7. Here, one should also be able to make a distinction between "bhava" (existence) and "jāti" (birth). For example, a uppatti bhava may give rise to many births until the kammic energy in that kamma seed wears out; see, "Bhava and Jāti - States of Existence and Births Therein."

- That is why, even though the human bhava is RARE, one may be reborn a human many times at a stretch. Only those born human in a previous life (or a few lives) may be able to remember those lives; see, "Evidence for Rebirth."
- Different types of Paṭicca Samuppāda cycles discussed at: "Paticca Samuppāda Cycles."

## We Attach via Taṇhā and Avijjā

8. By perceiving illusory happiness, we willingly attached to pleasurable things. We also get attached to stuff via hate, and the root cause is an attachment to something related.

- For example, we get "attached" to a person with hate if that person is blocking our access to something that we like. We keep thinking about how bad he is, etc.
 fused or attached to" in English) means; see, "Tanhā - How We Attach Via Greed, Hate, and Ignorance."
- Therefore, it is essential to realize that "tanhh $\vec{a}$ " does not mean just greed. It could also be due to hate or dislike.

## Unimaginable Suffering in Some existences (Among the 31 Realms)

9. Ultimately, both desire and hatred arise due to ignorance (avijj $\bar{a}$ ). Ignorance of not knowing the unfruitful nature of "this world" of 31 realms, ie., "Anicca, Dukkha, Anatta."

- We think that living is pleasurable, but lives in some realms are filled with unimaginable suffering. Human birth is rare.
- There is unimaginable suffering in the lower four realms (see "How the Buddha Described the Chance of Rebirth in the Human Realm"').

## We Create Our Future Lives!

10. There is no one, or no external force, keeping us bound to "this world" of 31 realms; see, "The Grand Unified Theory of Dhamma." Just like an octopus grabbing its prey with all eight legs, we willingly cling to things in "this world" of 31 realms filled with suffering.

- Unless we see the true unfruitful and even dreadful (in the lower four realms) nature of 'this world" by comprehending "Anicca, Dukkha, Anatta," we will not let go of it.

## Use Pāli Words Without Translating to Other Languages

11. The Buddha advised NOT TO translate keywords in Pāli (and even verses in deep suttas) to other languages. In most cases, there are no equivalent words in other languages.

The translation of Paticca Samuppāda to Sanskrit as Pratittyasamutpāda is an excellent example of this problem. See the explanation of Pratittyasamutpāda (the Sanskrit word for Paṭicca Samuppāda) on Wikipedia: WebLink: wiki: Pratītyasamutpāda

- I think you will agree that it is confusing at best, with multiple possible meanings.
- Even though "Dependent Origination" is better, it still does not convey the whole meaning.
- On the other hand, for someone knowledgeable in Pāli or Sinhala, the meaning is evident in the name itself: paṭi $+i c c a$ sama + uppāda.

## Pronunciation of Pāli Words

12. It is highly beneficial to learn how to pronounce Pāli words. When the European scholars started writing the Pāli Tipitaka with the English alphabet, they came up with a unique system that I call the "Tipitaka English" Convention. It has helped keep the 'word length" short.

- For example, even though written as "gati," its pronunciation is "gathi." Similarly, "icca" is for "ichcha." If written as pronounced, "dhammacakkappavattana" would be "dhammachakkappavaththana."
- See "Tipitaka English" Convention Adopted by Early European Scholars - Part 1" and "Tipitaka English" Convention Adopted by Early European Scholars - Part 2" for details.
- A pronunciation guide at "Pāli Glossary - (A-K)" and "Pāli Glossary - (L-Z). "
- Don't be discouraged. Start getting used to the method of learning the meanings/pronunciations gradually. Learn the common keywords first.

### 9.2 Sakkāya Diṭṭhi and Paṭicca Samuppāda

February 4, 20121
Sakkāya Ditṭhi arises in those who do not understand the Paṭicca Samuppāda process. We will discuss the steps in the Paticca Samuppāda process to clarify this critical point.

Sakkāya Ditthi - Wrong View of "Me" and "Mine"
What Reincarnates? - Concept Of A Lifestream
Anatta and Sakkāya Ditthi - Two Different Concepts
Nibbāna - Rāgakkhaya Dosakkhaya Mohakkhaya - Part 1

### 9.2.1 Sakkāya Diṭthi - Wrong View of "Me" and "Mine"

February 4, 2021; revised February 5, 2021 (added \#9 and \#10); major revision June 19, 2022
Sakkāya Diṭthi is the wrong view of an unchanging essence associated with a human. Materialists who don't believe in rebirth - believe the essence is one's physical body. The other extreme is the belief that there is a "soul-like" entity that survives the death of the physical body.

## Definition of Sakkāya Diṭthi

1. Average humans who have not been exposed to the true teachings of the Buddha have sakkaya ditt thi. Several suttas describe sakkāya ditthi with the verse of Ref. 1. In the following, I will discuss the meaning of that verse.

- One group has the wrong view of uccheda ditthi. They regard the physical body to be equivalent to "me." They believe that all mental phenomena arise in the body and are thus totally associated with the body. Materialists of the present day belong to this category. They believe that mental phenomena (thoughts) arise in the brain, and thus, they also stop with the death of the body.
- Therefore, those with uccheda dițthi also believe that vedanā, saññ̄, sañkhāra, and viññāna are equivalent to "me." When the physical body dies, that is the end of all five entities, i.e. the five aggregates or pañcakkhandha.
- Thus, those with uccheda ditthi have those 5 types of wrong views about an existence that is limited to just one life.

2. The other group has the view that something unique to me ("essence of me that will never change and cannot be destroyed) must be moving from life to life. They don't know what it is but the concept is the same as that of a "soul" in many other religions. As we know, in those religions, a soul will live forever either in the heaven or the hell.

- They have one of the following three views regarding their physical body: it represents me, it is "in me", or "me" is in the body temporarily. Again, that "me" is a "soul-like entity."
- They will also have the same views about the mental factors (vedanā,saññā,sañkhāra, and viññāṇa) as well. For example, regarding vedana they have one of the following views: it represents me, it is "in me", or "me" is in vedana temporarily.
- People belonging to most major religions today have these 15 types of wrong views of an "unchanging soul" and that is sassata dittthi.

Those are the $\mathbf{2 0}$ types of wrong views about existence: vīsativatthuk $\overline{\boldsymbol{a}}$ sakk $\overline{\boldsymbol{a}} \boldsymbol{y} \boldsymbol{a}$ ditthi. I have done a deeper analysis with Tipiṭaka references in "Sakkāya Ditthi - Getting Rid of Deeper Wrong Views."

## Getting Rid of Sakkāya Diṭ̣hi Is the First Step to Nibbāna

3. To understand why those are wrong views (per Buddha Dhamma,) first, we need to clarify what kind of suffering the Buddha said can be stopped.

- When an average human thinks about suffering, they would think about the FEELING of pain or suffering. That could be physical suffering (injuries. sicknesses) or mental anguish like depression.
- But the Buddha taught that those kinds of suffering could only be "managed" but cannot be stopped. They can be managed by eating well, exercising, and following medical advice for injuries/sicknesses. One can control mental suffering partially by living a simple, moral life.

4. However, the Buddha said we must pay more attention to possible suffering in future lives. Those lives are yet to arise, and we can stop ALL suffering associated with future births. He taught that the death of the physical body does not end our suffering. One will be reborn either as human again or in one of 31 realms, including the animal realm.

- He said that most births in this process (called saṃsāra) are in the lowest four realms (apāyās) and that the animal realm is one of those four. Even though we cannot see those beings in the other realms, we can see the suffering of the animals, which is much harsher than for humans.
- The critical point is that we can stop such future suffering by attaining Nibbāna.
- When one understands the futility of seeking happiness in this world, one gets rid of sakkāya dittthi and becomes a Sotāpanna. Then one follows the Noble Eightfold Path and becomes an Arahant, thereby attaining Nibbāna.

## The Worst Wrong View Is Uccheda Diṭthi (Materialism)

5. From the above discussion, it is obvious that Buddha Dhamma's main benefit is to help people attain Nibbāna and thus be free of future suffering in the rebirth process (samsāra.) The current body is a "result," and vedanā that arises in that physical body cannot be stopped. We note that Ven. Mahā Moggallāna died a horrible death after being beaten; that was due to a residue of an annantariya kamma from a previous life.. However, ALL suffering for Ven. Mahā Moggallāna ended after his death (Parinibbāna.) For all others, there will be more future suffering after death.

- Thus it should be evident that the worst wrong view is to assume that one's life ends at death. If that is the case, there is not much benefit in studying Buddha Dhamma at a deeper level. One could be a "secular Buddhist" and just try to live a moral life. However, the term "secular Buddhist" is an oxymoron, just like the term "alone in a crowd" or "walking dead."
- Having the sassata ditthi (believing in a permanent soul) is also wrong and is the other extreme. They may be reluctant (or afraid) to engage in immoral deeds for fear of being sent to hell permanently but do not see any drawbacks in engaging in "legitimate sense pleasures."
- I say that those with the uccheda ditṭhi may be worse because they DO NOT NEED to have AN INTRINSIC moral compass. Even though most materialists DO live perfectly moral lives, they could be more susceptible to commit offenses on impulse (when temptations become strong enough.)

## If There is No Soul, "What" Is Reborn?

6. The two views of materialism and soul-view are easy to understand.

Materialism means one lives this life, and when one dies, that is the end. Those with the soul-view do their best to live a moral life and hope to be born in Heaven (Abrahamic religions) or in a Brahma realm which is supposed to be permanent (Hinduism.)

- Most people have difficulty understanding the Buddha's view. Since Buddha's view involves rebirth, it is difficult for them to see how it differs from the soul-view. The question that is frequently asked is: "What is reborn, if there is no soul?" Paṭicca Samuppāda explains that.
- One quick way to see the difference is to compare Buddha's view with Hinduism's. In Abrahamic religions, one will be born either in heaven or hell, i.e., there are not many rebirths. But in both Buddha Dhamma and Hinduism, there can be numerous rebirths. In Buddhism, that process ends when one attains Nibbāna (as an Arahant). In Hinduism, it ends when one is born in the realm of Mahā Brahma.
- The other key difference between Hinduism and Buddhism is the following. In Hinduism, future lives are "reincarnations" of the same $\overline{\text { atman }}$ (similar to a soul in Abrahamic religions.) Reincarnation implies the same "essence" (as a soul) that moves from one life to another.
- In Buddha Dhamma, there is no such soul or ātman that goes from life to life. Instead of "REINCARNATION," it is REBIRTH. That is THE crucial difference.

## How Is Rebirth Different From Reincarnation?

7. Reincarnation implies that there is SOMETHING unique AND unchanging in a human gets carried to the next life. The body can take different forms, but there is a "unique life force" (my characterization of "ātman") that remains unchanged from life to life.

- "WebLink: holy-bhagavad-gita.org: Bhagavad Gita: Chapter 2, Verse 22" explains that as, "As a person sheds worn-out garments and wears new ones, likewise, at the time of death, the soul casts off its wornout body and enters a new one."
- Thus, one may be born with a "different body" (outer garments), but the essence (personal identity or "ātman") remains.
- The mechanism is very different in Buddha Dhamma. Paṭicca Samuppāda dictates the process. "Personality" can change drastically from one existence (bhava) to another. I have tried to explain it in the post "What Reincarnates? - Concept of a Lifestream."

## Concept of a Bhava - No Personality Involved

8. In Buddha Dhamma, a critical idea is the concept of a "bhava." A "lifestream" makes transitions from bhava to bhava based SOLELY on kammic energy. There is NO "personality" that remains FIXED.

Different types of unwise thinking, speech, and actions (dictated by different types of sañkhāra) lead to different kinds of bhava and $j \bar{a} t i$.

- However, in adjacent lives, there will be similarities in character/habits represented by the term "gati." One's gati will significantly influence the next bhava. For example, if one lived an immoral life suitable for an animal, it is likely that they WOULD BE born an animal.
- Pațicca Samuppāda explains that. Sañkhāra (one's thoughts, speech, and actions) that arise due to avijj $\bar{a}$ is at the beginning of the Paticca Samuppāda process. Then towards the end, it leads to a particular type of bhava (existence) and birth ( $j \bar{a} t i$ ) in that existence.
- For example, if a human cultivates arupāvacara jhāna (with āneñjābhisañkhāra), that will lead to existence as an arupāvacara Brahma. See \#5 of "Sañkhāra - What It Really Means" for an explanation of how different types of bhava arise due to three broad categories of abhisañkhāra.

## All Bhava Lead to Suffering

9. The akusala-mūla Pațicca Samuppāda process describes how (abhi)sañkhāra done with avijjā LEAD to various bhava and jāti. This is the first step in the akusala-mūla Paticca Samuppāda process: "avijjā paccayā sañkhāra." Towards the end, it leads to bhava.

- Those bhava lead to births ( $j \bar{a} t i$ ) among the 31 realms. Without exception, any $j \bar{a} t i$ ends up suffering. That is the last step in the akusala-mūla Paṭicca Samuppāda process: " $\bar{j} \bar{a} t i ~ p a c c a y a ̄ ~ j a r a ̄, ~ m a r a n ̣ a, ~$ soka-parideva-dukkha-domanassupāyasā sambhavan'ti."
- In upcoming posts, we will go through the steps in Paticca Samuppāda to further clarify how the wrong view of sakkāya ditṭhi sustains this process that keeps one bound to samsāra, the rebirth process. That is not the reincarnation of a "soul."
- Until one understands that process, one has $a v i j j \bar{a}$, i.e., ignorant about the Four Noble Truths.
- There is one more aspect that needs to be understood. Let us discuss that now.

## Difference Between Wrong Views and Wrong Perceptions

10. Most texts describe sakkāya ditthi as "self-illusion" or "personality belief," i.e., "belief that a self or I exist" (you can Google "sakkāya ditthi" and see). Here it is essential to understand that there is a difference between "wrong view" and "wrong perception." A Sotāpanna would have removed the wrong view (dittthi), but not the false perception (sañña $\overline{\text {. }}$ )

- But this perception (sañ $\tilde{n} \bar{a}$ ) of a "self" (or a "soul" which is also called " $\bar{a} t m a "$ ) is NOT sakk $\bar{a} y a$ ditṭhi per Tipitaka, as we discuss below. That is a sañ̃ña (perception) that we have carried from life to life. For a discussion on saññā, see "What is Saññā (Perception)?".
- The deeply-embedded idea of a "self" or an innate sense of "me" is rooted in the manna cetasika.
- If one gets offended if treated with disrespect, that means one still has māna left. Even an Anāgāmi could be somewhat annoyed if they perceives being mistreated. A component of māna - called asmi māna - is still left at the Anāgāmi stage. Māna is removed not at the Sotāpanna stage but at the Arahant stage.

## A Sotāpanna Removes Only Wrong Views About an "Unchanging Self"

11. At the Sotāpanna stage, the wrong view (ditṭhi) that there is something unchanging and permanent, like a "soul" is associated with oneself, goes away. Simultaneously, the wrong view that one can remove future suffering by just living a moral life (sīlabbata parāmāsa)will go away too. (However, living a moral life is necessary too.) Furthermore, any doubts about the teachings of the Buddha (vicikicchā) will also disappear simultaneously.

- When one can see that there is no "real essence" (like a "soul" or a "ātma") associated with a living being, this wrong view of sakkāya ditṭhi goes away. A lifestream evolves, according to Paṭicca Samuppāda; see, "Anattā in Anattalakkahana Sutta - No Soul or a Ātma."
- However, it is incorrect to believe that the perception of a "me" will go away at the Sotāpanna stage. That perception completely goes away only at the Arahant stage. See "Vipallāsa (Ditthi, Saññā, Citta) Affect Sañkhāra."

## References

1. The following verse appears in many suttas, for example in the "WebLink: suttacentral: Cūlavedalla Sutta (MN 44)": "assutavā puthujjano, ariyānaì adassāv̄ ariyadhammassa akovido ariyadhamme avinīto, sappurisānaì adassāv̄̄ sappurisadhammassa akovido sappurisadhamme avinīto, rūpaì attato samanupassati, rūpavantain vā attānaì, attani va rūpaim, rūpasmimin vā attānarin. Evaí kho, $\bar{a} v u s o$ visākha, sakkāyadiṭ! hi hotī."

# What Reincarnates? - Concept of a Lifestream 

Revised August 3, 2016; revised March 27, 2018; September 6, 2019; November 12, 2019; August 22, 2020; re-written February 8, 2021; added \#9 February 9, 2021; February 14, 2021 (\#3 and \#8); revised August 7, 2022

## Reincarnation Versus Rebirth

1. Reincarnation is a Hindu concept where the "ātma" ("ātman") or the soul remains the same but takes a different form. The Rigveda compares it to a person discarding an old suit and wearing a new outfit. See "Sakkāya Ditthi - Wrong View of "Me" and "Mine."

- In Buddha Dhamma, it is a rebirth since there is no soul to reincarnate. We have accumulated many "kamma seeds" (kamma bïja) which contain various "habits" and "character qualities" (called "gati") In our long journey through samisāra. Those lead to different types of rebirths; see, "Sañkhāra, Kamma, Kamma Bīja, Kamma Vipāka."
- At the end of this human existence, the kammic energy of the kamma seed for the present life is exhausted. At that moment, a new life starts with a new potent kamma seed. The selection of a new seed itself is a complicated process and depends on the potency of the available kamma seeds, but it happens within a thought moment.
- Let us first summarize Buddha's description of sentient life. The following facts are indisputable.

## No Discernible Beginning to Saimsāra (Rebirth Process)

2. During the night of attaining the Buddhahood, the Buddha looked back at his rebirth process. He was able to scan eons in mere moments, but no matter how far back he looked, he could not see a "beginning." He has given many similes (analogies) to indicate the "unimaginable length of the rebirth process."

- For example, WebLink: suttacentral: Assu Sutta (SN 15.3) states: "Bhikkhus, this rebirth process has no discernible (na pannāyati) beginning. Beings whose minds are covered by ignorance and are bound to this rebirth process with bonds of craving."
- Birth as a human is very rare among all those rebirths, as stated, for example, in the WebLink: suttacentral: Nakhasikha Sutta (SN 20.2). "bhikkhus, sentient beings reborn as humans are few as this bit of sand on my fingernail. But those not reborn as humans are many as the sand on this great Earth. Therefore, you should strive diligently and without delay to end this suffering in the rebirth process."
- Further details in "Rebirth - Connection to Suffering in the First Noble Truth."

## The Concept of a Lifestream

3. The Buddha used the term "satta" to describe a living being going through that rebirth process. In the WebLink: suttacentral: Satta Sutta (SN 23.2), Ven. Rādha asked the Buddha: "..they speak of this thing called a 'sentient being.' How is a sentient being defined?"

- The Buddha answered: "Rādha, when there is liking (chanda), strong liking (rāgo), reveling (nand $\bar{l}$ ), and the tendency to attach ( $\tanh \bar{a})$, then a 'sentient being with cravings' (satta) is spoken of." Note that the Pāli word 'satta' means "to attach."
- In other words, as long as a 'sentient being' highly values things in this world, it will be reborn in this world. It could be reborn, a human, an animal, a Deva, etc., at various times. Thus, associating any such existence with an "unchanging entity" (such as a soul) is impossible. When born a human, a satta behaves like a human, and when born an animal, it acts like an animal, etc.
- I use the English word to describe "satta" as a "lifestream." The term "sentient being" is more suitable to refer to a "satta." On the other hand, "a lifestream" refers to the process that a satta goes through in Sainsära.
- A given lifestream can take various forms in the rebirth process. There is no "core" or 'soul" or 'ätman" to talk about! On the other hand, as long as that fact is not understood, there is a satta in the rebirth process.

## A Bodhisatta is a Special Satta

4. Buddha Gotama, like any other Buddha, made a heroic effort to become a Buddha through many eons.

When he made enough progress, he was declared a "Bodhisatta" by Buddha Deepankara many eons ago.

- A Bodhisatta is a special satta destined to become a Buddha. "Bodhi" means "towards liberation/release." When a satta has fulfilled enough paramitā to become a Buddha, he is declared a "Bodhisatta" by existing Buddhas. See, "Pāramitā and Niyata Vivarana - Myths or Realities?."
- Even after becoming a Bodhisatta, it is possible to be born in the animal realm (but NOT in the other three realms in the apāyās.)
- Therefore, a sentient being is born in any given bhava ONLY according to causes and effects. That is described in Paṭicca Samuppāda, which starts with "avijjā paccayā sañkhāra" and ends in "bhava paccayā jāti" and jāti paccayā jarā, marana, soka-parideva-dukkha-domanassupāyasā sambhavan'ti.
- There is no reference to a "specia/particular being" in that whole process. Future existences (bhava) and births ( $j \bar{a} t i)$ within that existence only depend on past kamma (sañkhāra) done with avijjā!

## Transcending the "Satta State" to Attain Puggala Stages

5. All other living beings (sattā) overcome the "satta state" by learning how to do that from a Buddha or a true disciple of a Buddha (Ariya.)

- Note that "satta" is pronounced, "saththa." See "Tipitaka English" Convention Adopted by Early European Scholars - Part 1."
- There are eight such Ariyā (Noble Persons) as described in the "WebLink: suttacentral: Pathamapuggala Sutta (AN 8.59)," for example.
- They are: "Sotāpanno, sotāpattiphalasacchikiriyāya paṭipanno (sotāpanna anugāmi), sakadāgāmī, sakadāgāmiphalasacchikiriyāya paṭipanno (sakadāgāmi anugāmi), anāgām̄̄, anāgāmiphalasacchikiriyāya paṭipanno (anāgāmī anugāmi), arahā, arahattāya patipanno (arahant anugāmi)."
- Another special satta overcomes the "satta state" with his efforts. That is a Pacceka Buddha. A Pacceka Buddha has not fulfilled ALL the paramitās to become a Sammāsambuddha like Buddha Gotama. Therefore, a Pacceka Buddha cannot explain Dhamma like a Sammāsambuddha. Not that many sattā can attain Nibbāna during a Pacceka Buddha.

## All Sattās Are Trapped in the Rebirth Process

6. Therefore, until the Sotāpanna Anugāmi stage is attained, all sentient beings are trapped in the rebirth process.

- They all have not overcome the "satta state" and thus could be born in the apāyās in the future.
- The lifestream of a satta in ANY of those 31 realms will flow ceaselessly until the fruitlessness AND danger in remaining in the rebirth process are comprehended.
- The danger is that most births in the rebirth process are in the lowest four realms (apāyās.) The reason for that is in the verse that describes a "satta" in \#3 above: "Rādha, when there is liking (chanda), strong liking (rago), reveling (nand $\overline{\text { l }}$ ), and the tendency to attach ( $\tanh h \bar{a}$ ), then a 'sentient being' is spoken of."
- The Buddha referred to a sentient being ("satta") as one with attachment to "worldly pleasures."

## Rest of the Satta Sutta

7. After explaining to Ven. Rādha the meaning of a "satta," Buddha explained to him why those sentient beings are trapped in the rebirth process filled with unimaginable suffering.

Here is the English translation at Sutta Central (my revisions are in bold):
"Suppose some boys or girls were playing with sandcastles. As long as they're not rid of greed, desire, fondness, thirst, passion, and craving for those sandcastles, they cherish them, fancy them, treasure them, and treat them as their own. But when they grow up, they get rid of greed, desire, fondness, thirst, passion, and craving for those useless sandcastles. Then they scatter, destroy, and demolish them with their hands and feet, making them unplayable.

In the same way, you should scatter, destroy, and demolish the desire for mind-pleasing things in this world and reject them. And you should practice for the ending of craving. You should scatter, destroy, and demolish the desire for feeling ... perception ... sañkhāre ... Viñ̃̃ānaị, making them unplayable.
Taṇhākkhayo hi, rādha, nibbānan" ti (Rādha, Nibbāna is the elimination of taṇhā)."

## Overcoming the Desire to Build Sandcastles

8. Thus, the Buddha compared the behavior of any living being in the "satta state" to children enjoying building sandcastles on a beach. Due to their ignorance (avijja, ) they don't realize the futility of building sandcastles for enjoyment.

- In the same way, until one hears and comprehends the actual teachings of the Buddha (Four Noble Truths/Pațicca Samuppāda/Tilakkhana,) one would not "see" the futility AND dangers in enjoying sense pleasures in this world. Children building sand castles only waste their time. On the other hand, satt $\bar{a}$ enjoying sensory pleasures pave the way to rebirths in the apāyās without realizing it.
- When one starts "seeing" the true nature of this world, one removes sakkāya ditṭhi and becomes a Sotāpanna Anugāmi. That "vision" is fully established when one also removes any doubts (vicikicchā) and also sees that rituals (sīlabbata parāmāsa) will not get one released from the rebirth process. One is at the Sotāpanna stage at that point.
- However, that is only the beginning of the Noble Eightfold Path. Only the diṭthi vipallāsa (wrong vision) has been removed yet. With that "new vision" (Sammā Dittthi), one needs to follow the other seven steps and get to Sammā Samādhi to remove sañn̄ā vipallāsa at the Anāgāmi stage and the citta vipallāsa at the Arahant stage. See, "Vipallāsa (Ditthi, Saññā, Citta) Affect Sañkhāra."

## Puthujjano Is a Satta in the Human Realm

9. Finally, a human in the "satta state" (i.e., who has not comprehended the Four Noble Truths) is a "puthujjano." Thus, a puthujjano (normally translated as "uninformed ordinary person" in many translations) is a human with sakkāya diṭthi.

- In the "WebLink: suttacentral: Cūlavedalla Sutta (MN 44)," Ven. Dhammadinnā is asked: "how does sakkāya diṭthi (identity view) come about?"
- She replied: ".. uninformed ordinary persons who have not been exposed to the teaching of the Noble persons have one of the following views. One group has the wrong vision of rūpa (material
form) in 4 ways: to regard $r \bar{u} p a$ as "mine," or "I" as $r \bar{u} p a$, or $r \bar{u} p a$ to be "in me," or "I" to be "in $r \bar{u} p a$." Then there is the other group who regard one or more of the mental factors vedana $\bar{a}$ (feeling) ... sañ̃n̄̄ (perception) ... sañkhāra (ways of thinking) ... viññāṇa (consciousness) as "mine," or "I" as those, or them to be "in me," or "I' to be "in them." (We discussed this in \#1 of the previous post, "Sakkāya Ditthi - Wrong View of "Me" and "Mine.")
- Thus, any living being (human, Deva, Brahma, as well as any other living being) who has not comprehended the "world vision" of how suffering arises is a "satta." A satta in the human realm is a puthujjano.

### 9.2.3 Anatta and Sakkāya Ditṭhi - Two Different Concepts

## February 13, 2021

## Anatta is Not Sakkāya Diṭ̣hi

1. As we discussed in the previous two posts [Post 1 and Post 2], sakkāya ditthi is the WRONG VIEW of "me" and "mine." See, "Sakkāya Ditthi and Paticca Samuppāda."

- New existences (bhava) arise due to specific kamma done with different types of abhisañkhāra (vacī abhisañkhāra and kāya abhisañkhāra.) That is a process dictated by Paṭicca Samuppāda. Those sañkhārā arise with having that wrong view (avijjā.) That is why the PS process starts with "avijja paccayā sañkhārā."
- When one understands the Paticca Samuppāda process, one will see that it is such sañkhārā (thoughts) arise because one believes that experiences in this world can bring happiness. Such experiences come through the body and mind, and one takes those as "me." Those external things that be likes, one takes them to be "mine." (To emphasize again, saññ̄à and citta vipallāsa of "me" and "mine" will be removed only at Anāgāmi and Arahant stages. Removal of sakkāya ditṭhi only removes the wrong view.)
- Those wrong views of a "me" and 'mine" keep one bound to the rebirth process. There is a livingbeing (satta) AS LONG AS there is the wrong of a "me" and "mine" associated with that life stre am. We will discuss this in detail in upcoming posts.
- That wrong view is sakkāya ditṭhi. As long as the sakkāya ditṭhi is there, one will not overcome the "satta" state and become one of the 8 Ariya puggalā, as discussed in those previous two posts. Furthermore, a "me" will exist (in the rebirth process) until that wrong view is removed.
- That wrong view will be removed ONLY WHEN one sees nothing in this world TO BE CONSIDERED "me" or "mine." Therefore, sakkāya ditṭhi (the wrong view) is RELATED TO anatta (a characteristic of nature.)
- But anatta is NOT that wrong associated with a "me" or a "self." Anatta means EVERYTHING in this world is devoid of value.

## Anatta is Not "No-Self"!

2. Many people translate the word "anatta" as "no-self." But the Buddha advised us to stay away from the following two extremes to describe a living-being (satta.)

- It is NOT correct to say that a satta (with the wrong view of a "self") does not exist. That satta will live in one of the 31 realms as long as having that incorrect view. Most importantly, life is real, and so is the suffering (together with infrequent happiness). Here, I am referring to the long rebirth process.
- On the other hand, in ultimate reality, there is no "self" or a "soul" or an "ātman" traveling the rebirth process (sainsāra.) When that is understood, that satta will cease to exist IN THIS WORLD, i.e., that lifestream will merge with Nibbāna.
- Instead of having endless debates about whether a "self" exists or not, it pays to focus on how the Buddha explained the existence of a satta suffering much in the rebirth process.
- To repeat: abhisañkhāra ARISE in a mind BECAUSE a satta (living-being) acts with that wrong view. But if one understands this process, one can be mindful and stop such sañkhārā from CONTINUING TO grow and LEAD TO new existences (bhava.) That is the basis of Satipatṭhāna.
- When one understands Paṭicca Samuppāda, one will see no need to follow either of those two extremes of whether there is a "self" or not.

## What is Anatta?

3. The concept of anatta is intrinsically related to the other two: anicca and dukkha. Those three are the "three characteristics of nature."

- None of those are DIRECTLY about a "person" or a "satta."
- Anicca, dukkha, anatta are related by "yadaniccam tam dukkham, yam dukkham tadanattā" (expanded: "yad aniccam taì dukkham, yaim dukkham tad anattā.") That means, "everything in this world" is of anicca nature; (craving for them) leads to dukkha; therefore, it is unfruitful to crave for anything in this world (anatta)."
- There are 12 suttas in the Aniccavagga of the Samiyutta Nikāya 35 (SN 35.1 through SN 35.12), stating that anicca (and dukkha and anatta) nature is associated with everything in this world.
- There are 6 suttas in the Aniccavagga of the Samimutta Nikāya 2 (SN 22.12 through SN 22.17) stating the same and the above relationship among the three entities.

## Inert Things Are of Anatta Nature Too!

4. The "WebLink: suttacentral: Yadanattō Sutta (SN 22. 17)" states: "Rūpain, bhikkhave, anattā. Yadanattā taì 'netaì mama, nesohamasmi, na meso attā'ti evametaí yathābhūtaì sammappañ̃̄̄̄ya daṭ!habbaim. Vedanā anattā ...sañña anattā ...sañkhārā anattā ...viññ̄̄̄nain anattā."

Translated: "Bhikkhus, rūpa is of anatta nature. It has no essence and is of no value. Any rūpa (including external $r \bar{u} p a$ ) should be seen as it really is - with correct wisdom - thus: 'This rūpa is not mine, this I am not, this should not be taken as "me." Then the same is stated for the four mental components.

- There are other suttas explicitly stating that the external world is also of anatta nature. For example, the "WebLink: suttacentral: Bāhirāvatana Anatta Sutta (SN 35.227)" says: "Rāpā, bhikkhave, anattā. Saddā ... gandhā ... rasā ... phoṭthabbā ... dhammā anattā. Evaí passamं ... pe ... nāparaì itthatt $\bar{a} y a \bar{t} t i ~ p a j a ̄ n a ̄ t \bar{\imath} \bar{\prime} " t i$.

Translated: "Bhikkhus, sights, sounds, smells, tastes, touches, and dhammā are of anatta nature. Seeing this ... (a Noble Person) understands: 'There is no value in any of those... (for them) there is no return to any state of existence in this world (i.e., they will attain Nibbāna).""

- Does it make sense to say, "sights, sounds, smells, tastes, touches, and thoughts are not-self"? Is having a "self" a possibility for sights, sounds, etc.? But that is the exact English translation of this sutta at Sutta Central!
- Thus, it should be clear that ALL INERT THINGS in this world are also of anatta nature!
- It is unfruitful AND dangerous to value them and to attach ( $\operatorname{tanhh} \bar{a}$ ) to them.
- We will get to discuss this in detail in the future. But I just wanted to make the distinction between sakkāya diṭthi and anatta.

5. Of course, getting rid of sakkāya diṭthi and starting to comprehend Tilakkhaña (including anatta nature) happens simultaneously at the Sotāpanna stage. Those two concepts are related.

- This relationship is described in the "WebLink: suttacentral: Anattalakkhana Sutta (SN 22.59)," the second sutta delivered by the Buddha to the five ascetics.
- "Rūpaì, bhikkhave, anattā. Rūpañca hidaì, bhikkhave, attā abhavissa, nayidaì rūpaì ābādhāya saìvatteyya, labbhetha ca rūpe: 'evai் me rūpaì hotu, evaí me rūpaí mā ahosī’ti." OR "Bhikkhus, form no value and should not be considered one's own. If $r \bar{u} p a$ (meaning one's body in this case) belonged to oneself, one should be able to control it (without leading to sicknesses and injuries; one should be able to say: "Let my body be thus without affliction)"
- "Yasmā ca kho, bhikkhave, rūpaì anattā, tasmā rūpaì ābādhāya sam்vattati, na ca labbhati rūpe: 'evaì me rūpaì hotu, evai் me rūpaì mā ahosī'ti. OR "But this body has the anatta nature, it leads to affliction, and it is not possible to have it thus: 'Let my body be this way; let my body not be the other way."" Therefore, "this body should not be considered as mine" is ONE ASPECT of the anatta nature.
- In other words, one's body is just like any other rūpa in this world. It is subject to the anatta nature dictated by Pațicca Samuppāda. That is also why sakkāya ditṭhi is wrong.
- The sutta explains that the same is true for the other four mental aggregates: vedan $\bar{a}$ anatt $\bar{a}$, sañ $\tilde{n} \bar{a}$ anatt $\bar{a}$, sañkhārā anattā, viññannaì anatt $\bar{a}$.

## Anattā Asārakaṭ! henāti - Anatta Means Anything in this World is Void of Value

6. Finally, the following verse is in the "WebLink: suttacentral: Khuddaka Nikāya Patisambhidāmagga 3.1. Mahāpañ̃̄̄̄kath $\vec{a} "$ (towards the end) of Patisambhidāmagga in the Tipitaka: "Rūpaì atī̀ ānāgatapaccuppannaim aniccaim khayatthena dukkhaì bhayat!̣hena anattā asārakat!̣henāti.."

- Translated: "any $r \bar{u} p a$ belonging to the past, present, or future is of anicca nature and (attaching to them) will lead to one's downfall (khaya); it is of dukkha nature because it is dangerous (bhaya); it is of anatta nature because it is useless (asāra.)" [asāra : [adj.] worthless; sapless; vain.]
- Thus it is evident that anatta CANNOT be translated as "no-self."

The next verse there is; "R̄̄paì atī̄̄̄nāgatapaccuppannaiं aniccaì sañkhataì patticcasamuppannain khayadhammai் vayadhammai் virāgadhammaiं nirodhadhammanti tulayitvā tīrayitvā vibhāvayitvā vibhūtaì katvā rūpanirodhe nibbāne khippaì javatīti-
 atī̄ānāgatapaccuppannaì aniccaì sañkhataì paṭiccasamuppannai் khayadhammaì vayadhammaì virāgadhammaì nirodhadhammanti tulayitvā tīrayitvā vibhāvayitvā vibhūtaì katvā jarāmaraṇanirodhe nibbāne khippaì javatīti-javanapaññā. Javanapaññatāya samivattantīti-ayaì javanapañ̃̄̄̄. (14)"

- Here it is emphasized that EVERYTHING in this world, including all rūpa, vedanā, sañ̃̃ $\bar{a}$, sañkh $\bar{a} r \bar{a}$, viññāna, cakkhu ... pe ... jarāmarana, are all of anicca nature and arise via Paticca Samuppāda. They ALL lead to eventual suffering (dukkha). They ALL are of no real value (anatta.) See \#3 above "yad aniccam taì dukkham, yaì dukkham tad anattā."
- That is why we first need to understand the Paticca Samuppāda process.
- This post has many Pāli verses. But I wanted to quote directly from the Tipiṭaka to make things absolutely clear. It is critical to understand these fundamental concepts.

### 9.3 Pațicca Samuppāda - Essential Concepts

February 19, 2021

## Nibbāna - Rāgakkhaya Dosakkhaya Mohakkhaya - Part 1

"Lobha, Rāga and Kāmacchanda, Kāmarāga"
"Lobha, Dosa, Moha Versus Rāga, Patigha, Avijija"
Pañca Nīvarana and Sensual Pleasures (Kāma)
What Is "Kāma"? It Is Not Just Sex
Icchā, Tanhā, Kāma - Root Causes of Suffering
Jāti - Different Types of Births
Bhava - Kammic Energy That Can Power an Existence
Bhava and Punabbhava - Kammic Energy Giving Rise to Renewed Existence
Concepts of Upādāna and Upādānakkhandha

- Difference Between Physical Rūpa and Rūpakkhandha
- Where Are Memories "Stored"? - Connection to Pañcakkhandha
- Loka Sutta - Origin and Cessation of the World
- Dukkha Samudaya Starts With Samphassa-Jā-Vedanā
- Key Steps of Kammic Energy Accumulation
- Generating Kammic Energy in the "Upādāna Paccayā Bhava"

Six Root Causes - Loka Samudaya (Arising of Suffering) and Loka Nirodhaya (Nibbāna)

### 9.3.1 Nibbāna - Rāgakkhaya Dosakkhaya Mohakkhaya - Part 1

## February 19, 2021

Nibbāna is defined as "rāgakkhayo dosakkhayo mohakkhayo-idaín vuccati nibbānan'ti" OR "Nibbāna is the ending of rāga, dosa, and moha."

## What Is Nibbāna?

1. The above verse explaining Nibbāna appears in many suttas. The above quote is from "WebLink: suttacentral: Nibbānapañhā Sutta (SN 38.1)."

- There is a stronger version of rāga, i.e., lobha (extreme greed.) Someone with a lobha mindset CANNOT comprehend the Four Noble Truths. That is why Nibbāna is defined as above.
- All future suffering arise due to lobha, dosa, moha. But until lobha is reduced to the rāga level, one cannot comprehend the Noble Truths. See, "Lobha, Dosa, Moha versus Rāga, Patigha, Avijijā."
- Someone with a "moral mindset" who has removed the ten types of wrong views NORMALLY has reduced versions of rāga, patigha, avijjā. However, their mindsets can also be elevated to stronger lobha, dosa, and moha under some conditions (if the temptation is high enough.)
- Someone who has removed the ten types of wrong views can comprehend the Four Noble Truths and remove avijja (ignorance about this world's real nature.) It happens in four stages culminating at the Arahant stage.
- That is a summary. We will discuss the details below and in upcoming posts.

## Nibbāna Defined as Above Is the Ultimate Version

2. What is defined above is the ultimate version of Nibbāna or the "ultimate cooling down" via "eliminating ANY future suffering."

- In the previous three posts in this series, I briefly laid out the key (and deeper) foundations of Buddha Dhamma. I did that so that one would see the outline. Of course, more explanations are needed to clarify them.
- We will gradually clarify those concepts.
- The way to do that is to realize that we CAN experience the early stage of "cooling down" by gradually reducing lobha, dosa, moha to the rāga, patigha, avijjā AND trying to maintain them there without reelevating to the lobha, dosa, moha levels.
- A single Pāli word captures lobha, dosa, moha (and the reduced versions of rāga, patigha, avijjā.) That word is "san." See details in the section on "San."

## Sanditṭhikaím Nibbānaím - One Needs to "See Defilements" to Get to Nibbāna

3. One first needs to "see defilements" or "see 'san"' (san ditṭhika) to be able to see the path to Nibbāna.

- That is why the Buddha Dhamma is "sandittthika." In the verse that points out the virtues of Buddha Dhamma, "..bhagavatā dhammo sandiṭthiko akāliko ehipassiko opaneyyiko paccattain veditabbo viññūhiti" it is one of the qualities that makes Buddha Dhamma unique.
- One can experience the first stages of Nibbāna (cooling down of the mind) by "seeing the dangers of "san" and gradually getting rid of them.
- That is the Nibbāna that can be experienced in this life! It is easily reached, especially if one can see the drawbacks of "san" (greed, anger, delusion.)

4. That is what the Buddha explained to Jāṇussoṇi in the "WebLink: suttacentral: Nibbuta Sutta (AN 3.55)." A reasonable English translation is "WebLink: suttacentral: Nibbāna (AN 3.55)."

- Jānussoṇi asks the Buddha, 'Master Gotama, it is said: 'Directly visible Nibbāna, directly visible Nibbāna.' In what way is Nibbāna directly visible, immediate, inviting one to come and see, applicable, to be personally experienced by the wise?"
- As explained there, a mind with greed, hate, and delusion (ignorance about the real nature) "..experiences mental suffering and dejection."
- Thus if one can see the bad consequences of greed, hate, and delusion (or 'san'), one can reduce those and reach a "better state of mind." It is a "cooled state of mind" with less agitation and would not experience depression.
- In particular, it is easy to recognize when greed and anger arise in one's mind. The one should make an effort to control them. That is the basis of Ānāpāna and Satipatt"hāna me ditations: "being mindful."
- That is why Nibbāna is directly visible AND can be experienced in this life itself!

## $\bar{A} d i t t a p a r i y \bar{a} y a$ Sutta (The Fire Sermon) Is About the "Fire in a Mind"

5. An English translation is at "WebLink: accesstoinsight.org: Ādittapariyāya Sutta (The Fire Sermon)." As with all English translations, it is a 'word-by-word" translation without clarifying what is meant by that "fire." (see other translations at Sutta Central: "WebLink: suttacentral: Āditta Sutta (SN 35.28)")

- It says, "The eye is burning, forms are burning, eye-consciousness is burning, eye-contact is burning, also whatever is felt as pleasant or painful or neither-painful-nor-pleasant that arises with eye-contact for its indispensable condition, that too is burning." That may not make sense if one does not see
that it is ATTACHMENT TO those 5 things that LEADS to "fires in the MIND." Those 5 are associated with "seeing."
- Even the direct translation says, "Burning with what? Burning with the fire of lust, with the fire of hate, with the fire of delusion.
- Such 5 types of "sources of fire" arise with the other senses: hearing, tasting, smelling, body touches, and the mind itself.
- But all those 30 "sources of fire" ALWAYS lead to "fires in mind." We MUST note that all 30 types of sensory experiences register in the mind!
- It is the MIND that will burn (sooner or later) due to the actions one takes (kamma via sañkhāra) with the desire for seeking pleasures with "seeing.'
- Some of that "burning" will materialize later in this life or even in future lives. That "potential to bring suffering" is deposited as "kammic energy," and that is also the same as "bhava" (cause for future suffering)! That is a hard part of understanding. But we will get to that.

## "Burning" (Tāpa) Has Root Cause in Rāga (Greed) and Dosa (Anger)

6. We attach to things that we like. This "attachment" is described in several ways by the Buddha: icchā, $\boldsymbol{t a n h} \boldsymbol{a}$, nandi, piya, kāma, etc. When exposed to such 'likable things" in this world, we become joyful and try to get more of them, even using immoral deeds. Therein lies the problem.

- Those things in this world that lead to such attachment and joyful feelings are called "things with kāmaguna" or "characteristics/sources of kāma." We will discuss that soon.
- Even though they may provide temporary joy, they always lead to "heat/burning" ( $\boldsymbol{t} \bar{a} p a$ a) in mind.
- The word "tappati" in the Dhammapada verse in \#10 refers to a mind that is "heated/burning."

## Rāga and Dosa - Two Faces of a Coin

7. Rāga and dosa are like the two faces of a coin, and the coin itself is moha (avijjā.) As long as avijj $\bar{a}$ is there, rāga OR dosa can arise.

- Dosa (anger/hate/dislike) is the opposite of rāga (and lobha.) There are things that we don't like in this world. Furthermore, we also dislike/hate people who get in our way in our efforts to seek more sensory pleasures.
- We tend to evaluate external objects (people or objects) based on their ability to provide us with enjoyment/happiness or whether they appear ugly/distasteful/tend to get in our way. Thus, we tend to put anything into one of those two categories: like/dislike. This is due to the root cause of moha. This explicit "measuring" or 'evaluation" is "māna."
- We do that "measuring" with the perception of "me" and trying to decide what will enhance "my enjoyment" and minimize "my displeasure." That is because of our avijjā or ignorance that such behavior will ONLY lead to future suffering.

## Moha Is the Root Cause of Rāga and Dosa

8. Sometimes, the mind becomes uncertain (vicikicchā) about what to do. At other times, it becomes perturbed/excited (uddhacca) due to uncertainty about something. In such cases, only moha (or avijja) is present.

- In other words, moha is the root cause of rāga, dosa, and all other asobhana cetasika.
- Furthermore, the deepest level of moha is in māna, uddhacca, avijj $\bar{a}$. Those are removed only at the Arahant stage. It is one of the last five Samyojana (bonds to the samisāric process) of rūpa rāga, arūpa rāga, māna, uddhacca, avijjā.
- By the way, kāma rāga is removed at the Anāgāmi stage. When one becomes an "Arahant Anugāmi" at the next level, one loses rūpa rāga and arūpa rāga. It is only at the Arahant stage that one removes the last three: māna, uddhacca, and avijjā. Here, māna and uddhacca are the last traces of rāga and dosa left. Avijj $\bar{a}$ is the last trace of moha removed that breaks ALL bonds to the rebirth process (samisāra.)

## Avijjā and Taṇhā Go Together!

9. Because of our unwise perception of a "me," we tend to attach to some things ( $r a \bar{g} a$ ) and try to stay away from other things (dosa.) Either way, we are 'mentally bound" to both types. We tend to think about ways to get likable things closer and to keep unlikable things away. Thus, taṇha is involved in both cases. See, "Tanhā - How We Attach Via Greed, Hate, and Ignorance."

- It is impossible to get rid of tanhh $\bar{a}$ as long as we do not comprehend the real nature of this world explained by the Buddha and thereby get rid of avijj $\bar{a}$.
- The first step towards that understanding is to live a moral life and cleanse the mind. That will enable one to comprehend this 'previously unheard" Dhamma: Why sensory pleasures (kāma) WILLL invariably lead to future suffering.
- Therefore, we need to get to the next step of understanding dasa akusala and dasa kusala.
- Don't worry too much about all these Pāli terms. They will become clear as we discuss further. There is no need to memorize. If you understand the concepts, they will become familiar.

## Dasa Akusala and Dasa Kusala

10. The path to Nibbāna is to avoid immoral deeds or dasa akusala ("Ten Immoral Actions (Dasa Akusala)") and to engage in meritorious deeds or dasa kusala ("Dasa Akusala/Dasa Kusala - Basis of Buddha Dhamma.')

- The drawbacks of dasa akusala succinctly stated in the following Dhammapada verse:

Idha tappati, pecca tappati, Agony now, agony hereafter, pāpakārī ubhayattha tappati.
"Pāpain me katan"ti tappati,
bhiyyo tappati, duggatim gato.
The wrong-doer suffers agony in both worlds.
Agonized now by the knowledge that one has done wrong, one suffers more agony when gone to a state of woe.

- In the same way, the benefits of dasa kusala will be evident in this life and future lives:

## Idha nandati, pecca nandati, Rejoicing now, rejoicing hereafter,

katapuñño ubhayattha nandati. The doer of wholesome actions rejoices in both worlds.
"Puññam me katan"ti nandati, Rejoicing now in the knowledge that one has acted morally, bhiyyo nandati, suggatim gato. one rejoices more when gone to a state of bliss.

- We will discuss the relationship of rāga, dosa, moha to dasa akusala and dasa kusala in the next post in this series.
- Before that please make sure to read the two posts: "Lobha, Rāga and Kāmacchanda, Kāmarāga" and "Lobha, Dosa, Moha Versus Rāga, Patigha, Avijija." It is necessary to grasp the meanings of those various Pāli terms before reading the next post in this series.
Posts in this subsection at: "Paticca Samuppāda - Essential Concepts."

### 9.3.2 Pañca Nīvaraṇa and Sensual Pleasures (Kāma)

February 28, 2021; revised March 1, 2021 (link in \#1 revised, \#8 and \#9 re-written); July 17, 2021
Pañca Nīvaraṇa (Five Hindrances) are defilements that "cover the mind" and make the mind agitated or lethargic and susceptible to make bad decisions. Craving for sensory pleasures is the root cause for the covering of the mind.

## Why Are They Called "Hindrances"?

1. These five are indicators for "mental states." When they become elevated, one can easily make "bad decisions." Furthermore, it is difficult for a mind to focus on any subject or comprehend new concepts with the five hindrances at high levels.

- Pañca nīvaraṇa does not cover a mind all the time. They can be triggered under the influence of temptations.
- In such instances, one could be tempted to engage in dasa akusala to ANY extent, depending on the temptation level. One may even do strong immoral deeds (pāpa kamma) that make rebirth in the apāy $\bar{a} s$ possible.
- The possibility of pañca nīvaraṇa arising will permanently go away when one attains the Sotāpanna stage.
- That is why a Sotāpanna is permanently released from the apāyās.
- However, getting to the Sotāpanna stage REQUIRES seeing (or understanding) that craving for sensory pleasures (kama) is the root cause of all suffering. Of course, even after "seeing" it correctly (i.e., removing the wrong vision) a Sotāpanna would still enjoy sensual pleasures because he had not removed the wrong perception (sañña $\bar{a}$.

## What Is the "Previously Unheard Dhamma (Teachings)?"

2. The Buddha, in his first discourse, declared that his teachings had not been known to the world (in the absence of another Buddha.) That is the meaning of the verse, "Idain dukkhaim ariyasaccan'ti me, bhikkhave, pubbe ananussutesu dhammesu." OR "bhikkhus, this is the noble truth of suffering that was not heard before.." That highlighted part of the verse appears 12 times in the sutta ( 3 times each for the Four Noble Truths)!

- The "previously unheard teaching" is that even though sensory experiences can provide short-lived pleasures, they ALWAYS lead to suffering in the long-term (during this life and especially in the rebirth process.)
- The root cause for that suffering is the wrong view/perception of a "me" or sakkāya dittchi. That view/perception, in turn, arises because of the perceived "pleasure" in sensory experiences.
- We attach to worldly pleasures (with icchā/taṇhā) with that wrong view AND perception BECAUSE we think they can provide long-lasting happiness. But the Buddha explained that there is hidden suffering in those pleasures. See the previous posts in "Sakkāya Ditthi and Paticca Samuppāda."
- Upon attaining the Buddhahood, the Buddha was able to see the minds of countless living-beings and was first discouraged that most of them would not be able to comprehend his teachings. Then he realized that some have the ability to comprehend his deep Dhamma.

## Kāmato Jāyat̄̄ Soko - Kāma Is a Root Cause of Suffering

3. "WebLink: tipitaka.net: Dhammapada Verse 215" provides the key idea:

Kāmato jāyatī soko, From desire, arises grief,
$k a \overline{m a t o ~ j a ̄ y a t ı ̄ ~ b h a y a \dot{n} ; ~ f r o m ~ d e s i r e ~ a r i s e s ~ f e a r ; ~}$
Kāmato vippamuttassa, Completely free from desire, natthi soko kuto bhayam. there is no grief, how can there be fear?

- The above verse is the 7th verse in that link. The verses 4th through 8 th are the same verses with synonymous words for kāma:piya, pema, rati (pronounced 'rathi'), and tanh $\bar{a}$. We have discussed that icch $\overline{\boldsymbol{a}}$ is also the same as $\tanh \overline{\boldsymbol{a}}$. In English, we can use words like desire, attachment, craving, liking, etc., to express the same meaning.
- There are pleasurable experiences. Those are NOT kāma. More details at, "What is "Kāma"? It is not Just Sex." It is critical to read that post.
- The desire to accumulate more such experiences is kāma. That desire has no bounds. If temptations are high enough, we may take extreme immoral actions to fulfill such desires. That is when we get into trouble. But the key is to figure out how to stop such temptations. That CANNOT be done with willpower.
- With that in mind, let us look into pañca nīvaraṇa.

## What Are Pañca Nīvaraṇa?

4. Pañca n̄̄varaṇa are: Kāmacchanda, vyāpāda (or byāpāda), thina-middha, uddhacca-kukkucca, and vicikicchā. See "Āvarananīvarana Sutta (SN 46.38)."

- In the sutta, the Buddha used two words, "āvaraṇā" and "n $\bar{\imath} v a r a n ̣ a ̄ " ~ t o ~ d e s c r i b e ~ t h e s e ~ f i v e . ~ T h e ~ w o r d ~$ " $\bar{a} v a r a n a \bar{a} "$ means "to cover (the mind.)" When the mind is covered, it cannot grasp Buddha's teachings, and thus Nibbāna (or cooling down) is prevented (the meaning of "nīvaraṇā.")
" When a mind is "covered," one cannot clearly see the consequences of one's actions. It is like looking through a fog. One cannot see what lies ahead.
- Removing pañca nīvaraṇa from one's mind is like lifting a fog. One can see far ahead with much clarity.
- But how do those 5 things cover a mind? We need to figure that out before we can remove them.

## Kāmacchanda Is the Main Nīvaraṇa

5. Kāmacchanda is stronger than kāma rāga. It is like lobha but focused on $k \bar{a} m a$.

- Kämacchanda is the highest level of attachment. Here one is willing to do abhorrent acts (killing, raping, etc.) to satisfy one's desires.
- When kāma rises to the kāmacchanda level, one becomes unaware of the bad consequences of one's actions. Kāmacchanda comes from $k \bar{a} m a+i c c h \bar{a}+a n d a$, or "being blinded by sensory attractions." Here, "icch $\bar{a} "$ is liking, and "anda" is blind.
- It is said that "one loses one's mind" when blinded by attachment to sense pleasures, i.e., one cannot think rationally when one has kāmacchanda.
- See, "Lobha, Rāga and Kāmacchanda, Kāmarāga."

## Vy $\bar{a} p \bar{a} d a$ Is a Consequence of Kāmacchanda

6. The second nīvaraṇa, vyāpāda, arises because of kāmacchanda. But it is a different manifestation. Instead of becoming lustful, one becomes hateful and angry.

- That anger arises when one is prevented from satisfying one's desire for sensual pleasures. Patigha (or displeasure) is a lower level of vyāpāda and is not a n $\bar{\imath} v a r a n ̣ a . ~ O n e ~ d o e s ~ n o t ~ d o ~ " a p a ̄ y a g a ̄ m \bar{\imath}$ deeds" with patigha.
- We have heard about people killing others to get their wealth or their spouses or other loved ones. That happens when one's mind becomes overwhelmed with kämacchanda.
- Dosa (or dvesha in Sanskrit or Sinhala) is the ANGER that arises based on initial lobha. Here, dvesha comes from "devana" + "vesha" - 己̨ఠอٍ పఠ๘ん - or second manifestation of lobha. We get angry when someone else is in the way of getting what we want. This statement is from "Lobha, Dosa, Moha versus Rāga, Patigha, Avijjā."
- With dosa, one will inevitably take a "downward path." That is the meaning of vyāpāda ("vaya" or 'downward"+ "pāda" or "direction.") Thus, vyāpāda is the same as dosa.

## Other Three Nīvaraṇa Also Have Roots in Kāmacchanda

7. When one gets attached to sensory pleasures, one's mind becomes dull (Pāli word is thīna.) Because of that, the mind gets stuck (middha.)

- Thus, thīna-middha refers to a mind that has become lethargic and stuck. Such a mind would not be able to focus on anything, let alone difficult concepts. A good example is those addicted to watching movies, TV, sports, etc., all day. Their minds are stuck. Some people forget even to eat.
- A different manifestation is uddhacca-kukkucca. Here, one becomes "high-minded" (uddhacca) with perceived wealth or power and starts doing lowly deeds (kukkucca.) For example, a powerful politician or a wealthy person may engage in "lowly deeds" like bribery, rape, etc.
- A mind is susceptible to cravings for sensory pleasures because it has no true faith in Buddha Dhamma. It is not certain that the concepts in Buddha Dhamma are correct. For example, there are doubts about the laws of kamma or rebirth. Having such doubts is vicikicchä. Such doubts will go away only when one comprehends the Four Noble Truths.
- Further details at, "Key to Calming the Mind - The Five Hindrances."

## Noble Truth on Suffering - Kāma Is the Root Cause of Suffering

8. A key aspect of comprehending Noble Truths is to see that kāma (craving for sensory pleasures) is the root cause of future suffering.

- It is embedded in the verse that describes the root cause of suffering: "yampiccham na labhati tampi dukkhā $\boldsymbol{m} "$ ("Yam pi icchain na labhati tam pi dukkham.". See, "Essence of Buddhism - In the First Sutta."
- "Yam pi icchamं" means "whatever is liked or craved for." "Na labhati" means "not getting," "tam pi dukkhaì" means "that leads to suffering."
- Therefore, that verse simply says: "If one does not get what one craves or likes, that leads to suffering."
- Note that $k \bar{a} m a$ arises due to $i c c h \bar{a}$.

## Importance of Getting Rid of Micchā Ditṭhi

9. Micch $\bar{a}$ Ditthi has TWO levels. Not knowing that $k \bar{a} m a$ is the root cause of suffering is the deeper level of micchā ditṭhi.

- First, one needs to get rid of the 10 types of wrong views that include not believing in the laws of kamma and rebirth. The deeper level of wrong views is removed when one becomes a Sotäpanna and realizes that attachment to worldly things only leads to future suffering, i.e., understand the Four Noble Truths.
- That deeper level of micch $\bar{a}$ dittthi starts fading away when one becomes a Sotāpanna. At that point, ALL FIVE nīvarana are removed permanently.
- An average human (puthujjano) thinks exactly the opposite way; That one should live FOR sensory pleasures. That is why it is so hard to change that ingrained mindset. But it is not that different from the mindset of a fish who only thinks about the tasty bait and does not see the hidden dangers in biting into that tasty bait.

## What is "Kāma"? It is not Just Sex

Revised October 31, 2017; revised December 18, 2018 (\#13, \#14); February 28, 2021 (major revision); March 5, 2021

Kāma means "sañkappa rāga" or "thinking about and planning to enjoy more sensual pleasures." Another related meaning is "giving priority to mind-made pleasures."

## Kāma Is Assigning High Value for Sensory Pleasures in Kāma Loka

1. "Kāma" comes from " $k \vec{a}$ " meaning "eat or destroy" and "ama" means Nibbāna. In our human world, which is a part of "kāma loka," temptations for staying away from Nibbāna come from five physical senses.

- Some people believe "kāma" is just about engaging in sex. Some others believe attractive sense objects are "kāma" objects, and those lead to defilements. Both are not correct.
- While "attractive sense objects" can lead to "kāma assāda" or "mind-made pleasures", the objects themselves don't have kāma. An Arahant is not tempted by any such object. But an Arahant would eat a delicious meal offered, but would not crave such meals.
- Furthermore, an Arahant gets to that stage by learning and contemplating Dhamma (cultivating wisdom) and NOT by living a harsh life.
- The lowest 11 realms are collectively called "kāma loka" because all such made-up pleasures are available through all five physical senses in those realms.

## Sensory Experiences are Not Kāma

2. This is a critical point to understand. There are sensory contacts that naturally bring pleasurable FEELINGS. For example, eating a cake or smelling a rose gives a pleasurable feeling. That experience itself is not $k \bar{a} m a$ or $k \bar{a} m a$ rāga.

- Rather, it is the DESIRE to enjoy more of those sensory experiences is $k \bar{a} m a$. That is why the word "icch $\vec{a} "$ and "tanhhā' are closely associated with kāma/kāma rāga.
- In the "WebLink: suttacentral: Na Santi Sutta (SN 1.34)," the Buddha defined " $k \bar{a} m a$ " as that second kind mentioned above: "Na te kāmā yāni citrāni loke, Sañkapparāgo purisassa kāmo..".

Translated: 'World's pretty things are not kāma, a person creates his/her own kāma by generating mind-made pleasures (rāga sañkappa)..".

- Buddha said that this world has many attractive pictures, sounds, tastes, smells, and touches. But those are not "kāma." The initial sense experience could be pleasant, but it is a kamma vipāka (no sañkhāra generated in the initial sense input).
- When one attaches to such a sensory experience and keep thinking about them, one makes
 "kāma." Each person generates his/her own kāma based on his/her gati or samisāric habits/cravings.

## Sañkappa Rāga Is Kāma

3. We experience those external sensory inputs in two ways:

- We experience them directly: For example, we see a person; hear a song; taste a piece of cake; smell a fragrance; someone we love gives a kiss. Those are actual sense contacts and are due to kamma vipāka.
- But then we tend to re-live that experience over and over in our MINDS. You may be surprised, but most of our "sense pleasures" or "kāma assāda" are created by our minds. A sensory contact comes and goes away relatively quickly; but we keep thinking about it, sometimes for hours. This "kāma assäda" is the one that we CREATE IN OUR MINDS, via vacī sañkhāra.
- For example, we may just see an attractive item in a store display that provides sensory pleasure while we are looking at it for a few seconds.
- But then we start thinking about how nice it would be to be able to buy it, enjoy it, and analyze how to go about paying for it, etc. We may be thinking about it for several days. Please take the time and contemplate this point.
- The initial sense contact of several seconds led to hours of thinking about it and making up "additional pleasure." That is $\boldsymbol{k} \bar{a} m a \operatorname{ass} \bar{a} d a$.

## What Are Sañkappa?

4. Let us discuss what is meant by "sañkappa rāga": Sañkappa means thoughts. Rāga means giving a highpriority (craving) for pleasures in samisāara; see, "Lobha, Rāga and Kāmacchanda, Kāmarāga."

- Thus "sañkappa rāga" means thinking about such sense pleasures and giving priority to them. We tend to think for hours about an actual sensory experience that we enjoyed in the past or one that we are about to experience in the future.
- Sometimes we also think for hours about how to enjoy a certain sense experience that seems out of reach for various reasons. In all these cases, we can spend hours and hours thinking about them and getting kāma assāda (or "āsvāda" in Sinhala) from it.
- In fact, most times sexual enjoyment comes from just thinking about a past experience or an anticipated one. The actual contact pleasure is relatively short-lived.

## Pleasurable Sensory Experiences Due to Good Kamma Vipāka

5. As we pointed out in \#3 above, some actual sense contacts arise due to kamma vipāka (good kamma vipāka lead to good sense experiences and bad lead to bad). Those are not kāma orkāma assāda.

- Even an Arahant experiences such sense experiences due to kamma vipāka, both good and bad. $\mathrm{He} /$ she may eat tasty food when offered, ride in a luxurious car, or see eye-catching pictures while on the road.
- But he/she will not keep thinking about how to enjoy such sense experiences, i.e., there is no "sañkappa rāga."

6. It is relatively easy to distinguish between sense pleasures due to kamma vipāka and those due to kāma assāda.

- When one is offered a tasty meal, for example, that is due to a previous good kamma, i.e., it is a kamma vipāka. But when one starts thinking how good that meal was and starts thinking about how to enjoy another such meal, that is kāma assāda.
- In the same way, one may be born to a wealthy family and get all types of luxurious sense contacts, those are kamma vipāka.
- Whether rich or poor, when one is thinking about acquiring and enjoying new sense pleasures or reminiscing on past sense pleasures, that is kāma assāda.

## What Is Wrong With Kāma Assāda or Sañkappa Rāga?

7. Now we have two questions.
A. Why is it OK to experience direct sense pleasures that naturally comes one's way, but not good to enjoy "made-up mental pleasures" by thinking about them? (It is important to realize that even those direct sense pleasures INITIATED by oneself do not count as harmless; when we think about it a bit, we realize that such instances have their beginnings at "sañkappa rāga," i.e., one must have thought about to initiate it).
B. How can one experience an enjoyable sensory pleasure and not be "tempted by it", i.e., not make "sañkappa rāga"?
8. The answers to those two questions can be found in one explanation. But that requires analyzing the situation from a different vantage point than we are used to. This is the "Dhamma that has never been known to the world.." or "pubbe ananussutesu Dhammesu..".

- The akusala-mūla Pațicca samuppāda cycle starts with, "avijjā paccayā sañkhāra." Those "madeup mental pleasures" or "kāma assāda" are precisely what sä̀khāra are. These have bad consequences, or ādīnava, through the rest of the Paticca samuppāda (PS) cycle: "sañkhāra paccayā viññāna," "viñ̃ān̄a paccayā nāmarūpa,.....up to "jāti paccayā jarā, marana, soka, parideva,...". Thus the endpoint is suffering.
- When we experience a "direct sense contact" that naturally comes our way, that is not sañkhāra or $\boldsymbol{k} \overline{\boldsymbol{a} m a} \boldsymbol{a s s} \bar{a} d \boldsymbol{a}$. That is a kamma vipāka. They do not lead to future suffering.
- In other words, sañkhāra in "avijjā paccayā sañkhāra" is sañkappa rāga. They eventually lead to suffering. That is the hard point to understand.

## Early Comprehension - Agitation of the Mind Due to Excess "Sensory Pleasures"

9. Now, one could say, "well, the more such sañkappa rāga that I make, it is better. I don't mind if the mind gets many such assāda in a given time."

- In order to analyze that, we need to look at the ādīnava (bad consequences) of such assāda, other than the mind being pushed and pulled in many directions as we discussed in the previous bullet.
- If you watch too many movies/ TV shows or play video games all day, your mind will be agitated. You may not get a good sleep. This is the key reason for the scattered-ness of our minds. This is called tappa or "heat in the mind"; see, "Satipatthāna Sutta - Relevance to Suffering in This Life."
- The problem is that each time we enjoy kāma assāda, we do (abhi)sañkhāra, as we saw above. They lead to future suffering via the akusala-mūla Paṭicca samuppāda cycle. This is what we have been doing in countless births up to now.

10. That future suffering can arise both in this life as well as in future lives. It can materialize at different levels depending on the "strength of the kāma assāda."

- Let us start at the most extreme level. One decides that "I have to have this. I am going to do whatever it takes to get it." With such a mindset one can kill, steal, engage in sexual misconduct, lie, or make any number of other immoral acts with a "drunken mind" or a"covered mind."
- Of course, the bad consequences are many, even during this life. One could get caught and go to jail. Even otherwise, one will be under the constant stress of worrying about being caught.
- But stronger consequences will follow in future lives as well, with interest. Thus a normal moral person can see the "ādinava" in such strong kāma assāda.
- By contemplating on such "ādīnava," it becomes easier for one's mind to automatically reject doing such acts. That is "nissarana." Through an understanding of the consequences, one avoids such acts.

## Long-Term Consequences of Craving "Sensory Pleasures"

11. At the next level, we may not do any of the immoral acts by body or speech, but may still accumulate vacī sañkhāra via constantly thinking about them. It is important to realize that such conscious thoughts (vitakka/vicāra) are included in vacī sañkhāra; see, "Correct Meaning of Vacī Sañkhāra."

- The problem with vacī sañkhāra or kāma assāda is that they are addictive. One can spend hours and hours enjoying past sense events of perceived future events (especially involving sex, food, and also about one's enemies).
- And vacī sañkhāra or kāma assāda appear to be harmless. No one else can know about them. One could spend hours on end generating kāma assāda about an object of interest and derive enjoyment. But they have consequences.
- It must also be remembered that all those kāya sañkhāra and vacī sañkhāra that one suppressed by one's will power started off as mano sañkhāra (thoughts that just come to one's mind) and then one normally "keeps going" by generating CONSCIOUS deliberate thoughts or vacī sañkhāra, which can lead to actual speech and even bodily actions.
- Thus even though dasa akusala corresponding to speech and bodily actions were avoided, those due to vacī sañkhāra (kāma assāda) would still count as bad kamma.
- This is why keeping the conventional five precepts is not sufficient; the hard part is to purify one's thoughts or the mind; see, "The Five Precepts - What the Buddha Meant by Them."

## Connection to Āsava and Anusaya

12. A key problem with vacī sañkhāra or the kāma assāda is that they lead to the formation of bad habits (gati), which in turn lead to the formation of new āsava/anusaya or in strengthening old āsava/anusaya; see, "Āsava, Anusaya, and Gati (Gathi)," and other related posts.

- It can become a vicious circle. In a way, this is the "wheeling process" of " riya" that sustains the cycle of rebirths; see, "Nibbāna - Is it Difficult to Understand?."
- Even though vacī sañkhāra (abhijjhā, vyāpāda, micchā dițthi) seem to be harmless, those can lead to birth in the apāy $\bar{a}$.
- When one starts controlling such conscious thoughts (vacī sañkhāra), one gati will gradually change, and then those "automatic bad thoughts" or mano sañkhāra will become less and less frequent because one's āsavalanusaya will gradually reduce.
- The best and permanent way to change āsava/anusaya is to comprehend anicca, dukkha, anatta. When one realizes that "nothing in this world can be maintained to one's satisfaction in the long run" (anicca), one's mind automatically stops thinking about such "made up pleasures."

13. Connection to pañca n̄̄varaṇa discussed at, "Pañca Nīvarana and Sensual Pleasures (Kāma)."

- All relevant posts at, "Paticca Samuppāda - Essential Concepts."

### 9.3.4 Icchā, Taṇhā, Kāma - Root Causes of Suffering

## March 7, 2021; March 8, 2021 (\#2, \#3)

An average human sees and perceives sensual pleasures are to be pursued. The Buddha taught that craving for sensual pleasures is the root cause of suffering. However, sensual pleasures can be experienced without having cravings for them.

## Difference Between Kāma and Sensory Pleasures

1. As we discussed in the post, "What is "Kāma"? It is not Just Sex," there is a huge difference between $k \bar{a} m a$ and "good sensory experiences."

- Kāma is the DESIRE/CRAVING to enjoy more of those sensory experiences. That is why the word "icch $\bar{a}$ " and "taṇh $\bar{a}$ " are closely associated with $k \bar{a} m a$ and $k \bar{a} m a ~ r a \bar{g} a$.
- Wealthy people, including Kings, offered the Buddha tasty meals. Jetavanārāmaya, where the Buddha lived for many years, was built like a palace.
- Of course, the Buddha decided to spend the last several months of his life traveling, even while suffering some ailments. He could have stayed in Jetavanārāmaya or one of many such temples. He probably wanted to illustrate the suffering that he himself was experiencing in his old age.
- The Buddha's main message was that one would not be free of future suffering as long as one does not see the long-term bad consequences of sensory pleasures. But, one needs to get there in a step-by-step way. It is impossible to give up sensory pleasures willfully. One MUST first SEE the bad consequences of craving sensory pleasures.

## The Analogy of a Drunkard

2. Let us consider person X an alcoholic. He likes to drink whenever he gets a chance because it is a pleasurable experience for him.

- When X goes to a physical exam, he is asked about his alcohol consumption. Upon hearing how much X drinks, the physician advises him to cut down on drinking.
- Yet, X has a hard time getting rid of the habit. He tries hard to "cut down," but he is back to his routine drinking after a few days.
- One day, he experiences severe abdominal pain and swelling. When admitted to the hospital, his physician takes a scan of his liver and explains to him that it has been damaged and that except for the brain, the liver is the most complex organ in the body. The physician explains that he will have serious health problems soon unless he stops drinking.
(i) Now, for the first time, X "sees" the dangers in drinking alcohol and can cut down his drinking habit drastically. He has lost "ditṭhi vipallāsa" or "wrong/distorted views" regarding drinking.
(ii) After a year, X goes for a checkup, and the physician asks him about his drinking habit. X says he does not drink as much as he used to because he is afraid of dying at a young age. But he says he still likes to drink and would have a drink when the urge becomes too strong. He still has "saññ̄a vipallāsa" or "wrong/distorted perceptions" regarding drinking.
- The doctor gives the following advice: (i) keep contemplating on the dangers of damaging his liver and (ii) also keep contemplating on the relief that he has gained by stop drinking (no more abdominal pain/swelling, etc.), (iii) don't associate with those who like to drink, (iv) associate with those who don't drink in excess.
- Following the advice of the physician, X gradually loses his desire to drink. After several months, he realizes that the desire to "have a drink" is not there anymore. Now he has lost "saññā vipallāsa" regarding drinking as well.

## The Similarities in the Noble Path

3. Humans (and all living beings) are like the alcoholic $X$ in the analogy in $\# 2$ above. They can only see the "immediate pleasures" that mind-pleasing things in this world provide.

- The Buddha is like the physician who can see the dangers of that mindset. But it is hard to convince an average human that craving those "mind-pleasing things" can be not only unfruitful but also WILL HAVE dangerous consequences in the future.
- A Sotāpanna learns the dangers of kāma assāda from a true disciple of the Buddha (an Ariya.) That transition to the Sotāpanna stage happened when he started "seeing" the dangers of kāma assāda.
- There is one difference between the two cases: Unlike the physician who was able to take a scan of the damaged liver and convince X of the dangers, it is harder to explain the dangers to those who don't even believe in rebirth. However, once that stage is reached, the similarities are there as below.
(i) A Sotāpanna "seeing the dangers in craving sensory pleasures" is similar to X, who started "seeing the dangers in heavy drinking." He has now removed ditthi vipallāsa about "sensual pleasures."
- There is a second difference between the two cases: While it is possible for X to "lose his willpower" and to go back to his "old ways" of being an alcoholic, the mindset of a Sotāpanna WILL NEVER change, even in future lives.
(ii) Analogous to X, a Sotāpanna still has not removed the MINDSET (saññ̄ā vipallāsa) that sensory pleasures can provide "enjoyment." Of course, he/she will not engage in immoral deeds to experience such sensory pleasures.
- Similar to X, a Sotāpanna should contemplate the drawbacks of craving worldly pleasures (i.e., contemplate anicca, dukkha, anatta nature or engage in aniccānupassanā, dukkhānupassanā, anattānupassan $\bar{a}$ ) and associate with like-minded people striving for Nibbāna.
- As he contemplates the drawbacks of craving worldly pleasures, sañ̃̄̄$\overline{\boldsymbol{a}}$ vipallāsa fades away and one day he/she attains the Anāgāmi stage by completely eliminating sañña vipallāsa. After that, any desire for sensual pleasures will be gone.
- Many people have a hard time understanding the difference between ditṭhivipallāsa and sañnā vipallāsa. I hope the above analogy is useful.

## Difference Between Kāmacchanda and Kāma Rāga

4. Another way to express the above is the following. A Sotāpanna has removed kāmacchanda, but kāma rāga remains. When diṭthi vipallāsa is removed, one would NOT be "blinded" by sensual pleasures, i.e., $k \bar{a} m a c c h a n d a$ removed. But the tendency to like sensual pleasures (kāma rāga) remains because sañ $\bar{n} \bar{a}$ vipallāsa is still there.

- Thus, a Sotāpanna can live the normal life of a householder. He/she can be married and bring up a family.
- Only when kāma rāga intensifies may one be tempted to engage in activities harmful to others and oneself. That becomes likely when one drinks too much alcohol or takes drugs. A Sotāpanna would instinctively abstain from such activities.
- Association with "bad friends" could make an average person engage in harmful activities. For example, hunting and fishing are immoral activities to be abstained from. Such activities are considered to be accepted "sports activities," and many people engaged in such activities without realizing the dangers. Such activities fall under the "vihims $\vec{a}$ " category (hurting other living beings for one's pleasure) in Buddha Dhamma.
- Note that vihimsa is different from vyāpāda. With vyāpāda, one does immoral deeds with anger/hate. Actions with vihims $\bar{a}$ are done with ignorance (avijjā.)

Jhāna Correspond to Mindset of Brahmas Who Have Overcome Kāma
5. One is born in Brahma realms when one has cultivated jhāna. To cultivate jhāna, one must overcome $k \bar{a} m a$ at least temporarily.

- Thus, one must at least temporarily suppress kāma rāga to cultivate $j h a \bar{a} a$. In fact, one MUST abstain from kāma, vyāpāda, and vihimisa sañkappa (i.e., abstain from thoughts involving sensual, angry, or otherwise harmful thoughts towards other living beings.
- This is why a Brahma in any Brahma realm is free of kāma rāga, vyāpāda, and vihiminsa thoughts during that Brahma existence. But unless they have attained magga phala, they have all three "hidden" or "temporarily suppressed" during that existence (as anusaya.)
- That is just a "side-track" to show the connection to jhāna.

## Difference Between an Average Human and a Noble Person

6. The following table shows what we discussed above in summary form. The first and second columns show an average human and a Noble Person (Ariya). The four rows for the Noble Person depict the Four Noble Truths, as indicated by the third column.

## Average Human

Kāma (sensual experiences) are valuable.
Pursuing Kāma assāda is beneficial.
Not having enough sensual pleasures is suffering.
Noble Eightfold Path is not pleasurable.

## Noble Person

Sensual experiences are empty of value and are suffering.
Pursuing Kāma assāda leads to suffering.
Future suffering stopped by losing cravings for kāma.
Noble Eightfold Path is the way to stop suffering (i.e., to lose cravings for kāma.

## Four Noble Truths

First Noble Truth (What suffering is)
Second Noble Truth (root cause of suffering)
Third Noble Truth (stopping future suffering)
Fourth Noble Truth (the way to eliminate suffering)

- The First Noble Truth states what suffering is. It is not the suffering that one FEELS. Sensual pleasures are devoid of value and cause suffering even during this life (by stressing the mind). Of course, more suffering will materialize in future lives too.
- The root cause of suffering in this life, and future lives, is craving sensory pleasures (kāma). That is the Second Noble Truth.
- The average human (puthujjano) believes that lack of sensual pleasures is suffering. That is why he/she strives for more sensory pleasures. But the Third Noble Truth says that all suffering can be stopped by losing cravings for sensory pleasures (kāma.)
- The average human (puthujjano) cannot understand why a Noble Person lives a life staying away from sensual pleasures. He/she perceives such a life to be suffering. But the Noble Person lives a stress-free life and is free from the births in the $a p \bar{a} y \bar{a}$ where there is unimaginable suffering. The way to become a Noble Person (i.e., the way to lose cravings) is the Eightfold Noble Path. That is the Fourth Noble Truth.
- Again, remember that kāma means "sañkappa rāga" or "having a mindset that sensual pleasures (and even jhānic pleasures) are beneficial. Of course, one must first remove the craving for sensual pleasures (kāma rāga) before tackling rūpa rāga and arūpa rāga (cravings for jhānic pleasures.)

## Icchā Is the Root Cause of Suffering - In the First Sutta

7. In his first sutta, the Buddha defined suffering to arise originating with icch $\bar{a}$. The First Noble Truth is stated as: "jātipi dukkhā, jarāpi dukkhā, byādhipi dukkho, maraṇampi dukkham̈, appiyehi sampayogo dukkho, piyehi vippayogo dukkho, yampicchaì na labhati tampi dukkhain-sainkhittena pañcupādānakkhandhā $d u k k h \bar{a}$." See, "Essence of Buddhism- In the First Sutta."

- There, he stated that suffering arises when one does not get the desired outcome: "Yam pi icchā̀̀ na labhati tam pi dukkhaim" OR "one suffers when one does not get (na labhati) what one desired (icchāī.)
- Because of that desires (icchā), one would try to keep close (upādāna) those things that one desires. Those things are parts of the pañckkhandhä that one likes, i.e., pañcupādānakkhandh $\bar{a}$.
- For details, see "Icchā (Cravings) Lead to Upādāna and to Eventual Suffering."

8. The connection between icch $\bar{a}, \tanh \bar{a}$, and $k \bar{a} m a$ comes in the Second Noble Truth on how that suffering arises: "yāyaì taṇhā ponobbhavikā nandirāgasahagatā tatratatrābhinandinī, seyyathidaím-kāma tanhā, bhava taṇhā, vibhava tanhā̆."

- Because of the icchā (or liking/desire), we get attached (taṇhā): "it is this attachment (tanh $\bar{a}$ ) which leads to renewed existence. That taṇhā is just for those delightful things in this world ( $k \bar{a} m a \operatorname{tanhh} \bar{a}$ ), for continued existence (for those who believe in rebirth, i.e., bhava tanh $\bar{a}$ ), and for optimum pleasures while this life lasts (for those who do not believe in rebirth, i.e., vibhava tanh $\bar{a}$ )
- Here we note that $k \bar{a} m a \tanh \bar{a}$ is common to both groups with bhava taṇh $\bar{a}$ and vibhava taṇh $\bar{a}$.

9. The Third Noble Truth states how that suffering can be stopped from arising (nirodha): "yo tassāyeva tanh $\bar{a} y a ~ a s e s a ~ v i r a ̄ g a ~ n i r o d h o ~ c a ̄ g o ~ p a t ̣ i n i s s a g g o ~ m u t t i ~ a n a ̄ l a y o " ~ O R ~ " i t ~ i s ~ t h e ~ r e m a i n d e r-l e s s ~ f a d i n g ~$ away and cessation of that tanh $\bar{a}$, the giving up and relinquishing of it, freedom from it, losing all affection for it."

- Of course, the way to stop future suffering is in the Fourth Noble Truth: "ayameva ariyo atthañgiko maggo, seyyathidaím-sammādiṭthi ... pe ... sammāsamādhi" OR" it is this Noble Eightfold Path. That is, Sammā Diṭṭhi ... Sammā Samādhi.

## Icchā, Taṇhā, Kāma - Can be Removed Only via Noble Eightfold Path

10. The key point here is that those three (icch $\bar{a}, \tan h \bar{a}$, and $k \bar{a} m a)$ CANNOT be removed directly by willpower or rituals. First, one needs to comprehend WHY icchā, taṇhā, and kāma GIVE RISE to suffering. That is the first step in the Noble Eightfold Path: Sammā Ditṭhi.

- Once that is understood, one will automatically follow the Noble Path. First, one will think accordingly (Sammā Sañkappa.) Then the rest will also follow. One will speak (Sammā Vācā), act (Sammā Kammanta), make an effort (Sammā Vāyāma), live (Sammā $\bar{j} \bar{j} \bar{\imath} a$ ), with that mindset (Sammā Sati). Then one will automatically get to Sammā Samādhi.
- There are two descriptive ways to understand the suffering hidden in icch $\bar{a}, \tanh \bar{a}$, and $k \bar{a} m a$. One is to comprehend Paticca Samuppāda, and the other is to comprehend Tilakkhaṇa.
- Of course, those two ways are inter-related. That will become more clear as we proceeded. It should already be clear to some extent by now.

9.3.5 Jāti - Different Types of Births

March 14, 2021; revised March 15, 2021; July 29, 2022
Before understanding Paticca Samuppāda, we need to understand the 11 terms there. One critical word is $j \bar{a} t i$. There are different meanings of the word $j \bar{a} t i$, depending on the context.

## Three Main Meanings of $\boldsymbol{J a ̈ t} \boldsymbol{i}$

1. The commonly-used meaning of $j \bar{a} t i$ is "birth," as in the birth of a human body. We celebrate "birthdays" based on the day someone was born in this life. As we see below, Buddha Dhamma has two other (different) meanings depending on the context.

- In the Uppatti Paticca Samuppāda, jāti means the birth in a new realm among the 31 realms. For example, a living being can be born as a human, animal, Deva, Brahma, etc.; that is a birth in that existence. See, "Akusala-Mūla Upapatti Paticca Samuppāda."
- On the other hand, in Idappaccayatā Paṭicca Samuppāda, one can be "born" in countless "states" during a given lifetime. See \#3 below.
- The above TWO are the main meanings of " $j \bar{a} t i "$ in Buddha Dhamma. After understanding the concepts, one could use the same term appropriate for a given situation.
- Note that $j \bar{a} t i$ is pronounced "jāthi" with "th" sound as in "three." See ""Tipitaka English" Convention Adopted by Early European Scholars - Part 1."

## "Birth of a Baby" as Jāti Needs to be Understood as the Mundane Version

2. The mundane meaning of "birth" as the birth of a human (or animal) baby is all we can "see" with our limited worldview.

- It takes a Buddha to comprehend the real nature of this complex world.
- The other two possible meanings of "jāti" require a basic understanding of the "wider world view."
- That means possible births among 31 realms in a rebirth process. But it DOES NOT mean the "reappearing" of a soul (as in Abrahamic religions) or a ātman (as in Hinduism.)

## "Births" During a Lifetime - One Important Type of Jāti

3. This type of $j \bar{a} t i$ happens during a lifetime. For example, one can become angry and be "born" in an "angry bhava" and "angry jāti" for a short time. An hour later, one may learn of a big promotion and become very happy. At that time, one is "born" in a "happy $j \bar{a} t i$."

- Even before understanding births ( $j \bar{a} t i$ ) in the rebirth process, it is important to understand how such temporary $j \bar{a} t i$ arise. The Buddha discussed that in many suttas. See, for example, "WebLink: suttacentral: Avijiā Sutta (AN 10.61)." This sutta explains that one must associate with "good people," cultivate good habits, and be mindful of one's actions. That way, one is likely to be "born in good jāti" during a given bhava. That is the basis for guaranteeing good rebirths in the rebirth process (saimsāra.)
- See "Idappaccayatā Paticca Samuppāda" for details on "temporary jāti."

## The Primary Meaning of $J \bar{a} t i$ - Birth in One of the 31 Realms

4. In the "WebLink: suttacentral: Saccavibhañga Sutta (MN 141)," Ven. Sariputta explains in a bit more detail the material in the "Dhammacakkappavattana Sutta (SN 56.11)." That sutta states: "Katamā cāvuso, jāti? Yā tesamin tesam sattānam tamhi tamhi sattanikāye jāti sañjāti okkanti abhinibbatti khandhānaim pātubhāvo āyatanānaì paṭilābho, ayaì vuccatāvuso: 'jāti'."

Translated: "What is $j \bar{a} t i$ ? It is the birth of beings in the various realms with one or more of the following stages: jāti sañjāti okkanti abhinibbatti khandhānain pātubhāvo āyatanānamं paṭilābho. This is called birth."

- English translations try to translate those words directly, but that does not convey the real meaning of those words. See, for example, "WebLink: accesstoinsight.org: Discourse on The Analysis of the Truths."

## Births in the Brahma and Deva Realms Have Only the First step - Jāti

5. For opapātika (instantaneous) births in the Deva and Brahma realms, $j \bar{a} t i$ is the ONLY stage involved. A Brahma or a Deva is born instantaneously, complete with "all parts of the body." [opapātika : lit. 'accidental' (from upapāta, accident; not from upapatti, as PTS Dict. has); 'spontaneously born', i.e. born without the instrumentality of parents. This applies to all heavenly and infernal beings.]

- Here the "body" refers to the combination of the mental body and physical body composed of the four great elements. Of course, the physical bodies of Brahmas only have a few units of suddhatthaka. Devas have more "solid bodies" but are still not visible to us.
- More details in "Manomaya Kāya (Gandhabba) and the Physical Body."

## Humans and Animals Have Other Additional Stages of "Birth"

6. Humans and animals have those other four stages as follows. Let us describe human birth.
(i) A human is first "born" with just 3 sets of suddhaṭthaka (vatthu dasaka, kāya dasaka, and bhava dasaka.) This happens at the $j \bar{a} t i$ stage.
(ii) Within a split second, 4 more dasaka (4 pasāda rūpa of cakkhu, sota, ghāna, and jivhā) are incorporated, leading to the sañjäti stage. This is the same as the gandhabba state. That gandhabba then stays for the duration of the human existence (bhava.) It is periodically pulled into a womb by kammic energy to be "born with a physical body."
(iii) When pulled into a womb, the gandhabba merges with a zygote, which is the okkanti state.
(iv) Then, that embryo grows in the womb in the abhinibbatti stage.
(v) When all body parts are formed, that is the khandhānain pātubhāvo stage, and a baby then comes out of the womb. That last stage is what we commonly call a "birth."
(vi) The sensory faculties start working as $\overline{\boldsymbol{a}}$ yatana after the baby is born. This is the last $\overline{\boldsymbol{a}} \boldsymbol{y} \boldsymbol{a t a n a} \boldsymbol{a} n a \dot{\boldsymbol{m}}$ patilābho stage.

- See "Manomaya Kāya (Gandhabba) and the Physical Body" and "Buddhist Explanations of Conception, Abortion, and Contraception" for details.

## Repeated "Births" Within Human and Animal Bhava

7. When that physical body dies, that is not necessarily the end of the "human bhava." That gandhabba comes out of the dead body and waits for another womb. We also call this "repeated jāti" within that same human bhava. See "Bhava and Jāti - States of Existence and Births Therein." Per our discussion above, " $j \bar{a} t i "$ " in that post refer to the mundane meaning - which is the same as the khandhānaim pātubhāvo stage in \#6 above. Thus, we need to understand the meaning of a word appropriate for the situation.

- When the kammic energy for the human bhava (human existence) is depleted, that gandhabba dies, which is the end of human bhava. Then it can grasp a new existence as a Deva, Brahma, an animal, etc.
- Therefore, we can see that a human can be in the 'human bhava" as a human gandhabba for many thousands of years. The same holds for animals. A fly lives with a visible "fly body" only for several days, but that "fly bhava" can last thousands of years. That is the "repeated births" within a given bhava. There are many more details that can be found by searching for posts on gandhabba; type the word "gandhabba" in the "Search" box on the top right.

## There Are Other Types of Jāti Too!

8. When one gets deeper into Buddha Dhamma, one can see that everything in this world is "born" due to causes and effects, i.e., Pațicca Samuppāda. For example, a tree is born out of a seed. A car is "born" in a factory. Paticca Samuppāda can describe all those.

- The Buddha explained this to Vāsetṭha in the "WebLink: suttacentral: Vāsettha Sutta (MN 98)." The English translation there is good enough to get the idea: "WebLink: suttacentral: With Väsettha (MN 98)." However, there is no need to get into those aspects initially.
- However, in that sutta, the Buddha told Vāsetṭha that humans are the same as a species. But they can be "born" in various "gati" according to their actions. For example, one who steals is "born" a thief. In another example, the Buddha says, "I don't call someone a brahmin (of high caste) based on the mother or womb they came from." Furthermore, even an immoral person can change to be "born a moral person of good character."
- Those are also "types of $j a \bar{a} t i$."

## Jātidhammā Different From Jāti

9. It is to be noted that $j \bar{a} t i d h a m m \bar{a}$ means something different from $j \bar{a} t i$.

- As explained in the "WebLink: suttacentral: Saccavibhañga Sutta (MN 141)," Jätidhammā are dhammā responsible for jāti. Similarly, jarādhammā, byādhidhammā, and sokaparidevadukkhadomanassupāyāsadhamm $\bar{a}$ are dhammā responsible for old age, disease, and all other sufferings associated with $j \bar{a} t i$ : sorrow (soka), lamentation (parideva), suffering (dukkha), misery (domanassa), and despair (upāyāsa).
- A fairly good English translation: "WebLink: accesstoinsight.org: Discourse on The Analysis of the Truths."

## Summary

10. The term $j \bar{a} t i$ (birth) needs to be understood according to the given situation.

- When someone says, "I was born 30 years ago," that refers to his/her birth with the present physical body. That person would not know when he/she was first "born" in the human realm. Thus we normally refer to birth as "to be born with a human body." We say the same about animals; "This dog was born ten years ago."
- However, in Buddhist terminology, birth (jāti) refers to two main types discussed above: the first happens many times during a given lifetime.
- The second type of $j \bar{a} t i$ is the moment of appearance in any given realm. A living being could be born a Deva, Brahma, human, animal, etc.
- After the Parinibbāna (death) of an Arahant, birth ( $j \bar{a} t i$ ) in any of the 31 realms of this world will not take place. In the "WebLink: suttacentral: Dhammacakkappavattana Sutta (SN 56.11)," the Buddha stated, "ayamantimā jāti" or "this is my last birth." At Parinibbāna (merging with Nibbāna), suffering stops without a trace.
- As long as there is a $j \bar{a} t i$, it ALWAYS ends up in death. That is why all Patticca samuppāda cycles end with decay (jarā) and death (marana.) Even the kusala-mūla version of Pațicca Samuppāda ends up with just "jāti paccayā jarā maraṇam.." See, "Kusala-Mūla Paticca Samuppāda."
Thus, even a Noble Person on the way to Nibbāna will encounter death. Of course, death is stopped at Parinibbāna.
- The akusala-mūla version of Paṭicca Samuppāda has "jāti paccayā jarā, maraṇa, soka-parideva-dukkha-domanassupāyasā sambhavan'ti." That has other types of suffering as well. See, "AkusalaMūla Upapatti Paticca Samuppāda."

### 9.3.6 <br> Bhava - Kammic Energy That Can Power an Existence

March 21, 2021; revised March 27, 2021; May 31, 2022 (\#4); August 31, 2022 (esp. \#4)
Bhava is kammic energy created by the mind. It can power a new existence in kāma bhava, rūpa bhava, or arūpa bhava. Buddha means "to stop bhava" (bhava + uddha.)

## Grasping a Bhava (Kammic Energy) Leads to Jāti (Birth) in That Bhava

1. There are different types of $j \bar{a} t i$ or births. See, "Jāti - Different Types of Births."

- Nothing can arise without a cause and sufficient energy. Any birth can arise only if kammic energy can sustain that birth. Different types of energy can sustain different types of births.
- Three main types of bhava refer to kammic energies that can sustain existences in the kāma loka, rūpa loka, or arūpa loka. The Buddha explained that to Ven. Ānanda in the "WebLink: suttacentral: Pathamabhava Sutta (AN 3.76)." Venerable Ānanda asked the Buddha "Bhante, they speak of this thing called 'bhava'. How is bhava defined?"
- As we know, all 31 realms in this world can be divided into three categories: 11 realms in kāma loka, 16 in rūpa loka, and four in arūpa loka. See, " 31 Realms Associated with the Earth."
- Existences in those three are supported by kāma bhava, rūpa bhava, and arūpa bhava. We will see below that three different types of energies are created by the mind.

## Kāma Bhava Required for Births in Kāma Loka

2. The Buddha explained kāma bhava as follows: "Kāmadhātuvepakkañca, ānanda, kammaì nābhavissa, api nu kho kāmabhavo paññāyethā"ti?

Translated: "If, Ānanda, a kammic energy established in the sensual plane (kāmadhātuvepakkañca or kāma dhātuve pakkañca) is not entered (nābhavissa or na abhavissa), can an existence in a sensual realm (kāma bhavo) come about?"

- Venerable Ānanda replied that it would not be possible. To be born in any of the 11 realms in the $k \bar{a} m a$ loka, such an appropriate type of energy must be cultivated and then grasped to "start that birth in kāma loka."
- Of course, there are different varieties of kammic energy powering the 11 realms in kāma loka.
- But they all have one thing in common: craving sensory experiences associated with all five six senses, and in particular, the five physical senses. Thus the term pañca kāma or "five types of kāma."
- Note that Devas in the 6 Deva realms have less dense bodies than humans. But they still have dense enough bodies to experience all five physical sensory inputs.

## Rūpa Bhava Required for Births in the Rūpa Loka

3. In the same way as above, the Buddha explained rūpa bhava: "Rūpadhātuvepakkañca, ānanda, kammaí nābhavissa, api nu kho rūpabhavo paññāyethā"ti?

Translated: "If, Ānanda, a kammic energy established in the rūpa plane (rūpadhātuvepakkañca or rūpa dhātuve pakkañca) is not entered (nābhavissa or na abhavissa), can an existence in the rūpa plane (rūpa bhavo) come about?" No.

- Therefore, one must have cultivated the necessary type of energy to grasp a birth in one of the 16 rūpāvacara Brahma realms in rūpa loka. Such energies are created with rūpāvacara jhāna.
- To cultivate $r \bar{u} p \bar{v} v a c a r a j h a ̄ n a$, one MUST give up cravings for the strongest of the pañca kāma, i.e., those sensory experiences associated with a physical body. Those are smell, taste, and physical touch.
- That is why rūpāvacara Brahmas do not have physical bodies. Those Brahmas are satisfied with just sights and sounds.
- There is no need for a physical body if smell, taste, and body touches are not needed. A rūpāvacara Brahma has only a manomaya kāya or a "mental body."
- As we have seen human gandhabbas can still see and hear after coming out of the physical body. A physical body with eyes and ears is not necessary to see and hear. Only the cakkhu and sota pasāda rūpa (in the manomaya kāya) are required for seeing and hearing. See, "Mental Body Versus the Physical Body."

## Arūpa Bhava Required for Births in the Arūpa Loka

4. As can be expected, the Buddha explained arūpa bhava as follows: "Arūpadhātuvepakkañca, ānanda, kammaì nābhavissa, api nu kho arūpabhavo paññ̄̄yethā"ti?

Translated: "If, Ānanda, a kammic energy established in the arūpa plane (arūpadhātuvepakkañca or arūpa dhātuve pakkañca) is not entered (nābhavissa or na abhavissa), can an existence in the arūpa plane (arūpa bhavo) come about?" No.

- Therefore, one must have cultivated the necessary energy associated with the arupa bhava to grasp a birth in one of the four arupāvacara Brahma realms in arūpa loka. Such energies are created with arupāvacara jhāna.
- To cultivate arupāvacara jhāna, one MUST give up cravings for all of the pañca kāma. That is why arupāvacara Brahmas do not have any pasāda rūpa. It has only hadaya vatthu in the manomaya $k a \bar{a} a$. They can not even see or hear. They can only think.
- Thus the only "matter" in rūpāvacara Brahma realms is the suddhatthaka in the hadaya vatthu of those Brahmas.
- We notice a trend from the above summary. Let us discuss that now.

## "Level of Suffering" Decreases With "Decreasing Matter"

5. In general, "Level of Suffering" Decreases With "Decreasing Matter." We see that sensory experiences with all six senses are available only in the 11 realms of the kāma loka. That is where most suffering is too! While the Deva realms with "less dense bodies" have optimum sensory pleasures with all six senses, the four lowest realms (apāyās) have the most suffering. The human realm in the middle has both pleasures and suffering.

- Of course, pañca kāma pleasures are available only in kāma loka. They include body touches, tastes, smells, sights and sounds. The first three types REQUIRE dense bodies to have "close contacts." But there is a "price to pay" as we will discuss below.
- Furthermore, those who cultivate rūpāvacara jhāna (Ariya or anāriya) can see that "jhānic pleasures" are much better and longer-lasting than "pañca kāma pleasures."
- The rūpāvacara jhāna are the first four jhāna. If one keeps going up to higher jhāna, they can see that the higher four arūpāvacara jhāna are better than the rūpāvacara jhāna.
- That is why it is easier for those who have cultivated jhāna to see that there is stress associated with "sensory contacts." The closer the contact is, the stronger the stress level.
- However, there are some exceptions to this "rule." While that trend holds well for the realms above the human realm, there are exceptions in the four lowest realms. In particular, some petas (hungry ghosts) have subtle (not dense) bodies.

## Increasing "Cooling Down" With Decreasing Sensory Contacts

6. In the long-run, having more faculties for sensory experiences has "built-in" suffering much more than any pleasures. The ability to smell, taste and touch requires a dense physical body. Such a physical body comes with bodily pains, diseases, and can be subjected to injuries. Such drawbacks are minimum in Deva realms where those bodies have the least density. But in other realms in the kāma loka, such sufferings can be unbearable, especially in the apāyās.

- Those who cultivate such rūpāvacara jhāna can experience this "relief" in this life itself. As one progresses towards higher $r \bar{u} p \bar{v} v a c a r a j h a ̄ n a$, the physical body is felt less and less. In the fourth $j h a \bar{a} a$, one does not feel the physical body at all. Furthermore, those who cultivate such rūpāvacara jhāna are invariably born in $r \bar{u} p \bar{v} v a c a r a ~ B r a h m a ~ r e a l m s ~ a t ~ t h e ~ d e a t h ~ o f ~ t h e ~ p r e s e n t ~ h u m a n ~ b o d y . ~$
- When one transcends the fourth $j h \bar{a} n a$ and gets into the higher $j h a \bar{a} \bar{a} s$, one will start seeing that even rūpāvacara jhāna are stressful. The relief becomes even higher as one proceeds to the highest arupāvacara jhāna. At the highest arupāvacara jhāna, one just feels that one is alive and the stress level is at the minimum. However, one with anāriya jhāna cannot go beyond that and stop that remaining stress, because one still has anusaya (latent defilements.) Furthermore, one with anusaya can be reborn even in the apāyās in future lives. This is why anāriya jhānās are useless in the end. See, "Samādhi, Jhāna, Magga Phala - Introduction."
- But an Arahant who can attain the highest jhāna can "stop life altogether" and get into "nirodha samāpatti." That can last up to 7 days, and one can "experience full Nibbāna" during that time. But that is not an experience in this world that can be described with the vedanä cetasika. We have no idea of what that would be like.

## Parinibbāna Is Where There Is No Suffering

7. Not even a trace of stress - let alone any suffering - is left when an Arahant attains Parinibbāna at death. All three planes of existence (kāma bhava, rūpa bhava, arūpa bhava) are absent in Parinibbāna!

- This is why "this world of 31 realms" and Parinibbāna are mutually exclusive. One can exist ONLY in either "this world" OR in "full Nibbāna" (Parinibbāna.)
- Note that even an Arahant lives in "this world" until death, and is subject to suffering due to kamma vipāka. Even the Buddha had some ailments and Ven. Moggallana was beaten to death.
- Therefore, even an Arahant is subjected to suffering as long as living in "this world of 31 realms." Thus Nibbāna is not complete until the death of the Arahant.

## Summary

8. Bhava is kammic energy created by the mind. In the above, we discussed three main types of bhava responsible for ALL births ( $j \bar{a} t i$ ) in this world of 31 realms.

- As we can see, the mind creates the required kammic energy. That is quite clear in the cases of rūpa bhava and arūpa bhava where the corresponding jhāna cittā produce that energy.
- Energies associated with kāma bhava are also produced in javana citta. Such javana cittā arise when we are engaged in a strong kamma. For example, javana energy to fuel a birth in the niraya or hell (the lowest realm) is produced in the mind of the murderer while doing that killing.
- That is how different types of bhava are related to different types of kamma. Cultivating jhāna is a type of kamma too.
- Buddha means "to stop bhava" (bhava + uddha.) Only a Buddha can figure out how to stop grasping various types of bhava (kammic energies) that we have accumulated, and thus stop any and all future suffering. That is why "Buddha" is a shared title for all the Buddhās.

All posts in this subsection at "Paticca Samuppāda - Essential Concepts."

### 9.3.7 Bhava and Punabbhava - Kammic Energy Giving Rise to Renewed Existence

March 28, 2021
Bhava is kammic energy. When a vipāka due to that kammic energy is grasped (upādāna), that leads to a new existence (punabbhava.)

## Summary of the Previous Post

1. Bhava is kammic energy created by the mind. It can power a new existence in kāma bhava, rūpa bhava, or arūpa bhava. Those are three main types of bhava responsible for ALL births (jāti) in this world of 31 realms.

- As humans, we can generate all three types of energies that CAN power a new existence in those three bhava. Depending on the details of kammic energies (i.e., specific kamma committed,) they CAN lead to births ( $j \bar{a} t i$ ) in the 4 apāyās, the human realm, and 6 Deva realms in kāma bhava, or in 16 Brahma realms in the rūpa bhava or 4 Brahma realms in arūpa bhava.
- See, "Bhava - Kammic Energy That Can Power an Existence."

## Bhava and Punabbhava

2. Just because there are energies that CAN power a new existence, that second step of grasping (upādāna) a new existence (punabbhava) DOES NOT happen automatically. To be reborn in a new existence, bhava MUST become punabbhava ("puna" + "bhava," where "puna" is "repeat/renewed.") In other words, the mind must grasp (upādāna) that "stored energy" (bhava) to energize the next existence.

- For example, Angulimala killed 999 people just before he met the Buddha. So, he had created a strong kammic energy that could have led to a birth in the niraya, the lowest realm. That kammic energy was there in a "niraya bhava" to support existence in a niraya.
- To INITIATE that "niraya bhava," his mind must latch onto that energy at the cuti-patisandhi moment at the end of the human bhava. However, he learned Dhamma and became an Arahant. Therefore, Ven. Angulimala's mind had become purified and would not latch onto existence in the niraya.
- In fact, since he had attained the Arahanthood, his mind would not latch onto ANY existence (bhava) in this world. He probably cultivated jhanas before his death, but birth in a Brahma realm was also not possible.
- Thus, it is critical to understand the difference between bhava and punabbhava.

## To Be Born in an Existence (Bhava) It Must Be Grasped (Upādāna)

3. We all have done MANY of both good and bad kamma in this life and previous lives. At the end of the human bhava, one can bring a new existence (punabbhava.) For that to happen, the mind needs to go through the "upādāna paccayā bhava" step in Pațicca Samuppāda at the cuti-pațisandhi moment.

- However, depending on the "level of purity" of a given mind, it may not grasp certain types of bhava. For example, a Sotāpanna's mind would not "grasp" (upādāna) a bhava in an apāya; such a bhava would not be compatible with the gati of a Sotāpanna.
- Similarly, an Anāgāmi's mind would not grasp even a human or a Deva bhava. Since Anāgāmi has "seen" the perils of births in kāma loka (kāma bhava), "renewed bhava" (punabbhava) in the kāma bhava WILL NOT happen.
- The mind of an Arahant has seen the perils of ALL existences in this world. Thus, it would not grasp an existence in this world. At death, an Arahant will be released and will merge with Nibbāna.
- Even an Arahant would have accumulated many types of bhava (kammic energies), especially in previous lives. However, none of them will lead to punabbhava or "renewed existence" since that mind would not grasp any existence in this world. That mind has realized that no existence is free of suffering.

## If There Is No New Existence (Punabbhava), There Is No Rebirth (Jāti)

4. Now we can clearly see what the Buddha stated in his first sutta, "WebLink: suttacentral: Dhammacakkappavattana Sutta (SN 56.11)": "Ñānañca pana me dassanaì udapādi: 'akuppā me vimutti, ayamantimā jāti, natthi dāni punabbhavo'" $t$.

Translated: "The knowledge and vision arose in me: 'Unshakable is the liberation of my mind. This is my last birth. Now there is no more renewed existence."

- There are many suttas with similar statements for Arahants. You can search for the verse "natthi dāni punabbhavo" at Sutta Central Search. That phrase means, "now there is no more renewed existence."

## "Upādāna Paccayā Bhava" Step in Idappaccayatā Paṭicca Samuppāda

5. We must understand many of the terms in Paticca Samuppāda, depending on the context. I have pointed out many times that "viññ̄ạna" in the "sañkhāra paccayā viñ̃̄̄̄ṇa" is ALWAYS a kamma viññāna and NOT a vipāka viññāna (like cakkhu viññāna or "seeing.")

- In Paticca Samuppāda cycles that run DURING a lifetime (Idappaccayatā Paṭicca Samuppāda,) the "upādāna paccayā bhava" step leads to TWO effects. (1) It CREATES kammic energies (or bhava) that can manifest AT THAT TIME. One can get to that bhava temporarily and be "born" in that bhava temporarily. (2) Also, part of the kammic energy generated will be preserved as a kamma $b \bar{i} j a$ in the viññạna plane.
- For example, when someone gets into a fight, that angry mindset generates kammic energy in his/her javana citta. Part of that energy leads to a "temporary angry bhava" and, thus, a "temporary angry $j \bar{a} t i$." An onlooker can see the change in his/her body: face will transform to an "angry face." Also, part of the kammic energy generated will either give rise to a new kamma bïja or strengthen an existing kamma bīja for a bhava in the apāyās. Of course, that will be a tiny kamma seed. If one kills a human, that kamma bïja (or bhava energy) will become much stronger and could become strong enough to bring in a punabbhava (new existence) in the apāyās.
- The more he/she engages in similar actions throughout life (even without killing anyone), such kamma $b \bar{j} a$ (bhava) will grow and could contribute to punabbhava.

## "Upādāna Paccayā Punabbhava" Step in Upapatti Paṭicca Samuppāda

6. There are different types of Paticca Samuppāda cycles that run in different situations. A special type of Paṭicca Samuppāda cycle (Upapatti Patticca Samuppāda) operates at the moment when the kammic energy (or bhava energy) for the current bhava runs out. That is when a new or "renewed existence" is grasped (upādāna.)

- In this particular case, the "upādāna paccayā bhava" step becomes "upādāna paccayā punabbhava."
- Therefore, in a Paticca Samuppāda cycle that runs at the cuti-patisandhi moment (at the end of the current existence), the step MUST BE interpreted as "upādāna paccayā punabbhava."

7. Note that neither type of Paticca Samuppāda cycles operate for an Arahant, since the steps "taṇh $\bar{a}$ paccayā upādāna" OR "avijjā paccayā sañkhāra" WILL NOT take place for an Arahant.

### 9.3.8 Concepts of Upādāna and Upādānakkhandha

April 3, 2021
Important concepts of upādāna and upādānakkhandha are discussed in this subsection:
Difference Between Physical Rūpa and Rūpakkhandha (This post is also in the section on "The Five Aggregates (Pañcakkhandha).")

Where Are Memories "Stored"? - Connection to Pañcakkhandha
Loka Sutta - Origin and Cessation of the World
Dukkha Samudaya Starts With Samphassa-Jā-Vedanā
Key Steps of Kammic Energy Accumulation
Generating Kammic Energy in the "Upādāna Paccayā Bhava"

### 9.3.8.1 Where Are Memories "Stored"? - Connection to Pañcakkhandha

April 7, 2021; revised April 8, 2021; September 10, 2022
Records of our memories (nāmagotta) are permanent. A handful of people worldwide have autobiographical memories, i.e., they can recall their past experiences in great detail. These memory records are the same as "atīta pañcakkhandha."

## Memory Versus Autobiographical Memory

1. An average human can only recall relatively few memories even from this life. During our waking hours, we experience many things. How many events from yesterday can you recall in detail? If you are asked what you ate for lunch or what you wore to work on a specific day last month, can you recall?

- There are only a handful of people in the world who CAN recall such things in great detail. They can recall anything that THEY experienced on any given day for many years in the past. That is a special ability, and scientists call it "Highly Superior Autobiographical Memory" or HSAM.
- Note that this is not an ability of memorization. As we see below, some of these people CANNOT memorize a poem, for example. They can recall whatever they saw, heard, stated, smelled, touched, or thought about. That is why it is called "autobiographical memory."
- They can recall ONLY those things that they experienced. Suppose they had watched a TV show on a certain day, even several years ago. They can "bring back that memory" in their mind and re-live that experience. It is like "playing back" that TV show again in their mind!
- If you ask them what they ate for lunch on a specific day back in 1980, for example, they can "playback" that scene of them eating lunch on that day: They can tell you not only what they ate, but what the weather was like, and who they were with, etc. It is as if their brain is a video recorder, and they can play back on any past event in their life. But the brain cannot "store" events in such detail.
- The key point is that those with HSAM capability are RECALLING those memories from a depository. There is no way that such details can be stored in the brain. Scientists are "stuck" and have not been able to explain the phenomenon of HSAM; see the review article at the end of the post.
- Whatever ALL OF US experience goes into a depository in the viñ̃āāna plane (nāma loka) as we will discuss below. But different people have varying capabilities to retract that information.

## First Recorded Case of Autobiographical Memory

2. That AMAZING ability first came to light with Jill Price, who contacted a team of scientists in the early 2000s about her ability to recall anything from 1974 onwards. Here is a video of her with Diane Sawyer on an ABC News program in 2008:

- She cannot recall all of her life, but just those events after 1974. The ability of HSAM just got 'turned on" when she was a teenager.
WebLink: youtube: The woman that never forgets - Jill Price First Interview!

## The Amazing Recalling Ability of Jill Price

3. Let us discuss the main points from the above video.
@1:10 minutes: She remembers everything since she was 14 years old.
@2:50 minutes: Diane Sawyer tests Jill's ability to recall past events. She passes all tests.
@4:20 minutes: Jill says she has a "split-screen" in her head. She is talking to Diane while "watching" the playback of whatever past event she recalls. She describes what she had for lunch on May 27, 2006. Remember that the above interview was recorded in 2008. Since she kept a detailed diary, anyone can check these accounts. One may think she has memorized all those detailed records, but that is impossible, especially since she can't memorize even a poem.

## Connection to Nāmagotta and Atīta Pañcakkhandha

4. Let us pause and make the connection to Buddha Dhamma.

- As discussed in the post, "Difference Between Physical Rūpa and Rūpakkhandha," rūpakkhandha is 11 types. But all 11 types are in 3 main categories: atīta, anāgata, paccuppanna (past, future, current.) All other types are included in these three types. For example, internal (related to one's own body) and external rūpa must be of past, future, or present.
- The paccuppanna (or current) rūpa are those being experienced now. In a moment, it will go to the past and be added to the atitita (past) rūpa category. The category of anāgata (future) rūpa is those that we hope/expect to experience in the future.
- As we can see, the category of atīta (past) rūpa dominates one's rūpakkhandha. It is also clear that rūpakkhandha is one's own; it is what one has experienced. One person's rūpakkhandha is different from someone else's.
- Furthermore, those atīta (past) rūpa (i.e., atīta rūpakkhandha) are just RECORDS of past rūpa that one has experienced. They are PERMANENT. Whatever happened cannot be changed.

Memories Are the Same as Atīta Pañcakkhandha (Past Experiences)
5. Now, here is another KEY point to remember. Whenever an event (registering of one of six kinds of rūpa) registers in the mind, corresponding mental aggregates (vedanā, sañ̃̄̄a, sañkhāra, viññāna) also register. Thus all five aggregates (pañcakkhandha) arise and immediately go into atīta pañcakkhandha.

- For example, suppose we hear a pleasing sound, for example. It may register as a sukha vedana $\bar{a}$, and we recognize what that sound is (sañña $\bar{a}$.) Then we think about it (sainkhāra) and the overall sensory experience is viññanna (in this case, sota viññāna.)
- Thus not only is that sound (sadda rūpa) registered in the mind but those mental components are also registered. Thus, a rūpakkhandha ALWAYS arises with the other four khandhas (aggregates.) In other words, pañcakkhandha arises with any sensory event and is immediately recorded as atīta pañcakkhandha.
- Those records (atīta pañcakkhandha) are in the viñ̃̃̄ãna plane (nāma loka) and can be recalled at any time in the future. They are called "nāmagotta." (With each sensed event, a record of it gets added to nāmagotta in viñ̃̃̄ạa dhātu - via the mana indriya in the brain.)
- Details at "Arising of Five Aggregates Based on an Ārammana" and "Our Two Worlds: Material and Immaterial."
- Please note that it is necessary to read and understand the posts I refer to if one wants to understand these concepts. Just reading a post or two will not do.

## People With Iddhi (Supernormal) Powers Can Recall Past Lives

6. Now, we can see how the Buddha could "look back" and recall his past lives extending trillions of years to the past.

- Just like Jill Price can recall any event that took place in HER life, the Buddha was able to recall any event that happened in his life. The only difference is that Jill Price can recall ONLY her current life from 1974. The Buddha could recall any event in his ANY previous life!
- By the way, anyone who can cultivate the fourth jhāna (Ariya or anāriya jhāna) would be able to recall at least a few past lives. Even before the Buddha, many yogis could recall several past lives. Note that some children can remember events from their previous life.
- One can recall past lives only because records of all past experiences are preserved in the viñ $\tilde{a} n{ }_{n} a$ plane (nāma loka). Those memories are NOT stored in the brain, but the brain plays a role in "bringing those memories back." A discussion on this subject is in "Brain and the Gandhabba."
- When an average human recalls (some of) past events, it is those nāmagotta that they recall. It is just that an average human can recall only significant events of his/her life. Many people with HSAM can recall all events from their current life.

## Nāmagotta (Atīta Pañcakkhandha) Has Records of One's Life Experiences

7. Let us go back to discussing the video of $\# 2$ above.
@5:15 minutes: Jill Price says she was not "good in school" and could not memorize even a simple poem. She meant that she was an average student who was not exceptionally intelligent. What she has is not KNOWLEDGE, but an ability to RECALL memories. As she explains, her memory is aitobiographical, i.e., she can recall ONLY those events she has experienced (seen, heard, tasted, smelled, touched, and thought about.)
@6:40 minutes: She says that she "travels in her head." That means she can travel to the past and relive an experience as if it is happening now!
@6:40 minutes: She says she will not be able to go on the TV show "Jeopardy" and win because she does not have general knowledge about the world. She can recall ONLY those EVENTS that she experienced, for example, by watching TV. This is a critical point that I want to emphasize. It is not knowledge/wisdom that she has, but the ability to RECALL past events in great detail!

## Summary

8. All our memories (including those from previous lives) are preserved in the viñ̃ān̄a plane (nāma loka.)

- The ability to recall memories is a complex subject. A Buddha can recall events from ANY life in the past. An average human can recall only bits and pieces from the current life. Between those two extremes, there is a huge variety of that capability.
- Recalling a memory means playback that old experience in one's mind. Recalling an "experience" recreates that whole past event. That includes that part of the rūpakkhandha and the events's mental attributes (other four aggregates). Thus, it plays back that part of the "atīta pañcakkhandha."
- The five aggregates (pañcakkhandha) are one's own. It has one's past experiences, experiences happening at the present moment, and hopes/expectations of future experiences.

## Implications

9. Each person is automatically attached ( $\tanh \bar{a}$ ) based on one's past experiences. One would like to "keep them close," i.e., have "upādāna" for those things. Those past experiences (atīta pañcakkhandha) influence one's character/habits (gati.) That is how "pañca upādānakkhandha" arises.All these concepts are interrelated. I hope you can at least begin to appreciate these relationships.

- To break bad gati and to avoid taṇhā/upādāna for things that can get one into trouble, one must be able to clarify these concepts and "see" how future suffering arises due to them.
- The "cooling down of the mind" can result ONLY via gaining knowledge of this process. Following moral guidelines (precepts) is essential to get to the right mindset. But it is pañ̃̃ $\bar{a}$ (wisdom) that eventually leads to the right vision (Sammā Diṭthi) at the Sotāpanna stage.

## Further Information

10. It is impossible to put all the necessary information into one post. If one desires to comprehend these concepts, one must spend some time reading all related posts. I have mentioned some above.

In the Loka Sutta, the Buddha explained the arising and cessation of the "world of an individual." It does not directly refer to arising and cessation of the vast physical world.

## Introduction

1. The "WebLink: suttacentral: Sabba Sutta (SN 35.23)" explains everything belonging to the world as, "Kiñca, bhikkhave, sabbaì? Cakkhuñceva rūpā ca, sotañca saddā ca, ghānañca gandhā ca, jivhā ca rasā ca, kāyo ca phoṭthabbā ca, mano ca dhammā ca-idaì vuccati, bhikkhave, sabbamं."

Translated: "And what, bhikkhus, is the all? The eye and forms, the ear and sounds, the nose and odors, the tongue and tastes, the body and tactile objects, the mind and mental phenomena. This is called the all."

- Here, "the all" refers to "everything in the world." The Buddha refers to the world per each individual. A given person has six sense faculties, and with which they experience the "world."
- If you think carefully, you will see that this description is the same as saying that one's five aggregates (pañcakkhandha) are the same same as one's world. The rūpakkhandha includes one's sensory faculties and any "rūpa" ever experienced. The four mental aggregates include all mental phenomena that arise as a result of such sensory experiences. One person's world is different from another.
- In the Loka Sutta, the Buddha describes how that world repeatedly arises in the rebirth process. Of course, the world experienced in different births are very different. Most births are into sufferingfilled worlds, and that is why one would want to stop this recurring process.

## Loka Sutta - Arising of One's World

2. Here is how the Buddha described the "arising of ones world" in the "WebLink: suttacentral: Loka Sutta (SN 12.44)": "Katamo ca, bhikkhave, lokassa samudayo? Cakkhuñca pațicca rūpe ca uppajjati cakkhuviññānam. Tiṇ̣am sañgati phasso. Phassa paccayā vedanā; vedanā paccayā taṇhā; taṇhā paccayā upādānaim; upādāna paccayā bhavo; bhava paccayā jāti; jāti paccayā jarāmaranamì sokaparidevadukkhadomanassupāyāsā sambhavanti. Ayaì kho, bhikkhave, lokassa samudayo."

Translated: "And what, bhikkhus, is the origin of the world? In dependence on the eye and forms ( $r \bar{u} p a$ ), eye-consciousness arises. That is followed by "contact with the three types of 'san'" or "samphassa." With samphassa as condition, samphassa-j $\bar{a}-v e d a n \bar{a}$ come to be; with samphassa-j $\bar{a}$-vedana $\bar{a}$ as condition tanh $\bar{a}$; with taṇhā as condition, upādāna; with upādāna as condition, existence (bhava); with bhava as condition, birth; with birth as condition, aging-and-death, sorrow, lamentation, pain, displeasure, and despair come to be. This, bhikkhus, is the origin of the world."

- The word samudaya comes from "san" + "udaya" which rhymes as "samudaya." There is "san" again! Now, "udaya" means to arise, and thus, "samudaya" means "arising due to san." This really means not the arising of the whole world with trillions of stars/planets, but the re-arising of the world at death. If "san" (or the defilements of greed, hate, ignorance) were to have been removed, one would not be reborn and experience this suffering-filled world again.
- Note that just a sensory experience CANNOT be the root cause of suffering. Rather it is the attachment to sensory experience with samphassa that is the root cause. That is the KEY POINT of this sutta. This is why I have bolded the verse, "tinnain sañgati phasso."
- Let us discuss the time sequence stated in the whole verse. Then my point will become clear.

## Time Sequence in the Above Verse - The first Step Happens to Anyone

3. The whole process starts with a sensory input through one of the six senses. The above verse describes what happens when someone sees an object they attach to (other five sense faculties work the same way.) That attachment (tanhh $\bar{a}$ ) eventually leads to suffering in some form.

- The process starts with "cakkhuñca pațicca rūpe ca uppajjati cakkhuviññānami." That means cakkhu viññāna occurs when one sees an object. It just sees what that object is. No kamma generated here. That "seeing event" or cakkhu viñ̃ñạna arises with the help of the phassa cetasika. This phassa (contact) is that between cakkhu and rūpa.
- As we have discussed, phassa cetasika is a universal cetasika that arises with ANY sensory event. Suppose you hear a sound or taste food; that involves the phassa cetasika. Any living being, including an Arahant, will experience all six sensory inputs.
- The next step is "tịnṇaì sañgati phasso."

## Tị̂naín Sañgati Phasso - Misunderstood Key Verse

4. This short verse is commonly mistranslated as, "The meeting of the three is contact." See the English translation of the Loka Sutta at Sutta Central: "WebLink: suttacentral: The World (SN 12.44)."

- It does not make any sense to say "the meeting of cakkhu, rūpa, and cakkhu viññāṇa." Instead, cakkhu viññāna (or seeing the object)" happens with the contact or meeting of cakkhu and rūpa. There is no "meeting of the three."
- Instead, what happens at this second step is "contact with defiled gati" or "samphassa." Here samphassa is "san phassa" ("san" + "phassa," where "san" are defilements (greed, anger, ignorance). It rhymes as "samphassa." To learn about "san" see, "What is "San"? Meamomg of Sansāra or Samsāra"). Thus samphassa (contact with defilements) is an internal process that happens in mind.
- There are three main "defiled gati": lobha, dosa, moha. Those are the "three" referred to in verse.
- For details see, "Difference between Phassa and Samphassa." Then we can see that "phassa paccay $\bar{a}$ $v e d a n \vec{a} "$ really means "samphassa paccay $\bar{a}$ samphassa-j $\bar{a}$-vedana $\bar{a}$." Some deep suttas are in "summary form" and need detail explanations; see, "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."

## "Phassa Paccayā Vedanā" Is "Samphassa Paccayā Samphassa JāVedanā."

5. Therefore, the third step, "phassa paccayā vedanā" that comes after the step "tiṇnaím sañgati phasso" is "samphassa paccay $\bar{a}$ samphassa-j $\bar{a}$-vedan $\bar{a}$." This is a "mind-made vedan $\vec{a} "$ due to samphassa.

- Now it is clear that the fourth step of, "vedan $\bar{a}$ paccay $\bar{a} \operatorname{tanhh} \bar{a}$ " really is "samphassa-j $\bar{a}-v e d a n \bar{a}$ paccayā taṇhā." An Arahant has vedanā, but not samphassa or samphassa-j $\bar{a}$-vedana $\overline{\text { a }}$.
- One would attach to that ārammaṇa ONLY because it led to "samphassa" with the step"tinnain sañgati phasso."

## "Loka Samudaya" Will Not Take Place for an Arahant

6. Therefore, all steps after the first step of 'seeing an object" will not arise for an Arahant because an Arahant would not generate samphassa. See \#3 and \#9 of the post "Difference between Phassa and Samphassa."

- Another way to state the same is to say that an Arahant does not have sañgati ("san gati") or "defiled gati." An Arahant's mind is pure and is devoid of greed, hate/anger, and ignorance. Note that "gati" is pronounced "gathi" like in "Thailand."
- For an Arahant, a 'seeing event" is just that. No attachment. Thus, any sensory event would be limited to just experiencing that sensory input. The critical step of "tinụaim sangati phasso" WILL NOT take place for an Arahant. Thus all other steps following it would not be there!
- That is why an Arahant is free from future suffering.

## How Can Someone Get to the Arahanthood?

7. Now the question is: "How can someone attain Arahanthood, i.e., attain Nibbāna"?

The Buddha provided the answer in the second part of the sutta: "Katamo ca, bhikkhave, lokassa atthañgamo? Cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññānaì. Tị̣nam sañgati phasso. Phassa paccayā vedanā; vedanā paccayā tanhhā. Tassāyeva taṇhāya asesavirāganirodhā upādāna nirodho; upādāna nirodhā bhava nirodho ...pe... evametassa kevalassa dukkhakkhandhassa nirodho hoti. Ayamं kho, bhikkhave, lokassa atthañgamo."

Translated: "And what, bhikkhus, is the cessation/ending of the world? In dependence on the eye and forms, eye-consciousness arises. That is followed by "contact with the three types of 'san'" or "samphassa." With samphassa as a condition, samphassa-jā-vedanā come to be; with samphassa-j $\bar{a}-$ $\boldsymbol{v e d a n} \bar{a}$ as condition tanhha. But with the remainder-less fading away and cessation of tanh $\bar{a}$ result in the cessation of upādāna; with the cessation of upādāna, cessation of existence (bhava); with the cessation of existence, cessation of birth; with the cessation of birth, aging-and-death, sorrow, lamentation, pain, displeasure, and despair cease. Such is the cessation of this whole mass of suffering. This, bhikkhus, is the cessation/ending of the world.

- Until one attains the Arahanthood, one COULD generate samphassa, depending on the sensory input. As one attains higher magga phala, there will be less and less ärammaṇa that could lead to samphassa or "contact with defilements." For example, after attaining the Anāgāmi stage, one would not "attach to" any sensual pleasures available in kāma loka.
- An Arahant would have removed all defilements, and thus, the akusala-mūla Paticca Samuppāda process starting with "avijjā paccayā sañkhāra" would not be initiated. That is the cessation/ending of the world for that Arahant!

## A Sensory Experience is a Trigger to Initiate a PS Process

8. As Loka Sutta points out, the accumulation of kammic energy to "power up" future existences starts with sensory experiences. Kamma generation in Paṭicca Samuppāda (PS) process takes place in the "taṇh $\bar{a}$ paccayā upādānaí" step in \#2 above.

- As discussed in the second part of the Loka Sutta, the critical point is the stopping of the sequence of events following a sensory experience at the arising of tanh $\bar{a}$ due to "samphassa-j $\bar{a}$-vedana $\bar{a}$." Obviously, we cannot control it at that moment since it happens within a split second.
- (Additional information: Two critical things need to happen to reduce and eliminate taṇhā over time: (i) First, one must comprehend this whole process that we are discussing, and also how the Paticca Samuppāda process works. That is the "dassanā pahātabba"" step where a large fraction of wrong views are removed at the Sotāpanna stage by getting rid of wrong views. (ii) Once getting to the Sotāpanna stage, one needs to remove the tendency to attach to sensory pleasures with $\overline{A n} \bar{a} p \bar{a} n a$ and Satipattthāna Bhāvanā. One reaches higher stages of magga phala in this second stage of "bhāvana pahātabbä" step. In the WebLink: suttacentral: Sabbasava Sutta (MN 2), "dassanā pahātabbä" is the "first removal" and "bhāvanā pahātabbā" is the "last removal.")
- We will discuss that in future posts again. But it has been discussed in some existing posts. See, for example, "Tanhā - The Origin of Suffering" and "Vipallāsa (Ditthi, Saññā, Citta) Affect Sañkhara."

## Paṭicca Samuppāda process Initiates With a Sensory Experience

9. Therefore, the akusala-mūla Paticca Samuppāda process does not automatically start with "avijjā paccayā sañkhāra." No one would act with avijjā WITHOUT a cause. The cause for acting with avijjā is a TEMPTATION brought up by a SENSORY EXPERIENCE.

- One can see that by combining the two suttas discussed in this post, the Sabba Sutta (SN 35.23) and the Loka Sutta (SN 12.44).
- In fact, this is the theme that one can see in many suttas, including the Chachakka Sutta (MN 148). I have discussed that sutta in detail in another series of posts on the "Worldview of the Buddha." Just take a look at the introductory post of that series; "Buddhist Worldview - Introduction."
- The current series looks at the same issue with a different approach: "Paticca Samuppāda - Essential Concepts."

### 9.3.8.3 Dukkha Samudaya Starts With Samphassa-Jā-Vedanā

## April 23, 2021; revised September 7, 2022

Dukkha samudaya means "origin of suffering." Kammic energies for future suffering accumulate via Paticca Samuppāda (PS). We start acting with avijjā and initiate PS when sensory inputs trigger temptations and generate "samphassa-j $\bar{a}$-vedan $\bar{a}$ " or "mind-made feelings."

## Critical Conclusions from Loka Sutta (SN 35.23)

1. In the previous post, "Loka Sutta - Origin and Cessation of the World," we reached the following conclusions. (you may want to print it and refer to it as we proceed.)

- IPațicca Samuppāda (PS) describes the key steps leading to future suffering.
- However, that process DOES NOT initiate with "avijjā paccayā sañkhāra." We don't AUTOMATICALLY start acting with avijjā!
- A sensory input (ārammana) triggers the Paticca Samuppāda process: sight, sound, taste, smell, touch, or the memory of a past event (dhamma $\bar{a}$.)
- If the mind attaches to such a sensory event ( $\tanh \bar{a}$ ) that attachment leads to upādāna (keeping it in mind and getting stuck in it.) Then while in the "upādāna paccayā bhava" step, we accumulate kammic energy for future births with mano, vacī, and kāya sañkhāra. That is how the PS process gets to "avijjā paccayā saǹkhāra."
- Before we discuss those details, it is critical to understand how this whole process starts with "getting attached" to certain sensory inputs (ārammaṇa) with "samphassa-j $\bar{a}-v e d a n \bar{a} "$ " or "mind-made feelings."
- By the way, "dukkha samudaya" is the same as "loka samudaya." That is why Nibbāna implies "stopping future rebirths" or "stopping the re-arising of this word." It may take time to absorb this critical point.

## "Samphassa-jāa-Vedanā" - Example 1

2. A sensory input comes through one of the six senses: eyes (sights), ears (sounds), nose (smells), tongue (tastes), body (touches), and mind (memories). In Pāli, they are six types of vipāka viññāna.

- Let us consider a simple example starting with cakkhu viññāna. Suppose three people A, B, and C, sit in a small coffee shop. They are all facing the door, and person X walks in. Suppose that person X is a close friend of A , the worst enemy of B , and that C does not know X at all. We will also assume that all 4 are males.
- So, let us see what happens within a split second. A recognizes $X$ as his friend, and a smile comes to his face. B recognizes X as his enemy, and his face gets darkened.
- On the other hand, X is just another person to C . He immediately goes back to whatever he is doing.

3. That is an example of a "cakkhu viñnāna," a "seeing event." It is over within a split second, just like taking a photo with a camera takes only a split second, where the image in captured on the screen instantaneously.

- However, something very complicated happens in the human mind when a "seeing event" occurs.
- It is critically important to go slow and analyze what happens to see how complicated this process is (for a human mind) to capture that "seeing event." It is much more complicated than just recording "a picture" in a camera.

4. Within that split second, A recognizes X as his good friend, and joy arises in his mind, and he becomes happy. B recognizes X as his worst enemy, and bad emotions arise in his mind, and he becomes angry. On the other hand, no extra feelings arise in him. He goes back to whatever he was doing.

- As we can see such vastly varying feelings arise due to the three steps that follow the "seeing event" or cakkhu viññanna. As we remember from the previous post (refer to the printout) those three steps are "Tiṇnain sañgati phasso; Phassa paccayā vedanā; vedanā paccayā tanhā." As we discussed, the last two steps are "samphassa paccay $\bar{a}$ samphassa-j $\bar{a}-v e d a n \bar{a} "$ and "samphassa-j $\bar{a}-v e d a n \bar{a} p a c c a y \bar{a}$ taṇhā."
- The three people, A, B, and C, generate different "san gati" upon seeing X. Even though they all see the same person X, three different types of "samphassa-j $\bar{a}-\mathbf{v e d a n} \vec{a}$ ": joy, anger, and neutral feelings arise respectively in $\mathrm{A}, \mathrm{B}$, and C .
- How does the SAME "seeing event" (seeing X) lead to all these very different changes in the minds of three different people? (and the emotions even show up on their faces!)

5. Since all three people A, B, and C, are average humans, they have not removed "san gati" or defilements from their minds. Such "san gati" remain hidden as "anusaya" in all three.

- However, a trigger is needed to bring those "san gati" to the surface. A has had "good experiences with X ," and thus "affectionate san gati" arose in him upon seeing X. B's experiences with X were not good, and those "bad memories" were triggered by seeing X.
- On the other hand, C has had no prior experiences with X . Thus, a trigger for "samphassa-j $\bar{a}-v e d a n \vec{a}$ " was not there. But if C sees a person he is familiar with, that may trigger his "san gati."
- If C were an Arahant, he would not have any "san gati" left. Thus, affection or anger would not arise upon seeing ANY person.
- The best way to comprehend this key point is to think about your own experiences.

## Kamma Generation Depends on One's Actions Based on the Initial "Attachment"

6. Once bound to an event with "samphassa," that leads to corresponding "mind-made feelings" or samphassa-j $\bar{a}$-vedanā. Joyous feelings arose in A and angry feelings arose in B upon seeing X . Both A and $B$ got "attached" to that event. Thus, tanh $\bar{a}$ can arise via greed or anger.

- Person A may start talking to X excitedly, especially if X is a close friend. B's face may darken and many angry thoughts about his past experiences with X may arise in him. Both are "samphassa-jā-vedana paccayā taṇhā" and "taṇhā paccayā upādāna."
- The next step of "upādāna paccayā bhavo" depends on what happens next. In this case, B may start accumulating "bad kamma" just by cultivating "bad vacī sañkhāra" in his mind, even if he does not say or do anything. Such "bad thoughts" arise via "avijjā paccayā sañkhāra" where sañkhāra are vacī sañkhāra (not speaking out but talking to himself.)
- But it could get worse if B's anger rises and he says something bad to X. That is also 'bad vacī sañkhāra." If X responds and the situation escalates, B may hit X. That is getting to the "bad kāya sañkhāra" stage. All these lead to the accumulation of "bad kamma" for B.
- That is a brief example of how one could generate kammic energy for future existences, even if this particular action may not be strong enough to "power up" a new birth. However, if the situation escalates and B kills X, then that would certainly be a strong kamma leading to new birth in an apaya.

## "Samphassa-jā-Vedanā" - Example 2

7. Let us clarify it further with an example since it is critical to understand this issue. Suppose a friend visits an alcoholic $(\mathrm{X})$ and brings a bottle of alcohol. Again, let us follow the steps in \#2 of the previous post.

- First, X sees that his friend has brought a bottle of alcohol, his favorite kind. This is the "seeing event" in this example: "cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññānaṁ." This cakkhu viññāṇa is a vipāka viññāna and no kamma generated. Even an Arahant would see the bottle.
- Next is the CRITICAL step "tinnain sañgati phasso" where X's mind instantly makes the "san phassa" or "defiled contact" with his "alcoholic gati."
- Note the two types of "contacts" in the above two processes. In the first, the "phassa cetasika" in cakkhu viññāna makes the "contact" between cakkhu and $r \bar{u} p a$ (alcohol bottle) to give rise to cakkhu viññanna (seeing the bottle.) The second is a "defiled contact" (samphassa) that arises due to his craving for alcohol.
- On the other hand, if someone brought a bottle of alcohol to an Arahant, he would also see the bottle, i.e., cakkhu viññāna with the "phassa cetasika" will also arise in him. But there would be no "tiṇnam sangati phasso" and, thus, the process will stop there.

8. Once X got "attached" to the bottle of alcohol with samphassa he becomes joyful and that joyous feeling is samphassa-jā-vedanā: Samphassa led to "Samphassa-j̄̄a-vedanā."

- Therefore, the "extra vedan $\bar{a} "$ made up by the mind is the "samphassa-jā-vedana." Here, "jā" means "generated with." That vedan $\bar{a}$ was generated by samphassa (san phassa).
- Suppose X's wife is also home when the friend brings the bottle. She would not be happy to see the bottle, especially if she is trying to break the "drinking habit" of her husband. She may even get angry with her friend. That is also a samphassa-j $\bar{a}-$ vedana $\overline{\text { a }}$.
- On the other hand, the Arahant will also see the bottle and will identify it as such. But there will be no joy or dismay. There will be no samphassa-j $\bar{a}-v e d a n \bar{a}$.

9. The "samphassa-j $\bar{a}$-vedan $\vec{a}$ " of joyous feelings in X makes him attach (tanh $\bar{a}$ ), which immediately leads to the next step of upādāna. Which means his mind is now focused on the alcohol bottle.

- If his wife opposes him having alcohol often, she may become agitated. Even if she may not say anything, she could get mad at the friend for bringing the alcohol bottle. Does he not know that he is easily
tempted? Did the two of them plan to "have a drink" without her knowing? She also gets to the "tanh $\vec{a} "$ and "upādāna" stages.
- Of course, an Arahant would not "get attached" or "get stuck" (no taṇhā or upādāna.)

## Generating Kamma Starts With the "Taṇhā Paccayā Upādānaì" Step

10. Therefore, once getting attached with tanhhā, the next step of "getting stuck and proceeding along" is likely to happen with "taṇhā paccayā upādāna" and "upādāna paccayā bhavo" steps.

- This is where X started getting ready to "have a good time with the friend." He would think, speak, and act to have a "good time " with his friend.
- However, it is possible to stop the process at that point by acting mindfully. If $X$ has seen the dangers of keeping his "drinking habit" he can think about the bad consequences of engaging in that practice and tell the friend that he is trying to eliminate his drinking habit. Thus he could start acting with "vijja" (or wisdom) and NOT engage in "avijjā paccayā sañkhāra."
- That is the basis of the correct Ānāpānasati or Satipaṭ!hāna Bhāvanā.

### 9.3.8.4 Key Steps of Kammic Energy Accumulation

May 1, 2021; revised May 2, 2021; October 13, 2022
Here we discuss the critical steps in kamma accumulation. Paṭicca Samuppāda (PS) explains how one creates one's future with our actions (kamma generated via sañkhāra.) However, that kamma accumulation process starts not at the beginning of PS but in the middle of PS with a sensory experience.

## Chronological Order of Kamma Accumulation

1. Let us first list the critical steps involved.
(i). A sensory experience with one of the six sense inputs (seeing, hearing, smell, taste, touch, memory recall) is the first step.
(ii). Attachment (tanhā ) to that sensory experience based on our habits/character (gati.)
(iii). Embracing (willingly getting involved) in that sensory experience with specific goals.
(iv). Thinking, speaking, and doing things to accomplish that goal.

- During that last step, we accumulate kammic energy to bring about future rebirths and all other types of kamma vipāka.

## Matching the Steps in Paṭicca Samuppäda

2. We experience those sensory inputs with our five physical senses and the mind. In Pāli, those six are "salāyatana" or "all āyatana.")

- A sensory experience starts with the "salāyatana paccayā phasso" step in PS. That verse means "making contact with one of the six āyatana."
- Here, it is critical to see that an Arahant does not have "āyatana" but only "indriya." Arahant‘s six senses only capture a sensory experience. An Arahant has indriya, but they DO NOT become "āyatana." Indriya become āyatana when rāga, dosa, moha (or "san") come into play.

3. So, IF someone's mind "gets involved" with a sensory experience and starts the "salāyatana paccayā phasso" step, that person's indriya becomes ayatana. That is the beginning of a PS process based on that $\bar{a} r a m m a n a$. Then the mind automatically goes to the next few steps of "phassa paccay $\bar{a} v e d a n \bar{a}, "$ "vedanā paccayā taṇhā," and "attaches" (tanhhā) to that ārammaṇa. As we discussed in previous posts, "vedan $\bar{a} "$ here really is "samphassa-jā-vedanā." See "Loka Sutta - Origin and Cessation of the World" and "Dukkha Samudaya Starts With Samphassa-Jā-Vedanā."

- Once "attached," the mind automatically "pulls it close (upādāna)" and will start thinking, speaking, and acting on it. That is the "upādāna paccayā bhavo" step taking a side-step leading to "avijja paccayā sañkhāra." This is when the PS process starts from the beginning. The following chart illustrates this critical point.

Download the pdf: "WebLink: suttacentral: Icchā to Upādāna to Suffering."

- Let us take an example to illustrate this critical point.

## Example of "Salāyatana Paccaȳ̄ Phasso" Leading Automatically to "Upādāna Paccayā Bhavo" Step

4. Husband and wife are walking down the street, and the wife stops and looks at a beautiful painting on display in a store window. The husband looks at it, shrugs his shoulders, and wants to move on. But the wife is "attached" to that painting. So, she asks her husband whether they can go inside and take a good look at it.

- In this particular case, both saw the painting, i.e., "cakkhuñca pațicca rūpe ca uppajjati cakkhuviñ̃āṇam"" took place for both. But the critical step of "tiṇnaì sañgati phasso" DID NOT take place in the husband's mind. Note that this is the sequence of events described in the Loka Sutta. See "Loka Sutta - Origin and Cessation of the World."
- The exact sequence of events is stated slightly differently in the PS process (for the wife.) It starts with "salāyatana paccaya phasso." It immediately goes through "phassa paccayā vedanā," "vedanā paccayā tanhhā," and 'tanhh $\bar{a}$ paccay $\bar{a} u p \bar{a} d \bar{a} n a "$ " steps. Now she is "stuck" with that ārammaṇa or the painting. See, Dukkha Samudaya Starts With Samphassa-Jā-Vedanā."
- It is a good idea to have both of those posts printed out for reference.
- Now, the wife is at the "upādāna paccayā bhavo" step in PS and the Loka Sutta steps. II hope you can see that the steps in the two versions describe the same processes that the wife's mind underwent.

## Kamma Accumulation in the "Upādāna Paccayā Bhavo" Stage

5. At this point, the wife starts acting with avijjā. She starts generating kamma via "avijjā paccay $\bar{a}$ sañkhāra," "sañkhāra paccayā viññāna," "viññāṇa paccayā nāmarūpa," etc., down to "upādāna paccayā bhava" again!

- Before we discuss those details, let me digress a bit to address some related issues.

## Additional Details

6. Here, I want to emphasize an important point. Getting attached to a painting is not an immoral deed. But in a deeper sense, such actions keep one bound to the kāma loka and away from Nibbāna. That is why it falls under avijjā. But only Sotāpannas who are trying to attain the Anāgāmi stage automatically avoid such actions. I am just taking an example that everyone can understand.

- They both saw the same painting as a vipāka vedanā. Here, one should not assign such "vipāka vedan $\bar{a}$ " to a single past kamma. Our physical body is the result of incalculable past kamma. A "mundane event" CANNOT be traced back to a SINGLE kamma done in the past. Only strong kamma (like killing a human) can lead to a specific vipāka (like getting a bad rebirth.)
- That was just the "seeing event." As discussed in Abhidhamma, most vipāka vedanā are neutral, like seeing or hearing. The exceptions are bodily contacts - either bodily dukha vedana (like an injury or a headache) or sukha vedanā (like getting a massage or being in an air-conditioned room on a hot day) depending on whether it is a bad or a good vipāka.
- Now let us get back to our example.

## "Upādāna Paccayā Bhavo" Stage Explained With the Above Example

7. Let us continue with our example to see how the wife keeps accumulating kamma with different types of sañkhāra with the "upādāna paccayā bhava" step in PS.

- The painting is expensive, so the wife is considering whether they can afford it now, but she would really like to buy it. The husband is not interested in it and thinks it is a waste of money. Those are sañkhāra done with $a v i j j \bar{a}$, i.e., "avijjā paccayā sañkhāra." Now we can see how the PS process starts from the beginning starting with the "upādāna paccayā bhava" step.
- Now, any "happy feeling" in the mind of the wife would be due to her "san gati" that comes to play at the "tinnain sañgati phasso" stage of getting attached to a sensory event; see, "Dukkha Samudaya Starts With Samphassa-Jā-Vedanā." This is also called kāma assāda.
- Such a "happy feeling" did not arise in the husband's mind. This is an important point. The "happy feeling" in the wife could not have been a property of the painting; if so, it should have given the same "happy feeling" to the husband! Only the wife had "taṇha" and "upādāna" for the painting.
- Now that she is "attached" to the painting, the wife keeps looking at it for a while. She will be enjoying "kāma assāda" about that picture even after they leave that place by thinking back about it. Now she has made a "viññaṇa" and a "bhava" for it.

## Repeated PS Cycles Based on One Arammana

8. Numerous such Paticca Samuppāda cycles can operate for her based on that ārammaṇa even several days later.

- For example, that "kāma assāda" can resurface with Paṭicca Samuppāda cycles that involve only the mind when she is at home. It can now start with "manañca patticca dhamme ca uppajjati manoviññānaí," i.e., she just remembers the painting while washing dishes. How does she start thinking about the painting when she is busy with another task?
- One way to explain that is to say that "she had 'cultivated' a viññanna" for that painting, and now it can sometimes resurface even without a prompt. This is sometimes known as the "subconscious"; see, "ㄹ. Viñ̃nāna, Thoughts, and the Subconscious."
- Another way to explain it by saying that she had made a "bhava" for liking that painting and it is a dhamma that can come back to the mind when the conditions are right: "manañca paticca dhamme ca uppajjati manoviññānam."."

9. Of course, that "manañca paticca dhamme ca uppajjati manoviññānaị" step will be followed by, "tiṇnaim san gati phasso" and "(san)phassa paccayā vedanā"; see, "Difference between Phassa and Samphassa." Her "gati" for liking such pictures will make her mind "samphassa," which in turn will lead to "samphassa paccayā vedan $\bar{a} "$ or, more accurately, "samphassa-j $\bar{a}$-vedanā."

- As long as that "kamma viññāna" (expectation of owning the painting) is present in her, the possibility of cultivating more sañkhāra with that ārammaṇa (painting) will be there. Again, "cultivating sañkhāra" here means to think and act on the desire to own the painting; see "Sanikhāra - What It Really Means."
- However, that particular dhamma or concept or thought would never come to her mind if she were listening to a discourse or thinking about a critical concept like anicca. But such a "subconscious viññāna" gets an opportunity to come to the surface while doing a mundane task (washing dishes, in this case.)

## One Way That Kamma Viññāṇa May be Removed from Her Mind

10. One way that can happen is IF IT BECOMES CLEAR that it would be impossible for her to fulfill her expectation due to events beyond her control. Suppose that a week later they are walking by the same store. The wife looks for the painting but finds it no longer there; someone had bought it. Now, think about what happens to the two of them.

- The wife will be distraught: "I should have bought it; now I may not be able to find such a nice painting." But the husband will not have any bad feelings, except may be some bad feelings about his wife not being able to get what she wanted.
- This is the suffering that we can stop from arising even in this life. It is not a vipāka vedanā but a "samphassa-j $\bar{a}$-vedanā." The wife got distraught only because she got attached to that painting, but the husband did not.
- I have discussed this example and more in the post, "Kāma Assāda Start with Phassa Paccayā Vedanā or Samphassa-Jā-Vedanā."

11. Once it becomes clear to the wife that owning that painting is no longer possible, that expectation will automatically disappear from her mind. In other words, that "viññāna to own the painting" will no longer be there.

- Therefore, she will no longer think or act based on that viñãāna. Since that viṇ̃̃̄̄̄a is no longer there to trigger the step "avijjā paccayā sañkhāra." The rest of the steps in PS will also stop.
- However, it is essential to note that her "san gati" have not changed. A similar viññāṇa can reappear in her mind if that painting is returned to the store and will become available to purchase. Another similar painting could also do it.

## Second Way That Kamma Viññāṇa May be Removed from Her Mind

12. The second way she could lose that desire for the painting (and thus that viñ̃ānạa "to own the painting') is if she attained the Anāgāmi stage. This time, the removal is permanent, with no "san gati" or "anusaya" left for sensual pleasures.

- One gets to the $A n a \bar{g} \bar{a} m i$ stage by realizing the fruitlessness of "owning such sense-pleasing objects."
- At that stage, she will not desire to own ANY "sense-pleasing objects." In other words, her "san gati" (or anusaya) would have been permanently removed from her mind.
- That is a deeper discussion involving the "anicca nature."

## 9.3.s.5 Generating Kammic Energy in the "Upādāna Paccayā Bhava"

May 7, 2021
Bhava is the energy that powers mindsets, existences, and rebirths. That energy is produced in the "upādāna paccayā bhava" step in Pațicca Samuppāda. That is also where we cultivate "bad gati" to attach to various sensory inputs. That is the process we need to control to gradually reduce tanhh $\bar{a}$ to attain Nibbāna with Ānāpānasati and Satipatthāna meditations.

## Sensory Trigger Is "salāyatana paccayā phasso" step in PS.

1. In the past two posts ("Loka Sutta - Origin and Cessation of the World" and "Dukkha Samudaya Starts With Samphassa-Jā-Vedanā"), we discussed the fact that it is an arrammana through one of the $\mathbf{6}$ "sense doors" that triggers PS processes. The Pāli verse that describes such a trigger is, "cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññāṇam்.." Let us call this "trigger description 1."

- We did not specifically say it, but it is easy to see that this is the same thing that happens at the "salāyatana paccayā phasso" step in the "moment-to-moment PS" or the "Idappaccayatā PS." See, "Idappaccayatā Paticca Samuppāda." Let us call this "trigger description 2."
- In "trigger description 1" we have the first few steps of "cakkhuñca patticca rūpe ca uppajjati cakkhuviññānain, tinñain sañgati phasso, phassa paccayā vedanā; vedanā paccayā taṇhā."
- In "trigger description 2" the corresponding steps are, "salāayatana paccayā phasso, phassa paccayā vedanā, vedanā paccayā taṇhā,"
- The two processes highlighted in blue are the same. That becomes clear when we see that salāyatana (all "āyatana") takes into account "contact with defiled gati" or "sañ phassa" or "samphassa."
- Please make sure you understand that point by reading the recent previous posts in "Concepts of Upādāna and Upādānakkhandha."
- By the way, there are many suttās that discuss "trigger description 1" and "trigger description 2." See, " 315 results for tinnam sangatit" and " 738 results for paticca AND uppajjati."

## Samphassa Is Already Included in "Salāyatana Paccayā Phasso" Step in PS

2. The above key point is also explained in "WebLink: suttacentral: Paticcasamuppāda Vibhañga (VB 6)" in one of the original commentaries: "Tattha katamo salāyatana paccaya phasso? Cakkhusamphasso sotasamphasso ghānasamphasso jivhāsamphasso kāyasamphasso manosamphasso-ayam vuccati "salāyatana paccayā phasso."

Translation: "What is salāyatana paccayā phasso? It is cakkhusamphasso sotasamphasso ghānasamphasso jivhāsamphasso kāyasamphasso manosamphasso."

Thus, contact with an "āyatana" MEANS a "defiled contact." An Arahant DOES NOT have 6 āyatana (cakkhāyatana and so on). Instead, an Arahant has 6 indriya (cakkhu indirya and so on.) Thus an Arahant can see, hear, etc. But his mind will not make contact with "sañ gati" because "sañ gati" are absent. That means the step "tiṇ̣am sangati phasso" will not occur as we discussed in the previous two posts.

- As I explained in the post, "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa," a fundamental concept is first stated succinctly ("uddesa" or "utterance.") That is the version of PS in most suttās where the 11 steps are briefly stated.
- Then a "niddesa" is a "brief explanation" that can be found in the commentaries (above verse is a good example. Of course, one should rely on the 3 original commentaries and NOT on more recent commentaries like Visudhimagga; see the above post.
- Then the concept needs to be explained in detail with examples ("patiniddesa") My explanation of "samphassa" in the post "Dukkha Samudaya Starts With Samphassa-Jā-Vedanā" is an example of that.

## Importance of the "Upādāna Paccayā Bhava" Step

3. In other words, we start acting with avijjā ONLY IF we get attached to a sensory event (also called ārammaṇa.)

- Attachment (taṇhā) to an ārammaṇa directly leads to "taṇhā paccayā upādāna" and "upādāna paccayā bhava" steps.
- It is at the "upādāna paccayā bhava" step that we start acting with avijjā via "avijjā paccayā sañkhāra." That is when we start generating "kammic energy" for a corresponding existence (bhava.) That "kammic energy seed" can germinate in the future and give rise to a corresponding birth ( $j a \bar{a} t i$.) Each $j \bar{a} t i$ ends up in old age, disease, and death.
- (Note that the term "jāti" could also mean a "temporary birth" DURING a lifetime. For example, someone can get drunk and be "born" in a "drunken state" for a few hours.)
- Thus, the origin of future suffering starts (i.e., the PS cycle starts at the beginning) WITHIN the "upādāna paccayā bhava" step. A trigger is a sensory event. Let us discuss this critical issue.

## Tendency to Attach to $\bar{A} r a m m a n ̣ a ~ I s ~ C u l t i v a t e d ~ i n ~ t h e ~ " u p a ̄ d a ̄ n a ~ p a c c a y \bar{a}$ bhava" step.

4. Thus, it is at the "upādāna paccayā bhava" step that the full PS cycle starts as follows: "avijj $\bar{a}$ paccayā sañkhāra; sañkhāra paccayā viññanna; viññāna paccayā nāmarūpa, nāmarūpa paccayā salāyatana, saḷāyatana paccayā phasso, phassa paccayā vedanā, vedanā paccayā taṇhā, taṇh $\bar{a}$
paccayā upādāna, upādāna paccayā bhavo, bhava paccayā jāti, jāti paccayā jarā, maraṇa, soka-parideva-dukkha-domanassupāyasā sambhavan'ti." See "Idappaccayatā Paticca Samuppāda."

- But the above verse is in the "uddesa" version. It is a highly condensed statement of a complex process. It needs to be explained at least in "niddesa" (brief explanations) and in the "paṭiniddesa" version, preferably in a verbal discourse with many examples as needed to clarify subtle issues. My posts are somewhat in between niddesa and patiiniddesa.
- For details on that see, "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."
- Let us re-visit an example to clarify what we discussed above in the "patiniddesa" version.

## Re-Visiting a Previous Example

5. At \#7 of the post, "Dukkha Samudaya Starts With Samphassa-Jā-Vedanā," we discussed the case of an alcoholic ( X ) tempted by the seeing of an alcohol bottle.

- As soon as X saw the alcohol bottle, his "sañ gati" (craving for alcohol) emerged via "tiṇnaì sañgati phasso." Then he immediately started generating sañkhāra via "avijjā paccayā sañkhāra."
- With such sañkhāra, he started cultivating a viññāna (expectation to have a drink) with "sañkhāra paccayā viññāna." Note that the "trigger event" for the whole process was a "vipāka viññāna" (cakkhu viññāna.) Now, he is cultivating a "kamma viññāna" (expectation to have a drink) via "sañkhāra paccayā viññāṇa."

## "Feeding the Viñ̃̄āna" - Generating Kammic Energy for "Kāma Bhava"

6. All of X's conscious thoughts (vacī sañkhāra) and actions (kāya sañkhāra) lead to a kamma viññāna via the "sañkhāra paccayā viññāna" step. All these sañkhāra strengthens his "alcoholic mindset." His thoughts, speech, and actions are based on that mindset.

- Note that until he gets drunk, he is not committing any immoral deeds. Yet, his desire to get drunk leads to a corresponding mindset. To put it differently, someone cultivating jhāna WOULD NOT get into such a situation because that person knows that such a mindset is not compatible with rūpa/arūpa realms (i.e., rūpa/arūpa jhāna.) It is compatible with realms in kāma loka, at least in the human realm.
- As long as one cultivates sañkhāra compatible with kāma loka, it is impossible to be freed from kāma loka. Even seeking "harmless sense pleasures" binds one to kāma loka. This is a deep and critical point.

## If Immoral Sañkhāra Generated Suffering Will be Higher

7. Now, if X gets really drunk, he could start acting like an animal. In an extreme case, he and his friend could get drunk (and may be even using drugs) and become totally incoherent, and they may not be able to stay upright. That is getting into the mindset of animals. At some "wild parties," immoral deeds like rapes could happen with such a mindset. If so, X could be cultivating the mindset suitable for an animal. This is called "establishing viññāna suitable for animal bhava." That sets up a possible birth in a lower realm of kāma loka.

- That is the meaning of "sañkhāra paccayā viññāna." Such kamma viññāṇa are "fed" by strong sañkhāra or "abhisañkhāra."
- The key point is that repeatedly engaging in unwise behaviors will feed both "bad gati" and "kamma viññanna." As we can see, "bad gati" directs one to engage in more similar actions. That feeds "kamma viññāna" or "kamma bija" that can become strong enough to bring about a 'bad jāti" such as one in the animal realm, and thus to future suffering.
- That is a brief going-over of the whole PS cycle ending up with future suffering.
- One can think about how other types of activities (triggered by sensory inputs) can lead to different PS cycles. For another example see, "Idappaccayatā Paticca Samuppāda."

## Samphassa Takes Place Because of "Sañ Gati"

8. From the recent posts so far, we see that "getting attached to an arammana" starts with the "tiunnaim sañgati phasso" step. That happens because of "san gati" or "defiled gati," as discussed in \#6 of that post.

- For example, someone who has an "angry character" is more likely to be triggered with an insult. A "greedy character" is easy to be bribed. An alcoholic is easily tempted to "have a drink." Therefore, the critical step of "tiunain sañgati phasso" or "samphassa" is closely associated with one's gati (character/habits.)
- An Arahant has no "sañ gati" left, and thus his/her mind does not attach to ANY such sensory event (ārammaṇa). Of course, all sensory events like "cakkhuñca paṭicca rūpe ca uppajjati cakkhuviñ̃nāṇaì" takes place for an Arahant, i.e., he/she will see, hear, etc. But "tiṇnamं sañgati phasso" will not take place. An Arahant has removed tanhhā!
- The key to eliminating tanh $\bar{a}$ is to gradually reduce "sañ gati" in the 4 stages of Nibbāna and eventually eliminate it at the Arahant stage!
- To get rid of such "sań gati," one needs to see the bad consequences in engaging in related activities. Thus, an alcoholic needs to understand the bad consequences in two ways: (i) drinking alcohol can lead to health problems and also can get one to engage in immoral activities, (ii) these activities involve "bad sañkhāra" that can lead to births in lower realms.

## Clarification of Sañkhāra

9. Most people are familiar with the phrase "avijjā paccayā sañkhāra" but do not comprehend the meaning of that phrase. Translation of "sañkhāra" as "mental formations" may not convey the real meaning. Let me go through the example to make it clear.

- Let us look briefly at the actions of X once he is "attached." Now, he wants to have a "drink" with his friend with snacks and watch a game on TV.
- All such activities are done with mano, vacī, kāya sañkhāra. First, he automatically thinks about such activities (mano sañkhāra.) Then he will come up with a plan and starts speaking about such activities (vacī sañkhāra). He then starts working to put that plan in action with kāya sañkhāra. Note that all 3 types of sañkhāra arise in mind.
- Kammic energy is generated in such sañkhāra and lead to kamma viññāna. Thus, "sañkhāra paccayā viññāna" is really "abhisañkhāra paccayā kamma viññāna." Sometimes, especially in Sinhala, it is also stated as "abhisañkhāra paccayā abhiviññāna," where "abhiviññāṇa" just means "strong kamma viññāna."
- The point is that this viññ̄ạa (that arises in the PS process) is DIFFERENT from the vipāka viññ̄ạna that arises in a sensory event like "cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññānam̈." That cakkhu viññāṇa was a vipāka viññāṇa and had no kammic energy in it.

## Summary

10. The initial trigger for kamma accumulation is a vipāka viññanna that arises with sensory input (ārammana.) That can be described in two ways: (i) "cakkhuñca paticca rūpe ca uppajjati cakkhu viññānaỉn (any one of the six types of vipāka viñ̃ñ̄āna).." OR (ii) the "salā̄yatana paccayā phasso" in the PS cycle. Both describe the same process.

- If that person attaches to that sensory event (i.e., if it matches a "sañ gati"), then he/she will start thinking/acting to engage with that experience. That starts PS processes at "avijjā paccayā sañkhāra" and leads to the progression of that cycle ALL THE WAY to the end.
- That process is AUTOMATIC. We don't have control over the initial steps of "getting attached."
- The only way to control is to reduce one's "san gati gradually." The key here is to realize that one is "attached" and is "generating sañkhāra" and to stop generating such "bad sañkhāra" once one becomes aware of it.
- If that alcoholic understood the PS process, he/she would realize that one needs to control one's urges. This is what is meant by "being mindful" in the Ānāpānasati or Satipatthāna meditations.
- If X becomes good at controlling his urges, his "sañ gati" (craving alcohol) will gradually diminish, and he will be free of that addiction over time.
- That is the way to break any bad habit ("sañ gati.) On the other hand, one should willingly engage in activities that cultivate "good gati." Those are the "āna" and "āpāna" in Ānāpānasati. See, " $\underline{\text { b }}$ Ānāpānasati Bhāvanā (Introduction)."

### 9.3.9 <br> Six Root Causes - Loka Samudaya (Arising of Suffering) and Loka Nirodhaya (Nibbāna)

July 19, 2018; revised December 23, 2018; re-written June 3, 2021 (like a new post); re-written August 21, 2022
Loka Samudaya is not about "creating a whole new world." When someone dies and is reborn, that is "arising into a new world" for that person. The stopping of the rebirth process is loka nirodhaya, the same as Nibbāna.

## Meanings of Samudaya and Nirodhaya

1. Loka Samudaya ("san" "udaya") means "arising (again) into this suffering-filled world." Loka nirodhaya ("nir" "udaya") means "stopping the rebirth process permanently." Then the world will cease to exist for that lifestream.

- As we have discussed before, the meanings of words (whether Pāli or in any language) need to be understood in the context. Thus, loka Samudaya is not about "creating a whole new world/universe." It is about being reborn upon death.
- That may sound bad. But that will make sense when one understands that most rebirths are into realms filled with suffering.
- Let us consider an example to understand the implied meaning.

## Life in the 31 Realms Arise Due to Six Root Causes

2. There are six root causes (mülika hetu) that lead to the arising of one's world: lobha (greed), dosa hate/anger), moha (having ten types of micchā ditṭhi), and alobha (non-greed), adosa (non-
hate/anger), amoha (absence of moha). Those latter three are only "superficial" and thus are mundane versions of alobha, adosa, and amoha.

- When one acts with one or more of lobha, dosa, and moha, one is giving rise to kamma būja (kammic energy) that can lead to rebirth in the four "bad realms" or the apāy $\bar{a} s$. In other words, one is generating bad abhisañkhāra or "apuñña abhisañkhāra," therefore, "bad viññāṇa," etc., which lead to "bad bhava" and "bad jāti"" (see, "Paticca Samuppāda").
- In the same way, one or more mundane alobha, adosa, or amoha, give rise to kamma bïja that can lead to rebirth in the "good realms" at or above the human realm. There, one is generating good abhisañkhāra or "puñña abhisañkhāra" with "good viññāna," etc., which leads to "good bhava" and "good jāti."

## There Are No "Good Reams" In Ultimate Reality

3. However, those "good realms" at and above the human realm are also NOT free from suffering. Old age and death are inevitable in any realm.

- To look at it from another point of view, the two sets of root causes are like the two faces of a coin. Getting rid of just one face of a coin is impossible.
- In other words, getting a "good rebirth" does not mean one will not get "bad rebirths" subsequently. Most rebirths are in the "bad realms."
- Only when one comprehends the Four Noble Truths (closer to Anāgāmi/Arahant stages) can one clearly understand the futility and dangers of rebirths in ANY realm of "this world."
- That is why one must follow the path sequentially. See "Is It Necessary for a Buddhist to Eliminate Sensual Desires?"

## Lobha, Dosa, Moha Lead to Apāya Births - Mundane Alobha, Adosa, Amoha to Births in Good Realms

4. Lobha, dosa, and moha are food (āhāra) for the apāyās (the lowest four realms.) They give rise to the worse form of sañkhāra, i.e., apuñña abhisañkhāra (or apuññābhisañkhāra.) One does pāpa kammā (immoral deeds) with lobha, dosa, and moha.

- One does puñ̃̃a kammã (moral deeds) with the mundane versions of alobha, adosa, and amoha, i.e., with puñ̃n̄abhisañkhāra.
- The problem is that not only papa $\boldsymbol{k a m m a} \overline{\boldsymbol{a}}$ but also puñ$\tilde{\boldsymbol{n}} \boldsymbol{a} \boldsymbol{k a m m} \overline{\boldsymbol{a}}$ are done with avijja $\bar{a}$ (ignorance.) The ignorance here is that of the Four Noble Truths (which says birth in any of the 31 realms will not stop future suffering.)

## Moha and Mundane Amoha Can Arise in Any Average Human (Puthujjano)

5. In an average human, thoughts can arise with EITHER moral roots (based on mundane amoha) OR immoral roots (based on moha.)

- Moral deeds (puñña kamma) are done with mundane amoha and involve puñ̃na abhisañkhāra (puññābhisañkhāra.) Immoral deeds (pāpa kamma) done with moha involve apuñña abhisañkhāra (apuñ̃ābhisañkhāra.).
- Puñña kammā make a mind joyful and bring good vipāka. Pāpa kammā leads to a stressed-out mind and leads to bad vipāka.
- For an average human, avijjā remains as anusaya (hidden) even with mundane amoha. This is why a puñña kamma done by an average person belongs to puññābhisañkhāra that arises with "avijjā paccayā sañkhāra" in "Akusala-Mūla Upapatti Paticca Samuppāda."
- Only kusala kamma can lead to Nibbāna via "kusala-mūla paccayā sañkhāra" in "Kusala-Mūla Paticca Samuppāda."
- Puñ̃a Kammā become kusala kammā and lead to stopping the rebirth process and, thus, attaining Nibbāna upon becoming a Sotāpanna Anugāmi; see "Kusala-Mūla Paticca Samuppāda."

## All Six Root Causes Sustain the Rebirth Process

6. Therefore, all six root causes lead to the continuation of the rebirth process. However, one needs to work to stop only the three "bad root causes" to stop the rebirth process ((AND cultivate pañ̃̄̄̄)): "rāgakkhayo dosakkhayo mohakkhayo-idam vuccati nibbānan'ti." See "WebLink: suttacentral: Sāmandaka Sutta - SN 39.1"

- The path to Nibbāna involves the reduction of the three immoral roots and the cultivation of the three mundane moral roots first. Then one must comprehend the Four Noble Truths and cultivate paññā or wisdom. That is when one can turn puñ̃a $\boldsymbol{k a m m a}$ a to kusala kammā.
- To attain Nibbāna, one MUST be born in a good realm. Therefore, the first objective is to avoid births in the apāyās. The three bad roots (lobha, dosa, moha) are also called kilesa (or keles or impure) because they can lead to rebirths in the apāyās.
- Once one is born in a good realm (especially the human realm), one can learn the Noble Truths from a Nobel Person (Ariya) and, with sufficient work, comprehend them. That will elevate mundane amoha to pañ̃̃ā gradually.

## Paññā Is Not Mundane Amoha - It Is Comprehension of Noble Truths

7. Mundane amoha is just the absence of lobha (greed) and dosa (hate/anger.) The deeper (lokuttara) amoha is pa $\tilde{n} \tilde{n} \bar{a}$ (wisdom) comprehension of the Four Noble Truths (which is the same as comprehending Pațicca Samuppāda or Tilakkhaṇa.) One would understand all three if one understands one of those three.

- When one comprehends the Four Noble Truths, one will lose the desire to be reborn in the "good realms," too. That is the same as "seeing the anicca nature." It is also the same as truly understanding how cultivating various types of sañkhāra (with avijjāa) leads to births among the 31 realms.
- When one's pañ̃āa becomes optimum at the Arahant stage, one's MIIND will not go through the "upādāna paccayā bhava" step in Paṭicca Samuppāda leading to ANY rebirth. See "Concepts of Upādāna and Upādānakkhandha."
- That is why completing the eighth step of Samm $\bar{a} \operatorname{Sama} \bar{d} h i$ in the Noble Eightfold Path enables one to get to the Sammā $\tilde{N} \bar{a} n a$ stage (when pañña is optimized.) Then one attains Sammā Vimutti (complete release from this world), i.e., "dasa añgehi samannāgato Arahant."

## "Kusala-Mūla Paccayā Saṅkhāra" In Kusala-Mūla Paṭicca Samuppāda

8. When someone starts following the Noble Path, that avijja anusaya will be removed in stages. Thus, at least some puñña kamma will be effectively become kusala kamma.

- That is why the type of sañkhāra in the kusala-mūla Paticca Samuppāda are "kusala-mūla paccayā saǹkhāra." Thus such sañkhāra may be called "kusala sañkhāra."
- "Kusala" comes from "ku" + "sala," or getting rid of immoral ("ku"). All kusala kammā involve the three "good roots" of alobha, adosa, amoha, AND comprehension of the Noble Truths.
- As we know, puññābhisañkhara come under "avijjā paccayā sañkhāra" in akusala-mūla Paṭicca Samuppāda. See \#6 of "Sañkhāra - What It Really Means."
- By Arahanthood, all puñña kamma would become puñ̃na kiriyā. Since an Arahant would not have defilements, there are no akusala to deal with. Thus, any puñ̃a kamma done by an Arahant becomes NOT a kusala kamma but a puñña kiriyā (just a good deed without kammic power.)

## Difference Between Puñña Kamma and Kusala Kamma

9. Therefore, one can do puñna kamma without getting rid of avijijā, i.e., without cultivating paññā. Most people (who are not even Buddhists) engage in giving, have compassion for others, etc. Being a Buddhist (in particular, a Noble Person) is more than that. That is a crucial point to remember.

- Only Noble Persons (at or above the Sotāpanna Anugāmi stage) can do kusala kamma. That requires an understanding of the Four Noble Truths/Paṭicca Samuppāda/Tilakkhaṇa.
- Therefore, for Noble Persons (up to the Arahant stage), puñ̃a Kammā effectively become kusala $\boldsymbol{k} \boldsymbol{a m m} \boldsymbol{m}$ and lead to stopping the rebirth process; see "Kusala-Mūla Paticca Samuppāda."
- An Arahant has no akusala to remove, thus any puñ̃a Kammä by an Arahant becomes a puñña $\boldsymbol{k r i y} \overline{\boldsymbol{a}}$ (just a good deed without kammic power) as explained in \#8.

## Two Eightfold Paths

10. Before getting to the Noble Eightfold Path, one must follow the mundane eightfold path; see "Mahā Cattārisaka Sutta (Discourse on the Great Forty)."

- Therefore, "good deeds" are done at two levels: within the mundane eightfold path, one can do puñña kamma. More and more of the same deeds become "kusala kamma" as one starts comprehending the Noble Truths; see, "Puñña Kamma - Dāna, Sīla, Bhāvanā."
- In other words, puñña kamma are "contaminated" to some degree, and they become more potent kusala kamma in the Noble Path with the increasing comprehension of Tilakkhana.
- For example, in "mundane alobha," one loses the craving for some things and is willing to share those with others. In "lokuttara alobha," one just loses craving by seeing the worthlessness of things in this world.

## Until Comprehending Noble Truths, All Kamma Perpetuate the Rebirth Process

11. It is inevitable that even the most moral "average person (puthujjano)" WILL generate "bad abhisañkhāra" either during this life or in the future life until one REMOVES the three bad root causes from the mind via comprehending Tilakkhaṇa. They remain as anusaya and come to the surface under suitable conditions.

- For example, X may see an enticing object, and greed (lobha) may come to his mind.
- But at another time, X may see a hungry person and buy that person a meal with MUNDANE non-greed (alobha), non-hate (adosa), and amoha.
- An Arahant has removed all six root causes. But he/she may provide a meal to a hungry person out of paññ $\bar{a}$ (wisdom) - doing the appropriate thing; it is also called a kiriya $\bar{a}$, just action without kammic consequences.

Kāma Assāda - A Root Cause of Suffering
Gati (Habits/Character) Determine Births - Samisappanīya Sutta

### 9.4.1 Kamma and Paṭicca Samuppāda - Introduction

March 27, 2020

## The uniqueness of Buddha Dhamma (Buddhism)

Kamma and Paṭicca Samuppāda are closely related, with sañkhāra bridging the gap. We will get to the role of sañkhāra in the next post.

1. Many Eastern religions (Buddhism, Hinduism, Jainism, Sikhism) believe in kamma and rebirth. So, what is the difference in Buddhism?

- Abrahamic religions do not believe in rebirth. But they also teach that the way to get to a state of permanent happiness is to live a moral life. That means one needs to do good kamma and avoid doing bad kamma.
- On the other hand, all religions other than Buddhism are based on finding a permanent existence of happiness in a heavenly world. Buddha Dhamma does not promise sensory pleasures in a heavenly realm. Attachment to sensory pleasures is what leads to future suffering.
- By the way, Buddhism is not a religion. It is a fully self-consistent world view. When one comprehends that world view, one can see a permanent solution to the problem of suffering.
- Understanding the Four Noble Truths first requires understanding that suffering exists in the rebirth process. That understanding will reveal three more truths at the same time. (i) The Causes of future suffering, (ii) that those causes CAN BE REMOVED, and (iii) the WAY to stop that suffering from arising. Therefore, it is necessary to first understand the "previously unknown suffering" that the Buddha revealed to the world.

2. Buddhism (Buddha Dhamma) says the following.
(i) There is no existence in this world where suffering is absent permanently. There are existences in higherrealms that are almost suffering-free, but they also have limited lifetimes.
(ii) Even if one does good deeds and lives a moral life, one can have bad future births because of kamma from previous lives.
(iii) On the other hand, even if one has lived immorally in this life, it is possible to attain Nibbāna in this life.

- Those three points may not be clear. In the next few posts, I will address those issues.
- The answers to those questions will also clarify the following. The Buddha taught that it is not a good starting point to insist on whether a "self" exists or not. Instead, we need to start by investigating how future births (and thus future suffering) arise. Just like in science,
- Like science, Buddha Dhamma is based on the Principle of Causality. Nothing can happen without causes. Yet, NOT all causes inevitably lead to their outcomes. That is a crucial point to understand too.

## Causes and Conditions Bring Future Births

3. If all causes just lead to their consequences, then kamma would lead to deterministic outcomes. For example, some religions teach that immoral deeds WILL lead to their results. So, they try to find ways to remove existing bad kamma. That is what the Buddha also tried to do for six years while striving to attain the Buddhahood.

- On the night of his Enlightenment, the Buddha discovered that causes could bring their effects (results) ONLY if the right conditions are there. That is Paticca Samuppāda, the Principle of Causes and Conditions. But one must understand what those conditions are. That is why Patticca Samuppāda is a profound concept.
- By the way, Paticca Samuppāda pronounced, "patichcha samuppaada." The way Pāli words are written is different from standard English; see, ""Tipitaka English" Convention Adopted by Early European Scholars - Part 1" and "Tipitaka English" Convention Adopted by Early European Scholars Part 2."
- Paticca Samuppāda explains how causes lead to their effects UNDER suitable conditions. Therefore, we do not need to remove past kamma. We can purify our minds so that CONDITIONS for those bad kamma to bring vipāka will be absent. That is how Angulimāla, who killed almost a thousand people, was able to attain the Arahanthood; see below.
- Since this principle of CAUSES and CONDITIONS is a crucial point, let us discuss this a bit more with that analogy of a seed.

## An Example of the Requirement of Conditions

4. An apple seed has the POTENTIAL to bring an apple tree to life, so the CAUSE is there in the seed.

- Suppose one prepares a plot by preparing the soil, providing water, and plants the seed there. If sunlight is also available, the apple seed will germinate, and an apple tree will grow. Those are the necessary CONDITIONS for that apple seed to germinate and give rise to an apple tree.
- However, if one keeps the apple seed in a cool, dry place, it will not germinate, i.e., necessary CONDITIONS are not present in that case for an apple tree to come to life. After a long time, the seed will become a "dud" and will never be able to give rise to a tree.
- Furthermore, when an apple seed is planted, a mango tree will not result from that, only an apple tree. The RESULT (vipāka) is according to the CAUSE (kamma or more specifically kamma bīja).

## Example From Tipiṭaka - The account of Angulimāla

5. In the same way, someone who attains the Arahanthood may have done highly immoral deeds even in the present life. But he/she would have eliminated the CONDITIONS that can bring the results of those deeds to fruition.

- The account of Angulimāla is a good example to illustrate this point. He had killed almost a thousand people. Thus he had done enough bad kamma to be born in the apāy $\bar{a}$ many times. Yet he was able to attain the Arahanthood in a few weeks! See, "Account of Angulimāla - Many Insights to Buddha Dhamma."
- When one does a bad kamma, a kamma bïja (kamma seed) is created. Under suitable conditions, that kamma seed can "germinate" and lead to a new birth, just as a seed can lead to the birth of a plant. We will discuss how such a kamma seed is created by one's powerful thoughts (javana citta.)
- However, unlike in the case of plant seed, even potent kamma CANNOT bring vipāka to an Arahant to bring rebirth. In the case of Angulimāla, the strong bad kamma of killing almost a thousand people was done in the same life that he attained Parinibbāna. At his death, those kammic energies were there, but his mindset would not grasp them, i.e., the "upādāna paccāyā bhava" step in PS would not take place.
- Of course, we need to discuss that last point in detail in the upcoming posts.

6. Furthermore, the result (if it manifests) is compatible with the kamma. That is analogous to only an apple tree arising due to an apple seed. Akusala kamma (an immoral deed) will only lead to a birth in the apāyā. It will not lead to a birth in the human realm or a higher realm.

- Similarly, a kusala kamma (a good deed) will not lead to a birth in the apayy $\bar{a}$. It will only lead to a birth in a good realm.
- Most importantly, even if the causes are there, corresponding results (vipāka) would not materialize if necessary conditions are not fulfilled.
- We all have done uncountable kusala and akusala kamma in our previous lives. We need to be mindful to make conditions for good kamma to bring their vipāka AND for bad kamma not to bring their vipāka.
- So, we can see why both CAUSES and CONDITIONS play roles in our daily life and in the rebirth process.

## "Self" and "No-Self" Are Misleading Concepts

7. We can get some insights about the concept of a "self" from the fact that an Arahant would not have a rebirth. If a permanent "self" existed, it would be impossible for an Arahant to attain Parinibbāna and to end the rebirth process. That means there was no everlasting "self" like a "soul" or an "Atman" or "ātma."

- However, that Arahant was possibly born in most of the 31 realms uncountable times in the past. During a human existence, for example, there was a "self" living his/her life. He/she was making his/her decisions.
- When that Arahant was born an animal, it would have had the mindset of an animal. When born In a Deva realm, that Deva would have enjoyed sensual pleasures for a long time.
- Therefore, the idea that there is "no-self" while one is living life does not make sense either. There is obviously "a self," making decisions about how to live life. Even a wild animal has to decide how to get the next meal.

8. We can summarize as follows. While we live this life, we cannot deny that we exist. On the other hand, the idea of a "self' is a temporary one. That 'self' keeps changing even during life, but will change drastically when grasping a "new bhava." Thus, it is also not correct to talk about an "everlasting self."

- The "sense of a self" goes away entirely only at the Arahant stage. Until then, we need to try to comprehend WHY it is unfruitful to take anything in this world to be "mine."
- That does not mean one needs to start giving away everything that one owns. We have responsibilities to fulfill. Furthermore, the "giving" and "letting go" will happen AUTOMATICALLY as the mindset changes. I have personally experienced that.
- Another critical point is that having the "big picture" helps clarify many issues. That may sound contradictory, but that is true. See, "The Framework of Buddha Dhamma."

## The Bigger Picture of 31 Realms

9. As we discussed in many previous posts, our world is much more complicated than what we can experience with our limited senses. I will summarize some relevant key points to the current discussion.

- The 31 realms in our world belong to three types of "loka" or "worlds." The "kāma loka" has 11 realms, including the human realm. There are 16 realms in "rūpa loka" where rūpāvacara Brahmā live. Then, there are four realms in "arūpa loka" for arūpāvacara Brahmā.
- Those higher-lying two lok $\bar{a}$ are the simplest. In those 20 realms, there is only jhānic pleasure. A human can experience all those by cultivating jhāna. The lower four jhānā correspond to the jhānic experiences of the 16 rūpāvacara Brahma realms. The higher four correspond to the four arūpāvacara Brahma realms. All those Brahmā do not have "dense bodies" like ours. Their "bodies" have very little matter. They are even harder to "see" than even gandhabbā.
- The remaining 11 realms are in the kāma loka. Sensory pleasures associated with eating, smelling, and body touches are available only in those 11 realms. Living beings in those 11 realms have relatively "dense solid bodies" or karaja kaya. There is a complex variety of "bodies" in kāma loka. We can see very high complexity even within the animal realm. In general, Devā in the six realms have "bodies" much lighter than ours but denser than Brahma.

## What Leads to Rebirth in Different Realms?

This has answers from the close relationship between kamma and Paṭicca Samuppāda, where sañkhāra plays a key role.
10. To be born in those higher 20 realms, a human must cultivate $j h \bar{a} n \bar{a}$.

- It is not necessary to follow Buddha Dhamma to cultivate either type of $j h \bar{a} n \bar{a}$ and to be born in those higher 20 realms. Anāriya (or non-Noble) meditation techniques (breath and kasina meditations) can be used to cultivate those anāriya jhāna.
- However, that birth in a Brahma realm lasts only for the duration of the life there. Then one will be born back in the kāma loka based on the strongest kamma vipāka that comes to the mind of that Brahma at the dying moment.
- Rebirths in various realms in the kāma loka are much more complex. We will discuss those in the next post, where we will discuss the role of sañkhāra.

## Summary

11. We have discussed other ways of looking at the basic principles in Buddha Dhamma before. See, for example, "The Framework of Buddha Dhamma."

- The above is a simple summary of yet another way. We will continue to explore the connection between kamma and Paṭicca Samuppāda in the next post.
- It is essential to grasp the basic framework from different "vantage points." Then we can slowly get into more profound aspects.
- Reviewing the "bigger picture" from different angles is necessary to get an idea of the beginning-less rebirth process. The world is complex, and understanding it is like putting together a big jigsaw puzzle. It takes a real effort, but it becomes joyful when one gets some traction.
- Once one starts understanding the essential aspects, one will see the value of the Buddha, his Dhamma (teachings), and the Sangha, who understood this profound Dhamma and transmitted it faithfully over 2500 years. That is the real faith (saddh $\bar{a}$.)
- All previous posts in the series at "Origin of Life."

## Kāma Assāda - A Root Cause of Suffering

April 4, 2020; revised April 6, 2020

## Kāma Assāda - Sensory Pleasures

1. Kāma assāda, or simply "kāma," means "sensory pleasures." See, "What is "Kāma"? It is not Just Sex."

- We all like and crave sensory pleasures. An average human likes to eat tasty foods, smell perfumes, and experience soothing bodily contacts, including sex. $\mathrm{He} /$ she also wants to see related objects and listen to related sounds. Thus, an average human enjoys such sensory events through all five physical senses.
- Besides, we also tend to endlessly think about such "pleasures" and how to get more of them. Thus, we use all six senses to "enjoy sensual pleasures." That leads to kāma taṇhā, one of the three types of taṇhā: kāma taṇhā, bhava taṇhā, vibhava taṇhā.
- The Buddha pointed out that we are trapped in the suffering-filled rebirth process because of this tendency to value sensory pleasures or kāma assāda. That is another way to discuss the "previously unknown suffering" that the Buddha introduced in his first discourse, Dhammacakkappavattana Sutta. The dangers in kāma assāda stated there as one extreme way to live life, or "kāmasukhallikānuyogo."
- It is important to note that Buddha rejected the opposite extreme, too ("attakilamathānuyogo.") There is no need to force oneself to eat less or to eat not-tasty food, be subject to unpleasant bodily contacts, etc. The "middle way" is to live a simple life away from both extremes and to contemplate and comprehend the "true nature of this world 31 realms."
- It is not easy to comprehend the bad consequences/danger (ādīnava) of kāma assāda. We will go through a systematic analysis.

## Connection to the Previous Post

2. In the previous post, we discussed that causes (kamma bïja) are not enough to bring about their results (kamma vipāka.) Just because one has done bad kamma does not mean one will have to face adverse consequences, especially unfortunate rebirths. The same is true for good kamma.

- We all have done enough good and bad kamma to sustain the rebirth process over billions of years. However, even Angulimāla, who killed almost a thousand people, was able to nullify that kamma. He did that by purifying his mind (attaining Arahantship) and removing avijjā and taṇhā that fuel the Upapatti Paticca Samuppāda process.
- That indirect way of "overcoming" a kamma bīja is called kammakkhaya. It does not destroy any previous kamma bïja. Instead, one would remove the conditions for such kamma bïja to "germinate." As we know, the removal of avijj $\bar{a}$ will stop the tendency to attach to "worldly things" (tanh $\bar{a})$. Then, the "upādāna paccayā bhava" step in Upapatti Paṭicca Samuppāda will not take place.
- The key message of the Buddha was that the rebirth process in "this world" is filled with suffering. When one comprehends that "hidden suffering" of "this world," one will strive to overcome the rebirth process and to attain Nibbāna.
- "This world" ("ayamं loko") consists of three loka: kāma loka (with 11 realms,) rūpa loka (with 16 realms,) and the arūpa loka (with four realms.) As we know, at the Sotāpanna stage, one overcomes rebirths in the four lowest realms (apāy $\bar{a}$.) Rebirths in all realms in kāma loka will stop at the Anāgāmi stage. At the Arahanthood, rebirths in all three lok $\bar{a}$ (i.e., in all 31 realms) will end, and Nibbāna realized.

## Most Living Beings Are Trapped in the Four Lowest Realms (Apāy $\bar{a}$ )

3. Over $99 \%$ of the living beings are trapped in the four lowest realms (apayy $\bar{a}$ ) in the ka$m a$ loka. It is extremely difficult to get rebirth in a higher realm.

- For example, there are less than eight billion people on Earth. But there are a million times more ants on Earth! There are a trillion types of lifeforms on Earth; see, "WebLink: sciencealert.com: The Largest Study of Life Forms Ever Has Estimated That Earth Is Home to 1 TRILLION Species." These are mind-boggling numbers! That is not counting the other three realms in the apāya that we cannot see.
- While it is hard to get rebirth in the human and Deva realms, it is EVEN HARDER to get rebirths in rūpa loka and arūpa loka, collectively called Brahma loka. That is because one has to overcome (at least
temporarily suppress) kāma rāga (craving for sensory pleasures) to get a birth in a Brahma realm. If one can attain a jhāna, that means one has at least temporarily suppressed (during this lifetime) attachment to sensory pleasures, especially desire for sex.
- That is why it is tough for most people to attain jhāna.

## Easy to Describe and Hard to Imagine Life in the Two Brahma Loka

4. Those Brahmā do not need "solid, dense bodies" like ours since they have overcome the desire for physical touch, taste, and smell. Solid, dense bodies are required for those three sensory contacts.

- Rūpāvacara Brahmā still have cravings for seeing and listening. But those two functions can be achieved without dense bodies and just with the two corresponding pasāda rūpa. A pasāda rūpa is a suddhatthaka that is "energized" by kammic energy. A rūpāvacara Brahma also has hadaya vatthu (seat of mind), another "energized" suddhatthaka.
- Those living-beings in the highest loka, the arūpāvacara Brahma loka, have only the mind. They have given up the desire to see and hear as well. Thus, they just have hadaya vatthu, just a single suddhatthaka!
- It is not easy for an average human to even imagine such lifeforms. Only a Buddha can discover such details about the "wider world of 31 realms."
- Anyway, the point is that it is much easier to explain the lifeforms in the highest 20 realms. Furthermore, they mainly experience $j h a \bar{a} i c$ pleasures. Therefore, even sensory experience is easy to explain. That was briefly discussed in the previous post, "Kamma and Paticca Samuppāda - Introduction."

## Eleven Realms in Käma Loka Are Very Complex - Simplest Are the Deva Realms

5. Compared to the higher-lying 20 Brahma realms, life in the 11 realms in $k \bar{a} m a$ loka is very complex.

- The 6 Deva realms in the kāma loka are the simplest. They have opapātika births (instantaneous births) without a "growth stage" like ours. Even though they have all five physical senses, their "physical bodies" are much less dense, almost like the gandhabbā.
- As we have discussed, a gandhabba is born with a mental body that is similar to a Brahma. That means just with a hadaya vatthu and a set of pasāda rūpa. Then that gandhabba can absorb aroma (scents) and become a bit denser, but still cannot be seen by average humans. See, "Ghost 1990 Movie - Good Depiction of Gandhabba Concept." A Deva is similar to a gandhabba that has a "bit more dense body" than just the mental body.
- Devā enjoy sensory pleasures and do not experience significant bodily ailments or diseases. Thus, the main difference between them and Brahmā is while Brahmā enjoy jhānic pleasures, Devā enjoy sensual pleasures or kāma assāda.

## Complexity Starts at the Human Realm

6. As we know, suffering is the highest in the lowest four realms including the animal realm.

- Therefore, the human realm is unique. Some humans enjoy life, almost like some Devā, without even any health problems. Then are others who suffer almost like some animals due to either financial or health issues. Furthermore, a human could cultivate jhāna and enjoy jhānic pleasures like Brahmā.
- Brahmā and Devā are content with their sensual or jhānic pleasures. It is mostly those who had attained magga phala as humans who are interested in following the Path. On the other hand, those in the ap $\bar{a} y \bar{a}$ do not have the mental capacity even to comprehend Dhamma.
- That is why the human realm is the best-suited to follow the Noble Path. Humans can comprehend Dhamma. Furthermore, other than a relatively few, they do experience enough suffering to be motivated to think about the problem of suffering.
- In this and a few upcoming posts, we will focus more on the reasons for living-beings to be born in all these different realms. That will help us understand the critical principles of Paticca Samuppāda.

## Overview of the Three Lok $\bar{a}$

7. We know that causes are not ENOUGH to bring rebirths in respective realms, as discussed in the previous post, "Kamma and Paticca Samuppāda - Introduction." But causes are NECESSARY to bring rebirth in a given realm. Without a cause, there cannot be a rebirth in a given realm.

- A discussed in that post, one MUST cultivate a jhāna to get rebirth in a Brahma realm. A rūpāvacara $j h a ̄ n a$ leads to rebirth in one of 16 realms in the rūpāvacara Brahma realms (in rūpa loka). An arūpāvacara jhāna will lead to rebirth in an arūpāvacara Brahma realm (in arūpa loka).
- Of the three types of loka, kāma loka is the "default loka" for living beings. Living beings have cravings for sensory pleasures ( $k \bar{a} m a ~ a s s a \bar{a} d a$, ) and that is kāma rāga. One who has very strong $k \bar{a} m a$ ragga, and is willing to do immoral deeds to enjoy them, has lobha.
- Those with lobha also have a higher version of patigha, and that is dosa. One acting with lobha/dosa can do immoral deeds (pāpa kamma) and make kamma bīja suitable to bring rebirths in the apayy $\bar{a}$ (four lowest realms in kāma loka.)
- To summarize, lobhaldosa are strong versions of kāma rāga/patigha; see, "Lobha, Dosa, Moha versus Rāga, Patigha, Avijijā."
- Those with kāma rāga/patigha are capable of engaging in moral actions (puñña kamma.) Such puñña kamma are the causes to bring "good rebirths" in the human realm or the six Deva realms.
- The bottom line is that living-beings in kāma loka have strong cravings for sensual pleasures (kāma rāga.) Until those cravings are removed, it is not possible to overcome rebirths in kāma loka.
- As we know, even a Sotāpanna has kāma rāga. Only an Anāgāmi has removed kāma rāga.

## Craving for Sensory Pleasures Is the Root of Most Suffering

8. From the above discussion, it should be clear that suffering in the rebirth process can be attributed to the innate tendency of living-beings to crave sensual pleasures (i.e, to have kāma rāga.)

- When they do immoral deeds (pāpa kamma) in their pursuit of sensual pleasures, they build-up kammic energies (kamma bīja) to bring about rebirths in the apāy $\bar{a}$.
- Even those who just enjoy sensual pleasures (without doing immoral deeds like killing, stealing, sexual misconduct, etc) they cannot "escape" the realms in the kāma loka. This is clear in the "tanh $\bar{a}$ paccay $\bar{a}$ upādāna" and "upādāna paccayā bhava" steps in Pațicca Samuppāda.
- In order to overcome or transcend the kāma loka, one MUST lose the cravings for sensual pleasures or $k \bar{a} m a ~ a s s a ̄ d a$. I will try to use the term "kāma assāda" in the future since it relates directly to kāma loka. Here "assāda" means "pleasures" and thus kāma assāda are sensual pleasures (taste, smell, and touches including sex.)

## Dangers in Kāma Assāda

9. What we discussed above is an essential teaching of the Buddha that is hidden these days. The Buddha described "kāma assāda" or just "kāma" to be very dangerous.

- Bhava Sutta (AN 6.23) says: " 'Bhayan'ti, bhikkhave, kāmānametamं adhivacanamं; ‘dukkhan'ti, bhikkhave, kāmānametaì adhivacanaì; 'rogo'ti, bhikkhave, kāmānametaì adhivacanaì;.." OR "'Danger', 'suffering', 'disease',..are terms for sensual pleasures."
- Bhaya Sutta (AN 8.56) says, "" danger' is a term for sensual pleasures. 'Suffering', 'disease', 'infected wound', 'pierced by spear', etc. are terms for sensual pleasures. And why is 'danger' a term for sensual pleasures? Someone who is caught up in sensual greed and shackled by lustful desire is not freed from dangers in the present life or in lives to come. That is why 'danger' is a term for sensual pleasures.."
- See the English translations there for more details.
- There are many sutt $\bar{a}$ that emphasize the hidden dangers in kāma assāda or kāma rāga. For example, Mahādukkhakkhandha Sutta (MN 13), Cūladukkhakkhandha Sutta (MN 14), Cūladhammasamādāna Sutta (MN 45), and many others discuss the ādīnava or "bad and dangerous consequences of indulging in sensual pleasures, i.e., dangers of $k \bar{a} m a$ assāda.
- I have given the links to the Pāli versions of those sutttā at Sutta Central. One can access translations to several languages, including English, by clicking on the "down arrow" above the name of the sutta.

10. We will make the connection of various types of rebirths to sañkhāra and Paticca Samuppāda in the next post.

- More on assāda and ādīnava at, "Assāda, Ādīnava, Nissarana."
- All posts in this series at, "Origin of Life."

### 9.4.3 Gati (Habits/Character) Determine Births - Samsappanīya Sutta

April 11, 2020

## Gati (Habits/Character) is a key concept

1. Gati (Habits/Character) is a key concept that has been hidden for hundreds of years, just like the true meanings of anicca and anatta. I just did a search for the keyword "gati" on Tipitaka at the Sutta Central and came up with "WebLink: suttacentral: 515 results of search for gati." At the end of the post, I will discuss one sutta as an example, which describes how one with "crooked gati" is a candidate to be "reborn crooked."

- Any given person thinks, speaks, and acts based on his/her views. If started with wrong views, one tends to go in the wrong direction. That is why Sammā Ditthi or "correct views" comes first in the Noble Eightfold Path.
- Avijjā and micchā ditṭhi go together. See, for example, "WebLink: suttacentral: Avijjā Sutta (SN 45.1)."
- Any person will have a certain set of gati at a given time, based on avijj $\bar{a}$ and micchā dițthi at that time. As one makes progress on the path, avijjā and micchā ditthi will be reduced and one's bad gati will be reduced too.
- Gati is a common Sinhala word with the same meaning as in Pāli, so it would be easier for a Sinhala-

- The Buddha explained that if one cultivates "dog gati" that could lead to rebirth as a dog in the "Kukkuravatika Sutta (Majihima Nikaya 57) - Kammakkhaya."
- An introduction to gati at, "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsava)." Further information at, "9. Key to Ānāpānasati - How to Change Habits and Character (Gati)."
- It is also important to know the difference between standard English and "Tipitaka English." See, ""Tipitaka English" Convention Adopted by Early European Scholars - Part 1" and "Tipitaka English" Convention Adopted by Early European Scholars - Part 2."

## Five Main Types of Gati

2. The Buddha explained that there are five main types of gati. The WebLink: suttacentral: Gati Sutta (AN 9.68): "Pañcimā, bhikkhave, gatiyo. Katamā pañca? Nirayo, tiracchānayoni, pettivisayo, manussā, devā-imā kho, bhikkhave, pañca gatiyo. Imāsam் kho, bhikkhave, pañcannaì gatīnaì pahānāya ... pe ... ime cattāro satipaṭ̂hānā bhāvetabbā"ti."

Translated: "Bhikkhus, there are five character qualities (gati). What five? (Those belonging to) hell, the animal realm, the ghost realm, humans (manussā), and Devā. To eliminate those five types of gati, you should cultivate Satipatṭhānā."

- In the WebLink: suttacentral: Sañgīti Sutta (DN 33): "Pañca gatiyo-nirayo, tiracchānayoni, pettivisayo, manussā, devā."
- By the way, Sañgīti Sutta provides definitions of many key Pāli words.
- It is to be noted that all six Deva and 26 Brahma realms are included in the Deva category in many suttā, including the Dhammacakkappavattana Sutta. See \#7 of, "Dhammacakkappavattana Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."

3. In many English translations, the Pāli word "gati" is mistranslated as "destination." But the correct translation is "habits/character" as explained in detail in the links in \#1 and also at \#8 below. We can also see that in other suttā, for example, in the Mahāparinibbāna Sutta (DN 16.)

- In the WebLink: suttacentral: 9. Anāvattidhammasambodhiparāyana (DN 16) section of Mahāparinibbāna Sutta, Venerable Ānanda asks the Buddha about several people who had recently died: "sālho nāma, bhante, bhikkhu nātike kālañkato, tassa kā gati, ko abhisamparāyo?" OR "the monk named Sälha has passed away in Nādika. What is his gati (that led to the new birth) and where has he been reborn?"
- However, it is true that one with "bad gati" (or dugati), for example, will have a "bad destination" (or duggati.) Similarly, one with "good gati" (or sugati), will have a "good destination" (or sugati.) Note the subtle difference in dugati and duggati, whereas the same word "sugati" is used for both "gati" and "destination."
- Now, let us look at the connections between gati, sañkhāra, and rebirths in various realms.

## Connection to Paticca Samuppāda

4. As we know, Paṭicca Samuppāda dictates future existences (bhava) and births ( $j \bar{a} t i$.) One generates (abhi)sañkhāra due to avijjā and engages in three types of abhisañkhāra. This was discussed in detail in the posts, "Kamma, Sañkhāra, and Abhisañkhāra" and "Kamma are Done with Sañkhāra - Types of Sañkhāra." It is essential to understand those posts.

- As explained there, those three types of abhisañkhāra are, Puñ̃̄ābhisañkhāra (puñña abhisañkhāra), apuññābhisañkhāra (apuñña abhisañkhāra), and āneñjābhisañkhāra (āneñja abhisañkhāra.)
- Those lead to various types of rebirths, per Pațicca Samuppāda.

5. We can understand the connection between those three types of abhisañkhāra and the five types of gati, in simple terms, as follows.

- Apuñña abhisañkhāra (in the mind) lead to the ten types of akusala kamma and thus lead to rebirths in the apāyā. In other words, such kamma committed by those with niraya, tiracchāna, and peta gati.
- On the other hand, one with manussa or deva gati does puñña kamma with puñña abhisañkhāra. They lead to rebirths in the human, Deva, and the 16 rūpāvacara Brahma realms. It is to be noted that cultivation of the four lower jhāna falls under puñña abhisañkhāra.
- Āneñja abhisañkhāra are cultivated while practicing the highest four $j h \bar{a} n \bar{a}$ leading to rebirths in the four arūpāvacara Brahma realms. It is interesting to note that "āneñja" means "un-dying" and thus "permanent." Ancient yogis (including Ālāra Kālāma and Uddaka Rāmaputta) thought these realms have infinite lifetimes and equated rebirths there to the cessation of the rebirth process. Of course, the Buddha found out that those also have finite lifetimes, even though extremely long, lasting eons (billions of years).
- Also see, "Sañkhāra, Kamma, Kamma Bīja, Kamma Vipāka" and \#14 of "Vacī Sañkhāra - Sañkappa (Conscious Thoughts) and Vācā (Speech)"

## Good Realms Are Sugati and Bad Realms Are Duggati

6. There are several sutt $\bar{a}$ that discuss various types of behaviors that lead to good and bad rebirths. Those with "good gati" tend to reborn in "realms with good gati" or "sugati" ("sukha" + "gati.") On the other hand, those with "bad gati" tend to reborn in "realms with bad gati" or "duggati" ("dukkha" + "gati.")

- For example, see, "WebLink: suttacentral: Dukkha Sutta (AN 5.3)," "WebLink: suttacentral: Dukkha Sutta (AN 6.75),"

7. The last verse of the "WebLink: suttacentral: Vinopama Sutta (SN 35.246)" is informative: "Evameva kho, bhikkhave, bhikkhu rūpaì samanvesati yāvatā rūpassa gati, vedanamं samanvesati yāvatā vedanāya gati, saññai samanvesati yāvatā sañn̄āya gati, sañkhāre samanvesati yāvatā saǹkhārānaì gati, viñ̃n̄ạnàं samanvesati yāvatā viñnānassa gati. Tassa rūpaì samanvesato yāvatā rūpassa gati, vedanaiं samanvesato ... pe ... saññai் ... sañkhāre ... viññānamं samanvesato yāvatā viññāṇassa gati. Yampissa taỉ hoti ahanti vā mamanti vā asmīti vā tampi tassa na hotī"ti."

Translated: "So too, bhikkhus, a bhikkhu investigates a rūpa to see the connection to gati in that rūpa, he investigates feelings to see the connection to gati in those feelings, he investigates a perception to see the connection to gati in that perception, he investigates sañkhāra to see the connection to gati in that sañkhāra, he investigates viñ̃̄āna to see the connection to gati in that viññāna. Through those investigations, whatever notions of ' I ' or 'mine' or 'I am' had occurred to him before no longer occur to him."

- The Buddha described a living being as a "collection" of the five aggregates: rūpa, vedanā, sañ̃̄ $\bar{a}$, sañkhāra, and viññāna. A living-being, in any of the 31 realms, arises due to a certain paṭisandhi viññāna cultivated with a certain gati.
- What this deep sutta is saying that when one understands the Paticca Samuppāda process, one would be able to "see" how various types of gati lead to corresponding rebirths.
- Now we will discuss the WebLink: suttacentral: Sainsappanīya Sutta (AN 10.216) which explains how a human can be reborn a "creeping creature" like a snake. [sappana :[nt.] crawling. samsappi : [aor. of samsappati] crept along; crawled; moved slowly.]

## Sainsappanīya Sutta (AN 10.216)

8. In this sutta, the Buddha has explained that one who engages in dasa akusala has "bad gati" or "dugati" or "crooked/bad character." Such people are eligible for rebirth in "bad realms" or "duggati."

- Similarly, one who abstains from dasa akusala has "good gati" or "sugati" or "straight/good character." Such people are eligible for rebirth in "good realms" or "sugati."

I am going to skip some standard verses and translate (explain) the critical verses to provide the essence.

- "Bhikkhus, I will explain to you how creeping, crooked creatures like snakes are born in this world."

## "Crooked Kamma" Done With "Crooked Gati" Lead to "Crooked Births"

9. "And what, bhikkhus, is that explanation of the Dhamma on creeping creatures? Bhikkhus, living-beings are the owners of their kamma, the heirs of their kamma. They have kamma as their origin, kamma as their bondage, bound to their kamma. Whatever kamma they do, good or bad, they will inherit the corresponding vipāka.

- In the following, the numbers refer to each of the dasa akusala.
(1) "Consider someone who destroys life. He is murderous, bloody-handed, given to blows and violence, merciless to living beings. He is crooked in bodily actions, speech, and thoughts. His bodily kamma, verbal kamma, mental kamma are all crooked. His gati is crooked and his rebirth is crooked ( jimha gati, jimhupapatti, where "jimh $\vec{a} "$ is "crooked" and "jimhupapatti" is "jimh $\vec{a} "+$ "upapatti").
- For one with a crooked gati and rebirth, I say, there is one of two destinations: either the exclusively painful hells or a species of creeping animal. And what are the species of creeping animals? The snake, the scorpion, the centipede, the mongoose, the cat, the mouse, and the owl, or any other animals that creep away when they see people.
- Thus a being is reborn from a being, meaning one is reborn through one's deeds. When one has been reborn, one makes more (defiled) sensory contacts (to be born again.) It is in this way, I say, that beings are the heirs of their own kamma.
(2) "Similarly, someone takes what is not given ... (3) ... engages in sexual misconduct ... (4) ... speaks falsehood $\ldots$ (5) $\ldots$ speaks divisively $\ldots$ (6) $\ldots$ speaks harshly $\ldots$ (7) $\ldots$ indulges in idle chatter $\ldots$ (8) $\ldots$ is full of greed ... (9) ... has a mind of ill will and intentions of hate ... (10) ... holds the ten types of micch $\bar{a}$ ditthi. He creeps along by body, speech, and mind. His bodily kamma is crooked ... His gati crooked and his rebirth is crooked....
- Thus a being is reborn from a being, meaning one is reborn through one's deeds. When one has been reborn, one makes more (defiled) sensory contacts (to be born again.) It is in this way, I say, that beings are the heirs of their own kamma.

## "Straight Kamma" Done With "Straight/Honest Gati" Lead to "Good Births"

10. "Bhikkhus, beings are the owners of their kamma, the heirs of their kamma. They have kamma as their origin, kamma as their relative, kamma as their resort. Whatever kamma they do, good or bad, they are its heirs.
(1) "Consider someone who has abandoned the destruction of life. With the weapons laid aside, conscientious and kindly, he dwells compassionate toward all living beings. He does not engage in crooked bodily actions, speech, and thoughts. His bodily kamma, verbal kamma, mental kamma are all straight. His gati are straight and his rebirth is straight (good.)

- For one with a straight gati and rebirth, I say, there is straight gati (uju gati; where "uju" means "straight") and births (ujupapatti). They have rebirths in either pleasurable heavens or eminent families, such as those of affluent householders, families that are rich, with great wealth and property, abundant gold and silver, abundant treasures and belongings, abundant wealth and grain.
- Thus a being is reborn from a being, meaning one is reborn through one's deeds. When one has been reborn, one makes more (defiled) sensory contacts (to be born again.) It is in this way, I say, that beings are the heirs of their own kamma.
(2) "Having abandoned the taking of what is not given, someone abstains from taking what is not given ... (3) $\ldots$ abstains from sexual misconduct $\ldots$ (4) $\ldots$ abstains from false speech $\ldots$. (5) $\ldots$ abstains from divisive speech ... (6) $\ldots$ abstains from harsh speech ... (7) $\ldots$ abstains from idle chatter ... (8) $\ldots$ is without longing ... (9) ... is of goodwill ... (10) ... holds correct views. He does not creep along by body, speech, and mind. His bodily kamma is straight ... His gati are straight and his rebirth is straight....
- Thus a being is reborn from a being, meaning one is reborn through one's deeds. When one has been reborn, one makes more (defiled) sensory contacts (to be born again.) It is in this way, I say, that beings are the heirs of their own kamma.
"Bhikkhus, beings are the owners of their kamma, the heirs of their kamma. They have kamma as their origin, kamma as their relative, kamma as their resort; whatever kamma they do, good or bad, they are its heirs.

11. Again, it is necessary to understand the posts, "Kamma, Sañkhāra, and Abhisañkhāra" and "Kamma are Done with Sañkhāra - Types of Sañkhāra."

### 9.5 Paṭicca Samuppāda, Tilakkhaṇa, Four Noble Truths

October 4, 2021
Paticca Samuppāda - Introduction
What Did the Buddha Mean by a "Loka"?
Future Suffering (Loka/Dukkha Samudaya) Starts With Sensory Input (Ārammana)
Sotāpanna - One With the "Wider Worldview" of the Buddha
Sotāpannā - Just Starting on the Noble Path
Yoniso Manasikāra and Paticca Samuppāda
Dhamma - Different Meanings Depending on the Context
Dhammānudhamma Patipatti - Connection to Paticca Samuppāda/Tilakkhana
9.5.1 Paṭicca Samuppāda - Introduction

October 4, 2021; revised August 31, 2022

## Resources in the Tipitaka

1. In the "WebLink: suttacentral: Saimyutta Nikāva 12" in the Sutta Pitaka, there are over 100 suttas on Paṭicca Samuppāda. However, the first 70 are the more important. The series starts with the "WebLink: suttacentral: Paticcasamuppāda Sutta (SN 12.1)." That first sutta introduces the terms in Paṭicca Samuppāda and the second one, "WebLink: suttacentral: Vibhañga Sutta (SN 12.2)" provides brief descriptions of the terms in Paṭicca Samuppāda.

- Of course, many other key suttas and sections spread over the whole Tipitaka because it is the essence of Buddha Dhamma. For example, "WebLink: suttacentral: Mahānidāna Sutta (DN 15)" is a key sutta on Paṭicca Samuppāda.
- To get to deeper explanations, one needs to refer to the "WebLink: suttacentral: Paticcasamuppādavibhañga (Abhidhamma Vb 6 )" in "Vibhañga Pakarana," one of the three original Commentaries included in the Tipitaka, As usual, SOME of the English translations there are NOT correct. Of course, the original Pāli versions (in English letters) are correct.
- The Commentary, Visuddhimagga, written (much later, around 450 CE) by Ācariya Buddhaghosa is completely inadequate. It only discusses the Akusala-mūla Uppatti Pațicca Samuppāda and does not even discuss the Kusala-mūla Paṭicca Samuppāda. In brief, the Akusala-mūla Uppatti Paṭicca Samuppäda explains how different types of births arise in the rebirth process and the Kusala-mūla Paticca Samuppāda explains the way to stop the rebirth process and attain Nibbāna.

## A Novel Approach

2. I have discussed Paticca Samuppāda in the section "Paticca Samuppāda." Here, I want to take a different approach that hopefully provides new insights.

- Almost all explanations of Paticca Samuppāda follow the standard sequence starting with "avijjā paccayā sankhhāra." That is because the main cause for the rebirth process and its result (the last step in Paṭicca Samuppāda, i.e., "jāti paccayā jarā, maraṇa, soka-parideva-dukkha-domanassupāyasā sambhavan'ti') is avijj $\bar{a}$. As we have discussed, the rebirth process and all that suffering arise due to ignorance of the Four Noble Truths/ Tilakkhaṇal Paṭicca Samuppāda; see, "Buddha Dhamma Noble Truths, Paticca Samuppāda, Tilakkhana."
- However, in real life, we don't start acting with avijjā without reason. Our unwise actions ALWAYS start based on an ārammaṇa that comes through one of the six senses.

## Mind "Turns On" With an Arammaña

3. Our minds are not active if we are unconscious or deeply sleep. Thus, under those conditions, we are unaware of the "world" around us. But, of course, we are still alive and our bodies are kept alive by kammic energy.

- We take action in response to an external stimulus called an ārammana. Some actions are "morally bad," some are "morally good" and others are "neutral."
- An ārammaṇa can come in on its own. For example, while walking we may see and hear various things. Most are "neutral" and we don't pay attention to them.
- But if we see something "eye-catching" we may even stop and take a good look at it. If we hear a loud noise, we may walk away from it. In such cases, we take action based on such an ārammaṇa.
- The sense inputs coming through the five physical senses are easy to recognize as such. But many $\bar{a} r a m m a n ̃ a$ come through the mind itself. For example, while waiting to fall asleep, thoughts about a memory or a future plan may come to mind. We may act on those too. For example, if thoughts about an old friend come to mind, one may decide to call that friend.

## What Happens When an Arammana Brings a Sensory Input?

4. It is useful to see how the Buddha described that process. That will help our analysis of how a Paticca Samuppāda process is initiated.

- If we see something while walking, our eyes capture an image of a certain object, say a person (X.) It just happened because that person was also walking on the road. Even though the eyes capture that image, it is not the eyes that "see" that person. It is our mind that "sees." We don't need to understand the details, but here is what happens: The image of person X captured by the eyes is processed by the brain and then transmitted to the cakkhu pasāda rūpa in the "mental body" or the gandhabba.
- At the SAME MOMENT the cakkhu pasāda rūpa (abbreviated as "cakkhu") receives such an image from the brain, it passes that image (called " $r \bar{u} p a$ ") to the seat of the mind, hadaya vatthu. That is how the mind becomes aware of that person X , i.e., how a "cakkhu viññāna" arises.
- That interaction between the cakkhu and a rūpa leading to the "awareness of an external object" is written in Pāli as, "cakkhuñca paṭicca rūpe ca uppajjati cakkhu viññāṇaṃ." For details, see the post, "Phassa (Contact) - Contact With Pasāda Rūpa."
- Don't be discouraged by these Pāli words. Try to get the basic idea. The main point is that "seeing" does not happen in the physical eye. The mind sees (not the eyes and not the brain)!

5. The Pāli verse, "cakkhuñca paṭicca rūpe ca uppajjati cakkhu viññānaṃ" is commonly translated as, "eye-consciousness arises dependent on the eye and sights." But we need to remember that the "contact" is NOT between the PHYSICAL EYES and the PHYSICAL OBJECT (a person in our above example.)

- In that verse, "cakkhu" refers to the cakkhu pasāda rūpa and " $r \bar{p} p a$ " refers to the "image of person X" (formed by the brain based on the image received from the physical eyes.) The "meeting of the cakkhu and rupa" is indicated by "paticca" in the above verse. Which leads to the mind "seeing an image of person X" (cakkhu viññāṇa or eye-consciousness).
- Therefore, there are a few CRITICAL things to remember: "cakkhu" is not physical eyes; "rūpa" is not the actual object (a person in this example); "cakkhu viññāna" does not arise in the eyes or the brain or even in the cakkhu pasāda rūpa (cakkhu.) That cakkhu viññāna (eye-consciousness) arises in the mind!
- The other processes involving ears, nose, tongue, and the physical body (touch) must be understood similarly.

## Two Meanings of Patticca

6. The Pāli word "paticca" has TWO possible meanings, depending on the context. The term "Patticca Samuppāda" means "getting attached willingly" or "paṭi" + "icca" ("pati" means to "bind.") See "Paticca Samuppāda - "Pati+ichcha" + "Sama+uppāda""

- However, in the above verse, paticca [pați+ca= bind + and $=$ in dependence] implies "two entities (that are compatible) making contact." A rūpa does not "make contact" with one of the other four indriya like "sota pasāda rūpa" or "ghāna pasāda rūpa." Similarly, a sound (sadda) does not "make contact" with "cakkhu pasāda" or "ghāna pasāda."
- In the "Samyojana Sutta (SN 44.9)," the Buddha explains the second meaning: "Seyyathāpi, bhikkhave, telañca paṭicca vațtiñca paṭicca telappadīpo jhāyeyya" OR "Bhikkhus, an oil lamp burns in dependence on oil and a wick (oil getting soaked in the wick)." An old-fashioned oil lamp has a wick partially immersed in oil. That oil soaks the wick gets to the burning wick's tip, and sustains the flame. Therefore, oil and wick are compatible and will "paticca." If one puts a "wick made out of the plastic" in oil, the oil will not soak the plastic, i.e., they are incompatible and thus would not "get together" or paticca.
- Now let us go back to our example of "seeing a person."

## Cakkhu Viññāṇa Is More Than Just "Seeing"

7. Suppose that person X is a friend. The moment we see person X , we identify him. Think about it. It does not take more than a split second to identify X . How does that happen?

- A complex process happens in mind during the event of "cakkhuñca paṭicca rūpe ca uppajjati cakkhu viññānaṃ." That process happens in that single citta which lives only for less than a billionth of a second. Only a Buddha can discern something that can happen that fast. We can verify that to be true only by seeing that it is compatible/consistent with nature.
- The mind needed to compare it with previous experiences to identify $\mathbf{X}$ as a friend. Otherwise, how would it identify person X ?
- It is possible because the mind can access the five aggregates (pañcakkhandha)!
- As we have discussed, the mind has access to our past experiences and future hopes. Ruppakkhandha is of 11 types, including "past rūpa we have experienced" and the same is true for the other four aggregates: vedanā, sañ̃̄ā, sañkhāra, viññāṇa. The mind can scan our memories/hopes and IDENTIFY the sense object (we have had prior experiences with it). That is how the mind identified person X as "a friend." The amazing thing is that it happens so fast. See, "Amazingly Fast Time Evolution of a Thought (Citta)."
- Further details and examples at "Arising of the Five Aggregates With an Ārammana."

## Next Post

8. It is not possible to put everything in a single post. Therefore, reading the relevant posts referred to above is critical to get a better understanding of the concepts.

- All posts are in the "Paticca Samuppāda, Tilakkhana, Four Noble Truths" section.

### 9.5.2 What Did the Buddha Mean by a "Loka"?

October 11, 2021
By the word "loka" the Buddha did not mean the "physical world." He meant various types like kāma loka, rūpa loka, arūpa loka, manussa loka, Deva loka, etc.

## Introduction

1. In the previous post, "Paticca Samuppāda - Introduction", we started a new discussion on Paṭicca Samuppāda. In the WebLink: suttacentral: Samiyutta Nikāya 12 in the Sutta Piṭaka, there are over 100 suttas on Paticca Samuppāda.

- Recently I realized that these suttas are in a particular order. Even though it is impossible to discuss all those suttas, it is beneficial to see the progression of suttas there to get some key insights. Furthermore, I will discuss only those suttas relevant to our ongoing discussion on the connection between Paticca Samuppāda and Tilakkhaṇa (and the Noble Truths.)
- In the previous post, I pointed out that the first two suttas provide a brief introduction to Paticca Samuppāda.

2. The third sutta, "WebLink: suttacentral: Patipad̄ Sutta (SN 12.3)" points out that the steps in the standard Akusala-mūla Paṭicca Samuppāda describe unwise actions (starting with "avijjā paccayā sañkhāra") that lead to future suffering ("jāti paccayā jarā, maraṇa, soka-parideva-dukkhadomanassupāyasā sambhavan'ti'). Therefore, it describes micchā patipadā (wrong practices/way of living) of an average human. Such future suffering can be stopped by stopping the steps in Patticca Samuppāda. That is accomplished by cultivating wisdom (knowledge of the Noble Truths) and removing $a v i j j \bar{a}$. Once one understands the true nature of this world (Tilakkhaṇa) at the Sotāpanna stage, one will follow sammā patipad $\bar{a}$ (correct practices/way of living) or the Noble Eightfold Path to get to Nibbāna.

- Then there are seven suttas (SN 12.4 through 12. 10) that describe how most recent 7 Buddhas discovered how future suffering arises via the Paṭicca Samuppäda process, i.e., why an average human follows the micch $\bar{a}$ patipad $\bar{a}$. (The teachings of a given Buddha last only a limited time. That is why each Buddha needs to discover this process on his own.) Of course, simultaneously, each Buddha figures out how to stop future suffering in the rebirth process, i.e., samm $\bar{a}$ patipad $\bar{a}$.
- The next sutta in the series (of interest to the present discussion) clarifies a "loka." In almost all English translations, "loka" is translated as "world" and gives the impression that the Buddha meant the "physical world around us" or even "the universe with its stars, planets, galaxies, etc." But the Buddha meant something entirely different, as we see below.

## Kaccānagotta Sutta (SN 12.15) - "Loka" Is Not the "Physical World"

3. The "WebLink: suttacentral: Kaccānagotta Sutta (SN 12.15)" provides the first clues. Venerable Kaccānagotta asks the Buddha what is meant by "samma ditṭhi" and the Buddha explains in the following way: "Dvayanissito khvāyamं, kaccāna, loko yebhuyyena-atthitañceva natthitañca."

- The world (loka) arises mainly based on two extreme views:
(i) it lasts forever (atthitañca), and
(ii) it does not last forever (natthitañca.)
- Here the Buddha is NOT talking about the physical world with stars, planets, galaxies, etc. He is referring to the existence of a living being. Just like these days, people mainly had two extreme views: (i) a living being exists forever (i.e., the belief of a "soul" or "ātman"), and (ii) "one's world" (loka) ends at the death of the physical body (the materialistic view of today).

4. Then the Buddha explains that both those views are not correct. A living being will exist (within the 31 realms) as long as the (Akusala-mūla) Paṭicca Samuppāda process is in effect and thus exists in a "loka." Of course, most existences are filled with unbearable suffering. And that will not end until that living being starts comprehending the Four Noble Truths (or Tilakkhaṇa or Paṭicca Samuppāda) and becomes a Sotāpanna.

Thus the Buddha almost always used the word "loka" to refer to the "world of a living being." The next verse in this sutta also confirms that: "Tañcāyaì upayupādānaì cetaso adhitthānaìm
abhinivesānusayaì na upeti na upādiyati nādhitṭhāti: 'attā me'ti. 'Dukkhameva uppajjamānaỉn uppajjati, dukkhain nirujjhamānain nirujjhatī'ti na kañkhati na vicikicchati aparapaccayā

Translated: "But someone with the right view does not cling to existence. He does not see any benefit of existence in this world, i.e., anything in this world is of no value (and thus should be considered mine or 'attā me'ti). He has no perplexity or doubts that what arises is only suffering; what ceases is only suffering. It is in this way, Kaccāna, that there is CORRECT VIEW."
5. The verses at the end of the sutta provide further confirmation:
"Sabbam atthī'ti kho, kaccāna, ayameko anto. 'Sabbain natthī'ti ayamं dutiyo anto.
Ete te, kaccāna, ubho ante anupagamma majjhena tathāgato dhammaì deseti:

- 'avijjāpaccayā sañkhārā; sañkhārapaccayā viññānaim ...pe... evametassa kevalassa dukkhakkhandhassa samudayo hoti.
- Avijjāya tveva asesavirāganirodhā sañkhāranirodho; sañkhāranirodhā viññānanirodho ...pe... evametassa kevalassa dukkhakkhandhassa nirodho hotī" "ti.

## Translated:

"'All exists': Kaccāna, that is one extreme. 'All does not exist': that is the second extreme.
Without veering towards either of these extremes, the Tathägata teaches the Dhamma by the middle:

- 'With avijj $\bar{a}$ as condition, sañkhāra arise; with sañkhāra as condition, viññāna (and the rest of steps in PS).... Such is the origin of this whole mass of suffering.
- But with the remainderless fading away and cessation of avijjā comes the ending of sañkhāra; with the cessation of sañkhāra, cessation of viññāna (and the rest of steps in PS).... Such is the end of this whole mass of suffering."
- Also, note that the Buddha has defined "all (sabba)" as "all that pertains to a living being," ie., the five aggregates/twelve $\bar{a} y a t a n a /$ six $d h a \bar{t} t u /$ etc. Thus, by "all," he did not restrict to the physical world (that is, of course, a part of "all"). The five aggregates/twelve $\bar{a} y a t a n a / s i x ~ d h a ̄ t u / e t c . ~ i n c l u d e ~ t h e ~ p h y s i c a l ~$ and mental worlds. See, "WebLink: suttacentral: 256 results for kiñca AND sabbam்."
- But in a sutta elsewhere in the Tipitaka, the Buddha did discuss the "physical world" too.

## Rohitassa Sutta (AN 4.45) - A Sutta That Addresses the "Physical World"

6. In the "WebLink: suttacentral: Rohitassa Sutta (AN 4.45)" Rohitassa Deva comes to the Buddha and asks whether it is possible to "travel to the end of the physical world." Buddha answers that it is not possible. The Rohitassa says he had confirmed that in a previous life where he had developed abhiññ̄ powers as a yogi; with his manomaya kāya (gandhabba-like), he could travel the distance from one ocean to another in one stride. One day, he decided to see the "end of the world." He said he traveled for a hundred years and died on the way.

Then the Buddha makes the following deeper point: "Yattha kho, āvuso, na jāyati na jīyati na mīyati na cavati na upapajjati, nāhaì tamं gamanena lokassa antaì ñāteyyaì daṭheyyaìm patteyyan'ti vadāmi. Na cāhaì, $\overline{\text { a }}$ vuso, appatvāva lokassa antaì dukkhassa antakiriyamं vadāmi. Api cāhaì, āvuso, imasmimyeva byāmamatte kalevare sasaññimhi samanake lokañca paññāpemi loka samudayañca loka nirodhañca loka nirodhagāminiñca patipadanti."

- The following is the concept described by the Buddha in the above verse: "Without attaining Nibbāna, it is not possible to get to an "end of the world" by traveling. Until the suffering (associated with the rebirth process) is ended, one cannot reach the "end of this world." For it is in this
physical body with its manomaya kāya with perception and mind (sasaññimhi samanake) restricted to moment-to-moment arising (byämamatte) that I declare the arising and cessation of this world and the practice that leads to its cessation."

7. Modern science admits that it cannot find "an edge to the universe." The size of the universe is genuinely mind-boggling. The furthest a human has traveled in outer space is to the Moon. It is doubtful that humans will be able to travel to even the nearest star system anytime soon or probably ever.

- Distances between stars are too large to be measured in km or miles. Such vast distances are calculated in "light-years." One light-year is the distance traveled by light in a year. The closest star to us is over four light-years away, meaning it will take a light beam over four years to travel to that star.
- For comparison, the distance to the Moon is only about $\mathbf{1 . 3}$ light-seconds! Of course, our fastest rockets take about three days to get to the Moon. Such a rocket will take over 80,000 years to get to the vicinity of the nearest star! You can Google that to verify.
- Then there are billions of stars in our galaxy, and there are billions of such galaxies in the universe. There is no way to count all galaxies, and there may not even be a limit!
- That is why the Buddha said there is no point in investigating the physical universe. We will NEVER be able to even fully explore the closest stars and their planets, let alone the whole universe.

## "Loka" Is One's World!

8. Therefore, it is critical to understand that when the Buddha referred to "loka," he meant the existence of a living being.

- That is why the Buddha only talked about various types of loka encompassing the 31 realms: In one category, we have kāma loka, rūpa loka, and arūpa loka with 11, 16, and 4 realms, respectively. Within the kāma loka, there are various "lokā": manussa loka (human world), peta loka (loka of hungry ghosts), Deva loka, etc. The 20 realms in rūpa loka and arūpa loka are all inhabited by Brahmas and thus are commonly known as Brahma loka.
- A living being WILL ALWAYS live in one of those "worlds" until Parinibbāna is attained (the death of an Arahant.) Thus, the "world' does not cease to exist until then.
- Thus, we can also see that "cessation of the world" is the same as Nibbāna.

## What Are "Loka Samudaya" and "Loka Nirodha"?

9. When the current existence (say, human existence) ends, that is the end of the current "human bhava" in the "manussa loka." But all of us (who are not Arahants) still have many accumulated kammic energies to "power up" different types of "bhava" for different kinds of "loka."

- For example, that human may grasp a "Deva bhava" and thus be born in a "Deva loka." Someone who has cultivated jhāna will grasp a "Brahma bhava" and thus be born in a "Brahma loka." Yet another who had killed a parent will grasp a "niraya bhava" and be born in a "niraya." For each of them, that will be their "loka" until that kammic energy runs out.
- However, there will always be many possible bhava for any average living being. We all have accumulated many such "seeds" in our past lives and maybe even a few in this life. That is why there is no end to this process until Arahanthood. The creation of such a kammic energy (to power up a new bhava) is the "arising of a "loka" or "loka samudaya."
- That "loka samudaya" takes place via the Akusala-mūla Paṭicca Samuppāda process. It describes how such kammic energies accumulate via acting with avijja. We will continue that discussion in the next post.
- Accumulation of new bhava (and grasping such accumulated bhava) will stop at the Arahant stage. Then no more existences in any type of loka, and that is "loka nirodha" or Nibbāna. We will get to that discussion on the Kusala-müla Paṭicca Samuppāda process later.

### 9.5.3 Future Suffering (Loka/Dukkha Samudaya) Starts With Sensory Input (Ārammaṇa)

October 18, 2021
As pointed out in many suttas, future suffering (Loka/Dukkha Samudaya) starts with sensory input (ārammaña). Here we specifically discuss the Loka Sutta and the Dukkha Sutta as part of our discussion of the suttas in Samiyutta Nikāya 12 on Paṭicca Samuppāda.

## Previously Unheard Dhamma - Arising of Suffering Same as Arising of the World

1. I have emphasized this before. However, this is so contradictory to our perception of the world that I need to repeat it.

- An average person has a wrong "nicca view/perception" that one can succeed and be happy by striving to "make money and acquire things of worldly value" such as houses, cars, etc. That is because our time horizon is VERY short.
- Some people believe that there is no afterlife. Most of those who may believe in rebirth are too busy living this life. Both those groups focus on "enjoying life while it lasts."
- However, the Buddha pointed out that we will be reborn, and MOST of the future existences are guaranteed to be "filled with much suffering." That is true for even the most moral person living today until understanding the Noble Truths. I have explained this in detail before.
- Until that is understood, people will inevitably have the "nicca view/perception," ie., everything is going to work out as long as we make an effort to be "successful" by getting a good job and acquiring worldly things. However, the world has "anicca characteristic."

## "The World" Includes Both Physical and Mental Worlds

2. Modern science is focused on the "physical world." But the Buddha taught that one's world includes both the physical world and the mental world. in fact, the mental world is more important than the physical world.

- The Buddha defined the "world" (same as "sabba" or "all") in several different ways. All of them encompass the physical world and mental world.
- For example, the Buddha taught that everything in the world come under six dhätu: pathavī, appo, tejo $v a \bar{a} y o, \bar{a} k \bar{a} s a, ~ v i n ̃ \tilde{n} a ̈ n a$. As you can see, the first five include everything in the physical world. Everything in the mental world comes under viññ̄ạna dhātu.
- The Buddha also described everything in the world as pañcakkhandha (five aggregates): rūpakkhandha, vedanākkhandha, sañ̃̄̄̄kkhandha, sañkhārakkhandha, and viññānakkhandha. In this categorization, the first five dhātu are included in rüpakkhandha. Viññāna dhātu covers the other four aggregates.

## A Sentient Being Has All Six Dhätu/Five Aggregates

3. It is evident that the difference between sentient living beings and everything else (rocks, houses, planets, stars, etc., as well as plant life) is that a sentient being has viññāna dhātu.

- All physical entities (including the physical bodies of living beings) are made of the four great elements (pathavī, āpo, tejo vāyo) and are in specific locations in space (ākāsa.)
- However, viññāna dhātu has no such space location. It permeates the whole space and is accessible to any sentient being from anywhere. For example, astronauts can function well on the Moon, just as on Earth. Their memories remain intact, i.e., memory has no spatial locations and is accessible from anywhere.
- Therefore, any living being anywhere in the universe will have all six $d h a \bar{t} t u /$ five aggregates.

## Loka Sutta (SN 12.44) - Existence in a Loka Means Subjected to Suffering

4. The Buddha starts the "WebLink: suttacentral: Loka Sutta (SN 12.44)" by saying, "Bhikkhus, I will teach you the origin and the cessation of the world." ("Lokassa, bhikkhave, samudayañca atthaṅgamañca desessāmi.")

- One's world does not end at the death of the physical body. For example, when a human dies, he will be reborn with a different human body if more kammic energy remains in the human bhava. Otherwise, he will grasp a new bhava, and the rebirth will be in that appropriate realm (among the 31 realms.) That is "loka samudaya" or "origin of the world" above.
" As we have discussed, "cessation of the world" (stopping the rebirth process) happens at Arahanthood, and that Arahant will be "totally separated from this world" at Parinibbana (death of the physical body.)

5. Next, the Buddha explained how "loka samudaya" happens: "Katamo ca, bhikkhave, lokassa samudayo? Cakkhuñca paṭicca rūpe ca uppajjati cakkhu viñ̃n̄ṇam். Tiṇnam் sañgati phasso. Phassa paccayā vedanā; vedanā paccayā taṇhā; taṇhā paccayā upādānaim; upādāna paccayā bhavo; bhava paccayā jāti; jāti paccayā jarāmaranaì sokaparidevadukkhadomanassupāy āsā sambhavanti. Ayaì kho, bhikkhave, lokassa samudayo."

Translated: "And what, bhikkhus, is the origin of the world? When cakkhu and rūpa "get together" (paṭicca), cakkhu viññāna arises. Then contact with "san" (samphassa or "san" + "phassa") happens due to one's sañgati ("san" + "gati"). As a result, "samphassa-j $\bar{a}$-vedan $\bar{a} "$ arises; with samphassa-j $\bar{a}$-vedan $\bar{a}$ as condition, craving; with craving as condition, clinging; with clinging as condition, existence; with existence as condition, birth; with birth as condition, aging-and-death, sorrow, lamentation, pain, displeasure, and despair come to be. That, bhikkhus, is the origin of the world."

- I have discussed this in the previous series on "Origin of Life." You can review the relevant posts under the subsection "Worldview of the Buddha" there. I discussed the "Chachakka Sutta (MN 148)," which discusses sensory inputs through the six sense faculties. But we will discuss that verse briefly again.
- It is CRITICAL to note that the Buddha equated birth in any realm (loka samudaya) to be the same as the origin of suffering!
- The second part of the sutta describes how "cessation of the world" (or loka nirodha/atthañgama.) We will discuss that in detail in the future (see \#8 below.)

## Seeds for the "Origin of the World" (Rebirths) Initiate With Our Response to Sensory Inputs (Arammana)

6. Then, the verse is repeated for the other five senses. Thus, the "origin of the world" (or the rebirth process) can start with sensory input (i.e., arrammaṇa) coming through any of the six senses.

- That is explained (in summary form) in the following part of the verse: " Phassa paccay $\bar{a}$ vedan $\bar{a}$; vedanā paccayā taṇhā; taṇhā paccayā upādānaì; upādāna paccayā bhavo; bhava paccayā jāti; jāti paccayā jarāmaranaim sokaparidevadukkhadomanassupāyāsā sambhavanti.
- That is how "seeds" for future rebirths accumulate with strong akusala kamma. Even though only a tiny fraction of sensory interactions lead to the creation of such "seeds" (or "kamma bija"), we all have
accumulated countless such seeds over previous lives. Luckily, they DID NOT inevitably bring future rebirths, and we will discuss that. (Otherwise, no one will be able to attain Nibbāna.)
- Now let us discuss the Dukkha Sutta (SN 12.43), which comes just before the Loka Sutta (SN 12.44).

## Dukkha Sutta (SN 12.43) - Origin of Suffering Same as Origin of the World (Rebirth)

7. The Buddha starts the "WebLink: suttacentral: Dukkha Sutta (SN 12.43)" by saying, "Bhikkhus, I will teach you the origin and the cessation of suffering." ("Dukkhassa, bhikkhave, samudayañca atthaṅgamañca desessāmi.")

- Then the Buddha explained "dukkha samudaya": "Katamo ca, bhikkhave, dukkhassa samudayo? Cakkhuñca paṭicca rūpe ca uppajjati cakkhu viññ̄n̄ami. Tinṇaì sañgati phasso. Phassa paccayā vedanā, vedanā paccayā taṇhā. Ayaì kho, bhikkhave, dukkhassa samudayo."
- Comparing this verse with that in \#5 above from the Loka Sutta (SN 12.44) makes the following very clear: "Loka samudaya is the SAME as dukkha samudaya."
- In other words, "arising of a new world in a new birth" is the SAME as "arising of another mass of suffering."

## End of Suffering (Nibbāna) Is Cessation of the World (Rebirth Process)

8. In the second part of the Dukkha Sutta the Buddha says how that suffering can be stopped from arising: "Katamo ca, bhikkhave, dukkhassa atthañgamo? Cakkhuñca pațicca rūpe ca uppajjati cakkhuviññānam். Tiṇnamin sañgati phasso. Phassapaccayā vedanā; vedanāpaccayā taṇhā. Tassāyeva taṇhāya asesavirāganirodhā upādāna nirodho; upādānanirodhā bhava nirodho; bhava nirodhā jāti nirodho; jāti nirodhā jarāmaranamं sokaparidevadukkhadomanassupāyāsā nirujjhanti. Evametassa kevalassa dukkhakkhandhassa nirodho hoti. Ayaì kho, bhikkhave, dukkhassa atthañgamo."

- That is also the same verse as the second part of the Loka Sutta (SN 12.44.) In other words, "Stopping of the arsing of a new world (new birth)" is the SAME as "stopping the arising of another bout of suffering."
- The above verse requires a detailed discussion. We will do that in upcoming posts.
- It is a good idea to understand what an arammaña is before we get into that discussion. See, "Ārammana Plays a Critical Role in a Sensory Event."

9. We know that Nibbāna is the cessation of suffering. We see clearly from the above two suttas that the end of suffering stops the rebirth process (bhava and $j \bar{a} t i$ ).

- Of course, there are many more suttas stating the same. These two suttas are in the "Samyutta Nikāya 12" on Pațicca Samuppäda that we are discussing presently.

## Connection to Paṭicca Samuppāda

10. The other important point is that the above two suttas point out the connection of loka samudaya/dukkha samudaya to Pațicca Samuppāda.

- As I have pointed out before, the Paticca Samuppāda process starts with "salāyatana paccayā phasso," i.e., with sensory input (ārammana) coming to one of the six sensory faculties.
- That is what the verse in \#8 above says. As we can see, it has the following steps (in the latter part) of the Pațicca Samuppāda sequence: "Phassa paccayā vedanā; vedanā paccayā taṇhā. Tassāyeva tanhāya asesavirāganirodhā upādāna nirodho; upādāna nirodhā bhava nirodho; bhava nirodhā
jāti nirodho; jāti nirodhā jarāmaranaì sokaparidevadukkhadomanassupāyāsā nirujjhanti. Evametassa kevalassa dukkhakkhandhassa nirodho hoti."
- I have discussed this in the previous series on "Origin of Life" as mentioned in \#5 above.
- We will look at it from a bit different point of view here, highlighting the steps in Paṭicca Samuppāda.

11. The process by which that future suffering arises is (Akusala-Mūla) Paṭicca Samuppāda.

- In plain English, the following happens. One gets attached to an ārammaṇa and starts doing foolish/immoral deeds ("avijjā paccayā sañkhāra.") Such actions are going to have future consequences, ALWAYS leading to suffering at the end.
- But that process starts only with a strong sensory input or an ārammana. See, "Ārammana Plays a Critical Role in a Sensory Event."
- The critical point is that those consequences can manifest in future lives as well. Strong immoral deeds lead to future births in "undesired existences," in particular the four lowest realms.

## Future Suffering (Loka/Dukkha Samudaya) Starts With Sensory Input (Ārammana)

12. As we can clearly see in $\# 5$ and $\# 7$, the two suttas state that loka samudayaldukkha samudaya (origin of the world/origin of suffering) starts with: "Cakkhuñca paṭicca rūpe ca uppajjati cakkhu viññānaim.." The suttas repeat that verse for all six senses. That is the same as the "saḷāyatana paccayā phasso" step in Paṭicca Samuppāda.

- Then, attachment ( $\tanh \bar{a}$ ) to such a sensory input lead to the subsequent steps leading to suffering at the end: "phassa paccayā vedanā, vedanā paccayā taṇhā, tanhhā paccayā upādāna, upādāna paccayā bhavo, bhava paccayā jāti, jāti paccayā jarā, maraṇa, soka-parideva-dukkha-domanassupāyasā sambhavan'ti"
- It is at the "upādāna paccayā bhavo" step that Paṭicca Samuppāda goes to the step "avijjā paccayā sañkhāra" and starts accumulating kamma to that could power future existences.
- We will discuss that in the next post.

### 9.5.4 Sotāpanna - One With the "Wider Worldview" of the Buddha

October 25, 2021; revised \#4 on October 27, 2021

## Introduction

1. We covered a lot of material in the recent few posts about "original of the world" (loka samudaya) and "origin of suffering" (dukkha samudaya.") See, "Paticca Samuppāda, Tilakkhana, Four Noble Truths."

- As we saw, the Buddha equated the world's origin (with each new birth in the rebirth process) as the origin of suffering. That is because even if that particular existence (e.g., a Deva realm) may not have extreme suffering, the possibility of suffering in the future (in a lower realm) is there.
- We used direct Pāli quotes from relevant suttas in those posts.
- Some people (justifiably) stress out just seeing Pāli words. Here, I want to provide a summary in simple English to clarify the key conclusions.
- I want to do that because the concepts discussed in those posts are contrary to the views/perceptions of an average human. Once comprehend the key message, they can go back and review those posts. They may also want to carefully go through the suttas to ensure that I have not distorted a single verse.
- I welcome thoughtful discussions based on the Tipitaka. If my writings are contradictory to anything in the Tipitaka, please provide references, and discuss them. Understanding the primary message of the Buddha is ESSENTIAL before trying to follow his path to Nibbāna!

## The Suffering Buddha Referred to - In the Rebirth Process

2. Many people go to meditation retreats to get rid of the daily stresses of life by calming the mind. There is nothing wrong with that. However, Buddha's teachings are there to tackle a much bigger problem.

- That problem is the unimaginable suffering in the rebirth process that is inevitable for all those who have not understood the "wider world view" of the Buddha.
- The Buddha described a world consisting of 31 realms, out of which an average human is aware of only two: the human and the animal realms. He taught that our lives don't end with the death of this physical body. We can be reborn anywhere in the 31 realms, but most rebirths are in the four lowest realms (apāy $\bar{s} s$,) where the level of suffering can be much higher than that we can see in the human and animal realms.
- We will address the validity of that "wider worldview" in the next post. Let us finish our summary of recent posts.

## Suffering Is Inevitable in the World and Absent in Nibbāna

3. The main two conclusions for the previous two posts are the following:
i. Both suffering and sensory pleasures are present in the world of 31 realms, i.e., in the rebirth process among the 31 realms. The higher realms have more happiness than suffering, while the suffering in the lowest four realms is unbearable. Since any given living being spends most of the time in the apāyās, suffering dominates this world.
ii. There is no suffering or sensory pleasures in Nibbāna (after the death of an Arahant.) Nothing of this world exists in Nibbāna. In terms of the language of mathematics, "this world and Nibbāna are mutually exclusive." Material objects, feelings and perceptions about them, etc., all belong to this world, and NONE of them exist in Nibbāna. Even a Buddha cannot "describe" what is in Nibbāna because we don't have that terminology in this world. The only way to conclusively describe Nibbāna is to say that there is no suffering in Nibbāna; that is how the Buddha ALWAYS described Nibbāna.

- Another critical point is that Nibbāna is also, "rāgakkhayo dosakkhayo mohakkhayo-idaí vuccati nibbānan" ti OR "the ending of rāga, ending of anger/hate, and ending of ignorance/delusion is Nibbāna." See, for example, "WebLink: suttacentral: Nibbānapañhā Sutta (SN 38.1)."
- Equating Nibbāna to rāgakkhaya provides a CRITICAL clue to our current discussion. We will discuss that in \#7 below.

4. Only an Arahant in Nirodha Samāpatti can experience the complete "Nibbānic bliss" (total absence of suffering.) An Arahant can stay in Nirodha Samāpatti only for up to seven days at a time. During this time, the physical body of the Arahant appears to be dead (even the heart stops beating), but kammic energy maintains the body temperature.

- However, one can experience more and more of the "Nibbānic bliss" as one proceeds up the four stages of magga phala. That "reduced level of mental stress" has been referred to as "cooling down of the mind" in the Tipitaka.
- On the other hand, bodily suffering (aches, injuries, sicknesses, etc.) will persist until the death of the physical body of an Arahant. That is because even an Arahant has to live in this world until the demise of the physical body. With the death of the physical body, an Arahant departs from this world. That is is Parinibbāna or "full Nibbāna." No more rebirths in this world and no more suffering!

## The Reality of any Existence in This World

5. We all would like to live a "comfortable and pleasurable life" among our friends and family. But the reality is that no one has been able to sustain that EVER. Anyone who ever lived had to give up everything at death. We would not even know where we would be reborn.

- After some years, we may be reborn with a human body if more kammic energy remains in this human bhava. Until then we will only have the "mental body" or the "gandhabba kāya." Of course, even then, we don't know exactly where that birth would be.
- If there is no more kammic energy left in the human bhava, we have no idea where we will be reborn. That depends not only on how we lived this life but also on what types of kammic energies have been accumulated in previous lives.
- However, those who have attained stages of Nibbāna would have eliminated rebirths in lower realms. A Sotāpanna would not be reborn in the four lowest realms (apāyās.) A Sakadāgāmi would be born only among the six Deva realms. An Anāgāmi would be reborn only in certain Brahma realms. They all will attain full Nibbāna within a relatively short time.

## Importance of Becoming a Sotāpanna

6. Most people cannot imagine that there can be suffering in the realms above the human realm. But we all can clearly see the suffering in the human and especially the animal realm. The animal realm is the only apāya that we can see. The Buddha has described the suffering in the other three lowest realms, and those descriptions are scary. That is why the main goal of a Buddhist is to attain the Sotāpanna stage.

- Most humans cannot even fully understand the suffering we experience in the human realm because their minds are "covered" by anticipated bouts of "future pleasures" that one hopes to achieve. But anyone can see the suffering in the animal realm. Since a Sotāpanna would avoid rebirth in all four lowest realms, that should incentivize one to attain the Sotāpanna stage.
- Once getting to the Sotāpanna stage, one will begin to see the suffering in the human realm. But a Sotāpanna may still have the perception that life in a Deva or a Brahma realm could be good.
- Therefore, for anyone below the Sotāpanna stage, there is no need to comprehend suffering in higher realms. But the point is that life in that higher realm WILL end, and one WILL end up in the lower realms.
- The only REQUIREMENT to attain the Sotāpanna stage is to understand the "wider worldview of the Buddha." The Buddha said that just that understanding (or getting to the correct worldview) would remove an unimaginable amount of defilements. It is the removal of defilements by clear vision ("dassanā pahātabbā") in the "WebLink: suttacentral: Sabbāsava Sutta (MN 2)." We can see that from a different perspective too. Let us discuss that first.

## "Rāgakkhayo Nibbānan" - Nibbāna Is Ending of Sainsāric Travel

7. Without exception, the current English translation of "rāga" is "greed." However, "greed" is "lobha." Furthermore, have you ever wondered why Nibbāna is NOT defined as "lobhakkhayo dosakkhayo mohakkhayo-idamं vuccati nibbānan" ti? That would be the logical choice there since the three immoral roots are lobha, dosa, moha.

- The correct "pada nirutti" (etymology) of " $r \bar{a} g a "$ " comes from " $r \vec{a} "+$ "agga" where " $r \vec{a} "$ means to "travel (in the saimsäric journey)" and "agga" is to "give priority." Thus, "rāga" means to "travel (the saimsäric journey)." Here, one may not even believe in rebirth but would still enjoy the world as long as it lasts. In other words, anyone craving things in this world would have some type of rāga. [agga : [adj.] the highest; the top-most. (m.), the end; the top.]
- Rāga arises because one believes there are pleasures to be had in this world (i.e., one believes the world to be of nicca nature.) But one would NOT do highly immoral things with just rāga. Specifically, kāma rāga needs to escalate to lobha for immoral actions to take place.
- The samisāric journey is among three types of loka: kāma loka, rūpa loka, and arūpa loka (with the 31 realms distributed among these three.) As explained in Paṭicca Samuppäda, one's birth will be according to one's cravings for things in this world. When one has kāma rāga, one will be born among the 11 realms in the kama loka. Those who have (at least temporarily) overcome kāma rāga (and cultivate rūpāvacara jhāna) may still have rūpa rāga and thus will be born in the 16 realms in rūpa loka. Those who have overcome kāma rāga and rūpa rāga (and cultivate the arūpāvacara jhāna) will be born in one of the four realms in the arupāvacara loka.
- To attain Nibbāna, one must permanently overcome all three types of rāga, and thus "rāgakkhayo nibbānan."

8. The relevant point to our discussion is the following: If one can understand the material in the previous two posts in this series, one would realize that future suffering is INEVITABLE unless the rebirth process is stopped. "The suffering-filled world" will keep arising at death.

- Please read that again and contemplate on it. The Buddha said that arising of any new birth (anywhere among the 31 realms) means the suffering has not stopped.
- Saimsāric suffering (future suffering in the rebirth process) will not stop until one comprehends this KEY POINT.
- That is the same as understanding the "wider worldview of the Buddha" of the rebirth process among the 31 realms.
- One becomes a Sotāpanna Anugāmi when starting to understand that critical point. When that understanding takes root in the mind irreversibly, one would attain the Sotāpanna stage at that moment.
- That is the removal of defilements by clear vision ("dassana pahātabba"") mentioned in \#6 above per Sabbāsava Sutta (MN 2.) That is the Noble Sammā Dițthi ('Noble Correct View") of a Sotāpanna.

## A Sotāpanna Starts on the Noble Eightfold Path with Sammā Diṭ̣hi

9. It is at that point one can start on the Noble Eightfold Path as a Sotāpanna. All others below the Sotāpanna Anugāmi stage are still on the mundane eightfold path (a Sotāpanna Anugāmi WILL become a Sotāpanna.) The WebLink: suttacentral: Mahācattārīsaka Sutta (MN 117) discusses the two eightfold paths; see, "Mahā Cattārisaka Sutta (Discourse on the Great Forty)."

- In the "WebLink: suttacentral: Dutivasāriputta Sutta (SN 55.5)" the Buddha discussed the Sotāpanna stage with Ven. Sariputta. The Buddha asked, "'Sotāpanno, sotāpanno'ti hidamं, sāriputta, vuccati. Katamo nu kho, sāriputta, sotāpanno"ti? OR "Sāriputta, they speak of 'a Sotāpanna'. Who is a Sotāpanna?"
- Venerable Sariputta replied: "Yo hi, bhante, iminā ariyena atṭhañgikena maggena samannāgato ayaì vuccati sotāpanno, svāyaì āyasmā evainnāmo evañgotto"ti. OR "Bhante, someone who has embarked on the Noble Eightfold Path is a Sotāpanna," and the Buddha consented.

10. Furthermore, in several suttas Samm $\bar{a}$ Ditt $t h i$ is described as, "understanding the truth about suffering."

- That "previously unheard truth about suffering" is that "the origin of suffering is the origin of the world (with each rebirth)" as we discussed.
- For example, in the "WebLink: suttacentral: Saccavibhañga Sutta (MN 141)": "Katamā cāvuso, sammā ditṭhi? Yaì kho, $\bar{a} v u s o$, dukkhe ñānaì, dukkhasamudaye ñaṇam, dukkhanirodhe ñānaì, dukkhanirodhagāminiyà paṭipadāya ñāṇaì, ayaì vuccatāvuso: 'sammā ditṭhi'."
- As we saw, "dukkha samudaya" is the same as "Ioka samudaya;" "dukkha nirodha" is the same as ""loka nirodha;" "dukkhanirodhagāminiya patipad $\bar{a} " "$ is the same as "lokanirodhagāminiy $\bar{a}$ paṭipadā."
- That is "dukkhe ñānaí" or the knowledge on the Noble Truth about suffering.

## It Is a Sotāpanna Who Can Cultivate the Other Seven Factors on the Noble Path

11. Therefore, one must first see the "wider worldview of the Buddha" to get to Sammā Ditthi, or "the correct vision about the world." At that point, one has SEEN the unfruitful/dangerous nature (anicca nature) of this world. That is the same as comprehending the First Noble Truth on suffering. That is also the same as comprehending Tilakkhaṇa (Characteristics of this world) and Paṭicca Samuppāda (how suffering arises due to causes and conditions.)

- A Sotāpanna WILL NOT lose that understanding even through future lives. Even if it takes several more births to complete, a Sotāpanna WILL cultivate the remaining seven steps on the Noble Path and WILL get to the Arahanthood.
- That is why understanding the Four Noble Truths/Tilakkhaṇa/Pațicca Samuppāda is ESSENTIAL to becoming a Sotāpanna Anugāmi first. Sometimes a Sotāpanna Anugāmi is called a Cula-Sotāpanna, even though that term is not in the Tipiṭaka.
- This turned out to be a long post. But the essence of the Buddha Dhamma is summarized here.

### 9.5.5 Sotāpannā - Just Starting on the Noble Path

## November 1, 2021

A Sotāpanna is at the beginning stage of the Noble Path, and needs to overcome kāma rāga, rūpa rāga, and arūpa rāga.

## Getting to Nibbāna Is a Step-by-Step Process

1. In the recent posts, I have outlined the ULTIMATE GOAL of a Buddhist. Those posts may discourage some people. They may think that they will never be able to get to Nibbāna. However, I just wanted to emphasize that it is a "previously unknown worldview." But getting to that ultimate goal is a step-bystep process. Even a Sotāpanna is far away from losing attachments to "this world." But many people attribute qualities of an Arahant to a Sotāpanna.

- Thus, many people waste precious time by trying to suppress sense desires. In some cases, they try to eliminate the innate sense of "me" or "a self." That is an impossibility! Their goal should be to understand the "worldview of the Buddha" and first become a Sotāpanna. It is a good idea to read the post, "Is It Necessary for a Buddhist to Eliminate Sensual Desires?"
- Some others also waste time doing Ānāpānasati/Satipațthāna using "breath meditation." Only a Sotāpanna knows how to cultivate them properly. At the beginning of the "WebLink: suttacentral: Ānāpānassati Sutta (MN 118)," Buddha clearly stated that ALL the Bhikkhus listening to the discourse had various stages of magga phala, i.e., all were at or above the Sotāpanna stage.
- You can read this English translation at Sutta Central: "WebLink: suttacentral: Mindfulness of Breathing (MN 118)." Of course, the title is quite misleading, and the latter part of the sutta translated incorrectly. But the detailed description of the assembled bhikkhus proves my point. That description starts with, "Bhikkhus, this assembly is free from prattle, this assembly is free from chatter. It consists purely of heartwood.." close to the beginning of the sutta. [Apalāpāyaì, bhikkhave, parisā; nippalāpāyaì, bhikkhave, parisā; suddhā sāre patiṭthitā.] [paris $\bar{a}:[\mathrm{f}]$ a company; an assembly. palāpa : [m.] chaff (of corn); prattle; nonsense; voice of essence. nippalāpa : [adj.] free from chaff or prattle. sāra : (m.),
essence; the pith of a tree; the choicest part. (adj.) essential; excellent; strong. patittthita : [pp. of patitṭhahati] was established; stood firmly; found a support.]

2. The same sutta also has the following verse: "Nāhaim, bhikkhave, mutṭhassatissa asampajānassa annāpānassatim vadāmi." In the above translation: "I do not say that there is the development of mindfulness of breathing for one who is forgetful, who is not fully aware."

- But the real meaning of that Pāli verse is more like, 'I do not teach ānāpānassati to those who do not know where to establish sati (mutthassatissa) and not know how to sort out "san or defilements" (asampajānassa).
- Therefore, the priority is to understand the worldview of the Buddha that we discussed in previous posts and become a Sotāpanna Anugāmi. It is also a good idea to dispel some other myths about Sotāpanna Anugāmi/Sotāpanna.

## Sotāpanna Anugāmi/Sotāpanna - Knows the Anicca Nature of This World

3. As I explained in the previous post, one gets to the Sotāpanna stage by removing wrong views about the world (worldly things can be fruitful/beneficial.) That is the wrong view that the world is of "nicca nature."

- We are bound to "this world" with ten samisāric bonds (samiyojana.) They are "mental bonds." At the Sotäpanna stage, only three of those ten bonds break and ALL three are about wrong views only.
(i) First there is sakkāya ditṭhi is the WRONG VIEW of a "nicca worldview." Breaking of that bond leads to the simultaneous breaking of the other two bonds.
(ii) Vicikicch $\bar{a}$ is to have doubts that Buddha discovered the true nature of this world, his Dhamma is the correct world view, and his Noble disciples can end the samsāric suffering.
(iii) Sīlabbata parāmāsa is the wrong view that end of suffering is achievable by just following a set of rituals, without understanding the broader worldview.)

4. A Sotāpanna has Sammā Dițthi or "the correct world view" and would be able to follow the Noble Path without further assistance. A Sotāpanna also knows and understands the other seven steps to get to Arahanthood. That takes place via three more stages: Sakadāgāmi, Anāgāmi, Arahant. The two primary bonds that break at the Sakadāgāmi and Anāgāmi stages are kāma rāga (craving sensory pleasures) and patigha (tendency to get upset/angry when obstacles come in the way of fulfilling such cravings.).

- The Buddha laid down a systematic way for a Sotāpanna to reach those higher goals. He first described them in the Ānāpānassati Sutta. He gave more details in the Mahā Satipatṭhāna Sutta (DN 22.) The $\bar{A} n a \bar{p} \bar{n} n a s s a t i ~ S u t t a ~(M N ~ 118) ~ h a s ~ t h e ~ f o l l o w i n g ~ v e r s e: ~ " E v a i ̀ ~ b h a ̄ v i t a ̄ ~ k h o, ~ b h i k k h a v e, ~$ ānāpānassati evaì bahulīkatā cattāro satipatṭhāne paripūreti" OR "Bhikkhus, that is how $\bar{a} n \bar{a} p a ̄ n a s s a t i, ~ d e v e l o p e d ~ a n d ~ c u l t i v a t e d, ~ f u l f i l l s ~ t h e ~ f o u r ~ f o u n d a t i o n s ~ o f ~ m i n d f u l n e s s ~(c a t t a ̄ r o ~$ satipaṭthāna)." Thus, ānāpānassati is just a brief version of satipatṭhāna.

## It is Not Easy to Remove Kāma Rāga and Get to the $\operatorname{An} \bar{a} g \bar{a} m i$ Stage

5. The question is: If a Sotāpanna KNOWS that craving worldly things hinder getting to Nibbāna, why is it hard for a Sotāpanna to lose those cravings? Why did the Buddha systematize that process to make it easier? The short answer is that even though a Sotāpanna has removed the wrong views (dittthi) about this world, wrong perceptions (sañ $\tilde{n} \bar{a}$ ) about mind-pleasing things in the world still remain intact.

- The analogy of an alcoholic can be helpful to understand the difference. To give up alcohol, first, he must come to the right view, i.e., that alcohol is bad for health. But most alcoholics get stuck at the second step of getting rid of the "good sañña " associated with drinking. He must persistently be thinking about
the bad consequences of drinking. In the same way, even though a Sotāpanna KNOWS that sensual pleasures lead to suffering, it is hard to get rid of that "good saññ"" associated with sense pleasures.
That is where $\bar{a} n \bar{a} p \bar{a} n a s s a t i ~ a n d ~ s a t i p a t!!~ h a ̄ n a ~ m e d i t a t i o n s ~ a r e ~ r e q u i r e d . ~$
- It is a good idea to read the post, "Saññā - What It Really Means" and understand the concept of saññā. Further details of the difference between ditṭhi and sañ̃n̄ā at "Vipallāsa (Ditthi, Saññ̄a, Citta) Affect Sañkhāra."

6. That is where many people get confused. Some people INCORRECTLY believe that a person needs to abstain from sensory pleasures completely to GET TO the Sotāpanna stage. Of course, one MUST refrain from extreme immoral actions seeking sensory pleasures to get to the Sotāpanna stage. But as we discussed above, kāma rāga can be removed only AFTER the Sotāpanna stage. Even then, it will take a considerable effort.

- A simple analogy is an alcoholic. There is no hope of getting rid of that habit without first "seeing" the harmful consequences of drinking. But even after "getting to the correct view," it takes considerable effort not to "have a drink" when the urge comes! An alcoholic MUST keep thinking about the adverse consequences of drinking. That is precisely what a Sotāpanna would do while engaging in $\bar{a} n \bar{a} p \bar{a} n a s s a t i / s a t i p a t t t h a ̄ n a ~ B h a ̄ v a n a ̄ . ~ I t ~ i s ~ N O T ~ a b o u t ~ b r e a t h i n g ~ i n ~ a n d ~ o u t!~ R e r e a d ~ \# 1, ~ \# 2 ~ a b o v e ~$ carefully (and read those references) if you have any doubts.
- Now let us discuss some key features of the Sotāpanna stage to dispel some more common myths.

## The Sotāpanna Stage - Per Tipiṭaka

7. Valuable information about the Sotāpanna Stage is in the "Sotāpattisamimutta," where a series of suttas from SN 55.1 through SN 55.74 provide a lot of information.

- The first one, "WebLink: suttacentral: Cakkavattirāja Sutta (SN 55.1)," states that a Sotāpanna is better off than an Emperor who rules the whole world because that Emperor is not free of rebirth in the apāyās. The four realms in the apāy $\bar{a} s$ are also named niraya (hell), animal, peta, and vinipāta asura. Furthermore, a Sotāpanna has unbreakable faith (aveccappasādena) in the Buddha, Dhamma, Sañgha and has unbreakable moral conduct (ariyakānta sīla.)
- One who gets to the Sotāpanna stage can figure that out by himself. That is in the "WebLink: suttacentral: Pathamagiñjakāvasatha Sutta (SN 55.8)." It specifically states that one would know that one is free from the four apāyās. Furthermore, one is free to declare that attainment if so desired. Many people believe one should not state such attainments. Even though one should not brag about it, the above sutta clearly shows that the Buddha allowed it. There are more such myths.

## More Myths About the Sotāpanna Stage

8. A Sotāpanna has only "seen" what Nibbāna is and knows the path but has just started. His new mindset will not allow any apāyagāmi kamma (immoral deeds that will lead to rebirth in the apāyās).

- Sarakāni was an old Brahmin who used to drink a lot. At old age, he listened to a discourse by the Buddha and attained the Sotāpanna stage. Soon afterward, he died, and the Buddha stated that he was born in a Deva loka. Some people laughed at the notion that an alcoholic could be born in a Deva loka. Buddha explained that those were ignorant of the Buddha Dhamma. That account is in the "WebLink: suttacentral: Pathamasaranānisakka Sutta (SN 55.24)." We also know that Angulimāla killed almost a thousand people and was able to attain Arahanthood!

9. Another myth is that a Sotāpanna would not crave sensory pleasures. But there were millions of Sotāpannas who got married and led normal family lives during the days of the Buddha. For example, Visākhā (or Visākā), who was the leading female lay disciple at the time, attained the Sotāpanna stage at age seven and went on to get married and have twenty plus children. She did not abstain from sex. She still
had kāma rāga since she was not an Anāgāmi. Of course, she would not have engaged in sex outside the marriage.

- There are only six types of strong kamma that will not happen by a Sotāpanna: killing mother, father, or an Arahant, injuring a Buddha, causing "sañghabheda," and following a path other than that of the Buddha. These are in the "WebLink: suttacentral: Bahudhātuka Sutta (MN 115)." So, it is a myth to say that a Sotāpanna will not break any of the five precepts. It is an Arahant who is incapable of breaking them.
- That is not to minimize the status of a Sotāpanna. A Sotāpanna would NEVER be born in an apāya.

## A Sotāpanna Understands the Pațicca Samuppāda Process

10. In the "WebLink: suttacentral: Dutiyasāriputta Sutta (SN 55.5)," the Buddha discussed the Sotāpanna stage with Ven. Sāriputta. As we discussed in the previous post, someone who has embarked on the Noble Eightfold Path is a Sotāpanna. That sutta also states how one can get to the Sotāpanna stage. Venerable Sāriputta says, "Sappurisasamisevo hi, Bhante, sotāpattiyañgaì, saddhammassavanaì sotāpattiyañgaim, yoniso manasikāro sotāpattiyañgaì, dhammānudhammappatipatti sotāpattiyanggan" $t i$ OR "Bhante, the necessary conditions are: associating with Noble Persons, listening to the true teaching, yonisomanasikāra, and practicing in line with the teaching." Here, the key point is that one cannot be exposed to the correct Dhamma unless taught by someone who has understood it first. Another is the term yoniso manasikāra (mundane translation "proper attention") meaning "to understand how various types of births (bhava and $j \bar{a} t i)$ arise via Paticca Samuppāda."

- The "WebLink: suttacentral: Pathamabhayaverūpasanta Sutta (SN 55.28)" in the same series explains yonisomanasikāra as follows: "Idha, gahapati, ariyasāvako paṭiccasamuppādaññeva sādhukamं yoniso manasi karoti-iti imasmim sati idamं hoti, imassuppādā idam uppajjati; iti imasmim asati idaì na hoti, imassa nirodhā idamं nirujjhati; yadidaì avijjāpaccayā sañkhārā, sañkhārapaccayā viññānami ...pe... evametassa kevalassa dukkhakkhandhassa samudayo hoti." In other words, one has yonisomanasikāra when one understands Paṭicca Samuppāda.
- I have only provided a summary of the most essential facts about the Sotāpanna stage above. It is good to scan through the available English translations, even though they are not correct in some aspects. Here is the link to the first sutta in the series at Sutta Central: "WebLink: suttacentral: A Wheel-Turning Monarch (SN 55.1)."

## Summary

11. Living moral life is NECESSARY but NOT ENOUGH to get to the Sotāpanna stage. One MUST see the dangers in the rebirth process, just like an alcoholic must first see the dangers (health risks) associated with drinking.

- Many people have wrong ideas about the Sotāpanna stage. I have addressed some in this post.
- Sotāpanna Anugāmi/Sotāpanna stages are the beginning stages of the Noble Path, not the end. A Sotāpanna has understood the dangers in remaining in "this world" (rebirth process) but has to overcome kāma rāga, rūpa rāga, and arūpa rāga (that binds one to the kāma loka, rūpa loka, and arūpa loka.) But a Sotāpanna has overcome the lowest realms in the kāma loka and thus is free from MOST of the suffering in the rebirth process.
- Many people start "meditating" even before understanding "what to meditate on." Of course, if one is doing "breath meditation," there is nothing to learn. Breath meditation can be used as a "Samatha $B h \bar{a} v a n \bar{a} "$ to calm the mind. But it WILL NOT get one closer to the "end of suffering."

### 9.5.6 Yoniso Manasikāra and Paṭicca Samuppāda

November 9, 2021

To get to the Sotāpanna stage, one must understand the mechanism by which future suffering arises, i.e., Paticca Samuppāda. One first gets on the Noble Path by beginning to understand this process as a Sotāpanna Anugāmi. When that understanding takes a firm hold in mind, one gets to the Sotāpanna stage. That is not stated directly in a single sutta, but we will discuss a few suttas to clarify it.

## Four Conditions Required to Attain the Sotāpanna Stage

1. There are four conditions NECESSARY to get to the Sotāpanna stage.

In many suttā, including WebLink: suttacentral: Sotāpattiphala Sutta (SN 55.55) and WebLink: suttacentral: Dutiva Sariputta Sutta (SN 55.5), the four requirements for someone to attain the Sotāpanna stage of Nibbāna are stated: "Cattārome, bhikkhave, dhammā bhāvitā bahulīkatā sotāpattiphalasacchikiriyāya saṃvattanti. Katame cattāro? Sappurisasamsevo, saddhammassavanam, yonisomanasikāro, dhammānudhammappatipatti."
i. Association with "sappurisa (sath + purisa or "Noble friend," i.e., an Ariya)," sometimes called a "kalyāna mittā" ("kalyāna mitrā" in Sanskrit.)
ii. Listening to Dhamma discourses (while reading is enough to get to the Sotāpanna Anugāmi stage, listening is necessary to attain the Sotāpanna stage).
iii. Act with yoniso manasikāra (basic idea of anicca, dukkha, anatta, and Pațicca Samuppāda).
iv. Dhammanudhamma patipad $\bar{a}$ (following the Noble Path, which is beyond the mundane Path; see, "What is Unique in Buddha Dhamma?".

## A Noble Friend Needed to Fulfill First Two Requirements

2. To get to a destination, we need to get directions from someone who KNOWS how to get to that destination. These days, there are many people giving directions to get to Nibbāna (i.e., facts about the Noble Path.) Obviously, you cannot get to the correct destination if you follow someone who does not know the "path to Nibbāna." If someone has attained at least the Sotāpanna stage, he/she would know.

- We discussed that in detail in the post, "The Sotāpanna Stage."
- The next two requirements can be fulfilled ONLY through such a Noble friend.
- Now, you may ask: "Why do I need someone to tell me the correct path? Isn't it described in the Tipitaka?"

## Degradation of Buddha Dhamma and the Revival of that "Distorted Version"

3. We are indeed fortunate to still have the original Tipitaka as recited in the first four Buddhist Councils by Arahants. Those Arahants at the Fourth Council wrote down that Pāli Tipiṭaka. That was 2000 years ago. See, "Preservation of the Buddha Dhamma."

- However, distortion of key concepts started soon after the Fourth Buddhist Council. The main reason for that was the mundane interpretations introduced by Mahāyāna Buddhism that originated in India about 2000 years ago.
- Even though Buddhism in India faded away and disappeared at least 500 years ago, those Mahāyāna concepts took root in many other Buddhist countries, including Sri Lanka. Therefore, even though the Pāli Tipiṭaka remained intact, its translations became incorrect. For example, the Sinhala translation of the Tipitaka (Buddha Jayanti edition) has anicca and anatta translated incorrectly as impermanence and "no-self."
- When Europeans discovered Buddhism in the Asian countries, those two (and more) misinterpretations were deeply rooted in all those countries. I have given a brief account in the post, "Misinterpretation of Anicca and Anatta by Early European Scholars."
- By the time Europeans arrived, Buddhism had been in decline in those countries. Most Buddhist places of worship were in poor condition. Those European scholars and the British government helped restore many of those places. More importantly, they collected and preserved the original Pāli documents that are still in the British museum today. That is how the Pāli Tipiṭaka survived.
- The European scholars readily accepted those interpretations. Even though they were "academic scholars", they were even less familiar with the deep concepts in Buddha Dhamma. So, those "mundane interpretations" made perfect sense to them. They widely disseminated those incorrect interpretations using the printing press invented around that time.

## "Mundane Interpretations" Are Easy to Grasp

4. There is a reason for the degradation of Buddha Dhamma. Let us consider two examples of anicca as impermanence and $\bar{A} n \bar{a} p a \overline{n a s a t i}$ as breath meditation.

- It is very easy for anyone to see the "impermanent nature of things." We can easily see that anything in this world is not permanent. Especially these days, science has shown that even our Sun will be destroyed in several billion years.
- In the same way, it is easy to accept that $\bar{A} n \bar{a} p a ̄ n a s a t i$ is breath meditation. Even though the deeper meaning is to "discard immoral" and "take in morals," these days it is interpreted as "breathing in and breathing out." In addition, "watching the breath" does calm the mind, so many people are impressed by that itself.
- Even though this gradual degradation started with Mahāyāna, those concepts gradually got incorporated into Theravāda Buddhism. A turning point was Buddhaghosa's writing, especially his Visuddhimagga. For details, see, "Buddhaghosa's Visuddhimagga - A Focused Analysis."
- In almost all Buddhist countries, the Pāli Tipiṭaka was set aside and Buddhaghosa's Visuddhimmagga was adopted. The accepted theory was that there was no need to go through the 56 volumes of the Tipitaka. Buddhaghosa had summarized it all in a single commentary!

## Concepts in the Tipiṭaka Need to be Explained

5. Fortunately, there are three original commentaries prepared by Arahants that have survived as part of the Tipitaka: Patisambhidamagga, Petakopadesa, and Nettippakarana.

- No one had bothered to read them for hundreds of years. In fact, even if read, it is not possible to grasp those deep concepts unless explained by a Noble Person (Ariyā). Such Noble Persons are born occasionally and they revive the correct teachings. They are "jāti Sotāpannas" who had attained the Sotāpanna stage in previous lives.
- Waharaka Thero was such a jāti Sotāpanna. In his discourses, he had described how the correct meanings naturally came to him. When he grew up he was able to go through the Tipitaka, and with the help of those three original commentaries mentioned above, he was able to revive the correct interpretations. Of course, each person needs to verify that by carefully comparing his interpretations (which I provide on this website) with many other interpretations widely accepted all over the world.
- With that background, let us discuss the remaining two requirements for the Sotāpanna stage mentioned in \#1 above. Hopefully, you can see which version is correct by comparing my analysis with other current versions.

Yoniso Manasikāra - Connection to Paṭicca Samuppāda and Tilakkhaṇa
6. The third condition for the Sotāpanna stage is to have "yoniso manasikāra." Here "yoni" means "origin," "so" means "oneself," and "manasikāra" here means "with this in mind."

- The origin of future existence (bhava) and births within them (jāti) is explained in Paṭicca Samuppāda. As we have discussed, "avijjā paccayā sañkhāra" means to do "unwise actions due to ignorance of the Noble Truths." That ALWAYS ends with "bhava paccayā jāti, jāti paccayā jarā, maraṇa, soka-parideva-dukkha-domanassupāyasā sambhavan'ti" or the "whole mass suffering."
- To put it another way, one's future births (and associated suffering or happiness) are according to one's actions. Births in the "good realms" lead to mostly happiness and births in "bad realms" lead to suffering. However, the problem is that MOST births are in the "bad realms." At a deeper level, the reason for that is the tendency to act with "ayoniso manasikāra" the OPPOSITE of "yoniso manasikāra."

7. The Vibhangapakarana (BJ edition Book 2, p. 234) explains ayoniso manasikāra as follows: "Tattha katamo ayoniso manasikāro? Anicce "niccan"ti ayoniso manasikāro, dukkhe "sukhan"ti ayoniso manasikāro, anattani "attā"ti ayoniso manasikāro, asubhe "subhan"ti ayoniso manasikāro, saccavippațikulena vā cittassa āvatṭanā anāvaṭtanā ābhogo samannāhāro manasikāro-ayam vuccati "ayoniso manasikāro".

- At Sutta Central, you can find it toward the end of section "3. Tikaniddesa" at"WebLink: suttacentral: Khuddakavatthuvibhañga (KN vb 17)"
- In many English translations, ayoniso manasikāra is "improper attention." See, for example, the "WebLink: suttacentral: English Translation of Mahāli Sutta (AN 10.47)" at Sutta Central.
- However, the above verse says:"ayoniso manasikāra is to consider anicca as nicca, dukkha as sukha, and anatta as atta."
- To state that briefly, if one believes that things in this world can provide happiness in the long run, then one acts with ayoniso manasikāra. To act with yoniso manasikāra is to see the unfruitfulness of these struggles to attain something that is not attainable, and thus to work diligently towards at least the Sotāpanna stage because this life is so short.
- As we have discussed in many posts, this world is of anicca, dukkha, anatta nature. However, an average human (who has not understood Buddha Dhamma) perceives this world to be nicca, sukha, atta nature. See, "Basic Framework of Buddha Dhamma."

## Critical Inferences

8. The discussion in \#6 and \#7 points to the following.

Now it is clear that the third requirement is a natural extension to the first two requirements. Without a Noble friend, it is not possible to fulfill the third requirement, i.e., to understand what is meant by yoniso manasikāra because that requires an understanding of anicca, dukkha, anatta (Tilakkhaṇa.)

- It also confirms the value of the original three commentaries that we discussed in \#5 above. The critical verse from Vibhangapakarana in \#7 clarifies yoniso manasikāra.
- But an understanding of that verse REQUIRES comprehension of the true meanings of anicca, dukkha, anatta.
- In recent times, those meanings have become clear due to our kalyāna mittā, Waharaka Thero. He was able to provide a consistent picture based on the Tipitaka simply because he was born a jāti Sotāpanna.
- We will discuss the fourth requirement, dhammānudhammappaṭipatti, and its connection to Patticca Samuppāda in the next post.

Previous posts in this subsection at, "Paticca Samuppāda, Tilakkhana, Four Noble Truths."

### 9.5.7 Dhamma - Different Meanings Depending on the Context

November 16, 2021
Dhamma is a Pāli word that gives (seemingly) different meanings depending on the context. But those meanings are based on the root "to bear."

## Introduction

1. In the previous post, "Yoniso Manasikāra and Paticca Samuppāda," we discussed the four requirements for someone to attain the Sotāpanna stage There we discussed the first three requirements. The fourth is dhammānudhammappatipatti.

- The Pāli word dhammānudhammappaṭipatti is the combination of three words: dhamma, anudhamma, and patipatti.
- Therefore, we need to discuss the words "dhammä" and "anudhamma." As we will see, "dhamma" can have different meanings based on the context.
- We have many examples in English where the same word gives different meanings based on the context. For example, the term "right" conveys unrelated things in "turn right" and "you are right."
- That is why it is dangerous to translate Pāli texts word-by-word, as commonly done these days. I have pointed out such issues with specific examples.

## The Meaning of "Dhamma"

2. "Dhamma" means "to bear." This direct meaning is in verse, "manañca paṭicca dhamme ca uppajjati manoviññānaṃ."

- "Vipāka-bearing kammic energy" of a kamma stays in viññāna dhātu as "kamma bija" or "dhamma."
- Just like a $r \bar{u} p a$ can bring in a sensory input via the five physical senses, dhammā can bring a sensory input (memory of a previous kamma) directly to the mind.
- While the five types of rūpa (vanṇa, sadda, gandha, rasa, photthabba) belong to the "material world" made of suddhatthaka, "dhammā" are below the suddhatthaka stage. As we know, a suddhatthaka is the smallest unit of matter in Buddha Dhamma (comparable to an atom or an elementary particle in modern science. However, a suddhatthaka is even smaller.)
- Unlike the other five types of rūpa, dhammā cannot be seen (anidassana) or touched/detected even with most sensitive instruments (appatigha) and detectable only with the mind (dhammāyatanapariyāpannaì).
- That is explained in the last verse of "WebLink: suttacentral: Abhidhamma Ds 2.3.1. Tikanikkhepa" in Dhammasañgaṇī as, "yañca rūpai் anidassanaì appaṭighaì dhammāyatanapariyāpannaï; asañkhatā ca dhātu-ime dhammā anidassana appattighā."
- Therefore, those $\boldsymbol{d h a m m a} \boldsymbol{a}$ bear the fruits of kamma! They can bring vipāka in the future.

3. All such dhammā generally appear in two forms: dhamm $\bar{a}$ and $a d h a m m \bar{a}$.

- The word dhammā generally refers to "good dhammā." Those that arise due to "bad kamma" are "adhammā."
- "WebLink: suttacentral: Dhamma Sutta (AN 10.182)" provides a direct explanation. "Killing, stealing, sexual misconduct, lying, divisive, harsh, or idle speech, greed, ill will, and wrong view. Those ten are adhammā. Abstaining from such actions (and having the opposite mindset generating "good javana power") lead to dhammā.
－However，both dhamm $\bar{a}$ and adhamm $\bar{a}$ belong to the dhamm $\bar{a}$ category．It is just that adhamm $\bar{a}$ ＂bear the fruits of bad kamma＂and dhammā＂bear the fruits of good kamma．＂
－The word＂smell＂indicates all types of odors，but if someone says＂it smells，＂that means it is a＂bad odor．＂That is the accepted usage．In the same way，dhammā usually means the＂good type．＂

## Anudhamma at the Basic Level

4．Each of the ten types of dhamma falls into four categories［see （1）（2）（3）（4）$=$ dhamma／（1）（2）（3）（4）$=\mathrm{adhamma}$ ］．For example，concerning（1）killing other living beings，it is not only（1）abstaining from killing that counts as dhamma．［Ten types of dhammā ：pāṇātipātā，adinnādāna， kāmesumicchācārā，musāvāda，pisuṇavācā，parusāvācā，samphappalāpa，abhijjha，vyāpāda，micchā ditṭhi］［pānātip $\bar{a} t \bar{a} \boldsymbol{a}$ ：（pānana呼吸＋atipāta殺），Kill 殺生（kill one who is breathing 殺有呼吸者）。］［pāna： ［m．］life ；breath；a living being．］［atipāta ：［m．］slaying；killing．］［kāmesumicchācārā ：（＝kāmesu micchā carati），邪淫］
－（2）Not helping others in killings，（3）not encouraging others to kill，and（4）not praising killings by others also count as＂good deeds＂or dhamma．Those are the anudhamma．
－In the same way，while（1）killing is the worst adhamma in that category，（2）helping others to kill， （3）encouraging others to kill，and（4）praising killings by others also count as evil deeds and will have dire kammic consequences．

## Above Usage is the Basic Form－Completes the Mundane Eightfold Path

5．Abstaining from immoral deeds and cultivating moral acts is NECESSARY to facilitate the mundane eightfold path．That is to bear＂moral dhamma＂and NOT to bear＂immoral adhamma．＂
－Cultivation of moral dhamma will help remove the ten types of micchā dittthi．
－Getting to that stage is NECESSARY to comprehend the deeper dhamma needed to get to the Sotāpanna and higher levels of Nibbāna．
－Of course，even after that，it is necessary to hear the deeper dhamma（Four Noble Truths／Tilakkhana／Paticca Samuppāda）from a Noble Person．As we have discussed，the first two conditions pertain to that．

## Mundane Eightfold Path Has Similarities with Other Religions

6．From \＃3 above，we can see that the mundane path has some common features with other world religions． However，even there，there are some drastic differences．
－For example，other religions（except some versions of Hinduism）do not see a problem with killing animals．
－All other religions teach a permanent heavenly existence（or permanent existence in Hell）．That is one of the 10 types of wrong views（micchā ditthi）in \＃5 above．

## What Is the Deeper Buddha Dhamma？

7．As we can see，dhammā arise due to＂good or bad kamma．＂Good kamma lead to good vipāka and bad kamma lead to bad vipāka．However，both types are associated with＂this world．＂
－In contrast，＂Buddha Dhamma＂is＂bhava uddha dhamma．＂It mainly refers to the teachings of the Buddha that lead to Nibbāna，i．e．，the results（vipāka）of actions taken according to Buddha Dhamma lead to＂stopping of future existence／rebirths．＂

- The word Buddha comes from "bhava" + "uddha"; here, "bhava" means "existence (in the 31 realms)" and " $u d d h a$ " means "removal." Therefore, a Buddha figures out how to stop the rebirth process and thus end future suffering.
- Now the question is: What kind of "deeper dhamma" would lead to the stopping of the rebirth process and the permanent elimination of future suffering?

## Paticca Samuppāda Is Buddha Dhamma!

8. The "WebLink: suttacentral: Mahāhatthipadopama Sutta (MN 28)" ends with the statement, "Yō Paṭiccasamuppādam passati, so Dhammam passati; yo Dhammaì passati so paṭiccasamuppādamं passatī"ti." That means, "One who sees patticca samuppāda sees the Dhamma; one who sees the Dhamma sees pațicca samuppāda." To understand Buddha Dhamma, one needs to know how future suffering arises via the Paticca Samuppāda process.

- In other words, Pațicca Samuppāda is the same as Buddha Dhamma. To be precise, Akusala-mūla Paticca Samuppāda explains how existences and rebirths arise due to the accumulation of "lokiya dhamma" or "good/bad dhamma" that we discussed in \#2 and \#3 above. As we know, those Paticca Samuppāda processes start with "avijjā paccayā sañkhāra," i.e., actions based on avijjā or ignorance of the Four Noble Truths. Thus, comprehension of Paticca Samuppāda will lead to the stopping of such processes. That is the "lokuttara dhamma" or the deeper version.
- Therefore, in many cases, "dhamma" (without the "long a") refers to either version of Buddha Dhamma.
- For example, "Dhammo ha ve rakkhati dhammacārï̀" means, "Dhamma will protect those who follow (Buddha) Dhamma."

## Anudhamma at the Deeper Level - Tilakkhana

9. As we have already discussed, Paticca Samuppāda is closely related to Tilakkhaṇa (anicca, dukkha, anatta.) Those are the three characteristics of this suffering-filled world (in the rebirth process.)

- We will discuss that in detail, with sutta references, in the next post.

## Dhammānudhamma Paṭipatti - Connection to Paṭicca Samuppāda/Tilakkhaṇa

November 21, 2021
Dhammānudhamma Patipatti Leads one to Nibbāna.

## What Is Dhammānudhamma Paṭipatti?

1. The Pāli word dhammānudhammappaṭipatti (dhamma anudhamma patipatti) is the combination of three words: dhamma, anudhamma, and paṭipatti. In the previous post, we did an overview: "Dhamma Different Meanings Depending on the Context."
i. Dhamma here is Buddha Dhamma. The "WebLink: suttacentral: Mahāhatthipadopama Sutta (MN 28)" ends with the statement, "Yō Pațiccasamuppādam passati, so Dhammam passati; yo Dhammaí passati so pațiccasamuppādaì passatī"ti." That means, "One who sees paṭicca samuppāda sees the Dhamma; one who sees the Dhamma sees paṭicca samuppāda." To understand Buddha Dhamma, one needs to know how future suffering arises via the Paṭicca Samuppāda process.
ii. We discussed "anudhamma" briefly in the previous post. Those are other aspects (one could say, subcategories) that fall under dhamma. There are four suttas that clarify "anudhamma" at a deeper
level. They are "WebLink: suttacentral: Anudhamma Sutta (SN 22.39)" through "WebLink: suttacentral: Catutthaanudhamma Sutta (SN 22. 42)" We will discuss them below. Simply stated, "anudhamma" means "according to Dhamma" or "according to Paṭicca Samuppāda."
iii. Patipatti is conduct or practice.

Therefore, the literal translation of dhammānudhammappatipatti is "to live according to dhamma and anudhamma."

## Requirements for the Sotāpanna Stage

2. We listed the four requirements for someone to attain the Sotāpanna stage in a previous post, "Yoniso Manasikāra and Paticca Samuppāda." There we discussed the first three requirements.

- The first two requirements reflect that one must hear the "previously unknown teachings of the Buddha" from a Buddha or a true disciple of a Buddha who has understood those teachings. The framework of Buddha Dhamma can be stated in three inter-related ways: Four Noble Truths, Paṭicca Samuppāda, Tilakkhaṇa.
- The third condition (yoniso manasikāra) is to UNDERSTAND those concepts, i.e., how the sufferingfilled rebirth process continues because the true nature of this world is not understood.
- The fourth condition (dhammānudhammappațipatti) is where that understanding becomes established permanently in mind. That happens when it becomes clear without a doubt that the word of 31 realms has the three characteristics of anicca, dukkha, anatta, and thus it is not possible to stop future suffering until stopping of the rebirth process.

## Anudhamma - At Deeper Level

3. As we discussed in the previous post, "anudhamma" - at the primary level - means "moral living." After comprehending the deeper Dhamma, one would realize that just moral living is not enough to stop suffering in future lives.

- Deeper level anudhammā are concepts related to Paṭicca Samuppāda. Tilakkhaña (anicca, dukkha, anatta) are those anudhammā.
- It is important to note that "moral living" is based on mundane versions of alobha, adosa, and amoha have "hidden ignorance." That is ignorance of Tilakkhana.

4. Anudhamma at the deeper level is discussed in a series of four suttas, as mentioned in \#1 above. Following is the English translation of the "Anudhamma Sutta (SN 22.39)":

- "A bhikkhu lives by the Dhamma (Dhammānudhammappatipadā), after he understands what is meant by Dhamma (i.e., Paticca Samuppāda). Then he lives without attaching (nibbidābahulo) to rūpa, vedanā, sañ̃̄̄, sañkhāra, viññāna. He fully understands the real nature of rūpa, vedanā, saññā, sañkhāra, viññāna and thus he is freed from rebirth, aging, and death; he is free from sorrow, lamentation, pain, displeasure, and despair; he is free from all suffering (through future rebirths)."
- The Päli verse is in Ref. 1 below.
- The next three suttas in that series explain why a bhikkhu would not attach to (or crave) anything in this world (rūpa, vedanā, saññā, sañkhāra, viññāna)

## Connection to Tilakkhana

5. The REASON why someone would not attach to (or crave) rūpa, vedanā, sañ̃̄̄ $\bar{a}$, sañkh $\bar{a} r a$, viñ̃ñana is he has understood that they all have anicca, dukkha, anatta nature! That is explicitly stated in the three suttas of Ref. 2 , Ref. 3, and Ref. 4 below.

- "WebLink: suttacentral: Dutiva Anudhamma Sutta (SN 22.41)" states that such a bhikkhu would have seen the anicca nature of rūpa, vedanā, sañ̃̄̄a, sañkhāra, viññāna (the five aggregates or pañcakkhandha.)
- "WebLink: suttacentral: Tatiya Anudhamma Sutta (SN 22.42)" states that such a bhikkhu would have seen the dukkha nature of $r \bar{u} p a$, vedanā, sañ̃̄ $\bar{a}$, sañkhāra, viññāna (the five aggregates or pañcakkhandha.)
- "WebLink: suttacentral: Catuttha Anudhamma Sutta (SN 22.43)" states that such a bhikkhu would have seen the anatta nature of rūpa, vedanā, sañ̃̄̄a, sañkhāra, viññāna (the five aggregates or pañcakkhandha.)

## Connection to the First Discourse - Dhammacakkappavattana Sutta

6. We note that the Buddha is referring to the five aggregates (pañcakkhandha) above.

- Attaching to pañcakkhandha is pañcupādānakkhandha (pañca upādāna khandha). That is the root cause of future suffering.
- One would lose the craving for things in this world when he sees the dangers of such desires. As we have discussed, "this world" means $r \bar{u} p a$ in this world and our mental impressions of them (vedan $\bar{a}$, sañña $\bar{a}$, sañkhāra, viññāṇa.) That is pañcupādānakkhandha.
- We have discussed the fact that the Buddha summarized suffering as "saṃkhittena pañcupādānakkhandhā dukkhā." See, "Essence of Buddhism - In the First Sutta."
- The main task in studying Buddha Dhamma is to understand the truth of the above statement. There are many ways to tackle that.

## Different Approaches

7. The puredhamma.net website is tailored to provide that understanding. I have presented it in several ways.

The most recent approach started with the section, "Basic Framework of Buddha Dhamma." Then we proceeded to the next step: "Paticca Samuppāda, Tilakkhana, Four Noble Truths." This current post is in the second section.

- In those sections, we discussed Tilakkhaṇa (anicca, dukkha, anatta) or three characteristics of this world. We can summarize them as follows: Anicca means our expectation to get rid of suffering cannot be achieved within this world. Dukkha means what we perceive to be desirable in this world leads to suffering. Anatta means "therefore, any efforts to get rid of suffering would be in vain."
- Ignorance of Tilakkhaṇa (avijjā) leads to unwise actions via sañkhāra. In an 11-step process that leads to future births and, thus, the continuation of suffering. That process is Paticca Samuppāda. It describes how our efforts (sañkhāra) based on avijijā WILL INEVITABLY lead to rebirth among the 31 realms. While some of those existences are mostly suffering-free, they are only temporary, AND the probability of such "good births" is very low. Most rebirths are in the suffering-filled four lowest realms (apāyās.)

## Dhammānudhamma Patipatti Leads to Nibbāna

8. The "WebLink: suttacentral: Nalakalāpī Sutta (SN 12.67)" has the following verse at the end (see Ref. 5 below): "If a bhikkhu is practicing for the purpose of release from aging-and-death via losing attachment (virāgāya) and cessation (nirodhāya), he can be called a bhikkhu who is practicing in accordance with the Dhamma (dhammānudhammappatipanno). If through such practice a bhikkhu has lost attachment (virägāya) and attained cessation (nirodhāya), he can be called a bhikkhu who has attained Nibbāna in this very life.."

## References

1. The "WebLink: suttacentral: Anudhamma Sutta (SN 22.39)" states:
"Dhammānudhammappațipannassa, bhikkhave, bhikkhuno ayam anudhammo hoti yaì rūpe nibbidābahulo vihareyya, vedanāya nibbidābahulo vihareyya, sañ̃n̄aya nibbidābahulo vihareyya, sañkhāresu nibbidābahulo vihareyya, viñ̃n̄ạe nibbidābahulo vihareyya. Yo rūpe nibbidābahulo viharanto, vedanāya ... sañ̃n̄āya ... saǹkhāresu nibbidābahulo viharanto, viññāne nibbidābahulo viharanto rūpai் parijānāti, vedanai் ... saññai் ... sañkhāre ... viññānaím parijānāti, so rūpaì parijānam், vedanaì ... saññai் ... sañkhāre ... viññānamं parijānai் parimuccati rūpamhā, parimuccati vedanāya, parimuccati saññāya, parimuccati sañkhārehi, parimuccati viññānamhā, parimuccati jātiyā jarāmaranena sokehi paridevehi dukkhehi domanassehi upāyāsehi, parimuccati dukkhasmāti vadāmı̄"ti.
2. The "WebLink: suttacentral: Dutiva Anudhamma Sutta (SN 22.40)" states: "Dhammānudhammappatipannassa, bhikkhave, bhikkhuno ayam anudhammo hoti yaì rūpe aniccānupassī vihareyya ...pe (vedanāya ... saññāya ... sañkhāresu...viñnāṇe aniccānupassī) ... parimuccati dukkhasmāti vadāmū"ti.
3. The "WebLink: suttacentral: Tatiya Anudhamma Sutta (SN 22.41)" states: "Dhammānudhammappațipannassa, bhikkhave, bhikkhuno ayam anudhammo hoti yaí rūpe dukkhānupassī vihareyya ...pe (vedanāya ... saññāya ... sañkhāresu...viññāṇe dukkhānupassī)... parimuccati dukkhasmāti vadāmū"ti.
4. The "WebLink: suttacentral: Catuttha Anudhamma Sutta (SN 22.42)" states (full version as in Ref. 1): "Dhammānudhammappațipannassa, bhikkhave, bhikkhuno ayam anudhammo hoti yaì rūpe anattānupassī vihareyya, vedanāya ... saññāya ... sañkhāresu ... viñnāṇe anattānupassī vihareyya. Yo rūpe anattānupassī viharanto ...pe... rūpaì parijānāti, vedanaì ... saññà் ... sañkhāre ...
 parimuccati rūpamhā, parimuccati vedanāya, parimuccati sañ̃̄āya, parimuccati sañkhārehi, parimuccati viññānamhā, parimuccati jātiyā jarāmaraṇena sokehi paridevehi dukkhehi domanassehi upāyāsehi, parimuccati dukkhasmāti vadāmū"ti.
5. The verse from the "WebLink: suttacentral: Nalakalāp̄̄ Sutta (SN 12.67)" : "Jarāmaraṇassa ce, $\bar{a} v u s o, ~ b h i k k h u ~ n i b b i d a ̄ y a ~ v i r a ̄ g a ̄ y a ~ n i r o d h a ̄ y a ~ d h a m m a i ̀ ~ d e s e t i, ~ d h a m m a k a t h i k o ~ b h i k k h u ̄ t i ~$ alaìvacanāya. Jarāmaraṇassa ce, āvuso, bhikkhu nibbidāya virāgāya nirodhāya paṭipanno hoti, dhammānudhammappațipanno bhikkhūti alaìvacanāya. Jarāmaraṇassa ce, āvuso, bhikkhu nibbidā virāgā nirodhā anupādā vimutto hoti, diṭṭhadhammanibbānappatto bhikkhūti alaìvacanāya."
6. I have discussed only a few suttā pertaining to this subject. Some other relevant suttā are: SN 12.16, 12.67; SN 22.115, 22.116; SN 35.155; SN 51.10; SN 55.25; Ud 6.1; MN 113; AN 4.6, 4.7, 4.97; AN 7.68; AN 8.25, 8.26, 8.62, 8.70, 8.78, 8.82, AN 10.83, DN 16, DN 29.

### 9.6.1 Distortion of Pāli Keywords in Paṭicca Samuppāda

## November 29, 2021; revised October 16, 2022

Distortion of Pāli keywords in Paṭicca Samuppāda is quite common in current English translations. I will analyze two critical suttas to make that clear.

## First Two Suttas in Udāna

1. The suttas in the Udāna section are the "joyful utterances" of the Buddha and many of his disciples. Let us look at the first two suttas in Udāna. They describe how the Buddha comprehended anuloma and patiloma Paticca Samuppāda during the night of the Enlightenment. First, I will reproduce the English translations of the two suttas verbatim. [patiloma : [adj.] reverse; opposite; contrary.]

The following verse is from the first sutta. The Pāli version of the corresponding verses is in Ref. 1 :
"In the first part of the night, he reflected on dependent origination in forwarding order:
When this exists, that is, due to the arising of this, that arises. That is: Ignorance is a condition for choices. Choices are a condition for consciousness. Consciousness is a condition for name and form. Name and form are conditions for the six sense fields. The six sense fields are conditions for contact. Contact is a condition for feeling. The feeling is a condition for craving. Craving is a condition for grasping. Grasping is a condition
for continued existence. Continued existence is a condition for rebirth. Rebirth is a condition for old age and death, sorrow, lamentation, pain, sadness, and distress to come to be. That is how this entire mass of suffering originates."

- The complete English translation: "WebLink: suttacentral: Upon Awakening (1st) by Sujato (KN Ud 1.1)." The second translation is almost the same: "WebLink: suttacentral: The First Discourse about the Awakening Tree by Anandajoti (KN Ud 1.1)."

2. The following verse is from the second sutta. The Pāli version of the corresponding verses is in Ref. 2 :
'In the second part of the night, he reflected on dependent origination in reverse order:
When this doesn't exist, that is not; due to the cessation of this, that ceases. That is: When ignorance ceases, choices cease. When choices cease, consciousness ceases. When consciousness ceases, name and form cease. When name and form cease, the six sense fields cease. When the six sense fields cease, contact ceases. When contact ceases, feeling ceases. When feeling ceases, craving ceases. When craving ceases, grasping ceases. When grasping ceases, continued existence ceases. When continued existence ceases, rebirth ceases. When rebirth ceases, old age and death, sorrow, lamentation, pain, sadness, and distress cease. That is how this entire mass of suffering ceases."

The complete English translation: "WebLink: suttacentral: Upon Awakening (2nd) by Sujato (KN Ud 1.2)." The second translation there is almost the same: "WebLink: suttacentral: The Second Discourse about the Awakening Tree by Anandajoti (KN Ud1.2)."

## Overview of the Two Suttas

3. Those two suttas summarize the key findings of the Buddha upon his Enlightenment.

- The first sutta describes how future suffering arises via future rebirths. It all starts with the step, "avijja paccayā sañkhārā."
- The second sutta explains that removing ignorance from a mind prevents future rebirths.

4. Both English translations of the second sutta are blatantly incorrect. Buddha's mind became free of ignorance ( $a v i j j \bar{a}$ ) upon Enlightenment that night. Does that mean he stopped all the subsequent steps as stated in the translation of \#2 above?

- If so, he would not have generated any sañkhāra from the moment of attaining Enlightenment (Buddhahood.) Vedanā and sañ̃n̄̄are in ALL types of sañkhāra. Does that mean he would not feel anything or be unable to perceive and identify anything?
- The literal word-by-word translation is blatantly wrong for all the steps in the second sutta.
- The cessation of those steps would also hold for any Arahant since they have no trace of avijj $\bar{a}$ left in their minds!

## Insane Discussions in Discussion Forums

5. There is a recent discussion at Dhamma Wheel: "WebLink: dhammawheel.com: Do Arhats experience contact with their sixfold sense media? What about vedanā??" It is a clear example of the confusion caused by such translations. The participants are understandably confused by the above translation of the second sutta in \#2.

- The translation in \#2, without a doubt, says that when avijjā is not there, choices (sañkhāra), consciousness, name and form, six sense fields, contact (with the sense fields), feeling, craving, grasping (upādāna), continued existence (bhava), rebirth, and the entire mass of suffering ceases.
- We all agree that the Buddha and Arahants do not have even a trace of avijjā (ignorance about the Four Noble Truths) left.
- Then, according to the translations in \#2 above, they would not generate any more sañkhāra. They do not experience the six sensory facilities (i.e., don't hear, taste, smell, touch, or think) and will not feel anything. That means they would essentially not be living!
- On the contrary, we know that the Buddha lived for 45 years after Enlightenment. He experienced all six sensory faculties, used them optimally, and had the best mind. He could recall any event in the past as far as he desired. But he also felt all types of vedana $\bar{a}$, including bodily dukkha vedan $\bar{a}$ (he had back problems and once was injured by Devadatta)

6. So, where is the problem? Is that second sutta wrong?

- Both suttas are perfectly fine. Such problems arise when translators start translating Pāli suttas word-by-word without paying attention - - or not understanding the basic concepts in Buddha Dhamma.
- As I have repeatedly emphasized, each Pāli word (especially in deep suttas) needs to be handled in the context of the discussed issue. We run into similar situations, even in English. The word "park" means two different things in the same sentence, "She will park the car so we can walk in the park."

## Sutta Interpretation - Uddesa, Niddesa, Paṭiniddesa

7. The steps in Patticca Samuppāda (and those in the reverse or the Pațiloma Pațicca Samuppāda) are in the "utterance (uddesa)" form. That is to recite the 11 steps.

- Those steps need explanations in either the niddesa (brief descriptions) or the patiniddesa (detailed explanations.) Details at "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."
- There are many verses like that in the Tipiṭaka. Another is "Ye dhammā hetuppabhavā, Tesaì hetum் tathāgato āha; Tesañca yo nirodho, Evainvād̄̄ mahāsamaṇo." Upatissa (Ven. Sāriputta before becoming a bhikkhu) attained the Sotāpanna stage just by hearing the "uddesa version." Of course, he was the chief disciple of the Buddha and had the sharpest mind next to the Buddha.
- For a few other people at the time of the Buddha, the niddesa version would have been enough to understand the meaning of that verse.

8. However, for most people, that verse needs to be explained in detail, i.e., the patiniddēsa version is required. Most current English translations provide word-by-word translations of that "uddēsa version" without any explanation. That can have disastrous outcomes, as illustrated by the translation of the second sutta in \#2 above.

The following chart illustrates the problem I am trying to highlight. The first column shows the "uddesa version" of the sutta in the Tipitaka. The Sutta Central "word-by-word translation" of that uddesa version is in column 2, which is incorrect.

## Download pdf: "WebLink: PDF Download: Paticca Samuppāda Figure"

## Niddesa and Paṭiniddesa Versions of Some Steps in Paṭicca Samuppāda

9. I have explained those 11 steps in Pațicca Samuppāda in many posts. Below I will briefly state the correct interpretations. It is impossible to discuss even a single term with a single essay.

- First, sañkhāra in the step "avijjā paccayā sañkhāra" refers to "abhisañkhāra." "WebLink: suttacentral: Paticcasamuppāda Vibhañga (Abhidhamma Vb 6))" explains the step "avijjā paccayā sañkhāra" as, "Tattha katame avijjā paccayā sañkhārā? Puñn̄ābhisañkhāro, apuññābhisañkhāro, $\bar{a} n e n ̃ j a ̄ b h i s a n ̃ k h a ̄ r o . " ~ T r a n s l a t e d: ~ " W h a t ~ i s ~ m e a n t ~ b y ~ ' a v i j j a ̄ ~ p a c c a y a ̄ ~ s a n ̃ k h a ̄ r a ̄ ? ? ' ~ T h a t ~ m e a n s ~$ Puññābhisañkhāra, apuññābhisañkhāra, āneñjäbhisañkhāra." For details, see "Sañkhāra - What It Really Means."
- Abhisañkhāra leads to the cultivation of "kamma viññāna," which are different from cakkhu viññāṇa, sota viññāna, etc. The latter are the six sensory fields, which are "vipāka viññāna."
- Therefore, an Arahant would have the six sensory fields intact (contrary to the translation in \#2 above) but would not generate kamma viññāna. See, "Viññāna - What It Really Means."
- Nāmarūpa in the step "viññ̄ṇa paccayā nāmarūpa" is a bit harder to explain. See: "Kamma Viññāna and Nāmarūpa Pariccheda Ñāna." I may get to address all these terms again, but let us finish our overview.

10. In the next step, "salāyatana" does not refer to the "six sense fields" but only when those sensory fields (indriya) are used as "āyatana." For example, an Arahant would have "cakkhu indriya," i.e., he can see just like anyone else. But an Arahant would not use eyes for pleasure-seeking, and thus it will not become "cakkhu āyatana" (or "cakkhāyatana.") See, "How Do Sense Faculties Become Internal Āyatana?"

The above becomes clear when we look at the next step, "saḷāyatana paccayā phasso." Here, "phassa" means "samphassa." The contact between cakkhu and rūpa is "phassa," and that leads to "seeing" or "cakkhu viññāna." Details at "Indriya Make Phassa and Āyatana Make Samphassa."

- A special kind of "phassa" (samphassa) comes into play JUST AFTER that "seeing" or "cakkhu viññāna." As I explained in that post, "samphassa" means "contact of the mind with lobha, dosa, moha (defilements in mind called anusaya.)" That will happen ONLY IF one gets attached to that sight. Such "samphassa" then leads to "samphassa-jā-vedanā." That is a type of vedanā made up by a defiled mind. Therefore, the niddesa version of "phassa paccay $\bar{a}$ vedan $\bar{a} "$ is "samphassa paccay $\bar{a}$ samphassa-jā-vedanā."
- It is samphassa-jā-vedanā that leads to taṇhā in the step "vedanā paccayā taṇhā." Therefore, not all vedana $\bar{a}$ lead to taṇh $\bar{a}$. It is only those samphassa-j $\bar{a}$-vedana $\bar{a}$ that lead to tanhh $\bar{a}$.

## Correct Explanation of the Second Sutta

11. Now, one should get at least an idea of the real meaning of the second sutta.

- A living Arahant would not generate abhisañkhāra (which involves lobha, dosa, and moha to various degrees.) But an Arahant can think, speak, and do bodily actions. Those involve mano, vacī, and kāya sañkhāra. But they will not become abhisañkhāra!
- Living Arahants can see, hear, etc., as anyone else. Thus, they will have all six sensory faculties. But they will not use them seeking sensory pleasures, i.e., they will not become "āyatana."
- Each sensory event will have vedanā cetasika. That means an Arahant can "feel" just like anyone else. But there will be no "samphassa-jā-vedana $\bar{a}$."
- Of course, since there is no tanhhā, the rest of the steps will not materialize, i.e., there will be no upādāna, bhava, or $j \bar{a} t i$ (fiture rebirths.)

12. Any rebirth ( $j \bar{a} t i$ ) leads to "old age and death, sorrow, lamentation, pain, sadness, and distress," as stated in \#1. Since an Arahant would not be reborn, all such suffering would not arise. That is the "parinibbāna" (or "full Nibbāna") reached by an Arahant at the death of the physical body.

- However, focusing on "ending rebirths" is not advisable at the beginning of the Path. If a child thinks about getting a Ph D. in nuclear physics, she will be quickly discouraged. She must first go through primary and secondary schools. One's first goal should be the Sotāpanna stage; even then, one must first learn the basic concepts. See, "Is It Necessary for a Buddhist to Eliminate Sensual Desires?" Still, it is a good idea to have the "big picture" laid out by the Buddha (and the ultimate goal of Nibbāna) in the back of the mind.

## Summary

13. We can reach two critical conclusions.
i. Paṭicca Samuppāda IS Buddha Dhamma. Simply stating the 11 steps is useless. A detailed explanation of each step is necessary.
ii. There is danger in translating Pāli verses word-by-word without understanding their meanings which depend on the context.

- It is sad to go through discussions in various "Buddhist discussion forums" to"see how many people struggle to figure out the true meanings/concepts in multiple suttas. But they run into problems because most translations are wrong, and there are apparent contradictions.
- This "mindless word-by-word translation process" has been going on for years. Just read old posts at Dhamma Wheel. Many topics have been repeatedly discussed, citing the identical wrong translations! But those translations are not consistent with other translations (by even the same author) because the translators do not understand the meanings of keywords in the context of some suttas. Many words have different meanings depending on the context. For example, "viñ̃̃āna" DOES NOT mean the same thing everywhere! That is the problem. See my recent post, "Dhamma - Different Meanings Depending on the Context."
- It is time for those translators to come to their senses and learn the genuine and pure Buddha Dhamma and not continue cranking out meaningless translations of highly-condensed suttā!

### 9.6.1.1 Sañkhāra - Many Meanings

## December 14, 2021

Sañkhāra - Should Not be Translated as a Single Word
Kamma and Sañkhāra, Cetanā and Sañcetanā
Kusala-Mūla Sañkhāra Are Needed to Attain Nibbāna
Rebirths Take Place According to Abhisañkhāra

### 9.6.1.1 <br> Sañkhāra - Should Not be Translated as a Single Word

## December 7, 2021; revised December 10, 2021 (\#3); August 27, 2022

Sañkhāra is a critical Pāli word with different meanings depending on the context. It should not be translated with a single word, like choices, processes, activity, mental formations, etc., as commonly done these days.

## Introduction

1. In the previous post, I referred to a couple of English translations of two key suttas. They translated "sañkhāra" as "choices" and "mental formations." See "Distortion of Pāli Keywords in Paticca Samuppāda."

- According to those translations, ALL sañkhāra would stop from arising if a mind is devoid of avijjā. In the two English translations quoted in the above post, "avijjā nirodhā sañkhāra nirodho" is translated as "When ignorance ceases, choices cease" and "from the cessation of ignorance, there is the cessation of volitional processes."
- We all know that the Buddha's mind became free of avijjā upon attaining Buddhahood. But then he lived for 45 years. Did not the Buddha generate any sañkhāra during that whole time?
- As discussed below, one cannot think, speak, or do anything without generating sañkhāra!
- That would clearly illustrate the dangers of mindlessly translating Pāli suttas word by word without understanding the meaning of the sutta in the context of the topic.

## Several Types of Sañkhāra

2. The "WebLink: suttacentral: Cūlavedalla Sutta (MN 44)" discusses three types of sañkhāra: kāya sañkhāra, vacī sañkhāra, citta sañkhāra. The last type is (almost) the same as mano sañkhāra.

- In the English translations of this sutta at Sutta Central, three translators translate those three types of sañkhāra in three different ways: "Physical, verbal, and mental processes," "bodily process, the speech process, the mental process," and "physical activity, verbal activity, and mental activity."
- However, all three types of sañkhāra are MENTAL; they arise in mind. They are NOT physical processes, but they can control physical processes.
- Kāya sañkhāra arises in the mind and controls bodily actions. Vacī sañkhāra also occurs in mind and may lead to speech. All three types of sañkhāra appear in mind.
- It is NOT POSSIBLE to find a single English word representing the different meanings of sañkhāra in various suttas. We will discuss another way to categorize sañkhāra below, but let us first briefly examine these three types of sañkhāra.

## Any Thought Has Mano Sañkhāra

3. In the WebLink: suttacentral: Cūlavedalla Sutta (MN 44), citta (mano) sañkhāra defined as, "vedanā and sañ̃̄̄̄." See Ref. 1 below.

- In most English translations, vedanā and sañ̃̃̄a are feelings and perception (or recognition).
- But vedanā is more like "sensing an external sensory input." Sañ̃̄̄ $\bar{a}$ is the recognition of the sensory input (but includes one's biases for such a sensory event.)
- For example, tree roots feel vedanā (of nutrients in the soil), and the leaves of a tree feel the sunlight. Each can respond to such stimuli. For instance, we know that a plant 'turns" towards sunlight over time, and tree roots "pull-in" suitable nutrients.
- Therefore, plants and trees have a basic form of vedanā and sañ̃̃ā. A plant can "feel" when sunlight falls on it (vedana $\overline{\text { ) }}$, and recognize that as sunlight (saññ $\bar{a})$. However, a plant CANNOT generate sañkhārā
(in thoughts or $\operatorname{cittt\overline {a})\text {aboutthose}vedanā~and~saññā.~See,~"Contact~Between~Āyatana~Leads~to~Vipāka~}$ Viññāna."
- Only sentient beings (like people and animals) can generate sañkhāra. For example, we know that a dog becomes joyful when seeing its owner but is aggressive towards strangers. A dog can generate lobha (affection for the owner) or dosa (in this case aversion toward the stranger.)

4. Therefore, only living beings generate mano sañkhāra. In other words, mano sañkhāra are in any citta ("thought.")

- Abhidhamma clarifies this issue. Any citta (loosely translated as a thought) will ALWAYS arise with seven cetasika (mental factors.) Two of those seven are vedanā and saññā. Therefore, any "thought" is ALWAYS associated with vedanā and sañ̃n̄̄
- In other words, it is impossible to think without generating mano sañkhāra!

## Vacī Sańkhāra That Arise in the Mind Lead to Speech

5. The WebLink: suttacentral: Cūlavedalla Sutta (MN 44) defines vacī sañkhāra as, "vitakka vicārā vacī sañkhāro"; see Ref. 1.

- Vitakka and vicāra are two cetasika that MAY ARISE in a citta. They arise when we consciously start thinking about something. Simply put, vitakka means to "turn attention to an ārammaṇa," and vicāra is to "stay on that ārammaṇa to investigate."
- When we do that, we either "talk to ourselves" or "speak out." Both involve vacī sañkhāra. See "Correct Meaning of Vacī Sankhāra."
- Since the Buddlha spoke to others for 45 years after attaining the Buddhahood, it is clear that he generated a lot of vacī sañkhāra.

## All Bodily Actions Are Based on Kāya Sañkhāra That arise in the Mind

6. Kāya sañkhāra is defined as "Assāsa passāsā kāya sañkhāro" in Ref. 1. Which means, "breathing in and out is due to kāya sañkhāra."

- All bodily activities are due to kāya sañkhāra. Breathing is just one aspect. The mind controls breathing, but we don't need to breathe consciously. Then why is it called a type of sañkhāra?
- Again, we need to refer to Abhidhamma. All mental activities involve citta vīthi. A single citta does not arise by itself. Cittas ALWAYS occur in a series of citta (citta vīthi). However, we "feel" only those citta vīthi that contain javana citta. Those citta vīthi that maintain breathing do not have javana citta, and they are atiparittārammaṇa citta vīthi (ie., "weak citta vīthi").
- The fact that citta vīthi are involved in breathing becomes apparent when you think about asthma patients. They need to breathe willfully, i.e., "make an effort to breathe."
- That sutta is mentioned because it happens all the time, except when unconscious. When unconscious, citta vīthi cannot arise, and kammic energy keeps the body alive.
- The critical point is that ANY body movement involves kāya sañkhāra. To write, wallk, run, or move any body part, we must do that with kāya sañkhāra.

## Avijjā Is Not Involved in Most Sañkhāra!

7. Therefore, we generate numerous sañkhāra during the day. That was true for the Buddha and Arahants as well. As long as one lives in this world, one will generate $k \bar{a} y a, ~ v a c \bar{l}$, and mano sañkhāra.

- That is why it is foolish to translate "avijjā nirodhā saǹkhāra nirodho" as "When ignorance ceases, choices cease" or "from the cessation of ignorance, there is the cessation of volitional processes" in
the two translations cited in the post, "Distortion of Pāli Keywords in Paticca Samuppāda." We can also see that the English words "choices" and "volitional processes" are not applicable for some types of sañkhāra. For example, there is no need to make "choices" or "mental formations (consciously)" to breathe, but breathing involves kāya sañkhāra.
- Those translators don't seem to realize that only abhisañkhāra will cease to arise in an Arahant. An Arahant would not have a trace of aviijā but obviously would generate all three types of sañkhāra discussed above!
- That type of translation distorts Buddha Dhamma! I have repeatedly pointed out that it leads to much confusion in discussion forums.
- Now, let us discuss another way to categorize sañkhāra that is directly relevant to "avijjā paccayā sañkhāra." These types are sañkhāra are abhisañkhāra, some of which (apuññābhisañkhāra) can lead to "bad kamma vipāka" as various forms of suffering. Some kinds of abhisañkhāra (puññäbhisañkhāra) can lead to temporary relief from suffering (and even bouts of happiness) but will NEVER lead to a permanent end of suffering.
- Let us discuss the special categorization of abhisañkhāra now.

## Akusala-Mūla Paṭicca Samuppāda Involves Abhisañkhāra

8. Sañkhāra in the step "avijjā paccayā sañkhāra" refers to "abhisañkhāra." "WebLink: suttacentral: Paticcasamuppāda Vibhañga (Vb 6)" explains the step "avijjā paccayā sañkhāra" as, "Tattha katame avijjā paccayā sañkhārā? Puñn̄ābhisañkhāro, apuññābhisañkhāro, āneñjābhisañkhāro."

Translated: "What is meant by 'avijjā paccayā sañkhārā?' That means Puññābhisañkhāra, apuñn̄ābhisañkhāra, āneñjābhisañkhāra." For details, see "Sañkhāra - What It Really Means."

- Such abhisañkhāra can be kāya, vacī, or mano sañkhāra that we discussed above. But only a part of $k \bar{a} y a, ~ v a c \bar{l}$, and mano sañkhāra are abhisañkhāra.
- In other words, abhisañkhāra lead to kamma done with lobha, dosa, moha. They are dasa akusala (three with the body, four with speech, and three with the mind). They are kāya kamma, vacī kamma, and mano kamma. See, "Ten Immoral Actions (Dasa Akusala)."

9. Then a question arises: How can puñ̃̄ābhisañkhāra (puñ̃na abhisañkhāra or MORAL ACTIONS) be done with lobha, dosa, moha?

- Puññābhisañkhāra leads to puñña kamma that can bring "good results" in this world.
- That means such "good kamma" leads to "good kamma vipāka" (like health and wealth) during such "good existences." Stronger ones can lead to rebirth in "good realms."
- However, such benefits are only temporary. Such births in "good realms" are rare. Even if we think we only do good deeds in this life, we may have done many "bad deeds" in past lives, which can still bring rebirths in "bad realms." Puñña kamma becomes kusala kamma (that leads to Nibbāna) ONLY with the comprehension of Tilakkhaṇa; see \#11 below.

## Examples

10. As we already noted, breathing takes place via kāya sañkhāra. Raising one's hand involves kāya sañkhāra. Eating food involves kāya sañkhāra. All these activities are NECESSARY to live life. We cannot categorize them as "good" or "bad." Those are kammically neutral activities.

- On the other hand, hitting another person with anger involves the apuñ̃̄ābhisañkhāra version of $k \bar{a} y a$ sañkhāra. So does stealing or sexual misconduct. Telling a lie is done with the apuñ̃āabhisañkhāra version of vacī sañkhāra.
- Preparing a meal and offering that to a bhikkhu or a homeless person involves the puññābhisañkhāra version of kāya sañkhāra. Teaching Buddha Dhamma (or anything valuable) to others involves kāya and vacī sañkhāra that belong to the category of puññäbhisañkhāra.
- Having a greedy or angry mindset is a mano sañkhāra belonging to the apuñnāāhisañkhāra version. The same is true for having the ten types of wrong views. The opposites of those belong to the puññābhisañkhāra category.

## Doing Good Deeds (Puñña Kamma) Is Not Enough to Stop Future Suffering

11. The point is that while "good deeds (puñña kamma)" can lead to periods of happiness in good realms, that would not remove the possibility of future rebirths in the apāyās.

- Another way to say this is: "rebirths the apāyās will stop only upon understanding the dangers in the rebirth process, i.e., that this world is of anicca, dukkha, anatta nature (Tilakkhana.) That is when one becomes a Sotāpanna. Attempts to overcome past "bad deeds" by ONLY engaging in "good deeds" or puñña kamma will not be successful. However, it is necessary to engage in puñ̃na kamma to gain that insight.
- Instead, (while engaging in puñña kamma with puñ̃̃ābhisañkhāra) one MUST try to understand the three characteristics of this world of 31 realms. That is the ONLY WAY to avoid severe suffering in the future.
- Understanding Tilakkhaṇa leads to the cultivation of "kusala-mūla Pațicca Samuppāda," which leads to various stages of Nibbāna. See, "Kusala-Mūla Paticca Samuppāda."

## Difference Between Puñña Kamma and Kusala Kamma

12. It is essential to understand the difference between puñ̃̃a kamma and kusala kamma. Puñ̃a kammā BECOME kusala kammā IF one comprehends Tilakkhana!.

- Puññābhisañkhāra lead to puñña kamma.
- The same puñña kamma done with the comprehension of Tilakkhaṇa are NOT puññābhisañkhāra. They can be called "kusala-mūla sañkhāra."
- That is why the Kusala-Mūla Paticca Samuppāda process (that leads to Nibbāna) starts with "kusalamūla paccayā sañkhāra."
- For details, see, "Kilesa - Relationship to Akusala, Kusala, and Puñña Kamma" and "Kusala-Mūla Paticca Samuppāda."
- For those unfamiliar with these terms, it may take a repeated reading of relevant posts to understand these concepts. Things will fall into place once one can get a foothold (like in a jigsaw puzzle).

## Reference

## Kamma and Sañkhāra, Cetanā and Sañcetanā

## December 14, 2021; August 27, 2022

Kamma and sañkhāra are related. Kāya, vacī, and mano sañkhāra with cetanā lead to kāya, vacī, and mano kamma. However, only kāya, vacī, and mano abhisañkhāra with sañcetanā lead to akusala kamma and are responsible for the rebirth process.

## Introduction

1. Most people use the word "kamma" to indicate "bad deeds" or even "results of past bad deeds." When something bad happens, they say, "Oh, this is my kamma."

- But kamma is a generic word that means "action." That could mean moving the body, speaking, or thinking ( $k \bar{a} y a, v a c \bar{l}$, and mano kamma.) Kamma can be of mainly three types:
(i) Neutral kamma: like using a knife to cut vegetables or asking directions from someone.
(ii) Akusala (or pāpa) kamma: e.g., stabbing someone with a knife or telling a lie to make money.
(iii) Kusala (or puñña) kamma: e.g., using a knife to cut loose a trapped animal or teaching something useful to others.
- All three types are done with a certain intention. We all need to engage in various types of kamma of the first type in our daily lives. The "intention" in the second type is bad or immoral, while that in the third type is good or moral.
- The first type of kamma yields results that do not have "kammic consequences." The second/third type can bring "bad/good results" at that time or in the future.
- The "intention" is connected to the cetana cetasika (mental factor) per a verse in the Nibbhedika Sutta (AN 6.63). Let us discuss that next.

## Cetanā Is In Every Citta!

2. "Nibbedhika Sutta (AN 6.63)" is a vital sutta that explains many keywords in Buddha Dhamma. Toward the end, it defines kamma: "Cetana $\bar{a}$, I tell you, is kamma. With intention, one does kamma by way of body, speech, and mind." See Ref. 1.

- Now, cetanā is a "universal cetasika" meaning it is in every citta. This is a CRITICAL observation. We don't do good or bad kamma at all times. Thus, kamma means any bodily activity, speech, or even thoughts. For example, we saw that even breathing happens with cittā.
- Therefore, even any action, like lifting an arm is a kamma. One may also speak and think about getting some task done that would NOT have morally good or bad intentions. Those would NOT belong to akusala, pāpa, puñña, or kusala kamma. They are just kamma. Such "neutral kamma" would have just cetanā cetasika in cittās without sobhana (good) or asobhana (bad) cetasika.

3. Any action, speech, or thought would have kammically-neutral kāya, vacī, and mano sañkhāra associated with them.

- If one does that task with lobha, dosa, moha, then it is an akusala (or pāpa) kamma. Another subtle way to say that is any action done with chandarāga (with a mindset that says worldly pleasures are worthwhile pursuing) has at least a trace of akusala nature.
- A particular activity involving generosity, compassion, etc. is a puñña kamma. A kusala kamma is a "better version" of a puñ̃̃a kamma done with an understanding of Tilakkhaṇa. In some places in the Tipiṭaka, puñ̃na kamma done without an understanding of Tilakkhana are referred to as, "kāmāvacara kusala kamma." That means those are "good kamma" done with the expectation of "better rebirths/good vipāka" in the higher realms of the kāma loka (human and Deva realms.)
- The same "good deeds (kamma)" are done by someone with the comprehension of the Four Noble Truths/Pațicca Samuppāda/Tilakkhana, they would be pure kusala kamma. Such kusala kammā are done WITHOUT expectations for worldly benefits, but ONLY with the expectation of attaining Nibbāna and, thus, stopping the suffering-filled rebirth process.

## What Is Cetanā?

4. Cetana $\bar{a}$ is a cetasika that is in every citta. There are seven such "universal cetasika" that is in every citta: Phassa (contact with an (ārammana); vedanā (feeling); saññā (perception); cetanā (putting together all suitable mental factors); Ekaggatā (One-pointedness); jīvitindriya (life faculty); manasikāra (memory.) [jīvitindriya : [(jīvita + indriya), nt.] the faculty of life; vitality.]

- A citta vīthi arises when a new ārammaṇa comes in. That contact with the new ārammaṇa is phassa. The mind "feels" that (vedanā) and recognizes it (sañ̃̄ $\bar{a})$ with the help of the manasikāra cetasika that can recall similar past events. Ekaggatā helps keep the mind focused on that ārammaṇa.
- That is a very complex process that happens within a billionth of a second (lifetime of a citta.) See, "Amazingly Fast Time Evolution of a Thought (Citta)." It is critical to read that post to understand this basic process.
- Now we can begin to see the role of the cetanā cetasika. If the ārammana is mind-pleasing, lobha (greed) can arise in mind. When the cetanā cetasika "puts together the citta" it becomes a "lobha citta." On the other hand, seeing an enemy would generate dosa (anger), and the corresponding citta would be angry because cetana would incorporate the dosa cetasika into the citt $\bar{a}$.
- Going back to the types of kamma in \#1 above, now we can make sense of the role of the cetana cetasika. The "intention" comes from the types of cetasika that arise in mind based on $\bar{a} r a m m a n a$. Since it is the cetanā cetasika that "constructs" a citta, such added cetasika will dictate the "intention." This is a CRITICAL point to understand. I highly recommend reading the abovesuggested post and the links in that post.

## Kammic Energy Arises In the Mind

5. As we know, the three types of kamma are k $\bar{a} y a, v a c \bar{l}$, and mano kamma. Therefore, all three types of kamma accumulation occur in mind, with cetanā incorporating other mental factors (cetasika) such as lobha, dasa, alobha, and adosa.

- Note that cetan $\bar{a}$ is a cetasika in every citta, together with vedana $a$ and saññ $\bar{a}$; see Ref. 2. The cetanā cetasika "incorporates other relevant cetasika such as lobha, dosa, alobha, amoha" to a citta. The "intention" comes from the types of cetasika included. For example, stealing happens with a "greedy intention in mind," where cetanā has included the lobha cetasika to that citta. Thus, cetana $\bar{a}$ is like a supervisor/administrator who adds other relevant cetasika (good or bad) based on the "state of mind." It is good to read the post referred to in Ref. 2.

6. Since cetana cetasika is ANY citta, it is in ALL cittas of an Arahant or a Buddha. They also do things, speak, and think with specific "intentions."

- But an Arahant would not do anything, speak, or think about hurting or deceiving others. That happens only when "asobhana cetasika" like lobha and dosa are incorporated into cittā by the cetana $\bar{a}$ cetasika. That gives rise to "sañcetanā." Thus, Arahants do not generate sañcetana
- Even when "sobhana cetasika" like alobha and adosa are incorporated into cittā by the cetanā cetasika they are still "sañcetan $\vec{a}$ " IF one has not comprehended the dangers of the rebirth process, i.e., since one still has a (weaker level) of avijj $\bar{a}$. That is why one needs to comprehend the Four Noble Truths/Paticca Samuppāda/Tilakkhana. See, "Kilesa - Relationship to Akusala, Kusala, and Puñ̃̃a Kamma."

## How Cetanā Become Sañcetanā

7. The word "sañcetanā" comes from "san" + "cetanā." Thus, it means cetanā cetasika has incorporated "san" that can contribute to generating kammic energy for future rebirths. I have discussed the importance of "san" in many posts. See "San - A Critical Pāli Root."

- Therefore, sañkhāra are associated with cetanā and abhisañkhāra (those that contribute to the rebirth process) involve sañcetanā.
- A Buddha or an Arahant would not generate abhisañkhāra with sañcetanā, but they do generate sañkhāra with cetanā until Parinibbāna.
- This is why the types of sañkhāra that arise due to the ignorance of the Four Noble Truths (i.e., "avijjāa paccayā sañkhārā") are kāya sañkhāra, vacī sañkhāra, and citta sañkhāra that involve kāya $\boldsymbol{s a n ̃ c e t a n a ̄ , ~ v a c i ̄ ~ s a n ̃ c e t a n a ̄ , ~ a n d ~ m a n o ~ ( o r ~ c i t t a ) ~ s a n ̃ c e t a n a ̄ . ~ S e e , ~ R e f . ~} 3$.
- It is imperative to understand these basic concepts.

## References

1. From WebLink: suttacentral: Nibbedhika Sutta (AN 6.63): "Kammaï, bhikkhave, veditabbaì ... pe... kammanirodhagāmin̄̄ paṭipadā veditabbāti, iti kho panetaì vuttamं. Variant: kammanirodhagāmin̄̄ $\rightarrow$ sabbatthapi evamevaKiñcetaì pațicca vuttamं? Cetanāhaì, bhikkhave, kammaì vadāmi. Cetayitvā kammaì karoti-kāyena vācāya manasā."
2. The "WebLink: suttacentral: Sammāditthi Sutta (MN 9)" defines nāma (mentality) as, "Vedanā, sañ̃n̄̄, cetanā, phasso, manasikāro-idaì vuccatāvuso, nāmaì." In Abhidhamma, two more cetasika of $j \bar{\imath} v i t i n d r i y a$ and ekaggatā are listed together with the above five cetasika. Thus, there are seven cetasika in every citta. The point here is that "intention" is not strictly a good translation for cetanā. One's "intention" comes through the types of other good or bad cetasika (such as lobha or alobha) included in the citta. The cetanā cetasika "puts together appropriate cetasika and builds the citta." See "What is a Thought?"
3. "WebLink: suttacentral: Paticcasamuppāda Vibhañga (Vb 6)" states: "Kāya sañcetanā kāya sañkhāro, vacī sañcetanā vacī sañkhāro, mano sañcetanā citta sañkhāro. Ime vuccanti "avijjā paccayā sañkhārā."

## Kusala-Mūla Sañkhāra Are Needed to Attain Nibbāna

December 20, 2021; revised August 31, 2022
"Kusala-mūla sañkhārā" lead to Nibbāna. This category of sañkhāra is generated via wisdom or pañ̃̄̄̄, the opposite of $a v i j j \bar{a}$.

## We Live Life with Sañkhāra

1. As discussed in recent posts, everyone (including Arahants) generates sañkhāra while living in this world.

- Sañkhārā are, in simple terms, THOUGHTS.
- Everything we do involves thoughts. Thoughts can vary: compassionate, loving, greedy, angry, jealous, etc. Then we speak and do things with such thoughts with an intention.
- Mano sañkhāra are thoughts that arise in the mind automatically according to one's gati (character/habits). If the sensory input (an ārammana) is interesting, one starts thinking about it and vaci sañkhārā arise; such vacī sañkhāra also lead to speech. If then one decides to take action, corresponding body movements happen via $k \bar{a} y a$ sañkhārā.
- For example, you automatically start looking at an item in a shop if your gati matches it. Then if you think it is worthwhile to investigate it further, you keep looking at it, debating whether to buy it. If you lean toward buying it, you may decide to pick it up and look at it more carefully. Those involve mano, vaci , and $k \bar{a} y a$ sañkhārā, respectively. Such THOUGHTS related to attachment to worldlly things (i.e., with chandarāga) are Abhisañkhāra. Arahants generate sañkhāra, but not abhisañkhāra.

## Chandarāga Lead to Abhisañkhāra

2. The easiest way to see the difference between sañkhāra and abhisañkhāra is as follows. Sänkhāra with chandarāga are abhisañkhāra.

- The correct "pada nirutti" (etymology) of "rāga" comes from "ra" + "agga" where "ra" means to "travel (in the samisāric journey)" and "agga" is to "give priority." Thus, "rāga" means to "willingly engage (in the samisāric journey.)
-"Chanda" ("ca" + "anda") means "blinded mind." Therefore, one with "chandarāga" has not comprehended the dangers of remaining in the rebirth process. See, "Lobha, Rāga and Kāma chanda, Kāma rāga."
- Chandarāga is of three types: Kāma rāga (attachment to kāma loka), rūpa rāga (attachment to rūpa loka, the 16 rūpāvacara Brahma realms), and arūpa rāga (attachment to the four arupāvacara Brahma realms.)
- Note that kāma rāga, rūpa rāga, and arūpa rāga are three samiyojana (samisāric bonds) that bind one to the rebirth process - Kāma rāga broken at the Anāgāmi stage and the other two bonds broken at the Arahant stage.
- Thus, the removal of chandarāga leads to Nibbāna; see Ref. 1.

## Three Main Types of Sañkhāra

3. The following categorization could be helpful:
i. Our thoughts, speech, and actions involved in daily activities are "kammically neutral." Thus they involve "kammically-neutral sañkhāra."
ii. Abhisañkhāra keeps one on the rebirth process. These are sañkhāra arising due to avijjā, i.e., "avijjā paccayā sañkhāra" in the Akusala-mūla Paṭicca Samuppāda process; see, "Akusala-Mūla Uppatti Paticca Samuppāda.،
iii. Then there are "kusala-mūla sañkhāra" cultivated by those on the Noble Path (Noble Persons above the Sotāpanna Anugāmi stage.) Those sañkhāra arise with the comprehension of the Noble Truths. Those are the "kusala-mūla paccayā sañkhāra" in the Kusala-mūla Paṭicca Samuppāda process; see, "Kusala-Mūla Paticca Samuppāda."'

## We Have to Attain Nibbāna While in This World

4. We cannot do ANYTHING in this world without generating sañkhāra. Thus, working toward Nibbāna also involves sañkhāra.

- To work towards attaining Nibbāna, one needs to engage in physical activities (with kāya sañkhāra), and discuss Dhamma concepts (with vacī sanंkhāra.) Furthermore, when the mind is in an appropriate state (samādhi), certain Dhamma concepts automatically come to mind as mano sañkhāra.
- Those are "kusala-mūla sañkhāra." One would start cultivating kusala-mūla sañkhārra from the Sotāpanna Anugāmi stage. However, until the Arahant stage, some abhisañkhāra can arise via the Akusala-mūla Paṭicca Samuppāda process.
- Once attaining the Arahanthood, abhisañkhāra would not arise at all. However, Arahants would still generate sañkhāra after attaining Nibbāna, until Parinibbāna. See, "Sañkhāra - Should Not be Translated as a Single Word."

## Three Types of $\boldsymbol{A b h i s a n} k h \bar{a} r a$

5. In the post, "Sañkhāra - Should Not be Translated as a Single Word," we discussed three types of abhisañkhāra that can come into play in "avijjā paccayā sañkhāra." See \#8 there.

- First, there are apuññäbhisañkhāra ('bad sañkhāra") involving lobha, dosa, moha (and other related cetasika like jealousy. They are "apuñña abhisañkhāra" that can lead to rebirths in lower realms ( apāyās.) Such apuññ̄ābhisañkhāra will move one away from Nibbāna. That is easy to see.
- However, we saw that two other types of "good sañkhāra" can move one away from Nibbāna. Those "relatively good" abhisañkhāra that can lead to rebirths in the "good realms" at or above the human realm. Those are puññābhisañkhāra and $\bar{a} n e n ̃ j a ̄ b h i s a n ̃ k h a ̄ r a . ~$

6. Puñña kamma with puññābhisañkhāra can bring "good results" in this world, including rebirths at or above the human realm. Giving, moral living, and meditation come under puñña kamma; see, "Puñña Kamma - Dāna, Sīla, Bhāvanā." Puñ̃̃ābhisañkhāra also includes the cultivation of rūpāvacara jhāna (first four $j h a \overline{n a}$ ) that lead to rebirths in the 16 rūpāvacara Brahma realms.

- Āneñjābhisañkhāra comes into play in the cultivation of the four higher (arupāvacara) jhānas that lead to rebirths in the four arupāvacara Brahma realms.

Per \#2 above, all three types of abhisañkhāra arise due to chandarāga.

## How Can Puñ̃̄ābhisañkhāra and Āneñjäbhisaṅkhāra Arise Due to Avijjā?

7. For those who do not have a solid background in the basics, it will be difficult to see why
 MAY act with avijjā until one understands the Four Noble Truths/Paṭicca Samuppāda/Tilakkhaṇa. When one starts comprehending the Noble Truths, one would see why striving for future rebirths even in the higher realms can be dangerous in the long run.

- That is related to the fact that one would understand many deep suttas ONLY after one gets that critical understanding.
- That is also why it is dangerous to translate deep suttas word by word without understanding the deeper concepts in Buddha Dhamma.
- I hope to discuss those in detail soon. Let us now discuss another related issue.

## All Religions Encourage Doing Good Deeds to Achieve Happiness

8. Before the Buddha, people believed in morally good, morally wrong, and neutral deeds. All religions (to some extent) taught that one must abstain from evil deeds and engage in good deeds. In Pāli terms, that means one should avoid apuññābhisañkhāra and need to cultivate puñ̃̄ābhisañkhāra.

- The principle behind that rationale is that doing good will lead to good results, and the opposite will happen to those engaged in evil deeds. That is the "BASE LEVEL of understanding of laws of kamma."

## Difference Between Buddha Dhamma and Major Religions

9. Buddha also advised people to live moral lives and to cultivate puñ̃āāhisañkhāra.

- But there is a DEEPER LEVEL of understanding in Buddha Dhamma. That involves understanding the "real nature" of this world of 31 realms embedded in the Three Characteristics of Nature or Tilakkhana. That understanding goes hand-in-hand with understanding Paṭicca Samuppāda and the First Noble Truth on Suffering. That DEEPER teaching says that suffering will NEVER come to an end until the true nature of this world is understood. That truth says it is foolish (avijja) to assume that one can stop future suffering by just doing "good deeds" and by abstaining from "bad deeds."
- The deeper point (that may be initially hard to understand) is the following: The Buddha saw the real suffering in this world at his Enlightenment. There is a broader world with 31 realms among which rebirths occur. Living beings commit "bad deeds" pursuing worldly pleasures and end up in the four lowest realms (apāyās.) He explained the process (Paticca Samuppāda) by which future rebirths occur.
- Until that process is understood (and thus one can comprehend Tilakkhana,) one would still have that "subtle wrong view" of our world. That is the deeper level micchā ditṭhi removed at the Sotāpanna stage! That is the DEEPER LEVEL of understanding mentioned above.

## Doing Good Deeds Is Not Enough to End Suffering

10. The CRITICAL point is that "good results" from "good deeds" do not last forever. Since we all have done "bad deeds" in past lives, their results can bring "bad births."

- Suppose person X avoids doing ANY evil deeds in this life. When this life ends within 100 years or so, there will be two possibilities:
(i) Kammic energy for this human bhava has not been exhausted, and thus X will be reborn human again. Suppose X can avoid doing any evil deeds in that life and possibly a few more human lives. Eventually, X has to face option (ii) below.
(ii) X will be reborn in a new existence (bhava,) and it will be determined not only by the "good kamma" that X has accumulated in the current human bhava but also by any "bad kamma" accumulated in previous lives extending to billions of years to the past.
- That danger is evident in some accounts in the Tipitaka. Even after stating the Arahanthood, Ven. Moggallāna was beaten to death. That was due to a trace of kamma vipāka leftover from killing his parents in a previous life. Angulimāla killed almost a thousand people and would have been born in an apāya if he could not attain the Arahanthood. If such highly-regarded Arahants had committed such heinous crimes in the past, how can we say that we have not?

11. That is why Buddha Dhamma needs to be understood in the context of the rebirth process. Of course, it is up to each individual to decide the validity of the rebirth process.

- Not believing in rebirth is one of the ten types of wrong views (micchā dittthi) in Buddha Dhamma. Thus, it would be impossible to make ANY progress with that wrong view. One gets to mundane Sammā Dittthi by getting rid of such wrong views. Only then would one be able to comprehend more profound concepts like Pațicca Samuppāda and Tilakkhaṇa and get to the lokuttara Sammā Ditṭhi and start on the Noble Path.
- It is a good idea to contemplate the above. It is a waste of time to discuss deep suttas without understanding these basic concepts.

## Difference Between Kusala Kamma and Puñ̃̃a Kamma

12. Any "good deed" done with the BASE LEVEL of understanding is a puñ̃̃a kamma. The same deed done with the DEEPER LEVEL of understanding is a kusala kamma. Let us discuss that briefly next.

Let us start with ten types of akusala kamma (dasa akusala.) Three by actions: pānātipātā (killing), adinnādān $\bar{a}$ (taking what is not given), kāmesu micchācār $\bar{a}$ (not just sexual misconduct, but also excessive of sensory pleasures.) Four by speech: musāvāda (Lying), pisuṇā vācā (slandering), pharusā vācā (harsh
speech), and sampappalāp $\bar{a}$ (frivolous talk). Then there are three directly by the mind: Abhijjh $\bar{a}$ (covetousness; greed for other's belongings), Vyāpāda (ill-will, hatred), and Micchā Diṭthi (wrong views.) [See Ten Immoral Actions - Dasa Akusala.]

- Those ten become stronger IF THEY ARE DONE WITH micchā ditṭhi. Such strong versions of akusala kamma are pāpa kamma. They involve apuññäbhisañkhāra that can DIRECTLY lead to rebirths in the apāyās. In Abhidhamma, such "apāyagāmi deeds" are done with "ditṭhi sampayutta citta" or "citta that arise with wrong views." We can also say that they involve apuñnäbhisañkhāra. Yet another way to say that a stronger version of avijjā (or moha) is in play when one has one or more of the ten types of micchā ditthi or wrong views.
- The ten types of wrong views are discussed in "Micchā Ditthi, Gandhabba, and Sotāpanna Stage."
- Again, if one has any of the ten types of micchā ditṭhi, one can act with moha (under high temptations) and do "apāyagāmi pāpa kamma." Note that it DOES NOT mean one with micchā diṭthi will always act with wrong views and will inevitably do pāpa kamma. But the possibility is there.

## Akusala Kamma May Be Done by Anyone Except a Arahant

13. The critical point is that even if one does not have the ten types of miccha ditthi, one could act with avijja and still do p $\bar{a} p a$ kamma and be reborn in an apāya. But the possibility of that is much less than that for someone with the ten types of micchä ditṭhi.

- That is why only those above the Sotāpanna Anugāmi stage are genuinely free from rebirths in the apāyās. In addition to losing the ten types of wrong views, they have understood the following: The possibility of Future suffering in the ap $\bar{a} y \bar{a} s$ will be there as long as one believes that one can achieve permanent happiness within the rebirth process.
- (However, even a Noble Person below the Arahant stage can do "mild akusala kamma" that can lead to rebirths in the human or higher realms.)
- What if one does not believe that there is a rebirth process?
- Then there is no need to read deep suttas about Nibbāna. One WOULD NOT be able to understand them. But even more importantly, why bother reading about Nibbāna if one does not believe in the concept of Nibbāna?
- That is why not believing in the rebirth process is one of the ten wrong views.

## Wasting Time Discussing (Incorrectly Translated) Deep Suttas

14. Many people can save time by carefully reading and understanding what I discussed above. Of course, word-by-word translations of such deep suttas make it worse. The problem is that even the translators do not understand the concepts I discussed above. If they did, they would not do such nonsensical translations.

- I see many people have engaged in the same discussion in discussion forums over many years. They have wasted a lot of valuable time. Of course, some people do not even take these discussions seriously. It is like discussing philosophy for them.
- But if one even starts to understand the key message of the Buddha, one would not waste any time. We have a limited time of fewer than 100 years to use this rare opportunity.

## Summary

15. The "Kusala-Mūla Paticca Samuppāda" process leads to Nibbāna. That process starts with "kusalamūla paccayā sañkhāra."

- On the other hand, the rebirth process continues with "Akusala-Mūla Paticca Samuppāda. "That process starts with, "avijjā paccayā sañkhāra." Good, moral deeds done without comprehending the Noble Truths (i.e., puñña kamma) also fall under this category.
- The same kind of moral deeds done with the comprehension of Four Noble Truths/Paṭicca Samuppāda/Tilakkhaṇa are kusala kamma.
- But many people believe moral, good deeds by anyone belong to the kusala kamma category. That is not correct. Kusala kamma can be done only with the comprehension of the Noble Truths.

## Reference

1. "WebLink: suttacentral: Chandarāga Sutta (SN 22.25)." English translation there: "WebLink: suttacentral: Desire and Lust (SN 22.25)." Note that "chandarāga" is translated as "desire and lust." That is not correct, as I explained in \#2 above.

## Rebirths Take Place According to Abhisañkhāra

December 27, 2021; revised December 28, 2021; June 15, 2022; July 2, 2022
Rebirths take place according to abhisañkhāra cultivated. That mechanism is explained in Akusala-mūla Paticca Samuppāda.

## Three Types of Abhisañkhāra Leading to Rebirth in the 31 Realms

1. As we have discussed, the 31 realms in this world (loka) are distributed among three levels: kāma loka, rūpa loka, and arūpa loka.

- Kāma loka has 11 realms: the four lowest realms (apāyās,) the human realm, and the six Deva realms.
- Rūpa loka consists of the sixteen rūpāvacara Brahma realms.
- Arūpa loka has four arūpāvacara Brahma realms.
- In previous posts, we saw that three types of abhisañkhāra are generated with the Akusala-mūla Paticca Samuppāda process that leads to rebirths among the 31 realms. See, \#8 of "Sañkhāra - Should Not be Translated as a Single Word."

2. Those three types of abhisañkhāra lead to rebirths among the 31 realms as follows:

- The worst type, apuññābhisañkhāra, lead to rebirths in the four lowest realms.
- The next higher level of puñ̃ñābhisañkhāra leads to rebirths in the higher seven realms in the kāma loka and the 16 realms in the $r \bar{u} p a$ loka.
- The best type of āneñjābhisañkhāra lead to rebirths in the highest four realms of this world belonging to the arūpa loka.

## Akusala-Mūla Paṭicca Samuppāda Dictates the Rebirth Process

3. The Akusala-Mūla Patticca Samuppāda describes how rebirths (jāti) take place in this world starting with "avijjā paccayā (abhi)sañkhāra" step.

As we discussed, sañkhāra in the step "avijjā paccayā sañkhāra" refers to "abhisañkhāra." "WebLink: suttacentral: Paticcasamuppāda Vibhanga (Vb 6)" explains the step "avijjā paccayā sañkhāra" as, "Tattha katame avijjā paccayā sañkhārā? Puñ̃ābhisañkhāro, apuñn̄ābhisañkhāro, āneñjābhisañkhāro."

Translated: "What is meant by 'avijjā paccay"̄ sañkhārā̃?' That means puññābhisañkhāra, apuññābhisañkhāra, āneñjābhisañkhāra." For details, see "Sañkhāra - What It Really Means."

- Such abhisañkhāra can be $k \bar{a} y a, v a c \overline{1}$, or mano sañkhāra that we discussed above. But only a part of $k \bar{a} y a, v a c \overline{\text {, }}$, and mano sañkhāra are abhisañkhāra.
- In other words, abhisañkhāra leads to kamma done with lobha, dosa, moha, and mundane versions of alobha, adosa, amoha.
- They are akusala kamma or dasa akusala (three with the body, four with speech, and three with the mind). They can be kāya kamma, vacī kamma, and mano kamma. See, "Ten Immoral Actions (Dasa Akusala)

## Apuñ̄̄̄̄bhisañkhāra - Connection to Lobha, Dosa, Moha

4. Apuñ̃̄ābhisañkhāra ("worst abhisañkhāra") can lead to rebirths in the four lower realms (apāyās.) Such "bad abhisañkhāra" arise due to lobha, dosa, moha (and other related cetasika like jealousy.)

- Such apuññābhisañkhāra ("apuñña abhisañkhāra") lead to apuñña kamma (or "pāpa kamma.") That is the worst form of akusala kamma based on lobha (greed), dosa (hate/anger), moha (worst than avijjā).

5. "WebLink: suttacentral: Paticcasamuppāda Vibhañga (Vb 6)" explains apuññ̄abhisañkhāra as follows: "Tattha katamo apuñn̄ābhisañkhāro? Akusalā cetanā kāmāvacarā-ayaì vuccati "apuññābhisañkhāro" OR "apuññābhisañkhāra are akusala cetanā associated with the kāma loka."

- Akusala cetanā (or intention of doing an akusala kamma) is in "akusala citta" or "defiled thoughts."

## Puñ̃̄ābhisañkhāra and Āneñjābhisañkhāra - Connection to (Mundane) Alobha, Adosa, Amoha

6. Then there are two types of "good sañkhāra" that lead to rebirths in the higher 27 realms. Those "relatively good" abhisañkhāra lead to rebirths in the "good realms" at or above the human realm. Those are puñ̃̃̄abhisañkhāra and āneñjābhisañkhāra. Those two categories arise based on the mundane versions of alobha, adosa, and moha (i.e., without comprehension of the Four Noble Truths/TilakkhanalPaṭicca Samuppāda.)

- Puñña kamma with puññābhisañkhāra can bring "good results" in this world, including rebirths in the human realm and the six Deva realms. Giving, moral living, and meditation come under puñña kamma; see, "Puñ̃ña Kamma - Dāna, Sila, Bhāvanā." Puññäbhisan̉khāra also includes the cultivation of $r \bar{u} p \bar{v} v a c a r a ~ j h a ̄ n a ~ t h a t ~ l e a d ~ t o ~ r e b i r t h s ~ i n ~ t h e ~ 16 ~ r u ̄ p a ̄ v a c a r a ~ B r a h m a ~ r e a l m s . ~$
- Āneñjäbhisañkhāra comes into play in the cultivation of the four arūpāvacara samāpatti that lead to rebirths in the four arupāvacara Brahma realms: ākāsānañcāyatana, viññānañcāyatana, ākiñcaññāyatana, and nevasaññānāsaññ̄̄yatana.
- Akusala kamma is any kamma that keeps one in the rebirth process. Thus, puñña kamma done without comprehension of the Four Noble Truths/Tilakkhaṇa/Paṭicca Samuppāda belong to akusala kamma. That is why puññābhisañkhāra and āneñjābhisañkhāra also arise due to avijjā.

## Three Levels of Abhisañkhāra

7. Therefore, now we have an easy way to remember what types of abhisañkhāra lead to rebirths among the 31 realms in this world. To summarize:

- Worst form of akusala kamma are apuñña kamma or pāpa kamma. They are done with apuñña abhisañkhāra (apuñ̃̃äbhisañkhāra) and lead to the rebirths in the lowest four realms. Those four realms are collectively called apāy $\bar{a} s$ and deliver the worst forms of suffering.
- The next (higher) level of abhisañkhāra are puñña abhisañkhāra (puñ̃ābhisañkhāra.) Puñña kamma (like giving to charity, taking care of parents/elders/bhikkhus, etc) lead to rebirths in the human
realm and the six Deva realms. There is a higher level of puññābhisainkhāra that leads to rebirths in the 16 rūpāvacara Brahma realms; those involve the cultivation of rūpāvacara jhāna. Thus, puñ̃̄äbhisañkhāra lead to rebirths in 23 realms.
- The highest level of abhisañkhāra is āneñja abhisañkhāra (āneñjäbhisañkhāra.) Those involve the cultivation of the four arupāvacara samāpatti. They, of course, lead to rebirths in the four arupāvacara Brahma realms.

Thus we can now clearly see how the rebirth process takes place among the 31 realms according to the types of abhisañkhāra cultivated via "avijjā paccayā sañkhāra."

## All Types of Abhisañkhāra Arise Due to Avijjā!

8. As explained in \#1 above, all types of abhisañkhāra within the three categories arise due to avijja. What is $a v i j j \bar{a}$ ?

- "WebLink: suttacentral: Paticcasamuppāda Vibhañga (Vb 6)" explains avijija as follows: "Tattha katamā avijjā? Dukkhe aññānaỉ, dukkhasamudaye añ̃̃ānain, dukkhanirodhe aññānaim, dukkhanirodhagāminiyā patipadāya aññānaim-ayaì vuccati "avijjā".

Translated: "What is $a v i j j \bar{a}$ ? It is the ignorance of the Four Nobel Truths or the absence of four types of knowledge ( $\tilde{n} \bar{a} n a)$ : knowledge about the Truths on suffering (Dukkhe añ̃̄ānaì), the origin of suffering (dukkha samudaye añ̃̄ānaì), cessation of suffering (dukkha nirodhe aññānaì), and the way to reach the cessation of suffering (dukkha nirodha gāminiyā patipadāya aññānaí.)

- As we saw above, starting with the "avijjā paccayā sañkhāra" step in Akusala-mūla PS different types of existences (bhava) and corresponding rebirths ( $j \bar{a} t i$ ) arise among the 31 realms.

## Connection to Tilakkhaṇa and Paṭicca Samuppāda

9. The key here is to understand the First Noble Truth. In other words, instead of "dukkhe añnānaim" (not comprehending the Noble Truth on Suffering) get to "dukkhe ñānaim" (knowledge of the Noble Truth on Suffering.)

- What is dukkha (suffering)? It is not the relatively minor sufferings that we experience in this life. Most people are happy with their lives.
- To understand the REAL suffering, one must understand the "wider worldview" seen by the Buddha upon his Enlightenment. He saw that most living beings are trapped in the four lowest realms for very long times. That is the suffering referred to by the Buddha!
- Even though relatively reduced levels of suffering manifest in the higher realms at or above the human realm, ANY given "sentient being" spends most time in the apāyās.
- More details at, "Paticca Samuppāda, Tilakkhana, Four Noble Truths."

## Apuñ̃̄ābhisañkhāra Done With Moha or Avijjā

10. The worst form of apuñ$\tilde{n} \bar{a} b h i s a n k h a ̄ r a$ is done with the worst form avijjā of moha. One may FREQUENTLY act with moha if one still has one or more of the ten types of micchā dittthi.

- With the removal of the ten types of micch $\bar{a}$ ditt th i the tendency to act with moha and generate apuñ̃ābhisañkhāra will be reduced.
- But as long as one has not comprehended the Four Noble Truths/Tilakkhana/Paticca Samuppāda, one may act with avijjā and may generate abhisañkhāra of all three types.
- As we saw above, Pațicca Samuppāda clearly explains how different types of rebirths arise due to $a v i j j \bar{a}$. That is why it is critical to understand that process.

## Cultivation of Anāriya Jhāna Done With Avijjā

11. We can clearly see now that the cultivation of all types of anāriya jhāna is done with avijjā ("anāriya" means "non-Buddhist"). Such anāriya jhāna are cultivated using anāriya meditation techniques such as kasiña mediation (using kasiṇa objects) and breath meditation (which is NOT Ānāpānasati meditation.) The sole purpose of such efforts is to attain such jhānās, and NOT Nibbāna. Cultivation of such jhāna leads to rebirths in the Brahma realms, as we saw above.

- Any effort to seek a rebirth anywhere in the 31 realms is done with avijija because ANY such existence will have a finite lifetime.
- When that existence in such Brahma realm comes to an end, rebirths in lower realms will take place, inevitably ending up in the apāyās. That is why such efforts will NOT lead to the ending of samisāric suffering.
- The only way to stop future suffering is to stop the rebirth process.
- Thus, we can see that another way to describe $a v i j j \bar{a}$ is as follows: As long as one has the mindset that "existence ANYWHERE among the 31 realms is beneficial," one would have avijja. That is why the cultivation of (anāriya) jhāna is done with avijjā!

12. Note that Ariya jhāna is NOT cultivated with the goal of getting a rebirth in a Brahma realm. Ariya $j h a ̄ n \bar{s} s$ are realized automatically by some people with magga phala (if one has cultivated anāriya jhānās in recent past lives.)

- But some Arahants have cultivated Ariya jhāna deliberately and the Buddha had recommended that too. A good example is Ven. Moggallāna. After the cultivation of such jhānās, he developed abhiñ̃ñ̄a powers. Then he frequently visited Deva and Brahma realms to teach Dhamma to those Devas and Brahmas.
- By the way, there is a series of suttas that describe how Ven. Moggallāna attained all jhānās in sequence. That series starts with the "WebLink: suttacentral: Pathamajhānapañhā Sutta (SN 40.1)." Those who have questions about the terms vitakka/vicāra, avitakka/avicāra, and savitakka/savicāra should read that series of suttas.

### 9.6.1.2 Viññāna - Two Critical Meanings

January 3, 2022
Abhisañkhāra Lead to Kamma Viññāna
Two Types of Kamma Viññāna
Summary of Key Concepts About Viññāna and Sañkhāra
Anidassana, Appatigha Rūpa Due to Anidassana Viññān̄a

### 9.6.1.2 Abhisañkhāra Lead to Kamma Viññ̄āna

January 3, 2022; revised August 31, 2022
All viñãāṇa belong to either six types OR two types: vipāka viññāṇa and kamma viññāṇa.

## Two Categories of Viññạ̣̄a

1. Viññāna needs to be understood based on the context. All viññanna belong to either six types OR two types:
i. The six types of viñnāṇa [sensory experience] are: cakkhu viññaṇa, sota viññāna, jivhā viññāna, ghāna viññāna, kāya viññāṇa, and mano viññāna.
ii. The two types of viññāna [resultant and action] are: vipāka viññāna and kamma viññāna.

- Five types of viññāna in the first category are ALWAYS vipāka viññāna. Mano viññāṇa can be either vipāka viñ̃̄āna or kamma viññāna.
- Kamma viññāṇa are ALWAYS mano viññāṇa.

## Sensory Experience (Vipāka Viññāṇa) Versus Abhisañkhāra Generation (Kamma Viññāña)

2. An easy way to remember those categories is as follows.

- The six types of viñnāña arise when sensory inputs come in through the six senses: cakkhu, sota, jivhā, ghāna, kāya, and mano. I have discussed them in "Chachakka Sutta - Six Types of Vipāka Viññ̄̄na." They are just sensory experiences and no kammic energy is produced. These are all vipāka viññāna.
- Kamma viññāna are strictly mano viññāna. These are the viññāna that arise in Paticca Samuppāda. They generate kammic energies that can lead to future vipāka and even "power up" future rebirths. They arise in "Akusala-Mūla Uppatti Paticca Samuppāda," and "Idappaccayatā Paticca Samuppāda ."
- Therefore, the five types of sensory experiences involving the five physical senses (cakkhu viññāna, sota viññāna, jivhā viññāna, ghāna viññāna, kāya viññāna) are ALWAYS vipāka viñ̃̃āṇa.
- On the other hand, mano viñnạ̄̂a can be either vipāka viñ̃̃āña or kamma viññāna.

## All Viññāna Arise in the Mind

3. The six types of viññāna ALL arise in mind. The six types indicate the "sense doors" through which they comes in. For example, a sensory input coming through the eyes is a cakkhu viññāna, one coming through the ears is a sota viñ $\tilde{n} a \underline{n a}, .$. one comes through the mind is a mano viññana (six types.)

- Such six types of viññāna only give rise to an experience. We see something with cakkhu viññāna, hear with sota viññ̄ạna, .. and recall something with mano viññāna (six types.)
- Note: Vipāka viññanna DOES NOT mean that each sensory event has a one-to-one correspondence with a past kamma. When born with a human body due to past kamma, that body will be subjected to all kinds of sensory experiences associated with the human bhava. That is a result (vipāka) of being born human.
- Based on vipāka viññāna, we may start accumulating "new kamma" with kamma viññāna.

## Kamma Viññāṇa - More Than Experience

4. BASED ON vipāka viññāṇa (i.e., sensory input,) we may start thinking, speaking, and doing things thereby accumulating new kamma (mainly leading to vacī and kāya kamma based on vacī and kāya abhisañkhāra, as we have discussed.)

- All those initiate with mano viññāna that arise via "avijjā paccayā abhisañkhāra" followed by "abhisañkhāra paccayā kamma viñ̃n̄ạa" in Paṭicca Samuppāda.
- In the course of that process, the mind generates kammic energy. That is why it will be easy to remember that by calling those "kamma viññāna."

5. The categorization of vipāka and kamma viñãāna is not mentioned explicitly in the Tipiṭaka. But it helps separate the two types.

- Otherwise, it can lead to much confusion even for the translators as I pointed out in the post, "Distortion of Pāli Keywords in Paticca Samuppāda" among many others.
- Kamma viññaña is the type of viññāna that bhikkhu Sāti said would 'travel from bhava to bhava" (presumably from his Vedic background) in the "WebLink: suttacentral: Mahātanhāsañkhava Sutta (MN 38)." But we know that various types of kamma viññāna are cultivated by us, and only one of them can give rise to existence at a time.
- Just like bhikkhu Sāti was confused, present-day translators are also confused (or may be not even aware of) that viññāna CAN BE many types. When they translate viññaña as "consciousness" that would only include vipāka viññāna. That leave out viññāna arising via, "abhisañkhāra paccayā kamma viññāna" in Paṭicca Samuppāda.

## Vipāka Viññą̣̄a Do Not Involve Abhisañkhāra

6. Any mental EVENT (involving vipāka or kamma viññāna) will have associated vedanā, saññ̄a, sañkhāra, and viññāṇa.

- Vedanā "detects" the sensory event and sañ̃̄̄̄ identifies what it is. Sañkhāra means to "prepare" that citta (loosely called "thought"), and that is done with the cetanā cetasika, as we have discussed. See, "Kamma and Sañkhāra, Cetanā and Sañcetanā."
- That is why vedanā, sañ̃̄ $\bar{a}$, and $\operatorname{cetana} \bar{a}$ are three of seven "universal cetasika" that arise in ANY citta. In other words, ANY mental event (involving vipāka or kamma viññạna) will have vedanā, saññā, and sañkhāra. The totality of that experience is viññāna.
- That is also why vedanā, saññā, sañkhāra, and viññ̄ạna are the principle "mental aggregates."
- Now, when the cetanä cetasika "prepares the citta," that is sañkhāra. Thus, we can now see that mano sañkhāra are in EVERY citta because vedanā and saññā are in every citta! Now, if we consciously think (with vacī sañkhāra) about doing something and then do it (with kāya sañkhāra) that could lead to new kamma. See Ref. 1.
- Note: Breathing is via kāya sankhāra (so is raising a hand) but those do not lead to new kamma.

## Mano Sañkhāra Cannot be Abhisañkhāra Leading to Rebirth

7. The critical point here is that mano sañkhāra are in vipāka viñ̃āạa as well as in kamma viññāna, i.e., in any type of viññāna. In fact, they are also in "pure citta" or "pabhassara citta" of an Arahant in Arahant-phala samādhi.

- Mano sañkhāra can NEVER become abhisañkhāra that can lead to rebirth.
- To generate kammic power (in javana citta), we need to generate defiled thoughts CONSCIOUSLY. Those involve vacī and kāya sañkhāra. Kamma viññ̄ạna (in javana citta with kammic energy) arises only in Paticca Samuppāda.
- It is not necessary to fully understand the above in \#7. It is there for completeness.

## First Two Steps in Paṭicca Samuppāda in the Niddesa Version

8. I have pointed out that "avijja paccayā sañkhāra" is the uddesa version (or the brief version) frequently used in the suttas. The niddesa (or a bit more descriptive) version is "avijja paccayā abhisañkhāra."

- In the same way, we can now see that the next step of "sañkhāra paccayā viñ̃̃āna" would be a bit more explanatory (niddesa version) in "abhisañkhāra paccayā kamma viññāna." In fact, we used that
terminology in \#4 above. The three different ways of explaining concepts discussed in, "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."
- As discussed above, our conscious thoughts (with vacī and kāya sañkhāra) in the Paṭicca Samuppāda processes create kammic energy. Some kammic energies may result in kamma vipāka during life, but some can lead to future rebirths.
- On the other hand, no kamma viñ̃ān̄na can arise when an ārammana comes in via one of the six sense faculties. Those are vipāka viññāña (just seeing, hearing, etc.)

## Difference Between Kammic Energy and "Food-Produced" Energy

9. Some people get confused when I say kāya sañkhāra are needed to take bodily actions, i.e., to move body parts. They may be asking, "how can thoughts move body parts?"

- That is a valid question from a mundane perspective. I have seen many materialistic scientists and philosophers ask the same question.
- The key is to understand that the mind only INITIATES the movement of body parts. That body movement is carried by the brain. The energy needed to move body parts comes from the food we eat.
- The brain is made of inert matter and is like a computer. All body movements are coordinated by the brain. The food we eat provides energy not only to move body parts but also, to keep the brain working. Since the brain is the interface between the mind and the body, it consumes a lot of energy by itself, about $25 \%$ of all the energy from the food we eat.
- Consider the following analogy of a soldier (mind/mental body or the gandhabba) driving a fullyenclosed military tank (physical body.) The soldier can see the outside only with the video cameras (eyes.) To drive the tank, to see outside, and fire artillery, the soldier depends on the on-board computer (brain.) The amount of work by the soldier ( $\mathrm{mind} / \mathrm{mental}$ body or the gandhabba) is minuscule compared to that generated by oil powering the vehicle and the guns (food powering body movements.)
- See "Gandhabba in a Human Body - an Analogy" for further details. It is critical to understand that analogy.

## Connection Between Kamma and Sañkhāra

10. In other words, kāya kamma (like offering food) involves moving body parts; one has to prepare and offer the food. Those are bodily actions. Those activities are powered by the food we eat.

- The mind only makes the decision to make the offering. It directs the body to do certain tasks with kāya sañkhāra. Since they involve alobha/adosa/amoha, those are kāya abhisañkhāra.
- This is why cetanā determines kamma. Bodily movements are BASED ON cetanā (sañkhāra.) If we see a man carrying a big knife we don't know what his intention is. It could be cut loose a trapped animal (good deed) or to kill someone (bad deed.)
- The same holds for speech. One intends to utter certain words with vacī sañkhāra. Then the brain gets the words out by moving the tongue and lips with vacī kamma. Now, if one generates such vaci sañkhāra with an angry mindset, they would be apuñ̃̃ābhi vacī sañkhāra (i.e., vacī abhisañkhāra.) Just asking someone for directions would involve just vacī sañkhāra (no abhisañkhāra.)

## Only Kamma Viññāṇa via Abhisañkhāra Generate Kammic Energy

11. As we have discussed, a vipāka viññāna can only "bring in a sensory input" and we just experience it. Our minds do not generate any abhisañkhāra or kammic energy.

- But, based on such a sensory input, we may get attached to it and start generating abhisañkhāra and accumulate kamma (or more correctly kammic energies). Such kammic
energies are unimaginably TINY compared to the energy required to move a hand, for example.
- Then such kammic energies can bring in future kamma vipāka, some of which can lead to rebirth.

## Mental Aspects Are with the Mental Body (Gandhabba)

12. The fact that the brain is NOT the mind is quite apparent from numerous rebirth accounts and Near-Death-Experience (NDE) studies.

- With more rebirth accounts published worldwide, it is becoming impossible to avoid their validity. The same is true for NDE studies.
- Furthermore, scientists have been trying hard to come up with an explanation of how consciousness can arise in the brain. Despite many studies and proposals, they have not been able to make ANY progress. A popular approach is to say consciousness arises in neurons.
- But they seem to ignore the following basic question: "How can joy or sorrow arise in inert atoms/molecules? Anything in the brain is made of atoms/molecules!
- No one will ever be able to prove that consciousness can arise in the brain. Some philosophers are beginning to see the truth of that; see Ref. 2.

## References

1. In the "WebLink: suttacentral: Cūlavedalla Sutta (MN 44)":
"Tayome, āvuso visākha, sañkhārā-kāya sañkhāro, vacī sañkhāro, citta sañkhāro"ti.
"Katamo panāyye, kāya sañkhāro, katamo vacī sañkhāro, katamo citta sañkhāro"ti?
"Assāsapassāsā kho, $\bar{a} v u s o ~ v i s a ̄ k h a, ~ k a ̄ y a ~ s a n ̃ k h a ̄ r o, ~ v i t a k k a ~ v i c a ̄ r a ̄ ~ v a c i ̄ ~ s a n ̉ k h a ̄ r o, ~ s a n ̃ n ̃ a ̄ ~ c a ~ v e d a n a ̄ ~$ ca citta sañkhāro"ti.

The last verse says: 'breathing involves kāya sañkhāra, vitakka/vicāra are vacī sañkhāra, and vedanā/saññ̄ā are mano sañkhāra."

A recent book by Nagel shows that he leans further toward the possibility that mind is primary: "Mind \& Cosmos: Why the Materialist Neo-Darwinian Conception of Nature Is Almost Certainly False" by Thomas Nagel (Oxford University Press, 2012).

### 9.6.1.2 Two Types of Kamma Viññāṇa

January 9, 2022
There are two types of kamma viñ̃āṇa. One brings vipāka at that time [Idappaccayatā Paticca Samuppāda] and the other in the future [Akusala-Mūla Uppatti Paticca Samuppāda].

## Overview of Types of Viñ̃āāna

1. As we have discussed in recent posts, kamma viñnān̄a is different from vipāka viññāna. Kammic energy created via kamma viññāna can bring vipāka in this life or future lives. Vipāka viññ̄āna are just sensory experiences (consciousness.)

- Kamma viññāna are strictly mano viññāna. These are the viññāna that arise in Paṭicca Samuppāda. They generate kammic energies that can lead to vipāka and even "power up" future rebirths.
- "Idappaccayatā Paticca Samuppāda "describes how kamma viññāṇa can bring vipāka in the present life itself at that time. "Ida" (or "idha") means "here" or "at that time." "Ida paccaya"" (based on the conditions at this time) rhymes as "idappaccayā." [idappaccayat $\bar{a}$ : [f.] having its foundation based on the conditions at this time, i.e., causally connected.]
- On the other hand, arising of future rebirths via kamma viññanạa is described in "Akusala-Mūla Uppatti Paticca Samuppāda."
- In Abhdhammic language, those two types of kammic energies (kammic potential) are nānākkhaṇik $\bar{a}$ (for rebirth) and sahajāt $\bar{a}$ (in the present life); see Ref. 1. No need to go into such details for our discussion.
- To refresh memory on kamma viññāna, see, "Abhisańkhāra Lead to Kamma Viññāna."

## Simple Example 1

2. A strong kamma (say hitting a human) originates with abhisañkhāra arising in mind (say in person X.) Of course, X does such a deed without knowing (or forgetting about) the harmful consequences. Due to either reason, avijjā had arisen in mind leading to "avijjā paccayā abhisañkhāra" and "abhisañkhāra paccayā kamma viññāna." Kamma viñ̃āṇa is the mindset to achieve a particular goal (in this case, to hurt the other person.)

- He may hurt that person based on that intention (by becoming a violent person.)
- "Idappaccayatā Paticca Samuppāda" describes that process. However, his INTENTION to hurt the other person will generate kammic power that will bring back vipāka to HIMSELF in the future, well into future lives. "Akusala-Mūla Uppatti Paticca Samuppāda" explains that second process.
- Let us see how X is "born" a violent person in this life via "Idappaccayatā Paticca Samuppāda."

## Idappaccayatā Paṭicca Samuppāda Example

3. First, hatefil thoughts (with dosa) arise in X's mind, and those are vacī abhisañkhāra. That gives rise to a defiled mindset (kamma viññāna). As one keeps generating vacī abhisañkhāra, anger grows and that kamma viññāṇa will become strong.

- Those defiled thoughts create javana power (kammic energy) in javana citta. This energy accumulates in the "kamma bhava" (we will discuss that in the future.) Part of that energy leads to vipāka in the present life by turning him into a violent person at that moment. The rest of that kammic energy can bring $v i p a \overline{k a}$ in the future.
- Now, as X keeps getting angrier, part of that kammic energy brings vipāka by transforming him into a temporary bhava (state of a violent person in this case). His face becomes dark, and he will be visibly agitated. "Idappaccayatā Paticca Samuppāda" describes that process.
- If he gets "worked up," he may get into physical violence with kāya abhisañkhāra, and that could lead to even killing of the other person. Kāya abhisañkhāra are even more potent. The accumulated kammic energies can bring a future rebirth in a lower realm. "Akusala-Mūla Uppatti Paticca Samuppāda" explains that process.

## Birth Within Birth - Innocent Teenager to a Drunkard

4. "Idappaccayatā Paticca Samuppāda "can also explain the transformation of an innocent teenager to a drunkard over a longer time (still within the present life.) Suppose X is a teenager growing up in a nice family. At school, he starts hanging out with bad friends and starts drinking. In the beginning, he is reluctant even to taste the alcohol but cannot resist the "peer pressure."

- Once getting started, he develops a new "gati" (habit) to like drinking and related activities. The more he wants to get drunk, the more he starts thinking about it (i.e., frequently generating vacī abhisañkhāra.) Here he starts building a new kamma bhava that can make him born a "drunkard" again in this life. On the other hand, future vipāka will contribute to a rebirth in a lower realm.
- A kamma viñãāna is the desire to get something done or work toward a specific goal. X is cultivating a "viññāna of a drunkard" or the "mindset of a drunkard." The more X thinks about getting together with friends and drinking, the more "drunkard viññạ̄a" grows and contributes kammic energy to the corresponding kamma bhava.
- That is a CRITICAL point that differentiates kamma viññaña from a vipāka viññāña. It is discussed (as usual in the summary or "uddesa" form) in the Cetanā Sutta (SN 12.38); see below.

## Establishment and Growth of a Kamma Viññāṇa

5. As we have discussed, kamma accumulation does not start until the following two conditions are satisfied:
(i) A sensory input (ārammanaa) comes in, which could be through any of the six senses.
(ii) Mind gets attached to that sensory input. It could be seeing an attractive person, hearing a pleasing sound, etc.

- Note that step (i) involves a vipāka viñ̃ãaña. There is no kamma accumulation. It is just seeing, hearing, etc.
- Step (ii) would not occur unless the mind gets attached to that arammana. Once getting attached, the mind starts generating citta (thoughts) about that sensory input (how to enjoy it more/get possession of it, etc.). Such citta develop (within a billionth of a second) into a kamma viññāna. That kamma viññāna (expectation) can grow with more abhisañkhāra.

## Correct Translation of Cetanā Sutta (SN 12.38)

6. Let us see how the "WebLink: suttacentral: Cetan $\bar{a}$ Sutta (SN 12.38)" explains the above process. The link at Sutta Central provides both the English translation by Bhikkhu Sujato and the Pāli version side-byside.

- The third verse there is: "Ārammaṇe sati patitṭhā viññanassa hoti." That means a kamma viñnāạna establishes upon the mind getting attached to an ārammana. Note that it is a vipāka viññāña that had started the process. "Ārammañe sati" means focusing the mind on that ärammaṇa.
- Next verse, "Tasmim patițthite viññāne virūḷe āyatim punabbhavābhinibbatti hoti" means "when that kamma viññāna is established and grows, it will produce kammic energy for future renewed existence" (punabbhava means repeated existence.) Of course, bhava would be according to the type of kamma.
- Note that the English translation at Sutta Central says: "When consciousness is established and grows, there is rebirth into a new state of existence in the future." How can consciousness grow? Consciousness means awareness. Most translators translate it the exact wrong way without distinguishing between the initial vipäka viññāna and the subsequent kamma viñnäna. Only vipāka viññāna fall into the category of "consciousness."
- (By the way, I was not trying to pick on Bhikkhu Sujato above. Bhikkhu Bodhi also has a translation (about the same as Bhikkhu Sujato), but it does not have the Pāli text side-by-side.

## Simple Example 2

7. Let us take a simple example to illustrate the sequence of events when person X sees his arch-enemy Y .

- "Seeing Y " is a vipāka viññāṇa and Y becomes the ārammaṇa (thought object) for X .
- X starts generating angry thoughts (vacī abhisañkhāra) about Y, resulting in the establishment of a kamma viññāna (an expectation.) Because of that mindset, X says something terrible to Y ; that is an escalation of vacī abhisañkhāra, and the kamma viññanna grows. X has now started accumulating kammic energy that brings him to an "angry bhava." His face becomes dark, and he is visibly getting upset.
- If Y also says something hostile in return, the situation can escalate. X may become angrier, generating more vacī abhisañkhāra, and the kamma viññāna grows to the extent that X may decide to attack Y physically. Such an attack involves kāya abhisañkhāra and even more kammic energy generated. Of course, part of that energy would also bring vipāka in the future.

## Summary

8. Understanding Buddha Dhamma means understanding Pațicca Samuppāda. That requires knowing what is meant by each term in Paticca Samuppāda. Most translators don't seem to understand what is meant by basic terms like sañkhāra and viññāna, let alone more complex nāmarūpa, bhava, etc.

- In previous posts, I pointed out that "sañkhāra" is a generic term, and in some instances, it is necessary to use abhisañkhāra even though the "uddesa version" just says "sañkhāra."
- In the same way, viññāna is a generic term. One needs to know the difference between vipāka viñ̃̄āṇa (consciousness or awareness) and the kamma viñnäna (mindset to achieve a goal/expectation.)
- Translating deep suttas word by word without understanding those differences has hindered many, particularly those in the Western world who rely on English translations. Also, see, "Distortion of Pāli Keywords in Paticca Samuppāda."
- Up to now, such incorrect translations could have been justified because correct interpretations had not been available. But I, and a few others, have been trying to point these issues over the past few years. We are not saying to accept our explanations blindly. But if our descriptions are not correct, those errors need to be pointed out. Such comments can be made at the discussion forum.

1. In WebLink: suttacentral: Patthānapakarana, toward the end of the page under the sub-heading "Kamma":

Ajjhattārammaṇo dhammo ajjhattārammanassa dhammassa kammapaccayena paccayo- sahajātā, nānākkhaṇikā. Sahajātā-ajjhattārammaṇā cetanā sampayuttakānaì khandhānaì
 vipākānaì ajjhattārammaṇānaì khandhānaì kammapaccayena paccayo.

### 9.6.1.2 Summary of Key Concepts About Viññāṇa and Sañkhāra

January 16, 2022; revised August 31, 2022
We have discussed several key concepts about viñ̃̄āna and sañkhāra in the recent series of posts. It could be beneficial to summarize them in one post.

Difference Between a Vipāka Viññạna and a Kamma Viñ̃̄āṇa

1. It is CRITICAL to distinguish between recognizing a sensory input and thinking about it to achieve a particular goal.

- The first is just a sensory experience called consciousness or awareness. One becomes aware of sight, sound, taste, smell, touch, i.e., "eye-consciousness through body-consciousness (touch sensation.)."
- The second is MORE THAN consciousness/awareness. The mind wants to accomplish something based on that sensory input. The second type occurs ONLY IF the mind is attracted/attached to that sensory experience.
- It is essential to see the connection between the two cases and the time sequence. A kamma viñ̃āṇa may arise only after a vipāka viññāṇa.

## Vipāka Viññ̄āna - Initial Sensory Experience

2. The first type is a vipāka vi $\tilde{n} \tilde{n} \bar{a} n a$. Any person living in the human world (whether it is an average human or a Buddha) will experience this type of viññ̄ạna.

- For example, imagine our Buddha Gotama living in Jetavanārāmaya (a luxurious residence offered to the Buddha and the bhikkhus by the wealthy merchant Anāthapinḍika.) He would see and hear the same things as anyone else there. If someone offered a good meal, they all would agree that it was tasty.

## Kamma Viññāṇa - Expectation (Goal) Based on the Vipāka Viññāṇa

3. The second type, kamma viñnāṇa, will take place ONLY IF one got attracted/attached to the sensory experience of the first type, a vipāka viñ̃̄̄̄ṇa.

- The mind MUST first be made aware of "something attractive thing," whether it is a sight, sound, taste, smell, or a touch to get attached. Of course, it could also be a MEMORY of a previous sensory experience. For example, the memory of a tasty food eaten last week may come to the mind as a vipāka viñ̃ān̄a too. That is why a vipāka viññāna can be cakkhu, sota, jivhā, ghāna, kāya, or mano viññāna.
- However, we don't get attached to all we see, hear, etc. We get enticed by only a fraction of such sensory inputs (ārammana.) But if we do attach, we start building expectations along with that. We do that by thinking about acting on that arammana (how to enjoy it more if it is enjoyable.) All that happens at the mind-door (manodvāra), and thus kamma viññāna is always a mano viññana.

## Sañkhāra and Abhisañkhāra - Critical Difference

4. Thus, the cultivation of a kamma viññ̄ạna starts with vitakka/vicāra. In simple terms, vitakka is to "focus on that ārammaṇa" and vicāra is to "think along that ārammaṇa." For example, if we see an appealing person, we may think about approaching that person.

- Thus the initiation/cultivation of a kamma viññāna starts with "vitakka/vicāra." Such vitakka/vicāra are vacī sañkhāra. If such thoughts involve lobha, dosa, and moha, they become vacī abhisaǹkhāra.
- If that kamma viññāna becomes more assertive, we may take physical action to fulfill that kamma viññāna (expectation.) In the above example, we may walk to that person and start talking to the person. Such activities involve kāya sañkhāra. Again, if such thoughts also involve lobha, dosa, and moha, they become kāya abhisañkhāra.
- Thus, we can see that abhisañkhāra are associated only with kamma viññāna and NOT with vipāka viñ̃̄āna.

## It Is Necessary to Understand Those Key Concepts

5. I hope the above summary on sañkhāra/abhisañkhāra and their relationships to vipāka viñ $\tilde{n}$ ănalkamma viññanna is clear. If you go back and read the previous posts, that may solidify your understanding.

- It is essential to understand those critical concepts before being able to comprehend Patticca Samuppāda or Tilakkhaṇa or the Four Noble Truths.
- The English words "consciousness" or "thoughts" do not convey the meaning of viññāna, especially kamma viññāna. Learning about the relationship between citta and viññāna could be helpful

## A Citta Evolves to a Viññāṇa

6. Why did the Buddha analyze our world with five entities (five aggregates) of rūpa, vedan $\bar{a}$, sañ $\tilde{n} \bar{a}$, saṅkhāra, viññāṇa?

- The world offers sensory inputs with six types of rūpa: rūpa rūpa (sights), sadda rūpa (sounds), rasa rūpa (tastes), gandha rūpa (smells), photthabba rūpa (touches), and dhamma rūpa or dhammā (kammically-produced fine $r \bar{u} p a$ ).
- That last category of dhammā includes rūpa below the suddhatṭhaka stage. A suddhaṭthaka is the smallest $r \bar{u} p a$ belonging to the other five types of rūpa. In other words, modern science can detect the first five types of rūpa with their instruments but will never detect dhammā.
- For details, see "Chachakka Sutta - Six Types of Vipāka Viññāna" and "What are Rūpa? - Dhammā are Rūpa too!"
- The suttas refer to dhammā as "anidassana appatigha rūpa" (which cannot be seen or detected with the physical instruments). I will discuss how dhamma $\overline{a r e}$ related to kamma viñ $\bar{n} \bar{n} n a$ in the next post. An intro to the next post is in \#10 below.

7. When any of those six types of rūpa makes contact with the mental body (gandhabba), then vedanā, sañ̃̄̄̄, sañkhāra, viñ̃̃āna arise as vipāka viññāna. That is how we experience such a rūpa. The brain plays a crucial role in the above process; see, "Brain - Interface between Mind and Body."

- All four of those mental aggregates rise in citta. A citta arises with a certain number of cetasika (mental factors.) At least seven cetasika arise with a citta, and vedanā and sañ $\tilde{a} \bar{a}$ are two of those "universal cetasika."
- The inclusion of more cetasika in a citta comes under "sañkhāra." If any sobhana (good or "mundane alobha, adosa, amoha") or asobhana (bad or lobha, dosa, moha) cetasika arise, then those become abhisañkhāra. That is a simple way to remember the difference between sañkhāra and abhisañkhāra.
- The overall sensory experience is viññāna. Any citta starts with the seven universal cetasika and will incorporate more cetasika (sañkhāra generation) and ends up as viñ̃āāna. That happens very fast (within a billionth of a second), and only a Buddha can "see" such a rapid process.
- That is a bit of very basic Abhidhamma that everyone needs to know. It is not necessary to learn the details at the beginning.

8. I hope now you can see the inter-relationships among the five aggregates.

- The six types of rūpa bring sensory experiences via vipāka viññāna.
- The four aggregates of vedanā, sañ̃̃̄, sañkhāra, ans viññāna help describe such a sensory experience.
- If we attach to such sensory experiences, the mind will generate kammic energies (dhammā) via kamma viññāna.
- Such dhamm $\bar{a}$ can lead to future rebirths of a sentient being AND more of the six types of $r \bar{u} p a$. That is all explained by Paticca Samuppāda.

## Paṭicca Samuppāda Can Be Deep and Explain Everything in This World

9. That is also the critical meaning of the first two verses in Dhammapada: "Manopubbangamā Dhammā.." It is the mind that creates the future lives and the physical world. That is a profound subject, and we are at the beginning of such a discussion.

## - Of course, it is NOT necessary to learn such processes in detail.

- But it is good to realize that Buddha Dhamma (Paṭicca Samuppāda) should not be taken lightly, as the Buddha admonished Ven. Ananda in the "WebLink: suttacentral: Mahānidāna Sutta (DN 15)." The first few verses in the English translation recount that exchange between the Buddha and Ven. Ananda.

## Anidassana Viñ̃nāṇa - What Does That Mean?

10. As we discussed above, it is a kamma viññāna that creates dhamma rūpa or dhamm $\bar{a}$ - the sixth type of $r \bar{u} p a$ in Buddha Dhamma addressed in \#6 above.

- The phrase "viññānaim anidassanaì" has invoked many discussions; see, for example, "WebLink: suttacentral: Viññāna anidassana: the state of boundless consciousness."
- However, it has a simple meaning, "viññāṇa is not visible." Yet, for those who assume viññāṇā can only mean "consciousness" it is intriguing. They think, "of course, consciousness is invisible. So, why did the Buddha say that?" The answer is that a kamma viññāna is much more than just consciousness.
- That phrase "viññānam anidassanaì" appears in the WebLink: suttacentral: Brahmanimantanika Sutta (MN 49) and the WebLink: suttacentral: Kevatta Sutta (DN 11) and refers explicitly to kamma viññāna. The CRITICAL POINT to understand is that a kamma viññāna can generate "anidassana rūpa" (dhammā).
- That discussion in "Anidassana, Appatigha Rūpa Due to Anidassana Viññāna."

## Summary

10. A sensory experience starts with a vipāka viññāna. If the mind gets attached to it, then it may begin to generate abhisañkhāra and thereby generate kammic energies via kamma viññāna. Such kammic powers bring future vipāka, and thus the saimsāric process drags on.

- Any type of viññāna starts as a citta, "the primary unit of cognition" in Buddha Dhamma. A set of cetasika arises with a citta that defines the citta as good, bad, or neutral.
- That citta evolves into a complex entity called viñãāna (by incorporating various cetasika) within a billionth of a second. During that astonishingly short time, the original citta gets contaminated depending on two factors: (i) the sensory input and (ii) the gati (character/habits) of the person. See "Gati (Habits/Character) Determine Births - Samsappanīya Sutta."
- Comprehending Buddha Dhamma requires studying various interconnected aspects. It is like working on a jigsaw puzzle. With time and effort, a clear picture will emerge.

9.6.1.2 Anidassana, Appaṭigha Rūpa Due to Anidassana Viññāṇa

January 23, 2022

The famous verse, "viññannaì anidassanaì anantaì sabbato pabhaì" in Kevatṭa Sutta (DN 11) and Brahmanimantanika Sutta (MN 49) refers to the creation of anidassana appatigha rūpa (dhammā) by kamma viññāna.

## Viññānàm anidassanaím anantain sabbato pabhaím - Correct Translation

1. The phrase, "anidassana viññāna" needs to be analyzed within the longer verse, "viññānaìn anidassanam் anantamं sabbato pabham." "

- That extended verse appears in two suttas, "WebLink: suttacentral: Brahmanimantanika Sutta (MN 49)" and "WebLink: suttacentral: Kevatta Sutta (DN 11)"; see Ref. 1 and Ref. 2.
- That verse means: "Viññ̄ạna is unseen, infinite, and is the origin of all existence (bhava)." Here, it refers specifically to kamma viññ̄āna that arises via "avijjā paccayā sañkhāra," "sañkhāra paccayā viññāna" in Paticca Samuppāda. As we know, that leads to "upādāna paccayā bhava."
- The "WebLink: suttacentral: Dutivabodhi Sutta (Ud 1.2)" and many other suttas confirm that. It states that avijja nirodhā (cessation of avijjā) lead to the cessation of kamma viñnāna that, in turn, lead to the cessation of bhava and future suffering.
- See, "Distortion of Pāli Keywords in Paticca Samuppāda" where I pointed out the problem with translating "viññāna" as just "consciousness." The six types of vipāka viññāna do not cease with the cessation of $a v i j j a \bar{a}$ and will exist until Parinibbāna.
- Now, let us see how most translators have incorrectly translated that verse, "viññānaim anidassanai் anantaim sabbato pabham," in both those suttas.

## Viññānaim anidassanaí anantaim sabbato pabhaím - Incorrect Translations

2. Bhikkhu Sujato translates, "viññānaì anidassanaím anantai் sabbato pabhaï" as "consciousness that is invisible, infinite, entirely given up;" "WebLink: suttacentral: On the Invitation of Brahmā (MN 49)." I have no idea how he translated "pabhaim" as "given up."

- Bhikkhu Bodhi translates the same verse as, "consciousness non-manifesting, boundless, luminous allaround;" see Ref. 3.
- I have seen others translate "pabha" as "luminous," too. That confusion comes from equating "pabha" to "pabh $\vec{a} "$ (with a "long a.") Those two words have very different meanings; see \#3 below.
- All of us agree that the first part means, " viññāṇa is unseen, infinite." As I show below, those are general characteristics of viñnānaa dhātu.

## Pabha Is Different from Pabhā

3. The "WebLink: budsas.org: Concise Pāli-English Dictionary" by Buddhadatta Mahathera defines "pabhava" as "origin, source" and "pabha" (with a long " a ") as "light, radiance."

- Both those are correct. It is also good to know that the word "pabhava," " $p a$ " means again and again, "bha" is related to" bhava." Thus pabhava means "repeated existence" that arises via Paticca Samuppāda, as pointed out in \#1 above.
- The word "pabha" appears in another critical verse, "Ye dhammā hetuppabhavā;" see Ref. 4, Ref. 5, and Ref. 6.
- The meaning of "pabhä" (with a long "a") as "light" is easily seen in the short "WebLink: suttacentral: Pabhā Sutta (AN 4.142)."
- To get a good idea of how bad the translations of \#2 are, we need to look at the background of the two suttas where the verse "Viññānaim anidassanaì anantaì sabbato pabhaì" appear.

## Brahmanimantanika Sutta (MN 49)

4. This sutta describes an account of a "debate" between the Buddha and Baka Brahma, the "leader" of the Mahā Brahma realm. Baka Brahma thought that his existence was eternal and he was superior to the Buddha.

- During that discussion, the Buddha explained to the Brahma that Baka Brahma was not even aware that there are realms above the Maha Brahma realm.
- Then they discussed how attachment to worldly things made of pathavi, āpo, tejo, vāyo would lead to various existences. The Buddha pointed out to Brahma that did not understand the fundamental nature of the four primary elements (pathavi, $\bar{a} p o, t e j o, v \bar{a} y o$ ) present in all the realms.

5. That is when the Buddha made the general statement in Ref. 1 to point out that it is (kamma) viññana that leads to the continuation of the rebirth process among all those realms where the four primary elements are present.

- Translation of the first part of the verse in Ref. 1: "Viñ̃̄̄āna is unseen, infinite, and leads to the rebirth process for all. With viññāna one cannot comprehend the real nature of pathavi, āpo, tejo, vāyo, bhūtā, deva, pajāpati brahma, abhassara brahma, subhakinha brahma, vehapphala brahma, etc. (in any realm) in this world (sabba)".
- The last part of the verse in Ref. 1, "sabbassa sabbattena ananubhūtam" means the following. Without comprehending kamma viññaña (that it is invisible, infinite, and gives rise to existences based on the four primary elements), one would not be able to comprehend the fundamental nature of this world.
- The verse in Ref. 1 is the critical part of this relatively long sutta. Even though the rest of the sutta could be translated word by word, that verse requires a detailed explanation.
- Next, the Kevatṭa Sutta directly states that cessation of (kamma) viññāna leads to the stopping of the rebirth process.

## Kevațta Sutta (DN 11)

6. Kevatta Sutta is even longer. But most of this sutta can also be translated word by word. The Buddha explains to Kevatta that it is not good to try to convert people of other faiths by performing miracles/supernatural deeds like flying through the air. When people understand the deeper aspects of the Buddha Dhamma, they will not give any value to such miracles.

- It is Section 4 of the sutta, where the background story starts leading to the verse in Ref. 2. The following question arose in the mind of a certain bhikkhu: "Where do these four primary elements (pathavi, āpo, tejo, vāyo) cease to exist?"
- Then the Buddha explains to Kevatta how that bhikkhu (who had abhiññā powers) went to higher realms looking for the answer to his question. No one knew the answer, and he returned to ask the Buddha. That account takes most of Section 4.
- The verse of importance to us comes at the end of the sutta in Section 4.1. There, the Buddha explains that the question needs to be re-phrased, as we discuss next.

## Nibbāna Reached with the Cessation of Kamma Viñnāạa

7. The point is that one cannot find any existence where those four primary elements are absent. Rather, one should re-phrase the question as, "How would those four primary elements (pathavi, āpo, tejo,
$v \bar{a} y o$ ) not find a footing anywhere (among the 31 realms)?" That is the same as asking, "How can one stop the rebirth process?"

- The answer is at the end of the verse: "Viññānassa nirodhena etthetaim uparujjhatī'ti." "They (the four primary elements) will cease to exist with the cessation of viññāna." Of course, it refers only to kamma viññāna.
- The four primary elements will cease to exist in Parinibbāna or "full Nibbāna" (realized after the death of an Arahant.) Once the Arahant dies, they would not be reborn in this world made of the four primary elements.

8. As we have discussed, kamma viññāna ceased to exist for the Buddha upon his Enlightenment. But he lived in this world for another 45 years until Parinibbāna and experienced vipāka viññāna during that whole time! Thus, "cessation of the four primary elements" was realized only after the Parinibbāna. See, "Distortion of Pāli Keywords in Paticca Samuppāda."

- I hope now you can see why the English translations in \#2 above of the verse "viññānám anidassanaí anantaim sabbato pabhaï" are wrong. Of course, there are several more wrong translations of the same verse. We will discuss one more next.

## Anidassana Viññạ̣a Is the Second Arupāvacara Jhāna?

9. In the previous post, I mentioned the fact that there have been many discussions at discussion forums on anidassana viññāṇa. See, for example, "WebLink: discourse.suttacentral.net: Viññāna anidassana: the state of boundless consciousness." The author points out to a reference that equates anidassana viññāna to Nibbāna!

- The author of the above essay does not go that far, but says, "I show here that viñnāna anidassana is not nibbāna, but a poetic description of the state of boundless consciousness, the second "formless" meditation state."
- So, the author attempts to prove that anidassana viññaña is a state of higher consciousness, the second arupāvacara jhāna or the "viñ̃n̄ạnañcāyatana."
- It is also interesting to read the comments following that essay. Bhikkhu Sujāto agrees with the author of the essay, saying, "It makes a lot of sense, especially the idea of anidassana being equivalent to arūpa.." Bhikkhu Brahmāli states, "Excellent essay! It is clear, and I think the conclusion you arrive at is solid."

10. That is why I have been emphasizing that most translators of the Tipitaka do not even understand basic concepts like viññāna and sañkhāra. I hope those bhikkhus and other translators will think through the FACTS presented here.

- One can get a good idea of the sad state of Buddha Dhamma in the present day by reading the above essay and the series of comments that follow. It was a depressing experience for me.

## Ananta Viññāṇa - Characteristic of Viññāṇa Dhātu

11. The author of the essay in \#9 above extracted "boundless consciousness" from the next word, anantaim, in verse: "viññānāàm anidassanamं anantaì sabbato pabhaín.." The Pāli word "ananta" does mean "infinite."

- However, viññanna dhātu itself is boundless and that characteristic is NOT limited to the second arūpāvacara jhāna. In the transition from ākāsānañcāyatana (the first arupāvacara jhāna) to the viññānañcāyatana, viñ̃̄̄̄ṇa dhātu separates from the ākāsa dhātu. At that point, the mind separates from any rūpa and perceives ONLY the "ananta (infinite) viñ̃̃āṇa."
- Note that everything in this world is represented by the five aggregates (pañcakkhandha), twelve $\bar{a} y a t a n a$, or six types of dhātu. Those six types of dhātu are pathavi, āpo, tejo, vāyo, ākāsa, viñ̃̄āṇa. Both $\bar{a} k \bar{a} s a$ and viññāna dhätu are infinite.

12. Any type of viññāna is "spread out" without bounds. A mind has access to its own viññana dhātu from anywhere. That is why whether we are on Earth, go to the Moon, or even to another planetary system at the other end of the universe, we will be able to recall memories and to think just like while we are on Earth. On the other hand, the five physical senses detect only localized, dense $r \bar{u} p a$.

- The astronauts who went to the Moon could not see, hear, smell, taste, or touch anything that is not on the Moon. But they could recall their memories as if they were on the Earth. That is because viññanna is infinite.
- Put it another way, dense rūpa (experienced by the five physical senses) are localized, but the nāma category (vedanā, sañ̃̄̄a, sañkhāra, viññāna) is NOT localized. In between such dense (sappatigha) rūpa and anidassana/appatigha nāma, there are anidassana/appatigha rūpa (dhammā.)
- Both nāma and dhammā are not localized and are included in viñnāna dhātu. See, "What are Rūpa? - Dhammā are Rūpa too!"‘

## Sappatigha Rūpa and Appatigha Rūpa (Dhammā)

13. In modern terms, sappaṭigha rūpa can be detected with five physical senses AND scientific instruments. On the other hand, appatigha rūpa (dhammā) and appatigha nāma cannot be detected with scientific instruments and can be detected only by the mind.

- Note that out of the five types of sappatigha rūpa, only rūpa rūpa (visual objects) can be seen (dassana) because sounds (sadda rūpa), tastes (rasa rūpa), odors (gandha rūpa), and touches (phoṭthabba rūpa) cannot be seen (anidassana).

## Anidassana Viññāṇa Means "Viñ̃̃āṇa Cannot Be Seen"

14. The phrase, "viññānāàm anidassanam"" simply means, "viññāṇa is invisible."

- If any viñ̃n̄ana is purely mental belonging to the nāma category (i.e., just consciousness or awareness), then what is the point of saying, "viññāna is invisible"?
- As I have explained in previous posts, it is only the vipāka viñ̃āạa that pertains to just consciousness (strictly within the nāma category.) In contrast, kamma viñnāana is more than consciousness and has energy. Kamma viñ̃̃āna gives rise to subtle rūpa (dhammā,) the sixth type of rūpa in Buddha Dhamma.

15. In this world, there are nāma and rūpa and nāmarūpa (for example, living beings have nāmarūpa represented by the five aggregates). There are different meanings of all three words depending on the context.

- The verse in question, "viññānāàm anidassanamं anantaim sabbato pabhamं.." refers to the unique property of a kamma viññāna. It is "in the middle between the category of pure nāma (vedanā, sañ̃̄̄̄, sañkhāra, vipāka viññāna) and dense (sappaṭigha) rūpa (rūpa rūpa, sadda rūpa, gandha rūpa, rasa rūpa, and photthabba rūpa.)
- In Buddha Dhamma, there is a sixth type of fine (appatigha) rūpa called "dhammā," as we have discussed, for example, in "What are Rūpa? - Dhammā are Rūpa too!" Dhammā are invisible and arise due to kamma viñ $\tilde{n} \bar{n} a$. That is why the need to emphasize that kamma viññana is also invisible.

Kamma Viññāṇa = Paṭisandhi Viññạṇa = Gandhabba (Mental Body)
16. Thus, a kamma viññāna that comes to play in Patticca Samuppāda is MORE THAN consciousness. It CREATES kammic energies (dhammā or kamma bija) to power future rebirths. That kammic energy creates the "seed" of a future human at the cuti-patisandhi moment. That "seed" is the "mental body" or "gandhabba." That gandhabba is so tiny that it is invisible to the naked eye or even the most powerful scientific instruments.

- Note that gandhabba is not a kamma viñ̃āṇa, but the RESULT of a kamma viññāna. At the cutipatisandhi moment (grasping a new existence or bhava, that kammic energy creates the "seed" of the sentient beings in the new existence. In many cases, like a Deva or Brahma, that seed itself is the new living being, i.e., a Deva or a Brahma. We would not be able to see them.
- In the case of humans and animals, that seed (gandhabba) needs to get into a womb to grow into a human with a dense physical body. See "Buddhist Explanations of Conception, Abortion, and Contraception."
- That gandhabba is "anidassana" too, i.e., invisible. Even though some suttas refer to a gandhabba descending to a womb (e.g., WebLink: suttacentral: Mahā Tanhāsankhava Sutta (MN 38), other suttas (e.g., WebLink: suttacentral: Mahā Nidāna Sutta (DN 15)) refer to a "paṭisandhi viññāna" descending to a womb. Thus, both refer to the "seed" of a human, which grows inside a womb taking food from the mother.

## Summary

17. "Anidassana viññāṇ"" in the verse, "viññānaaiं anidassanaì anantamं sabbato pabhaम்" specifically refers to kamma viññāna that creates kammic energy (or dhammā or kamma bija.)

- We may have created numerous such kamma viññāna (or kamma bija) that can "power up" births in various realms in the future. When it is time to grasp a new existence (at the end of the current bhava) one kamma bija comes to the mind as an arrammaṇa.
- If that ārammaṇa is grasped, that creates the mental body/gandhabba/paṭisandhi viñ̃ñaṇa. Thus, pațisandhi viññāna is actually not a viññanna, but the result of a kamma viññāna.
- More details at, "Anidassana Viññāna - What It Really Means."

## References

1. In the "WebLink: suttacentral: Brahmanimantanika Sutta (MN 49)": "Viñnānamín anidassanaì anantai் sabbato pabhaì, taì pathaviyā pathavattena ananubhūtaim, āpassa āpattena ananubhūtaì, tejassa tejattena ananubhūtaì, vāyassa vāyattena ananubhūtaì, bhūtānaì bhūtattena ananubhūtaì, devānai் devattena ananubhūtaì, pajāpatissa pajāpatittena ananubhūtaì, brahmānaì brahmattena ananubhūtaì, ābhassarānaì ābhassarattena ananubhūtaì, subhakinhhānaì subhakiṇhattena ananubhūtaì, vehapphalānai் vehapphalattena ananubhūtaì, abhibhussa abhibhuttena ananubhūtaì, sabbassa sabbattena ananubhūtaì."
2. In the "WebLink: suttacentral: Kevatta Sutta (DN 11)": "Viñnāāai் anidassanaì, anantaim sabbatopabhaì-Ettha āpo ca pathavī, tejo vāyo na gādhati. Ettha dīghañca rassañca,aṇum thūlaì subhāsubhaì; Ettha nāmañca rūpañca,asesai் uparujjhati; Viñnāānassa nirodhena, etthetaì uparujjhatī’ti."
3. Bhikkhu Bodhi, "The Middle Length Discourses of the Buddha" Wisdom Publication (2009), p. 428. A lengthy footnote on p. 1249 (footnote 513) describes how he has agonized over choosing from three different explanations for this verse.
4. "Ye dhammā hetuppabhavā,

Tesaì hētù̀ tathāgato āha;
Tesañca yo nirōdhō,

Evaìv $\bar{a} d \bar{\imath}$ mahāsamaṇō." (See Ref. 5 below)

- Upon hearing this verse uttered by Ven. Assaji, Upatissa (later Ven. Sāriputta) became a Sotāpanna. That is the fundamental concept of Buddha Dhamma and explained in detail in the Patticca Samuppāda.
- The correct translation is the following. "Buddha declared that all dhamm $\bar{a}$ (some of which are kamma $b \bar{y} a$ ) that give rise to everything (including the rebirth process,) are caused by "three san" (lobha, dosa, moha); he has also explained how we can stop those causes from arising (and thus end the rebirth process)."
- That is essentially the translation of the above verse given in many English texts; see, for example, the following from Ref. 6 below: "Of all those things that from a cause arise, Tathagata the cause thereof has told; And how they cease to be, that too he tells, This is the doctrine of the Great Recluse."

5. From "WebLink: suttacentral: Petakopadesa (KN Pe 1)" (around the midway in the link):
"Tattha katamāni cattāri ariyasaccāni? "Ye dhammā hetuppabhavā,Tesamं hetum tathāgato $\bar{a} h a ; T e s a n ̃ c a ~ y o ~ n i r o d h o, ~ E v a i n v a ̄ d \bar{u} ~ m a h a ̄ s a m a n ̣ o " t i . ~ H e t u p p a b h a v a ̄ ~ d h a m m a ̄ ~ d u k k h a \dot{m}$, hetusamudayo, yaì bhagavato vacanaim."

### 9.6.1.3 Memory, Dhammā, and Viññāṇa Dhātu

February 1, 2022
Critical Influence of Wrong Views on Akusala Citta
Near-Death Experiences (NDE): Brain Is Not the Mind
Gandhabba (Mental Body) Separating from Physical Body in Jhāna
Where Are Memories Stored? - Viñ̃̃āna Dhātu

### 9.6.1.3 Critical Influence of Wrong Views on Akusala Citta

## February 1, 2022

Wrong views (micchā diṭthi) play the dominant role in akusala cittā. The same akusala kamma done by someone with wrong views leads to a much stronger kamma vipāka compared to the same kamma done by another person without wrong views.

## Critical Role of Wrong Views

1. Wrong views in Buddha Dhamma refer to wrong views about the nature of our world.

- The Buddha taught that our world operates on a set of natural laws based on the laws of kamma.
- The first level of wrong views is not believing in the laws of kamma. They include not believing that immoral deeds (akusala kamma) will bring dire consequences (bad kamma vipāka) and good kamma will bring good kamma vipäka. Another is not believing in the rebirth process. They fall under the ten types of micchā diṭthi. See, "Micchā Ditthi, Gandhabba, and Sotāpanna Stage."
- Someone who does not have the ten types of micchā dittthi can learn the correct version of Buddha Dhamma and get rid of the second and deeper layer of micchā dittthi. An average human thinks that the world is of nicca, sukha, atta nature, i.e., it is possible to have a future with happiness. However, "future" in Buddha Dhamma is not restricted to this life, but also future lives. Realizing the true anicca, dukkha, anatta nature will remove that deeper layer of wrong views.

## Akusala Kamma Based on Akusala Citta

2. There are ten types of akusala kamma, three by the mind, four by speech, and three by bodily actions. However, akusala kamma by speech and bodily actions also originate in the mind. In other words, 12 types of cittā (loosely called "thoughts") are responsible for all akusala kamma.

- Thus, all ten akusala kamma are done with these 12 akusala citt $\bar{a}$. There are eight greed-rooted, two hatred-rooted, and two delusion-rooted citt $\bar{a}$. Of course, cittt $\bar{a}$ (pronounced "chiththā") are thoughts; any speech or bodily action starts with a thought.
- As we know, all akusala cittā arise in the mind due to lobha (greed), dosa (anger), and moha (delusion). Out of 12 akusala citt $\bar{a}, 8$ arise due to greed, 2 with anger, and 2 with delusion (a worse form of avijjā.)

## Lobha (Greedy) Citta (Also has the moha root)

1. Citta connected with wrong views, accompanied by pleasure, and done with the habit (gati).
2. Citta connected with wrong views, accompanied by pleasure, and done reluctantly (with encouragement by others.)
3. Citta without wrong views, accompanied by pleasure and done with habit.
4. Citta without wrong views, accompanied by pleasure and done reluctantly.
5. Citta connected with wrong views, accompanied by a neutral feeling, and done with habit.
6. Citta connected with wrong views, accompanied by a neutral feeling, and done reluctantly.
7. Citta without wrong views, accompanied by neutral feeling and done with habit.
8. Citta without wrong views, accompanied by neutral feeling and done reluctantly.

Dosa (Angry/Hateful) Citta (Also has the moha root)
9. Citta associated with hate, accompanied by displeasure, done with habit.
10. Citta associated with hate, accompanied by displeasure, done reluctantly.

Moha Citta (only with the moha root, i.e., without greed or anger)
11. Citta accompanied by a neutral feeling and associated with vicikicch $\bar{a}$ (not aware of bad consequences)
12. Citta accompanied by a neutral feeling and associated with $u d d h a c c a$ (excited/scattered mind).

## The Strong Influence of Wrong Views

3. One starts on the Noble Eightfold Path as a Sotāpanna (or Sotāpanna Anugāmi) by getting rid of both layers of wrong views discussed in \#1 above.

- At the Sotāpanna stage, three of the ten samyojana (fetters) are removed, and thereby akusala citt $\bar{a}$ $\# 1,2,5,6$, and 11 stop arising. Furthermore, apāyagāmi strength in the other types of cittā goes away.
- Thus, a Sotāpanna does not need to control the arising of such cittā consciously. Such cittā WILL NOT arise for any reason.
- Therefore, only the remaining seven types of cittā can arise in the mind of a Sotāpanna.

## Effect of Attaining Higher Stages of Nibbāna

4. The remaining akusala citt $\bar{a}$ are progressively removed as one gets to the higher stages of Nibbāna.

- The potency of the two patigha-rooted cittā, and the remaining four greed-based citta, i.e., kāma rāga, are reduced at the Sakadāgāmi stage.
- Those two patigha-rooted cittā (\#9, \#10) stop from arising at the Anāgāmi stage. Also, the potency of the remaining four greed-based citta, i.e., $\boldsymbol{k} \overline{\boldsymbol{a} m a} \boldsymbol{r} \bar{a} g a$, is reduced to just $\boldsymbol{k} \overline{\boldsymbol{a} m a}$ level.
- Finally, the remaining four greed-based citta (\#3, \#4, \#7, \#8) and the uddhacca citta (\#12) stop from arising at the Arahant stage. Thus an Arahant will never experience any akusala cittā.

## Key Observations

5. Generally, the kammic strength of cittā in each category decrease in descending order. Thus citta \#1 is stronger than any other in that category. citta \#9 is stronger than \#10. Citta \#11 is stronger than \#12.

- With higher magga phala, the strengths of ALL cittā are reduced, and some cease arising altogether.
- As we can see, a Sotāpanna mainly removes wrong views. But that will also reduce the strength of other types of citt $\bar{a}$. Thus kāma rāga is reduced too for a Sotāpanna; it is further reduced for a Sakadāgāmi and stops at the Anāgāmi stage.

## Role of Gati/Anusaya and Association with Asappurisa ("Bad People") with Wrong Views

6. As we can see, the strongest lobha citta (\#1) arises due to one's bad gati (character/habits.) Such cittā arise automatically.

- A common question that arises is: "Where are those gati/anusaya or defilements stored?"
- They stay with each person. Each person has their own nāma loka or viññāna dhātu.
- Records of all memories (nāmagotta) remain intact in the nāma loka. We will discuss that in the next post.

7. In some cases, one may engage in evil deeds due to the influence of immoral friends (asappurisa), and cittā of type \#2 can arise. Such citta have weaker strength. However, if one continues to associate with such friends, one may cultivate those bad gati and thus start generating the worse type (\#1) of akusala cittā.

- On the other hand, if one associates "good/Noble friends" (sappurisa) one will get rid of bad gati and cultivate good gati.
- Several suttas point out the importance of choosing one's associates/friends. See, for example, "WebLink: suttacentral: Dutivaasappurisa Sutta (SN 45.26)." More at, "WebLink: suttacentral: 30 results for asappurisa."

## Value of Abhidhamma

8. The above analysis of akusala citta is in basic Abhidhamma.

- Abhidhamma can become very useful in resolving "knotty issues." Once the basics are understood, it is possible to avoid lengthy explanations of certain concepts.
- See p. 32 of Ref. 1 for further details. Also, see "Akusala Citta and Akusala Vipāka Citta" and "Conditions for the Four Stages of Nibbāna."

### 9.6.1.3 Near-Death Experiences (NDE): Brain Is Not the Mind

February 7, 2022; August 31, 2022
Recent studies show that near-death experiences (NDE) are common occurrences while the brain is inactive. That means consciousness does not arise in the brain.

## Materialistic View - A Dangerous Wrong View in Buddha Dhamma

1. In the prevalent materialistic view (especially in the western world,) consciousness arises in the brain. Thus, when a person dies, the brain dies with it, the END. That means a materialist only needs to worry about any suffering we experience in this life (of course. That is a wrong conclusion based on an incorrect view.

The Buddha taught that life continues after the death of this physical body. The following birth is according to the causes and conditions prevailing at the moment of death and is according to Paṭicca Samuppāda. Most future existences/births are in the four lowest realms (apayās), where suffering dominates.

- That "future suffering" associated with rebirth stops only after attaining Nibbāna.
- The materialistic view is a STRONG wrong view (micchā ditṭhi) in Buddha Dhamma and will lead to rebirth in the apayās. How can one even start learning about "how to stop future suffering" if one does not believe in future lives?
- Therefore, evaluating the evidence for and against the rebirth process is a good idea.

2. If the materialist view of consciousness arising in the brain is correct, that assumption leads to the following inferences: (i) ALL rebirth accounts and NDE accounts are fake, and (ii) ALL our memories are stored in the brain.

- Therefore, it is critical to look at the following two related issues.
(i) How strong is the evidence for past lives? How reliable are the NDE accounts where brain activity is confirmed to have ceased?
(ii) Is it possible for a brain to store ALL our memories?

## One White Crow Is Enough to Disprove the Hypothesis, "All Crows Are Black"

3. If even a SINGLE rebirth account or an NDE is valid, then the hypothesis "consciousness arises in the brain" is false. American philosopher William James stated the following that is widely quoted today (Ref. 1):

## In order to disprove the assertion that all crows are black, one white crow is sufficient.

- That is a logical statement. It is unnecessary to prove that all or even many rebirth accounts/NDE accounts are true. Even if just one account is valid, that is enough to conclude that the brain is not the "seat of the mind."
- We have thousands of rebirth/NDE accounts scrutinized by scientists/physicians.

In rebirth accounts: Since a brain can store only the memories from this life, there is no way to recall memories from a previous life. Instead, the brain helps in recalling memories (from viñnäña dhātu) while the gandhabba is inside the body. I will discuss that in future posts.

In NDE accounts: Since the patient's brain activity had ceased (and even pronounced dead for a short time), the subject could not have "seen" and "heard" what was happening with the inactive brain. Furthermore, many saw their physical bodies "from the above (close to the ceiling)."

- Therefore, even if just ONE rebirth/NDE account is accurate, the hypothesis "consciousness arises in the brain" is wrong!

## Recent Developments

4. Several scientific findings within the past 50 years have converged to THREE types of investigations that point to the fact that the brain is not the "seat of consciousness." These findings indicate that while the brain plays a crucial role in consciousness, it is NOT where our thoughts arise, i.e., the brain is not the mind!

ONE: Rebirths accounts by children have been common knowledge in many Asian countries for ages. Most people in those countries were Buddhists who accepted those accounts without question. Only recently, Western countries became interested after two significant developments: Systematic studies conducted by Professor Ian Stevenson (Ref. 2) and easy access to rebirth accounts via the internet. Also, see "Evidence for Rebirth."

TWO: Accounts of Near-Death Experiences (NDE) in the absence of any brain activity. Some NDE accounts are by those declared dead for periods ranging from a few minutes to many minutes. They say that "they were outside of the physical body." They were looking down at their bodies from the ceiling!

THREE: Reports of "extraordinary memory recall" by several people. They can recall the past several years in great detail, and it is unlikely that the brain could have "stored" such minute details as a video recorder.

- We will discuss the second category in this post and the third in the next post.

## What Are Near-Death Experiences (NDE)?

5. Near-death experiences (NDE) occur when someone "almost dies" under a medical condition. For example, it may happen during a coma induced by cardiac arrest or someone badly injured in an accident.

- Of course, only a tiny fraction of such patients experience NDE. However, "..estimates put the number of people who have had one in the past fifty years at more than 25 million worldwide." (Ref. 3, p. 9)
- In such cases, the "mental body" (gandhabba) comes out of the physical body, and the patients can watch their physical bodies from above! Furthermore, they correctly reproduced the conversations among the doctors and nurses while their brains were not functioning.

## Accounts of NDE

6. Physicians have conducted several systematic studies on NDE within the past 20-30 years.

WebLink: youtube: A Cardiologist and Life after Death | An interview with Pim van Lommel
WebLink: youtube: The Joy of Dying: Understanding Near Death Experience

- In the second video, make sure to watch the following segments:
@ 36.30 mins: addressing the objections by skeptics of NDE. In particular, he talks about his patients looking at their bodies from above while the body is "lifeless."
(a) 40 mins: Most compelling evidence for Dr. Long is the account of one of his patients born blind but was able to see for the first time in her life.
(a) $\mathbf{4 1 . 1 5}$ mins: The patient's vision was not restricted to the forward direction. She had $360^{\circ}$ vision, i.e., she could see all around. That is consistent with a gandhabba (mental body) seeing all around, not just the forward direction. See \#8 below.
@43 mins: Based on the accounts of NDE, Dr. Long believes in the afterlife and thinks that the afterlife will be wonderful. I will also discuss this in \#8 below.

## Seeing for the First Time in Life!

7. I am unsure whether the following video is from the woman Dr. Long referred to in the above video. But she was born blind and could see for the first time in her life during an NDE.

WebLink: youtube: Near Death Experience - Blind woman 'sees' while out of body

## Seeing and Hearing Is Better During an NDE

8. The mental body (gandhabba) is trapped inside the physical body. The brain processes the visuals captured by the eyes and passes them to the mental body trapped inside. I have discussed that complex process in "Brain - Interface between Mind and Body."

- Humans are born with dense physical bodies because such a body is required to sense smells, tastes, and body touches, including sex. The mental body (gandhabba) is almost devoid of matter and cannot be seen by an average human. However, once outside the physical body, the capability for seeing and hearing is vastly enhanced. Furthermore, the woman in the above video verified that her "weightless" mental body could go through the ceiling. Thousands of people have experienced those phenomena. See Ref. 4.
- We don't realize the burden of "bearing a dense physical body." But those who experience NDEs were especially experiencing bodily pains. Thus, it is an indescribable relief to be outside that "suffering-filled physical body." That is why some even say they visited heaven!
- But they were not in heaven but in "paraloka" that world of the gandhabbas. They have been in that state only for a brief time, several minutes. If they stay there for long times, they will "miss" the ability to smell, taste, and touch bodily, including sex. That is why even Brahmas are "itching to come back to kāma loka" at the beginning of a "new Earth"; see."Buddhism and Evolution - Aggañña Sutta (DN 27)."
- There are many youtube videos and books on the subject. See Ref. 5 for a sample.

### 9.6.1.3 Gandhabba (Mental Body) Separating from Physical Body in Jhāna

## February 14, 2022

The "mental body" (gandhabba) may automatically come out of the physical body during near-death experiences (NDE.) A meditator (yogi) can willfully do that in the fourth $j h a \bar{a} n a$.

## Materialistic View of the Mind

1. The "brain is the mind" materialistic hypothesis CAN explain the fact that we can recall memories even when we are on the Moon; we carry the brain with us everywhere.
i. Of course, that hypothesis cannot explain memories of past lives, because the brain could not have stored memories from past lives.
ii. It cannot explain NDEs experienced while the brain was inactive.
iii. It also cannot explain memory recall with such precision by some people. We will postpone that discussion to the next post.

- We discussed the above framework in the previous post "Near-Death Experiences (NDE): Brain Is Not the Mind."
- However, all those observations can be explained in Buddha Dhamma.

## Explanation in Buddha Dhamma

2. There are THREE key points:
(i) Consciousness arises in the "mental body" (manomaya kāya or gandhabba), not in the brain. "Human life" is in the "mental body" and not in the "physical body." The physical body is just a shell, energized by the mental body.
(ii) Memory records (nāmagotta) of ALL our past experiences are in viññāna dhātu. We can recall them from anywhere.
(iii) While the mental body (gandhabba) is inside the physical body, memories come to the gandhabba via the brain. While outside the physical body, gandhabba can directly recall memories.

- "Mental body," "manomaya kāya," "gandhabba", "gandhabba kāya" all mean the same. I will use them interchangeably.

3. Our nāma loka (viñ̃̄āṇa dhātu) is VERY DIFFERENT from our rūpa loka. Our manomaya kāya can access the memory records from anywhere. It is as if we are "carrying" all those records with us.

- If the gandhabba is outside the physical body (as in NDE) memories can be directly accessed and are much clear. This is why many NDE subjects say "their life events flashed vividly in their minds."
- If the gandhabba is inside the physical body, then the brain plays a critical role in extracting memory records (nāmagotta) from the viṇ̃̃̄̄̄̄a dhātu. When certain parts of the brain are damaged, the ability to recall memories - even from this life - stops.
- In the case of NDEs, the gandhabba comes out of the physical body accidentally. It happens only on occasion.
- However, there is a way to come out of the physical body with the mental body (gandhabba) willfully. Those who can cultivate (Ariya or anāriya) jhāna can come out with the gandhabba kāya while in the jhāna.

## Just Like a Sword Is Pulled Out of a Scabbard (or Sheath)

4. There are several suttas that describe pulling the gandhabba kāya out of the physical body at any time.

- One must cultivate the fourth jhāna to the highest level to be able to do that. The "WebLink: suttacentral: Sāmaññaphala Sutta (DN 2)" (among a few other suttas) describes the process step-by-step. One starts with abstaining from immoral deeds, abstain from excessive sensual pleasures, and starts cultivating $j h a \overline{n a}$ one by one until getting to the fourth $j h \bar{a} n a$ and then being able to get into that jhāna instantly.
- The English translation gives enough details: Section "4.3.3.2. Mind-Made Body" has the following description (I am slightly revising the translation in the above link):
"When their mind has become immersed in samādhi like this-purified, bright, flawless, rid of defilements, pliable, workable, steady, and imperturbable-they extend it and project it toward the "mental body" (manomayaì kāyaì). From this physical body, they (come out with) that "mental body", complete in all its various faculties, not deficient in any faculty."
- Then three analogies are provided to get an idea of how that manomaya kāya or gandhabba $\boldsymbol{k} \bar{a} y a$ comes out of the physical body: (i) a person was pulling out a reed from its sheath or (ii) drawing a sword out from its scabbard, and (iii) a snake shedding its skin. The following youtube video makes the third process clear.

## WebLink: suttacentral: How a Snake Sheds its Skin

- Of course, you can easily visualize a sword being pulled out of its sheath/scabbard. I am not sure how many people have seen the first analogy.

## "Miracles" Performed With the Gandhabba Kāya

5. Once coming out with the manomaya kāya or gandhabba kāya the yogi can perform many types of "miracles."

- One of those "miracles" of course is to be able to see and hear without physical eyes and ears over long distances. They can see and hear much better than with the physical body. That is what is meant by "From this physical body, they (come out with) that "mental bodly", complete in all its various faculties, not deficient in any faculty" in the quoted verse in \#4 above.
- Another is the ability to go through solid objects like ceilings and walls. Some NDE accounts verify that too.

6. The critical point associated with that last ability is that the manomaya kāya or gandhabba kāya has only a trace of matter. It is a "body that cannot be seen." It can go through walls, mountains, water, etc., as confirmed by some NDE accounts.

- For example, when a heart patient is having an NDE, they are floating above their physical body and no one in the room can see him/her.
- Another special aspect of such a manomaya kāya is the ability to travel anywhere just by thinking. Several NDE accounts say they were able to get to distant places "instantly."
- For details on what other "miracles" are possible with a manomaya kāya, see "Pātihāriya (Supernormal Abilities) of a Buddha - Part I"

## Kammic Energy Creates the Manomaya Kāya

6. The most important thing to remember is that the manomaya kāya (gandhabba) is the essence of a human. It is created by kammic energy at the moment of grasping the human bhava.

- That gandhabba consists of just six suddhatthaka (hadaya vatthu and five pasāda rūpa). But they are very special suddhatthaka WITH LIFE. That is the essence of a living being and it CAN NOT be created anyway other than by kammic energy. That is why Artificial Intelligence (AI) is NEVER going to be a reality.
- Human bhava can last many thousands of years. As we know, these days a physical human body can last only around 100 years or less. The initiation of a physical body is the manomaya kāya being pulled into a suitable womb. It merges with the zygote cell in the womb and grows into a baby by taking in food from the mother. Once born, the baby grows by eating food. Thus, the physical body grows due to food intake, just like a seed growing to a tree.

## Gandhabba/Para Loka Concept Is Critical to Understand!

7. That manomaya kāya or gandhabba will last for thousands of years until that kammic energy is exhausted. During that time, the gandhabba can be born in "this world" (i.e., with a physical body) many times. When in a physical body, it is in "this world" or "ayam loka." In between two consecutive lives with physical bodies, gandhabba is in the "other/nether world" or "para loka" and is invisible to us.

- Note that not believing in "ayamं loka" and "para loka" are two of the ten types of micchā ditt thi that can lead to rebirths in the apāyās. See, "WebLink: suttacentral: Pathamaniravasagga Sutta (AN 10.211)"
- The following is the translation of the relevant verse: "They have the wrong view. Their perspective is distorted: "There's no meaning in giving, sacrifice, or offerings. There's no fruit or result of good and bad deeds. This world is not real. There's no afterlife (para loka). There's no obligation to mother and father. No beings are reborn spontaneously. And there's no ascetic or brahmin who is well attained and practiced, and who describes this world and afterlife (para loka) after realizing it with their own insight. Someone with these ten qualities is cast down to hell. (Pāli verse in Ref. 1.)
- Thus, it is critical to understand that our physical bodies are secondary and the manomaya kāya or gandhabba is primary. Also see, "Micchā Ditthi, Gandhabba, and Sotāpanna Stage."

## Mental Body (Gandhabba) Is Primary!

8. Human existence (bhava) is NOT limited to one life with a physical human body.

- Some children die very early, even within weeks. Are their human existences limited to a few weeks or even just a day?
- Human existence can last thousands of years. Within that time, there is a single human gandhabba. When one physical human body dies (in a few days to 100 or so years) that gandhabba comes out of the dead body. It will be pulled into another womb by kammic energy. While waiting for another womb, that gandhabba is not in "this world" but in "para loka."
- Thus, there can be many births ( $j \bar{a} t i$ ) with a human body within a single human existence (bhava.) That is the "bhava paccayā jāti" step in Paticca Samuppāda.
- At the end of the human bhava, that human gandhabba dies and that is the cuti-patisandhi moment, where a new existence (bhava) is grasped. It is very important to understand this relationship between bhava and $j \bar{a} t i$. See, "Bhava and Jāti- States of Existence and Births Therein."

## Experiences of Yogis Are Superior to those With NDE

9. People with NDE are average humans with many defilements. Thus, even when they come out of the physical body with the gandhabba kāya their abilities are much less. They just experience the unbelievable "relief/lightness" of being outside the heavy and pain-ridden physical body. That is why many of them say they were "in heaven" during the NDE.

- Those yogis who can come out of the physical body can stay in that state for long times. That is an optimum "jhānic sukha" discussed in suttas. But they need to successfully cultivate the fourth jhāna with SUPPRESSION of defilements (anariya yogis) or REMOVAL of defilements (at least at the Anāgāmi stage.)
- Therefore, only those yogis will be able to perform other types of "miracles" discussed in "Pātihāriya (Supernormal Abilities) of a Buddha - Part I."
- One such miracle is to recall past lives.

10. Depending on how well the fourth jhāna is cultivated, they can recall many previous lives. The Buddha was able to look as far back as he wanted, and also could access the nāmagotta of other people. He provided accounts of the lives of many previous Buddhas in the "WebLink: suttacentral: Mahāpadāna Sutta (DN 14)."

- That is another indication that memories from past lives could not be in the brain of the current physical body.
- During the time of the Buddha, people did not know much about the brain. So, the Tipitaka does not have an explanation of memory recall with the aid of the brain. However, we can put together a reasonable explanation; see "Patient H.M. - Different Roles of Brain in Memory."

9.6.1.3 Where Are Memories Stored? - Viññāṇa Dhātu

February 21, 2022
Viññāna dhātu represents the nāma loka. It has no spatial location. That is why we can recall memories from anywhere.

## Nāma Loka (Viñ̃̃āṇa Dhātu) Is Different Compared to Rūpa Loka!

1. A question that comes up frequently is: "Where are our memories stored?" Are they stored in the brain?

- The Buddha could recall memories of previous births trillions of years to the past. See, for example, "WebLink: suttacentral: Mahāpadāna Sutta (DN 14)." Those memories could not possibly have been in his brain of his last birth!
- Below, we will discuss scientific evidence that the brain cannot possibly hold our memories.
- Then we will discuss the Buddha's explanation of "memory storage/recall." The brain plays a crucial role in recalling memories, but the memories are in our nāma loka (viññāṇa dhātu.)
- We are used to thinking in terms of the rūpa loka represented by the other five types of dhātu (pathavi, $\bar{a} p o, t e j o, ~ v \bar{a} y o, \bar{a} k \bar{a} s a)$ where objects remain in specific locations. But viññāna dhātu has no specific location in space. We will discuss some unique properties of our nāma loka or viññāna dhātu.

## Recent Evidence Against "Brain as the Mind" Hypothesis

2. As we discussed in the recent posts, scientific findings within the past 50 years have converged to THREE types of investigations that point to the fact that the brain is not the "seat of consciousness." These findings indicate that while the brain plays a crucial role in consciousness, it is NOT where our thoughts arise, i.e., the brain is not the mind! In addition, our memories are not "stored" in the brain either.

ONE: Rebirths accounts by children have been of common knowledge in many Asian countries for ages. Most people in those countries were Buddhists who accepted those accounts without question. Only recently, Western countries took an interest after two significant developments: Systematic studies conducted by Professor Ian Stevenson (Ref. 1) and the easy access to rebirth accounts via the internet. Also, see "Evidence for Rebirth."

TWO: Accounts of Near-Death Experiences (NDE) in the absence of any brain activity. Some NDE accounts are by those declared dead for periods ranging from a few minutes to many minutes. They say that "they were outside of the physical body." They were looking down at their bodies from the ceiling!

- We discussed the second category in recent posts; see "Near-Death Experiences (NDE): Brain Is Not the Mind" and "Gandhabba (Mental Body) Separating from Physical Body in Jhāna."

THREE: Reports of "extraordinary memory recall" by several people. They can recall the past several years in great detail, and it is unlikely that the brain could have "stored" such minute details as a video recorder.

- Let us discuss briefly the third now.

## Extraordinary Memories - Impossible to be Stored in the Brain!

3. Strong evidence has emerged recently that there is indeed a "complete record" of one's past, just like a videotape. These studies started with Jill Price, who contacted a team of scientists in the early 2000's about her ability to recall anything from 1974 onwards. Here is a video of her interview with Diane Sawyer on an ABC program:

## WebLink: suttacentral: The woman that never forgets - Jill Price First Interview!

- Note that she says she can "see" what happened on any day in the past. It is not like she recalls a "summary" or the gist of what happened. She can recount the whole episode in detail. Even the date and time come out effortlessly. That is amazing!
- @2:50 minutes: Diane Sawyer tests Jill's ability to recall past events. She passes all tests.

4. Since then, several more such individuals have been studied in detail. More details at "Recent Evidence for Unbroken Memory Records (HSAM)," "Autobiographical Memory - Preserved in Nāma Loka," and "Where Are Memories "Stored"? - Connection to Pañcakkhandha."

- It is evident that the brain cannot "store" that much information in such detail. Scientists are unable to explain these amazing accounts.
- The point is that even one such account of "detailed memory recall" (as by Jill Price above) is enough to negate the "memories in the brain" hypothesis. In the words of the American philosopher William James, "If you wish to upset the law that all crows are black. it is enough if you prove one single crow to be white."

5. A mind has access to its own viññāña dhātu from anywhere.

- That is why whether we are on Earth, go to the Moon, or even to another planetary system at the other end of the universe, we will be able to recall memories and to think just like while we are on Earth.
- The brain helps to extract memories from the nāma loka (viñnāạa dhātu) and pass them to hadaya vatthu, the seat of the mind.
- On the other hand, the five physical senses help detect localized, dense rūpa. Again, the brain plays a key role in that process; see, "Brain - Interface between Mind and Body." Of course, it is the mind that experiences all $r \bar{u} \bar{p} \bar{a}$ and memories.

## Our World - Rūpa Loka and Nāma Loka

6. Our world consists of rūpa loka and nāma loka. Rūpa loka, of course, consists of physical rūpa that we can see, hear, smell, taste, or touch. Other humans and animals are included in one's rūpa loka. They are at specific locations in $\bar{a} k \bar{a} s a ~ d h \bar{a} t u$ (space.)

- The nāma loka includes the "mental aspects" or nāma, specifically vedanā, saññ̄a, sañkhāra, and vipāka viñ̃āṇa.
- Kamma viññāna (associated with dhammā ) do not strictly fall into the nāma category but are also in nāma loka (viññāṇa dhātu.)
- We all share the same rūpa loka. However, each person has their own nāma loka, because vedanā, saññā, sañkhāra, viññāna are one's own.
- Unlike rūpa (located in specific places in space), nāma in nāma loka (viññāna dhātu) can be recalled from anywhere in space ( $\bar{a} k \bar{a} s a ~ d h a ̄ t u$.)

7. The astronauts who went to the Moon could not see, hear, smell, taste, or touch anything that was not on the Moon. But they could recall their memories as if they were on the Earth. That is because we can access viññāna dhātu from anywhere.

- Put it another way, dense rūpa (experienced by the five physical senses) are localized, but the nāma category (vedanā, sañña, sañkhāra, viñ̃n̄āna) is NOT localized.
- In addition to those dense $r \bar{u} \bar{a} \bar{a}$ and $n \bar{a} m a$, there is another category that makes the bridge between nāma and rūpa. Those are the dhammā in "manañca paticca dhamme ca uppajjati manoviññānam"" in the "WebLink: suttacentral: Chachakka Sutta (MN 148)"
- In between such dense (sappatigha) rūpa and anidassana/appaṭigha nāma, there are anidassana/appaṭigha rūpa (dhammā.) These dhammā are kammic energies created by kamma viññāna; see, "Dhammā, Kamma, Sañkhāra, Mind - Critical Connections."
- Both nāma and dhammā are not localized and in viññāna dhātu. See, "What are Rūpa? - Dhammā are Rūpa too!"

## The Sixth Type of Rūpa in Buddha Dhamma

8. As discussed below, nāma (or "thoughts with nāma") arise when an external rūpa comes into contact with an internal $r \bar{u} p a$.

- Our thinking process always starts with an ārammaṇa that comes to a "sense door." We discussed the five physical sense doors above.
- The sixth sense door is the mind itself. It can become active upon receiving a "dhamma" as we have discussed previously; see, for example, \#6 in "Summary of Key Concepts About Viñ̃n̄āna and Sañkhāra" and the two posts referred to there.
- Dhammā (with a "long a") are memory records (nāmagotta) with embedded kammic energies. They are kamma bija (kammic energies) that bring vipāka. The contact of such dhammā directly with the hadaya vatthu is described in the "WebLink: suttacentral: Chachakka Sutta (MN 148)" as "manañca paticca dhamme ca uppajjati manoviññānam." See "Chachakka Sutta - Six Types of Vipāka Viññāna."
- Where are such dhammā or kamma bīja "stored"?

## Dhammā Are in Viññāṇa Dhātu (or Nāma Loka)

9. Our world consists of six types of dhātus: pathavi, āpo, tejo, vāyo, ākāsa, viññāṇa.

- We are familiar with the rūpa loka associated with the first five types of dhātus. "Things" made of pathavi, āpo, tejo, vāyo are in specific places in ākāsa dhātu or "space."
- The Buddha described a nāma loka associated with the viññāna dhātu. Nāmagotta and dhammā in the nāma loka do not have spatial locations. They can make contact with the hadaya vatthu from anywhere in space. We discussed that starting with \#11 in the recent post "Summary of Key Concepts About Viññāna and Sañkhāra."
- Let us think about that a bit more because it can provide more insights.

## Difference Between "Dense Rūpa" in $\overline{A k} \bar{a} s a$ Dhātu and "Nāmagotta/Dhammā" in Viññāṇa Dhātu

10. If you want to see the great wall in China, you need to go to China. If you need to see a concert you need to go there. To experience any of the five types of "dense rupa" DIRECTLY with the five corresponding physical senses, we need to "bring them together" at the appropriate location.

- However, we can recall memories of any of the above experiences from anywhere. Even if you go to the Moon, you can recall such experiences (nāmagotta) from the past. Does that mean you took all those memories with you to the Moon?
- Some scientists believe that all memories are in the brain. But no one has proven that despite the efforts, especially during the past several decades.
- Furthermore, there is an ever-increasing collection of evidence from the accounts of past lives and neardeath experiences. Even if just one of those accounts is true, we can rule out the "memory storage in the brain" hypothesis.

## Internal (Ajjhatta) and External (Bahiddha) Rūpa

11. There are five types of rūpa in the external world (bahiddha rūpa): rūpa rūpa or vaṇna rūpa, sadda rūpa, gandha rūpa, rasa rūpa, and phoṭthabba rūpa.

- Then there are subtle internal $r \bar{u} p \bar{a}$ (ajjhatta rūpa) associated with a living being. The seat of the mind (hadaya vatthu) and a set of pasāda rūpa arise at the beginning of a new bhava (existence.)
- Note that the external vanṇa rūpā are experienced (or sensed) with the internal cakkhu pasāda rūpa; external sadda rūpa experienced with internal sota pasāda rūpa, etc.
- Both internal and external rūpā are made of the four fundamental elements (pathavi, āpo, tejo, vāyo) and other types of $r \bar{u} p a$ derived from the fundamental elements (upādāya rūpa.)

## The uniqueness of the Set of Internal $R \bar{u} p a$

12. These internal $r \bar{u} p \bar{a}$ are very special. They can be created only by kammic energy.

- Materialists think thoughts ( $\overline{\bar{a} m a \text { ) arise in the brain. But they have not found ANY evidence of that }}$ despite intensive research over the past 60 plus years.
- How can feelings of joy or sorrow arise in inert molecules, no matter how complex they become?
- As I discussed in the first few posts in the "Origin of Life" series, even the first cells are created by kammic energy!

13. Note that pasāda rūp $\bar{a}$ are in the mental body or gandhabba. They cannot be seen even with the most powerful microscopes.

- The eyes, ears, nose, tongue, and physical body only capture the external sensory inputs. Those signals get processed by the brain and transmitted to the mental body with the hadaya vatthu and a set of pasāda rūpa.
- Nāma (vedanā, sañ̃̄̄̄, sañkhāra, viññāna) arise at hadaya vatthu in the mental body (gandhabba.) See, "Brain - Interface between Mind and Body." It is not necessary to learn such details. But it is necessary to understand the difference between the sensory system on the physical body (eyes, ears, nose, tongue, body, and brain) and that in the mental body (hadaya vatthu and five pasāda rūpa.) Thoughts (nāma) arise in the mental body.

## Contact Between External and Internal Rūpa Give Rise to Nāma (Mental Attributes)

14. Nāma arises when an external $r \bar{u} p a$ comes into contact with an internal $r \bar{u} p a$. For example, when an external rūpa is seen with the cakkhu pasāda rūpa, cakkhu viñ̃ān̄na arises. That "seeing sensation" is felt with vedanā, sañ̃ña, sañkhāra, and the overall experience is cakkhu viññanna. All five "physical senses" work the same way.

- By the way, those five types of sensory experiences (cakkhu, sota, ghāna, jivhā, and kāya viññāna) are vipāka viññāna.

## What Are Nāmarūpa?

Nāma loka includes two types of "nāmarūpa":
(i) The primary type of nāmarūpa is "in-between nāma and rūpa" and arises in Uppatti Paṭicca Samиррāda. This is the "mental body" or "gandhabba" produced by kammic energy!
(ii) The second type belongs to the "n $\bar{a} m a$ " category and arises in the Idappaccayat $\bar{a}$ PS.

- In this post, we will refer only to the first type of nāmarūpa.

15. The set of ajjhatta rūpa defines a living being. It is also the primary type of nāmarūpa because it can generate nāma!

- "Nāma" arises at the "seat of the mind" (hadaya vatthu) with the help of the five pasāda rūpa. Each pasāda rūpa is a "doorway" to the hadaya vatthu. For example, vaṇna rūpa makes contact with the cakkhu pasāda rūpa, and that contact is transferred to the hadaya vatthu.
- We can see that this primary type of nāmarūpa has the remarkable ability to generate nāma or "mental attributes": vedanā, sañ̃̃̄̄, sañkhāra, and vipāka viñ̃̄̄ạna.
- That is why the hadaya vatthu and the five pasāda rūpa go by the name "mental body" or gandhabba. It has the unique ability to generate nāma upon interactions with the five types of external rūpa.

16. Some living beings, particularly the Brahmas in the highest 20 realms, have only such a "mental body." They do not have dense physical bodies like humans or animals.

- Rūpāvacara Brahmas in the first 16 Brahma realms have hadaya vatthu and two pasāda rūpa (cakkhu and sota.) Thus they can only see and hear.
- Arupāvacara Brahmas in the four arupāvacara Brahma realms have only the hadaya vatthu. They cannot see or hear either. But they can think! That brings up another type of rūpa that we discuss now.
- The hadaya vatthu of any Brahma (or any living being) is unique; it is formed in accordance with the specific kammic energy that gave rise to its existence.

## External Rūpa are Inert; Internal Rūpa Are Not Inert

17. The critical observation is that the set of internal rūpa (hadaya vatthu and the set of pasāda rūpa) are not inert. That set is the "mental body" or "manomaya kaya" or "gandhabba."

- Those are the ONLY rūpa that can give rise to nāma (vedanā, saññā, sañkhāra, vipāka viññāna.)
 by kammic energy to be compatible with that existence.
- Our big, dense physical bodies are made of inert matter, just like plants. "Consciousness" arises in the "mental body."

18. For each human, kammic energy creates a manomaya kāya with a hadaya vatthu and five pasāda rūpa. Until it is pulled into a suitable womb, that gandhabba or manomaya kāya lives in the "para loka." That means those of us in "this loka" (ayam loka) cannot see them; they are in a "different loka" (para loka) that is unseen.

- While in para loka, a gandhabba can see and hear just like a rūpāvacara Brahma. Even though a human gandhabba has ghāna, jivhā, and kāya pasāda rūpa, those cannot make contact with gandha, rasa, and phott habba until getting a physical body.
- A physical body starts when the gandhabba enters a womb and merges with a zygote in the womb. Then it grows inside the womb getting food from the mother. Once that baby comes out of the womb, it grows into an adult eating food.
- Thus, our physical bodies are made of inert matter, just like plants or rocks. They are all made of pathavi, $\bar{a} p o, t e j o, v \bar{a} y o$. That is why it becomes inert as soon as the gandhabba leaves.
- It is CRITICAL to have this basic understanding; see, "Micchā Ditthi, Gandhabba, and Sotāpanna Stage."

### 9.6.2 Citta Vīthi - Fundamental Sensory Unit

January 6, 2021; revised January 10, 2021 (\#9)
Citta vithi is the smallest sensory unit that is experienced by the mind. It is a series of citta with 17 citta for a pañcadvāra citta vīthi. A manodvāra citta vīthi can have a variable number of citta.

## Introduction

1. This subsection is a continuation of the series of posts in "Buddha Dhamma - A Scientific Approach."

- In this bottom-up analysis, we will get to the fundamentals of Buddha Dhamma. That involves tackling some basic features of Abhidhamma. Thus it will require some effort.
- But it will be a rewarding experience for those who make an effort.

Buddha Dhamma can be understood via the Four Noble Truths or Tilakkhaṇa or Paṭicca Samuppāda. If one understands any one of those three, one would understand all three.

- Our approach here is to look at the fundamental processes involved in a sensory event. That will provide invaluable insights to Paticca Samuppāda.

## A Citta Lasts Only a Billionth of a Second

2. What we call a "thought" is the cumulative effect of billions of citta flowing through a mind. The mind which processes citt $\bar{a}$ - is the fastest entity in the world (Ref. 1)

- Furthermore, a single citta does not arise in isolation. A citta ALWAYS arise in a citta vīthi (series of citt $\bar{a}$ ), some with 17 cittā; see below. Billions of such citta vīthi can flow through a mind in a second. What we "feel" is the cumulative effect of billions of such citta vīthi.
- When exposed to a new ārammaṇa (new sensory input), the first series of citta vīthi arises without even being aware. We will start experiencing them within a short time, and when we do, we CAN have control over the SUBSEQUENT citta vith related to those that arose first.
- But if we don't pay attention, such citta vithi can progress on their own and induce us to speak badly or even do bad things.
- That is why the need to be "mindful."
- For example, when someone says something nasty, we may automatically respond with bad speech or even bodily actions. Some people are prone to do that more than others. But ANYONE can cultivate mindfulness and be able to have control over one's speech or actions. Of course, it will take time to cultivate mindfulness. Our analysis here will help understand that process too.

## 

3. To emphasize, we DO NOT have control over how citta vith first arise due to new sensory input. They arise AUTOMATICALLY based on two things: The particular ārammaṇa (sense object) and one's habits/character (gati.) Note that "gati" is pronounced "gathi" as in "Thailand." That is easier to explain with a few simple examples.

- Consider a husband who likes alcohol and his wife, who dislikes alcohol. A friend visits them and brings a bottle of alcohol.
- That bottle of alcohol is the arrammaṇa. When the husband sees it, he feels happy. His wife sees the bottle at the same moment and becomes unhappy. Therefore, that same ārammana induced different types of citta vithi in the husband and the wife's minds! That means different types of cetasika (mental factors) arise in the citta in those two types of citta vithi.
- Prior experiences of the husband with alcohol are "happy occasions" for the husband. He has a gati to be attracted to alcoholic drinks. On the other hand, his wife cannot even stand the smell of alcohol, and she believes alcohol is bad to drink.
- However, gati can change. At a later time, the husband may give up alcoholic drinks after seeing the bad consequences of drinking. It is also possible that the wife may start associating with a group of friends who drink alcohol and gradually begin to form a liking for alcohol taste.
- See Ref. 2 for details on the critical roles of ārammaṇa and gati.

## One Sensory Unit (Citta Vīthi) At a Time - But They Flow Incredibly Fast

4. Let us consider that sensory event of "seeing a bottle of alcohol" when a friend brings that bottle. Let us consider the thoughts that flow through the husband's mind at that time of the visit.

- At the time of seeing the bottle, he is likely to be talking to that friend. It appears that talking, hearing the friend's words, and seeing the bottle in the friend's hands all happen simultaneously.
- They may happen at ABOUT the same time. But even just two sensory events CANNOT happen simultaneously (say, hearing the friend say "hello" and seeing the bottle in his hands).
Hearing his friend say "hello" happens with a citta vīthi of 17 citt $\bar{a}$. That auditory sensory input comes through the ears. It is a "sotadvāra citta vīthi." The sensation of "hearing" or sota viññạ̄na arises in such a sotadvāra citta vīthi.
- Seeing the friend with the bottle happens with a TOTALLY DIFFERENT citta vithi triggered by the visual event coming through the eyes. It is a "cakkhudvāra citta vīthi." The sensation of "seeing" or cakkhu viñãāṇa arises in such a cakkhudvāra citta vīthi.

## Mind Can Process Numerous Citta Vīthi Very Fast

5. A given citta vīthi is based on ONE ārammana. Until that series of citta run its course, another citta vith $h$ WILL NOT start.

- In the above example, hearing the sound "hello" was based on one citta vithi. The sight of the friend was with another citta vithi. But since they happened so fast that one would think they happened simultaneously.
- Countless citta-vīthi involving ALL SIX senses can flow alternatively in a split-second!
- The mind is capable of "sorting out" different types of ārammaṇa (sights, sounds, smells, etc.) That is why the Buddha said that the mind is the fastest entity in the whole world.
- Because these citta-vithis flow VERY FAST, and the mind can keep up with fast processing, we feel as if they all happen simultaneously! For details, see Ref. 3.

## Each "Data Packet" From a Sense Door Analyzed by a Citta Vīthi

6. As discussed in Ref. 3, the following sequence of events happens before we experience a sensory input. Consider seeing the bottle of alcohol in the above example. (1) Eyes capture the scene of the friend holding the bottle. That captured frame is of about 10 -millisecond duration. (2) That signal is sent to the brain via the optic nerve. (3) Brain processes that "data packet" and transfers to the gandhabba's "invisible body." (4) That signal is transferred to the "cakkhu pasāda rūpa." (5) The cakkhu pasāda rūpa transfers the signal to the hadaya vatthu (seat of the mind.")

- We also discussed the above aspects briefly in \#7 and \#8 of Ref. 4. Now, let us see in a bit more detail what happens when the cakkhu pasāda rūpa hits hadaya vatthu and transfers the signal to hadaya vatthu.
- The best way to understand this process is to visualize the hadaya vatthu surrounded by five pasāda rūpa. Only one pasāda rūpa can "hit" (or make contact) with the hadaya vatthu at any given time.
- Of course, those entities (pasāda rūpa and hadaya vatthu) can never be seen, even by the most sensitive instruments. Thus, the following is just an analogy to visualize the process easier.

## The "Bell Analogy"

7. Imagine a big metal ball (hadaya vatthu) surrounded by five smaller balls (five pasāda rūpa.) When one smaller metal ball hits the big metal ball, that big metal ball will "ring" (vibrate) a certain number of times. For a pañcadvāra citta vīthi, that number is ALWAYS 17.

- This is similar to the "ringing" of an old fashioned bell (like the Liberty Bell in Philadelphia) when hit by a metal object.
- In fact, Buddhist temples have bells that were originally designed to convey this idea of a citta vīthi: One pulls a rope tied to a small metallic ball inside a metal dome so that the metal ball hits the dome, and that emits a "ringing sound."
- At the very fundamental level, such a "contact" of a pasāda rūpa with hadaya vatthu is the only brief moment of sensory experience! (see Ref. 5.)
- The Pāli word "phassa" represents that "contact."

## Phassa - Contact Between a Pasāda Rūpa and Hadaya Vatthu

8. Therefore, that "contact" (phassa) DOES NOT happen, for example, between the physical eyes and a physical object ( $r \bar{u} p a$.) First, the brain processes that picture captured by the eyes and transfers it to the cakkhu pasäda; See Ref. 4. It is only then the cakkhu pasäda transfers that signal to hadaya vatthu by "hitting" the hadaya vatthu (just like the dome of a bell getting hit by the mental ball.)

- This is what is meant by the Pāli term "phassa." For example, in the Pāli verses, "salạyatana paccay $\bar{a}$ phasso" and "phassa paccay $\bar{a} v e d a n \bar{a} "$ refer to the "contact of an external sensory input with the mind (hadaya vatthu)" and "that contact leading to experiencing the sensory input."

## Contact (Phassa) by a Pasāda Rūpa Makes Hadaya Vatthu Vibrate 17 Times

9. When the hadaya vatthu is "hit" by a given pasāda rūpa (i.e., when it transfers the sensory signal to hadaya vatthu, that leads to 17 vibrations of hadaya vatthu; no more and no less. That is a citta niyāma or a universal law. With each "vibration," the hadaya vatthu generates a citta.

- That is the source of a citta vīthi with 17 cittā ("thought moments") in a sensory event involving pañcadvāra or the five physical doors (eyes, ears, nose, tongue, body.)
- The duration of those 17 thought-moments is how long that sensory experience lasts in reality (see Ref. 5). It is a billionth of a second! Of course, billions of such citta vithi flow through the mind it appears to us as if we are continuously experiencing it. But the mind falls to the bhavanga state numerous times in between those citta vīthi.
- Note that a pasāda rūpa plays a role ONLY in signals coming through the pañcadvāra (five physical senses), i.e., the rule of 17 cittā per citta vīthi holds ONLY for pañcadvāra citta vīthi.

## Manodvāra Citta Vīthi Do Not Have the 17-Citta Limit

10. When a dhamm $\bar{a}$ comes to the mind or hadaya vatthu (via the mana indriya in the brain,) there is no pasäda rūpa involvement. That signal goes directly to hadaya vatthu. Furthermore, the "17-citta rule" does not apply to manodvāra citta vīthi. They can have ANY number of citta, usually more than 10 citta.

- For example, in jhāna samāpatti, manodvāra citta vīthi can run for many hours continuously (as long as one is in that samāpatti.)
- But when in a "regular jhāna," there could be pañcadvāra citta vithi running between manodvāra (jhānic) citta vīthi. That means one could hear external sounds, for example, while in a regular jhāna.
- But when in a jhāna samāpatti, that $j h a ̄ n i c ~ c i t t a ~ v i ̄ t h i ~ r u n s ~ c o n t i n u o u s l y . ~ P a n ̃ c a d v a ̄ r a ~ c i t t a ~ v i ̄ t h i ~ d o ~$ not get a chance to "interfere." Thus, when one is in a jhāna samāpatti, one is totally oblivious to what happens around him/her.

## Citta Vīthi - Building Block of Thoughts

11. It is a good idea to get some familiarity with citta vīthi. That will make it easier to understand future discussions and get a deeper insight into Paṭicca Samuppāda. Further details on citta viththi in the post, "Citta Vithi - Processing of Sense Inputs."

- Of course, the descriptions of citta vīthi is not in the Sutta Pitaka but the Abhidhamma Piṭaka. The easiest way to review my description above is to consult Bhikkhu Bodhi's "A Comprehensive Manual of Abhidhamma" (Ref. 6.)
- However, the explanation in \#6 - \#8 is not in Bhikkhu Bodhi's book. That explanation was based on Waharaka Thero's discourses and my own incorporation of current scientific knowledge. I have explained that approach in "Interpretation of the Tipitaka - Gandhabba Example."

## References

1. Buddha said it is hard to find any phenomena in this world that change faster than the mind: "WebLink: suttacentral: Aṅguttara Nikāya (1.48)."
The short sutta says: "Nāhaín, bhikkhave, aññai் ekadhammampi samanupassāmi yä் evai் lahuparivattaì yathayidamं cittam். Yāvañcidamं, bhikkhave, upamāpi na sukarā yāva lahuparivattaì cittan"ti."

Translated: "I consider, bhikkhus, that there is no phenomenon that comes and goes so quickly as citta. It is not easy to find an analogy (a simile) to show how quickly citta can change."
2. "Ārammana Plays a Critical Role in a Sensory Event."
3. "Vision Is a Series of "Snapshots" - Movie Analogy."
4. "How Do We See? - Role of the Gandhabba."
5. This is the very brief sensory experience that the Buddha explained to Bāhiya Dāruciriya with the verse, "ditṭhe ditṭha mattaim bhavissati." It means, "what is seen is seen only for a brief moment." Mattain is "mātra" in Sinhala or Sanskrit or a "trace of something." What we feel is the cumulative effect of such a large number of contacts that take place in a short time. Yet, the "real experience" lasts only a billionth of a second! See "Does any Object (Rūpa) Last only 17 Thought Moments?"
6. Bhikkhu Bodhi, "A Comprehensive Manual of Abhidhamma." This downloadable version is from https://www.pariyattiorg. The above material is discussed in detail in Chapter IV (p. 149.)

## Does any Object (Rūpa) Last only 17 Thought Moments?

Revised October 29, 2015; April 5, 2016; August 18, 2019; February 18, 2020; December 19, 2020; re-written January 10, 2021

## Does Any Object Live Only For 17 Thought-Moments?

1. I have seen the following statement by many when discussing Abhidhamma: "Anything in this world lasts only a brief moment. Then it is re-formed, and the process continues ceaselessly."

- Here is a direct quote from a couple of sources, one of which is a popular book on Abhidhamma: "..a rūpa is very short-lived - it endures only for 17 conscious moments. Whatever object formed is almost instantly gone". Thus it is a widespread misconception.
- I Googled the following: "Abhidhamma ..a $r \bar{u} p a$ is very short-lived - it endures only for 17 conscious moments." Here is the search result: WebLink: google search: Abhidhamma ..a rūpa is very short-lived it endures only for 17 conscious moments - Google Search. As you can see, several links make that statement.

## The origin of Confusion

2. "Anything in this world" has a common name in Buddha Dhamma: a sañkhata.

- A sankkhata arises due to causes and lasts until those causes are there. Therefore, a sañkhata has a finite lifetime. That lifetime can range from a split-second (for thought) to billions of years (for a star like our Sun.) Everything in this world is sañkhata.
- The arising of a sañkhata is due to Paticca Samuppāda. That is the "udaya" (or "arise") part described in udayavaya ñāna.
- A sañkhata can be STOPPED from arising IF the causes and conditions are removed, i.e., by stopping the Pațicca Samuppāda process. That is "vaya."

## Stopping of Paṭicca Samuppāda with Paṭiloma Paṭicca Samuppāda

3. Paṭiloma Paṭicca Samuppāda is the "reverse" of the standard Akusala-Mula Paṭicca Samuppāda process. Which means it is the way to Nibbāna. See, "Patiloma Paticca Samuppāda - Key to Nibbāna."

- In other words, the standard Akusala-Mula Paticca Samuppāda process leads to the continuation of the rebirth process. It is also known as the Anuloma Paticca Samuppāda. The opposite (or the stopping of the rebirth process via eliminating avijjā) is Patiloma Pațicca Samuppāda. That is the "destruction" or "vaya" of the process that leads to the arising of all sañkhata (including our future births.) [paṭiloma : [adj.] reverse; opposite; contrary.]
- Therefore, udayavaya ñanna is a deeper concept. It describes, in yet another way, how the rebirth process can be stopped. It is a bit more complicated and is discussed in the section "Udayavaya Ñāna."
- So, why do some people say that any rūpa (sañkhata) has a lifetime of only 17 thought-moments (lasting only a split-second)?

4. It seems that this misinterpretation comes from taking the life of a "hadaya rūpa" and applying that to ANY rūpa!

- As we discussed in "Citta Vithi - Fundamental Sensory Unit," the lifetime of "vibration" of the hadaya vatthu (seat of the mind) is 17 thought moments. In Abhidhamma, that vibration is called a hadaya rūpa.
- First, let us clarify that a sañkhata (ANY rūpa in the external world) may have a lifetime as long as billions of years!

## Some Sañkhata May Have Lifetimes of Billions of Years!

5. Different sañkhata have different lifetimes. A fly may live for a few days, a human for about 100 years; a building may last hundreds of years, the Earth will last about 4-5 billion more years, etc. However, a sañkhata will be decaying gradually over time.

- An inert object, like a building, will start slowly decaying. If a building lasts 1000 years, then each day, it will "decay" by a little bit, though the decay will accelerate towards the end.
- From the present time to the final destruction (or until death in the case of a living being), any given sañkhata will change. If we consider a baby born today, it will first grow to become a young person. Then it will gradually start weakening while becoming an older adult and eventually die one day. Therefore, the critical aspect is not destruction but change. While the baby is growing, the cells in the body will multiply; but more cells will be dying in an older person's body.

## A Sañkhata Keeps Changing - Not "Appear and Disappear"

6. This constant change is not discernible to us on a real-time basis. A person does not age while we are watching him/her. But we can see the change over several years, especially if they are very young or over the middle age.

- Mayflies have a lifetime of the order of a day (after the larval stage), and some live only several hours; here is a short video by the National Geographic channel:
WebLink: youtube: The 24-Hour Life of the Mayfly | Nat Geo Wild
- Thus there is a HUGE difference in saying that a given material object CHANGES moment-tomoment versus saying that the object is "RECREATED" every 17 thought moments.
- During an Abhidhamma discourse that I listened to, the presenter showed a pen and said that the pen is "destroyed and recreated" EVERY 17 thought moments! By extending that logic, one could say that any entity (say, the Earth) is vanished and "recreated" within 17 thought moments! A complete misunderstanding of the Udayavaya process of a sañkhata.
- The 17 thought moments' origin is explained in the post "Citta Vithi - Fundamental Sensory Unit."
- As explained there, those 17 thought moments (or 17 citt $\bar{a}$ ) arise when the seat of the mind (hadaya vatthu) vibrates 17 times when one of the 5 pasāda rūpa transfers a sensory input. Those 17 vibrations make up a "hadaya rūpa" in the Abhidhamma language. Note that a "hadaya rūpa" is different from "hadaya vatthu." A hadaya rūpa arises every time the hadaya vatthu gets hit by a pasāda rūpa in the process of transferring a sensory signal. See "Citta Vithi - Fundamental Sensory Unit."

## A Hadaya Rūpa Has a Life of 17 Thought-Moments

7. So, where does this incorrect statement come from? ".. rūpa is very short-lived - it endures only for

17 conscious moments. Whatever object formed is almost instantly gone."

- The confusion arises when one does not understand the concept of a hadaya rūpa. A hadaya rūpa is generated in the hadaya vatthu by a sensory event through one of the five physical senses. The life time of a hadaya rūpa is the time taken to experience that external sense event. That takes 17 thought moments (during which an impression of the external rūpa is made in mind by a citta vithi).
- It is WRONG to take this time to be the lifetime of an external object (a sañkhata).

## Huge Difference Between a Rūpa (a Sañkhata) and a Hadaya Rūpa

8. Therefore, It is critical to understand the difference between ANY rūpa (sañkhata) and a hadaya rūpa that lasts only for a blink of an eye.

- The lifetime of a hadaya rūpa is just the time it takes for the mind to be AWARE of any sañkhata. We experience outside material things (sañkhata) in our world through our five physical senses. We see with eyes, hear with ears, smell with the nose, taste with the tongue, and touch with our body.
- During the lifetime of a hadaya rūpa, our minds only catch a very brief (a thought moments worth) of the seeing, hearing, etc., experience at a time. It is not that the object lives a short time; it is just that we sense it only for a brief moment at a time!
- It is unnecessary to spend time on the concept of a hadaya rūpa unless one is deep into Abhidhamma. However, it is good to know about it because one may come across it and may confuse it with a hadaya vatthu.
- The main point is that any object in the world (conventionally called a rūpa) is a sañkhata. Some sañkhata (like the Earth or a star) have lifetimes of billions of years. That is not to be confused with the hadaya rūpa (or a citta vīthi) that lasts only 17 thought-moments!

### 9.6.4 Phassa (Contact) - Contact With Pasāda Rūpa

January 15, 2021; revised January 16, 2021
Phassa (Contact) comes in the middle of the Paticca Samuppāda (PS) process. However, PS processes start with "salāyatana paccaȳ $\bar{a}$ phasso" or "an $\bar{a} y a t a n a ~ m a k i n g ~ c o n t a c t . " ~ T h a t ~ c o n t a c t ~ i s ~ b e t w e e n ~ a ~ r u ̄ p a ~$ and one of the six $\bar{a} y a t a n a(c a k k h u, ~ s o t a, ~ g a n d h a, ~ j i v h a ̄, k \bar{a} y a$, mano.) At the fundamental level, a rūpa makes contact with the mind via one of the five pasāda rūpa or directly with the mind (hadaya vatthu.)

## Importance of Phassa (Contact) in Paṭicca Samuppāda

1. The standard PS cycle starts with "avijjā paccayā sañkhārā." However, we do not just start generating sañkhāra. Furthermore, avijja is not there in a mind all the time. Only when we see, hear, taste, smell, touch, or think about an enticing "thought object" (ārammaṇa) that we start generating sañkhāra due to avijjā.

- For example, if we eat something tasty, we may generate greedy thoughts (sañkhāra) of eating more even if we are not hungry. If we see an enemy $\mathbf{X}$, we may generate angry thoughts (sañkhāra) about that person.
- Do those two "contacts" occur between the food and the tongue/eyes and person $\mathbf{X}$ ?
- In other words, does the vedana (feeling) of "good taste" arise in the tongue? Does "seeing of X" happen in the eyes? No.
- Some say those vedanā arise in the brain. But the brain is also made of inert atoms/molecules. Those cannot SENSE anything!
- Only a Buddha can accurately describe the actual sensing process. That "experience" takes place in the mental body (gandhabba.)

## Contact (Phassa) Is Between a Rūpa and an Ayatana (Pasāda Rūpa)

2. When we see person X , for example, that is contact (phassa) between our internal ayatana (eyes or more correctly, cakkhu pasāda rūpa) and external āyatana (an image of person X in this case). That is the process stated in verse, "cakkhuñca paticca rūpe ca uppajjati cakkhuviññānam்." The word "paticca" here refers to that contact (phassa).

- Due to that contact, a series of cittca flow in mind. That is a citta vīthi. We discussed that in detail in "Citta Vithi - Fundamental Sensory Unit." Also, see Ref. 1.
- That leads to a mental phenomenon that we call consciousness (in this case, cakkhu viñ̃āana). When we look at person X , we can instantly identify that person. This is amazing because the image that falls in the back of the eye is tiny. See Ref. 1 .
- Humans and animals generate such "awareness" or consciousness when seeing, hearing, smelling, tasting, touching, or thinking about an external $r \bar{u} p \bar{a}$.

## Cakkhāyatana Is Cakkhu Pasāda Rūpa

3. Cakkhāyatana is not the eyes. The "seeing" takes place in the mind, and the "seat of the mind" is the hadaya vatthu. The image captured by the eyes gets transmitted to the cakkhu pasāda rūpa, which transfers the image to the hadaya vatthu. See the previous post, "Citta Vithi-Fundamental Sensory Unit." It is a good idea to review that post.

- All five physical senses (cakkhu, sota, ghāna, jivhā, kāya) work that way. See Ref. 2 for a Tipiṭaka reference.
- Memories and other concepts come to the mind via mana indriya in the brain. Those signals get directly transferred to the hadaya vatthu. We may get to those details in future posts.

## What Is Meant by "Cakkhu, bhikkhave, aniccain"?

4. Many suttas state, "Cakkhu, bhikkhave, aniccaim." (and similarly for sota, ghāna, etc.) It should be clear that "cakkhu" does not refer to the physical eyes. The cakkhu pasāda rūpa in the gandhabba can last many thousands of years.

- After the human bhava, we get another cakkhu pasāda rūpa (with another mental body corresponding to the new bhava).
- However, what kind of bhava we get will NOT be due to our liking/expectations. It will be due to our past kamma and will be dictated by the upapatti PS process; see Ref. 3. That is what is meant by "anicca."

## Vedanā and Saññ̄ā Can Arise Without a Mind

5. There are a couple of "mental factors" (or cetasika) that may arise without a "mind." Crude versions of $v e d a n \bar{a}$ and sañ̃̄ $\bar{a}$ can arise even without a mind in "living things" (like plants) in the absence of a mind.
 aware of something." When we make contact with an "external āyatana" via our six senses, we become aware of that external rūp$\overline{\boldsymbol{a}}$; that is vedana $\bar{a}$. See, "Vedanā (Feelings)."

- At the fundamental level, Saññā means "recognition" of an object or a person, or a concept, for example. In general, it is the recognition of an "external āyatana" or "external rūpā." See, "Saññā What It Really Means."
- Therefore, plants and trees have a crude basic form of vedanā and sañ̃̃ā. A plant can "feel" when sunlight falls on it (vedana $)$, and "recognize" (sañña) that as useful for its survival.

## Awareness in Living Things (Plants) and in Living Beings

6. Therefore, plants and trees also seem to be aware of the external world and can even respond in some cases. For example, a plant or a tree can "turn" towards sunlight. Their roots grow towards water sources and away from dry soil. One may ask: "Then how does a plant turn towards sunlight?."

- Plants are like robots. A moving robot may have sensors that can detect obstacles in the way. That involves vedana and saññā in the elementary sense.
- A robot has a built-in computer that can instruct how to go around an obstacle, for example.
- The working of a plant is very similar. A plant seed has necessary "programs" installed in its cells to deal with the external environment. We discussed this in the section on "Origin of Life."

## Plants Do Not Generate Sañkhāra and Viññāṇa

7. Therefore, some "live things" like plants can generate rudimentary versions of vedanā and sañ $\tilde{n} \bar{a}$. However, a plant CANNOT generate sañkhārā (thoughts) about those vedanā and saññā.

- Sañkhārā arises via "avijjā paccayā sañkhārā." Based on avijjā, a mind generates defiled thoughts. Plants do not generate sañkhārā and viññāṇa via "avijjā paccayā sañkhārā" and "sañkhārā paccayā viññāna."
- Of course, totally inert things like rocks do not have vedanā and sañ̃ña either.

## Living Beings Have All Four Nāma Dhammāa (Vedanā, Sañn̄ā,Sañkhāra, Viññạ̄a)

8. Now, let us go back to the discussion in \#1 above. A sensory contact (phassa) leads to some mental activity in a living being. We are happy to encounter "pleasing sights, sounds, etc." and dislike the opposites.

- As we discussed in \#1, if we eat something tasty, we may generate greedy thoughts of eating more even if we are not hungry. If we see an enemy $\mathbf{X}$, we may generate angry thoughts about that person.
- First, in both cases, an idea about enjoying/disliking that contact comes to mind. That is the mano sañkhāra stage.
- Then we start thinking about enjoying/getting rid of that sensory input. This is the vacī sañkhāra stage, EVEN IF we are not saying anything out loud. Talking oneself - as well as talking - involves vacī sañkhāra. In this case, two types of cetasika (vitakka and vicāra) are involved.
- If one really gets "attached" (via like or dislike) to that ārammana, one may take physical actions. Such physical actions are done with kāya sañkhāra that arise in mind.

## Two Types of Viññāna

9. In the beginning of a cakkhudvāra citta vīthi, we "see" the image. This is the cakkhu viññaña. It is a visual sensing experience, and it is a vipāka viñ $\tilde{n} a n a$. These citta DO NOT have javana power to create new kamma. They experience the presence of a rupa (sight, sound, taste, etc.). Thus cakkhu, sota, ghāna, jivhā, and kāya viññāna are ALWAYS vipāka viññāṇa.

- If we "attach" to what we saw/ate, etc., we start generating vaci and $k \bar{a} y a$ sañkhāra. That is when we start acting with avijjā and generate kamma viññāna via "avijjā paccayā sañkhāra" and "sañkhāra paccayā viññāna." Such kamma viññāṇa are EXCLUSIVELY mano viññāṇa. The unique aspect here is the presence of javana citta.
- That kamma generation happens with javana citta in the second stage of a citta vīthi, as we will discuss. However, mano viññāna can be vipāka viñ̃̃āṇa too (for example, when we recall memories).
- Such javana citta (generating new kamma via kamma viññāna) are absent in the citta vithi of Arahants. However, Arahants do experience the vipāka viññāna. That is another way to see the difference between kamma viññāna and vipāka viññāna.
- We will be able to clearly see that there are two types of viññaña when we analyze a citta vīthi in upcoming posts.

## References

1. "How Do We See? - Role of the Gandhabba,"
2. "WebLink: suttacentral: Āyatanavibhanga" explains a a yatana as follows:

Dvādasāyatanāni- cakkhāyatanaim, sotāyatanaí, ghānāyatanaí, jivhāyatanaí, kāyāyatanaim, manāyatanaì, rūpāyatanaì, saddāyatanaì, gandhāyatanaì, rasāyatanaì, phoṭthabbāyatanaì, dhammāyatanaì.

Tattha katamaí cakkhāyatanain? Yai் cakkhu catunnai̇ mahābhūtānai̇ upādāya pasādo attabhāvapariyāpanno anidassano sappaṭigho, yena cakkhunā anidassanena sappatighena rūpà் sanidassanaì sappaṭighaì passi vā passati v $\bar{a}$ passissati $v \bar{a}$ passe $v \bar{a}$, cakkhumpetaì cakkhāyatanampetaì cakkhudhātupesā cakkhundriyampetaì lokopeso dvārāpesā samuddopeso panḍarampetaì khettampetaì vatthumpetaì nettampetaì nayanampetaì orimaì tīrampetaì suñño gāmopeso. Idaì vuccati "cakkhāyatanaì".

- The others are explained similarly.
- In the above verse, "anidassano" means "cannot be seen." Thus, cakkhāyatana is not the physical eye. It refers to cakkhu pasāda rūpa in the mental body (gandhabba) that cannot be seen. As we know, in Out-of-Body Experiences, that gandhabba comes out of the physical body and can see without physical eyes. Details at "How Do We See? - Role of the Gandhabba."

## 3. "Akusala-Mūla Upapatti Paticca Samuppāda."

### 9.6.5 Arising of the Five Aggregates With an Ārammaṇa

January 20, 2021; revised January 21, 2021 (\#2, \#6, \#8, \#9); October 3, 2021
Arising of the Five Aggregates (pañcakkhandha) happens with the creation of a "mental image" of a thought-object ("ārammana.") For example, when we see an object, the mind re-creates its own version of that object. When we taste the food, the mind prepares its own version of that taste. All six sensory inputs work that way. In other words, pañcakkhandha ("Five Aggregates") are one's own. This is why different people respond differently to the same sensory event. [ärammana (where the mind dwells) is also called älambana (to hang [hold] on to)]

- This is a critical post to understand. It may take repeated readings and understanding of previous posts in this series: "Understanding the Terms in Paticca Samuppāda" and the references provided here. Don't hesitate to ask questions.

## Paṭicca Samuppāda (PS) Cycles Start with an Ārammaṇa (Focus of Thoughts)

1. The standard PS cycle starts with "avijjā paccayā sañkhāāa." However, we do not spontaneously start generating sañkhāra. We start generating sañkhāra based on an ārammaña (thought object) that we like or dislike.

- Cakkhu viññāna, for example, arises when cakkhu (cakkhu pasāda rūpa) makes contact (phassa) with the rūpa (an image of the object seen). In the suttas, that is stated as, "cakkhuñca paticca rūpe ca uppajjati cakkhu viññannam்." See the previous post, "Phassa (Contact) - Contact With Pasāda Rūpa."
- Different people respond differently to the same sensory input. Furthermore, that response is swift. We have discussed several examples in Ref. 1.
- A new series of thoughts (citta vīthi) starts with a new ārammaṇa.

## Figuring Out Which Sense Faculty (Pañcadvārā̄vajjana Citta)

2. For example, suppose person $X$ is relaxing at his desk during his lunch break. His mind is not focused on any specific task. It is said to be in the "bhavañga" state. I have discussed the "bhavaña"" state in "State of Mind in the Absence of Citta Vithi-Bhavañga."

- Now, an unfriendly co-worker walks into the office. Person X looks up from the desk, sees the unfriendly co-worker. There are two cittas involved here. One is the pancadvaravajjana citta to investigate "which of the five senses causes the disturbance." Then X realized that it is coming through the eye indriya, i.e., it is a cakkhudvāra citta giving rise to cakkhu viññāna.
- We discussed the basic aspects of a citta vithi in the previous post; see Ref. 2. Up to now, the citta $\boldsymbol{v} \bar{t} h i$ has gone through 5 cittā in a citta vīthi with 17 citt $\bar{a}$. "Releasing the mind from the bhavañga state" takes 3 citt $\bar{a}$. I will discuss that later.
- So, the series of events start with "seeing the unfriendly co-worker." That is a cakkhu viñ̃̃āṇa. That happened without X taking the initiative. Any event that happens without taking the initiative is a kamma vipāka. Therefore, that cakkhu viñ̃n̄ạna is a vipāka viññāna. His focus of attention was shifted due to the sight of the co-worker.
- That sight led to the arising of "bad thoughts with anger" in his mind instantaneously. He may then possibly react by saying something bad to the co-worker. That development (response to the cakkhu viññanna) happens at the later stage of the same citta vithi!
- First, we discuss what happens with a single citta bringing a new sensory input, i.e., the cakkhudvāra citta giving rise to cakkhu viññāna.

## Initiation of a Sensory Event Can be at One of Six Senses

3. In the above example, seeing the co-worker started with "cakkhuñca paticca rūpe ca uppajjati cakkhuviññānà்."

- Our attention abruptly changes when we encounter a new sensory input. That could come via any of the six senses, including the mind by itself. For example, we may be doing something, and all of a sudden, thoughts about an old friend may come to mind. That happens via "manañca paṭicca dhamme ca uppajjati manoviññānam.".
- Of course, switching among several different ārammaṇa can happen in rapid succession. When we watch a movie, we see the movie screen and hear the dialogues. They switch so rapidly that we feel that watching and hearing happen simultaneously! We discussed a simple example in \#4 of Ref. 2.

## Two Possible Meanings of "Paṭicca"

4. Going back to our example, seeing the co-worker starts with "cakkhuñca paticca rūpe ca uppajjati cakkhu viññannaị." Therefore, a cakkhu viñ̃n̄ạa arises when a rūpa (the figure of the co-worker) makes contact (paṭicca) with cakkhu pasāda rūpā.

- That cakkhu viññāna arises with a single citta, which is one of the 17 cittā in a citta vīthi.
- By the way, "paticca" has TWO possible meanings, depending on the context. In the term "Paticca Samuppāda," it means "getting attached willingly" or "pati" + "icca" ("pati" means to "bind.") See Ref. 3.
- However, in the above verse, paticca implies "two entities (that are compatible) making contact." A $r \bar{u} p a$ does not "make contact" with one of the other four indriya like ears or nose. Similarly, a sound does not "make contact" with the eyes or the nose. The Buddha explained that a wick would soak up oil because wick and oil are compatible and will "paṭicca" (Ref. 4.)

## The Role of Universal Cetasika

5. A complex process happens in mind during the event of "cakkhuñca paticca rūpe ca uppajjati cakkhu viññānam." That process happens in that single citta which lives only for less than a billionth of a second. Only a Buddha can discern something that can happen that fast. We can verify that to be true only by seeing that it is compatible/consistent with nature.

- That "contact" between "the image of a rūpa" and "cakkhu pasāda rūpa" is made by the "phassa" cetasika that arises with that citta.
- Then that "event" is registered in the mind as a sukha, dukkha, or adukkhamasukha vedanā (pleasant, unpleasant, or neutral feeling.) The "vedana"" cetasika is responsible for that.
- Then the mind recognizes the object with the "sañ̃̃ä" cetasika.
- During the SAME citta (where cakkhu viññāṇa arises,) a bit more complex process happens that involves the "cetanā" cetasika.

## How Does Cognition/Recognition (Sañ̃̄ā) Happen In a Single Citta?

6. An unimaginably complex process occurs during that SAME cakkhudvāra citta, which lasts only a billionth of a second.

- The mind needed to compare it with previous experiences to identify that object. For example, recognition of the co-worker in the example discussed in \#2 above requires comparing the image just received with one's previous experiences. Otherwise, how does the mind recognize the person who walked in to be a co-worker and that one has had bad experiences with him in the past?
- That ultra-fast recognition (sañ̃ña) happens with the aid of the manasikāra cetasika. To get an idea of what happens when we recognize an object, see the video below (especially starting at 3:30 minutes):

## WebLink: youtube: What is a Thought? How the Brain Creates New Ideas |Henning Beck | TEDxHHL

7. At 3:30 minutes, we see a "face" made up of fruits and vegetables. Even though it is not a real human face, it takes us just a split second to realize that it represents a face.

- But as Mr. Beck points out, a computer will never recognize the human face's representation depicted there.
- At 9:00 minutes, he starts a discussion on identifying a chair. Again, a computer runs into a problem identifying "less obvious" structures that can serve as chairs.
- In both these instances, what the computer is missing is sañ̃̃̄ $\bar{a}$ (loosely translated to English as "perception"). Even animals can recognize objects relevant to their survival. For example, a dog can instantly recognize its owners and any other pets living in the house. It can recognize foods that it likes, etc. See "Sañ̃ña - What It Really Means." Also, see Ref. 5.
- During that same citta, more processes happen to make that recognition possible.

## Creation of an Image of the External Object in the Mind by the Cetanā Cetasika

8. For that recognition to occur, another important cetasika of "cetana" comes into play. It CREATES a "cittaja rūpa" in mind (a rūpa created by the mind) according to one's gati/anusaya. This is a CRITICAL point that we will discuss in more detail. The "sañkhār $\vec{a}$ " aggregate represents this process. For those familiar with Abhidhamma, this is where "mano sankh $\bar{a} r a \bar{a}$ " arises AUTOMATICALLY.

- It is the manasikāra cetasika that helps incorporate one's past experiences, future hopes, etc. (represented by gati/anusaya) and helps the cetana make that "cittaja rūpa" or the "mental picture." It is that "mental picture" that we "see" or "experience."
- There are two more cetasika that ALWAYS arise with any citta: ekaggatā and jīvitindriya. The $j \bar{v}$ itindriya cetasika keeps the hadaya vatthu alive (with kammic energy). Ekaggatā cetasika keeps the mind on that particular ārammaṇa (in this case, a rūpa rūpa or a sight.)
- The above description is at the heart of all mental phenomena, i.e., creating a "mind-made image." In the recent post, "How Do We See? - Role of the Gandhabba," we asked the question, "How do we see?" The answer is in the above description. Please re-read that post, and things will become more clear.

## Connection to the Five Aggregates

9. The above description also explains how the five aggregates arise in that single cakkhudvāra citta representing the first instance of "experiencing a visual sensory input."

- The "rūpa aggregate" is represented by the "phassa" cetasika.
- Vedanā and saññā cetasika generate the "vedanā aggregate" and the "saññā aggregate."
- The cetanā cetasika plays a key role in generating "sañkhāra aggregate" with the help of the other six cetasika. This is where the mind CREATES its own version of the sense object, a visual $r \bar{u} p a$ in this case.
- We experience only a "mind-made image" of the external rūpa that is out there in the physical world. Thus, the viñ $\tilde{n} \bar{a} n a$ aggregate arises from the above processes' overall effect.
- That is how the Five Aggregates arise with ANY sensory input via one of the six senses.

## The Arising of the Five Aggregates (Pañcakkhandha) in a Single Citta!

10. That is how the five aggregates arise within that single cakkhudvāra citta. The same process takes place for any ārammana coming through any of the six senses.

- The five aggregates arise due to the cetasika of phassa, vedanā, sañña, and cetanā. However, all SEVEN cetasika (phassa, vedanā, saññā, cetanā, manasikāra, ekaggatā, and jīvitindriya) are essential ingredients of ANY citta.
- Those 7 cetasika arise with all citta and thus are universal (sabba citta sādhāraṇa) cetasika.
- The above process takes place in all types of sensory experiences. The sound we hear is not the "real sound," but it is "modified" according to one's gati/anusaya. The same is true for all 6 sensory experiences, including smells, tastes, touches, and concepts (dhamma $\bar{a}$.)

## The Same Person Could be Perceived as Likeable or Unlikeable

11. Suppose two strangers (with opposite political views) watch TV in a bar while having their drinks. A famous politician comes on TV.

- At that moment, one person's face gets darkened, and angry thoughts arise in him. Simultaneously, the other person's face brightens up, and pleasant thoughts arise in him.
- How is that possible? It was the same picture that they were looking at.
- The reason is what we discussed above. The "mental image" formed in one person's mind depicts a "bad person." On the other hand, the other person's mind had created a "bad picture" that gave rise to bad thoughts.
- We can think of many examples. I have discussed another example in Ref. 1.

## Viññāna Is a Magician!

12. The above description explains why the Buddha called viññaña a "magician" (Ref. 6). What we experience as cakkhu, sota, ghāna, jivhā, kāya, and mano viãñāna DO NOT represent reality. It is like looking at the world with tinted glasses. Depending on the level of defilements in the mind is (i.e., gati/anusaya), the sensory experience is biased.

- This was explained with examples in the posts, "Amazingly Fast Time Evolution of a Thought (Citta)" (especially see \#4 to \#6) and "The Amazing Mind - Critical Role of Nāmagotta (Memories)." It is essential to read all relevant posts and understand these fundamental ideas.
- I will continue the discussion in the next post. Please make sure to read all the relevant posts. Otherwise, future posts will not make sense.
- The mind is an amazing entity. It is unbelievably fast. That is why we are fooled into thinking that there are fruitful things that will please us. However, the reality is different. There is unimaginable suffering hidden in enticing "sense pleasures" or kāma rāga.
- That can be seen not with eyes but with wisdom. That is the yathābhūta ñaña, the wisdom to "see" the real nature with wisdom. As we discuss further, that real picture will become clear.

3. "Paticca Samuppāda - "Pati+ichcha" + "Sama+uppāda""
4. In the "WebLink: suttacentral: Saimyojana Sutta (SN 44.9)," the Buddha explains, "Seyyathāpi, bhikkhave, telañca paṭicca vattiñ̃ca paṭicca telappadīpo jhāyeyya" OR "Bhikkhus, an oil lamp burns in dependence on oil and a wick." An old fashioned oil lamp has a wick partially immersed in oil. That oil soaks the wick and gets to the tip of the burning wick, and sustains the flame. Therefore, oil and wick are compatible and will "paticca." If one puts a metal rod in oil, the oil will not soak the metal, i.e., they are not compatible and thus would not paticca.

### 9.7 Paticca Samuppāda - Overview

## Revised November 4, 2018; August 27, 2022

1. Nothing can happen without a cause ("hetu" in Pāli or Sinhala). Everything happens for reasons or causes. Usually, many things simultaneously arise due to multiple causes.

- However, if one cause dominates, it appears to have happened due to one cause.

2. Due to our ignorance of the true nature of this world, we keep initiating new causes. If we do not add more fuel to the fire, the fire will extinguish when existing fuel runs out.

- Akusala kammā is fuel to the saṃsāric journey or the rebirth process.
- Sainsāric journey does not end because we keep adding "fuel to the fire," i.e., keep doing akusala kamma.

3. The Paticca Samuppāda (let us shorten it as PS) describes that process. It explains the arising of future births due to accumulated kammic energies.

- Ācariya Buddhaghosa understood only one aspect (the akusala-mūla PS) of the numerous applications of PS. Since Theravāda Buddhism adopted Visuddhimagga as the basis of Dhamma, this deep knowledge of PS went underground. [äcariya : [m.] teacher.]
- Many variations of PS can be found in the WebLink: suttacentral: Paticcasamuppādavibhañga (Vb 6) of the Vibhañgappakarana in the Abhidhamma Pitaka.

4. Here are the main subsections in this section:

- Several PS cycles are discussed in this section: "Paticca Samuppāda Cycles." However, please read \#7 below before going there.
- For those who want to avoid too many Pāli words: "Paticca Samuppāda in Plain English."
- What is meant by "paccay $\vec{a}$ " (conditions) and discussions on different types of conditions: "Patthāna Dhamma." An introduction to "paccay $\vec{a}$ " is in \#5 below.
- "Imasmim Sati Idam Hoti - What Does It Really Mean?"

5. Even if there is a cause, its result (effect) does not manifest until the right conditions ("paccay $\vec{a}$ " in Pāli) appear.

- For details, see "What Does "Paccayā" Mean in Paticca Samuppāda?." We can get the basic idea from a few examples here.
- A matchstick has the potential to bring about a fire. But unless it is heated by striking on a hard surface, fire does not ignite.
- A bomb can explode and create much destruction. But it will not go off until triggered.
- We all have bad habits, but they do not manifest until triggered by an ārammaṇa or a "thought object" (a picture, sound, smell, touch, or thought). See "Worldview of the Buddha."

6. Therefore, if one acts mindfully, one can PREVENT many akusala vipāka and FORCE many kusala vipāka.

- We all have innumerable akusala accumulated in this samisāra;
- See, "What is Kamma? Is Everything Determined by Kamma?," and "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsavā)."

7. It is necessary to understand that the terms in the standard PS cycle: "avijj $\bar{a}$ paccay $\bar{a}$ sañkhāra; sañkhāra paccayā viññāna; viññāna paccayā nāmarūpa, nāmarūpa paccayā saḷāyatana, saḷāyatana paccayā phasso, phassa paccayā vedanā, vedanā paccayā taṇhā, taṇhā paccayā upādāna, upādāna
paccayā bhavo, bhava paccayā jāti, jāti paccayā jarā, marana, soka-parideva-dukkhadomanassupāyasā sambhavan'ti'' are highly condensed.

- One could write a book on each term.
- At a minimum, one needs to get the basic idea of each keyword: avijjā, sañkhāra, ..bhava, jāti.

8. Most modern texts in English translate those keywords to single words in English, which often leads to misinterpretations.

- It is better to understand the meaning of each of those Pāli worlds and use those words. They can have different meanings based on the context.

9. In the following, I will provide a few posts to read to get an idea of what those Pāli words mean. The following terms are associated with the akusala-mūla PS.

Avijjä: "What is Avijīā (Ignorance)?."
Sañkhāra: In most cases, what comes to play is abhisañkhāra or "strong sañkhāra." But it is necessary to get the basic idea of "sañkhāra" first: "Sañkhāra - What It Really Means."

Viñ̃nāna: One of the complex Pāli words: "Viñ̃nān̄a - What It Really Means."
Nāmarūpa: Another complex word: "Viññāna paccayā Nāmarūpa."
Salāyatana: Saḷāyatana (six āyatana) are not six sense faculties, "Nāmarūpa paccayā Salāyatana."
Phassa: What comes into play in PS is not "phassa" but "defiled contact" or samphassa, "Difference between Phassa and Samphassa."

Vedanā: Vedanā in PS does not mean "feelings," but "samphassa jā vedana": "Vedanā (Feelings) Arise in Two Ways."

Tanhā: "Tanhā - How We Attach Via Greed, Hate, and Ignorance."
Upādāna: "Difference Between Tanhā and Upādāna."
Bhava and Jäti: "Bhava and Jāti - States of Existence and Births Therein" and "Gati to Bhava to Jāti Ours to Control."

- Of course, gati is another key Pāli word not discussed much these days. See "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsava)."
- You can find more posts on each word using the "Search" box at the top. Note: only for online website.

10. It is clear from \#7 above that all future suffering (jar $\bar{a}$, marana, soka-parideva-dukkhadomanassupāyasā sambhavan'ti) will stop with the stopping of the akusala-mūla PS.

- It is also clear that all future suffering ends when there is no rebirth, i.e., when the step "bhava paccaya $j \bar{a} t i "$ stops and thus "jāti paccay $\bar{a}$ jarā, maraña, soka-parideva-dukkhadomanassupāyasä" step stops.
- As long as there are $j \bar{a} t i$ (or births), the suffering will not end.

11. The akusala-mūla PS can be terminated by working on two main targets: $a v i j j \bar{a}$ and taṇh $\bar{a}$.

- It is pretty clear why we need to remove $a v i j j \bar{a}$. If there is no $a v i j j \bar{a}$ (i.e., if one comprehends the Four Noble Truths), then an akusala-mūla PS will not even get started.
- Tanhha gradually reduces with changing our gati. That is discussed in the post: "Difference Between Tanhhā and Upādāna."

### 9.8 How Are Paṭicca Samuppāda Cycles Initiated?

November 6, 2015; Major revision October 13, 2017; \#12 added November 3, 2017; January 8, 2021

Paticca Samuppāda (PS) cycles have many varieties and can be analyzed in great detail and can reveal subtle aspects and clarify our understanding about the world we live in.

## Two Categories of PS Cycles

1. There are two broad categories of PS cycles.
i. The standard Pațicca Samuppāda describes how our actions (sañkhāra) lead to the generation of new kammā. Thus they could be called "kamm $\bar{a}$ generating"' PS cycles.
ii. The other category of PS cycles is responsible for bringing in kamma $\bar{a}$ ipāka, and thus could be called "vipāka generating" PS; this type of a PS cycle is labelled in the Tipiṭaka as an avyākata PS; $a v y a ̄ k a t a$ means "kammicaly neutral"; not generating new kamm $\bar{a}$. The Pāli word is $a v y \bar{a} k a t a$, and the Sinhala word is avyäkruta. But in many places, it is written as abyākata.

## Sensory Experience Starts With Avyākata PS

2. Everything that we INITIALLY EXPERIENCE is due to a kammā vipāka and is brought in by an avyākata PS. That PS process makes us see, hear, smell, taste, experience bodily sensations, and bring in new thoughts to the mind.

- However, the feelings (vedanā) that we experience due to such sense inputs are not the same for different persons, except in the case of bodily sensations. Everyone feels the same if getting hit (pain), or getting a good massage (pleasure).
- In other five sense inputs, the vedanā generated depends on the person. For example, a teenager may like a heavy metal song, but his grandfather may not.
- In all cases, each person RESPONDS to the sensory input in one's own way. This response may lead to new kamm $\bar{a}$ and is described by the "kamm $\bar{a}$ generating" PS cycles.

## We Don't Have Control Over Avyākata PS

3. We do not have control over the avyākata PS - which brings kammā vipāka by initiating new sense events; once started, they cannot be stopped. Even Arahants cannot avoid kammā vipāka.

- But the "kammā generating" PS cycles that arise as our response to such sense events can be controlled by us based on our gati (samisāric habits). This is the basis of Satipatṭhāna/Ānāpāna meditations.
- Avyākata PS bring kammā vipāka when suitable conditions are available; see, "Anantara Samanantara Paccaya."

## Avyākata PS May Lead to New Kamma

4. Now, depending on what we see, hear, etc due to a kammā vipāka, we MAY start making sañkhāra and a new "kammā generating" PS cycle may be initiated; then we make more kammā vipāka.

- For example, when we see an appealing object, we may generate lobha (greedy) thoughts (apuññābhi sañkhāra); when we see a distasteful object, we may generate hateful thoughts (apuññābhi sañkhāra). If we see a beggar on the street, we may generate alobha thoughts (puññābhi sañkhāra), which may lead to a meritorious act (giving some money to that person).
- All those "seeing events" arose due to avyākata PS cycles. But those different responses, generating sañkhāra, were done by "kammā generating" PS cycles, that operate based on one's gati (samisāric habits), as will discuss below.

## Not All Avyākata PS Lead to New Kamma

5. ALL our actions are initiated by avyākata PS cycles; but not all avyākata PS cycles lead to "kammā generating" PS cycles generating new $\operatorname{kamma} \bar{a}$. You may want to think about this and see that indeed that is true.

- Thousands of people see an item on display in a shop. Many glance at it and don't give it another thought. Some will stop and take another look since they like it. There could also be someone who really wanted it, but may not have money, and even think about stealing it!
- There is no "fixed person with avijjā." Avijjā can arise in any normal human (without magga phala), if the sensory input is strong enough! You may also want to read the post on "'Self' and 'no-self' A Simple Analysis - Do We Always Act with Avijijā?."
- Whether $a v i j j \bar{a}$ arises depends on the particular sense input and the person (more correctly, the person's gati).

6. We do not even notice most of these sense events. When we travel in a car, we see a million things, but only a few "catch our attention." Only those few events lead to the initiation of "kammā generating" PS cycles.

- But even one initiation of a "kammā generating" PS cycle can, in turn, initiate many "follow-up" PS cycles. For example, while walking, we may see a house by the road we really like (due to a kamm $\bar{a}$ $v i p a ̄ k a$ ). We may get attached to it (form tanh $\bar{a}$ ), and then start thinking about building a house like that. Then we may remember a nice house that belongs to a friend, and then start thinking about that friend, which could lead to thinking about a common enemy. Suddenly, we have started a stronger "kamma $\bar{a}$ generating" PS cycle that could lead to a worse kammā vipāka.
- This is the "wheeling process" that we discussed in the post, "Nibbāna - Is it Difficult to Understand?" and many other posts; enter the keywords "wheeling process" in the Search box at the top right, and you will get many posts. Our sansaric journey is fueled by an uncountable "kammā generating" PS cycles.

## Kamma to Vipāka to Kamma - Samsāric Journey

7. This vicious cycle of "vipāka" leading to "kammä" leading to more "vipāka" is the process that binds us to the sainsāra of endless rebirths, or perpetuates our "world" of suffering.

- The Buddha describes this as, "kammā vipāk $\bar{a}$ vaddanti, vipāko kamma sambhavo, tasmā punabbhavo hoti, evan loko pavattati."
- That means, "kammā lead to vipāka, vipāka, in turn, lead to kamm $\bar{a}$ and thus to rebirth (punabbhavo), and that is how the world (existence) is maintained."
- There "sambhava" is "san" + "bhava," or "adding more existences." Also, "loka" is the world, and "pavatta" means "maintain."

## "Moral" Is Relative - Any Pothujjana Can Act Morally or Immorally

8. We normally call a person "moral" when he/she acts morally in most cases.

However, that does not mean that a "moral person" will not generate immoral thoughts at times. If a "tempting sense input comes in" via any of the six senses, he/she may act with avijjā and start an akusalamūla PS.

- Similarly, one labeled as a criminal (because of his prior acts) may see someone in danger and act with kindness, initiating a meritorious deed.
- This is why the Buddha said that there is no "unchanging self," but there is no "self" either. What happens at a given moment depends on what kind of PS cycle is "triggered," and the level of avijja triggered. avijjā can range from moha (morally blind) to just not knowing the anicca nature.
- Any "average human (pothujjana) is considered to be "moral" might act with moha and commit a severely immoral act if the trigger was tempting enough.

## Stopping the Sainsāric Journey

9. The key point is that unless one has at least attained the Sotāpanna stage, one COULD act with avijjā at the level of moha, and generate kamm $\bar{a}$ (sañkhāra) that COULD generate kammā bhava corresponding to possible birth in the four lowest realms (apāy $\bar{a}$ ).

- In other words, depending on the trigger, it is possible for the pancan̄̄varana to "cover the mind" and initiate strong akusala-mūla PS cycles for any human being not yet attained the Sotāpanna stage.
- For example, we have heard stories about people with "good moral backgrounds" committing rape, under conditions that led to kāmacchanda n̄̄varana taking over their minds. Kāmacchanda comes from "kāma $+i c c a+$ andha," where icca is liking and andha is blind; thus kāmacchanda means "blinded by liking for kāma or sense pleasures."
- We have also heard stories about murders that were committed by "moral people" who were enraged by the sight of their spouse in bed with another person. Here the second nīvarana, vyāpada, covered their minds.
- Those two are the strongest $n \bar{v} v a r a n a$, but we can think about cases when the other three also could lead to immoral acts: thina middha (frozen or lazy mind), uddhacca kukkucca (tendency to do lowly things with high-mindedness), and vicikicch $\bar{a}$ (tendency to do unwise things due to not knowing the anicca nature).

10. When one attains the Sotāpanna stage, these pañcanīvaraṇa are permanently removed.

- That is why potent akusala-mūla PS cycles — which could lead to rebirths in the apāy $\bar{a}$ — are not triggered for a Sotāpanna; see, "Key to Calming the Mind - The Five Hindrances."
- One's gati permanently change with magga phala. More changes happen at higher magga phala.

## More Information

11. Different types of PS cycles are discussed at: "Paticca Samuppāda Cycles."

- The "vipāka generating" avyākata PS is discussed in the post, "Avyākata Paticca Samuppāda for Vipāka Viññ̄na."
- The "kammā generating" PS processes can be divided into two broad categories again: those generating "bad kamm $\vec{a} "$ and "good kamm $\vec{a} "$ " "Akusala-mūla Paticca Samuppāda" and "Kusala-mūla Paticca Samuppāda."
- Those "kammā generating" PS processes where one can see the consequences during this life itself are discussed in "Idappaccayatā Paticca Samuppāda."
- There can be many other types too. But one can get a good idea of how PS works in different situations can be grasped by understanding those key processes.
- A bottom-up approach to PS processes discussed at "Understanding the Terms in Paticca Samuppāda."

12. Finally, there is another important way that we get started with generating new kamma. This is when we "get random thoughts coming to our minds that get us started on a pleasurable activity."

- For example, we may be doing something, and all of a sudden, we get a thought about watching a movie or even start thinking about an enemy and what can be done to him/her. These are initiated by "manañca paticca dhamme ca uppajjati manoviññanạa,"," where dhammā coming to our minds; see, "What are rūpa? - Dhamma are rūpa too!."
- These are also kamma vipāka. But these are more common than just seeing an enemy by chance or hearing something that one likes, etc.
- In either case, we need to be mindful always, and catch such "new kamma generations." This is the key to Ānāpāna/Satipaṭthāna Bhāvanā.

### 9.9 What Does "Paccayā" Mean in Pațicca Samuppāda?

## Revised April 27, 2016; August 25, 2019

Before we start discussing the various forms of Paticca Samuppāda (PS), it is essential to be clear about what is meant by "paccayä" (pronounced "pachchayā"). Paṭ!hāna Dhamma provides a complete description. We will introduce the concept here.

## Introduction

1. The PS cycle starts as: "avijjā paccayā sañkhāra, sañkhāra paccayā viññāna, viññāṇa paccayā nāmarūpa, nāmarūpa paccayā saḷāyatana,....."

- And since PS describes the "cause and effect" in Buddha Dhamma, most people think "avijjā paccayā sañkhāra" means "avijjā causes sañkhāra" or "ignorance causes one to acts that generate bad kamma."
- Even an ordinary person has $a v i j j \bar{a}$, he/she will not ALWAYS act accordingly; most of the time, people act appropriately or morally. However, as long as avijja is there, at times one WILL likely act with $a v i j j \bar{a}$ and do inappropriate or immoral things.
- Similarly, many people think that "sañkhāra paccayā viññāna" means "sañkhāra causes viññāṇa" or "bad kamma lead to corresponding consciousness", and so on down the whole PS cycle.
- As we discuss below, the steps should be translated as, "with avijjā (ignorance) as condition, sañkhāra arise", "with sañkhāra as condition viññāna, etc.

## Key Role Of Conditions

2. It will clarify a lot of things down the line if one understood that PS does not refer to a "direct link" between causes and effects. Just because we have done many good/bad kamma (generated via sañkhāra) DOES NOT mean they ALL lead to kamma vipāka.

- That was pointed out in item \#5 in the previous post "Paticca Samuppāda - Overview." But in case the point was missed, I wanted to emphasize the point in this post.
- Any effect must have a cause. But there can be possible causes without leading to any results. Otherwise, Nibbāna would not be possible. That needs some contemplation, and I will give some examples below.
- However, without suitable CONDITIONS, causes (kamma) cannot automatically bring results (vipāka).

3. The easiest way is to consider the following example: A seed contains necessary causes (ingredients) for bringing up a new tree. But just because a seed is there, a tree is not going to come to existence. If the seed is in a cool, dry place, one could keep it that way for a long time. Or one could burn or crush it, and it will not bring up a tree.

- SUITABLE CONDITIONS must be present for causes to bring about corresponding effects. That is what paccayā means.
- When such suitable conditions are present, causes WILL bring about corresponding effects. Thus when some effect is brought about, it is called "paccuppanna", i.e., born ("иррапnа") via suitable conditions ("paccay $\vec{a}$ "); of course, if the root causes must be there, to begin with).
- In the above example, the seed could germinate and grow to a tree if one plants that seed (cause) in the ground and provides water, nutrients, and sunlight (suitable conditions).

## Not All Kamma Lead to Kamma Vipāka

4. When causes are there, corresponding effects (results) are LIKELY if suitable conditions for the effects of taking place. That is why kamma is not deterministic; see, "What is Kamma? - Is Everything Determined by Kamma?."

- However, the critical point in PS is that the effect - IF AND WHEN IT HAPPENS - is in accordance with the cause, and also the CONDITIONS was one's choosing: "Pati ichcha" leads to "sama uppāda" or simply: "when one gets attached, that leads to a new birth of similar characteristics." If and when the causes bring forth the consequences, they will be of the similar nature.

5. It is not necessary to get into further details unless one is interested in "digging deeper", but there are 24 "paccay $\bar{a} "$ or "conditions" that can actually cause the effect to materialize; these are "Patthāna Dhamma").

- Let us briefly discuss three such paccayā, "hetu paccay $\bar{a} "$, "anantara samanantara paccay $\bar{a} "$, and "aññamañña paccayä" to see what happens.

## Three Important Conditions (Paccayā)

6. Nothing happens without a root cause or a hetu (pronounced "hãthu"; see the pronunciation key in "Pāli Glossary (A-K) and Pāli Glossary (L-Z)").

- For example, a bomb causes damage because of the explosives in it; but someone has to trigger it to go off. If the bomb sits somewhere for a long time, its propellants may degrade, and then the "cause" may disappear; most kamma seeds are like that too.
- Thus, without the root cause, there will not be an explosion. That is "hetu paccayā."

7. My favorite example of the "anantara samanantara paccaya" is the germination of a seed that I discussed above in \#3. Just because there is an apple seed, it will not cause an apple tree to appear.

- An apple seed will stay without germinating for many years in a cool, dry place. But if planted in the ground with water and sunlight present, it will sprout and give rise to an apple tree; see, "Anantara and Samanantara Paccaya" for details.
- Of course, just like with the bomb, if the apple seed sits there for too long, it may lose its potency and may not yield an apple tree at all. Thus the hetu paccayā must always be satisfied.

8. The third one, "aññamañna paccayā," means dependent on each other: For example, viññ̄ạna and nāmarūpa depend on each other:

- It usually is stated that "viññāna paccayā nāmarūpa" or "depending on the viññāṇa, nāmarūpa arise." For example, viññāna of the cuti citta at the moment of death causes a matching nāmarūpa to rise in the next birth: a hatefil thought could lead to birth in the niraya or the animal realm.
- However, viññāna in turn, depends on the type of nāmarūpa: with the nāmarūpa of an animal, it is not possible to get into j jhāna. Only certain types of nāmarūpa can "support" certain types of viññạ̄a.
- Depending on the situations one or more of 24 paccay $\bar{a}$ (or conditions) can simultaneously come into play. We will discuss this in future posts.

## Pațṭhāna Dhamma

9. I just wanted to give a brief introduction to the complex "Patthāna Dhamma" which describes 24 such "paccayä" involved in Paticca Samuppāda. In other words, cause(s) and effect(s) have complicated relationships. We can only discern significant relationships. Only a Buddha can sort out all such complexities.

- But there is no need to analyze everything in great detail to understand the message of the Buddha. One can become a Sotāpanna just by comprehending the Tilakkhana: anicca, dukkha, anatta.

10. So why am I also providing information on these complex topics? It is for three reasons:

- First, it helps build saddhā (faith) in Buddha Dhamma. Anyone who takes time to examine these concepts can see that it provides a COMPLETE explanation for everything that we experience and more.
- Secondly, it is intellectually satisfying to see how all pieces nicely fit into the "big picture": I hope I have been able to give the sense of joy that I have experienced in "seeing how these pieces fall into place."
- Finally, this "self-consistency" is critical in the process of sorting out which version of Buddha Dhamma is the correct one. As the Buddha himself pointed out, any version that is not self-consistent should be discarded; see, "Saddharma Pundarika Sutra (Lotus Sutra) - A Focused Analysis."
Next in the series, "Anantara and Samanantara Paccaya", ..

### 9.10 Paṭicca Samuppāda Cycles

Avyākata Paticca Samuppāda for Vipāka Viññāna
Akusala-Mūla Upapatti Paticca Samuppāda
Uppatti Paticca Samuppāda (How We Create Our Own Rebirths)
Kusala-Mūla Paticca Samuppāda
Idappaccayatā Paticca Samuppāda

### 9.10.1 Avyākata Paṭicca Samuppāda for Vipāka Viññāna

## October 17, 2017

1. First, a word about the nomenclature: The Pāli word is $a v y a \bar{k} a t a$ (or $a b y a \bar{k} a t a$ ) and the Sinhala word is avyākruta. It means "not designated as kusala or akusala, i.e., kammicaly neutral": there are no javana citta involved that generate abhisañkhāra.

- Kamma vipāka are kammically neutral. But based on those kamma vipāka, we initiate new kamma; see, "How Are Paticca Samuppāda Cycles Initiated?." I recommend reading that first, before continuing on this post.
- Both categories - kamma vipāka and kamma generation - can be described by paṭicca samuppāda (PS).
- Another key point I want to point out is that avyākata PS cycles NEVER start with a pabhassara citta [Radiant Mind]; see below.

2. Past kamma vipāka bring sense inputs via the six senses and IF we get attached - taṇh $\bar{a}$ - to those sense inputs, THEN that leads to new kamma by us. That is why it is a never-ending process, until one attains Nibbāna. After the Arahanthood, one will still experience such kamma vipāka, but WILL NOT get attached to them, i.e., no new kamma will be generated.

This cyclic process can be described in three steps:
i. One sees, hears, smells, tastes, makes body contacts, or a "dhamma" comes to one's mind. These do not "just happen"; they happen due to reasons (causes). They come about due to kamma vipāka, and those thoughts that arise due to them are called vipāka citta OR avyākata citta, since they are kammically neutral.
ii. Then, based on one's gati (pronounced 'gathi'), āsava, anusaya, one's mind may automatically get interested in a sense input (called an arrammana), and may get attached to that sensory input. This happens within a billionth of a second and we DO NOT have control over that initial response either; mano sañkhāra are generated AUTOMATICALLY in one's mind. These are also part of the avyākata citta since they arise AUTOMATICALLY within the same citta vīthi.
iii. IIF we one gets attached, then one starts generating new kamma by thinking CONSCIOUSLY about that sense input (generating vacī sañkhāra), i.e., one starts "wheeling around" accumulating "san" that contribute to new kamma; see, "Sańkhāra, Kamma, Kamma Bīja, Kamma Vipāka." That new kamma can get stronger if we may also start doing kāya sañkhāra via speech and bodily actions.
3. All those three steps may start even before our minds register that we have started accumulating new kamma. This is because citta vithi are very fast, and all those happen within a single citta vithi; see below. But if we are mindful, we can "catch" such "wheeling around" within a few seconds and stop just the apuññābhi sañkhāra (we should not stop puññābhi sañkhāra or moral thoughts).

- But that requires careful monitoring of our "automatic responses" to such sense inputs; this is what is called "being mindful." With practice, one can "catch" them quickly and stop bad thoughts/speech/actions.
- If we keep doing that, then OVER TIME, our gati will change for the better, and our attachments to "bad things" will fade away; see, "Difference Between Tanhā and Upādāna." What is described in that post is the basis of Satipaṭ!hāna/Ānāpāna Bhāvanā. If one can grasp this concept, and implement it diligently over a few months, one will be able to see for oneself the benefits!
- Also see, "Gati, Bhava, and Jãti" to read about the very important concept of gati. It is not correct to say we have a "self" or "no-self"; we just have gati that can be changed.
- That is the basis of SatipatthhānalĀnāpāna bhāvanā. If one can grasp this concept, and implement it diligently over a few months, one will be able to see for oneself the benefits!
- One can try it with "bad habits" (smoking, drugs, over-eating, etc) first to see the power of it, and then extend to other dasa akusala. This is also the way to Sotāpanna stage because then one will be able to grasp Tilakkhana too.

4. It is very important to understand the above steps, and the post "Tanhā - How We Attach Via Greed, Hate, and Ignorance" is a necessary first read too. What happens is explained in a bit more detail in "Vedanā (Feelings) Arise in Two Ways," "Kāma Assāda Start with Phassa paccayā vedanā or Samphassa Jā vedanā," and has been discussed in a more fundamental way in the subsection: Living Dhamma Fundamentals."

- Grasping this cyclic process of how we have traversed this suffering-filled rebirth process can be quite helpful but one must be willing to spend some time on those posts.

5. All PS processes can be broadly divided into three categories:
i. What we will discuss in this post is how past kamma vipāka bring in sense inputs via avyākata (Sinhala: avyākruta) PS process, and also automatically generate mano sañkhāra.
ii. Then akusala-mūla PS processes may contribute to generating new kamma that extends the rebirth process. These also start within seconds, but as mentioned above, we can catch and stop them if we are mindful (Satipaṭ!hāna/Ānāpāna).
iii. The kusala-mūla PS process describes how one can accumulate new "good kamma" that will eventually help us attain Nibbāna by following the Noble Path. If the kamma vipāka generated such a "good PS" process, we should cultivate those. That is also part of Satipaṭthāna/Ānāpāna.

The akusala-mūla and kusala-mūla PS processes are discussed in: "Paticca Samuppāda Cycles." So, this post on avyakata (abyākata in Sanskrit) (Sinhala: avyakruta) PS process will complete that subsection.
6. Now we can make the connection between the categories in $\# 2$ to categories in $\# 5$.

- The sense inputs initiation \#2 (i), and the initial response to it \#2(ii), are generated by the avyākata PS process of \#5(i).
- Our CONSCIOUS response to those sense inputs in creating new kamma (apuññābhisañkhāra or puññābhisañkhāra) in \#2(iii), are carried out by the two kinds of PS processes in \#5(ii) and \#5(iii).

7. This avyäkata PS process is not discussed in current Theravāda texts including Visuddhimagga. It is of course in the Tipitaka, and only the Pāli version is available at: "WebLink: suttacentral: Paticca Samuppāda Vibhañga (Vb 6)" (Section 2.11 on Abyākata Niddesa is about three-quarters of the way down from the top).

- I have not seen any current texts or internet sites in English that describe the avyākata PS process. But is needed to complete the picture of how kamma vipāka bring in sensory inputs to us AND initiate new kamma.

8. Here is the initiation of the avyākata PS process per Tipitaka reference in \#7 above: "..vipākaim cakkhuviññānai் uppannaì hoti upekkhā sahagatain rūpārammañaì, tasmim samaye sañkhāra paccayā viññāṇain, viññāna paccayā nāmain, nāma paccayā chaṭthāyatanaín, chaṭthāyatana paccayā phasso, phassa paccayā vedanā, vedanā paccayā bhavo, bhava paccayā jāti, jāti paccay $\bar{a}$ jarāmaranaì. Evametassa kevalassa dukkhakkhandhassa samudayo hoti." [Weblink: suttacentral: 2.11. Abyākataniddesa 2.11 Ahetukakusalavipākacitta 2.11.1.1 Ahetukakusalavipākacitta 2.11.1.1.1. Cakkhuviññānacitta]

- We can translate the initial part of this verse as, "..when a rupārammana (seeing an object) gives rise to a vipāka cakkhu viñ̃n̄ạna with ne utrall feelings (i.e., just seeing)..."
- Thus, "seeing" event is a neutral vedanā, as are all vipāka that come through all senses except the body: Only kāya viññāna - coming through the physical body - can directly generate sukha or dukha vedana due to kamma vipāka (as in getting hit by something or getting a massage).
- The other five types sensory inputs, at the moment of receiving, generate only neutral feelings (upekkha vedana $\overline{\text { }}$. This is an important point to grasp. All these like seeing, hearing, could generate "good or bad feelings" based on our gati, and those secondary feelings arise moments later (even though we cannot perceive that because it is so quick).
- But we can clearly see that, for example, some may generate "good feelings" and others may generate "bad feelings" upon hearing the same song. Seeing the same politician may cause "good feelings" in his supporters and "bad feelings" in those in the opposite party, and neutral feelings in others.

9. Unless it is pre-planned, a seeing event (any sense event) is initiated by a kamma vipāka. (However, going to see a movie is a deliberate action, in which case the real starting point is an idea or a dhamma coming to the mind as a kamma vipāka; think about it!)

- Again, it is important to grasp that a seeing event itself is a neutral event (upekkhāsahagataim rūpārammanaini) EVEN IF it is the seeing of a good object or a bad object. "Good or bad" is a relative thing depending not on the object but only on one's gati, as explained in \#8 above.
- One way to think about it, this initial cakkhu viñ̃̃āna is just the "seeing", i.e., it is like taking a picture with a camera.

10. In the same way, sota viñ̃̃āṇa is just the "hearing", ghāṇa viñ̃̃āna is just the "smelling," etc. Whether they are "good or bad vedan $\vec{a}$ " depends on the individual.

- When that image is presented to the mind, it instantly matches the image with one's cravings, likes, dislikes (i.e., gati), and mano sañkhāra are generated AUTOMATICALLY, leading to viññāna.
- Now, this second viññāna is the viññāna which has incorporated one's gati, not the cakkhu viñ̃̃āṇa captured by the eyes; of course, cakkhu viñ̃āṇa is also registered in the mind.

11. This is explained in the next step in \#8 above, "tasmim samaye (at that time) sañkhāra paccay $\bar{a}$ viññānain, viññāna paccayā nāmain, nāma paccayā chatthāyatanain, chaṭhāyatana paccayā phasso, phassa paccayā vedanā, vedanā paccayā bhavo, bhava paccayā jāti, jāti paccayā jarāmaranaim. Evametassa kevalassa dukkhakkhandhassa samudayo hoti."

This is the avyākata PS due to the kamma vipāka.

- Note that this PS process is different than the akusala-mūla and kusala-mūla PS processes; see the highlighted part of the abyākata PS above.
- First, it does not start with "avijjā paccayā sañkhāra." There will be no kamma done with avijjā. This is just a kamma vipāka.

12. Without going into this complex process, only the mindset of the person is changed based on the contact (phassa) of the ārammana with the gati of the individual.

- We note here that there are no "nāmarūpa" involved here, but just "nāma." This is a deeper point, but the generation of "nāmarūpa" involves javana citta which actually performs kamma. In this vipāka cycle, no kamma is done by the mind; the mind just matches the "picture" that it received against one's gati, and automatically recognizes if it is an object that one likes/dislikes.
- For example, if an alcoholic sees a bottle of his favorite alcohol, he will be temporarily be "born" ( $j \bar{a} t i)$ as an alcoholic at that instant. But if it was a person who has no such gati, this process will end right there (just seeing).
- But if it did lead to the person being born in the "alcoholic state", then a new akusala-mūla PS process will run inside that avyākata PS process starting at "bhava paccayā jāti" step.

13. Therefore, subsequent to that avyākata PS, new akusala-mūla PS processes may start. That is the "new kamma generation." Even though an Arahant will experience a similar avyākata PS, that WILL NOT lead to an akusala-mūla PS process.

- An akusala-mūla PS process MAY NOT be initiated even in a normal human if he/she did not have gati to be attached to that sense input (ārammana).
- But that does NOT mean that the avyākata PS in that case involved "pabhassara citta" [Radiant Mind] or "pure uncontaminated citta." It just means that person did not have gati to be interested in that particular sensory input.

14. Both the initial avyākata PS and the subsequent akusala-mūla PS process will take place within the same citta vīthi (in the above example a cakkhudvāra citta vith $h i$ with 17 citta), which lasts only a billionth of a second!

- Such fast processes are not discernible to any human other than a Buddha. But we have the ability to study it and realize that indeed that must be correct. In that sense, we must not focus on just this process, but realize that it fits in nicely with any phenomenon that we experience.
- As one learns deeper concepts, it will be difficult not to be amazed by the capabilities of a Buddha. This is how one builds one's faith (saddh $\bar{a}$ ).
- The following discussion will illustrate how the processes that we discussed above fit in nicely with the concept of a citta vìthi.

15. The following may not be fully graspable by someone who is not familiar with the details of citta vīthi. But just read on and try to get the basic idea without worrying about the details.

- The following figure shows a typical thought process (citta vīthi) that is started when eyes capture a "seeing event" (rūpa aramanna or rūpārammana).

Avyakata PS Akusala-mula PS

B B "AB BC BU PD CV Sam San V J J J J J J J T T" B B Kamma Vipaka $\uparrow$ New Kamma

Decision Making According to Gati
$\mathrm{B}=$ bhavanga, $\mathrm{AB}=$ atita bhavanga, $\mathrm{BC}=$ bhavanga calana,
$B U=$ bhavanga upacceda, $P D=$ pancadvara vajjana, $C V=$ cakkhu vinnana,
Sam = sampticcana, San = santirana, $\mathrm{V}=$ vottapana, $\mathrm{J}=$ javana, $\mathrm{T}=$ tadanga

Click the following link to magnify and download: WebLink: PDF File: Avyākata Piticca Samuppāda

- For a discussion on citta vithi, see, "Citta vithi - Processing of Sense Inputs."

16. In between citta vīthi, the mind is in the "bhavañga state"; see, "Pabhassara Citta, Radiant Mind, and Bhavañga." That post is also a bit advanced, and I will try to make a new section on "simple Abhidhamma" in the future.

- If you see someone not active and just staring into space (not really thinking or concentrating on an idea), then that person's mind is likely to be in the bhavañga state ( $\mathbf{B}$ in the figure). This is also explained in the post, "Citta vithi - Processing of Sense Inputs."
- When the mind switches from this bhavanga state to a picture that is brought to its attention, it takes three thought moments to "break away" from that bhavanga state and to focus the attention on the new sensory input.
- With the PD citta, the mind sees that it is coming through the "eye door" (cakkhu dvāra) and in the next citta captures that picture. This is the initiation of the avyākata PS process: "..vipākain cakkhuviññānain uppannain hoti" in \#8 above.

17. Then, during the next two citta ("Sam" for sampaticcana, and "San" for santirana), the mind matches that picture (sense input) with its own gati and may get attached to it. This is what is described in "tasmim samaye sañkhāra paccayā viññannaì, viññāna paccayā nāmaì, nāma paccayā chaṭthāyatanaìn, chatṭhāyatana paccayā phasso, phassa paccayā vedanā, vedanā paccayā bhavo, bhava paccay $\bar{a}$ $j a \bar{t} i . "$

- Then the person is "temporarily born" in a different state (a person with "alcoholic gati" will be born instantly as an alcoholic upon seeing his/her favorite drink), and may start a new akusala-mūla PS process, as discussed below.
- That decision to acting with avijjā based on that "matching" happens at the all-important votthapana (V) citta.

18. Then a new akusala-mūla (or kusala-mūla) PS process starts and one starts generating kamma with javana citta (J), as shown in the above figure. So, this new PS process starts with the standard, "avijj $\bar{a}$ paccayā sañkhāra, sañkhāra paccayā viññāṇa...."

- When this initial citta vīthi ends, more such akusala-mūla PS cycles will follow, if one got "attached." Even within a second, there could be thousands of such akusala-mūla PS cycles running (and each becoming stronger due to the past ones), even before one is fully consciously aware of it.
- But as humans (with the neocortex that slows down this fast processing; see, "Truine Brain: How the Mind Rewires the Brain via Meditation/Habits," we have the ability to stop those akusala-mūla PS cycles from building up to doing bad speech and bad actions.
- This is the key to Satipaṭthāna/Ānāpāna Bhāvanā: to be mindful and catch any "impulsive wrong actions" before they get out of hand. With practice, one will be able to "catch oneself" very early in this process.

19. This is also why Satipațthāna/Ānāpāna bhāvanā cannot just be limited to a "sitting meditation session." One needs to be engaged during all waking hours and be mindful. Then with time, our gati will change for the better, and we will stop doing "foolish and damaging things."

- Then our minds will become pure and we will be able to grasp more of Buddha Dhamma. It is a gradual process, especially initially.
- Now it should also be clear that one will NOT have a "pabhassara citta" [Radiant Mind] at any time unless one is an Arahant. It should be clear that one can never stop that initial avyākata citta vithhi. It is gone within a billionth of a second.
- However, we do need to stop those akusala-mūla PS processes, as soon as we become aware of them. Terminology does not matter if one is doing the correct procedure.

20. Don't be discouraged if you find this post too technical. Paticca samuppāda can go to very deep levels. Just get the overall idea and things will become clear with time if you read the other posts referenced.

### 9.10.2 Akusala-Mūla Upapatti Paṭicca Samuppāda

This is an early post; revised May 10, 2018; March 13, 2021; May 10, 2021; May 13, 2021; rewritten May 21, 2021; revised August 18, 2021

Akusala-mūla upapatti Pațicca Samuppāda describes how our present actions dictate the rebirth process among the 31 realms. [upapatti :[f.] birth; rebirth; approach.]

## Six Root Causes That Determine Future Births

1. One is born in this world due to the six root causes.

- One is born in the apāyā or dugati (and also subjected to suffering even when born in good realms) due to bad gati arising mainly due to lobha, dosa, moha. The two main version of akusala-mūla PS operate when actions, speech, and thoughts occur with these three root causes; see \#2.
- One is born in the remaining "good realms" or sugati (and experience mundane sense pleasures) due to good gati due to alobha, adosa, amoha. The kusala-mūla PS operates when actions, speech, and thoughts occur with these three root causes with the comprehension of the Noble Truths; see "KusalaMūla Paticca Samuppāda." In particular, that post explains why puñ̃̄ābhisañkhāra (moral deeds) become kusala (i.e., truly alobha, adosa, amoha) only with an understanding of the Four Noble Truths/Paticca Samuppāda/Tilakkhaṇa.
" Also, see "Six Root Causes - Loka Samudaya (Arising of Suffering) and Loka Nirodhaya (Nibbāna)."

## Two Types of PS Processes Based on Lobha, Dosa, Moha

2. Akusala-mūla PS describes the PS process when one acts with lobha, dosa, moha, the three root causes that bring "bad outcomes." It is also two-fold:

- The upapatti PS describes how a "lifestream" or a being makes the samisāric journey via repeated births in the 31 realms.
- The Idappaccayat $\bar{a}$ PS describes the moment-to-moment progression of a "lifestream" or a being. This is discussed at "Idappaccayatā Paticca Samuppāda."
- It is important to note that Buddhaghosa (in Visuddhimagga) described only the upapatti PS. In recent times, Waharaka Thero has discussed the Idappaccayatā PS in detail.

## Upapatti Paṭicca Samuppāda Process

3. Let us now discuss the upapatti PS, which describes how the PS cycle goes through a new birth at the end of current life. The steps in this cycle are:
"avijjā paccayā sañkhāra; sañkhāra paccayā viññāna; viñn̄ạna paccayā nāmarūpa, nāmarūpa paccayā saḷāyatana, salāyatana paccayā phasso, phassa paccayā vedanā, vedanā paccayā taṇhā, tanh $\bar{a}$ paccayā upādāna, upādāna paccayā bhavo, bhava paccayā jāti, jāti paccayā jarā, maraṇa, soka-parideva-dukkha-domanassupāyasā sambhavan'ti" [Weblink: suttacentral: Majjhima Nikāya 115 Bahudhātukasutta]

And that is how this whole mass of suffering arises: "Evametassa kevalassa dukkhakkhandhassa samudayo hoti "

Let us briefly discuss those steps.

## Sañkhāra - Thoughts, Speech, Actions Due to Avijjā

4. With ignorance of the Four Noble Truths as a condition, one thinks, speaks, and acts with those "bad root causes" of lobha, dosa, moha. Such thoughts, speech, and actions arise due to mano, vacī, and kāya sañkhāra. We must note that these are really abhisañkhāra, i.e., they are strong sañkhāra; "abhi" means "strong." See, "Sañkhāra - What It Really Means."

- We are born without ANYTHING material other than our tiny baby body, which actually started as a single cell in the mother's womb. We grow up and start acquiring "stuff" both material and non-material: knowledge, material things, friends, spouse, children, fame, etc.
- While we acquire these "things" we also acquire new habits (gati) or strengthen ones that we brought from previous lives; these take place according to the Idappaccayatā PS at every moment: "pati + ichcha sama uppāda," i.e., we do things that we like and get similar kind of results.
- When we die, we take with us only the kamma seeds (both good and bad) from our actions; the habits (gati) and cravings ( $\bar{a} s a v \bar{a}$ ) are embedded in them. These are in the manomaya k $\bar{a} y a$, and the manomaya kāya (or gandhabba) leaves the dead physical body with those "updated" kamma seeds. This is basically the "net result" of our life here.
- One of the existing kamma seeds (from this life or previous lives) gives rise to the next life, where we acquire more of them BASED ON the gati and āsavas. So the cycle perpetuates.

## Viññāna in Upapatti PS Is Paṭisandhi Viññāṇa

5. With sañkhāra as a condition, energy for a new bhava or a patisandhi viññāna arises.

- This viññāna of the new life arises according to the nature of the kamma seed that gave rise to it. If that kamma seed was due to some hateful act(s), then the viññanna will be matching: "pati + ichcha sama uppāda." If it is a seed due to an act of generosity done with loving kindness, it could be the viññāna of a Brahma.
- Thus the "base level of viññāna" for animal life is VERY DIFFERENT from that of human life, even for the same "lifestream," i.e., when a human is reborn as an animal the "base level of viñ̃̄āna" makes a huge downward transition. This is why it is NOT correct to say that "viññāna is transferred from life to life." See, "What Reincarnates? - Concept of a Lifestream."

## What Are Nāmarūpa?

6. With viññāna as condition, nāmarūpa arise.

- Nāmarūpa in the upapatti PS is different from those come to play in the Idappaccayatā PS.
- For clarification of nāmarūpa, see "Viññāna Paccayā Nāmarūpa."
- A deeper discussion at "Kamma Viñ̃n̄āna and Nāmarūpa Paricceda Ñāna."

## Salāyatana Means To Use the Sensory Faculties With a "Unpurified Mind"

7. With nāmarūpa as a condition, salāyatana arises.

- In upapatti PS, salāyatana (six sense doors) refers to those that arise for the new existence. For example, six sense doors arise for an animal while just three sense doors (eye, ear, and mind) arise for a Brahma.
- See, "Nāmarūpa Paccayā Salāyatana" for details.

## Phassa, in This Case, Is "Defiled Contact" or Samphassa

8. With salāyatana as a condition, phasso arises.

- The meaning of the root word "phassa" is "contact." Any living being sees with eyes, hears with ears, etc.
- However, in akusala-mūla PS, phassa is really "samphassa" or "sañ phassa." See \#9.
- This is why this Akusala-mūla Pațicca Samuppāda is not applicable for an Arahant (and also for other Ariyā too at most times). An Arahant does not generate "samphassa" but just "phassa" without "sañ."
- Many posts on the website on this important concept; see, "Search Results for samphassa."

## Vedanā Is Samphassa-Jā-Vedanā

9. With (sañ) phassa as condition, vedana arise.

- The root level of vedanā arises due to phassa for living beings, including Arahants.
- It is important to realize that NOT all vedanā play a role in akusala-mūla PS. Only those vedana that arise due to samphassa ("samphassa ja vedanā") play a role here.
- When greed, anger, or ignorance take over, a mind generates samphassa-j $\bar{a}-v e d a n \bar{a}$.
- Such "samphassa jā vedanā" depend on the gati and $\bar{a} s a v a s: ~ s e e, ~ " V e d a n a ̄ ~(F e e l i n g s) ~ A r i s e ~ i n ~ T w o ~$ Ways." Also, see step \#3 in "Tanh $\bar{a}$ - How We Attach Via Greed, Hate, and Ignorance."
- We discussed this recently in the post, "Dukkha Samudaya Starts With Samphassa-Jā-Vedanā."

## "Attaching" or Tanhh $\bar{a}$

10. With samphassa-j $\bar{a}$-vedanā as a condition, tanhh $\bar{a}$ arise.

- Tanhha arise when one gets "attached," or 'fused" into a thing or situation: with sukha vedana $\bar{a}$, one attaches with greed; with displeasure, one attaches with hate; one also attaches with not knowing what to do (with a highly agitated mind); see, "Tanhā - How We Attach Via Greed, Hate, and Ignorance."

## The Key Step of Upādāna

11. With taṇhā as condition, upādāna arise.

- At the moment of death, in the last citta vithi, the dying person gets a kamma nimitta. This is normally a vision or a sound that depicts the nature of the strong kamma seed that came to the forefront of the mind.
- For example, if the kamma seed that is about to give the next birth was due to killing, then the person may see a gun or hear the sound of it, or even see himself as getting ready to shoot; thus, the person will have the same hateful thoughts arise and just like at the time of the crime, the person embraces that situation automatically (upādāna) because one has such "gati" or habits.
- I highly recommend the subsection on "Concepts of Upādāna and Upādānakkhandha" that will also clarify the previous steps.

## Kammic Energy Accumulation in the Step "Upādāna Paccayā Bhavo"

12. With upādāna as condition, a new existence (bhava) is grasped at the cuti-patisandhi moment.

- The next citta vith $h i$ starts with the new existence or "bhava" matching that state of mind: "pati $+i c h c h a$ sama uppāda." Depending on the kamma nimitta that was grasped, a matching existence, a human, animal, deva, etc. arise; see, "Paticca Samuppāda - "Pati+ichcha"+"'Sama+uppāda."
- More details in "Concepts of Upādāna and Upādānakkhandha." A deeper analysis of "Difference Between Tanhā and Upādāna."

## Bhava Paccayā Jāti - Kammic Energy Giving Rise to Rebirth in a New Realm

13. With bhava as a condition, $j \bar{a} t i$ (new birth) arises. Note that except for human and animal realms, bhava and jāti are essentially the same. See, "Bhava and Jāti- States of Existence and Births Therein."

- At this step, a birth matching the bhava starts for the human and animal realms. The selected "human/animal bhava" will last until the kammic energy associated with that kamma seed is exhausted, as explained in the above post.
- Thus, if the kamma seed has the potential for thousands of years of life, the next birth will still be in the human realm when the current life ends.

## Each Birth Ends Up With "Various Types of Suffering"

14. With $j a \bar{a} t i$ as condition, "jarā, maraṇa, soka-parideva-dukkha-domanassupayasa sambhavan' $t i$ ".

- Jāti inevitably results in decay and eventual death. Therefore, this process describes how dukkha arises in the rebirth process.
- No matter where one is born in the 31 realms, one grows old and eventually dies. During that time, one goes through all kinds of suffering, particularly in the human realm and below. Aging and death are certainties.
- And at death, the whole cycle re-starts unless the Arahanthood had not been realized. One WILL BE born somewhere in the 31 realms, and the whole process will continue.

15. The above steps describe the upapatti PS. The other aspect, i.e., what happens during a given lifetime, is described in "Idappaccayatā Paticca Samuppāda."

- Of course, ALL kamma accumulation happens in the Idappaccayatā PS. The upapatti PS explains how rebirths take place according to such accumulated kammic energies.
- All the steps in the akusala-mūla Paticca Samuppāda are described in detail in the series: "Paticca Samuppāda in Plain English."
- Also, see the new subsection, "Paticca Samuppāda - Essential Concepts."

### 9.10.3 Uppatti Paṭicca Samuppāda (How We Create Our Own Rebirths)

July 6, 2019; revised October 4, 2021

## Rebirths Arise Due to Our Actions

1. Uppatti Paṭicca Samuppāda describes how we create our rebirths. Idappaccayatā Paṭicca Samuppāda explains how we make our kamma vipāka. The post, "Bhava paccayā Jāti....Jarā , Marana,...." discusses the differences between kamma bhava and uppatti bhava. [upapatti : [f.] birth; rebirth; approach.][uppatti: :[f.] rebirth; coming forth; origin.]

- Both types of bhava or existences arise due to the generation of (abhi)sañkhāra due to avijjā. We remember that we do all kinds of kamma (kāya kamma, vacī kamma, mano kamma) with sañkhāra ( $k \bar{a} y a, v a c \overline{\text {, }}$, and mano sañkhāra) or "how we think and then act on such thinking."
- ALL sañkhārā arise in the MIND. As we know, sañkhārā make kammā that lead to future rebirths with physical bodies. That is why the Buddha said: "Mano pubbangamā dhammā.." or "ALL dhammā arise with the mind as precursor..."
- When we generate (abhi)sañkhāra that creates a "future expectation" or a viññ̄ạna; see, "Viññāna Aggregate." That ALWAYS leads to a kamma bhava, which is a "seed" to bring about a future existence in this life or future life.
- A kamma bhava can become a uppatti bhava if it becomes strong enough to give rise to rebirth. For example, killing a parent WILL generate a uppatti bhava that WILL bring in birth in an apāya in the very next rebirth.

2. That is the crucial difference between Idappaccayatā Paṭicca Samuppāda and Uppatti Paṭicca Samuppāda; see, "Paticca Samuppāda Cycles."

- Idappaccayatā Paticca Samuppāda generates kamma seeds or kamma bhava moment-to-moment.
- Those bhava (or kamma seeds or kamma bija) that bring kamma vipāka during a lifetime (whether in this life or WITHIN a future life) are called a "kamma bhava."
- Some bhava are strong enough to bring in a new future existence (whether in a bad realm or a good realm) are called "uppatti bhava."
- Regardless of whether it is a kamma bhava or a uppatti bhava, we generate them every time we act with avijjā and make viñ̃n̄ạna via the steps, "avijjā paccayā sañkhāra" and "sañkhāra paccayā viññāna."
- Then subsequent Paticca Samuppāda steps invariably lead to "bhava paccayā jāti" and "jāti paccayā jarā, marana, soka, perideva, dukkha, domanassa, upasaya sambhavanti. Evametassa kevalassa dukkhakkhandhassa samudayo hoti." or "the whole mass of suffering."

## Grasping a Bhava Happens Automatically

3. We do not have any control over which "uppatti bhava" is selected at death. The strongest with the most "upādāna" associated with it gets to the front automatically. The Buddha gave a simile to explain how this selection of a "uppatti bhava" or a potent kamma seed happens at the cuti-patisandhi transition at death.

- Imagine a barn that keeps the cows in for the night. In the morning, all the cows are anxious to get out and roam around. When the gate opens, the strongest cow has come to the front and is out of the gate first. The weaker cows don't even make an effort to go to the gate.
- Just like that, it is the most potent "kamma seed" or a "patisandhi bhava" that wins at the cutipatisandhi transition.
- We discussed the case of a teenager in the previous post, "Bhava paccayā Jāti....Jarā, Marana, ...". Suppose he created a potent kamma seed with an action depicting "animal-like" behavior. In that case, it will bring about an animal's existence at the cuti-patisandhi transition.

4. A Buddha could analyze such a patisandhi Paticca Samuppāda cycle in detail to pinpoint even the type of animal. That is because a Buddha can see not only a person's whole history in the present life but going back to many eons. Thus, he could see which kamma seed will bring the following existence and exactly which kind of "gati" are associated with that kamma seed. We can only discuss the general trends, and here we have discussed only the main ideas of how these Paticca Samuppāda cycles operate.

- Going back to the teenager, In this case, it is the pattisandhi Paticca Samuppāda cycle that operates, and "bhava paccaya $\bar{j} \bar{a} t i$ " here leads to the birth in a new existence as an animal using that uppatti bhava.

## Difference Between Bhava and Jāti

5. It is essential to realize that cuti-patisandhi transition DOES NOT necessarily happen when a human dies. They can be reborn many times as humans within a given "human bhava"; see, "Bhava and Jāti - States of Existence and Births Therein."

- Once born ( $j \bar{a} t i)$ in such an animal existence (bhava), that animal will grow and then start the old age ("jara"), and eventually, die ("marana").
- Since most violent animals have shorter lifetimes, only a fraction of that kammic energy is likely to have been spent. That animal will keep going through many similar births (" $j \bar{a} t i$ ") until the power of that kamma seed is consumed. Many animals keep coming back to the same life many hundreds of times.

6. That is the difference between "bhava" and " $j \bar{a} t i$." Once one gets a new existence or "bhava," one could have many births (" $j \bar{a} t t$ ") in that existence until the energy in the kamma seed runs out. I keep repeating this because it is essential to understand the difference between "bhava" and "jāti."

- Thus, we can see that the last step of "jāti paccayā jarā, marana, soka, parideva, dukkha, domanassa, upasaya sambhavanti. Evametassa kevalassa dukkhakkhandhassa samudayo hoti." will be with that "teenager" for a long time to come. It is not just one birth but many that will correspond to that existence as that animal.
- In general, when one is in the human "bhava" one could be reborn many times before the energy of that "good kamma seed" is depleted. That is why some people can recall memories from recent past lives. A human bhava can last thousands of years, but each human birth ( $j \bar{a} t i$ ) lasts only about 100 years.
- However, getting another "human bhava" is difficult; see "How the Buddha Described the Chance of Rebirth in the Human Realm."

## How Are Certain Rebirths Stopped?

7. We mentioned earlier that anyone would have accumulated numerous good and bad kamma seeds strong enough to give rise to good and bad rebirths. Then the following question arises. Does a person attain the Sotāpanna stage by eliminating all those corresponding bad kamma seeds?

- While it is possible to reduce the potency of kamma seeds and maybe even eliminate some, it may not be possible to remove all. The Ariya metta bhāvan $\bar{a}$ - discussed in the "Bhavana (Meditation)" section - can lessen the potency of some kamma seeds. Even the Buddha had 11 instances of bad kamma vipāka, including a back problem.
- Therefore, it is very likely that we all have many good and bad kamma seeds strong enough to energize many good and bad rebirths.

8. What happens at the cuti-paṭisandhi moment involves the "upādāna paccayā bhava" step in the uppatti Pațicca Samuppāda cycle.

- Suppose a person dies, and that was the last possible human birth for them. Then at the dying moment, that poten kamma seed will generate a corresponding nimitta (or sign of that kamma).
- Whether they will willingly grasp that nimitta will depend on whether they still have such "gati."

9. Let us again consider the case of the violent teenager discussed in \#3 in the previous post, "Bhava paccayā Jāti. ...Jarā , Marana,...." Suppose he continued with his violent acts and built up a "uppatti bhava" suitable for a fierce animal. Then, at the dying moment, he would see in his mind (like in a dream), a rival gang member trying to "steal a drug deal"; he would also see a gun close-by. That is the nimitta.

- If that person still has the same gati, he will get angry, grab the gun, and shoot that person by his instincts.
- That is the "upādāna paccayā bhava" step for the new existence. That person has willingly grasped the mindset of an animal, and he will be born as an animal.
- This process is explained from beginning to end in detail in the series of posts, "Paticca Samuppāda in Plain English."

## How Does a Sotāpanna Avoid Bad Rebirths?

10. Let us now go back to the question of how a Sotāpanna avoids such bad rebirths even if they have many bad kamma seeds. Suppose that Sotāpanna has the same kind of strong (and bad) kamma seed as that teenager (could be from a previous life).

- What happens is that a Sotāpanna will not grab the gun and shoot that person even if it is their worst enemy. His mindset or "gati" has permanently changed. Thus "upādāna paccayā bhava" step will not be executed for that kamma seed.
- In that case, now the next potent uppatti bhava will come to the forefront. If that is also a bad one suitable for rebirth in the lowest four realms, Sotāpanna's mind will rejected that too. Eventually, he will grasp a rebirth that is compatible with his "gati" at that dying moment. A Sotāpanna has removed the "gati" of a being in one of the four lowest realms.
- All that happens automatically and very quickly. We do not have any conscious control over it.

11. How one lives this life AND how one lived previous lives can contribute to future rebirths. One would generate "kamma seeds" or "uppatti bhava" for possible future existences according to how one lives a life.

- However, bad bhava will not result if one has changed one's gati PERMANENTLY (via attaining at least the Sotāpanna stage). EVEN IF one had committed bad kamma suitable to bring in a 'bad bhava," one's mind will not be grasped that "bad bhava"at the cuti-patisandhi moment.
- That is why Paṭicca Samuppāda means "pati + ichcha" leading to "sama" + "uppāda." What one grasps willingly and habitually is what one that will operate automatically at the dying moment; see, "Paticca Samuppāda - "Pati+ichcha"+"Sama+uppāda."
- It is better to use Paticca Samuppāda even in English rather than "dependent origination." Most Pāli words have "built-in" explanations (pada nirutti). One needs to understand what is meant by those words and use the Pāli words. [pada :[nt.] foot; foot-step; a word; position; place; reason; cause; a line of stanza; the final rest. nirutti : (f.) [Sk. nirukti, nis+vac] one of the Vedāngas (see chalanga), expln of words, grammatical analysis, etymological interpretation; pronunciation, dialect, way of speaking, expression.]
- I have explained this with sañ̃̄ā, sañkhāra, and viññ̄ạna as well; see, "Mental Aggregates." Those DO NOT have corresponding SINGLE English words. In particular, it is WRONG to translate viñũāna as just "consciousness"; see, "Viññāna Aggregate."

## Relevance to "Origin of Life" Issue

12. I hope it is clear now how we create our future births by doing strong kamma. Good kamma lead to good vipāka and good births. Bad kamma leads to bad vipāka and bad births.

- Not only that, but we can avoid bad births (in the lower four realms) by removing our 'bad gati that could lead to such births." Attainment of Sotāpanna stage ensures this.
- In the same way, we can stop births in the human and deva realms (remaining realms in kāma loka). Removal of "kāma gati" or cravings for sense pleasures get one there. The need to take this step may not become clear until one attains the Sotāpanna stage.
- Even the higher brahma realms have some of suffering (especially at the moment of death). Future suffering is completely removed by removing "all gati" including those based on craving for jhānic pleasures in brahma realms. This happens of course at the Arahant stage.

13. It should also be clear that "new lives" do not randomly come into existence. A new $j \bar{a} t i$ based on a new bhava arises ONLY as a continuation of an existing lifestream; see, "What Reincarnates? Concept of a Lifestream."

- A living being automatically grasps a new bhava when one bhava ends (except for an Arahant.)
- That is how the rebirth process continues. And that is also why there is no "traceable beginning to life."
" A detailed discussion in a new series of posts on "Origin of Life."

### 9.10.4 Kusala-Mūla Paṭicca Samuppāda

This is an early post; revised May 10, 2018; re-written February 6, 2021; \#2 revised February 10, 2021; May 28, 2022; August 27, 2022

## What Is Kusala-Mūla Paṭicca Samuppāda?

1. Kusala-mūla version of Paticca Samuppāda (PS) describes the way to Nibbāna. It is not described in even the current Theravāda texts, even though it is in the Tipitaka. Since the time Buddhaghosa wrote Visuddhimagga, all Theravāda texts followed his books instead of Tipitaka.

- That means the PS process for attaining Nibbāna has NOT been described for over 1500 years. No wonder the Nibbāna has been hidden for all these years.
- Kusala-mūla (pronounced "moola") PS describes the PS process for acting with alobha, adosa, and amoha with an understanding of the Four Noble Truths. That goes beyond the mundane versions of alobha, adosa, and amoha. We will discuss that below.
- Of course, the kusala-mūla PS process is unknown to the world without Buddha's true teachings.
- By the way, the word "kusala" comes from "ku" (defilements)+ "sala" (abandon.) Thus kusala kamm $\bar{a}$ lead to the removal/abandonment of defilements (akusala.)

## Regular Version of Alobha, Adosa, Amoha Keeps One in the Rebirth Process

2. One is born in this world due to the six root causes.

- One is born in the apāyā or dugati (and also subjected to suffering even when born in good realms) due to bad gati arising MAINLY due to lobha, dosa, and moha. The akusala-mūla PS operates when actions, speech, and thoughts occur with these three root causes; see, "Akusala-Mūla Patticca Samuppāda. "
- One is born in the "good realms" or sugati (and also experiences mundane sense pleasures) due to "good gati" developed by acting with conventional or mundane alobha, adosa, and amoha. For example, one can engage in "good deeds" like giving, helping out others, etc., or cultivate jhāna. Those are done with mundane versions of alobha, adosa, and amoha and can lead to rebirths in human, Deva, and Brahma realms. However, they WILL NOT lead to Nibbāna, i.e., stopping the rebirth process.
- It is ONLY when one is acting with alobha, adosa, and amoha (and comprehension of Four Noble Truths/Tilakkhana/Paṭicca Samuppāda) that those actions lead to Nibbāna via 'Kusala-Mūla Pațicca Samuppāda" that e are discussing now.
- The above points are also discussed in detail in "Six Root Causes - Loka Samudaya (Arising of Suffering) and Loka Nirodhaya (Nibbāna)."

## There Are Two Tiers of Alobha, Adosa, Amoha

3. The uniqueness in Buddha Dhamma reveals two tiers (or levels) of alobha, adosa, and amoha.

- All religions teach that it is good to act with alobha, adosa, and amoha. Of course, the Buddha advised that too.
- However, if one is to stop future suffering in the rebirth process, one MUST see the dangers of remaining in the rebirth process. This can be stated in three different ways of understanding: Four Noble Truths, Paṭicca Samuppāda, and Tilakkhaṇa.
- With that understanding, alobha, adosa, and amoha elevate to a new level. One is now engaged in "good deeds," not seeking "good rebirths" but to be released from the rebirth process. In other words, now, one's goal is to attain Nibbāna.
- Good deeds done without a deeper understanding of the Four Noble Truths are puñña kammā. One gets "good rebirths" with puñña kammā. When one starts understanding the Four Noble Truths, such actions AUTOMATICALLY become kusala kammā and help attain Nibbāna.
- This is discussed in detail in "Kamma, Sañkhāra, and Abhisańkhāra - What Is "Intention"?."

## Kusala-Mūla Paṭicca Samuppāda Involves Kusala Kamma

4. It is the kusala-mūla Paṭicca Samuppāda process that leads to Nibbāna. That is why this PS process starts with "kusala-mūla paccayā sañkhāra."

- As we know, the akusala-mūla Pațicca Samuppāda process maintains the rebirth process. Puñña kamma done with mundane versions of alobha, adosa, amoha are ALSO included in "avijjā paccayā sañkhāra" in the akusala-mūla Paṭicca Samuppāda process. See "Kilesa - Relationship To Akusala, Kusala, And Puñña Kamma."
- It is critical to understand this distinction. The mundane versions of alobha, adosa, and amoha still lead to akusala-mūla PS cycles that keep one in the rebirth process. It is ONLY AFTER one starts comprehending the Four Noble Truths (or the working of the Patticca Samuppāda processes or Tilakkhaṇa) that one will start operating under the kusala-mūla PS process leading to Nibbāna.
- Now we can look at the steps in the kusala-mūla PS process.

## Steps in the Kusala-Mūla Pațicca Samuppāda Process

5. The steps in this kusala-mūla cycle are (WebLink: suttacentral: Paticcasamuppāda Vibhanga):
"kusalamūla paccayā sañkhāro, sañkhāra paccayā viññanạam, viññāna paccayā nāmarupaín, nāmarupa paccayā salāyatanaì, salāyatana paccayā phasso, phassa paccayā vedanā, vedanā paccayā pasādo, pasāda paccayā adhimokkho, adhimokkha paccayā bhavo, bhava paccayā jāti, jāti paccayā jarā maranaìi. Evametesain dhammānain samudayo hoti."

Here I have marked in orange-red the terms that are different from those in the akusala-mūla PS. Let us briefly translate the terms. Here I am describing both pavutti and upapatti PS together. [pavutti: [fr. $\mathrm{pa}+\mathrm{vrt}$, cp. Class. Sk. pravrtti] happening, proceeding, fate, event.] and upapatti [also written as upapatti which means rebirth]

- With kusala-mūla as a condition, one accumulates puññābhi sañkhāra WITH the comprehension of the Four Noble Truths. Those may be called kusala-mūla sañkhāra.
- Such kusala-mūla sañkhāra arises in a mind when doing deeds with lokuttara alobha, adosa, and amoha. THEREFORE, one does not wish for anything other than Nibbāna because one's mind automatically rejecting anything within the 31 realms.

## Kusala-Mūla Sañkhāra Lead to Kusala-Mūla Viññạ̣̄a

6. With kusala-mūla sañkhāra as condition, a kusala-mūla viññāna arises.

- Because the sañkhāra was generated with a kusala-mūla deed, only a kusala-mūla viññāṇa arises: "paṭi +ichcha sama uppāda." The characteristic of this kusala-mūla viññāna is the desire (chanda, not kāmacchanda) for Nibbāna.
- The only expectation in one's mind is to attain Nibbāna and be free of all future suffering.

Kusala-Mūla Viññ̄ạa Lead to Corresponding Nāmarūpa
7. Such kusala-mūla viññāna lead to corresponding "good" or "kusala-mūla" nāmarūpa in pavutti Paṭicca Samuppāda or in upapatti Pațicca Samuppāda.

- Those "kusala-mūla nāmarūpa" are the "mental pictures" that arise in the mind and are associated with people and deeds relevant to one's efforts in attaining Nibbāna. For example, one may think about talking to a Noble friend, and he/she comes to mind. Or, one could be planning an alms-giving, etc.
- At death, the pațisandhi viññāna is again according to the kusala-mūla viññaṇa. Thus a birth in the lower four realms is avoided for a Sotāpanna, and a birth in the lower 11 realms (kāma loka) is avoided for an Anāgāmi, for example.

## Kusala-Mūla Nāmarūpa Lead to Kusala-Mūla Salāyatana

8. With such nāmarūpa as a condition, corresponding salāyatana arises.

- They are attuned to only meritorious deeds tailored towards Nibbāna in pavutti Paṭicca Samuppāda.
- In the case of new (Ariya) birth, the new existence's sense faculties arise accordingly. They can never be sense faculties for a realm in the apāyās.

## Subsequent Steps Arise in the Same Way

9. With a salāyatana as a condition, phasso (contact with that sense faculty) arises.

- Note that this is just "phassa" and NOT "san phassa" or "samphassa" as in "Akusala-Mūla Paticca Samuppāda."
- Contacts with the outside world are attuned to seeking Nibbāna. To learn dhamma and to practice dhamma.

10. With phassa as a condition, vedanā arises.

- Through such interactions, one enjoys contact with dhamma, true knowledge, and understanding.

## Such Contacts Lead to Citta Pasäda Followed by Adhimokkha (Instead of Taṇhā and Upādāna)

11. With such a vedanā as a condition, citta pasāda arises.

- The "tranquility of consciousness" is the standard translation for citta pasāda. It is of joyous feeling, lightness of heart.

12. With increasing citta pasāda adhimokkha results.

- Adhimokkha is normally translated as "decision" or "resolve" where saddhā peaks. Here it means the mind is decisively attracted to Nibbāna. The mind cools down.

## Ariya Bhava and Ariya Jāti

13. With adhimokkha as a condition, (Ariya) bhava arises. Note that an Ariya bhava arises via ELIMINATING a uppatti bhava. For example, one is "born" an Anāgāmi by eliminating the possibility of rebirths in the 11 realms of kāma loka.

- The resulting existence (or "bhava") matches that state of mind: "patitichcha sama uppāda"; one "lives" that experience. In the above example, an Anāgāmi does not have the mindset to be reborn in kāma loka.
- If it is a rebirth at patisandhi, an appropriate "bhava" is selected according to the kamma nimitta. Here any "apāyagāmi" kamma seeds acquired in the distant past do not get a chance to come to the forefront, and thus a rebirth in the lower four realms is prevented.
- Of course, at Arahant's death, the kusala-mūla PS process stops (forever) without grasping a new bhava.

14. With bhava as a condition, $j \bar{a} t i$ arises.

- The appropriate $j \bar{a} t i(S o t a ̄ p a n n a, ~ S a k a d a ̄ g a ̄ m i, ~ A n a ̄ g a ̄ m i) ~ w i l l ~ r e s u l t ~ i n ~ a n ~ a p p r o p r i a t e ~ r e a l m . ~$

15. With $j \bar{a} t i$ as condition, "jāti paccayā jarā maraṇam. Evametesain dhammānaỉ samudayo hoti."

- Any Ariya is also subject to decay and death as long as he/she is in one of the 31 realms.
- But here, the connection to dukkha is not shown because one is destined to attain Nibbāna. Thus, instead of "jāti paccayā jarā, maraṇa, soka-parideva-dukkha-domanassupāyasā sambhavan'ti" in the akusala-mūla PS process, here it ends with "Evametesam dhammānaim samudayo hoti."
- Instead of future suffering, conditions for attaining Nibbāna result in the kusala-mūla PS process.

## Difference Between Adhimokkha and Upädāna

16. In the Akusala-mūla PS that feeds the rebirth process, the critical step of "upādāna paccayā bhavo" leads to the creation of the kamma bhava (energy to feed future rebirths.)

- That upādāna forces the mind to act with avijjā repeatedly and to strengthen that kamma bhava. That is explained in detail in "Difference Between Tanhhā and Upādāna."
- In contrast, in the Kusala-mūla PS, that step is replaced by "adhimokkha paccayā bhavo." That bhava is an Ariya bhava (existence as a Noble Person) that makes any existing kamma bhava (created via Akusala-mūla PS processes) ineffective.

### 9.10.5 Idappaccayatā Paṭicca Samuppāda

Re-written with a new title May 18, 2019; revised May 20, 2019; March 13, 2021; re-written May 10, 2021; added \#16 on April 30, 2022

Akusala-mūla upapatti Pațicca Samuppāda (that describes future rebirths) is the only version of Patticca Samuppāda (PS) described in even the current Theravāda texts, even though the other versions are in the Tipiṭaka. Idappaccayatā Pațicca Samuppāda is a critically important one that describes kamma accumulation in real-time. [upapatti : [f.] birth; rebirth; approach.]

## Idappaccayatā - At a Given Moment

1. Idappaccayatā Paticca Samuppāda is another important teaching that has been hidden for hundreds of years. The word "Idappaccayat $\bar{a}$ " comes from "ida" for "here" and the closest English word for "paccay $\bar{a}$ " is "condition." Thus Idappaccayatā implies "based on this condition at this moment." [idappaccay $\bar{a}$ : From an assignable cause, from an ascertained cause.]

- Therefore, Idappaccayatā Paṭicca Samuppāda describes how "pati icca" leads to "sama uppāda" moment by moment based on the conditions present at that moment; see, "Paticca Samuppāda "Pati+ichcha"+"Sama+uppāda"."
- The additional "p" in "idappacayāt $\bar{a}$ " comes from the combination of "ida" and "paccayā." This is similar to "dammacakka" and "pavattana" combined to yield "dhammacakkappavattana" in the Dhammacakkappavattana Sutta.
- Another important point is that ""The first point of ignorance, bhikkhus, cannot be seen. Afterward, it came into being. Ignorance can arise at any time when the conditions are right" or "Purima, bhikkhave, koṭi na paññāyati avijjāya: 'ito pubbe avijjā nāhosi, atha pacchā samabhavī’ti. Evañcetaì, bhikkhave, vuccati, atha ca pana paññ̄ayati: 'idappaccayā avijjā̀ti."
- See "WebLink: suttacentral: Avijj $\bar{a}$ Sutta (AN 10.61)" for details.

## Idappaccayatā Versus Upapatti Paticca Samuppāda

2. As mentioned in earlier posts (see, "Paticca Samuppāda"), Paṭicca Samuppāda (PS) or "cause and effect" can describe various stages of life in multiple ways. At a deeper level, 16 PS cycles operate inside a thought-moment.

- The Buddha said that the PS is deep as a deep ocean and can apply it to any situation because everything "in this world" obeys the basic principle of cause and effect. It is no wonder that only one PS has been studied for over a thousand years while the true Dhamma remained hidden.
- In the previous post, we discussed the upapatti PS, which describes that latter process, i.e., how the PS cycle operates between lives; see, "Akusala-Mūla Upapatti Paticca Samuppāda."
- The other extreme of a swift PS process involved within a thought moment (citta) is very complex, and we do not need to examine it right now. We can learn it, but it can be "seen" only by a Buddha.
- This post will discuss the idappaccayatā PS cycle, which describes phenomena in real-time without getting into what happens within a citta (within a thought moment). This process - just like the PS cycle operates between lives - can also be easily understood by anyone.

## Paṭi+icca Leading to Sama+uppāda

3. As mentioned in the introduction to PS, whenever we willingly grasp something, whatever results from that action has a corresponding nature. Because one got attached willingly, a similar bhava will result: i.e., pati+icca leading to sama+uppāda or Paṭicca Samuppāda (PS). Here, "icca" is pronounced "ichcha."

- In the most fundamental sense, a "greedy state of mind" will result when we attach via greed, i.e., one develops a habit or gati or bhava corresponding to that state of mind; a 'hateful state" (habit/gati/bhava) results via hateful attachment; acts of greed and/or hate are always done with ignorance.
- Three examples of upapatti bhava for those three cases illustrate the principle: An excessively greedy person is likely to get a "peta bhava" and be born as a peta (hungry ghost); a person who is often engaged in hateful actions towards other beings is likely to develop a "hateful bhava" and is likely to be born in the niraya (hell) where there is a lot of hate due to extreme suffering; an animal bhava has developed with both greed and hate. Since ignorance is always there, an animal bhava is cultivated with all three "sans"; this is the root of the word "tirisan = three sans" for an animal in Sinhala.

## An Example of Idappaccayatā PS

4. Now, let us look at the Idappaccayatā PS, which describes how we develop certain habits or gati during a given lifetime and make "kamma bhava." That "kamma bhava" can become a "upapatti bhava" at the cuti-patisandhi moment of grasping a new bhava. It is often easier to use an example to illustrate these PS cycles. Let us examine how a teenager becomes an alcoholic.

- The teenager becomes friendly with a group of other teenagers who are into drinking. Initially, he may be reluctant to join in, but due to ignorance, he joins them and starts drinking.
- If a good friend or a family member came to know about the situation, they could have prevented the teenager from associating with such bad company, i.e., ignorance could have been dispelled by explaining to him the adverse effects of drinking but also of associating with such a group.

5. The PS cycle thus starts with "avijjā paccayā sañkhāra" (of course triggered in a party setting). Due to ignorance of the adverse results, the teenager starts drinking with that group (sañkhāra $=$ "san $+k h a \bar{r} a$ " or actions of accumulating, in this case, bad kamma).

- The more he is involved with such drinking activities, the more he thinks about it and develops a "mindset" or viñ̃̄āṇa for that activity. This is "sañkhāra paccayā viññāṇa"; see, "Kamma are Done with Sañkhāra - Types of Sañkhāra."

6. When he really begins to like drinking, he starts thinking about it even while doing other things. This is "viññāna paccayā nāmarūpa."

- In this case, nāmarūpa are the mental images associated with that viññāna, i.e., the names and shape of particular alcohol bottles, the places where he normally drinks, the friends who drink with him, etc.
- He thinks about the next "event" and visualizes the scene; all these are associated with nāmarūpa. Thus, here nāmarūpa are the mental images of "things" and "concepts" that one would like to enjoy.

7. Now his six senses become "involved" to provide reality to those nāmarūpa; to provide the desired sensory pleasures.

- In Pāli, the six indriya (senses) become "āyatana." For lack of a single English word, I will call an "āyatana" an "import/export facility" and really get involved in the actions associated with drinking events.
- His mind is often thinking about the next "event" (where, when, with whom, etc), he makes necessary preparations for the "event" using all six senses (now āyatanas.)That happens per the nāmarūpa in the previous step, i.e., "nāmarūpa paccayā salāyatana," where salāyatana means the six āyatana: the eye is now not merely for seeing, it has become an assistant in the lookout for a "good drink" or a "good friend to chat with," etc.

8. Thus, we have "salāyatana paccayā phassa," i.e., all six āyatana become actively engaged making contact with relevant sense objects. His eyes are on the lookout for a favorite drink or a favorite person to chat with, etc.

- However, "salāyatana paccayā phassa" is just the "uddesa" or short version given in the standard PS steps. It needs to be explained in detail; see "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."
" Here instead of phassa, it is really called "samphassa" (= "san" + "phassa"), where "san" implies it not just contact, but a "san" contact; see, "What is "San"? Meaning of Sansāra (or Samisāra)."

9. Such "samphassa" lead to vedanā, i.e., "(san)phassa paccayā vedanā." He experiences "good (but immoral) feelings" with all those sense contacts.

- Because of such "good feelings," he gets further attached: "vedanā paccayā taṇhā"; see, "Tanhā - How We Attach via Greed, Hate, and Ignorance."

10. Now comes, "tanhhā paccayā upādāna." Upādāna means "grabbing or pulling it close," like an octopus grabbing its prey with all its eight legs.

- In the present case, the teenager wants very much to re-live this experience. He gets immersed in it; when he is experiencing the event, his mind is totally absorbed; he does not think and does not have the mindset to think about any adverse consequences.
- This is the critical "habit-forming" or "bhava forming" step.
- If this habit becomes very strong, it could lead to a new bhava as an animal via the upapatti Paticca Samuppāda process;see,"Akusala-Mūla Upapatti Paticca Samuppāda."

11. So, the next inevitable step is "upādāna paccayā bhavo"; this particular state of getting drunk becomes more and more ingrained in his mind. It becomes "a bhava" or "existence" or habit that is of importance to him. He very much wants to re-live that experience.

- And that is exactly what he gets: "bhava paccayā jāti." This "bhava" or the kamma seed is now well established, and he can be born in that "drunken state" quite easily. All he needs is an invitation from a friend, or even a sight of a bar while traveling, for example.
- It is natural to get into that state or be "born" in that state. So, he gets drunk at every opportunity. See "Bhava and Jāti - States of Existence and Births Therein" for more details.

12. However, like everything else, any birth is subjected to decay and suffering: "jāti paccayā jarā, marana, ... dukkhakkhanda samudhayo hoti." This happens in many stages, as we describe below.

- But in the case of a single drinking event, that state of intoxication comes to an end, possibly with a big headache and a huge hangover. That episode ends with nothing to show for it but a hangover.
- Even worse, now he is "hooked." He has formed a bad habit, which only strengthens even more if he does it repeatedly. Because each time the PS runs, the viñ̃ñana for that habit gets more fuel, and the bhava gets stronger.

## Uncountable Idappaccayatā PS Cycles During a Lifetime

13. It is important to realize that the above PS cycle does not run to its conclusion when the drinking "event" is over. Rather the cycle can repeatedly occur unless it is stopped willfully, deliberately.

- And the way to do that is to learn Dhamma and develop good habits and become a "sampajanno"; see, "Kāyānupassanā - The Section on Habits (Sampajanapabba)."
- However, if the teenager keeps his bad habit, he gets trapped in that bhava, the more $j \bar{a} t i$ that occurs, i.e., more frequently he will be drunk. When one gets really drunk, one tends to behave like an animal without any sense of decency, and the long-term consequences could be rebirth as an animal; see below.
- Furthermore, such Idappaccayat $\bar{a}$ PS cycles run numerous times, even during the day, whenever we act with avijjā.

## Memories Can trigger Idappaccayatā PS Cycles.

14. And it is not even necessary to participate in a "drinking event" to run another PS cycle. He may be sitting at a desk trying to study, and may start going through the PS cycle just by recalling a past event or a scheduled future event.

- He would start with mano sañkhāra and vacī sañkhāra (vitakka/vicāra or planning), thus generating (and strengthening) the viñ̃āạa for drinking, generating nāmarūpa (visuals of places, friends, alcohol bottles, etc.), and thus going through the rest of the cycle: saḷāyatana, samphassa, vedana $\bar{a}$, tanhh $\bar{a}$, upādāna, bhava, jāti ('living it'), repeatedly.
- Thus numerous such PS cycles can run at any time, probably increasing their frequency as the bhava or the habit builds up.
- The stronger the bhava or habit is, it will be harder to break it. This is why meditation, together with another good habit to work on, should be undertaken to replace a bad habit. While in meditation, one can contemplate the adverse consequences of the bad habit. Developing a good habit will keep the mind away from the bad habit. See "Habits and Goals" and also "Bhāvanā (Meditation)."

## Connection to Upapatti PS Cycles

15. If the teenager keeps his bad habit, that "viññāna of a drunkard" will only grow with time. If it stays strong at the cuti-patisandhi moment (at the end of his human bhava), it could lead to a new upapatti bhava via the upapatti Paṭicca Samuppāda process mentioned in \#1 above "Akusala-Mūla Upapatti Paticca Samuppāda."

- Such a viññana is likely to give rise to rebirth in the animal realm, as mentioned in \#13.

16. Details on Idappaccayatā Pațicca Samuppāda in a new subsection, "Paticca Samuppāda During a Lifetime."

Note: This post was re-written to replace an early post, "Akusala-Mūla Pavutti (or Pravurthi) Paṭicca Samuppāda." I had not realized at that time that what the Waharaka Thero had described in Sinhala as "Pavutti (or Pravurthi) Pațicca Samuppāda" is really the Idappaccayatā Pațicca Samuppāda in the Tipitaka.

### 9.11 Pațicca Samuppāda in Plain English

Introduction - What is Suffering?
Introduction - 2 - The Three Categories of Suffering
Avijiā paccayā Sañkhāra
Sañkhāra paccayā Viññ̄n̄a - 1
Sañkhāra paccayā Viññ̄āna - 2
Viññāna paccayā Nāmarūpa
Nāmarūpa paccayā Salāyatana
Difference between Phassa and samphassa
Phassa paccayā Vedana....to Bhava
Bhava paccayā Jati. ...Jara, Marana,...

### 9.11.1 Introduction - What is Suffering?

Revised June 6, 2021; re-written June 14, 2021

## "Dukkha Sacca" Means "The Truth About Suffering"

1. "Dukkha sacca" (the latter pronounced "sachcha") refers not only to suffering hidden in the rebirth process but also to the elimination of it.

- Buddha never denied that there are "pleasures to be had" in this world. In fact, he pointed out that there are Deva and Brahma realms where there are enhanced sensual (kāma) and jhānic pleasures compared to the "pleasures" available in the human world.
- But the problem is that ANY given sentient living being spends much more time in the four lowest realms (apāyās) than the time spent in the human, Deva, and Brahma realms (in the rebirth process.) See, "Rebirth - Connection to Suffering in the First Noble Truth."
- Therefore, there is NET suffering in the rebirth process by a HUGE margin.

## Misconceptions About Dukkha Sacca (First Noble Truth)

2. Many people are addicted to the temporary "peace of mind" achieved by breath meditation or similar "meditation techniques." But that deals with only "superficial suffering." The Buddha pointed out that there is much harsher suffering in the rebirth process.

- Buddha Dhamma is all about ending that harsher and longer-term suffering AND getting to a state with ABSOLUTELY NO suffering. "Nibbānic bliss" or "happiness in Nibbāna" refers to the bliss of not having to experience even a trace of suffering.
- A crude analogy is someone who has had a migraine headache all his life and finally getting rid of it. However, it is only an analogy, because rūpa, vedanā, saññā, sañkhāra, viññāna are all ABSENT in Nibbāna (after the death of an Arahant.)
- That is the implication of not having the 3 ultimate realities of citta, cetasika, rūpa in Nibbāna. So while Nibbāna exists, we cannot describe it in terms of our terminology.
- See \#4 of the post, "Six Root Causes - Loka Samudaya (Arising of Suffering) and Loka Nirodhaya (Nibbāna)."

## Nibbānic Bliss Is About Total Absence of Suffering

3. This is also explained, for example, in the "WebLink: suttacentral: Nibbānasukha Sutta (AN 9.34)." The verse "Nibbānaì paramaí sukhamं" DOES NOT refer to a "sukha vedanä" in the sense of a feeling because there are no vedanā in Nibbāna. See, "Nibbāna "Exists," but Not in This World."

- Many people equate "jhānic experiences" with Nibbāna. Jhāna are the mental states of Brahma worlds, and thus, jhānic experiences belong to "this world of 31 realms." Any sentient being, including any animal, had attained jhāna and had been born in Brahma worlds many times in their deep past!
- Nibbāna is simply the total absence of ANY suffering. That is the "Nibbānic bliss." We cannot compare that to any "sukha vedana" experienced by any person, Deva or Brahma. That is why Prince Siddhattha and many kings and wealthy people gave up those "princely lives" to seek Nibbāna.
- So, how bad is this suffering in the rebirth process?

## Understanding "True Suffering" - It Is in the Rebirth Process

4. In the post "Rebirth - Connection to Suffering in the First Noble Truth"" we discussed references in the Tipitaka that MOST rebirths are in the four lowest realms (apāyās.) We can only see the suffering in one of them, the animal realm.

- The Buddha has discussed, in detail, the types of suffering in the other three apāyās. For example, in the "WebLink: suttacentral: Bālapandita Sutta (MN 129)" and "WebLink: suttacentral: Devadūta Sutta (MN 130)" the Buddha explains, in detail, the kind of suffering encountered in various lower realms.
- English translation of the first one: "WebLink: suttacentral: The Foolish and the Astute (MN 129)." That sutta explains that a person who engages in immoral activities ("bālo" or a "fool") can expect the consequences (kamma vipāka) both in this life and in future existences in the apāyās. The account of the experiences in the niraya (lowest realm) is terrifying.
- A related sutta is the "WebLink: suttacentral: Pāyāsi Sutta (DN 23)." It is about the wrong views that there is no rebirth process, etc. See the English translation there: "WebLink: suttacentral: With Pāyāsi (DN 23)." For those who have doubts about the validity of the rebirth process or the existence of apāy $\bar{a} s$, it is a good idea to read the above suttās.

## Luckily We Don't Remember Our Previous "Bhava"

5. As we discussed in the post "Rebirth - Connection to Suffering in the First Noble Truth"" we are reborn with human bodies many times during a "human bhava" that can last many thousands of years is why some children can recall their past HUMAN lives. Those rebirths took place during the SAME human bhava.

- Some yogis with abhiññā powers can see their RECENT bhava just before the current bhava. Almost all of them are likely to have had Brahma bhava just before the current human bhava. As we have discussed, it is unimaginably hard to get a human bhava FROM a human or lower bhava (ie.., from the apāyās.) Furthermore, those who can easily cultivate jhāna are VERY likely to have had a Brahma bhava just before this human bhava. Therefore, such yogis may be able to see their previous Brahma bhava. But there are no accounts of anyone recalling an animal or other existences in the apayy $\bar{a}$.
- Thus, different bhava are isolated, and it is difficult to "look back," especially past existences in the lower realms.
- That is fortunate because it would give nightmares to recall such levels of suffering in the ap $\bar{a} y \bar{a} s$ described in \#4 above. However, we can get an idea about the level of suffering in the $a p \bar{a} y \bar{a} s$ also from the following sutta.

## Sattisata Sutta (SN 56.35) - Take That Deal!

6. In the "WebLink: suttacentral: Sattisata Sutta (SN 56.35)," the Buddha advised bhikkhus to commit all their waking time to strive for Nibbāna. To drive the point home, the Buddha gave an analogy. It is a short sutta, and I will translate it below. Good English translation at Sutta Central: "WebLink: suttacentral: A Hundred Spears (SN 56.35)."
"Bhikkhus, suppose there was a man with a remaining life span of a hundred years. Someone would say to him: 'Come, good man, in the morning they will strike you with a hundred spears; at noon they will strike you with a hundred spears; in the evening they will strike you with a hundred spears. And you, good man, being struck day after day by three hundred spears will live a hundred years. Then, after a hundred years have passed, you will make the breakthrough to the Four Noble Truths and Nibbāna. That is guaranteed if you agree to bear that suffering."
"It is a wise decision, bhikkhus, for that man to accept the offer. For what reason? Because this samisāra is without a discoverable beginning. You have suffered mightily by uncountable blows by spears, blows by swords, blows by axes, etc. (and will do so in the future too unless you attain Nibbāna.)

However, bhikkhus, I do not say that the path to Nibbāna is accompanied by suffering or displeasure. Rather, the path to Nibbāna is accompanied only by happiness and joy.
"Therefore, bhikkhus, you should strive to understand: 'This is suffering. These are causes for that suffering. The removal of those causes will lead to the cessation of suffering. This is the way to the cessation of suffering.""

## Mistranslations of Some Suttās and Suppression of Selected Suttās

7. As you all would have seen, many people ignore those suttās. They say those suttās are "later additions" or "have been distorted after the Buddha." Then they pick and choose a few suttās and mistranslate them to prove their point! For example, in his first discourse, Buddha stated, "..ayamantimā jāti, natthi dāni punabbhavo 'ti." OR "..this is the last birth. There is no more gasping of a repeated bhava." Is "WebLink: suttacentral: Dhammacakkappavattana Sutta (SN 56.11)" a later addition?

- I am willing to discuss ANY sutta in Tipiṭaka. But please refrain from just expressing OPINIONS or quote other mistranslations. We are discussing Buddha's teachings. You may disagree, and that is fine, but don't distort his teachings. Buddha's teachings ARE contrary to the "accepted norms" and that is exactly why we all have been trapped in this suffering-filled rebirth process for SO LONG! The verse, "pubbe ananussutesu dhammesu cakkhum udapādi, ñānaì udapādi, paññā udapādi, vijjā udapādi, äloko udapādi..." ("such was the vision, knowledge, wisdom, penetrating vision, and the way to separate from the world, that arose in me regarding these teachings not heard before..") appears 8 times in that first discourse of the Buddha for this reason.
- The Buddha explained what kind of suffering to be expected and explained HOW such horrible suffering arises (dukkha samudaya) and HOW we can stop it from arising (dukkha nirodhaya.) Of course, the way to achieve that is the Noble Eightfold Path. To follow that Path, one MUST first understand the first 3 Noble truths.
- By the way, Buddha also explained that suffering is not caused by one's soul (or ātman in Hinduism.) There is no such thing, to begin with. Paṭicca Samuppāda starts with "avijjā paccayā sañkhāra." That process will proceed irrespective of a specific "soul." There is only a "satta (satva)" engaged in generating sañkhāra due to $a v i j j \bar{a}$. See \#3 of "Five Aggregates and Tilakkhana - Introduction." This is a deeper point that I will discuss in detail in upcoming posts.

## Dukkha Samudaya - Explained by Akusala-Mūla Paṭicca Samuppāda

8. The two main akusala-mūla Paṭicca Samuppāda schemes describe the mechanisms whereby suffering in this world arises (dukkha samudaya.)

- The "Idappaccayatā Paticca Samuppāda" describes how we accumulate kammic energies during our lives. Such kammic energies "pile-up" and lead to future existences, mostly in the apāyās, and that is described in "Akusala-Mūla Upapatti Paticca Samuppāda."
- As we have seen, any birth "in this world" WILL lead to suffering: Starting with "avijja paccaya sañkhāra" those cycles ALWAYS end up with "jāti paccayā jarā, marana, soka-parideva-dukkhadomanassup $\bar{a} y a s a \bar{a}$ sambhavan'ti" and the "whole mass of suffering."

## Dukkha Nirodhaya - Explained by Kusala-Mūla Paṭicca Samuppāda

9. The "Kusala-Mūla Paticca Samuppāda" describes the process of eliminating suffering.

- "Kusalamūla paccayā sañkhāra" WILL lead to births of Ariyās (Sotāpanna through Arahant.) But, since they are also born into this world, the cycle still ends with old age and death: "jāti paccay $\bar{a}$ jar $\bar{a}$ maranaain. Evametesain dhammānain samudayo hoti."
- But upon the death of an Arahant, there is the total absence of suffering. Thus, it will lead to the end of suffering.

## Two Types of Sañkhāra in Dukkha Samudaya and Dukkha Nirodhaya

10. Those sañkhāra generated with $a v i j j \bar{a}$ (we can call them "akusala sañkhāra") will perpetuate the rebirth process and will lead to more suffering.

- On the other hand, "kusala sañkhāra" generated with paññā (comprehension of the Noble Truths) will lead to the Arahanthood and the stopping of the rebirth process. That is Nibbāna, the total absence of suffering!

## Connection to the Root Causes

11. As we saw in the previous post, "Six Root Causes - Loka Samudaya (Arising of Suffering) and Loka Nirodhaya (Nibbāna)" "akusala sañkhāra" arise due to lobha, dosa, moha, and the mundane versions of alobha, adosa, amoha.

- To generate "kusala sañkhāra" one must cultivate the lokuttara (deeper) versions of alobha, adosa, amoha with comprehension of the Noble truths/Paticca Samuppāda/Tilakkhana. Note that those three (Noble truths/Pațicca Samuppāda/Tilakkhana) are equivalent, and I may just refer to just any one of them in most cases.
- To complete the discussion on suffering, we need to discuss the three categories of suffering.

## Three Categories of Suffering

12. The three categories of suffering are stated in the WebLink: suttacentral: Dukkhatā Sutta (SN 45.165):
"...Dukkha dukkhatā, sañkhāra dukkhatā, vipariṇāma dukkhatā-imā kho, bhikkhave, tisso dukkhatā."

- It does not make sense to try to translate the names of the 3 categories: Dukkha dukkhatā, sañkhāra dukkhat $\bar{a}$, viparināma dukkhat $\bar{a}$. Instead, it is better to understand the meanings of those 3 types of suffering. Here, dukkhatā means "type of dukkha."
- Thus, we can say that the 3 categories of suffering are dukkha-dukkha, sañkhāra-dukkha, and vipariṇāma-dukkha.

## Worst Is the Dukkha-Dukkha

13. As the name implies, the strongest suffering is the dukkha-dukkha that arises DIRECTLY due to kamma vipāka. That category is associated with major types of suffering (serious injuries, diseases like
cancer, etc.) that we face DURING a lifetime. Of course, when born in an apayya, most of that existence is filled with dukkha-dukkha.

- Therefore, most of the suffering that we discussed above comes under dukkha-dukkha.
- We will discuss all three categories in more detail in the next post: "Introduction -2 - The Three Categories of Suffering."

## Introduction-2 - The Three Categories of Suffering

June 20, 2021; revised June 10, 2022; October 12, 2002
The three categories of suffering are dukkha dukkhatā, sañkhāra dukkhatā, and vipariṇāma dukkhat $\bar{a}$.

## Three Categories of Suffering

1. In the previous post, "Introduction - What is Suffering?" we discussed what is meant by suffering in Buddha Dhamma. Here we continue that discussion. The three categories of suffering are stated in the WebLink: suttacentral: Dukkhat $\bar{a}$ Sutta (SN 45.165): "...Dukkha dukkhatā, sañkhāra dukkhatā, vipariṇàma dukkhat $\bar{a}-i m a \bar{a} k h o$, bhikkhave, tisso dukkhatā."

- It does not make sense to try to translate the names of the three categories: Dukkha dukkhat $\bar{a}$, sañkhāra dukkhatā, viparin̄āma dukkhatā. Instead, it is better to understand the meanings of those three types of suffering. Here, dukkhatā means "type of dukkha."
- Thus, we can say that the three categories of suffering are dukkha-dukkha, sañkhära-dukkha, and vipariṇāma-dukkha.

2. The three types of suffering are associated with the characteristics of a sankhata, as pointed out in the Tipitaka Commentary Peṭakopadesa, "5. Hāravibhañgapañcamabhūmi:"
"Tattha tīni sañkhatalakkhaṇāni tisso dukkhatā: uppādo sañkhatalakkhaṇaì sañkhāradukkhatāya dukkhatā ca, vayo sañkhatalakkhaṇaì viparin̄āmadukkhatā ca, añnathattaì sañkhatalakkhaṇaì dukkhadukkhatāya dukkhatā ca, imesaì tinṇà் sañkhatalakkhaṇānaì.."

## Translation:

"Three sañkhata lakkhaṇa correspond to three types of suffering (tisso dukkhatā):
(i.) uppāda is a sañkhata lakkhaṇa that corresponds to sañkhāra dukkhatā. A sañkhata arises due to (avijja paccaya) sañkhāra. That itself takes effort (suffering). Furthermore, it will also lead to future suffering.
(ii.) vayo is a sañkhata lakkhaṇa corresponding to vipariṇama dukkhatā. Any sañkhata is destroyed (vaya), and that leads to viparināama dukkhatā.
(iii) añ̃̃athatta is a sañkhata lakkhaṇa corresponding to dukkha dukkhatā. Any sañkhata undergoes unexpected changes (aññathatta) during existence, and that is dukkha dukkhata .

- All three types of dukkha WILL NOT stop until sañkhāra-generation via "avijjā paccayā sañkhāra" stops.

## What Is Suffering Based on?

3. What is our whole world? We sense external rūpa through our five physical senses (internal rūpa) and then think about them. Thus we can sum up our world as what we experience through our INTERNAL six senses (eyes, ears, nose, tongue, body, mind). If our six internal senses stop working or weaken, we suffer.

- Using those sensory faculties, we experience six types of rūpa in the external world: visuals, sounds, smells, tastes, touches, and dhamm $\bar{a}$. If those are not to our liking, we suffer. On the sixth type of $r \bar{u} p a$, see "What are Rūpa? - Dhammā are Rūpa too!"
- Those twelve (six INTERNAL and six EXTERNAL) make up "our world." Everything is included in those twelve - all 12 lead to suffering, not only in this life but also in future lives.
- Let us first discuss the three types dukkha that we experience during a lifetime.

## Three Types of Dukkha During Lifetime

4. Any rūpa changes (sometimes unexpected), leading to suffering. First, let us consider whether we can keep our physical bodies (internal $r \bar{u} p a$ ) and their associated sensory faculties to our satisfaction.

- We may be able to maintain our five physical senses to our satisfaction for many years. And this is why people do not even take the time to think about these concepts.
- We start feeling this hidden suffering when we pass middle age. For example, eyesight, hearing, and tastes will get weaker. Our bodies start sagging and the brain becomes weaker too. That is vipariṇamadukkha.
- So, what do most of us do? We start looking for ways to "prop them up": We can take temporary measures by wearing glasses and hearing aids, adding more spices/flavor to food, and doing cosmetic procedures to maintain the body's appearance. There is absolutely nothing wrong with some of these "fixes"; for example, we need to see, so we must take precautions to protect our eyes and start wearing glasses. Ditto for hearing aids and even for adding spices to food. Even doing some cosmetic procedures (coloring the hair, for example) may be needed to maintain a level of self-confidence, as may be the case.
- These "remedies" require effort and are part of sañkhāra-dukkha.

5. Note that those two types of dukkha can also arise due to external rūpa.

- For example, our houses, cars, or other "valuable things" are also sañkhata, just like our physical bodies. They also undergo (both expected and unexpected) change and will cease to exist in the future. That also contributes to our viparinā̄ma-dukkha.
- Here also we need to work to repair them and try to maintain them to our satisfaction. That is also part of saǹkhāra-dukkha.
- During both types of sañkhāra generation, we will generate kamma that will lead to kamma vipāka. Those manifest as dukkha-dukkha. For example, if a woman gets a "facelift" she must go to a surgeon and also needs to pay. If we need to repair a car, we must take it to a mechanic and pay him. All these activities involve dukkha-dukkha.

## Mental Stress - Big Part of Sañkhāra-Dukkha

6. The leading cause of suffering is in our MINDS. For example, a wealthy person may suffer due to losing of something he own, and a poor person may suffer due to the inability to get what he wants. Either person becomes distraught due to his/her mind activities: attachment to what one has or craving for what one desires. This is another aspect of the Pāli term anicca. It is primary mental and is called "sañkhāra dukkha." It arises through the struggles we engage in, to maintain things to our satisfaction.

- For example, when we buy a lovely house, there are endless things that need to be done to "maintain it to our satisfaction"; this is also part of sañkhāra dukkha. Sometimes we don't even realize this suffering. Think about how much work we do to prepare a nice meal; then we enjoy it in 10-15 minutes, and then we need to spend more time cleaning up. We slaved through hours to get a brief sensory pleasure.

## We Engage in Saṅkhāra Due to Avijjā

7. The suffering that we discussed so far arises from one aspect of anicca: Anything in this world is subjected to decay, and destruction, and nothing in this world is exempt from that. That is part of "viparin̄āma dukkha," suffering that arises due to changes and decay (both expected and unexpected.)

- Sañkhāra-dukkha is associated with maintaining our internal rūpa and acquiring and maintaining external rūpa. All such efforts require thinking, speaking, and bodily actions; they involve mano, vacī, and kāya sañkhāra. See, "Sañkhāra - What It Really Means."
- Dukkha-dukkha arises even without us realizing it, while we seek remedies for viparināma dukkha with various activities involving involve mano, vacī, and kāya sañkhāra. That leads to the kamma generation. Part of those $k a m m \bar{a}$ will bring vipāka into this life, primarily as physical work.
- As we will discuss, if they involve abhisañkhāra, those will lead to kamma vipāka in future lives.

## Three Types of Dukkha in the Rebirth Process

8. "Sañkhāra" means "san" + "khāra" or our efforts to accumulate/maintain things in this world (both internal and external) to our satisfaction. Any sañkhata (both internal and external) arises due to due to such efforts. See, "Sañkhāra - What It Really Means."

- (Note that any action to live in this world involves sañkhāra. For example, breathing is a kāya sañkhāra that does not have kammic consequences. Those that involve lobha, dosa, and moha are a particularl type of sañkhāra; they are abhisañkhāra. But this distinction is not always emphasized (like in "avijjā paccayā sañkhāra," but one needs to be able to figure that out. )
- In the end, all such efforts are in vain. No matter how much effort we make, our bodies will fall apart at old age (or even earlier), and when we die, we will have to leave behind all those external "valuables" that we accumulated with much effort. That is why we say sañkhāra arise due avijjā, i.e., "avijjā paccayā sañkhāra." All our efforts (based on "san" (greed, anger, and ignorance) are due to avijjā!
- "Abhisañkhāra" generation is the root cause for the generation of all types of sañkhata, internal and external. That takes place via Akusala-mūla Paticca Samuppāda.

9. In that broad sense, the three types of dukkha can be attributed to the three stages of a sankhata: uppāda (arising,) vaya (destruction,) and existence (thiti.) The three stages are stated in the "WebLink: suttacentral: Sañkhatalakkhana Sutta (AN 3.47)."

- The three types of dukkhatā correspond to the three lakkhaṇa of a sañkhata.
- A sañkhata arises due to Paticca Samuppāda starting with "avijjā paccayā sañkhāra." Thus the "uppāda lakkhaṇa" of a sañkhata is associated with sañkhāra dukkhatā.
- Any sañkhata will eventually be destroyed and has the "vaya lakkhaṇa." That is the viparināma dukkhatā.
- In between birth and death, a sañkhata exists (țithi). However, it undergoes unexpected change (aññathā), and that gives rise to Dukkha dukkhatā. That is expressed by, "titthassa sañkhata lakkhaṇain, dukkha dukkhata."
- Note that such unexpected changes (aññathā) take place due to vipāka of kamma done previously with (abhi)sañkhāra via "avijjā paccayā sañkhāra." Thus, Dukkha dukkhatā manifests as kamma vipāka.

10. The Petakopadesa - a Commentary in the Tipitaka - explains how the three types of dukkhatācorrespond to the three lakkhaṇa of a sañkhata. See "WebLink: suttacentral: 5. Hāravibhañgapañcamabhūmi' in the first paragraph. It is sort of hidden!
"Tattha tīni sañkhatalakkhaṇāni tisso dukkhatā uppādo sañkhatalakkhaṇam், sañkhāradukkhatāya dukkhatā ca sañkhatalakkhaṇaì, viparin̄āmadukkhatāya dukkhatāti aññathattaì ca sañkhatalakkhaṇà̇, dukkhadukkhatāya ca dukkhatā,."

## Dukkha-Dukkha

11. The worst category of suffering in the rebirth process arises as kamma vipāka giving rise to rebirth in the ap $\bar{a} y \bar{a}$. Beings in the apa $\bar{y} \bar{a}$ encounter harsher suffering; in the niraya (lowest realm), that is all one feels.

- A person who made money by killing another or stealing from another may live well in this life (at least outwardly) but will be subjected to much suffering in the upcoming births. This is the worst category of dukkha-dukkha, which arises due to past immoral actions. Until the death of the physical body, even an Arahant is subjected to dukkha-dukkha.
- Therefore, the third category of suffering, dukkha-dukkha, arises from immoral acts (pāpa kamma/akusala kamma.) The severity of suffering depends on the severity of the violation. Paticca samuppāda ("pati+ichcha" leading to "sama"+"uppāda") describes the underlying mechanism; see, "Paticca Samuppāda - "Pati+ichcha" + "Sama+uppāda"," where it is briefly discussed how one’s actions lead to effects that are similar "in-kind."
- The results of our actions will not be according to our wishes. Instead, they will be according to root causes (lobha, dosa, moha) and prevailing conditions at any time. Paticca samuppāda is Nature's lawenforcing mechanism.

## Dukkha-Dukkha in Rebirth Process Is Delayed Results of "Bad Saǹkhāra"

12. All our actions (including speech and thoughts) are initiated by sañkhāra. Thus, dukkha-dukkha arises from the worst forms of sañkhāra (involving lobha, dosa, and moha,) which we call immoral actions (pāpa kamma/akusala kamma.) This dukkha-dukkha is the main form of suffering discussed in the previous post, "Introduction - What is Suffering?"

- Everything happens due to a reason (causes). Doing a good deed, that will lead to good results, and evil deeds will lead to bad results. This is the basis of science and also how nature works. "Every action has a reaction." It is guaranteed, sooner or later.
- This is why rebirth is a reality of nature. Some people live lavishly with money earned by immoral deeds. They WILL suffer the consequences in future rebirths.
- It also explains why different people are born with different levels of health, wealth, beauty, etc., and why there are innumerable varieties of animals with different levels of suffering. Those are all results of evil deeds done in previous lives.

### 9.11.3 Avijjā Paccayā Sañkhārā

## Revised April 26, 2019; August 29, 2019

"Avijjā paccayā sañkhārā" (Ignorance as root cause for immoral/unfruitful actions and thoughts). That is the same as saying "avijjā nirodha" leads to "sañkhāra nirodha." All following terms in the akusala-mūla pațicca samuppāda cycle will stop arising and thus all suffering stop arising with the complete removal of avijjā.

1. Avijja (loosely translated as ignorance), is defined in many ways: not knowing the Four Noble Truths, not understanding the Noble Eightfold Path, not understanding the Three Characteristics of nature, not understanding dukkha, etc.

- All these are correct, but just reading about them is not going to help. The mind needs sees how suffering arises due to immoral and unwise actions (and thoughts).
- The paticca samuppāda cycle clarifies how the three kinds of suffering arise. One does not comprehend the true nature of the world, and think (and do) immoral/unfruitful things.

2. You may be wondering whether I was untruthfil when I said this series will be in "plain English." Especially If you have not read the first two posts. I did describe these three terms in plain English, and there is no easy way to get the same meaning across without using Pāli words.

- So, once I clarify them, I have to use these Pāli terms in order to keep a post to a reasonable length. One can always go back and read previous introductory posts to refresh memory.

3. The standard interpretation of "avijjā paccayā sañkhārā" reads "ignorance leads to mental formations." That does not get the underlying ideas across and also misleading. I believe that "ignorance as root cause and condition for immoral/unfruitful actions" is a better translation, and I will explain why.

First let us look at the difference between immoral acts and unfruitfil acts.

- We saw that dukkha dukkha in the four lower realms is the worst form of suffering. And we saw the cause of that as the immoral acts done with the ten defilement or dasa akusala. Thus worst types of sañkhāra are responsible for dukkha dukkha in the lower four realms.
- Why do we do any of such potent immoral acts that give rise to dukkha dukkha of the worst kinds in the lower four realms? Because to a very high degree of ignorance of the consequences of such acts. For example, if one does not believe in rebirth, then it is hard to see how such immoral acts can have consequences. After all, there are many people engaged in unethical behavior who seem to be enjoying life.
- Such high level of ignorance is called moha (which means totally covered, totally blind mind), and the closest English word is "delusion."
- A murderer who PLANS and kills another human is a good example. He thinks that if he can plan it well, he can avoid "getting caught" by the justice system and then will not have to pay for his actions. There are MUCH WORSE consequences waiting for him, regardless of whether the police catch him or not. He does not know that he is likely to get killed a thousand times in return in future births.

4. Thus immoral actions like killing, stealing, etc are responsible for the worst outcomes, the worst kinds of future suffering; these are the worst forms of sañkhārā.

- On the other side of the spectrum for sañkhāra are the unfruitful actions that lead to lower levels of sañkhāra dukkha in this very life. For example, when we get attached to things/people via strong attachments or dislikes, that can lead to mental suffering in this life.
- However, such unfruitful actions can also form bad habits that can grow into more significant problems with time. Someone acting with greed or dislikes habitually can tend to make those stronger and eventually grow into stronger forms of excess greed and hate, leading to immoral acts. We will discuss how this happens via the paticca samuppāda steps.
- Of course the severity of the consequences will be according to the severity and nature of the act: "pati+ichcha" leading to "sama" + "uppada", as we will discuss in detail later. See, "Paticca Samuppāda - "Pati + ichcha" + "Sama + uppāda'"' for the meaning of pațicca samuppāda. When one is even willing to do immoral acts to get what one wants, the consequences will also be stronger and "inkind." Then there are "unfruitful acts" that can lead to comparatively minor forms of suffering in the near term but can also add up to more significant effects in the long run.
- Thus one has to think beyond the five precepts to understand the origin of sañkhāra dukkha. I know I am repeating some statements, but I want to make sure to get these essential ideas across.

I hope it is clear now why "immoral/unfruitful actions, speech and thoughts" is a better translation for sañkhāra than "mental formations." Sañkhārā are all mental; kāya and vacī sañkhārā are those thoughts that LEAD TO actions and speech.
5. Now let us discuss the other erroneous aspect of the translation of "avijjā paccayā sañkhāra" as "ignorance leads to mental formations." For further details, see, "What Does "Paccaya" Mean in Paticca Samuppāda?."

- Ignorance (avijjā) is not there all the time. Even the worst criminal does not do immoral acts or even unfruitful acts ALL THE TIME. But when he does, such actions are done with ignorance as a root cause.
- It applies to all of us: The more we learn Dhamma, the more we get rid of ignorance. Then will we not think or do either immoral or unfruitful things, i.e., any type of (abhi)sañkhāra.

6. A closely related issue to think about is what kind of control we have over sañkhāra. There are three types of sañkhāra: kāya sañkhāra (those that lead to physical acts), vacī sañkhāra (those that lead to speech), and mano sañkhāra (those that automatically arise due to our gati).

- If we know right from wrong, we can control MOST of our physical actions and speech. We may even start saying something terrible and stop ourselves in the middle of the sentence.
- Depending on the emotional state of the mind, it may be not possible to control our actions under extreme stressful situations. Even a normally calm person may get into a rage if he catches his wife engaging in sex with another man. He may even kill that man in the heat of the moment.
- We also know "good people" who were tempted to do immoral things. That is especially true if the "payout or the perceived pleasure" was big enough. That is the danger of "not being free of the four lower realms."
- More information at: "Sañkhāra - What It Really Means."

7. The third category, mano sañkhāra, are also hard to control by will power instantly. I think we all can think about situations where it was hard to control greedy/hateful thoughts. We may start thinking about something, and the mind takes us all over the place. Such thoughts normally involve "what we could have," and also fantasize about all kinds of sense pleasures. One needs to stop such thoughts and think about their consequences willfully.

- These can only be lessened and ultimately stopped by changing one's habits ("gathi") and cravings ("āsavas"). That applies to kāya and vacī sañkhāra done on "impulse" or "temptations" discussed above.
- And that comes about by realizing the unfruitfuiness of any sañkhāra. That is strongly related to comprehending the Three Characteristics. We will be analyzing this in the upcoming steps of paticca saтирра̄da.

8. Thus the key is to change one's bad habits over time. Then, gradually, even such mano sañkhāra will STOP FROM ARISING.

- It may be hard to believe, but a significant part of this change of habits and cravings comes from comprehending the Three Characteristics of this world. One would realize that it does not MAKE

SENSE to hurt others (including animals) to get sense pleasure for oneself. That makes a BIG DIFFERENCE in one's outlook about what a "good life is."

- Contrary to what most people believe, a life filled with sense pleasures is not a "good, peaceful, life." An extravagant life can eventually become a "burdened life" because our body's ability to accommodate sense pleasures goes down as we age. This realization itself leads to "cooling down" of the mind. Anyway, as we discuss further, and if one contemplates more along with these ideas, these concepts will slowly become apparent.

9. In summary, all three kinds of suffering arise due to $\operatorname{sa\dot {n}khāra~that~range~from~highly~immoral~}$ acts to seemingly innocent unfruitful actions. All sañkhāra arise due to avijjā.

- That is why "avijjā paccayā sañkhāra"" is the first step in the paticca samuppāda cycle, which ends with "jara, marana, soka, parideva, dukkha, ....." all kinds of suffering.
- At the Arahant stage, one has removed avijjā (i.e., optimized paññā), and thus abhisañkhāra that lead to rebirth cannot arise; that is Saupadisesa Nibbāna. At the death of the physical body, the Arahant is not reborn and thus, at that time, all sañkhāra cease to arise (Anupadisesa Nibbāna or Parinibbāna or "complete Nibbāna").
- That is how "avijjā nirodha" leads to "saǹkhāra nirodha."

Thus we can see in a simple way how suffering arises with immoral/unfruitful actions as causes. One engages in such activities due to ignorance of the true nature of the world: anicca, dukkha, anatta. Here we discussed how ignorance gives rise to sañkhāra. In the next post, we will discuss how sañkhārā leads to viñ̃̄āṇa (or defiled consciousness). That is the next step leading to dukkha (suffering).

Next, "Sañkhāra paccayā Viññāna - 1",

### 9.11.4 Sañkhāra Paccayā Viññ̄āṇa - 1

1. "Sañkhāra paccayā Viññāna" is normally translated something like, "with mental formations as condition, consciousness arises." But I will show that a more accurate translation is, "Immora/unfruitful actions and thoughts as root condition for defiled consciousness."

- I will just keep the word viññāna without translating as "defiled/unfruitful consciousness" (which could become cumbersome to repeat also), because the word "consciousness" cannot fully embody the meaning of viññāna. Furthermore, vipāka viññāṇa (those that arise outside of "sañkhāra paccayā viññāna") are "just consciousness"; see \#4 below.
- Viññāna is a step in the pațicca samuppāda that describes how suffering arises; thus viññāna is NOT neutral or innocuous as the word "consciousness" or "awareness" implies; it is DEFILED consciousness, contaminated with immoral mental factors such as greed and hate.
- In contrast, an Arahant has undefiled, pure consciousness; thus an Arahant experiences the world without any defilements. He/she can see, hear, etc without making any type of judgement, attachment, or repulsion to what is seen, heard, etc.

Thus we need to realize that viññāna is DIFFERENT from "knowing" or "being aware", which is what "consciousness" implies. This is very important.
2. For example, two people with opposing political views (A and B) may encounter a politician C on the street who has views compatible with those of A. Person A will be happy to meet C and may go up to C , shake his hand and talk to him enthusiastically. On the other hand, Person B will automatically have irritable thoughts about C and is likely to avoid C. In this case, A and B generated two very different kinds of viññāna upon seeing the same person.

- On the other hand, suppose there is a fourth person, D, who also knows the politician C AND suppose D is an Arahant. Now, person D will recognize C as that politician but will not generate any likes or
dislikes about C. That is what "consciousness" is, just recognizing who or what it is without generating any biases.

3. The other main point is that viññaña is multi-faceted. It has embedded in it one's memories as well as one's future hopes and plans, and those lie under the surface. This is what Sigmund Freud called the subconscious. But there is no separate "subconscious"; there is only one citta at a time.

- The mind does this with the help of several mental factors (cetasika) like memory (manasikara) and perception (saññ $\bar{a}$ ). We will discuss that in the future.

4. For example, when I am looking at a picture I have what is called cakkhu viññāna, i.e., "visual consciousness." This is a vipäka viññāna and is "just consciousness."

However, if I have been planning a trip overseas that is still in the "back of my mind"; if I have been thinking about calling an old friend about whom I just thought of recently, that is also in the "back of my mind." Thus at a given time there may be several or even many viñ̃ñạna waiting to come to the surface.

- And some of those "subconscious" viññanna may disappear, if the reason for it to be there goes away for some reason. For example, if civil war breaks out in the country that I was planning to visit, I will abandon that trip and my "viññāna" for that will go away. If I stop thinking about my old friend, that viññāna for calling him up may also go away with time. Thus if a given viññāṇa stops getting "its food" it will die off gradually.
- The difference between kamma viññāṇa (those that arise due to "sañkhāra paccayā viññāna") and vipāka viññạ̄a is discussed in "Viññāna - Consciousness Together With Future Expectations."

5. Now we can see how "sañkhāra paccayā viñäāna" works. The more I think about my old friend, the more sañkhāra I am generating; thus I keep "feeding that viññāna" and that viññāna for calling him gets stronger.

- The breaking out of the civil war in that country basically deprived the "viññāna for making a trip to that country" of any food (i.e., now it is not possible to visit that country), and thus the news effectively killed that viññāna.
- As always, it is best to think about your own situations and see how "sañkhāra paccayā viññāna" works, and also how one can have many types of viññāna at the same time, even though only one is at the forefront at any given time.

6. There is another way that viñ $\tilde{n} \bar{a} n a$ can be divided into two main categories. One is the "base level" of viññāna for an existence or bhava. For example, if a deer is reborn as a human, then that lifestream will now have a "higher base level of viññāna" suitable for a human. Whereas a deer cannot sort out right from wrong, a human can. Thus at the end of a given "bhava" (say as a deer), that lifestream gets new, higher "base level" of viññāna.

- The other main category of viñ $\tilde{n} a n a$ is the numerous types of viññāna that arise in a given existence that we discussed above. What we perceive through the six senses (eye, ear, nose, tongue, body, and mind) gives rise to six types of consciousness: vision, hearing, smell, taste, touch, and concepts. Based on those, we can have infinite types of viññāna as we discussed above. These types of viññāna are now in accordance with the type of existence or "bhava." For example, a deer does not perceive what is seen at the same level of consciousness as a human, even if both are looking at the same thing. Sometimes there may be differences in sense faculties too: a bat cannot see but uses sonar to find its way around. Furthermore, as we discussed above, there are many types of "subconscious" viññanna as well.
- There are many new concepts introduced in these introductory posts that are critical. One may need to go back to previous posts and re-read in order to grasps these important concepts.

7. Based on those two categories, there are two main paticca samuppāda cycles that describe life "in this world of 31 realms":

- One describes how the "base level" of viññanna changes at the end of a "bhava", say when a deer is reborn as a human. Here a given lifestream can make a transition from a lower base level of viññaña to a higher (e.g., deer reborn as a human) or vice versa (e.g., human reborn as a deer). This is the "paṭisandhi paṭicca samuppāda" cycle.
- The other patticca samuppāda cycle describes how a given lifestream accumulates conditions for suffering during a given "bhava." This is where we experience viñ̃̃āna through our daily activities. This is the "idappaccayatā paṭicca samuppāda" cycle; see, "Idappaccayatā Paticca Samuppāda."

Let us discuss the viñ̃ān̄a associated with this latter one first.

## 1. Sañkhāra paccaȳ̄̄ Idappaccayatā Viññāṇa

Let us first look at how our consciousness changes basically every moment in an active day. We are being bombarded with pictures, sounds, smells, tastes, body touches, and we think about all sorts of things throughout the day. In each single case, we experience a different viññāna. This is why viññāna is very complex and multi-faceted.

1. If we take a simple example of looking at a person, there are multiple events that happens in the mind: the physical eye captures an image of the mind which is processed by the brain and sent to the mind (details of this will be discussed in the Abhidhamma section later). The mind instantly compares that image with previous experiences and recognizes that it is a close friend. Happy feelings may arise instantly too. If we had not seen him for a while, some old memories associated with him may also instantly pop into our mind. The sum total of all mental factors (feelings, perception, joy, etc) associated with that "seeing event" is the "eye consciousness" or "cakkhu viñãāna" at that moment.

- And this is an example of a "vipāka viññāṇa." We did not plan to see him, but just bumped into him.

2. But now based on this vipāka viññāna, we may decide to take some actions. We may run to meet him, give him a hug, and follow-up with even more actions. Most of these could be harmless sañkhāra and our experience, consciousness, or viññāna is mostly harmless.

- However, if we instead ran into a person with whom we recently had a serious argument, that vipāka viññāna may lead to a series of "bad sañkhāra" in our minds and thus lead to a totally different viññāna BASED ON those bad sañkhāra. we may decide to say something bad to that person. Now we are doing vacī sañkhāra that may have adverse consequences. Now our viññāna is different and we feel differently from the above case. We have an agitated state of mind, and with the slightest provocation from him, we may say or do even more harmful things.

3. When a thought arises in the mind, it has associated with it many mental factors (cetasika) which characterize how we feel: joy, sadness, greed, generosity, hate, kindness, etc. Viññāna encompasses all such relevant mental factors.

- In the previous example of persons A and B meeting the politician C, person A's thoughts embody happiness while person B's thoughts embody dislike.
- For a viññāna to arise, there must be some interest in the sense object. For example, we are bombarded with millions of sense inputs in a day, but we "pay attention to" only a fraction of those. Each mind has a set of "preferred items" in the background or "in the subconscious" based on the person's habits and cravings.

4. Then, the more we "feed a given viññana" by thinking, speaking, doing things related to that, the more strong it gets. Thus we can see how "habit building" is tightly associated with sañkhāra. In the same way, we can "remove a habit" by depriving that associated viñ̃āṇa of its food, i.e., by stopping thinking or doing things related to it.

- And that can be done only realizing the benefits of a good habit or adverse consequences of a bad habit, which was the first step in the paṭicca samuppāda, "avijjā paccayā sañkhāra." A bit of thought should
make this clear. Comprehending Buddha Dhamma takes time to think deeply about how all these things fit together. Just being able to recite the patticca samuppāda cycle does not bring any benefits.

5. A simple example is "building a viññanna for getting drunk": A teenager may not like the taste of his first drink, but if he keeps doing it due to "peer pressure", he is likely to build a new viññāna for it. As he builds this viññāna, he will keep accumulating sañkhāra to "feed that viññāna." He will be thinking about it, talking about it, and of course whenever has the chance he will be drinking. The more he does any of those sañkhāra, that viñ̃āạna will grow. AND even when he is doing something else, that viñ̃nāna will be at close to top of the subconscious waiting for an opportunity to come up and induce him to get drunk.

- And it works the same way for any type of activity. A teenager studying for an exam, will have a viññāna for it. If he is serious about it, he will be thinking about it more, talking about it, and studying hard; all those are sañkhāra too, in this case for his benefit.

The idea is to first not to do any abhisañkhāra (strong immoral sañkhāra) that could lead to birth in the four lower realms. These kinds of sañkhāra are the immoral acts, speech, and thoughts. We will discuss this in the next post.

### 9.11.5 Sañkhāra Paccayā Viññāạa - 2

If you are reading this without reading the earlier posts, you may be wondering whether I was being untruthful when I said this series will be in "plain English." I did describe any of the terms used here in plain English in the previous posts. There is no easy way to get the same meaning across without using such key Pāli words.

- So, once I clarify them, I have to use these Pāli terms in order to keep a post to a reasonable length, AND readable. One can always go back and read previous posts to refresh memory.

In the previous post, we discussed how sañkhāra can feed and build different types of viñ̃āṇa during our lifetime. The paṭicca samuppāda cycle which describes that process is the Idappaccayatā Patticca Samuppāda and we discussed the step "sañkhāra paccayā idappaccayatā viññāna" for that paticca samuppāda.

- Now we will discuss how such idappaccayatā viñ̃āạna can become strong and be "carried over" to the future lives; not only that, one of such strong viññāṇa can even determine the next birth. That is why such strong viñ̃̃āna can become "paṭisandhi viññāna" by providing the "link" to the next next life (that is what "patisandhi" means: "sandhi" is connection and "pati" is bond or making the connection).

## 2. Sañkhāra paccayā Patisandhi Viññāna

1. When we build idappaccayatā viññāna during our lifetime as described in the previous post, such viññāna can get very strong and even get carry over to the next lives.

- In fact, some of the viññāna that we easily get "attached to" very well could be coming from previous lives.

2. For example, different people have "natural tendencies" for certain tasks (music, art, science, business, basically any type of activity). Similarly, some people are attracted to gambling, drinking, sports, etc more than others. All these are sansāric habits, that have been cultivated by "feeding that viññāna" over many lives.

- Unless one reduces and eventually gets rid of one's bad habits, they can lead to bad births in the lower four realms where one can get trapped for long times. Similarly, developing good habits can lead to good births, in case one is unable to attain at least the Sotāpanna stage in this life.
- This is why it is very important to get rid of "bad habits" and to cultivate "good habits." There are many posts at the site on this important topic. I cannot emphasize enough the importance of this need to change habits.

3. Following the Noble Eightfold Path is all about changing to a "good person" first; doing "ānāpānasati $b h \bar{a} v a n a \vec{a}$ does the same thing. When one does this, one develops wisdom to see through the Three Characteristics: anicca, dukkha, anatta. And that also leads to the Sotäpanna stage, where one is guaranteed to be free of rebirths in the lower four realms.

- By the way, many people are introduced to the wrong concept of "there is no self" (incorrect translation of the term anatta). Thus they get stuck, saying the term, "good person", does not make sense (because there is no "self"); that could become a huge obstacle to any progress. While the Buddha rejected the concept of "self", he also rejected the concept of "no-self", because there is definitely some key personal characteristics that "flow" from one life to the next; see, "What Reincarnates? - Concept of a Lifestream."

4. Once one is free of the four lower realms (i.e., attains the Sotāpanna stage of Nibbāna), only then one will truly realize that it is unfruitful even to wish for or work to seek rebirths in higher realms.

- But, until one attains the Sotāpanna stage, one MUST avoid immoral abhisañkhāra (strong immoral actions) to avoid immoral viññāna and also engage in moral abhisañkhāra in order to cultivate moral viññanna; this will keep one firmly on the Path and to avoid rebirth in the lower four realms until the Sotāpanna stage is attained.

5. If we think deeply about the suffering that we encounter in this life, dukkha dukkha has arisen due to whatever immoral sañkhāra done in a previous life. An animal suffers more than a human, because the cause for an animal birth was a stronger immoral action done previously.

- Dukkha dukkha associated with higher realms (deva, brahma) is less than the dukkha dukkha for a human life, because the sañkhāra that led to the deva/brahma births were merely unfruitful, they were not immoral.

6. Any birth anywhere in the 31 realms is due to a abhisañkhāra. If it is due to a worst form of abhisañkhāra (immoral actions) then that leads to a birth in the lowest four realms via a strong and bad patisandhi viññāṇa. Lesser abhisañkhāra (unfruitful actions) lead to births in higher realms via "moral" abhisañkhāra viñ̃̃āṇa.

- Thus cultivating "immoral" abhisañkhāra viñãāṇa must be avoided by not engaging in immoral activities. Otherwise, "sañkhāra paccayā paṭisandhi viñ̃ān̄a" could lead to "bad births", where dukkha dukkha is very intense.

7. Viparinama dukkha associated with the current life is also mainly determined by previous action (abhisañkhāra) that led to this life, and can be analyzed the same way as for dukkha dukkha.

- But the sañkhāra dukkha associated with this life is due to actions (sañkhāra) that we do in this life. Also, the same sañkhāra that could cause future dukkha dukkha or viparinama dukkha can also give rise to sañkhāra dukkha in this life as well. This is an important point to be realized; if not clear, you may want to go back and review the previous posts.
- Therefore, we CAN get rid of part of the dukkha (the sañkhāra dukkha) in THIS LIFE by understanding Dhamma and acting and thinking accordingly. We can also stop or reduce ALL types of dukkha in FUTURE LIVES by this process.

If you have forgotten what these terms mean, it is a good idea to go back and refresh memory, because otherwise it will be difficult to comprehend the upcoming posts in this series as well. And these terms are critically important for grasping the message of the Buddha. Avijjā, sañkhāra, and viññāna are key terms that must be comprehended; they do not have corresponding English words.

More on viññāna can be found at, "3. Viññ̄āna, Thoughts, and the Subconscious."
Next, Viññāna paccayā Nāmarūpa,

### 9.11.6 <br> Viññāṇa Paccayā Nāmarūpa

Revised May 19, 2019; May 13, 2021; May 19, 2021 (\#10-\#12); September 9, 2022

## Introduction

1. Nāmarūpa can have different but related meanings in different contexts. Nāmarūpa in the standard upapatti Paṭicca Samuppāda is different from the "nāmarūpa" involved in idappaccayā Patticca Samuppāda which takes place moment-to-moment.

- Idappaccayā means "what happens at this moment depending on the conditions at this moment." Thus, it describes "events in real-time" that bring vipāka in real-time, in addition to vipāka in the future. See, "Idappaccayatā Paticca Samuppāda."
- The upapatti Paticca Samuppāda process describes how viñ̃āạa energies created up to and within this life lead to future births (i.e., vipāka in future lives via future births). Here "uppatti" means "birth." See, "Akusala-Mūla Upapatti Paticca Samuppāda."

## Nāmarūpa in Idappaccayatā Paticca Samuppāda

2. Let us first discuss nāmarūpa involved in Idappaccayatā Pațicca Samuppāda, i.e., how a $\bar{j} \bar{a} t i$ can arise in the current life based on one's avijj $\bar{a}$ (ignorance) and sañkhāra (thoughts, speech, and actions).

- Jāti is not restricted to "births as a human, a deva, an animal." Many different $j \bar{a} t i$ (births) arise during the current life itself, see "WebLink: suttacentral: Jātidhammādi Sutta Dasaka (SN 35.33)."
- We will discuss two examples below which explain how a "thief" and a "drunkard" are "born" during the current life itself.

## "Viññ̄ṇa Paccayā Nāmarūpa" During a Lifetime

3. "Nāmarūpa" involved in Idappaccayatā Paticca Samuppāda mainly refer to those "visual images" created by the person when making an "expectation" (viññāna) to achieve/maintain a certain goal.

- Here, "nāma" refers to whatever the "name" given to the subject involved in the Paticca Samuppāda process, and " $\bar{u} \bar{p} \bar{a}$ " are the associated objects themselves. Thus, the corresponding "nāmaru $\bar{u} p a$ " are the mental images of the subjects in question.

4. Let us take an example. When a thief plans to steal something (say a watch from a store), the process starts with the step "salāyatana paccayā phasso;" see, "Generating Kammic Energy in the 'Upādāna Paccayā Bhava' Step." That corresponds to him seeing the watch on display and realizing that he could take it without anyone seeing it.

- That is when he starts acting with avijjā initiating a PS cycle at "avijjā paccayā sañkhāra"; he starts thinking about the plan because of his ignorance of the consequences.
- Here "nāma" or the name is "watch," and "rūpa" is the watch itself. But "nāmarūpa" is the mental image of that watch: That is formed in HIS MIND. In addition, various other types of nāmarūpa related to the plan will go through his mind.
- For example, he may also make visuals of how he will be doing the stealing: "nāmarūpa" are the visuals he has in his mind to get the job done.
- He starts doing vacī sañkhāra first: thinking to himself about how to go about stealing the watch. This is "sañkhāra paccayā viññāna" and that gives rise to viññāna for stealing the watch.

5. The more he thinks and makes plans (i.e., makes more and more nāmarūpa in his mind, that future expectation for stealing that object (i.e., the viññāna for it) will get stronger.

- Here the Pațicca Samuppāda process runs backward, "nāmarūpa paccayā viññāna." This is called an "aññamañña paṭicca samuppāda." [aññamañña : (adj.), mutual.]
- These forward and backward steps may run back and forth while he is planning the robbery, and the Buddha said that both viññ̄ạna and nāmarūpa get stronger due to this feedback. They depend on each other and feed on each other.
- The more he thinks about it, the stronger those viññāna and nāmarūpa.
- Ven. Sariputta provided a simile for this inter-dependence between viññāna and nāmarūpa saying it is like two bundles of hay leaning against each other and supporting each other without any other support.

## A Second Example

6. Let us take another case of a teenager whose peers influence him to drink alcohol. Because of his ignorance about the consequences, he engages in such activities and also in planning activities: "avijj $\bar{a}$ paccayā sañkhāra."

- Here sañkhārā includes not only drinking activities but also planning. Therefore, all three types of sañkhāra are involved: mano, vacī, and kāya sañkhāra.
- While he is participating in drinking he is doing kāya sañkhāra; he will constantly talking about having such parties and those are vacī sañkhāra; it is also in the subconscious and many times a day they come back to his mind as mano sañkhāra. All these are included in "sañkhāra paccayā viññāna."

7. Most people do not realize it, but that process of "thinking and talking to oneself" (vacī sañkhāra) can make a big impact on the formation of nāmarūpa and the cultivation of viññāna. Many people spend hours and hours doing that assuming it does not contribute to "viññanna (or kamma) formation"; see, "Correct Meaning of Vacī Sañkhāra."

- In the above example, even when he is not drinking, such mano sañkhāra comes to the mind automatically, and he starts consciously thinking about drinking activities: he visualizes pictures of "party scenes," including friends, bottles of his favorite drink, any food that goes with it, etc.
- That conscious thinking is also vacī sañkhāra, and those also strengthen the viññāna via "sañkhāra paccayā viññāna."
- Now those mental pictures that arise during that process are nāmarūpa that arise due to "viñ̃ñaña paccayā nāmarūpa." Therefore, Paṭicca Samuppāda steps do not just flow in one way. They can run forward and backward.

8. If the teenager keeps his bad habit of drinking, he gets trapped in that bhava (state of mind of a drunkard), the more "drunken jāti" will result, i.e., more frequently he will be drunk. When one gets excessively drunk, one tends to behave like an animal without any sense of decency. The long-term consequences could be rebirth as an animal.

- Suppose that "viññāna of a drunkard" stays strong to the time of death (the cuti-patisandhi moment at the end of his human bhava). In that case, it could lead to a new uppatti bhava via the uppatti Paticca Samuppāda process mentioned in \#1 above. We will discuss this second type of Pațicca Samuppāda
- The important point is that such a patisandhi viñ̃ãnana is likely to give rise to rebirth in the animal realm, as mentioned above.

9. In both these examples, it is clear that those reverse steps also occur: "nāmarūpa paccay $\bar{a}$ viñ̃ān̄na" can happen, and does happen, together with "viñ̃n̄ạa paccayā nāmarūpa." The more one visualizes related nāmarūpa, the stronger that viññāna gets.

- As we saw above, this happens in other steps too (for example, "sañkhāra paccayā viñãāṇa" and "Viññāna paccayā sañkhāra") and such is referred to as an "añ̃̃amañña Paṭicca Samuppāda step." Here "aññamañ̃̃a" means "inter-dependent."
- This is especially true also for the "sañkhāra paccayā viñ̃̄āna." The stronger the viññāna gets, one is more likely to engage in the same kind of acts, i.e., sañkhāra, i.e., "viññāṇa paccayā sañkhāra." They feed on each other. This often happens in habit formation; see, " 9 . Key to Ānāpānasati - How to Change Habits and Character (Gati)."

## Viññāṇa Paccayā Nāmarūpa at Paṭisandhi (in Upapatti PS)

10. At the end of existence (bhava), a given lifestream jumps from one kind of existence to another. The easiest to visualize is the case of a Brahma to a Deva transition. The "nāma" part changes from a Brahma to a Deva, and the "rūpa" part changes from 2 pasāda rūpa for the Brahma to 5 for the Deva.

- That transition happens in the latter part of the last citta vithi of the life of Brahma. At that cutipatisandhi moment, the "Brahma nāmarūpa" dies and a "Deva nāmarūpa" is created by kammic energy. This is discussed in a bit more detail in the post "Cuti-Patisandhi - An Abhidhamma Description."

11. For humans (and animals,) the situation is a bit more complex because the first type of "human nāmarūpa" created is a human/animal gandhabba.

- In the cases of a human or an animal, the second type of nāmarūpa forms when that gandhabba merges with a zygote in a womb. That nāmarūpa is the basis for the physical human body. So, it depends on the particular case at hand.
- Let us consider the case of a human dying and born into a deer. A gandhabba is involved in both lives.

## Example of a Human to Deer Transition

12. In general, as soon as the viññana for the next existence was determined at the last citta vithi by the step "sañkhāra paccayā viññ̄ạna," the next step of "viñ̃n̄ṇa paccayā nāmarūpa" gives rise to the nāmarūpa for the next life.

- When human life ends, that "human gandhabba" will die, and at that cuti-patisandhi moment a "deer gandhabba" will arise.
- Thus here, "nāma" includes the basic level of viññāna for the new deer's existence, which is much different from the "nāma" of a human. The "rūpa" is that of a deer and not of a human. Thus "nāmarūpa" makes a huge transition at the end of the "bhava" from human to a deer.
- Of course, now that "deer gandhabba" needs to be pulled into the womb of a female deer (i.e., doe) to be born a deer.

13. I have discussed previously how a "deer gandhabba" could be reborn many times as a deer until the kammic energy of the "deer bhava" is exhausted; see, "Bhava and Jāti - States of Existence and Births Therein."

- In such instances, at the death of the deer, a "deer gandhabba" emerges from the dead body and waits for a suitable womb for the "deer mother" to become available. Here the new "nāmarūpa" may be somewhat different, but still, that of a deer so any change would be minor.
- Therefore, the "viñ̃ñana paccayā nāmarūpa" gives rise to a new set of "nāmarūpa" only at the patisandhi to a new existence.

Viññanna is a key concept in Buddha Dhamma. We can analyze it at various levels, and a deeper analysis is at "Viññāna Aggregate."

Next, "Nāmarūpa Paccayā Salāyatana",

### 9.11.7 Nāmarūpa Paccayā Saḷāyatana

Revised May 25, 2019; August 31, 2019; major revision May 20, 2021; September 9, 2022
"Nāmarūpa Paccayā Salāyatana" step involves different types of nāmarūpa and saḷāyatana depending on whether it is an Idappaccayatā or a upapatti Paṭicca Samuppāda.

## Ayatana and Indriya

1. First, let us discuss the difference between a $\bar{a} y a t a n a$ and an indriya.

- We have six sense faculties: eyes (cakkhu), ears (sota), nose (ghāna), tongue (jivhā), body (kāya), and the mind (mano). These are the indriya.
- Our initial sensory inputs (what we see, hear, etc.) are due to kamma vipāka based on this life with a solid, physical body. Unlike Brahma's "energy body," our "solid body" can be exposed to various ailments. At the moment of experience, these sensory faculties act as indriya. For example, when we see an attractive person on the road, that is just "seeing the event" with the cakkhu indriya.
- However, based on those initial sensory experiences, we may INTENTIONALLY use those indriya to "enjoy that ārammaña." Then those indriya become āyatana. In the above example, if we get attached to that attractive person and keep looking at that person, then we use our eyes as cakkhāyatana. In the same way, sota indriya becomes sotāyatana, and so on for all six.
- They are called salāyatana since there are six of them.

2. There is no equivalent English word for āyatana, so we will keep using indriya and āyatana from now on.

- By the way, pañca indriya (saddhā, sati, viriya, samādhi, pañña) are an entirely different set compared to this set of 6 indriya.
- In general, "indriya" means a "dominant faculty." Those that are dominant in the interactions with the external world are the six indriya in \#1; those dominant in spiritual advancement are the five indriya in pañca indriya.

## Examples of Indriya Becoming Ayatana

3. For example, I am walking on the road and see a nice house. I just happened to see it, and my eyes (cakkhu indriya) were working as indriya; they just presented a picture of that house to my mind. It is a neutral event.

- However, if I form an attachment to the house, I start looking at it for a while (with cakkhāyatana). I am thinking about how nice that house is and even about building one like that. At that point, I am also using my mind as a āyatana (mana indriya now becomes manāyatana).
- I have formed greedy thoughts about the house and now I am accumulating new kamma by generating vacī sañkhāra (talking to myself with vitakka/vicāra). I use my eyes and mind as āyatana (cakkhāyatana and manāyatana): I keep seeing the house and thinking greedy thoughts.

## Indriya Become Āyatana With Abhisañkhāra

4. In many cases, when we experience a sensory event through one indriya, we may start using some or all of the indriya as ayatana. In another example, someone offers us a piece of a tasty cake (a kamma $v i p \bar{a} k a$ ). We get the cake's taste with the tongue (jivhā) and like it so much we may use all six ayatanas to accumulate more kamma (smell and touch it and then ask for the recipe and think about how to make it or where to buy it).

- Those "extra activities" that we do with āyatana COULD BE abhisañkhāra (depending on whether greed was involved.) But just eating a cake is not abhisañkhāra; see, "Kāma Guna, Kāma, Kāma Rāga, Kāmacchanda."
- Most of the time, we use our sense faculties as indriya: we see, hear, etc., many things in a day but ignore most of them. But when we experience something that we have a craving for, we start using our sense faculties as āyatana.
- Both types of akusala-mūla Pațicca Samuppāda cycles operate only when we use our sense faculties as āyatana.
- An Arahant ALWAYS uses his/her sensory faculties as an indriya. He/she will see, hear, etc just like us, but will not get "attached to" anything.

5. However, we DO NOT use our indriya as ayatana in most situations. For example, I may become thirsty. Then I need to think about getting a glass of water or asking someone for a glass of water. Both involve vacī sañkhāra. Then I drink water that involves kāya sañkhāra (moving body parts.) Those are kammically neutral and NOT abhisañkhāra.

- In another example, suppose a robber attacks you with a knife in an isolated place. If possible, you would want to disarm him without killing or hurting him too much in the process. If that is not possible, you may want to try to run away. All those activities involve kāya sañkhāra. But they are NOT abhisañkhāra that involve greed, anger, or ignorance (lobha, dosa, moha.) The INTENTION (cetanā) there is to avoid injury to both.

## Salāyatana Means Different Things in The Two Types of PS

6. Salāyatana has somewhat different meanings in the idappaccayatā and paṭisandhi paticca samuppāda cycles. That is very much like for nāmarūpa that we described in the previous post.

- At birth (especially in a new bhava or existence), we get a "new set of sense faculties" or indriya. For example, if a human is reborn as a Brahma. A Brahma will have only eyes, ears, and mind. There will be only three indriya (or āyatana) instead of six for human. But we keep the term "salāyatana" in the Paticca Samuppāda as a generic term.
- Thus in Upapatti Paṭicca Samuppāda, we are concerned with forming a brand new set of āyatana for a new existence (bhava).
- However, when we consider the Idappaccayatā Pațicca Samuppāda series, we are concerned with how the six ayyatanas for a human change from even moment to moment. In particular, the issue is whether they are being used as àatana or indriya.

## "Nāmarūpa paccayā Saḷāyatana" at Paṭisandhi (Upapatti PS)

7. At the end of existence (bhava), a given lifestream makes a "big jump" from one kind of existence to another. At that time, the base level of viññāna for the lifestream makes a jump, and this is the "nāma" of the nāmarūpa. The nāmarūpa for the new existence also has a different blueprint for the new physical body, the "rūpa" part.

- As we did in the previous post, let us consider the case of a lifestream transitioning from a human to a deer. The basic level of viññanna changes from a human to a much lower level of a deer. This new level of viññana together with the blueprint for the deer is in the new nāmarūpa of the "deer gandhabba" that comes out of the body of the dead human, as we saw before.
- Now when this gandhabba descends to the womb of a female deer, that baby deer starts to grow. Six sense faculties (indriya) suitable for a deer grow in that womb, which may become salāyatana at times in the future after the birth.

8. In another example, consider a human who exhausted his kammic energy for the human bhava at death, and became a Deva in one of the Deva realms. At the cuti-pattisandhi transition in the last citta vithi of that human, the human gandhabba dies. In the next moment, a Deva gandhabba is born.

- All devas are born fully formed. There is no need for a mother's womb. That is an opapātika birth.
- When that human dies, his body becomes inert like a log. At that very instant, a fully-formed Deva appears in the appropriate Deva world.
- That Deva will have sense faculties appropriate for a Deva. Those are the indriya for the new existence. Those indriya can sometimes become āyatana depending on Deva's activities.

## "Nāmarūpa paccayā Salāyatana" During a Lifetime (Idappaccayatā PS)

9. During a given lifetime of a deer, human, or a Brahma, that lifestream will have a basic set of indriya (that become āyatana at times) appropriate for that existence: the sense faculties for a human are different from that of a deer or a Brahma.

- But during that lifetime, those ayatana will have minor changes (compared to the drastic changes at paṭisandhi) depending on the activity. Idappaccayatā Paṭicca Samuppāda cycle describes such changes.

## An Example in Idappaccayatā PS

10. In the previous post, we discussed the case of a thief who is planning a theff; see \#4 of "Viññāna Paccayā Nāmarūpa." His viññanna about the theft led him to generate appropriate nāmarūpa (the visuals in his mind of how the theft is to be carried out).

- When he plans the theft, he will use his sense faculties as ayyatana to do the "preparatory work." He will read about the place to be robbed, ask for relevant information, etc. Each time he does a specific act (whether thinking, seeing, hearing, etc.), the Idappaccayatā Pațicca Samuppāda cycles operate.
- Now when he is about to steal, his indriya becomes āyatana. All his sense faculties will be on high alert. He watches and listens carefully for anything unexpected, and his whole body becomes tense, pumped with adrenaline.
- All his àyatana will be employed to carry out the task. He will be using his body, eyes, and ears as $\bar{a} y a t a n a$. The act of stealing the watch is done with kāyayatana (kāya āyatana) and involves kāya abhisañkhāra. It is an abhisañkhāra because it involves greed.
- In comparison, getting the same watch by paying for it is a kāya sañkhāra where the body is used as an indriya. Both times he used his hand to hold the watch. It is the INTENTION (cetanā$)$ that determines whether the body was used as an āyatana (with kāya abhisañkhāra) or an indriya (kāya sañkhāra.)

Next, "Difference between Phassa and Samphassa",

## Difference between Phassa and Samphassa

## Revised November 6, 2018; June 2, 2019; re-written April 14, 2021

## Phassa and Samphassa - Incorrect Translations

1. No differentiation is made between "phassa" and "samphassa" in most English translations of Patticca samuppāda. Both words translated as "contact" in English translations without making the distinction. See, for example, "WebLink: suttacentral: Chachakka Sutta (MN 148)" and the English translations there.

- However, as we will see below, "samphassa" has a very different meaning than "phassa" and makes the connection of how our instinctive reactions to external sense experiences arise based on our "samisāric habits" or "gati."
- With the distinction made between "phassa" and "samphassa," the true meanings become clear in many suttā like "Chachakka Sutta (MN 148)".

## Phassa Is in All Citta

2. When we see, hear, etc. a citta arises that recognizes the sensory input. There are 7 cetasika (mental factors) that arise with ANY citta and phassa and vedana are two of them. We will have no sensory experience without the phassa (contact) cetasika.

- When the mind makes that contact with that image of the external object, a citta arises a citta arises, and that is what we experience.
- Some of the seven universal mental factors that arise with the citta instantaneously identify the object. These include vedana and sañña $\bar{a}$. Both those are universal cetasika.
- If samphassa takes place, there will be an additional vedana $\bar{a}$, which is called "samphassa-j $\bar{a}-$ vedanā."

## Samphassa - How Does It Arise?

3. An average human will form a like or a dislike for some of the sense inputs (but not for all).

- If a like or dislike is formed, then that sense contact is "san phassa"("san" + "phassa," where "san" are defilements (greed, anger, ignorance); see, "What is "San"? Meaning of Sansāra (or Samisāra)"). It rhymes as "samphassa."
- This "combination effect" or "Pāli sandhi" leads to the pronunciation of many "san" words with an "m" sound: "san" + "mā" to "sammā." In the same way, "san" "yutta" to "samyutta," "san" "bhava" to "sambhava," and "san" "sāra" to "saimsāra"; see, "List of "San" Words and Other Pāli Roots."
- Thus, when one sees, hears, smells, tastes, touches something, whether there will be any likes or dislikes towards that sensory experience depends on that person, or more specifically, the "gati" (habits/character) of that person.

## Examples of Samphassa

4. Let us discuss some examples to illustrate how "samphassa" arises. First, let us look at the connection with those people/things in the world that we have special relationships with or what we "upādāna," i.e., like to either keep close to like to stay away from.

- Think about the worst "enemy" you have. When you even think about that person X, you generate distasteful feelings. But that person's family will have loving thoughts about that person. Here, you and X's child (for example) would have generated very different "samphassa" when thinking, seeing, hearing about X.
- When you travel by car or bus and looking out of the window, you may see zillion things, but those are just "seeing"; you don't pay much attention to them. They are "phassa." But now, if you happen to see a beautiful house, it piques your interest, and you may even turn back and take another good look at it and may be even thinking about how nice it would be to live in a house like that. That is "samphassa."

5. Now, let us see how one's perception of what is "valuable" can lead to "samphassa." Suppose someone inherits a valuable gem from his father. Every time he sees it or even thinks about it, he becomes happy. But his mind is also burdened by it since he is worried that he may lose it; he is keeping it in a safe and has put burglar alarms in the house to protect that gem.

- Now, suppose one day he asks a professional to evaluate the gem and finds out that it is not a gem. He may not even believe that initially, but once it sinks in that it is indeed worthless, he will become "detached" from it. He will no longer keep it in the safe and may even throw it away in disgust.
- Now he may be generating either neutral or hateful thoughts about the SAME OBJECT that he once loved so much. Nothing changed about the "gem"; it is still the same object as before. What has changed is his PERCEPTION of the value of that object. Whereas he generated "samphassa" on thinking or seeing that object before, now he may generate just "phassa" (neutral feelings) or "samphassa" with quite the opposite feelings of disgust.

## Phassa Can Turn to Samphassa in an Instant

6. Let us take another example that Waharaka Thero gave. This one clearly shows how the transition from "phassa" to "samphassa" can happen very quickly.

The following happened many years ago in Sri Lanka. A mother had to go overseas when her son was less than a year old. She had been overseas for many years and came back to see her son. Apparently, she had not even seen any pictures of the boy, who was now a teenager. When she gets home, she is told that the boy is visiting a neighbor and starts walking there. On the way, she bumps into a teenager; the teenager apologizes, and she resumes walking. But then another person on the street says, 'Don't you recognize your son? Well. How can you? You have been away all this time". Hearing that, she says, "Oh, is that my son?" and immediately runs back and hugs him.

- She clearly saw the boy when he bumped into her and apologized. But at that time, he was just a teenager to her. That "seeing" event involved "phassa."
- But when someone pointed out that it was her son, her perception of the boy took a big leap in an instant. Now she looks at the same boy with the whole new set of "mental baggage." Now it is not just a teenager, but her son; there is attachment involved. Now when she looks at him, it is "samphassa" that is involved.

7. Now, we can also see how "samphassa" leads to an intensified vedan $\bar{a}$ or feelings. This is called "samphassa jā vedan $\overrightarrow{\boldsymbol{a}}$ " or "vedana arising due to samphassa." This "mind-made defiled vedan $\bar{a}$ " is different from the universal vedana $\bar{a}$ mentioned in \#2 above.

- She had neutral thoughts (may be even some annoyance) when the boy bumped into her apologized. But when she learned that it was her son, her feelings turned instantly to joy.
- To take a bit more further, if that teenager then got hit by a car after several minutes, that joy would turn instantly to sorrow.
- These different types of "vedana" arise based on the type and level of "attachment" to a given object, in this case, the boy.

## Samphassa - Connection to Gati

8. "Samphassa" is intimately connected to one's "gati" or habits, most of which come from our past lives, even though some may be strengthened or weakened by what we do in this life. We may even start forming new "gati" in this life. Note that "gati" is pronounced "gathi" like in "Thailand."

- For example, a young lady looking at a dress may form a liking for it. Another person seeing his enemy will form a dislike. A teenager, upon hearing a song, may form a liking for it, etc.
- This "contact with san" (or samphassa) happens instantaneously. That initial samphassa arises automatically purely based on our "gati." But since our actions based on that initial reaction take some time, we still have time to control our speech or bodily actions. Even if bad thoughts come to our minds, we can stop any speech or bodily actions. That is Kāyānupassanā in Satipatt
- There are many posts at this site that discuss "gati," and at the fundamental level, both A$n \bar{a} p \bar{a} n a$ and Satipatṭhāna meditations are all about removing bad "gati" and cultivating good "gati"; see, "9. Key to Ānāpānasati - How to Change Habits and Character (Gati)".

## An Arahant Has Phassa but Not Samphassa

9. Now, let us consider what happens when an Arahant sees or hears similar things (phassa or "contact" takes place.) $\mathrm{He} /$ she will see or hear the same thing as any other person.

- But an Arahant will not be attracted to it or repelled by it. There will be no samphassa. Thus, there will be no "samphassa jā vedana $\vec{a}$ " either.
- To put it in another way, an Arahant sees, hears, etc. without any bias or samphassa. He/she will also generate vedanā, but not "vedanā due to samphassa."
- An Arahant has removed all such defiled "gati," which are closely related to cravings or "āsava." An Arahant has removed all "āsava"; this is what is meant by "āsavakkhaya" at the Arahanthood. This is a technical detail that may not be clear to some, but don't worry about it if it does not.

10. We can now see the difference between "phassa" and "samphassa."

- In an Arahant's case, there is only "phassa" or mere contact with the external sensory input. An Arahant will thus "see" or "hear" or "smell" or "taste" or "feel" the same things as any other person. But an Arahant will not be attached or repulsed by that sensory experience.
- For example, the Buddha identified different people. But he did not give special treatment to Ven. Ānanda (his personal assistant.) He did not treat Ven. Ānanda any different from Devadatta, who tried to kill him. He treated the poorest person the same way as he treated a king.
- The Buddha ate the most delicious food offered by the kings and also ate meager meals offered by poor people.
- In all those sense contacts, it was just "phassa" and not "samphassa."

## Samphassa Leads to Samphassa-jā-Vedanā

11. Therefore, now we can see that the step, "phassa paccayā vedan $\bar{a} "$ in Akusala-M $\bar{u} l a$ Paṭicca Samuppāda really is "samphassa paccayā samphassa-jā-vedanā." Such Akusala-Mūla Patticca Samuppāda processes do not operate for Arahants.

- More details on how "samphassa" leads to samphassa-jā-vedanā at: "Vedanā (Feelings) Arise in Two Ways" and "Vipāka Vedanā and "Samphassa jā Vedanā" in a Sensory Event."

Next, "Phassa paccayā Vedanā....to Bhava",

### 9.11 .9 <br> Phassa Paccayā Vedanā....to Bhava

## Re-written May 24, 2021; revised May 25, 2021

It is critical to understand that "phassa paccay $\bar{a} v e d a n \bar{a} "$ in akusala-mūla Pațicca Samuppāda processes is really "samphassa paccayā samphassa-j $\bar{a}$-vedana $\bar{a} . "$

## Difference Between Phassa and Samphassa

1. In a previous post, we discussed the difference between "phassa" and "samphassa." See, "Difference between Phassa and Samphassa." To summarize:

- "Phassa" is pure mental contact. It is just seeing, hearing, smelling, tasting, touching, or just an arbitrary thought that comes to the mind without one's own likes/dislikes. Phassa is a universal cetasika and is present in ALL cittā.
- An ordinary person will also have "phassa" when sense inputs come in as kamma vipāka. For example, one may walk down the street and see an expensive ring on the road. That initial "seeing" is due to a kamma vipāka; that involves only "phassa." But now, greedy thoughts arise, and he picks it up and quickly puts it in his pocket. He did that action with "samphassa" (with greedy thoughts.)
- Thus the akusala-mūla Pațicca samuppāda involves "salāyatana paccayā samphassa," even though it is normally written as "salāyatana paccayā phassa" in the "uddesa" or "brief" statement; see \#3 below.
- Only an Arahant will always have just "phassa" and at no time "samphassa."

## Difference Between Indriya and Āyatana

2. We also discussed the difference between "indriya" and "āyatana," i.e., how we can use our sense faculties either way. See, "Nāmarūpa Paccayā Salāyatana." As discussed there, these six indriya are different from the five indriya in pañca indriya, which are sati, samādhi, saddh $\bar{a}$, viriya, and pañña $\bar{a}$.

- Our basic sense faculties are the six "indriya." When used with craving/anger/ignorance, they become "ayatana." Since there are six of them, there are six "āyatana" or "salāyatana."

## Brief and Detailed Explanations (Uddesa, Niddesa, Paṭiniddesa)

3. Akusala-mūla Paticca samuppāda processes start with ignorance (avijjā), and we start accumulating kamma by using our six indriya as "salāyatana." At such times, our sensory faculties make "defiled contacts" or "samphassa" as discussed in the above-mentioned posts.

- Therefore, it is clear that the step "salāyatana paccayā phassa" should really be "salāyatana paccayā samphassa." But for brevity, "salāyatana paccayā phassa" is used.
- In the same way, the next step of "phassa paccay $\bar{a}$ vedan $\bar{a}$ " is really "samphassa paccay $\bar{a}$ samphassa-jā-vedanā."
- It is common practice to write verses in brief in the Tipitaka. Such verses need to be explained in detail as I try to do in these posts. See, "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."

## Detailed Explanation With an Example

4. Let us take an example to go over the steps of the Paticca samuppāda up to now as a review. Suppose there is a teenager who comes to associate with friends that belong to a street gang. They tell him that one needs to enjoy life and has to do "whatever it takes" to make money to enjoy life. If the parents do not have close contact with the teenager, there is no one to explain the perils of such a way of life, and he embraces this wrong vision or "micchā dittthi."

- Thus due to ignorance (avijjā), the teenager starts doing things, speaking, and thinking like those gang members: "avijjā paccayā sañkhāra."
- Then what occupies his mind most of the time are thoughts (sañkhāra) related to gang activities and seeking pleasures by using drugs and alcohol: "sañkhāra paccayā viñ̃̃̄ạna." Thus, a corresponding "defiled mindset" occupies his mind at those times. During gang activities, his thoughts are focused on them, and what is in his subconscious during other times is also related to such activities.
- That, in turn, leads to "Viññāṇa paccayā nāmarūpa". He thinks about and visualizes various gang activities: How to sell drugs to make money and how he will enjoy the rest of the time hanging out with the gang.
- Thus all his six sense faculties become "āyatana": they all are used to find ways to optimize the gang activities and to think about ways to "have to fun": "nāmarūpa paccayā salāyatana."
- Thus inevitably, the sense contacts he makes are attuned for such activities: "salāyatana paccayā phassa" or more explicitly, "salāyatana paccayā samphassa." Those sensory contacts are defiled with greed, hate, and ignorance.
- Accordingly, most of his feelings are associated with such defiled sense contacts: He gets angry dealing with rival gangs, takes pleasure in beating them up, gets pleasure from drinking and using drugs, etc. Thus "(sam)phassa paccayā samphassa-jā-vedan $\bar{a} "$ ensues.

## Getting Attached (Tanhhā)

5. Now, we can see how he gets more and more absorbed in gang activities; he gets pleasure from them. Gang activities become regular habits. He gets "stuck" or "gets attached to gang activities" via both greed
 and Ignorance."

- The more he continues such activities, it will become harder to dissociate from them. He thinks about those activities even when not actively doing them. Those start working in his "subconscious"; he dreams about them, etc.
- We need to remember that consciously thinking (or talking to oneself) is also vacī sañkhāra and are kamma that will bring vipāka.

## Upādāna Makes One "Fully Engaged"

6. Such strong attachments to gang activities lead to "upādāna": Upādāna ("upa" +"ādāna," where "upa" means "close" and "ādāna" means "pull" or "attract"; thus gang activities becomes very close him. Those are what he thinks, speaks, lives, all day long: "taṇhā paccayā upādāna."

- He may especially get attached to certain specific activities. Alcohol, drugs, or even beating up other people or killing them. And such a specific thing would be his favorite, and that is what he will follow enthusiastically, and others will also encourage.
- He will spend most of his time with those gang members. They will enjoy doing their favorite things together.
- Thus, now he (his mind) will go through all the steps of PS starting with "avijjā paccayā sañkhāra" repeatedly. This is where one really accumulates kammic energies for new existences (bhava.)

7. This leads to the preparation of future "existence" or "bhava." For example, suppose his gang becomes notorious for hurting rival gang members. They take pleasure in beating up someone or, in some cases, even killing someone. He will acquire the mindset of a violent animal. He will become easily agitated and angry.

This is "upādāna paccayā bhava."

- His "bhava" has drastically changed from that of an innocent teenager to that of a violent animal at times.

## Paṭicca Samuppāda Is Not a Linear Process

8. Thus, we can see that this progression from "avijjā paccayā sañkhāra" to "upādāna paccayā bhava" does not happen in a linear sequence.

Some steps go back and forth. For example, "avijjā paccayā sañkhāra" is inevitably also followed by the reverse "sañkhāra paccayā avijjā," i.e., the more wrong things he does, that also solidifies his ignorance. When he starts enjoying those immoral acts, he will tend to think that it will provide him happiness in the future. kāmacchanda (strong greed) and vyāpāda (strong hate), the two main components of the five hindrances.

- The five hindrances will suppress his ability to think clearly, and avijjā (ignorance) will grow; thus, "sañkhāra paccayā avijj $\bar{a} "$ " will also take place.
- There can be many such "inter-loops" that tend to strengthen the downward progression of that teenager.

## The Concept of Bhava

9. Let us discuss the concept of a "bhava" in a bit more detail.

- Every time we do a sañkhāra (a bodily act, speech, or a thought), a corresponding kamma (basically an action) is done. In Buddha Dhamma, too, action will trigger a reaction (or a response or a result) just like in physics. But when dealing with mental phenomena, the reaction (kamma vipāka) can come later, sometimes many lives later.
- This is why science has not yet realized the way to handle mental phenomena. Since most "reactions" (kamma vipāka) come later in this life, or even in future lives, it is not easy to see these "action/ reaction" or "kamma/kamma vipāka" relationships.

## Not All Sañkhāra Are Bad

10. Not all kamma are the same. Some kamma (and corresponding sañkhāra) are harmless, i.e., they are not potent. Anyone who lives in this world (even an Arahant until death) has to do sañkhāra to live: An Arahant has to walk, speak, think about things, and all these can be considered to be kamma (sañkhāra). In some cases, they are put in the category of kriya to separate them specifically.

- In akusala-mūla Paṭicca Samuppāda, we are concerned with kamma involving greed, hate, and ignorance. Anytime that happens, such kamma (sañkhāra) are potent. They can bring about significant results or kamma vipāka.
- The clearly strong kamma (via sañkhāra) are called abhisañkhāra (or kamma patha.) Killing one's parents is an abhisañkhāra. Since it is immoral, it is called an apuñ̃ā̄bhisañkhāra (apuñña+abhisañkhāra). It will lead to horrible consequences (STRONG kamma vipāka).
- Saving the life of a human is also an abhisañkhāra. Since it is a moral one, it is called a puññābhisañkhāra (puñña + abhisañkhāra). It will lead to good consequences.
- As we discussed above, those good or bad consequences may not be apparent even in this life. But they can bear fruit in future lives.

## "Paṭi Icca" Leading to "Sama Uppāda"

11. How the consequences or "reactions" or kamma vipāka due to good or bad kamma are brought about involves the concept of a "bhava," which can also be called a "kamma bïja" or a "kamma seed."

- Every time one does a good or bad kamma, the potential to bring about its results remains with him/her. And the more one does the same, the kammic energy grows. It is said that such acts prepare a "bhava" or existence corresponding to that kamma. In fact, this is the meaning of Paticca Samuppāda ("paṭi icca" leading to "sama uppāda"); see, "Paticca Samuppāda - "Pati+ichcha" + "Sama+uppāda."
- For example, as the above-discussed teenager keeps doing his violent acts, he makes a "bhava" or a "kamma seed" appropriate for bringing about their consequences.
- During a lifetime, these "bhava" mostly bring about environments suitable for conducting similar acts. It becomes his "state of existence" or "bhava." He keeps acting violently and may even act like an animal at times. His "animal-like gati" or "animal-like habits" will grow.
- This "bhava" is called a "kamma bhava," and he may "born" in that existence many times during the lifetime. The Idappaccayatā Paṭicca Samuppāda describes that.
- Of course, when this bhava gets stronger with maintaining that lifestyle, it may grow to be strong enough to bring birth in an actual "animal bhava." That is described in the upapatti Paticca samuppāda.

## Idappaccayatā Paṭicca Samuppāda

12. Going back to our example, it becomes easier for that teenager to get that state of existence (bhava.). He is provoked easily, and he can hurt someone without much remorse. Thus whole "Idappaccayatā Paticca Samuppāda" cycle can run many times during a day.

- This is why stopping such actions early is important. If one has learned correct "ānāpāna" or "satipatṭhāna," then one would know not to keep doing such acts.
- This is also why the environment (parents, family, friends, teachers, etc.) plays such a huge role in one's life at a young age. We all have both good and bad tendencies ("gati") coming from previous lives. Which of those get to grow depends on how one's life is directed by the environment, especially at a young age. When one is old enough, one could, of course, make even drastic changes with effort.

## Upapatti Paticca Samuppāda

13. As a given "kamma bhava" gets stronger with repeated actions, it can become a "upapatti bhava," i.e., the kamma seed has now become strong enough to provide a patisandhi (rebirth) to a new bhava or existence at the end of the current existence (bhava) as a human; this is the cuti-patisandhi transition that happens in the last citta vith $h$ of the human existence.

- Details of this have been discussed in other posts and will be discussed in the next post as well, but the important thing here is the concept of a strong kamma seed that can give rise to a new existence (rebirth) or a "upapatti bhava."
- Such strong kamma seeds suitable for upapatti bhava can grow over many lifetimes as well.
- We all likely have many such good and bad strong kamma seeds that we have acquired in our previous lives. From all those good and bad kamma seeds potent enough to provide patisandhi, the most strong one comes to the forefront of the mind at death (if the kammic energy for the present bhava as a human is exhausted). We will discuss this in detail in the next post, but the difference between "bhava" and " $j a \bar{a} t i "$ has been discussed in "Bhava and Jāti- States of Existence and Births Therein."

We will discuss more details in the next post that will wrap up this series: "Bhava paccayā Jāti....Jarā, Marana,...".

### 9.11.10 Bhava Paccayā Jāti....Jarā, Maraṇa,...

## Revised June 16, 2019; re-written May 24, 2021; May 29, 2021

An existence (bhava) can result in this life (kamma bhava) or in future lives (upapatti bhava). Both types lead to more suffering in the end. Repetition of kamma bhava (i.e., engaging in similar activities) adds to kammic energies (kamma bija) that can fuel future upapatti bhava.

## Kamma Bhava and Upapatti Bhava

1. In a previous post ("Nāmarūpa Paccayā Salāyatana"), we discussed how repeated immoral actions of a teenager could bring about a specific type of existence (bhava) during the current life. That is a "temporary existence" (in that example as a drunkard,). Still, it creates kammic energy that will remain as kamma bhava.

- We also discussed how such kamma bhava could get stronger with time and become strong enough to lead to a whole new existence at death. This is called a upapatti bhava.
- Therefore, there are two types of "bhava": those that can bring about "experiences" during the current life (kamma bhava) and those that become strong enough to power a whole new existence (upapatti bhava).
- This is explained in the "WebLink: suttacentral: Paticcasamuppāda Vibhañga": "Tattha katamo upādāna paccayā bhavo? Bhavo duvidhena-atthi kamma bhavo, atthi upapatti bhavo," i.e., "What is upādāna paccayā bhavo? Two types of bhava - kamma bhava and upapatti bhava."
- This is why the Buddha emphasized the importance of the Idappaccayatā Paṭicca Samuppāda. Avijjā is NOT there all the time. Any unwise action done at a given time is due to avijj $\bar{a}$ present AT THAT TIME. See, "WebLink: suttacentral: Avijijā Sutta (AN 10.61)": "Purimā, bhikkhave, koṭi na paññāyati avijjāya: 'ito pubbe avijjāā nāhosi, atha pacchā samabhavī’ti. Evañcetamं, bhikkhave, vuccati, atha ca pana paññāyati: 'idappaccayā avijjā’ti." Thus, avijjā may arise based on the conditions at a given time, especially depending on the ārammaṇa (sensory input.)
- One's actions (kamma) DURING a lifetime accumulate and eventually lead to rebirths. Of course, in some cases, a single immoral action (like killing a human) can lead to a bad rebirth.

## Bhava as a "Seed"

2. Another way to look at the concept of a "bhava" is to treat it as a seed. As we discussed in the previous post, when we do any act with ignorance (and greed or hate), that helps the growth of a kamma seed (kamma bhava.) With more related kamma done, that seed can grow and bring a new birth (jäti) in the future (with upapatti bhava.) This concept of a kamma seed is easier to comprehend.

- Just like a normal seed has the potential to give rise to a plant, a kamma seed (or a "bhava") has the potential to bring about a "jāti" or a "birth," either during this life or in preparing a new life.
- Of course, once the Arahanthood is attained, that Arahant will not grasp a new bhava (since there is no upādāna.) Thus even if there could be many kamma seeds, they don't get to "germinate." Ven. Angulimala's account is a good example. See, "Account of Angulimala - Many Insights to Buddha Dhamma."
- I write it as $j \bar{a} t i$ (which is the conventional English term used), but it really is pronounced " $j \bar{a} t h i$." See, "Tipitaka English" Convention Adopted by Early European Scholars - Part 1"

## An Example from the Previous Post - Bhava and Jāti During a Life

3. Let us take the example of the teenager that we discussed in the previous post, "Phassa paccayā Vedanā....to Bhava." Because of the influence of his friends, the teenager starts dealing and using drugs and gradually gets drawn into the gang to become a gang member, and eventually starts doing violent acts of beating and killing people.

- When he did the first beating, his friends probably encouraged or even forced him to do it. Now let us suppose that he did not have a samsāric habit of doing that kind of violent act. So, when he did the first act, that energized a small kamma seed (or a "bhava.")

4. The next time he did something similar, this initial kamma seed made it easier for him to do the second act. Once he did that, the seed got bigger, and the next time he may not need much encouragement, and so on. The more he does it, the more easily he can get into that "bhava," i.e., the stronger kamma seed becomes.

This is none other than many Idappaccayatā PS cycles running that start with "avijjā paccay $\bar{a}$ sañkhāra" (doing immoral deeds due to avijjā), and leading to "upādāna paccayā bhava," making that bhava (or kamma seed) strong.

- This is another way of expressing "habit (gati; pronounced "gati") formation" that I have discussed in many other posts. The more one does acts suitable for a certain "bhava," the viññāna for similar behavior grows, and it is easier for one to be "born" in a corresponding state; this is "pati+ichcha"
leading to "sama+uppāda" as pointed out in the introductory post, "Paticca Samuppāda "Pati+ichcha"+" Sama+uppāda."
- Thus, the more the teenager does violent acts, the easier it becomes for him to be "born in that state," i.e., easier for him to do similar acts.
- In other words, repeated sañkhāra leads to strengthening the corresponding mindset or viññaṇa, and it propagates down the Paticca samuppāda series to make "kamma bhava."

5. Now let us consider when that kamma seed or "kamma bhava" gives rise to a " $j \bar{a} t i$ " in Idappaccayat $\bar{a}$ Paticca samuppāda. One day, his drug deal is sabotaged by a rival gang member, and he gets angry. Now he is easily "born" in that "animal-like violent state." He starts beating up that guy. This is a " $j \bar{a} t i$ " or "birth" in a violent existence.

- When the beating is almost done, that " $j \bar{a} t i$ " is almost over with; it is at the "jarā" (decay) stage, and when it is done, that is the end or death ("marana") of that " $j \bar{a} t i$."
- Thus when that episode is over, that temporary " $j \bar{a} t i \overline{ }$ " of "a violent existence" is over.
- The rest of it, "soka, parideva, dukkha, domanassa" or many forms of suffering, comes later in that life or even in future births. The kamma seed that helped him do that act itself got even stronger.

6. That violent action now gives rise to another kamma seed.

- Now, if during that confrontation with the other rival gang member, he himself gets beaten up, then that is due to a kamma vipāka of that new kamma.
- In either case, that "birth" or " $j \bar{a} t i$ " (the confrontation with the rival gang member) would give him only misery at the end: "soka, parideva, dukkha, domanassa."
- Many such Idappaccayatā samuppāda cycles can operate during even a day, and he may be "born" repeatedly in that confrontational state. Some may be minor, like getting mad at his friends, but some could be violent. He has prepared the "bhava," and he can get into "jati" or be "born in that bhava" easily.
- Just like when a seed is made, it is easy to get that seed to germinate. Once we prepare a "bhava," it is easy to be born in that type of existence.

7. Now, we can see that a "bhava" or a "kamma seed" is the potentiality for a particular kind of existence or a "state of mind" during the current life itself.

- He can now easily transition to that "state of mind" (or bhava). For example, he may be having a good time with his family and be in a "normal state of mind." Then he gets a phone call from a fellow gang member asking for his help with gang-related activity.
- He will instantly be transitioned to the "gang mentality" and be born a gang member. Then he will engage in whatever gang activity.
- But any birth (or $j \bar{a} t i)$ will come to an end. When that activity is over, he may come home and be part of the family life.
- However, that "bad jāti" will ALWAYS lead to "jarā, maraṇa, soka, parideva, dukkha domanassa." Even if that particular was successful and he leaves there happily, that ACTIVITY will lead to suffering in the future. He had accumulated more kammic energy for that "bad bhava."

8. But the important thing to remember is that "bhava paccayā $j \bar{a} t i$ " does not mean he is guaranteed to be born in that state. He will likely be born in that state under suitable conditions, for example, upon urged by friends.

- But if he comes to his senses and realizes the perils of such actions, he can make an effort and slowly degrade the potency of that kamma seed. The first thing is to stop doing those more violent acts. If the teenager has enough determination and has moral support from his family, he may get into the moral path.
- If he determines to change, it will be hard in the beginning. It is like trying to stop a moving car. If the car has a lot of speed, it takes a bigger effort to stop. It is easier to stop a slowly moving car before it gains speed. In the same way, it is easier to revert if one realizes that one is on the wrong path early.

## Same Example - Future Bhava and Jāti (via Upapatti PS)

9. If the teenager does not change his ways but only gets involved more and more with the violent activities, then that kamma seed (or kamma bhava) will grow bigger and can become strong enough to energize a whole new existence (rebirth) or "upapatti bhava." Or he can even make a single huge kamma seed by killing someone.

- We all are likely to have acquired several or even many such large bad kamma seeds (i.e., many bad "upapatti bhava") suitable to yield rebirths in the lowest four realms; we have no way of finding out.
- Of course, we are also likely to have many good kamma seeds (i.e., many good "upapatti bhava") suitable to yield rebirths in the higher realms.

## No Control Over the Next Bhava (in Upapatti PS)

10. And we do not have any control over which "upapatti bhava" is selected at the end of the current bhava. The strongest with the most "upādāna" associated with it gets to the front automatically. The Buddha gave a simile to explain how this selection of a "upapatti bhava" or a strong kamma seed happens at the cuti-patisandhi transition at death.

- Imagine a barn that keeps the cows in for the night. In the morning, all the cows are anxious to get out and roam around. But when the gate opens, it is the strongest cow that has come to the front and is out of the gate when it is opened. The weaker ones don't even make an effort to be at the front.
- Just like that, it is the strongest "kamma seed" or a "patisandhi bhava" that wins at the cuti-patisandhi transition.
- Let us get back to the teenager that we discussed above. If the kamma seed that he nourished during this life as a violent person with "animal-like" behavior is the strongest one of all his accumulated kamma seeds, then it will bring about an animal existence at the cuti-patisandhi transition.

11. A Buddha could analyze such a pattisandhi Patticca samuppāda cycle in finer details to pinpoint even what type of animal it would be. This is because a Buddha can see not only a person's whole history in the present life but going back to many eons; thus, he could see which kamma seed will bring the next existence and exactly which kind of "gati" are embedded in that kamma seed. We can only discuss the general trends, and here we have discussed only the main ideas of how these Paticca samuppāda cycles operate.

- Going back to the teenager, In this case, it is the pattisandhi Pațicca samuppāda cycle that operates, and "bhava paccay $\bar{a} j \bar{a} t i$ " here leads to the birth in a new existence as an animal using that upapatti bhava.

## Many Births Within a Upapatti Bhava - For Humans and Animals

12. Once born in such an animal existence, that animal will grow and then start old age ("jara") and eventually die ("maraṇa").

- The kammic energy of that kamma seed may not deplete in just one birth (this applies only to humans and animals.)
- Since most animals have shorter lifetimes, only a fraction of that kammic energy is likely to have been spent. That animal will keep going through many similar births (" $j \bar{a} t i$ ") until the energy of that kamma seed is spent. It is said that many animals keep coming back to the same life many hundreds of times.

13. This is the difference between "bhava" and "jāti." Once one gets a new existence or "bhava," one could have many births (" $\mathrm{j} \bar{a} t i^{\prime}$ ") in that existence until the energy of the kamma seed is totally spent. See, "Bhava and Jāti - States of Existence and Births Therein."

- Thus we can see that the last step of "jāti paccayā jarā, maraṇa, soka, parideva, dukkha, domanassa" will be with "him" for a long time to come. It is not just one birth but many that will correspond to that existence as that animal.
- In general, when one is in the human "bhava," one could be reborn many times before the energy of that "good kamma seed" is depleted. This is why some children can recall previous recent lives. However, it is tough to get another "human bhava"; see, "Rebirth - Connection to Suffering in the First Noble Truth."
- However, especially in Deva and Brahma realms, there is only one birth during that existence as a Deva or a Brahma.

## Kamma Seeds Removed for Those With Magga Phala? - No

14. Before closing this section, let us discuss another important point. We mentioned earlier that everyone had accumulated numerous good and bad kamma seeds strong enough to give rise to good and bad rebirths. Then the question arises: Does a person attain the Sotāpanna stage (i.e., make bad rebirths in the lowest four realms void) by eliminating all those corresponding bad kamma seeds?

- While it is possible to reduce the potency of kamma seeds and maybe even eliminate some, it may not be possible to remove all. The Ariya metta Bhāvanā may remove many kamma seeds, as discussed in the "Bhāvanā (Meditation)" section, but there could be leftovers. It is said that the Buddha had 11 instances of bad kamma vipāka, including a back problem. We will discuss this point in a separate post.
- Therefore, it is very likely that we all have many good and bad kamma seeds strong enough to energize many good and bad rebirths.
- What happens at the cuti-patisandhi moment involves the "upādāna paccayā bhava" step in the paṭisandhi Paticca samuppāda cycle. As we recall, this is the step that is responsible for energizing "upapatti bhava" as well as "kamma bhava."
- But this same step is involved in grasping the strongest "upapatti bhava" at the end of the current "bhava." If a person dies and if that was the last possible human birth for him/her, then at the dying moment, that comes closest, and he/she will willingly grasp it because that will match the dominant "gati" of him/her.

15. Let us consider the case of the violent teenager again. Suppose he continued with his violent acts and built up a "upapatti bhava" suitable for a violent animal. Then at the dying moment, he could see in his mind (like in a dream) a rival gang member trying to "steal a drug deal"; he will also see a gun close by. By his instincts, he will get angry, grab the gun, and shoot that person. This is an example of a "gati nimitta."

- That is the "upādāna paccayā bhava" step for the new existence. He has willingly grasped the mindset of an animal, and he will be born as an animal. His next thought-moment is in that animal that comes out of that dead body of the teenager as a "gandhabba" with an invisible fine body.
- This is described in detail in other posts; it needs more background material in "manomaya kāya" for understanding the technical details, but that is not critical here. However, now we can understand how a new existence is grasped at the end of a "bhava" in the patisandhi Paticca samuppāda cycle.

16. Let us now go back to how a Sotāpanna avoids such bad rebirths even if he/she has many bad kamma seeds. Suppose that Sotāpanna has the same kind of kamma seed as that teenager (could be from a previous life) and that it is strong enough to come to the forefront of his/her mind at the dying moment.

- What happens is that a Sotāpanna will not grab the gun and shoot that person even if it is his/her worst enemy doing something that could make him/her mad. His/her mindset or "gati" has been permanently changed. Thus "upādāna paccayā bhava" step will not be executed for that kamma seed.
- In that case, now the next potent upapatti bhava will come to the forefront. If that is also a bad one suitable for rebirth in the lowest four realms, that will be rejected. Eventually, he/she will grasp a rebirth compatible with his/her "gati" at that dying moment, which for a Sotāpanna will never be the "gati" of a being in one of the four lowest realms. This happens automatically and very quickly. We do not have conscious control over it.
- Thus one's rebirth will be determined by how one lives (and had lived previous lives). If one lived like an animal, one would be born an animal no matter how much one wishes to have a "good birth." As we discussed above, the real danger is that we do not know how we had lived our previous lives.
- This is why Paṭicca samuppāda means "pati + ichcha" leading to "sama" + "uppāda" or what one grasps willingly and habitually is what one that will operate automatically at the dying moment; see, "Paticca Samuppāda - "Pati+ichcha"+" Sama+uppāda."

### 9.12 Imasmim Sati Idam Hoti - What Does It Really Mean?

August 5, 2018; revised January 26, 2019; May 2, 2019; July 4, 2022

## A Zen Riddle?

1. "Imasmimं sati idamं hoti, imassa uppādā idamं uppajjati; imasmim asati idamं na hoti, imassa nirodh $\bar{a}$ idam nirujjhat $\bar{\imath}$ ti." This is a famous phrase that appears in most sutt $\bar{a}$ that describe Paṭicca Samuppāda (Dependent Origination).

- It is usually translated as, "When there is this that is, with arising of this that arises; when there is not this that is not, with the cessation of this that ceases." That sounds like a Zen riddle!
- But the Buddha never made his Dhamma into riddles. He always presented it in the simplest possible way. Some verses have become riddles because people have incorrectly translated them; they did not understand the true meanings or the significance of key Pāli words.
- Another example is, "Anidassana Viñ̃̃āna - What It Really Means."

## Sati - Mundane Meaning in the Verse

2. The keyword in the verse that we are interested is "sati." All English translations that I have seen have left out this keyword!

- There are two meanings to the word "sati." One is mundane, meaning "attention."
- It is actually that mundane meaning that should be used in this verse.
- If one set the mind on an immoral task (planning a robbery, assembling a bomb to kill people, etc.) one will start doing immoral deeds with "apuñña abhisañkhāra (or apuññ̄bhisañkhāra)" and initiate akusala-mūla Paticca Samuppāda. That will lead to rebirth in the apāyā.
- At the opposite end, a Noble Person above the Sotāpanna Anugāmi stage will try to set the mind on cultivating "kusala-mūla sañkhāra" and initiate kusala-mūlla Paticca Samuppāda. Here, they will have Samma $\operatorname{arati}$ (mindset focusing on Nibbāna). That "sati" is the one with deeper meaning.

## Sammā Sati - Deeper Meaning of Sati

3. The deeper meaning of "sati" should be used in the context of Satipatthāna bhāvanā, for example.

- That "sati" is a sobhana cetasika, i.e., a good mental factor. The sati cetasika is cultivated by learning dhamma and eventually comprehending Tilakkhaṇa.
- However, that cetasika sati does not have a counterpart in asobhana cetasika, i.e., there is no "asati" cetasika.
- In verse, both "sati" and "asati" are mentioned. Therefore, "sati" in the context of the verse in question does not refer to the sati cetasika.

## Mundane Sati - Examples

4. The word "sati" in "Imasmim sati idam hoti,.." is, however, still closely related to the mind. It just refers to keeping the mind focused on the task at hand, whether it is a "good" or "bad" task.

- Suppose a suicide bomber is assembling a bomb that he intends to use to kill many people. He must be paying careful attention (or "being mindful") to what he is doing,otherwise, he will blow himself up. That is the mundane meaning of sati there.
- Thus, the term "mindful" can apply to the mindset of the suicide bomber while assembling the bomb. He must be mindful of his task. If he makes even a slight mistake, he may trigger the bomb right there.
- Obviously, he is not engaged in Satipatṭhāna. In fact, someone being mindful of morality/Nibbāna would not engage in such an act.

## Attention Needed to Do Good or Bad

5. That mundane meaning of "attention" is the meaning that should be used in analyzing the verse in question here: "Imasmimं sati idaì hoti,.."

- What it means in this context is "to focus the mind on something (X)." Then that "something" leads to the creation of "another thing (Y)." Even though X is ALWAYS mental, Y could be mental ( $n \bar{a} m a$ ) or material ( $r \bar{u} p a$ ) or a combination of the two (nāmarūpa).
- When the mind is set on getting something done, one makes vacī and kāya sañkhāra accordingly, i.e., one thinks about getting it done and acts accordingly; that is the "sati" that is referred to in that verse.
- When the mind does not focus on something (and does not make plans in mind via vacī sañkhāra, and carries out such plans), that is called "asati." In that case, there is no reason that Y would arise.

## Good or Bad Deeds Done With Different Types of Sañkhāra

6. As we will see below, making sañkhāra is just the first step in a series of steps.

- We can make the mindset to do good or bad things. Keeping the attention on "good things" will lead to good outcomes (via good dhamma). Keeping the attention on "bad things" will lead to bad outcomes (via bad dhamma).
- Therefore, both cases (good or bad attention) will lead to a corresponding (good or bad) outcome. That is what is meant by "Imasmim sati idam hoti" or "keeping the attention on this will lead to that."
- What Pațicca Samuppāda describes the eventual outcome ("that" is a "jāti," the outcome or the result): "sañkhāra paccayā viññāṇa,"....ending up in "bhava paccayā jāti."

7. Of course, if one does not keep the attention on something, one will not be generating (good or bad) sañkhāra about it. Thus, one will not initiate Paṭicca Samuppāda cycles: "sañkhāra paccayā viññāṇa,"... .ending up in "bhava paccayā jāti."

- Therefore, if there is "asati" or "no attention on some task," then there will be no reason for there to be an outcome:"Imasmim asati idam na hoti."
- In other words, the mind will have no reason to generate new sañkhāra to initiate Paṭicca Samuppāda processes.

8. Now we can understand half of the verse: "Imasmim sati idaí hoti, "Imasmiminasati idam na hoti." That means "when the mind is focused on X that will give rise to Y when the mind is not focused on X that will not give rise to Y."

- We have already figured out what is meant by "imassa uppādā idaì uppajjati" and "imassa nirodhā idam் nirujjhatī ."
- This part states that what has ultimately come to being (uppajjati) or the jāti is due to what first arose in mind (uppād $\bar{a}$ ) which are sañkhāra.
- Similarly, for something not to come to being (nirujijhatī), the corresponding cause should not arise in mind (nirodha $\bar{a}$ ). If there is "asati" or "no attention," then nothing will be realized: "no $j \bar{a} t i "$ (because no sañkhāra is generated to trigger Paṭicca Samuppāda processes.)

## Correct Interpretation of the Verse

9. So, now we can translate the whole verse: "when the mind is focused on this it will give rise to that, when the mind is not focused on this it will not give rise to that; this arising in mind (uppād $\bar{a}$ ) will give rise to that (uppajjati), this not arising in mind (nirodh $\bar{a}$ ) will stop that from coming to being (nirujjhatī).

- In straightforward terms, this describes the Buddha's key message: if one does not generate any defilements in mind, then one will not be reborn into this suffering-filled world.
- Furthermore, one MUST understand the anicca/dukkha/anatta nature of this world and set the mind on attaining Nibbāna to stop the rebirth process. That understanding will stop apuñ̃a abhisañkhāra from arising via "avijjā paccayā sañkhāra" in akusala-mūla Pațicca Samuppāda.

10. How anything and everything in this world arises with the mind as the "creator" is explained in the doctrine of the cause or effect of Paticca Samuppāda.

- Even though the process starts with generating sañkhāra ("avijjā paccayā sañkhāra"), it involves many other steps ("sañkhāra paccayā viñ̃̄̄̄ṇa," etc.) before the final thing manifests.
- That is why this verse comes in many suttā just before introducing the Paticca Samuppāda cycle starting with "avijjā paccayā sañkhāra."

## Ariyasāvaka Sutta (SN 12.49)

11. What we discussed above becomes clear in the "WebLink: suttacentral: Arivasāvaka Sutta (SN 12.49)." It starts with the statement: "Na, bhikkhave, sutavato ariyasāvakassa evaì hoti: 'kim nu khokismim sati kim hoti, kissuppādā kimं uppajjati? Kismim sati sañkhārā honti, kismim sati viññannà் hoti, kismimं sati nāmarūpaì hoti, kismim sati salāyatanamं hoti, kismim sati phasso hoti, kismim sati vedanā hoti, kismimं sati tanhā hoti, kismimं sati upādānai் hoti, kismim sati bhavo hoti, kismimं sati jāti hoti, kismim sati jarāmaraṇà̀ hotī’ti?."

Translated: "Bhikkhus, a noble disciple, is not confused by the question: ‘[What gives you indeed- (kim nu kho-)] What in mind becomes a cause? With the existence of what in mind does what come to being? What in mind becomes a cause for sañkhāra? What in mind becomes a cause for viññaṇa? What in mind becomes a cause for nāmarūpa?... What in mind becomes a cause for jarāmaraṇa?'."
12. The next verse: "Atha kho, bhikkhave, sutavato ariyasāvakassa aparappaccayā ñānamevettha hoti: 'imasmim sati idamं hoti, imassuppādā idamं uppajjati. Avijjāya sati sañkhārā honti; sañkhāresu sati viññānamं hoti; viñn̄āne sati nāmarūpaì hoti; nāmarūpe sati salāyatanam hoti; salāyatane sati phasso hoti; phasse sati vedanā hoti; vedanāya sati taṇhā hoti; taṇhāya sati upādānamं hoti; upādāne sati bhavo hoti; bhave sati jāti hoti; jātiyā sati jarāmaraṇaì hotī’ti. So evamं pajānāti: 'evamayaì loko samudayatī'ti."

Translated: "Bhikkhus, the noble disciple knows that what arises is dependent on what is cultivated in mind: 'When this exists in mind, that comes to be; with the arising of this in mind, that arises. When the mind is ignorant (avijjāya sati), sañkhāra arise/come to be (sañkhārā honti). When there are saṅkhāra in mind (sañkhāresu sati), viññāna comes to be (viññāṇaí hoti). When there is viñ̃āṇa in mind (viññāne sati), nāmarūpa arise/come to be (nāmarūpaì honti), ....When the mindset takes that of a certain existence (bhave sati), $j \bar{a} t i$ comes to be ( $j \bar{a} t i$ hoti). When there is $j \bar{a} t i$ in mind ( $j \bar{a} t i y \bar{a}$ sati), jarāmarana comes to be (jarāmaraṇaì hotī). He understands thus: 'In such a way the world arises (samudaya).' "
13. Next verse is: "Na, bhikkhave, sutavato ariyasāvakassa evaï hoti: 'kim nu kho-kismim asati kim na hoti, kissa nirodhā kim nirujjhati? Kismimं asati sañkhārā na honti, kismim asati viññānamं na hoti, kismim asati nāmarūpaì na hoti, kismim asati salāyatanamं na hoti, kismim asati phasso na hoti, kismim asati vedanā na hoti, kismimं asati taṇhā na hoti, kismimi asati upādānamं na hoti, kismim asati bhavo na hoti, kismimं asati jāti na hoti, kismimं asati jarāmaraṇà̀ na hotī̀ti?."

Translated: "Bhikkhus, a noble disciple is not confused by the question: ‘[What gives you indeed- (kim nu kho-)]Absence of what in mind would not be a cause? With the cessation of what in mind what would
be stopped from arising? Absence of what in mind (kismim asati) sañkhāra would not result (na honti)? Absence of what in the mind viñ̃̄̄ana (an expectation of a worldly thing) would not result? ..Absence of what in the mind nāmarūpa would not result?... Absence of what in the mind jarāmaraṇa would not result?' ."
14. And then: "Atha kho, bhikkhave, sutavato ariyasāvakassa aparappaccayā ñānamevettha hoti: 'imasmim asati idamं na hoti, imassa nirodhā idaì nirujjhati. Avijjāya asati sañkhārā na honti; sañkhāresu asati viññānamं na hoti; viññạne asati nāmarūpaì na hoti; nāmarūpe asati salāyatanam na hoti ... pe ... bhavo na hoti ... jāti na hoti ... jātiyā asati jarāmaraṇà் na hotī’ti. So evaì pajānāti: 'evamayaì loko nirujjhatī'ti.

Translated: "Bhikkhus, the noble disciple knows that what arises is dependent on what is cultivated in mind: 'When this does not exist in mind, that will not come to be; with the cessation of this in mind, that is stopped from arising. When there is no ignorance in mind (avijjāya asati), sañkhāra do not come to be (sañkhārā na honti). When sañkhāra cease to exist in mind (sañkhāresu asati), viññāna do not come to be (viññānam na hoti). With the cessation of viññāna in mind (viññāne asati), nāmarūpa do not come to be (nāmarūpaí na honti), ...When there is bhava absent in mind (bhave asati), $j \bar{a} t i$ will not come to be
 na hot $\bar{\imath}$ ). He understands thus: 'In such a way the world ceases to exist (nirujjhatī), and thus the samisāric suffering ends.' "
15. Finally, "Yato kho, bhikkhave, ariyasāvako evai் lokassa samudayañca atthañgamañca yathābhūtaì pajānāti, ayaì vuccati, bhikkhave, ariyasāvako diṭthisampanno itipi ... pe ... amatadvāramं āhacca tiṭthati itipı’’ti.

Translated: "Bhikkhus, a noble disciple thus understands the origin and the ending of the world. He is knowledgeable about the true nature of this world, has the correct vision, and comes to attain Nibbāna."
16. That is the complete sutta. It provides the basic reasoning behind Paticca Samuppāda.

- It is important to realize that all the steps in Paticca Samuppāda involve the mind up to the $j \bar{a} t i$ stage. When the $j \bar{a} t i$ stage arrives, the process is complete. That $j \bar{a} t i$ that came into being has to evolve naturally to its end.

### 9.13 Paṭiloma Paṭicca Samuppāda - Key to Nibbāna

March 15, 2019; revised January 10, 2021

January 10, 2021: Renamed from "Anuloma Paṭiloma Paṭicca Samuppāda - Key to Sotāpanna Stage" to "Paṭiloma Paṭicca Samuppāda - Key to Nibbāna"

Paṭiloma Patticca Samuppāda is the "reverse of the standard Akusala-Mula Paṭicca Samuppāda process. That means it is the way to Nibbāna.

## Introduction

1. Just before his Enlightenment, the Buddha figured how beings are born endlessly due to their own way of thinking. That knowledge is embedded in Paticca Samuppāda, translated as, "Dependent Origination."

- It describes the origins of different types of living beings, according to their own thought processes (sañkhāra) based on the level of $a v i j j \bar{a}$ (ignorance of the real nature).
- Anuloma Pațicca Samuppāda describes the forward progression of events leading to eventual suffering. Pațiloma Paṭicca Samuppāda describes the backward progression to see that indeed avijjā must be removed (by cultivating wisdom or pañña) in order to stop future suffering from arising.

## Anuloma Paṭicca Samuppāda and Paṭiloma Paṭicca Samuppāda

2. "WebLink: suttacentral: Pathama Bodhi Sutta (Udāna 1.1)" and "WebLink: suttacentral: Dutiva Bodhi Sutta (Udāna 1.2)" state how the Buddha comprehended anuloma and patiloma Paṭicca Samuppāda during the night of the Enlightenment.

- Most people are quite familiar with how suffering originates with sañkhāra generation due to the ignorance of the Four Noble Truths (avijjā), and then goes through the familiar steps: "avijjāpaccayā sañkhārā, sañkhārapaccayā viññannam, ..and ends with ".. Evametassa kevalassa dukkhakkhandhassa samudayo hotī" $t i$ OR "the whole mass of suffering."

## Paṭiloma Paṭicca Samuppāda

3. It is also important to trace the steps backwards and see how future suffering can be stopped by cultivating pañ̃̄̄: "avijjānirodhā sañkhāranirodho, sañkhāranirodhā viñ̃̄āṇanirodho, viñnāạanirodhā nāmarūpanirodho, nāmarūpanirodhā salāyatananirodho, salāyatananirodhā phassanirodho, phassanirodhā vedanānirodho, vedanānirodhā taṇhānirodho, taṇhānirodhā upādānanirodho, upādānanirodhā bhavanirodho, bhavanirodhā jātinirodho, jātinirodhā jarāmaranain sokaparidevadukkhadomanassupāyāsā nirujjhanti. Evametassa kevalassa dukkhakkhandhassa nirodho hot $\boldsymbol{\imath}$ ti."

- By stopping $j \bar{a} t i$, it is possible to stop suffering from arising (at the end). Now we just go backwards: Jati (births) stopped by stopping bhava, which is stopped by stopping upādāna, tanhā, vedanā, phassa, saḷāyatana, nāmarūpa, viññāna, and sañkhāra. When one gets to the first step: sañkhāra cannot be stopped from arising without eliminating avijjä (and thus getting rid of ALL gati).
- In fact, if one really contemplates on this process, one can get some deep insights.

## Nirodha Means "Stop From Arising" - Not Destruction of an Existing Entity

4. It is quite clear that in order to stop "the whole mass of suffering", one MUST stop each of those 10 factors (jāti, bhava, upādāna, taṇhā, vedanā, phassa, saḷāyatana, nāmarūpa, viññāna, and sañkhāra) from arising.

- Thus one can clearly see that nirodha means "stop from arising."
- One can also see that can be done ONLY by removing avijjā, which is the same as cultivating paññā.
- The removal of avijj $\bar{a}$ (and cultivation of pañ $\tilde{n} \bar{a}$ ) is done by following the Eightfold path, which has two components; see, for example, "What is Unique in Buddha Dhamma?." There are no shortcuts!

5. We concluded in \#4 above that in order to stop future suffering from arising we must stop those 10 terms from arising. This appears not to make sense with some of those terms when we try to reconcile that with the fact that an Arahant has stopped those from arising.

- In particular, one could object in particular that vedanā, phassa, viññāna, and sañkhāra still arise in a LIVING Arahant.
- As I have explained in many posts scattered throughout the website (especially in the "Paticca Samuppāda" section), those terms are in the "uddesa" version. This is explained in detail in the post, "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."
- Let us discuss briefly a few of those terms.

## Need for Detailed Explanations

6. Basically all current English translations just provide word-by-word translations of that "uddesa version" without any explanation. For example, the English translation of the first sutta in \#1 above states, "..because of consciousness: mind and body, because of mind and body: the six sense spheres, because of the six sense spheres: contact, because of contact: feeling, because of feeling... because of continuation: birth, because of birth: old age, death, grief, lamentation, pain, sorrow, and despair all arise, and so there is an origination of this whole mass of suffering.."; see, "WebLink: suttacentral: The First Discourse about the Awakening Tree (UD 1.1)."

- According to the second sutta, all those terms (consciousness, six senses, contact, feeling) should not arise in an Arahant!
- Furthermore, it is not clear what is meant by "continuation" (for bhava), which leads to $j \bar{a} t i$ (births), and thus "this whole mass of suffering."

## Detailed Explanations of Terms in Paticca Samuppāda

7. For example, the step, "avijjā paccayā sañkhāra" really should be "avijjā paccayā abhisañkhāra."

- As is explained in the post, "Sañkhāra - What It Really Means," an Arahant generates sañkhāra, but NOT abhisañkhāra.
- It is those abhisañkhāra that lead to future births and thus future suffering!

8. The next step is written in suttā as "sañkhāra paccayā viññāna" and that is the uddesa version.

- It needs to be explained as "abhisañkhāra paccayā viññạna," where viññāna means "defiled consciousness."
- An Arahant would have "purified viññanna" and NOT "defiled viññāna." This is explained at, "Viññāna Aggregate."

9. Another confusing step could be "nāmarūpa paccayā salāyatana," where "saḷāyatana" or "six $\bar{a} y a t a n a$ " are normally translated as "six sense faculties." Of course, a living Arahant has perfectly good sense faculties (indriya).

- Those six indriya (or sense faculties) become salāyatana when one acts with avijjā and use them to accumulate "san"; see, "Nāmarūpa paccayā Salāyatana."

10. In the next step of "salāyatana paccayā phassa," it is really "salāyatana paccayā samphassa." When those indriya are used as a yatana, one "makes contact with a defiled mind" and that defiled contact is "samphassa" ("san"+ "phassa").

- This is discussed in, "Difference between Phassa and Samphassa."
- Therefore, an Arahant would have only "phassa" and NOT "samphassa."

11. Now when those sense inputs are evaluated with a defiled mind, one generates "mind-made vedan $\vec{a}$ " or "samphassa ja vedanā." These are greedy, angry, jealous, types of vedan $\bar{a}$ generated due to the defilements in the mind.

- Such "defiled and mind-made vedanā" are absent in an Arahant. An Arahant will, however, generate vedana due to the contacts with the six indriya.
- For example, if someone hits an Arahant, he/she will feel the pain. Spoiled milk would taste bitter and a piece of cake would taste sweet, etc. But an Arahant would not generate angry thoughts about someone offering spoiled milk and would not generate cravings for the cake.
- This explained in detail in the post, "Vedanā (Feelings) Arise in Two Ways."

12. The next confusion is at the step, "bhava paccayā jāti," which is translated in \#5 as, "because of continuation: birth." I am not sure what is meant by "continuation" there.

- The correct interpretation is given at, "Bhava and Jāti- States of Existence and Births Therein."

## Stopping Abhisañkhāra Is the Key to Nibbāna

13. If one can spend some time reading those posts and the links given in them, one should be able to get a good idea of how different types $j \bar{a} t i$ originate via abhisañkhāra (one's own thoughts).

- The Sotāpanna stage of Nibbāna is attained by getting rid of the wrong way of looking at one's body (and actions) are due to an unchanging "soul."
- However, one's bhava and jāti arise due to one's own abhisañkhāra. We are humans in this life because of good abhisañkhāra cultivated in a previous life.
- If we do bad (or apuñña) abhisañkhāra in this life, we may be born as animal or worse. If we do good (or puñña) abhisañkhāra in this life, we may be born as devas, Brahmā, or humans again.

## No Birth Among the 31 Realms Will Stop Suffering

14. However, there in no birth in the 31 realms that can bring a permanent state of happiness. Any Deva or Brahma existence will come to an end, and then one could be born in the apa $\bar{a} \bar{a}$.

- A permanent state of happiness (which means the absence of ANY suffering) is attained by stopping this never-ending rebirth process. That is the key message of the Buddha.
- When one truly understands that, one has the "vision" of a Sotāpanna, i.e., one would have gotten rid of sakkāya diṭthi (and vicikiccā and silabbata parāmāsa all at the same time).

## Further Information

15. More details can be found in the "Paticca Samuppāda" section. In the "Living Dhamma" section there is an attempt to provide a systematic approach to learn and practice Buddha Dhamma (of course, with more details in other sections).

- A systematic approach to Buddha Dhamma at "Buddha Dhamma - A Scientific Approach," which continues at "Understanding the Terms in Paticca Samuppāda."

### 9.14 Paṭ̣̣hāna Dhammā

## Patthāna Dhamma - Connection to Cause and Effect (Hetu Phala)

What Does "Paccaya" Mean in Paticca Samuppāda? Moved out of Patṭhāna Dhammā to one level up after How Are Paṭicca Samuppāda Cycle Initiated?

Anantara and Samanantara Paccaya
Asevana and Annamanna Paccaya

### 9.14.1 Paṭṭhāna Dhammā - Connection to Cause and Effect (Hetu Phala)

October 22, 2016; revised October 25, 2016; June 15, 2018; April 11, 2021; June 28, 2022

1. Patṭhāna dhammā is also cited as pattāna dhammā in English.

- The word "Pațthāna" comes from "Paṭtha" + "āna." I have previously mentioned that "āna" means "bringing in" as in "ānāpāna" in Ānāpānasati Bhāvanā. "Patt tha" in Pāli or Sinhala means the layer of a tree trunk underneath the outermost layer of bark - consisting of phloem cells - which carry food between roots and leaves.
- So, the word "patthāna" here conveys the idea that while the roots (mūlika hetu) are critical for the tree's survival, "paṭtha" also plays an important role in the tree's growth. In the case of Paṭthāna Dhamma, they play an important role in describing the conditions under which hetu or causes can bring in effects, as we will see below.
- By the way, "pattha" are essential for the tree's survival, just as the roots of the tree are. One could kill a tree simply by a process called "girdling" where those phloem cells are removed; see the Wikipedia article: "WebLink: WIKI: Girdling."
- The Buddha frequently used analogies with the workings of a tree. We also need to remember that "mūla" is a root in Pāli or Sinhala, so "mūlika hetu" means "root causes." So, the tree's survival depends on its roots and its "Pattha" containing those critical phloem cells.
- This is the same as saying Paṭthāna Dhamma describes CONDITIONS are as important as ROOT CAUSES, which are lobha, dosa, and, moha (for akusala kamma), and alobha, adosa, and amoha (for kusala kamma).

2. It is also to be noted that "patṭhāna" in "Satipatṭhāna" can be interpreted to mean "providing food" or "pattha" +" $\bar{n} n a$ " to cultivate sati or mindfulness.

- The word "Patṭhāna Dhamma" has not been discussed that much in English. Therefore, it is good to get started the right way. Buddhaghosa did not discuss it because he did not comprehend Paticca Samuppāda, and as a result even many people who follow even Theravāda Buddhism are not familiar with Patṭhāna dhamma. Ven. Ledi Sayadaw in Burma and Ven. Rerukane Chandawimala in Sri Lanka are clear exceptions. They have discussed Paṭthāna Dhammā; see the references below.
- However, their interpretations of Tilakkhana (anicca, dukkha, anatta) are not correct.

3. In the workings of living things (including plants) - and in mental processes in particular - the mechanism of how causes lead to effects is much more complex compared to material phenomena involving inert objects.

- In these cases, many conditions need to be satisfied, in addition to having sufficient causes.
- In many cases, such critical conditions are not satisfied even if the causes are there, so there is normally a TIME DELAY between causes and effects, i.e., between kamma and kamma vipāka.
- This is why it is hard for people to see the validity of cause and effect (hetu phala) involving living things, especially the mind.
- This is what is explained in Pațicca Samuppāda, with the help of Patthāna Dhammā. There are 24 conditions or paccayā discussed in the "Patṭhānapakaraṇa" in the Abhidhamma Piṭaka: "WebLink: suttacentral: 1.1. Nikkhepavāra." Of course, the English translation is likely to have many errors, but one can get the basic idea.
- Let us discuss some examples to understand the role of a few of such conditions or paccayā.

4. All necessary causes to bring about a tree are embedded in a seed. A seed is a CAUSE for the subsequent appearance of a tree. Yet, a seed cannot germinate unless suitable conditions are present. If one keeps a seed in a cool, dry place, it will just sit there for even thousands of years without giving rise to a tree.

- However, if one plants the seed in the ground where sunlight is available and provides water and nutrients, it will germinate and grow to be a tree.
- The root condition to bring into existence a tree is embedded in a seed. That is in the anantara paccaya. But suitable conditions for that seed to germinate are in fertile soil with adequate sunlight and water; this is called samanantara paccaya. Therefore, both anantara AND samanantara paccaya MUST be satisfied to bring a tree into existence; see "Anantara and Samanantara Paccaya" for details.
- So, AT WHAT TIME the seed will germinate will depend on when the samanantara condition (fertile soil) will be satisfied. Anantara condition (presence of a seed) is not enough.

5. Another important condition of paccayā comes into play for the germinated seed to grow into a tree: The $\bar{a} h \bar{a} r a$ paccayā (food condition) must be satisfied. If water, sunlight, and nutrients are not available after the seed is germinated, it cannot grow to be a tree.

- An essential type of āhāra is the "food for viññāna." When one has bad thoughts about another person, that viññāna grows as long as one keeps thinking about that person and how bad he/she is. Viññāna $\bar{a} h a ̄ r a$ are mano sañcetanā.

6. Another example of such a condition or paccayā is "āsevana paccayā." Āsevana means to "associate with."

- An important example is an association with bad friends. Whether it is a child or an adult, one's behavior will be influenced by who one associates with; see, "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsavas)."
- I have discussed several such important conditions or paccayā in the post, "Micchā Ditthi - Connection to Hethu Phala (Cause and Effect)." Here is that discourse:

## WebLink: Audio Desana: Episode 6 - Micchā Ditthi Connection to Hetu Phala Cause and Effect

There are 24 such conditions in Pațthāna Dhamma. I will discuss them in detail in this subsection on "Patthāna Dhamma" in a series of posts.

- This is why mental phenomena are so complex. In many cases, several such conditions need to be satisfied for a cause (hetu) to lead to a corresponding effect (phala).

7. In the same way, the kammic energies created by our actions do not disappear. A given action creates a kamma seed with energy to bring in its fruits. It is just like a seed waiting for the right conditions to germinate and bring a tree into existence.

- Those kamma seeds or kamma bīja are out there waiting for suitable conditions to bring in their effect.
- Whether they will bring vipāka, AND at what strength, AND when, will depend on the conditions or paccay $\bar{a}$. This is what is described by Pațicca Samuppāda with the help of Paṭthāna Dhamm $\bar{a}$.
- See, "What Does "Paccaya" Mean in Paticca Samuppāda?", "Sañkhāra, Kamma, Kamma Bīja, Kamma Vipāka" and "Nāmagotta, Bhava, Kamma Bīja, and Mano Loka (Mind Plane)" for more details.

8. But there are some strong kamma that WILL bring in vipāka without exceptions. Those include ānantariya pāpa kamma. They are so strong that they do not require conditions to be just right. They bring vipāka mostly at the dying moment, i.e., death of the physical body, and will not be delayed until the cuti-patisandhi moment. Hence, the delay is only until death.

- Some people inherit wealth unexpectedly and some people die of accidents. These are also strong kamma vipāka, though as not strong as ānantariya pāpa kamma.
- But in most cases, conditions or paccayā play major roles, sometimes many conditions need to be satisfied for vipāka to bear fruit.

9. This knowledge - or rather this understanding of - how kamma and kamma vipāka work - is called kammassakata sammā ditthi, and is a REQUIREMENT to attain mundane sammā samādhi. When one fully understands this, it will be easier to see that the rebirth process has a logical foundation.

- This is because one can now clearly see that most of kamma or one's actions are going to have corresponding vipāka or results when suitable CONDITIONS appear.
- So, if one does actions suitable to be born in the $a p \bar{a} y \bar{a}$, one COULD BE born in the $a p \bar{a} y \bar{a}$, until one REMOVES the ability to for such CONDITIONS to appear.
- When one attains the Sotāpanna stage, one will never realize the conditions suitable for a birth in the ap $\bar{a} y \bar{a}$. This requires another step BEYOND kammassakata samm $\bar{a}$ ditthi, which is the comprehension of Tilakkhaṇa.
- Therefore, getting to the Sotāpanna stage is a two-step process: first to get to kammassakata samm $\bar{a}$ ditt thi and then the comprehension of Tilakkhaṇa.
- This is discussed in detail in the desana $\overline{\text { in }} \# 6$ above.

10. We see people doing immoral things without them being subjected to corresponding punishments, but that does not mean they are getting away with it. Those actions can bring their fruits in future lives if they are not realized in this life.

- There are two ways to overcome kamma vipāka. The first is: those kamma seeds will lose their energy with time; they can last at most 91 eons. They are like regular seeds, which lose their power over time.
- The other way is to attain all four stages of Nibbāna. That will remove the possibility of making conditions for ANY kamma seed to germinate.

11. These conditions or paccayā play a critical role in Pațicca Samuppāda. When we say "avijjā paccayā sañkhāra," it means, "we do sañkhāra with ignorance when necessary CONDITIONS are present."

- For example, we do not do immoral acts or apuññābhi sañkhāra all the time. When we are attracted to, or repulsed by something that we see (this is an example of àrammana paccaya), we may generate craving or dislike, and then it can lead to an immoral action or apuññābhi sañkhāra; see, "What Does "Paccaya" Mean in Paticca Samuppāda?."
- This is the reason why kamma itself is not deterministic. Just because one has avijja does not mean one will necessarily do an immoral thing, generating (apuññābhi) sañkhāra. If we cultivate Satipatṭhāna, even if we get the urge to do something immoral, we can contemplate the bad consequences and stop that action, speech, or thoughts.
- When one keeps doing Satipaṭthāna - and keeps avoiding immoral acts - one's gati will change for the better, and then even the automatic urge to do something immoral will gradually fade. In other words, one's avijja will reduce. This is why Satipatṭhāna is so important.

### 9.14.2 Anantara and Samanantara Paccayā

## Revised February 12, 2020; August 7, 2022

## Critical Roles of Causes (Hetu) and Conditions (Paccayā)

1. An action or a deed is a kamma. That kamma was done with an intention and led to creating kammic energy that COULD bring vipāka in the future. Such kammic energies act as causes to bring vipāka. But such vipāka is not guaranteed.

- There must be suitable conditions (paccayā) that must be there for such vipāka to materialize.

2. The easiest way is to consider the following example: A seed contains the necessary ingredients (causes) for bringing up a new tree. But just because a seed is there, a tree will not come into existence. If the seed is in a cool, dry place, one could keep it that way for a long time. Or one could burn or crush it, and it will never bring up a tree.

- SUITABLE CONDITIONS must be present for causes to bring about corresponding effects. That is what paccayā means.
- If a seed is planted in fertile soil and water and sunlight are provided, it will germinate and give rise to a tree.
- When such suitable conditions are present, causes WILL bring about corresponding effects. Thus when an event takes place under the right conditions, it is called "paccuppanna," i.e., born ("ирраnna") via suitable conditions ("paccayā.") Of course, root causes must be there, to begin with.

## All Kamma Do Not Lead to Vipāka

3. That is the reason why kamma vipāka is not deterministic. In the post, "What is Kamma? - Is Everything Determined by Kamma?" I mentioned it, and here we will discuss it in detail.

- When we commit a good or an evil deed, the kammic potential or energy associated with that deed remains as a kamma bīja or a kamma seed. We will eventually get to the question of "where it is stored," but we just need to remember that a kamma seed is not a physical seed but energy or potential. This concept is described in the post, "Sañkhāra, Kamma, Kamma Bīja, Kamma Vipāka."
- The germination of a kamma seed, though, has some similarities to the germination of a physical seed, for example, an apple seed. The apple seed has the potential to bring about an apple tree. Still, the seed will not germinate until suitable conditions for germination are present. The seed needs to be in the soil, and water and sunlight must be provided for germination.
- In the same way, kamma vipāka (the result of a past kamma) can come to fruition only with the conditions for the corresponding kamma seed to germinate.

## Anantara and Samanantara Relations

4. Let us look at the anantara and samanantara relations as discussed in the Patṭhāna Dhamma (book on "Conditional Relations" in Abhidhamma): [anantara : [adj.] next; adjoining; immediately following. samanantara: [adj.] immediate; nearest.]

- "An" means food or in this case the kamma seed; "antara" means storage, waiting to bear fruit. Thus, anantara ("an" + "antara") means basically a kamma seed waiting to germinate. [antara : [nt.] difference. [adj.] inner; inter. anto : [ind.] inside; within; inner.]
- "Sama" means equal or similar. Thus samanantara ("sama" + "anantara") means "matching conditions" with the antara.
- Therefore, for a kamma vipāka to materialize, both anantara and samanantara must be there.
 see, "Ānantariya Kamma - Connection to Gandhabba."

## Some Analogies/Examples

5. Here is one analogy the Buddha gave. If one prepares a plot by preparing the soil, providing water, and if sunlight is also available, the samanantara for a seed to germinate is there. However, unless one starts with an apple seed (i.e., if anantara is not there), an apple tree cannot grow.

- On the other hand, if one keeps the apple seed in a cool, dry place, it will not germinate since the samanantara condition is not met.
- Results appear when both anantara and samanantara conditions are met. Thus, when one plants an apple seed in a suitable plot, it will germinate and become an apple tree.
- Furthermore, a mango tree will not result from an apple seed. Thus samanantara will give rise to a result matching the "seed" in the anantara.

6. More examples can be given these days that are related to modern technology. If a radio station is broadcasting a radio program, that is the anantara. The seed energy is available anywhere within a specific range. But one cannot listen to the program without a radio. Even if someone has a radio, one cannot listen to the broadcast unless the receiver is tuned to the correct frequency. When those conditions are met, one could hear the program.

- Kamma vipāka can bring results via "instant communication" when the conditions become right. All kammic potentials are in "instant contact" with us via a concept similar to that described in quantum entanglement: see, "Quantum Entanglement - We Are All Connected." Thus all potential kamma seeds are waiting in anantara and can bring about instant results when the right conditions (samanantara) appear.

## Many Bad Vipāka Can be Avoided by Being Mindful

7. By being mindful, we can avoid many past bad kamma seeds from coming to fruition. We make sure that samanantara conditions are not present. If one goes out at night in a bad neighborhood that provides fertile ground for a past bad kamma seed to germinate and the kamma vipāka to take place.

- In the same way, we can force "good" kamma seeds to germinate by providing the right conditions. For example, even if we have enough merits (i.e., a good kamma seed) that could make us pass a test or get a job, unless we make the right conditions (i.e., prepare in advance), we may not get the results.
- But sometimes, one gets an unexpected promotion or better results than anticipated in a test if the kamma seeds are potent.

8. From our past innumerable lives, we have accumulated countless kamma seeds, both good and bad. Some of the stronger ones bear fruit no matter what we do, especially the ānantariya kamma vipāka.

- But in general, by being mindful (i.e., by NOT providing appropriate conditions), we can avoid many bad kamma vipäka. By making the right preparations (i.e., by optimizing samanantara conditions), we can exploit those good kamma seeds.
- A particularly important case is bringing up a child. The parents and teachers have considerable responsibility for providing the right conditions for that young mind to develop. In particular, association with bad friends can direct a young life in the wrong direction; in the same way, association with good friends and a nurturing environment can bring about a productive, responsible adult.

## Importance of Cultivating Good Gati (Habits/Character)

9. One important cross-connection is matching "gati" with similar "gati" that we have discussed before; see "Habits and Goals" and "Sansāric Habits and Āsavas."

- For example, when a gandhabba is waiting for a suitable womb, the anantara-samanantara paccay $\bar{a}$ comes into play. A gandhabba, who in previous lives had developed a particular habit, say heavy drinking, is attracted to a womb of a woman with similar habits, possibly an alcoholic or a drug user. The concept of a gandhabba is in, "Manomaya Kāya (Gandhabba) and the Physical Body," and "Manomaya Kāya and Out-of-Body Experience (OBE)."
- Similarly, a gandhabba, who in previous lives led moral lives, is bound to be attracted to a mother's womb in a "good" family. Like in the above case, the samanantara for the gandhabba (where it can establish itself) is an environment that matches its own "gati."
- However, no matter how one is born, one can still change one's destiny by making conditions for other good kamma vipāka to come to fruition and by making sure not to create conditions for bad kamma vipāka to come to fruition.

In other posts, we will discuss further applications of anantara-samanantara relations. One important discussed in "Transfer of Merits (Pattidana)- How does it Happen?."

Next in the series, "Āsevana and Aññamañña Paccayā."

### 9.14.3 Āsevana and Aññamañña Paccayā

November 20, 2016; revised July 1, 2019 (comment added at the end); March 4, 2021; September 9, 2022

1. As mentioned in the "Patthāna Dhamma - Connection to Cause and Effect (Hetu Phala)," there are 24 paccay $\bar{a}$ or conditions that contribute to various steps in the Paticca Samuppāda (PS) cycles.

- As discussed in the post "What Does "Paccayā" Mean in Paticca Samuppāda?," and in the post mentioned, a given step in a PS cycle cannot proceed until one or more conditions are satisfied. And we have control over most of these conditions. Therein lies Patṭhāna Dhamma's value; we can see how to stop akusala-mūla PS cycles from proceeding and maintain kusala-mūla PS cycles.
- This post will discuss two of those 24 paccay $\bar{a}$ or conditions. They are somewhat related to each other and thus are suitable to discusse together.

2. $\bar{A} s e v a n a ~ p a c c a y \bar{a}$ - which can be loosely translated as the "condition of association" - is an important condition that fuels various PS steps at different times.

- In most cases, āsevana paccayā has been translated as a "condition of repetition." Even though repetition is relevant, repetition comes via close associations, so the association is primary.
- The word "āsevana" comes from " $\bar{a}$ " and "sevana" or "came to the shade"; when one is staying close to a tree in the hot sun, one is "hanging around" the tree and is benefited from its cool shade.
- Of course, one can be influenced in the wrong direction when one is associating with bad friends, too, as we will see below. Therefore, āsevana paccayā comes into play in both kusala-mūla and akusalamūla PS.
- When one likes the experience, one tends to keep that association. Sometimes, that eventually leads to bad consequences, but one still tends to keep bad associations because of the ignorance of such bad outcomes.

3. An important role of āsevana paccayā is played in the "viñ̃nāna paccayā nāmarūpa" step in PS, whether it is kusala-mūla PS or akusala-mūla PS.

- For example, a teenager who is (unknowingly) cultivating a viñ̃̃āna for drinking is heavily influenced by the association with bad friends. He likes to "hang out" with such bad friends and tends to generate a lot of sañkappa or vacī sañkhāra (conscious thinking about how he/she will be having a good time with those friends at parties with a lot of alcohol). The nāmarūpa generated in his mind are such "party scenes," visualizing those friends and various favorite drinks.
- On the other hand, when one is on the right path, one constantly thinks about Dhamma Concepts, has Dhamma discussions with good friends, and visualizes such gatherings. Or one could be visualizing some meritorious deeds, like giving or helping out at an orphanage; these are good nāmarūpa generated with such a good viññāna.
- These nāmarūpa are different from the nāmarūpa that descends to a womb at the okkanti moment, i.e., when a gandhabba enters a womb. We will discuss that later. So, nāmarūpa comes in two main categories.

4. $\bar{A}$ sevana paccay $\bar{a}$ can play a role in different types of situations. Let us consider two such examples.

- One such situation is the teenager mentioned above, who cultivates bad nāmarūpa by associating with bad friends. The more he/she associates with such bad friends, the more he/she will generate bad nāmarūpa of party scenes with a lot of alcohol and/or drugs. Not only that, there will be other associated nāmarūpa: $\mathrm{He} /$ she will constantly be visualizing favorite friends, gathering places, appropriate music, etc.
- In such an environment, it is also easy to cultivate other types of "bad nāmarūpa" such as gambling, illicit sex, stealing (to sustain those activities), violence, and even killings.
- The teenager could cultivate such nāmarūpa and more over time.

5. On the other hand, when one is on either mundane or lokuttara Eightfold Path, one will be cultivating "good viññāna," and one tends to visualize exactly opposite types of nāmarūpa.

- One could be planning a Dhamma discussion and thinking and visualizing who will be there and what topics will be discussed. One could be organizing a charity event and making arrangements.
- One could be planning to attend a meditation retreat and visualizing what kind of activities one could be engaging in. One could even be thinking about and trying to visualize the suffering endured by poor children in a situation one is familiar with and generating compassion-filled thoughts and nāmarūpa.

6. In either case, the "nāmarūpa paccayā salāyatana" step will then point one's all six āyatana or salāyatana (five physical senses and the mind) towards such thoughts, visuals, and actions.

- Then those associations will become even stronger. When one gets absorbed in relevant activities, when one's mind is occupied with such thoughts and constantly visualizes related activities, people, and objects, those nāmarūpa will "grow" in one's mind. Those nāmarūpa will be closely associated with one's gati.
- This is also discussed in the post: "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsavas)."
 sañkappa (or sankalapanā), we are generating an enormous number of citta vīthi in a short time. Each citta vith $h$ will make the next citta vithi stronger (actually make the javana citta in the subsequent citta $v i t h i$ stronger) by association.
- The best example is one we have talked about several times in the "Living Dhamma" section. When we start thinking about an enemy, we start visualizing more and more bad situations that we encountered with that person; we tend to pull out all "past associations" from memory and conjure up "many possible future scenarios" in our minds.
- All these "bad sañkappa" or "conscious bad thoughts" will strengthen the PS steps.
- Our minds can run wild if not controlled with Satipatṭhāna or $\bar{A} n \bar{a} p a \overline{n a}$; see, "Satipatthāna Sutta Relevance to Suffering in This Life."

8. Even in a given citta vīthi, each javana citta is strengthened by the previous javana citta via āsevana paccay $\bar{a}$. This happens in the time scale of a billionth of a second and is driven by our gati.

- The first javana citta is weak. But the second javana citta gets fuel from the first one and is inevitably generating strength via association. One meaning of the name javana is "to run with." The series of 7 javanas "run with the object in mind," initially getting stronger until the fifth javana. Then the fuel runs out, and the sixth and seventh javana become weaker and weaker.
- Kamma generated by the first javana citta can only bring vipāka this life. But kamma done by the second through the sixth javana citta (which get stronger by association), are potent enough to bring kamma vipāka in many future lives. The seventh javana is weak. Thus, it can bring vipāka only in the next life and become null if it does not bring vipāka in the next life.
- It is unnecessary to learn the complexities of citta vithi, but it is good to have some idea.

9. The association then moves to the next citta vithi. Thus the subsequent citta vithi (and thus the javana citta in that citta vīthi) will be stronger. And thus, it propagates, which is why one can get "really worked up" even thinking about a hated person.

- This is why Satipatthāna (and being mindful of bad thoughts) is so important. The start of such a hateful mindset is AUTOMATIC (due to our gati,) as discussed in the "Living Dhamma" section. But we can stop those initial thoughts BEFORE they get strong and become out of control if we are mindful.
- This can be compared to a seed giving rise to a mighty tree unless one destroys it when it is just a little bud. When a seed germinates and becomes visible as a little plant, that little bud can be easily broken. But if one waits and allows it to grow, it COULD grow into a strong tree that is hard to take down.

10. As we see, patṭhāna dhamma can go to finer details. This is why Paṭicca Samuppāda has been compared to an ocean. It is vast and can explain the arising of ANY SANKATA (whether live or inert) in this world.

- However, if we start digging deeper, that could become a waste of time since there is no ending regarding how much finer detail one wants to examine.
- Still, it is good to see the depth of Buddha Dhamma. It gives one confidence in following the Path. Unshakable faith comes from realizing that Buddha Dhamma describes our world as it is.

11. Now let us briefly discuss the aññamañña paccayā, usually translated as "mutuality condition." This is not a bad translation but could also be translated as "forward and backward condition."

- Many of the PS cycle's steps go backward and forward. For example, the step we have discussed, "viññāna paccayā nāmarūpa," runs backwards (in the same PS cycle) too.
- Therefore, while nāmarūpa are generated AND get stronger by a given viñ̃āạa, the viññāna itself gets stronger by the cultivation of nāmarūpa, i.e., "nāmarūpa paccayā viññāna" step runs simultaneously too. This is the "mutual strengthening."
- In the example of the teenager, the cultivation of bad nāmarūpa (visuals of party scenes, bad friends, etc.) leads to the strengthening of that bad viñ̃̄āna (desire to drink or take drugs), even though the bad viññāna first led to the corresponding nāmarūpa.

12. The añ̃̃amañ̃̃a paccay $\bar{a}$ - just like the $\bar{a} s e v a n a ~ p a c c a y ~ \bar{a}-$ is highly effective in the first several steps in PS. While the "avijjā paccayā sañkhāra" step initiates bad actions (or sañkhāra), the continued actions in the same direction then lead to strengthening avijja (or ignorance of the consequences of such actions), i.e., "sañkhāra paccayā avijjā."

- This is why it is essential to stop such conscious sañkhāra (especially sañkappa or the first part of vacī sainkhāra) when one realizes that one is getting on the wrong track. Otherwise, one's avijiā will grow, and one's bad gati will only grow.
- Such immoral sañkhāra - in the form of vacī sañkhāra - appear to provide us with a sense of satisfaction at that time. For example, when one gets "really worked up" thinking about a bad deed done by an enemy, it gives one pleasure to say bad things about that person to others, or even retaliate directly to that person.

13. However, such actions lead to a "heat" or "tāpa" in us in the longer term. Long after that "initial satisfaction" of putting down that person, one will be "burning inside" for long times, even if one does not realize that. One will be prone to frequent outbursts even with other people.

- Removal of this tāpa or "fire" in us is what is meant by the phrase "ātāpi sampajano" in the Satipatṭhāna Sutta. That will help reduce our tendency to get "worked up" at the slightest provocation, i.e., to change our gati in the right direction; see "Satipatthāna Sutta - Structure."
- This is the first type of suffering that many of us don't even realize; see, "Suffering in This Life - Role of Mental Impurities" and other posts in "Living Dhamma."

14. Finally, the aññamañña paccayā is not operative starting at the "saḷāyatana paccayā phassa" step in the Paticca Samuppāda.

- We can see that "phassa cannot lead to saḷāyatana," "vedanā cannot lead to phassa," etc.

July 1, 2019: Regarding \#2 above, it is important to note that āsevana differs from asevana.

- Sevana is association. $\overline{\text { Asevana }}(\bar{A}+$ sevana $)$ is "came to associate with"(as discussed in \#5 above).
- Asevana ( $A$ with a short A + sevana) is "not to associate with," the negation; see \#5 of "Associations (Sevana) - A Root Cause of Wrong Views.."

It is imperative to see the difference, which illustrates how Pāli words combine (sandhi) to produce other words with very different meanings. Thanks to Tobias Große for bringing this distinction to our attention at today's discussion forum.

## $x \quad$ Is There a 'Self'?

September 22, 2019

- Chachakka Sutta - Six Types of Vipāka Viññāna
- Sakkāya Ditthi in Terms of Attā or "Selp" or "Ātma"
- An Apparent "Self" Is Involved in Kamma Generation

Subsection: "Paticca Samuppāda - Not 'Self' or 'No-Self"
Conclusion: "Origin of Life - One Creates One's Own Future Lives"

- That only leads to more suffering. Creating new lives stops with attaining Nibbāna/Arahanthood.

### 10.1 Citta - Basis of Our Experience and Actions

September 22, 2019; revised November 14, 2019

## Introduction

1. We have been discussing the first few verses of the "WebLink: suttacentral: Chachakka Sutta (MN 148)" in the series on, "Is There a "Sell"?" It is a good idea to take a break and look at what we have learned from a different point-of-view.

- The Buddha called himself a "vibhajjavādi." That means he explained things in great detail by diving and subdividing a given entity or concept to examine it at more fundamental levels.
- That is very much like what the scientists are doing today. They first explained the matter in terms of molecules, and then with atoms. Later, they found that an atom consists of a nucleus and electrons in orbitals around it. Then they probed the nucleus and discovered that more fundamental particles (with names like gluons, and quarks) make up the nucleus.
- By probing deeper, physicists also came up with Quantum Mechanics. Matter and energy are "quantized" on a small scale. That just means they come in "packets" or "quanta"" (the singular is "quantum.")
- More than 2500 years ago, the Buddha taught that matter and energy are quantized. The smallest "quantum" in Buddha Dhamma is a suddhatthaka. But that is not relevant to the present discussion.

## Sensory Experience is Quantized - It comes in "Packets"

2. I am not going to have a discussion on Quantum mechanics here. But I want to look at the "Chachakka Sutta (MN 148)" from a little bit different point-of-view. That will break the tradition of providing boring translations of suttā, and I hope will also provide better insights into the material in the sutta. This discussion would be beneficial before we move to the next section of the sutta.

- As you will see below, scientists are just beginning to take the mental phenomena seriously. They have made a bit of progress. But they are not even close to having a detailed analysis of mental phenomena that the Buddha did over 2500 years ago.
- Mental energy is also quantized, even though we may feel like thoughts are continuous. The smallest unit in Buddha Dhamma is a "citta." A citta lasts less than a billionth of a second. We cannot experience a single citta. Even though it is conventionally translated as "a thought", that is not correct.
- What we usually think of as a "thought" consists of billions of cittā (The plural of citta is citta, but sometimes I tend to write that as citt $\bar{a}$ just because that is easier for most people.) By the way, citta is pronounced "chiththa."

## What is a Thought?

3. Let us first see the progress that science has made over the past 50 years or so. Science is still at a very early stage regarding the mind. But they have made some progress recently and we will show them to be fully consistent with Buddha Dhamma. In fact, those findings help explain deeper concepts in Buddha Dhamma.

- Only fifty years ago, scientists thought that computers can "become conscious" just by increasing the processing speeds. Now there are computers that are much faster, but they, of course, do not have consciousness. We will discuss later why computers will never become conscious.
- The following is a presentation entitled, "What is a Thought?" by Henning Beck, a scientist studying brain phenomena.

WebLink: youtube: What is a Thought? How the Brain Creates New Ideas |Henning Beck | TEDxHHL

## A Computer Does Not Have Perception (Sañ̃ $\bar{a}$ )

4. At 4:00 minutes, we see a "face" made up of fruits and vegetables. Even though it is not a real human face, it takes us just a split second to realize that it represents a face.

- But as Mr. Beck points out, a computer will never be able to recognize the representation of the human face depicted there.
- At 9:20 minutes he starts a discussion on the identification of a chair. Again, a computer runs into a problem identifying "less obvious" structures that can serve as chairs.
- In both these instances, what the computer is missing is sañ̃̃ā (loosely translated to English as "perception"). Even animals can recognize objects relevant to their survival. A dog, for example, can instantly recognize its owners and any other pets living in the house. It can recognize foods that it likes, etc. See "Saññā - What It Really Means."

## Vedanā, Sañ̃n̄̄, Joy, Sadness, etc. Cannot Arise in a Brain

5. Around 6:00 minutes, Mr. Beck starts talking about human thought. All he (and other scientists) know right now is that our thoughts rise very fast. But they do not have any explanation of how thoughts with feelings (vedanā), perception (sañ̃̄̄a), joy, etc. can arise out of a brain made of inert atoms and molecules.

- A brain is not that different from a computer, in the sense that atoms and molecules are the building blocks of both. Both can process information. But a brain processes information in a very different way compared to a computer. It involves billions of neurons working as a team. Scientists are not even close to figuring out how the brain processes information.
- In the future, scientists may be able able to figure out how those neurons are able to process information much faster than a computer with a thousand-times higher processing speeds.
- However, they will still NOT be able to able to figure out how a human or animal can recognize their surroundings AND generates emotions (happy, sad, etc.)
- Around 11:00 minutes he discusses the difference between learning and understanding. That is an excellent point.

## Vedanā, Sañ̃̃̄̄, Joy, Sadness, etc. Arise in the "Mental Body"

In a previous post, "Contact Between Āyatana Leads to Vipāka Viññāna," I mentioned that plants and trees have a basic form of vedanā and sañ̃̄̄̄ (see \#3,\#4 there.) However, plants and trees CANNOT generate emotions like joy and sadness. A tree does not have a mind or a "mental body" created by kammic energy.
6. In the same way, a brain cannot generate a thought. How can feelings and emotions come out of an entity made of inert atoms and molecules? The "mental body" of a living being is created by kammic energy.

- There has to be a LIVING BEING to generate a citta, the basic unit of consciousness. For a human being, the essence of that LIVING ENTITY is not the physical body, but the mental body.
- That "mental body" is alternatively called a manomaya kāya or gandhabba. It consists of a hadaya vatthu (seat of mind) and five pasāda rūpa located around it (for seeing, listening, smelling, tasting, and touching.) The mental body is not like the "physical body." It is more like an "energy body" that gives life to the inert and dense physical body.
- A manomaya kāya may be visualized as an "energy field" within the physical body with the hadaya vatthu and five pasāda rūpa overlapping the region of the physical heart.

7. Our brains do not have the capability to identify objects. It cannot generate emotions like joy and sadness. As we discussed in \#4 above, even animals can identify things and generate feelings and emotions.

- It is the mental body (manomaya kāya or gandhabba) that generates emotions like joy and sadness as well as vedanā, saññ̄a .
- More precisely, those mental phenomena arise in the hadaya vatthu (seat of mind) of the gandhabba.

8. The details are not critical, but that basic mechanism is important to understand. A brain does not see, hear, smell, taste, or touch. It is the seat of the mind (hadaya vatthu) that experiences all those.

- That is why a human body is just a shell that supports the mental body (manomaya kāya or the gandhabba). At the death of the physical body, that manomaya kāya leaves the body instantly. When we touch a dead body, it is obvious to us that there is no "life" there.
- A living body is like a "live wire" with an electric current flowing through. One will get an "electrical shock" by touching it. But if there is no electric current, it is just a metal wire.
- In the same way, it is the manomaya kāya that gives "life' to an inert physical body.

## The Manomaya Kāya Changes from Existence to Existence

9. What happens to the manomaya kāya at the end of existence? To make this clear, let us take the case of a Brahma dying and getting a human existence. That transition from a Brahma to a human happens at the moment of death of that Brahma. It is called the "cuti-patisandhi" moment ("cuti" means dying and "patisandhi" means getting a new existence.)

- That Brahma had a seat of the mind (hadaya vatthu) and two pasāda rūpa (for seeing and hearing). On the other hand, in the new existence, the human would have five pasäda rūpa (for seeing, listening, smelling, tasting, and touching). Furthermore, the hadaya vatthu of the human would be different from that of a Brahma.
- Therefore, the manomaya $k \bar{a} y a$ of in the new human existence is very different from that of the Brahma.
- Suppose that at the end of that human existence, that human gets an animal existence. Then at that "cutipațisandhi" moment, that new animal existence would have its own set of hadaya vatthu and five pasāda rūpa.

10. Those three existences are very different, even though it is the same "lifestream." So, what is there to be taken as a "soul" or a "self"?

- That is why the Buddha said there is no "soul" or a "self" or a "ātma" going from one birth to another. In the above example, the same "lifestream" that started as a Brahma became a human, and then an animal. What is the ESSENCE that defines a "soul" or a "self" or a "ātma"?
- The details on that are in the post "Chachakka Sutta - Six Types of Vipāka Viññāna." First, let us look into the mechanism of citta generation.

## A Citta Has Vedanā, Sañ̃̄̄̄, and Many Other "Built-In" Mental Factors

11. A citta is the fundamental unit of cognition, which we do not feel by itself. It comes in bunches of 12 or more cittā. Those "bunches" or series of cittā are citta vīthi. What we "feel" or "experience" is a vast number of such citta vīthi.

- Any citta vīthi that arises due to sensory input from one of the five physical senses has 17 citt $\bar{a}$. It is a pañcadvāra citta vīthi.
- On the other hand, a citta vīthi arising directly in the mind (due to dhammā) may have varying numbers of citta, with a minimum of 12 cittā. That is a manodvāra citta vīthi.

12. What we usually call a "thought" is the cumulative effect of billions of such citta vithi that arise PER SECOND.

- Each of those cittā has at least seven mental factors (cetasik $\bar{a}$ ). Those universal cetasik $\bar{a}$ include vedanā and saññā. Vedana cetasika makes one FEEL a sensory input. The sañña cetasika is the one which recognizes that sensory input.
- Only a living being can generate that fundamental unit of cognition (citta) within a billionth of a second, with built-in seven or more cetasik $\bar{a}$.
- That is why a computer or a robot will NEVER become conscious. Only Kammic energy can create a manomaya kāya with the seat of the mind (hadaya vatthu).

## Important Role of the Brain

13. Even though the brain itself cannot generate citta, it plays a critical role in getting the information about the sense object to the hadaya vatthu. More details at "Brain - Interface between Mind and Body." Let us briefly discuss the series of events following the capture of an image by our eyes.

- The retinas at the back of the eyes send the captured image to the visual cortex in the brain through the optical nerve. That part of the brain then analyzes the signal to a form that can be understood by the mind. That information is sent to the cakkhu pasāda rūpa in the manomaya kāya. Then the cakkhu pasāda rūpa makes a contact with hadaya vatthu, which vibrates 17 times due to that "impact."
- Those 17 vibrations of the hadaya vatthu correspond to the generation of a citta vithi with 17 citt $\bar{a}$. That is the origin of a cakkhudvāra citta vithi. It is not necessary to learn those details. But those interested can find details at "Does any Object (Rūpa) Last only 17 Thought Moments?."
- Sensory inputs coming through the other four physical senses (ears, nose, tongue, and the body) work the same way.

14. Just remember that the sensory input comes to a pasāda rūpa in the mental body AFTER the sensory signal is processed by the brain. For example, when we see a tree, the image of the tree received by the eyes is processed by the brain first.

- Then the brain transmits that processed signal to the cakkhu pasāda rūpa, which in turn transfers it to the hadaya vatthu.
- It is the hadaya vatthu that "feels" or "experiences" that image and "sees" the tree.
- But even a sensory experience that we "feel" arises due to a series of "sensory packets." For example, when we see a tree, that image does not come in continuously. It comes in "packets" or "snapshots."
- In fact, that is similar to how a video camera or a movie film works. We will discuss that in the post "Vision Is a Series of "Snapshots" - Movie Analogy."

### 10.2 Vipāka Vedanā and "Samphassa jā Vedanā" in a Sensory Event

September 29, 2019; revised November 15, 2019; August 28, 2022
We are discussing the "Worldview of the Buddha." It may be a good idea to print out the posts for referral while reading subsequent posts. It is CRITICAL to understand the material discussed so far to follow future posts.

## All Our Activities Start With a Sensory Trigger

1. We know that we are alive because we are aware of the external world. We can see an object, hear a sound, smell an odor, taste food, and feel the touch of something or someone. Furthermore, we can recall past events (part of dhammā).

- All our sensory experiences start with a "trigger event" that comes through one of our six sense faculties. If we see, hear, smell, taste, or touch something that grabs our attention, we start thinking, speaking, and taking action on that particular sight, sound, odor, taste, and touch.
- Also, a thought about a past event or a planned event (dhammā) may come to our mind, and we could get started that way too.

2. We usually go through our daily chores based on what we do routinely. We get up in the morning and get ready for work (school) on a working day. Those " to do tasks" come to our minds automatically as dhammā.

- Such a "planned or routine day of work" could be disrupted by an unexpected event. One may get a phone call from the boss asking to go to a meeting at a different location. A child may come down with a fever, and a hospital visit may be required. Again, a sensory trigger is there.
- We may also set up an alarm to get up at a particular time. When the alarm goes off in the morning, we wake and recall having to get ready for a specific task.
- It is a good idea to think about what one goes through during the day. We can see that all activities start with "sensory triggers."

## A Sensory Trigger is an "Arammaṇa"

3. Each activity starts with a "trigger," a sensory event. That is a "ārammana" in Päli. We consciously and deliberately start looking at an object when we become interested in that object. Then it becomes a new "ārammaṇa." That may prompt us to take further action.

- For example, short interaction with a person may trigger an interest in that person. Then that may lead to further contacts.
- We get exposed to many sensory inputs as we go through the day. But only specific sensory inputs catch our attention and make us think about them. A strong sensory input that gets our attention is a ārammaṇa.
- If X listens to the television in the background while eating, X focuses is on the meal. However, if X hears on the TV that a terrorist attack just took place in a major city, X's attention would focus on that news story. X may stop eating and go and watch the television to get more information. That is a new ārammaṇa.

4. There is always an "ārammaṇa" to initiate an action, and there are only six types of a rammana per "Chachakka Sutta (MN 148)."Cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññānain, sotañca paṭicca sadde ca uppajjati sotaviññānam், ghānañca paticca gandhe ca uppajjati ghānaviññānam், jivhāñca paṭicca rase ca uppajjati jivhāviññānamं, kāyañca paticca phoṭthabbe ca uppajjati kāyaviññānam், manañca paticca dhamme ca uppajjati manoviññānaì."

- For example, the second on the list says that "ear-consciousness (sota viññana) happens when ears (more precisely sota pasāda) come to contact with a sound (sadda)." In the above example, X heard about a terrorist attack.
- That sensory event could then start a whole series of new actions. In the example of \#3 above, X stopped eating and went to the television to watch it.
- You should think about this basic idea of how a sensory event (seeing, hearing, etc. leads to a whole set of actions during a given day. This idea was first introduced in the post, "Contact Between Āyatana Leads to Vipāka Viññ̄āna."

## Two Different Meanings of Paṭicca

5. We translated the verse, "cakkhuñca paticca rūpe ca uppajjati cakkhuviññaṇ̄ain" as "..cakkhu viññāna arises when a rūpa makes contact (paticca) with cakkhu pasāda rūpā." See, \#7 of "Contact Between Āyatana Leads to Vipāka Viññāna." That was further elaborated in the next post, "Indriya Make Phassa and Āyatana Make Samphassa."

- Some English translations state that as "dependent on the eye and forms, eye-consciousness arises." They translate paticca as "dependent on," presumably because Paticca Samuppāda is translated as "Dependent Origination."
- But paticca is a Pāli word with somewhat different meanings depending on the context. Let us clarify that first.

6. It is fine to translate Paticca Samuppāda as "Dependent Origination." That is because the steps in Paticca Samuppāda are CONDITIONAL statements. For example, "with avijjā (ignorance) as condition, sañkhāra arise." One could also state that the "arising of sañkhāra is dependent on the presence of avijja." However, conditionality comes from the word "paccayā," not from "paticca." See, "What Does "Paccayā" Mean in Paticca Samuppāda?."

- Therefore, "cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññānaì" should not be translated as "dependent on the eye and forms, eye-consciousness arises." It is more than just dependence. It is "coming together" or "coming to contact" of cakkhu and rūpa that gives rise to cakkhu viññanna. "Paṭicca" happens with only those events that grab our attention.
- There is also a deeper meaning of paticca in Paticca Samuppāda, where it combine the two words "pati" + "icca." When one attaches willingly to moral (or immoral) deeds, one ends up with corresponding "births" ("sama" + "uppada.") See, "Paticca Samuppāda - "Pati+ichcha" + "Sama+uppāda"." That is why I do not translate Paticca Samuppāda as "Dependent Origination." There is more than "just dependence" in Paṭicca Samuppāda.
- However, in verse "cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññānaim," paṭicca means "coming together" or "contact." Here there is no "intention." It is cakkhu and ruppa making contact. That is very clear in SN 12.53 and SN 12.54 , in verse, "telañca paṭicca vaṭtiñca paṭicca telappadīpo jhāyeyya." OR, "an oil lamp (telappadīpo) burns while the wick (vattiñca) is together with oil (telañca)." If one does not add oil to the lamp, the wick will burn out quickly. There is no involvement of the mind there. Thus, the "pati" + "icca" etymology does not apply here.

## Where Does Paṭicca Happen?

7. It is essential to remember that "cakkhu" (or cakkhāyatana) is not physical eyes (the Pāli word for the physical eye is "nayana"). "Cakkhu" is the cakkhu pasāda rūpa that lies close to the hadaya vatthu (seat of the mind), and hadaya vatthu overlaps the physical heart. That is far away from the brain.

- This cakkhu pasāda rūpa is the "internal āyatana." It is commonly referred to as "cakkhu."
- The brain processes an image the eyes receive and then sends it to the "cakkhu." We discussed in the post, "Contact Between Āyatana Leads to Vipāka Viññān̄,"
- Furthermore, the "r $\overline{u p a}$ " is the image of the external object (external $\bar{a} y a t a n a$ ). To be precise, it is a "vanna rūpa" (or "rūpa rūpa") in this case.
- When that rūpa makes contact with the cakkhu, the cakkhu in turn "hits" the hadaya vatthu (seat of the mind) and transfers that rūpa to the mind, that is the event, "Cakkhuña paticca rūpe ca uppajjati cakkhuviññānam."
- That contact gives rise to the cakkhuviññāna in mind. Therefore, that sensory experience arises in the mind close to the physical heart. It does not occur in the brain (or at the eyes)! You may want to refresh memory by reading \#12 of the post, "Buddhist Worldview - Introduction."

8. The example discussed in \#3 involves an ārammaṇa coming through as a sound (sadda rūpa). Here the "sound rūpa" received by the sota pasāda rūpa (shortened to just "sota") is the "sadda" in "sotañca paticca sadde ca uppajjati sotaviññānam.".

- Any external sensory input is a form of energy. That is why they are all rupa. There is some confusion because most times, a "rūpa rūpa" or a "vanna rūpa" is just written as a "rūpa."
- A sound is a sadda rūpa. You can figure out the other three: rasa rūpa, gandha rūpa, and phott!habba rūpa.
- A thought coming directly to the mind is a "dhamma"" or a "dhamma rūpa." There is no separate "pasāda rūpa" for dhammā, which directly contacts the hadaya vatthu.

## Vipāka Vedanā Arise With That Initial Vipāka Viññāṇa

9. Let us consider "hearing a sound." That is "sotañca paṭicca sadde ca uppajjati sotaviññānam.". This sotaviññāna is a vipāka viññāna, as we discussed in "Contact Between Āyatana Leads to Vipāka Viññāna."

- As we have discussed, vedan $\bar{a}$ and saññ $\bar{a}$ arise with each citta. Therefore, there are a vedan $\bar{a}$ and sañ̃ña associated with that sota viñ̃̄̄ana (which is a citta.) In other words, we know that we heard the sound (vedan $\bar{a}$ ), and we recognize what the sound is (saññ $\bar{a}$ ). The vedan $\bar{a}$ that arises with that vipāka viñnāṇa is a vipāka vedanā.
- At this stage, the mind receives the sensory event. All vedanā associated with that initial sensory event is a neutral (upekkhā) vedanā. However, some somanassa or domanassa vedanā arise due to $k \bar{m} m a$ guṇa (even in an Arahant.). The next post, "Kāma Guna - Origin of Attachment (Tanhā)," will discuss this issue. However, no dukkha/sukha vedanā arise in this step of, "sotañca paṭicca sadde ca uppajjati sotaviññannam." That also holds for other sensory faculties, except for the physical touch (kāya.)
- Therefore, the only exception is "kāyañca paticca photṭhabbe ca uppajjati kāyaviñnān̄aín." The sensory contact through the physical body can generate a dukkha vedana due to an injury. It can lead to a sukha vedanā due to a body massage.
- We will discuss sukha, dukkha, somanassa, domanassa, and upekkhā vedanā below.

## The Second Type of Vedanā is "Samphassa $\mathbf{j} \bar{a} \operatorname{Vedan} \bar{a} "$

10. In the post, "Indriya Make Phassa and Āyatana Make Samphassa," we looked further into the "Chachakka Sutta (MN 148): "Cakkhuñca paṭicca rūpe ca uppajjati cakkhu viññạnaì, tị̣nam sañgati phasso, phassa paccayā vedanā." Those we discussed the second type of vedana due to "phassa paccay $\overline{\text { a }}$ vedanā." There we discussed how the second type of vedana $a$ arises due to "samphassa." It is a good idea to review that post.

- That second type of vedanā is due to "contact with defilements in mind" or "san" or "anusaya." And that depends on each person, i.e., how strong a tanh $\bar{a}$ is generated via greed, anger, or ignorance. Therefore, this "samphassa-j $\bar{a}$-vedan $\vec{a}$ " is mind-made.
- An Arahant would experience the first type of vedanā, the vipāka vedanā. The second type of vedana would NOT arise in an Arahant because he/she does not have a defiled mind.
- Now we can categorize vedana $u$ using a different scheme. That will show that dukkha/sukha vedana arises ONLY due to the physical body. Other types of sensory contacts lead to unpleasant/pleasant vedana (domanassa/somanassa) in the MIND.

## Two Types of Vedanāa (Kāyika and Cetasika)

11. As we saw above, ALL vedanā belong to those two types discussed above: vipāka vedana and samphassa-j $\bar{a}$-vedan $\bar{a}$. However, there are other ways to categorize vedan $\bar{a}$. The Buddha has taught us how to examine a given entity or a concept in many different ways. Once one understands them, it is easy to see which analysis is appropriate for a given situation.

- The Buddha categorized vedanā up to 108 types. However, we do not need to discuss all of them. We will consider only those that are relevant to common situations.
- First, ALL vedanā belong to two categories of kāyika vedanā (those felt on the body) and cetasika vedana $\bar{a}$ (those arising in the mind.) Of course, all of the vipāka vedana $\bar{a}$ and samphassa-j $\bar{a}$-vedan $\bar{a}$ are in these two new categories. It is just a different way to look at them.
- Those vedanā felt in the physical body (kāya) are kāyika vedanā. All other vedana are cetasika vedan $\bar{a}$; they arise in mind.

## Three Types of Kāyika Vedanā

12. Then the kāyika vedana $\bar{a}$ can be three types: dukkha vedan $\bar{a}$, sukha vedanā, adukkhamasukha vedanā.

- We can see that dukkha vedanā due to injuries, body aches, etc. are kāyika vedanā. Those vedanā are felt AT A LOCATION in the body. We feel a finger cut at the finger. Similarly, a back massage gives a sukha vedana $\bar{a}$ on the back.
- We remember that vedan $\bar{a}$ means "becoming aware of." So, those vedan $\bar{a}$ due to bodily contacts that do not generate dukkha or sukha (i.e., neutral) are "adukkhama asukha" (neither painful nor pleasant), and that rhymes with "adukkhamasukha."

## Three Types of Cetasika Vedanā

13. Those cetasika vedanā similarly belong to three major types: domanassa vedanā, somanassa vedana $\bar{a}$, and upekkhā vedanā.

- The word "domanassa" comes from "do + manasa" or "a depressed mind." Similarly, "somanassa" comes from "so + manasa" or "a pleasant mind." Of course, upekkhā vedanā is neither domanassa nor somanassa. It is neutral, and we feel that sensory input.
- Note that while the adukkhamasukha vedanā is associated with body touches, upekkh $\bar{a}$ vedan $\bar{a}$ is associated with all other sensory inputs.

## Relationship to Vipāka Vedanā and "Samphassa-jā-Vedanā"

14. Now, these cetasika vedanā can be either vipāka vedanā or "samphassa-j $\bar{a}-v e d a n \bar{a} . "$

- As we have discussed, samphassa-j $\bar{a}$-vedana $\bar{a}$ depends on the person's mindset (more precisely, on one's anusaya or gati.) Three people looking at the same person X may generate different types of
samphassa-j $\bar{a}$-vedan $\bar{a}$. A friend of X will generate a samphassa-j $\bar{a}-v e d a n \bar{a}$ that is of somanassa type. An enemy of X will generate a samphassa-j $\bar{a}$-vedana $\bar{a}$ that is of domanassa type. A third person who does not know X may only feel a samphassa-j $\bar{a}$-vedan $\bar{a}$ of upekkhā type.
- Since there are six types of samphassa-j $\bar{a}$-vedan $\bar{a}$, we can see that there could be 18 types of vedan $\bar{a}$ associated with them. Each one could be domanassa, somanassa, or upekkhā.
- In the "WebLink: suttacentral: Atthasata Sutta (SN 36.22)," the Buddha has discussed 108 types of vedanā. But for many situations, the above types of vedanā are sufficient for our discussions.

### 10.3 Kāma Guṇa - Origin of Attachment (Taṇhā)

October 6, 2019; revised October 9, 2022
Kāma guṇa are associated with pleasurable things in this world. It is because of kāma guṇa that we tend to attach (tanh $\bar{a})$ to worldly things via either greed or anger (based on ignorance.) Based on kāma guṇa we AUTOMATICALLY generate sāmisa vedanā. Sāmisa vedanā, in turn, COULD lead to taṇh $\bar{a}$ (attachment to worldly things.)

## Summary of the Previous Post

1. In the previous post, we first categorized vedana into two types: vipāka vedana and samphassa-j $\bar{a}-$ vedanā.

- Then, later in the post, we categorized vedana differently. Those vedana $\bar{a}$ felt in the physical body (kāya) are $\boldsymbol{k} \bar{a} y i k a ~ v e d a n \bar{a}$. All other vedana types arise in mind, and they are cetasika vedana $\bar{a}$. Of course, vipāka vedanā can be kāyika vedana or cetasika vedanā. However, samphassa-jā-vedanā are all cetasika vedanā.
- Then kāyika vedanā can be three types: dukkha vedanā, sukha vedanā, adukkhamasukha (adukkhama asukha or neither dukkha nor sukha) vedană.
- One may need to review that post: "Vipāka Vedanā and "Samphassa jā Vedanā" in a Sensory Event."

## A Few Observations Based on the Previous Post

2. Now I need to add a few more comments. First, those k $\overline{\boldsymbol{a}} \boldsymbol{y} i k a \operatorname{vedan} \overline{\boldsymbol{a}}$ are all $v i p \bar{a} k a$ vedan $\bar{a}$. Those are the ones that contribute to physical suffering (injuries, sicknesses, etc.) and bodily comforts (like in a body massage.) Therefore, dukkha vedanā, sukha vedan $\bar{a}$, and adukkhamasukha vedanā are all vipāka $v e d a n \bar{a}$, and they arise only with "bodily contacts" (kāyañca paṭicca photṭhabbe ca uppajjati kāyaviñāānaam.)

- All other types of vipāka vedanā come through the eyes ears, nose, tongue, and mind. Unlike vipāka vedanā that come through the physical body, they are NOT kāyika vedana $\bar{a}$.
- Those are, at that moment, all upekkh $\bar{a} v e d a n \bar{a}$. We see, hear, smell, taste, or dhamm $\bar{a}$ come to mind. They are, "Cakkhuñca paticca rūpe ca uppajjati cakkhuviññānaìn, sotañca paticca sadde ca uppajjati sotaviññānaì, ghānañca pațicca gandhe ca uppajjati ghānaviññannaì, jivhāñca paticca rase ca uppajjati jivhāviñ̃āṇam, and manañca pațicca dhamme ca uppajjati manoviñ̃n̄ạaín." Note that "kāyañca paṭicca phoṭthabbe ca uppajjati kāyaviñ̃āṇamं" does NOT appear here.
- Then, samphassa-j $\bar{a}$-vedanā arise following those initial vipāka vedanā. For example, following hearing a sound (sotañca paṭicca sadde ca uppajjati sotaviññānaim), two more steps take place before samphassa-j $\bar{a}$-vedana $\bar{a}$ arise. They are in the "Chachakka Sutta (MN 148): "sotañca paticca sadde ca uppajjati sotaviññanami, tinnamं sañgati phasso, phassa paccayā vedanā." As we discussed In the previous post, phassa paccayā vedanā is samphassa-j $\bar{a}$-vedan $\bar{a}$. Those are vedana that arise due to greed, anger, and ignorance.
- In this post, we will discuss that last step in detail. Why do humans get attached to some sensory inputs via greed and to others via aversion (dislike)?

## What Are Kāma Guna?

3. The Buddha said that this world is filled with eye-pleasing sights, ear-pleasing sounds, etc. for all five physical senses. Each existence in the kāma loka has its own set of "attractive and enticing sensory objects." The Buddha called them kāmaguna or "sensual qualities." As we know, kāma means sensual.
"Guna" means "qualities" or "characteristics." Even though kāmaguna is one word in the Tipiṭaka, I like to write it as two words, "kāma guna" since that helps remember the meaning.

- For example, humans like certain types of food. Each animal species has its own "favorite foods." Lions and tigers like to eat meat. Cows don't eat meat, and they eat grass. Pigs like to eat all sorts of rotten food.
- Humans enjoy certain sights, sounds, tastes, smells, and bodily contacts. As long as one has a human body, it is impossible to avoid generating a sukha vedanā due to such sensory contacts. Even Arahants feel those.

## Kāma Guṇa Are Enticing Objects, Sounds, Tastes, Odors, and Bodily Contacts

4. Such sukha vedanā arise immediately AFTER the initial vipāka vedanā. As we discussed in the previous post, all vipāka vedana $\bar{a}$ due to sensory contacts other than bodily contacts are upekkh $\bar{a} v e d a n \bar{a}$. They are neutral.

- However, immediately following that initial contact, kāma guña comes into play. Many suttā discuss kāma guṇa, and they all have the following clarification of what it is. The "WebLink: suttacentral: Nibbānasukha Sutta (AN 9.34)," states, "Pañcime, bhikkhave, kāmagun̄ā. Katame pañca? Cakkhuviññeyyā rūp $\bar{a}$ ittth $\bar{a}$ kantā manāpā piyarūp $\bar{a}$ kāmūpasaimhita rajanīy $\bar{a}$, sotaviññeyy $\bar{a}$ saddā, ghānaviññeyyā gandhā, jivhāviññeyyā rasā, kāyaviññeyyā phoṭthabbā, itṭhā kantā manāpā piyarūpà kāmūpasaìhitā rajanīyā. Ime kho, bhikkhave, pañca kāmaguṇā."
- Translated: "There are these five sensual qualities (kāmaguna). Which five? There are forms ( $r \bar{u} p \bar{a}$ ) experienced with eyes that are agreeable, pleasing, charming, endearing, enticing, and leading to desire. There are sounds (sadda) that are agreeable, pleasing, charming, endearing, enticing, and leading to desire (and similarly for the other three senses.)

## Vedanā Due to Kāma Guṇa Are Not "samphassa-jā-vedanā"

5. However, this somanassa vedanā that arises due to kāma guṇa are NOT the "samphassa-j $\bar{a}$-vedanā." Somanassa vedanā due to kāma guṇa arises in an Arahant, as well as in an average human.

- Let us clarify with some examples. Sugar or honey has a "kāma guṇa" of sweetness. That holds for everyone, from an average person to an Arahant. A beautiful woman will be seen as such by anyone from an ordinary person to an Arahant.
- However, "tinnnam sañgati phasso, phassa paccay $\bar{a}$ vedan $\bar{a} "$ in \#2 above does not occur in an Arahant. Even though an Arahant will experience somanassa vedana due to kāma guṇa, an Arahant would NOT get attached to that "pleasant/sensual feeling."
- Therefore, even though an Arahant would feel the tastiness of honey, he/she would not generate any craving for more. An Arahant has comprehended that desire for ANY worldly pleasures (sights, sounds, smells, tastes, and body touches) will only lead to future suffering. But it is essential to realize that one CANNOT and SHOULD NOT suppress such desires with sheer willpower. That understanding comes after the Sotäpanna stage.

## Vedanā Due to Kāma Guṇa Are Sāmisa Vedanā

6. There is a unique name for those "automatically-arising" vedana due to kāma guṇa. They are sāmisa vedanā.

- The word sāmisa has origins in the keyword "āmisa," which means "associated with the sensual world" or "kāma loka." Thus, sāmisa sukha vedanā mean a "pleasant feeling" that arises due to the nature of the kāma loka. [āmisa :[nt.] food; flesh; bait; gain. (adj.) material.]
- An Arahant, as well as an average human, will experience similar "sāmisa vedanā." Any sensory event of $k \bar{a} m a ~ l o k a ~ i s ~ a ~ s a ̄ m i s a ~ v e d a n a \bar{a}$. We will briefly discuss the types of sāmisa vedana $\bar{a}$ below.
- We remember that the original viñ̃̄̄ạna (cakkhu, sota, ghāna, jivhā, kāya) resulted due to a vipāka. Vipāka vedanā associated with those are upekkhā vedanā. (The only exception was kāya viññāna, which could give rise to dukkha, sukha, or adukkhamasukha vedanā.)
- Immediately following those vipāka vedanā, kāma guṇa comes into play, and sāmisa vedanā arises automatically.
- It is only after the generation of sāmisa vedanā that "tiṇ̣aím sañgati phasso, phassa paccayā vedana $\bar{"}$ comes into play.

## Kāma Rāga Is Getting Attached to Sāmisa Vedanā

7. The human world is full of enticing sights, sounds, tastes, odors, and bodily comforts. Those are not $k \bar{a} m a$. They are kāma guṇa. Getting attached to them and cultivating kāma sañkappa (or vacī sañkhāra or vitakka/vicāra) is kāma (and kāma rāga).

- The "WebLink: suttacentral: Nibbedhika Sutta (AN 6.63)" states, "Sañkappa rāgo purisassa kāmo, Nete kāma y yāni citrāni loke..."

Translated: "A person's kāma is getting attached and thinking about (sañkappa rāga) those pleasing things in this world (citrāni loke). Those beautiful things in the world are not kāma."

- I highly recommend the post "Kāma Guna, Kāma, Kāma Rāga, Kāmacchanda." It has more information that will help understand the concepts better.

## Difference Between Samphassa-jā̄-Vedanā and Sāmisa Vedanā

8. Now we can see the difference between samphassa-j $\bar{a}-v e d a n \bar{a}$ and sāmisa vedanā.

- First, sāmisa vedanā are common to ALL HUMANS, including Arahants. They are the sweetness of sugar or pleasing odors like perfumes.
- On the other hand, samphassa-jā-vedanā are highly PERSONAL. They do not arise in Arahants. For others, how strongly they arise depends on one's gati AND the specific ārammana.
- We also need to understand that samphassa-jā-vedanā arises BECAUSE OF sāmisa vedanā. One gets attached to sensory inputs because they are enticing. As long as one does not see the "hidden suffering" in those enticing sights, sounds, etc., one is bound to generate a craving for them.
 discuss that briefly since it is crucial.

## Tanh $\bar{a}$ - Getting Attached via Greed, Anger, or Ignorance

9. Just like "pleasing and enticing things" in the kāma loka, there are also "unpleasant things." For example, rotten food tastes terrible, and we do not like loud or high-pitched noises. Humans generate sāmisa dukkha vedan $\bar{a}$ when exposed to such sensory inputs or $\bar{a} r a m m a n a$.

- Nonetheless, we get "attached" to them also. We complain about lousy-tasting foods or harsh noises and may take action to avoid them.
- That is why "taṇhä" means "getting attached to ārammana via either greed or anger." We also get attached to ārammaṇa due to ignorance, not knowing their true nature. See "Tanhā - How We Attach Via Greed, Hate, and Ignorance."
- We get attached via greed and ignorance DUE TO sāmisa sukha vedanā and sāmisa upekkhā vedana $\overline{\text {. }}$. It is essential to realize that while everyone feels sāmisa vedana $\overline{\text { a }}$, not everyone attaches via sāmisa vedanā the same way.

## Samphassa-jā-Vedanā Depend on One's Gati And The Specific Ārammaṇa

10. We have already discussed how samphassa-j $\bar{a}$-vedan $\bar{a}$ arise due to one's character/habits (gati) and specific ārammaṇa. See, "Vipāka Vedanā and "Samphassa jā Vedanā" in a Sensory Event."

- An Arahant does not have any gati left (other than those without kammic consequences), and thus would not generate taṇhā and, therefore, would not generate samphassa-jā-vedanā.
- All others attach to àrammaṇa in different ways and at different levels. Whether one attaches to ārammaṇa depends on that particular ārammaṇa AND one's gati. For example, teenagers are likely to gati to attach to loud music, whereas older adults may dislike such music. In each category of food, odors, sex, etc., some people attach more than others.
- It is essential to avoid "bad ārammana." If one associates with those who drink excessively or are engaged in drug use, it is hard to avoid getting involved with such activities.
- In the same way, it is easier to cultivate good habits (gati) by associating with those who already have good gati. Then one will mostly be exposed to "good ārammaṇa."

## Summary

11. So far, we have discussed the progression of events when a sensory input comes in per "WebLink: suttacentral: Chachakka Sutta (MN 148)." For example, when an external object is the ärammaṇa, the series of events start with, "Cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññānam." At that initial stage, it is just a vipāka viññāna. See, "Contact Between Āyatana Leads to Vipāka Viññāna." Then in the subsequent posts, we have been discussing the progression, "Cakkhuñca pațicca rūpe ca uppajjati cakkhu viññānamं, tinṇam sañgati phasso, phassa paccayā vedanā." Now we can summarize those steps as follows.

- First, a ārammaṇa (in this case, a visual object) catches one's attention with a vipāka viññāna. In this case, it is a cakkhuviññāna.
- Immediately, the kāma guna comes into play, and one experiences a sāmisa sukha vedana $\bar{a}$ if it is a mind-pleasing object. That happens whether one is an average human or an Arahant.
- Then the next part of the above verse, "tiṇnam sañgati phasso, phassa paccayā vedanā" happens in mind (within a fraction of a second.) One's "san gati" come into play. If one has the gati to be attracted to such type of objects, then one would automatically attach. If it was an object that one truly dislikes, one would generate sāmisa dukkha vedanā and would still attach with dislike or anger.
- Now, another average human MAY NOT get attached either way. That is because that particular $\bar{a} r a m m a n ̣ a$ may not be his/her "type," i.e., he/she may not have an interest in it. On the other hand, an Arahant WILL NOT get attached (via like, dislike, or ignorance) to ANY ārammana.

## Next Post

12. It took us a few posts to cover that, but I think it is essential to get these basic ideas clarified. It may not take long to go through the rest of the sutta.

- Another essential point from the discussion is that sensory events are discrete. They do not come in continuously. The mind handles ONE ārammaṇa at a time. However, since the mind is very fast, it APPEARS that we are seeing, hearing, smelling, tasting, and feeling the body touches simultaneously.
- The following post discusses this critical point: "Vision Is a Series of "Snapshots" - Movie Analogy."

### 10.4 Vision Is a Series of "Snapshots" - Movie Analogy

October 13, 2019; revised November 15, 2019; April 4, 2022

## Vision - How Do We See an Object?

1. Vision or "seeing" appears to us as continuous. We see people moving around, vehicles moving, animals running around, etc. However, in reality, "seeing" happens due to a series of "snapshots" that our physical eyes take. Please bear with me as I set the stage with the following Pāli terms. It is unnecessary to know these Pāli terms in detail, but try to get the basic idea.

- A key idea behind Buddha Dhamma is that we experience only one citta (loosely translated as a thought) at a time and that citta focuses on ONE a rammana. In other words, while the mind is registering a visual event, it cannot hear, smell, taste, or feel a touch. The keyword a rammaṇa was introduced in the post, "Vipāka Vedanā and "Samphassa jā Vedanā" in a Sensory Event."
- "Seeing" does not happen continuously since the mind can process only one cakkhudvāra citta vīthi (with 17 citta) at a time.. The mind processes that cakkhudvāra citta vīthi with three more manodvāra citta vīthi. At the end of those citta vīthi, the mind has captured a 'snapshot" of the object and recognized it. Those four citta vithi define one "snapshot" of a moving object.
- Our "seeing of a moving external object" involves many "snapshots" within seconds. Our perception of a moving object results from many such "snapshots." We do not see the individual "snapshots."

## Movie Analogy - Series of Snapshots

2. We can simplify and understand the above process using an analogy. What I stated above is - in principle - what happens when we watch a movie.

- A video camera captures many static pictures (snapshots) of a scene to make a move. Then those snapshots are projected to a screen at a specific rate. If the playback speed is too slow, we can see individual pictures, but above a certain "projection rate," it looks like natural motion. Here is a video that illustrates this well:

## WebLink: youtube: Animation basics: The optical illusion of motion - TED-Ed

- A movie projector projects static pictures to the screen at a rate of about 30 frames a second, and we see the movie as a continuous progression of events. If the projection rate is low, we can see it frame by frame or as individual "snapshots." When projected at 30 frames a second, we do not perceive those static pictures. Then we perceive a continuous progression without any gaps.
- More details in the post, "Citta and Cetasika - How Viññāña (Consciousness) Arises."
- That is why the Buddha said that the mind (or viñnäna) is a magician. We perceive a streamlined world, even though the reality is that our sensory faculties detect only a series of "snapshots," It is the mind that conceals the reality and gives us a perception of a continuous progression of events.
- It is critical to understand this point. It helps get rid of sakkāya ditṭhi; see "Chachakka Sutta - Six Types of Vipāka Viññāna."

## Mind and the Brain - Two Different Entities

3. In an early post on this series, I pointed out that cakkhāyatana is cakkhu pasāda rūpa, not the physical eyes. See \#12 of "Buddhist Worldview - Introduction."

- That cakkhu pasāda rūpa (or simply cakkhu) is part of the gandhabba, our "mental body." The gandhabba has the seat of the mind (hadaya vatthu) surrounded by the five pasāda rūpa corresponding to vision, hearing, taste, smell, and touch.
- When our physical eyes capture an image of an external object, that image goes to the visual cortex in the brain. The signal is processed there and then transmitted to the cakkhu pasāda rūpa, making contact with the hadaya vatthu. That contact (phassa) leads to the arising of cakkhu viññāna at the hadaya vatthu. More details in "Brain - Interface between Mind and Body."
- By the way, that is the step, "cakkhuñca pațicca rūpe ca uppajjati cakkhuviññānám" discussed in \#7 in the post, "Contact Between Āyatana Leads to Vipāka Viññāna."

4. Therefore, the brain works like a computer. It converts the image from the eyes to a form "processable" by the hadaya vatthu (seat of the mind.) Therefore, vision involves a somewhat complex process.

- Similar processes take place for the other four physical sensory events. For example, when the physical ears capture a sound, that signal goes to the auditory cortex in the brain for processing. That signal then goes to the sota pasāda rūpa, which makes contact with hadaya vatthu to transfer. That gives rise to sota viññāna via, "sotañca paṭicca sadde ca uppajjati sotaviññānami."

## Reviewing the Whole Series Could Be Helpful

5. It may need some effort to understand this sequence of events. But it is necessary to comprehend the overall process before we get to the next post.

- It is good to print all the posts in the "Worldview of the Buddha" subsection and go over them carefully. There are about eight posts up to now.
- It is not necessary to understand the DETAILS of \#6 and \#7 below. But it is good to get the general ideas involved. I am providing this information illustrate the following. New findings in science are not only compatible with Buddha Dhamma but also help explain critical concepts in Buddha Dhamma.

## The Brain Processes Visual Signals at About 30 Frames per Second

6. A recent study has reported that the minimum time to recognize of a static picture is about 13 milliseconds (Ref. 1). That means we should be able to see such snapshots projected at 77 frames per second at the highest rate. However, that is probably "pushing it" and not comfortable for the brain to handle. That is why movies use a projection rate of about 30 frames per second, as mentioned in \#2 above.

- Interestingly, the time for neural information to reach the brain takes about 15 to 30 milliseconds (References 49, 50 in Ref. 2). Therefore, a projection rate of 30 to 50 frames is compatible with that measurement too.
- A millisecond is a thousandth of a second.

## Same Analysis Holds For Other Four Physical Senses

7. A similar set of rules are valid for hearing as well. Another recent study (Ref. 2) found that sounds could be recognized at rates up to 30 sounds per second. That corresponds to a "sound packet" of a duration of about 33 milliseconds that can be detected and recognized.

- However, people speak at a much slower rate of 150 words per minute. That is about two words per second, much less than 30 possible words per second that would be possible according to the above study. So, there is no problem with hearing what other people speak, even if someone talks faster than the average rate.
- Currently, no studies are available from science for the other three sensory events (taste, smell, and body touches). But the same process holds for those as well.

## Aside - Cognition (Sañ̃̄̄̄) Requires More Than Detection

The following points (\#8, \#9) are "asides." It is not necessary information but could help those familiar with Abhidhamma.
8. We must remember that "experiencing a sensory input" is much more complex than just receiving that sensory input. For example, the mind needs to see an object or hear a sound, recognize what it is, and generate a vedanā.

- For example, upon hearing the sound "apple," the mind needs to know what an "apple" is. Someone who does not speak English would not know what is meant by the word "apple." But those who speak English AND have had an experience eating apples would have MEMORIES of those. Therefore, the mind needs to compare the received sensory with memories to recognize it!
- The mind does that very fast with the help of the manasikāra cetasika. As you may know, manasikāra is one of the seven universal cetasika that arises with each citta. Thus, the mind can recognize a sensory input instantaneously, as soon as it receives a "data packet."
- More details in "Citta and Cetasika - How Viññāna (Consciousness) Arises."

## Aside - Process In Abhidhamma Language

9. Actual "seeing" or vision takes place at hadaya vatthu. Same for the other four types of sensory events. For example, consider a "packet of data" sent from the physical eye to the b-rain. The brain processes that information and transmits to the cakkhu pasāda. As you may remember, the five pasāda rūp $\bar{a}$ (cakkhu, sota, ghāna, jivhā, kāya) surround the hadaya vatthu. Now the cakkhu pasāda makes contact with the hadaya vatthu by hitting it. That causes the hadaya vatthu to vibrate 17 times, like a gong struck by an iron rod vibrating for a certain fixed number of times.

- The 17 vibrations of the hadaya vatthu correspond to the 17 citt $\bar{a}$ in a citta vīthi. Such a citta vīthi is a pañcadvāra citta vīthi because one of the five physical senses or pañcadvāra ("pañca" or five + "dvāra" or "door") initiates it.
- Imagine a blade clamped at one edge and hit on the un-clamped side. The blade will vibrate. It vibrates for a certain FIXED number of times. For a given material, that is fixed number.
- The same thing happens when a pasāda rūpa makes contact with the hadaya vatthu. The hadaya vatthu vibrates 17 times, with each vibration leading to the arising of a citta. That is the origin of a citta vīthi with 17 cittā. Those 17 vibrations are a form of energy called a hadaya rūpa.

10. The misconception that any $r \bar{u} p a$ has a lifetime of 17 thought moments arose because of not understanding the difference between a rūpa (the image of an external object) and a hadaya rūpa (which is just the 17 vibrations of the hadaya vatthu).

- In other words, this information packet is received and processed by the hadaya vatthu within those 17 citt $\bar{a}$. The information is complete by the fourth citta (fourth vibration of the hadaya vatthu), and then the rest of the citta in that citta vīthi deal with this information. Three more citta vīthi run by the hadaya vatthu itself completes the process. The additional citta vīthi, initiated by the mind, are manodvāra citta vīthi. Here, manodvāra means the "mind-door."
- Details of \#9 and \#10 at "Does any Object (Rūpa) Last only 17 Thought Moments?."

## The mind is Fast, and the Brain is Slow

11. Thus, we can see a vast difference in time between the two processes involved. The physical body acquiring data takes time of the order of 10 milliseconds. The mind processes that information within a billionth of a second (using one pañcadvāra citta vīthi and three manodvāra citta vīthi.)

- Even if the five senses keep sending data continuously, the mind is "just sitting there" most of the time. Let us examine this in more detail: Suppose the brain keeps sending data from the eye non-stop. Since each "packet" takes, say ten milliseconds, then in a second, there will be 100 "data packets" of vision coming
in. If the brain is going at full speed, it can send at most $500(=100 \times 5)$ "data packets" from all five physical senses in a second. Then the mind will be spending less than a millionth of a second in processing all that data. During a movie that lasts two hours, the mind will be active, probably less than a second.

12. During those "gaps," the hadaya vatthu also interacts (both ways) with the mana indriya in the brain. In particular, it gives instructions to the brain (via mana indriya) on how to control the physical body in response to sensory inputs.

- Thus, for the most part, the mind (or, more precisely, the hadaya vatthu) is sitting there idly. That "idle state" of the mind is the "bhavañga" state.
- A key point here is that the mind spends only a VERY SHORT TIME experiencing the SENSORY INPUTS. There is no "self" watching a movie. The mind gives the illusion that a "self" is watching the movie. Details are in the next post, "Chachakka Sutta - Six Types of Vipāka Viññāna."
- The above is a very brief discussion. Of course, there are more details, but one can hopefully get the basic idea. Please ask questions if something is not clear. It is critical to understand this post.

## Summary

13. The critical point embedded in the WebLink: suttacentral: Chachakka Sutta (MN 148) is that there is no "self" experiencing the external world. We discussed the initial steps in sensory events addressed by that sutta.

- The key message in the sutta is that the mind DOES NOT experience the external world CONTINUOUSLY. Instead, the mind is active only for very brief periods when receiving inputs from the five pasäda rüpa. As mentioned above, the brain is "on" much longer than the mind. Once the brain processes information packets, the mind absorbs that information within a "blink of an eye."
- On the other hand, the brain has a heavy workload while watching a movie. It has to process audio and video inputs at a rapid rate for the movie's duration. One could get a headache if one watches two movies at a stretch. But even during that time, the mind is mainly in the bhavanga state. There is no "self" watching the movie. It is just a series of events taking place. The mind is "putting all those "events" together and giving the appearance of a continuous progression of events. Thus one has the perception that "I am watching a movie."
- Details are in the next post, "Chachakka Sutta - Six Types of Vipāka Viññāna."
- Later on, we will discuss why it is also incorrect to say that there is "no-self."

## Do I Have "A Mind" That Is Fixed and "Mine"?

August 30, 2018; revised October 3, 2022
You may first read the post, "Amazingly Fast Time Evolution of a Thought (Citta)" to have the proper background.

1. Let us systematically see what happens when we "see" a tree for example. Please don't just read through, but stop and think about each point. This post condenses much information (true for most posts, but especially this one).

- Light reflected off the tree falls on our eyes and forms an image of that tree on the retina in the back of the eye. As you can imagine, that image is tiny. But we "see" its numerous leaves, individual flowers, and fruits in great detail. How is that possible?
- Anyway, that image is transmitted to the brain through a chemical signal. How does the brain "see" the tree?
- Jeff Hawkins, who has thought a lot about this issue, is actively engaged in artificial intelligence. His book, "On Intelligence" discusses current scientific knowledge on vision and other sensory inputs.

2. Starting on p. 55 of his book, Hawkins discusses how the image that falls on the back of the eye is transmitted to the brain: "Visual information from the outside world is sent to your brain via a million fibers in your optic nerve...",

- "You can visualize these inputs as a bundle of electrical wires or a bundle of optical fibers..." and "The inputs to the brain are like those fibers, but they are called axons, and they carry neural signals called 'action potentials' or 'spikes,' which are partly chemical and partly electrical...."
- As discussed, not only visual signals but all sense inputs (sounds, taste, smell, and body touch) to the brain are the same type. You hear a sound, see the light, and feel pressure, but inside your brain, there isn't any fundamental difference between these different neural signals. An action potential is an action potential.
- Scientists have not figured out how the brain distinguishes those different types of signals. Moreover, they have no idea how the mind "sees the light" or an image of that tree.

3. To quote more from that book: "There is no light inside your head. It is dark in there. There is no sound entering your brain either; it is quiet inside. The brain is the only part of your body that has no senses itself. A surgeon could stick a finger into your brain and you would not feel it. All the information that enters your mind comes in as spatial and temporal patterns on the axons."

- So, it is a mystery how the mind senses those chemical and electrical signals coming to the brain as vision, sound, taste, smell, and body touch.
- Scientists are trying to solve this puzzle by looking for answers in the brain. They have come to the end of the line here.
- Now let us see how the Buddha described these processes.

4. Actual "seeing" (and hearing, smelling, etc) goes on at the hadaya vatthu located in the gandhabbā or the mental body. The gandhabbā is like a fine mesh overlapping the physical body, with the hadaya vatthu located close to the physical heart. That is what gives life to the physical body.

- At the death of the physical body, that fine gandhabbā is pulled off the physical body like a ghost. It is so fine that we cannot see it. But we all know that a body can be alive one second and become inert (like a piece of wood) at death.
- Of course, when the gandhabbā comes out temporarily (as in the case of those who can do astral travel or in the case of out-of-body experiences), it is still "attached" to the physical body and keeps
the physical body alive. In "astral travel" terminology, the mental body is attached to the physical body via an invisible "silver cord."
- Such cases are discussed in "Manomaya Kāya and Out-of-Body Experience (OBE)."

5. Another key point is that in the fine body of the gandhabbā, there are five "pasāda rūpa" located around the hadaya vatthu: cakkhu, sota, ghāna, jivhā, and kāya, that correspond to seeing, hearing, smelling, tasting, and touch. Here is the "missing part" of the puzzle that scientists will never be able to solve just by dealing with the brain:

- The brain is like a very sophisticated computer that analyzes those chemical and electrical signals discussed above in \#2 and \#3.
- Those chemical and electrical signals (which come in packets of about 10 millisecond duration per scientist) are converted to electromagnetic (EM) waves and are transmitted through the air to the pasāda rūpa located around the hadaya vatthu.
- This is what the Buddha taught 2000 years ago, and until scientists make this connection, they will not be able to proceed too far from where they are now.

6. The Buddha did not explain it in terms of EM waves. These waves are called "kiraṇa" in Pāli or Sinhala.

- This is explained in the post "Citta and Cetasika - How Viññāna (Consciousness) Arises" and other posts in the following subsection: "Citta and Cetasika."
- It takes a real effort to understand the details. But it will be worthwhile for those who are serious about learning Abhidhamma. Otherwise, just try to get the basic idea.

7. As an example, let us take the case of seeing a tree. A continuous series of "data packets" (chemical and electrical signals per \#3, \#4 above) that come to the brain from the eyes are processed by the brain and converted to EM waves (kiraṇa).

- Those waves then travel to the cakkhu pasāda situated close to the hadaya vatthu. These waves from the brain to the heart area of the body travel in the air much faster than those chemica/electrical signals traveling from the eyes to the brain via axons.

8. When an EM wave (kiraṇa) packet arrives at the cakkhu pasāda, it hits the hadaya vatthu and "transfers" that visual information about the tree to the mind. The mind is born momentarily during this transition for the duration of that signal.

- This is what is meant by "cakkhuñca paticca rūpeca uppajjati cakkhu viññānam்." Here cakkhu is the cakkhu pasāda rūpa (not the physical eye), and rūpa (in "rūpeca") is the signal from the brain that carries the visual signal about the tree (not the actual tree!). [uppajjati : [u + pad + ya] to be born; arises.]
- See "Chachakka Sutta - Six Types of Vipāka Viññāna."

9. This is CRITICALLY important to realize. What is meant by a "rūpa" is NOT the same as what our visual object is. We DO NOT see a man, a woman, or a tree. What comes to the mind is a "rūpa signal" that is generated by the brain. That signal has all the INFORMATION about that visual object.

- The reception of the visual signal (rūpa) by the cakkhu pasāda (cakkhu) happens at the very moment that the cakkhu pasāda transfers that signal to the hadaya vatthu by "hitting it." And at that very moment, cakkhu viññāna arises: "cakkhuñca paticca rūpe ca uppajjati cakkhuviññānaim."

10. These are critical points to understand, even if all the details are not understood by modern science yet. Visual consciousness arises briefly when that information about the visual object is transferred to the mind.

- However, within that split second, not only the object (the tree in this case) is recognized, but also vedanā, sañña $\bar{a}$ (recognition), and other mental factors also arise.
- For example, if we have seen that tree in the past, the mansikāra cetasika can feed that information too, so we will know the name of the tree instantly; see "Amazingly Fast Time Evolution of a Thought (Citta)."

11. In another example, let us consider what happens when we tap a glass with a spoon. Of course, we will hear the tapping sound.

- Where did that sound come from" Was it in the glass? No. Was the sound in the spoon? No.
- The sound was emitted as a result of the spoon hitting the glass. If the spoon did not hit a glass, there would not be a tapping sound.
- In the same way, unless a " $r \bar{u} p a$ " or an image taken in by the eyes came to cakkhu pasāda and made it hit the hadaya vatthu, there would not be a "seeing event" or a cakkhu viññāna.

12. So, there is no "entity" called the mind. The mind arises when we receive sense inputs via the five physical senses, as described above.

- What we loosely call the "mind" is the viññānakkhandha that arises in a billionth of a second after going through a fast process of citta, mano, mānasaì, ..: See "Amazingly Fast Time Evolution of a Thought (Citta)."
- We can not only hear the tapping sound, but we can also see the glass and the spoon simultaneously. But those two events do not happen "at exactly the same time." They just appear to be simultaneous.
- What comes to the mind is a series of sense inputs (via all five physical senses) in rapid succession. We just perceive it all to happen at the same time.

13. How this is possible is explained in the post, "Citta and Cetasika - How Viñ̃̃āna (Consciousness) Arises" and other posts in the following sub section: "Citta and Cetasika."

- As explained there, the process is similar to how a motion picture works. When making a movie, the producers take many many static pictures (with a video camera) and then play them back at a fast enough speed. If the playback speed is too slow, we can see individual pictures, but above a certain "projection rate," it looks like real motion. Here is a video that illustrates this well:
WebLink: youtube: Animation basics: The optical illusion of motion - TED-Ed

14. When we see the outside world, what happens is very similar to the above. At the end of the video it is stated that the "movie" we see is an illusion. As the Buddha explained, that holds for real life as well. In real life, when we see someone coming toward us, we see a series of "static pictures" or citta projected at a very fast rate in our minds, giving us the illusion of a "movie like experience."

- The mind is very fast. The Buddha said that nothing in this world is faster than the mind. That is why we feel that all types of sense inputs come to "one's mind" simultaneously. In reality, they are discrete snapshots, just like movie frames!
- But just like we see a continuous movie (that is really a large number of individual picture frames), we feel like we have a continuous mind.

15. Now to the second issue on the mind. Why do we experience the outside world our way, and have our feelings and perceptions about a given sense input (love or anger when seeing the same person, for example)? That is why we feel like "I have my own mind."

- The key is to realize that our response to the external sense inputs is unique because we have our "own way" of perceiving and evaluating those sensory inputs based on the set of gati we have.

16. As we discussed in the previous post, "Amazingly Fast Time Evolution of a Thought (Citta)," our feelings, as well as our initial responses, reflect our personality or our gati.

- There we also discussed why the types of sensory input also play an important role. So, our INITIAL response to an external sense input depends on BOTH one's gati AND the types of sensory input.
- That was an important post, so it may be beneficial to review it again. In this series of posts, I will try to highlight some key features of Buddha Dhamma that will truly help get rid of sakkāya ditṭhi. That is the key to the sotāpanna stage.

17. In other words, our "state of mind" depends on our gati and the sensory inputs we receive. Furthermore, we don't have "a fixed mind"; it can change rapidly.

- If you think back, I am sure you can remember times when you felt like your mind was filled with greed; other times with love, yet another time with anger, etc.
- As one progresses on the Path, these extreme swings of "one's mind" will become less, which is the key to nirāmisa sukha, eventually leading to Nibbāna.
- Each of us does not have a fixed mind. That means we don't generate "our own" saññā, vedana $\bar{a}$, sañkhāra, viññāna. In other words, we do not have our saññākkhandha, vedanākkhandha, sañkhārakkhandha, and viññānakkhandha.
- Moreover, it is not fruitful to take any of them as "mine." That perception is part of Sakkāya dițthi.

18. Sakkāya dittthi can be stated as the following wrong assumptions. "I am my body", "I am my vedanā," "I am my sañ̃n̄a," "I am my sañkhāra," and "I am my viññ̄ạna." The last four can be lumped together as "I am my mind." But a better way to remove Sakkāya ditṭhi is to realize that: "All those entities are not worthwhile to be taken as mine."

- We tend to think automatically that "I have my own body," "I have my own mind," and "it is fruitful to be taken them as mine."
- Let us first analyze the mind and see whether that statement is true. In the next post, we will address "I have my own body" and "it is fruitful to be taken as mine."
- The Buddha analyzed how the mind arises step-by-step, by breaking down the process. That is why he called himself a "Vibhajjavādi"; see, "WebLink: suttacentral: Subha Sutta (MN 99)": "Vibhajjavādo kho ahamettha, mānava; nāhamettha ekamisavādo.." or "Young man, I am a Vibhajjavādi (one who analyzes from many aspects by dividing a given process to parts), I do not hold a fixed view based on just one aspect."

In the next post, we will discuss why it is not fruitful to take one's body as "one's own." But it is important to know that the perception of "me" goes away only at the Arahant stage; see, "Sakkāya Ditthi is Personality (Me) View?."

### 10.6 Chachakka Sutta - Six Types of Vipāka Viññāṇa

October 19, 2019; revised \#12 on September 28, 2020; April 3, 2021; Title revised December 30, 2021; August 29, 2022

## [Old Title : Chachakka Sutta - No "Self" in Initial Sensory Experience]

## Cha chakka - Six Sets of Sixes

1. We have finished discussing the six steps in the Chachakka Sutta. See "Worldview of the Buddha." Let us briefly summarize the "six sets of sixes" (Cha chakka.)

- The sutta first lists the "six sets" or "six collections." "Cha ajjhattikāni āyatanāni veditabbāni, cha bāhirāni āyatanāni veditabbāni, cha viññānakāyā veditabbā, cha phassakāyā veditabbā, cha vedanākāyā veditabbā, cha taṇhāk $\bar{a} y \bar{a}$ veditabbā."

That means: "One needs to understand the following "six sets of sixes": Six internal āyatana, six external $\bar{a} y a t a n a$, six classes of (vipāka) viñ̃̄̄ $\bar{a} n a$, six classes of phassa, six classes of vedanā, six classes of tanh $\bar{a}$. Let us briefly state what they are. I have explained them in detail in the preceding posts.

- Six internal āyatana are: "Cakkhāyatanaín, sotāyatanaín, ghānāyatanaì, jivhāyatanamं, kāyāyatanaí, manāyatanam."‘
- Six external āyatana are: "Rūpāyatanaì, saddāyatanaín, gandhāyatanaim, rasāyatanamं, phoṭthabbāyatanaì, dhammāyatanam்."
- Six classes of (vipāka) viññāna are: "cakkhuviññāna, sotaviññạna, ghānaviññāna, jïvhāviññāṇa, kāyaviññāna, manoviññāna."
- The six classes of phassa: "Cakkhuñca pațicca rūpe ca uppajjati cakkhuviññānain, tiṇnamं sañgati phasso" and similarly for the other five (i.e., they are six types of "san phassa"),
- Six classes of vedanā: "phassa paccayā vedana"" arising from each of the preceding six types of "san phassa."
- Six classes of taṇhā: "vedanā paccayā tanhhā" due to the preceding six types of vedanā.
- It could be a good idea to print out the Pāli version of the sutta so that you can track which section of the sutta a verse under discussion is.

## Chachakka Sutta Describes Initial Sensory Experiences Based on a New Ārammaṇa

2. About the first fourth of the "WebLink: suttacentral: Chachakka Sutta (MN 148)" discusses the following steps: "Cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññānà், tiṇnam̀ sañgati phasso, phassa paccayā vedanā, vedanā paccayā taṇhā." (repeated for all six sense faculties.)

The sutta describes the automatic and instantaneous response to a new ärammana. In several posts, we discussed in detail all those steps. Very briefly, those steps are (just focusing on the cakkhu viññāna):

- With the coming together (contact) between cakkhu (or cakkhu pasāda rūpa) and a rūpa (which is a "snapshot" of that external rūpa), cakkhu viñ̃̃āṇa arises. Cakkhu is NOT the physical eyes; "seeing" happens only when a rūpa makes contact with cakkhu pasāda. Please review previous posts as needed.
- If that $r \bar{u} p a$ has a kāma guña, one may get interested in it (if one has the corresponding "san gati"). The next step takes place ONLY IF one has such matching gati for that $r \bar{u} p a$ or that $\bar{a} r a m m a n ̃ a$.
- If one has matching "san gati"" then a corresponding "samphassa-j $\bar{a}-\mathrm{vedan} \vec{a} "$ arises AUTOMATICALLY. See, "Vipāka Vedanā and "Samphassa jā Vedanā" in a Sensory Event."
- The next step, "vedanā paccay $\bar{a}$ tanh $\bar{a}$," happens if that "samphassa-j $\bar{a}$-vedan $\bar{a} "$ is strong enough to take further action. We discussed that last step in, "Kāma Guna - Origin of Attachment (Tanhā)."

## A Ārammana triggers sensory Experiences

3. Therefore, the sutta describes the events that occur when a new ārammana comes to mind via one of the six internal sense bases (internal āyatana).

- It is essential to see that ALL these activities happen AUTOMATICALLY and INSTANTANEOUSLY. They do not require CONSCIOUS thinking. There is no INTENTION involved.
- That is a critical point to understand. You might say, "I can use any sensory faculties (internal äyatana) anytime I want to." That is true. But think about any event, and you can ALWAYS trace it back to a arammaṇa that comes to mind on its own.
- For example, you may see and hear many things when walking down a crowded street. But one sight or sound could stop you and start doing something else. You may see an eye-catching item in a store window, stop to look at it, and then go inside to buy it. That was triggered via, "cakkhuñca paticca rūpe ca uppajjati cakkhuviññānam.". The sutta describes what happens ONLY at the MOMENT that you saw the item. Once you get "attached to it," you start generating vacī sañkhāra (consciously thinking about the item) and kāya sañkhāra (go inside the store). That is the "kamma generation" stage. We will discuss that in later posts.
- Even in the middle of a discussion, one may get a new idea, and then everyone may start talking about that new idea he/she presented. The conversation changes to a new topic with the new ārammana. That happened with a dhamm $\bar{a}$ (an idea) that came to the mind via "manañca paṭicca dhamme ca uppajjati manoviññānam்."

## Chachakka Sutta Describes Only Kamma Vipāka

4. All the steps in \#2 above happen within a fraction of a second. There is no conscious thinking involved. They are all kamma vipāka.

- Of course, that process describes only those events immediately following the INITIAL sensory contact. One can deliberately experience that sensory contact again and again after the initial experience. For example, one may keep looking at an interesting sight or keep listening to a pleasing sound. That is when one accumulates a new kamma (if done with greed, anger, or ignorance). We will discuss those steps in future posts involving Paticca Samuppāda.
- Results of past kamma automatically lead to kamma vipāka. Based on them, we create a new kamma. That is how the rebirth process continues.

## Sensory Inputs - One "Packet" At a Time

5. As I discussed in detail in the previous post, all our sensory inputs are first processed by the brain in "packets." The brain can process those six types of data in parallel (at the same time). Each "packet" is about one-hundredth of a second ( 10 milliseconds) in duration. Those processed signals arrive at the seat of the mind (hadaya vatthu) located on the mental body (manomaya kāya or gandhabba). The mind, in turn, analyzes only ONE packet of information at a time. See the previous post, "Vision Is a Series of "Snapshots" - Movie Analogy."

- For example, while the mind is processing a "sight" or rūpa rūpa, it CAN NOT process a "sound" or a "sadda rūpa." After analyzing that "snapshot" of sight the mind switches to another sensory input. Of course, our eyes and ears do not "die" moment-to-moment. It is just that "cakkhu," for example, is ALIVE (or ACTIVE) only while the mind is processing input from the physical eyes.
- Therefore, ONLY ONE internal āyatana is "ALIVE" at a given moment. Our "cakkhu" comes alive while the mind receives a "snapshot" of an external rūpa. The "sota" is alive (or active) only during a brief moment of receiving a "bit of sound" like just a word. They come to the mind in "packets," not as a continuous stream. But it SEEMS that we experience them all simultaneously since the mind processes all inputs very quickly.
- The following example may help to get the basic idea. We have seen those signposts where a message runs one letter at a time, but at a fast rate. Only one letter is on display at a given moment. But within a fraction of a second, that letter turns off, the next letter turns on, and so on. Since it happens fast, we can read the message.
- The mind is swift. It can — not only put together such a stream of incoming signals — but also separate the six sensory inputs. In the previous post (see \#8 there), I briefly mentioned that the mind does this with the help of the manasikāra cetasika.
- More details in "Citta and Cetasika - How Viññāna (Consciousness) Arises."

## If Cakkhu Is "Attā," It Must Be Alive (or Operational) All The Time

Now let us discuss the next verse in the sutta. It helps understand what is meant by the critical Pāli words attā and sakkāya diṭthi.
6. We have the perception that there is a "self" that sees, hears, tastes, smells, touches, and recalls dhamm $\bar{a}$ all simultaneously.

- However, we do not experience all six sensory inputs simultaneously. Even with just one sensory input, the mind receives only a brief"snapshot" of it at a time. See, "Vision Is a Series of "Snapshots" - Movie Analogy."
- In other words, our six internal āyatana of cakkhu, sota, ghāna, jivhā, kāya, and mano arise ONLY if a corresponding ārammaṇa appears. As I have emphasized, our physical eyes, ears, nose, tongue, and body are not our internal āyatana. See, "Buddhist Worldview - Introduction."
- Therefore, "one's self' is not in ANY of those 36 entities. All those come to existence momentarily and pass away. That happens from time-to-time only when a a arammana is registered.
- That is a critical conclusion that is related to "anattã." It will also become clear that anatt $\bar{a}$ differs from anatta (without the long " $\vec{a}$ "). Let us discuss anatta $\bar{a}$ in detail now.

## A "Self" Is Not Involved in The Preceding Processes

7. After going through the steps in \#2 above, the next part of the sutta starts with the verse, "Cakkhu attā'ti yo vadeyya taì na upapajjati. Cakkhussa uppādopi vayopi paññāyati. Yassa kho pana uppādopi vayopi paññāyati, 'attā me uppajjati ca veti cā'ti iccassa evamāgatam hoti. Tasmā tarin na upapajjati: 'cakkhu attā'ti yo vadeyya. Iti cakkhu anattā."

Loosely translated: "If anyone says, 'The cakkhu is self,' (or "seeing" is mine or "it is I who sees") that is not tenable. An arising and disappearing of cakkhu (not the physical eye) is evident. If cakkhu is 'self,' that would imply: 'my self arises and disappears' OR 'I come into being momentarily and disappear.' That is why it cannot be argued that 'The eye is self.' Thus cakkhu is 'not-self' or 'anattā." ("na att $\vec{a}$ " for "not $a t t \bar{a} "$ r rymes as "anatt $\bar{a}$, " just as "na a $a \bar{a} m i "$ " rhymes as "Anāgāmi.")

- That verse is then repeated for the other five entities related to $c a k k h u$, i.e., rūpa, cakkhu viññāna, cakkhu samphassa, cakkhu samphassa-jā-vedanā, taṇhā (due to cakkhu samphassa-jā-vedanā.) The last verse in that series is, "Iti cakkhu anattā, rūpa anattā, cakkhuviññannaím anattā, cakkhusamphasso anatt $\bar{a}$, vedana $a n a t t \bar{a}$, tanhhā anattā."
- Then that is repeated for the six entities associated with sota, ghāna, jivhā, k $\bar{a} y a$, and mano ( $6 \times 6$ ). The last verse is, "Iti mano anattā, dhammā anattā, manoviñ̃n̄̄n̄aì anattā, manosamphasso anatt $\bar{a}$, vedan $\bar{a}$ anatt $\bar{a}$, taṇhā anatt $\bar{a}$." At this point, we are about halfway through the text in the sutta.
- Therefore, "self" can be found in any of those.
- Now let us discuss two other suttā briefly to make those points clear.

## Bāhiya Sutta - "Diṭthe Diṭthamattaim Bhavissati"

8. In the "WebLink: suttacentral: Bāhiya Sutta (Udāna 1.10)," the Buddha tells Bāhiya, "Tasmātiha te, bāhiya, evaì sikkhitabbaì: 'dițthe dițthamattaì bhavissati, sute sutamattaì bhavissati, mute mutamattaì bhavissati, viññāte viññ̄atamattaì bhavissatī'ti.

Translated: "Bāhiya, you should train yourself the following way. At any moment, what you see (diț̣he) is just a snapshot (ditṭhamattaim is literally, "trace of a sight.") What you hear (sute) is a brief sound (sutamattain.) What you experience with taste, smell, and touch (mute) is a trace of that (mutamattain.) Your viñ̃̄̄ạna (viññāte) is a trace of viñnāṇa (viññātamattaì.)

Then the Buddha further explains, "Yato kho te, bāhiya, ditthe ditṭhamattain bhavissati, sute sutamattaì bhavissati, mute mutamattaì bhavissati, viññāte viññātamattaì bhavissati, tato tvain, bāhiya, na tena; yato tvaim, bāhiya, na tena tato tvaì, bāhiya, na tattha; yato tvaim, bāhiya, na tattha, tato tvamं, bāhiya, nevidha na hurain na ubhayamantarena. Esevanto dukkhassā" $t i$.

Translated: "Since what you see (dittthe) is just a snapshot (and similarly for others), Bāhiya, there is no "you" (involved) the re; because of that, Bāhiya, you should not get attached (na tattha); if you do that, Bāhiya, "you" are not in this existence (nevidha) or another existence (na hurain) or in between those two (na ubhayam antarena.") That (understanding) is the end of suffering (Esevanto dukkhassā" $t i$.

My comments:

- That means it is incorrect to say there is a "self" experiencing those traces of sensory events. Those are just results (vipāka) of past kamma, i.e., causes bring corresponding results. We will explain this further with the Mālukyaputta Sutta below.
- However, the above description may give the impression that everything is deterministic. That is not so, and that will become clear when we address what happens following the initial "vipāka stage."
- Many people incorrectly translate "mattam" to English as "only." For example, most current translators translate "ditt the dittthamattam" as "seeing is only seeing."
- Ditṭhamatta means "a snapshot" (literally a "trace of seeing."). For example, appamatta means "insignificant." "appa" means "little" and "matta" means "a trace." Matta is "mātra" in Sanskrit and "O sso in Sinhala. As we discussed in the previous post, the mind (or the viññāna) gives us the illusion of a continuous sensory experience implying an "experiencer." That is why the Buddha said that viññanna is a magician. See \#2 of, "Vision Is a Series of "Snapshots" - Movie Analogy."

## Mälukyaputta Sutta - Same Verse In More Details

9. Those above verses in \#8 are also in the "WebLink: suttacentral: Mälukyaputta Sutta (SN 35.95)," where the Buddha tells bhikkhu Mālukyaputta, "Ettha ca te, mālukyaputta, diṭthasutamutaviññātabbesu dhammesu ditṭhe diṭthamattain bhavissati, sute sutamattaiं bhavissati, mute mutamattam bhavissati, viññ̄te viñnātamattam bhavissati. Yato kho te, mālukyaputta, diṭthasutamutaviñnātabbesu dhammesu ditṭhe diṭthamattaì bhavissati, sute sutamattaì bhavissati, mute mutamattaì bhavissati, viñ̃n̄̄̄e viñ̃n̄̄̄tamattaì bhavissati; tato tvaì, mālukyaputta, na tena. Yato tvaín, mālukyaputta, na tena; tato tvaí, mālukyaputta, na tattha. Yato tvaí, mālukyaputta,
na tattha; tato tvaì, mālukyaputta, nevidha, na huraí, na ubhayamantarena. Esevanto dukkhass $\vec{a}$ "ti.

- That is very similar to Bāhiya Sutta above. However, now bhikkhu Mālukyaputta recounts what he understood. That is very informative.

## Mālukyaputta Sutta - What Happens If One Gets Attached

10. Bhikkhu Mālukyaputta then says that he understood what the Buddha meant by the above verse. He explains his understanding:
'Rūpaì disvā sati muṭthā,
Piyam nimittam manasi karoto;
Sārattacitto vedeti,
Tañca ajjhosa tiṭthati.
Tassa vaḍ̣hanti vedanā, anek $\bar{a} r u \bar{p} a s a m b h a v a \bar{a}$; Abhijjhā ca vihesā ca, cittamassūpahaññati;
Evaì ācinato dukkhain, $\bar{a} r a ̄ n i b b a ̄ n a ~ v u c c a t i . ' ~$

## Translation:

"When one sees a form (rūpa) without mindfulness (i.e., without knowing that it is just a trace of "seeing"), one gets attached to that (nimitta or ārammana),
One experiences it with an infatuated mind (with greed)
And remains bound to it.
"Many feelings flourish within,
Originating from the mind thinking about many related $r \bar{u} p a$ (anek $\bar{a} r \bar{u} p a s a m b h a v \bar{a}$ );
Greed and anger as well
By which one's mind becomes disturbed;
For one who accumulates suffering thus
Nibbāna is far away.

## Mālukyaputta Sutta - What Happens If One Does Not Get Attached

11. Bhikkhu Mālukyaputta then says the following about how one needs to train oneself to attain Nibbāna:
'Na so rajjati rūpesu, rūpaì disvā patissato; Virattacitto vedeti, tañca nājjhosa titṭhati.

Yathāssa passato rūpaì, sevato cāpi vedanā̀̈;
Khīyati nopacīyati,
evaì so caratī sato; Evaí apacinato dukkhaí, santike nibbāna vuccati.'

## Translation:

"When one sees a form with mindfulness (with proper understanding)
One is not inflamed by lust for forms;
One experiences it with a dispassionate mind

And does not hold on to it tightly.
"For one acting mindfully in such a way
Without attaching to the form,
Even while one experiencing those feelings;
Suffering is exhausted, not built up
For one not piling up suffering thus,
Nibbāna is near.

## Next Post

12. From what bhikkhu Mālukyaputta stated above, we can see that it is not correct to say that it is "noself," either. After the "vipāka stage" that comes with a new ārammaṇa is over, it is possible to "take control' of the sensory experience. That is possible ONLY IF one comprehends that anattā nature is involved in the vipāka stage. Without that understanding, one would have sakkāya diṭthi as the sutta points out next.

- Aside from those who are anxious to see why it is not correct to say that it is "no-self," either: At the end of the vipāka stage (at the step, "vedanā paccay $\bar{a} \tanh \bar{a}$ "), a new phase of the sensory experience starts. That is the "kamma accumulation" stage. That new phase could last a long time if the mind is firmly attached to that ārammana. One may think about more ways of enjoying that ārammana, speak about it, and do things to pursue that ārammana. All those are sankhhāra, and they lead to kamma viññāna via, "sañkhāra paccayā viññāna."
- However, Chachakka sutta starts at the vipāka stage (with a sensory experience) and shows how one starts accumulating kamma ONLY IF one has sañgati (if one has the corresponding "san gati"). See \#2 above. That decision to "get attached" is made at the votthapana stage of a citta vithi. See, \#15 of "Avyākata Paticca Samuppāda for Vipāka Viñ̃̃āna."
- That is what bhikkhu Mālukyaputta explained in \#10 and \#11 above. We will discuss that in detail after finishing the discussion on the Chachakka Sutta.
- Details of that "kamma accumulation" process will depend on whether one would still have sakkāya dittthi. That means one does not realize that there is no "self" or "att $\vec{a}$ " involved in that initial sensory experience due to kamma vipāka.
- That is the next verse in the Chachakka Sutta, which we will discuss in the next post.

### 10.7 Sakkāya Ditṭhi in Terms of Attā or "Self" or "Ātma"

October 26, 2019; revised November 1, 2019; October 9, 2022

## Summary of Chachakka Sutta Up to This Point

1. The Chachakka Sutta (MN 148) describes in detail what happens when a new ārammaṇa (thought object) comes to the mind. The mind may "attach" (taṇhā) to that ārammana via greed, anger, or ignorance. Let us briefly summarize those steps. All relevant posts are at, "Origin of Life."

- First, depending on the specific internal ayyatana involved, one of six vipāka viññanna arises. Those are cakkhu, sota, ghāna, jivhā, kāya, or mano viññāna. Such a viññāna does not create kammic energy. It is just "seeing," "hearing," "smelling," "tasting," "touching," or "recalling a memory or an idea."
- Then the mind "makes contact" with "san gati." If one has gati to attach to that ārammaṇa via greed, anger, or ignorance, then the mind GENERATES corresponding somanassa, domanassa, or upekkha $v e d a n \bar{a}$. They are samphassa-j $\bar{a}-v e d a n \bar{a}$ or mind-made vedan $\bar{a}$.
- The mind "attaches" to that $\bar{a} r a m m a n a ~ i f ~ s u c h ~ a ~ " m i n d-m a d e " ~ v e d a n a ̄ ~ a r i s e s . ~ O n e ~ c a n ~ a t t a c h ~(t a n ̣ h ~ \bar{a}) ~$ via greed, hate, or ignorance.
- The keyword ārammaṇa was introduced in the post, "Vipāka Vedanā and "Samphassa jā Vedanā" in a Sensory Event."

## The Unique Situation For an Arahant

2. Only the first step happens in an Arahant. There is no attachment to any ārammana. Only the experience of kāma guna (such as the sweetness of sugar or the bitterness of lemon) is there. See, "Kāma Guna Origin of Attachment (Tanhhā)."

- However, an Arahant would also feel $k \bar{a} y i k a$ (bodily) vedanā due to injuries, sicknesses, etc. Those are $d u k k h a$, sukha, or adukkhamasukha vedanā. Note that an Arahant does not experience somanassa/domanassa vedana $($ Samphassa-j $\bar{a}$-vedan $\bar{a})$ ) based on those k $\bar{a} y i k a$ (bodily) vedana $\overline{\text {. }}$
- Anyone other than an Arahant MIGHT attach to a particular ārammana. Whether or not that attachment happens depends on the "san gati." It is not that everyone attaches to every ārammana.

## Deeper Aspects of the Chachakka Sutta

3. We also discussed the "deeper aspects" involved in those steps.

- Only one of the six types of viñ̃āạa arises in mind at any moment due to a specific ārammaṇa. When we see, do not hear, smell, taste, touch, or think AT THAT BRIEF MOMENT. That is because only one citta vith focused on one sensory input can be present at any moment. Put another way, only one pasāda rūpa can contact the hadaya vatthu (seat of the mind) at a given time. The mind analyzes that sensory contact with four citta vīthi JUST FOCUSED ON that particular sensory input.
- For example, when the mind analyzes a "packet of sound," it focuses on that sound. The mind DOES NOT and CANNOT see, taste, smell, etc. during that brief time. Thus sensory inputs are analyzed in "packets." Each "packet" is only one of six possible types (sight, sound, taste, smell, touch, or recall of dhammā.)
- We analyzed that in terms of recent findings from modern science. The mind takes "snapshots" of each sensory input separated by about a hundredth of a second (10 milliseconds.) Since that happens very fast, we "feel like" we are "seeing continuously." That is an illusion created by the mind, just like we perceive a set of snapshots as a continuous movie. See, "Vision Is a Series of "Snapshots" - Movie Analogy."
- Not only that, but we feel that we are seeing, hearing, tasting, smelling, touching, and thinking simultaneously. But the reality is that the mind receives only one "snapshot" at a time. The mind has the astounding capability to combine "data packets" from the "six doors" without mixing them up!

## What is Ghāna Sañ $\tilde{n} \bar{a}$ ?

4. The fast mind gives the illusion that there is a "person" or a "self" or an "atta" experiencing those sensory events. That incorrect perception is "ghāna sañ̃̄ $\bar{a} "$ " or a "perception of solidity."

- I had not used the term "ghāna sañ̃̃"̄" previously. It is a word that describes the illusion that the mind creates by taking a series of "snapshots" and linking them together to provide a "continuous sensory experience."
- As we discussed, that happens when we watch a movie too. The illusion of continuous motion results in the projection of a series of "static pictures." See, "Vision Is a Series of "Snapshots" - Movie Analogy."

5. Any sensory event is just a brief "snapshot." It lasts a brief moment and goes to the past. That is the critical point to understand. Bāhiya understood that point instantly and attained Arahanthood. But he had cultivated the path almost to the end and needed a "little push" to get there. We discussed that in the previous post, "Chachakka Sutta - Six Types of Vipāka Viññāna."

- The mind has the astounding capability to recall preceding "snapshots," and to put it all together to present a "continuous sensory experience." That is why the Buddha called viññāna a magician.

6. We also have a "ghāna sañ̃ $\bar{a} "$ " about our physical body. We perceive our bodies as solid, but as I have explained in a previous post, our bodies are "mostly empty." That is because those atoms and molecules which make up our bodies are mostly empty. see, \#7-\#10 of the post, "Mystical Phenomena in Buddhism? ."

- I keep summarizing the discussion since there is a lot of material embedded in those verses. Now, let us discuss the next verse in the sutta.

## Next Verse in the Chachakka Sutta - Sakkāya Samudaya

We have discussed up to the verse which ends with, "Iti mano anatt $\bar{a}$, dhamm $\bar{a}$ anattā, manoviññannam anattā, manosamphasso anattā, vedana anattā, tanhh $\bar{a}$ anatt $\bar{a}$." Now we are getting to the critical conclusion reached from those earlier verses.
7. The next verse in the sutta starts with, "Ayaim kho pana, bhikkhave, sakkāyasamudayagāmin̄̄ pațipadā-cakkhum 'etain mama, esohamasmi, eso me attā'ti samanupassati, rūpe 'etaì mama, esohamasmi, eso me attà'ti samanupassati; ..."

- Sakkāya here refers to sakkāya diṭthi. Samudaya ("san" + "udaya") means "arising (due to) san." Gāmini means "path." Patipada means an "action plan" or simply one's behavior. Thus, sakkāyasamudayagāmin̄ patipadā means, "the behavior that leads to the arising of sakkāya dittehi."
- Then it says, sakkāya ditṭhi arises because one believes that "cakkhu is mine, cakkhu is what I am, cakkhu is my "self."
- The sutta then repeats that for all other five entities associated with "seeing." They are rūpa, cakkhu viññāna, cakkhu samphassa, cakkhu samphassa-j̄ā-vedanā, and tanhhā (that results from cakkhu samphassa-j $\bar{a}$-vedanā.)
- Then it is repeated for the other five internal āyatana: sota, ghāna, jivhā, kāya, mano.

## Re-cap on the Initial Sensory Experience Due to Kamma Vipāka

8. All our discussions on the first half of the sutta led to the CRITICAL conclusion in the above verse. In simple terms, "there is no EXPERIENCER" experiencing those initial sensory inputs. As we remember, those INITIAL sensory inputs come in as kamma vipāka.

- Let me emphasize this point. Any sensory experience starts without direct initiation by the "experiencer." For example, one FIRST sees an object via "cakkhuñca paticca rūpe ca uppajjati cakkhuviññannaì." But that does not happen by chance. It is ALWAYS a kamma vipāka.
- A kamma vipāka experienced through the physical body (kāya) can be comforting (sukha), painful (dukkha), or neutral (adukkhamasukha). For example, one gets to lie on a comfortable bed due to a good kamma done in the past. A bad kamma done in the past leads to an injury. Both happen via "kāyañca paticca phoṭ̣habbe ca uppajjati kāyaviññāṇam." "

9. All other INITIAL sensory EXPERIENCES START with adukkhamasukha vedan $\bar{a}$. We see, hear, smell, taste, or a thought comes to the mind. The last one is, "manañca pațicca dhamme ca uppajjati manoviññānaì." All those generate adukkhamasukha vedanā (neutral feeling).

- However, based on all six initial sensory contacts, we may instantly generate somanassa or domanassa vedanā due to kāma guna. For example, it is natural for a human (including Arahants) to experience an appealing taste when tasting sugar or seeing an attractive person.
- Based on those are "mind-made" feelings or "samphassa-j $\bar{a}$-vedanā." They are different from dukkha/sukha vedanā associated with sensory contacts with the body (kāya.)
- Now, based on such somanassa or domanassa vedanā due to kāma guṇa, an average human MAY generate samphassa-jā-vedana $\bar{a}$. That will happen IF the mind "get stuck" (tanh $\bar{a})$ on that sensory input. Of course, an Arahant WILL NOT generate those samphassa-jā-vedana $\overline{\text {. }}$
- That was discussed in, "Kāma Guna - Origin of Attachment (Tanhā)."

## Taṇhā Leads to Upādāna via Paṭicca Samuppāda

10. That is a critical step in Paticca Samuppāda, not discussed in the Chachakka Sutta. That sutta explains only the KAMMA VIP $\bar{A} K A$ stage. That step of "tanhhā paccaya upādāna" starts the "new kamma GENERATION" process.

- I hope you can see that ALL of our kamma generation activities start when a new ārammaña comes to mind. That starts with the "salāyatana paccayā phasso" step in the Paticca Samuppāda cycle. It is the "tanh $\bar{a}$ paccayā upādāna" step that starts a new Paticca Samuppāda cycle with "avijjā paccayā sañkhāra."
- That is a CRITICAL point. I will take the time to explain this "tanhhā paccayā upādāna" step. That way, one can get insights into how Paticca Samuppāda operates. Then one can begin to get an idea of the importance of understanding key concepts of Buddha Dhamma.

## A New Paṭicca Samuppāda Process Starts Only if One Starts Acting with Avijjā

11. Next, The Chachakka Sutta states the REASONS why a given person may START to going through the kamma generation stage starting with avijjā. See, "Chachakka Sutta - Six Types of Vipāka Viññ̄āna."

- One would pursue a given ārammana (the sight, sound, etc.) ONLY IF one perceives that it is worthwhile or beneficial to him or her. That perception comes from the wrong view that those sensory experiences are one's own. As we discussed, that wrong view is sakkāya diṭthi.
- One with sakkāya ditṭhi does not realize that those experiences are just results of causes from the past. That they are kamma vipāka. Then one tries to get control of the situation by either trying to maintain a
"good experience" or avoid a "bad experience." Therefore, it is POSSIBLE for ANYONE with sakkāya diṭṭhi to go through the "taṇhā paccayā upādāna" step.
- However, a Sotāpanna (who has removed sakkāya diṭthi) may still do immoral deeds. A Sotāpanna would NOT do apāyagāmī deeds. But he/she may still do less-strong immoral deeds. That is because a Sotāpanna still has wrong perceptions (viparita sañ̃̄̄̄.) At the Arahant stage, one would have removed both wrong views and perceptions. I will explain this in a future post after concluding the discussion on the Chachakka Sutta.

12. However, not everyone with sakkāya ditṭhi will go through the "taṇhā paccayā upādāna" step. Different people "attach" to different types of ārammaṇa.

- For example, if a beautiful woman starts working at a workplace, everyone will see her as beautiful. But only a few will get "attached" and start thinking about asking her for a date. There could even be a person who may "fall in love head over heels" at first sight of her.
- That is why we cannot say there is "no-self" either. Until one attains Arahanthood, there will be a "dynamic self" who gets attached to some things in this world. I say a "dynamic self" because there is no "fixed self" in the sense of a soul or a "ātma." See "What Reincarnates? - Concept of a Lifestream."

## Attachment (Taṇhā) Can Happen Due to Greed, Anger, or Ignorance

13. In the above example, we discussed getting attached to the sight of a beautiful woman. But as we have discussed, one can "attach" to a ārammaṇa via anger or ignorance.

- Seeing an enemy, one will instantly generate anger in mind via the steps in the Chachakka Sutta. Here, the samphassa-j $\bar{a}$-vedan $\bar{a}$ generated is a domanassa vedan $\bar{a}$. It is a stressful vedan $\bar{a}$. But still one "attaches" to that ārammaṇa, and will start making bad vacī sañkhāra (i.e., conscious thoughts of anger) in mind.
- On the other hand, the samphassa-j $\bar{a}$-vedanā generated in the example discussed in \#12 above (upon seeing a beautiful woman) is a somanassa vedana $\overline{\text {. That person is "attached" via greed. }}$
- In some situations, there could be confusion on how to respond to a ārammaṇa and still get "stuck." That is due to $a v i j j \bar{a}$.

## Taṇhā Leads to Upādāna Depending on One's Level of Avijjā

14. Having one or more of the following views leads to sakkāya ditṭhi.

- The physical body ( $k \bar{a} y a$ ) is mine, it is what I am, and it is my "self." Furthermore, all associated bodily functions are mine; they are what I am and my "self." Those are: seeing or cakkhu, hearing or sota, tasting or jivhā, smelling or ghāna, touching or kāya, and thinking or mana. See \#6 above.
- Then one also tends to associate some external rūpa the same way. Those are rūpa rūpa (or vaṇna rūpa or simply rūpa), sadda rūpa, gandha rūpa, rasa rūpa, phott habba rūpa, and dhamma rūpa or dhamm $\bar{a}$. For example, 'this is my house; my song; this is my cake; my favorite scent; my comfy bed; these are my thoughts."
- One may also perceive that all of one's mental aspects (cakkhu viñ̃̃āṇa, cakkhu samphassa, cakkhu samphassa-j $\bar{a}$-vedana $\bar{a}$, and $\operatorname{tanhha} \bar{a}$ ) are all one's "self." Of course, the same with other mental aspects associated with other sense faculties. There are 36 ( 6 X 6) such entities that the sutta lists. See, "Chachakka Sutta - Six Types of Vipāka Viññāna."

## Pañcupādānakkhandhā as Sakkāya Diț̣hi

15. Those 36 entities are also known as "pañcupādānakkhandhā." Here, Pañcupādānakkhandhā comes from "pañca" + "upādāna" + "khandha" or the five aggregates, to which one gets attached. See "Chachakka Sutta - Six Types of Vipāka Viññān̄a."

- If you carefully look at those 36 entities, they include rūpakkhandha, vedanākkhandha, sañ̃̄̄̄kkhandha, sañkhārakkhandha, and the viññāṇakkhandha. However, one does not consider all of those to be "mine." For example, out of all the houses in this world, one may claim to own one or a few homes. Out of all humans, one may have a set of people that one considers "mine." For example, my parents, wife, children, friends, etc.
- Therefore, only a tiny fraction of the pañcakkhandha one has "attachments to." Those attachments can vary from very strong (my body is the strongest) to decreasing levels for friends, neighbors, etc.
- Thus, pañcupādānakkhandhā is a small fraction of the pañcakkhandha.
- The "WebLink: suttacentral: Sakkāvapañhā Sutta (SN 38.15)" DEFINES sakkāya as pañcupādānakkhandhā: "'Sakkāyo, sakkāyo'ti, āvuso sāriputta, vuccati. Katamo nu kho, āvuso, sakkāyo"ti? "Pañcime, $\bar{a} v u s o, ~ u p a \bar{a} d \bar{a} n a k k h a n d h \bar{a}$ sakkāyo vutto bhagavatā, seyyathidaìrūpupādānakkhandho, vedanupādānakkhandho, saññupādānakkhandho, sañkhārupādānakkhandho, viññāṇupādānakkhandho. Ime kho, āvuso, pañcupādānakkhandhā sakkāyo vutto bhagavatā"ti.

## Other Ways of Describing Sakkāya Diṭthi

16. It is possible to describe sakkāya ditṭhi in somewhat different ways. However, all of those are interconsistent. The following posts discuss some of those. Please let me know if you find any inconsistencies (lal@puredhamma.net) or we can discuss it at the discussion forum.

- Sakkāya Ditthi is Personality (Me) View?
- Sakkāya Ditthi and Tilakkhana
- Sakkāya Ditthi - Getting Rid of Deeper Wrong Views

## Wrong Views of Nicca and Sukha Lead to the Wrong View of Attā

17. One gets attached to things one perceives to be nicca and sukha. Nicca (pronounced "nichcha") means we believe we can keep them in the way we want or like. Sukha means we think we will be happy by getting "ownership" of them.

- Then one takes "ownership" of them. One considers those to be "one's own" or "attā." That attachment can vary from very strong to less intense. One's own body and mental qualities (vedanā, sañña $\bar{a}$, sañkhāra, viñ̃̄āṇa regarding one's own body) give the strongest sense of att $\bar{a}$.
- Then comes one's spouse, children, house, cars, etc., relatives and friends, etc.
- Therefore, the hardest thing to remove is the sense of att $\bar{a}$ about one's body.
- IT CANNOT be removed by willpower. It comes only from understanding this world's anicca, dukkha, and anatta nature. What we discussed up to now plays a significant role in that understanding. There is no "experiencer." A sensory input comes in as a result (kāma vipāka) of a previous cause (kamma.)

# An Apparent "Self" Is Involved in Kamma Generation 

November 2, 2019; revised November 6, 2019; September 10, 2022; October 14,2022 (\#18)

## Introduction

1. Here, we will discuss why someone with sakkāya ditṭhi believes in a "self" (knowingly or unknowingly) and accumulates kamma with that wrong view.

- In previous posts in this series, we discussed why there is no "Experiencer." Thus, there is no need for the existence of a "self" to describe an INITIAL sensory experience.
- However, anyone with sakkāya ditṭhi has the wrong view of a "self" experiencing sensory inputs. Based on that mistaken view, steps are taken to maintain a "good experience" or to stop a "bad experience." Therefore, we could say there is a wrong view of a "Doer" as long as there is sakkāya dittthi. That is why it is incorrect to say that there is "no-self" either.
- That does not mean we do not need to take action to prevent bad outcomes. The key idea is to realize the unfruitfulness of doing immoral deeds (including conscious thoughts and speech) in response to sensory inputs.
- The Chachakka Sutta (MN 148) describes in detail what happens when a new ārammaṇa (thought object) comes to the mind. The mind may "attach" ( $\boldsymbol{t a n h} \overline{\boldsymbol{a}})$ automatically to that arrammaña via greed, anger, or ignorance. Let us briefly summarize those steps. It is critical to follow these steps. All relevant posts are at "Worldview of the Buddha." The main subsection is "Origin of Life."

## Posts on the Background Material

2. In earlier posts, we discussed that INITIAL sensory experiences DO NOT require a "self." However, they do not happen arbitrarily or randomly either. Those sensory experiences have causes (or reasons); they are kamma vipāka.

- Some kamma vipāka bring in suffering, such as injuries, sickness, etc., while other vipāka results in pleasurable experiences, such as good food, comfortable living, etc. Those are ALL experienced via the physical body ( $k \bar{a} y a$.) They are NOT illusions. There is real suffering (and some pleasures too.)
- All other INITIAL sensory experiences do not DIRECTLY lead to pain or pleasure. Seeing, hearing, smelling, tasting, and recalling memories are "neutral" sensory experiences at that moment.

3. However, based on those sensory inputs, somanassa or domanassa vedana arise automatically in the mind. Those are "mind-generated" vedanā based on "kāma guṇa." All humans (including Arahants) experience the sweetness of sugar or bitterness of some medicines. These are not "samphassa-j $\bar{a}$-vedan $\bar{a}$." However, for others, "samphassa-j $\bar{a}$-vedan $\vec{a}$ " arise due to such somanassa or domanassa vedan $\bar{a}$. See "Kāma Guna - Origin of Attachment (Tanhā)."

- Thus, based on somanassa or domanassa vedanā due to "kāma guṇa," a given person may attach (taṇh $\bar{a})$ to that particular sensory event (ārammaṇa) and generate samphassa-j $\bar{a}$-vedana $\bar{a}$. Only an Arahant is guaranteed not to attach.
- That is the summary of about a fourth of the Pāli text in the Chachakka Sutta (MN 148). That completes the six sets of six.

## No "Self" Involved in the Initial Sensory Experiences

4. As we have discussed, the next verse in the sutta is, "'Cakkhu attā'ti yo vadeyya tam na upapajjati. Cakkhussa uppādopi vayopi paññāyati. Yassa kho pana uppādopi vayopi paññāyati, 'attā me uppajjati ca veti cā'ti iccassa evamāgataì hoti. Tasmā tam na upapajjati: ‘cakkhu attā’ti yo vadeyya. Iti cakkhu anattā."

Loosely translated: "If anyone says, 'cakkhu is self,' (or "seeing" is mine or "it is I who sees") that is not tenable. An arising and ceasing of cakkhu (not the physical eye) is evident. If cakkhu is 'self,' that would imply the following: 'my self arises and ceases' OR 'I come into being momentarily and cease to exist.' That is why one cannot argue that 'cakkhu is self.' Thus cakkhu is 'not-self' or 'anatta.". ("na att $\bar{a}$ " for "not $a t t \bar{a} "$ r rymes as "anatta,", just as "na āgāmi" rhymes as "Anāgāmi.")

- Then the next fourth of the Pālitext in the Chachakka Sutta (MN 148) states that the above conclusion holds for all 36 entities ("six sets of sixes") involved in the initial sensory experience. Six internal $\bar{a} y a t a n a$, six external āyatana, six classes of (vipāka) viññāna, six classes of phassa, six classes of $\boldsymbol{v e d a n a}$, six classes of tanh $\overline{\boldsymbol{a}}$.
- See, "Chachakka Sutta - Six Types of Vipāka Viññāna"" for details on that.
- Then we discussed the next verse in the sutta starting with, "Ayam kho pana, bhikkhave, sakkāyasamudayagāmin̄̄ patipad̄̄.."

## Attā Translated as "Self" Is Not Correct

5. The Pāli word "att $\vec{a} "$ does not mean "self," even though I used that translation above. That translation is quite common these days. We will go with that until we finish discussing Paṭicca Samuppäda because it does help to get the idea of sakkāya ditthi across below. If I try to discuss the real meaning of atta right now, that could lead to confusion.

That is why the Buddha refused to answer Vaccagotta's question about whether or not there is an "att $\bar{a}$." See "WebLink: suttacentral: Ānanda Sutta (SN 44.10)."

- Vacchagotta comes to the Buddha asked "kim nu kho, bho gotama, atthattā" ti?" OR "Master Gotama, is it correct to say that there is an "att $\bar{a} "$ ?".
- Note that "atthatt $\bar{a} "$ is "atthi att $\bar{a} "$ where "atthi" means "exists." Vacchagotta meant in this case "attā" to be "self." Thus, Vacchagotta meant: "Is it correct to say that a "self" exists?"
- The Buddha remained silent, and Vacchagotta asked the question in the negative form. The second time, he asked: "Kim pana, bho gotama, natthatt $\overrightarrow{\boldsymbol{a}}$ " $t i$ ?" or, "Master Gotama, is it not correct to say that there is a "self"?". Seeing that the Buddha refused to answer his question, Vacchagotta got up and left.
- Note that "natthatt $\bar{a}$ " is made up of three words: "na atthi att $\bar{a}$, " which negates "atthatt $\bar{a}$. ." Just as these days, many people are confused about the Pāli word "atta" and the Sanskrit word "ātma." The latter meaning is closer to a "soul"
- I will discuss this sutta when I will discuss "attā" in detail, after discussing Pațicca Samuppāda. By the way, Vacchagotta understood the concept later on and became an Arahant too.

## The Origin of the Wrong View of Sakkāya Diṭṭhi - Sakkāya Samudaya

6. The sutta then states that the wrong view of sakkāya ditṭhi arises BECAUSE one does not realize the above facts. Without knowing those facts, one tends to BELIEVE that a "self" is experiencing those first sensory events.

- Then, if it were a "good experience," one would try to maintain that pleasant experience and also plan to experience it again in the future. In the case of a "bad experience," one would do the opposite to avoid such "bad experiences."
- The more one engages in either kind of such activity, the wrong VIEW of a "self" (sakkāya ditthi) grows.

7. That explanation is in a short verse starting with, "Ayam kho pana, bhikkhave, sakkāyasamudayagāmin̄ patipad $\bar{a}-c a k k h u \dot{m}$ 'etaì mama, esohamasmi, eso me attà’ti samanupassati; rūpe 'etaì mama, esohamasmi, eso me attā’ti samanupassati; ..."

- We discussed this verse in detail in the last post, "Sakkāya Ditthi in Terms of Attā or "Self" or "Ātma."
- So far I have summarized the discussion up to now. Now, we can discuss the next verse of the sutta.

## Next Verse in the Chachakka Sutta - Sakkāya Nirodhaya

The verse in \#7 above explains how sakkāya ditṭhi ARISES. The new verse below explains HOW sakkāya diṭthi WILL STOP FROM ARISING.
8. The next verse in the Chachakka Sutta (MN 148) starts with, "Ayaim kho pana, bhikkhave, sakkāyanirodhagāmin̄̄ patipad̄̄-cakkhumं 'netaì mama, nesohamasmi, na meso attā’ti samanupassati. Rūpe ‘netaì mama, nesohamasmi, na meso attā'ti samanupassati..."

The word Nirodha comes from "nir"+"udaya," where "nir" means to stop and "udaya" means "arise." Thus nirodha means to prevent something from arising.

- Gāmini means "path." Paṭipadà means an "action plan" or one's behavior. Thus, sakkāyanirodhagāmin̄̄ patipadā means, "the behavior that leads to STOPPING the arising of sakkāya diț̣hi."
- Then it says, that will happen when one "SEES" that "cakkhu is NOT mine, cakkhu is NOT what I am, cakkhu is NOT my "self." Here, "netaim" means "na" + "etam" or "it is not."
- That is because, in reality, there is no "self" or a "soul" or a "ātma" that is associated with a living being. The sensory experiences arise due to past causes. Yet, we cannot explain the response of an average human to those sensory experiences without the assumption of a "self." The response of an average human to such sensory inputs can only be explained by taking into account his/her mindset of believing in a "self."
- (Once we discuss Paticca Samuppāda, it will become clear why future suffering arises BECAUSE of that wrong view of sakkāya dițthi. That is how sakkāya ditṭthi can be removed. Only then can we also understand the real meaning of attalatt $\bar{a}$ (and anattalanatt $\bar{a}$.) I do not want to get into that issue right now because that will confuse many people.)

9. The sutta repeats that for all other five entities associated with "seeing." They are rūpa, cakkhu viññāna, cakkhu samphassa, cakkhu samphassa-j $\bar{a}$-vedanā, and taṇh $\bar{a}$ (that results from cakkhu samphassa-j $\bar{a}-$ vedanā.)

- Then it is repeated for the other five internal àyatana: sota, ghāna, jivhā, kāya, and mano. Please go through those verses.
- However, it may NOT be easy to "see" that no "self" is involved in sensory experiences. We have had the wrong view of sakkāya ditṭhi virtually forever! That is why we are in this never-ending rebirth process.
- To remove that strong ditṭhi, we need to see the "true nature," i.e., we need to cultivate "yathäbhūta $\tilde{n} \bar{a} n a . "$ A big part is realizing that there is no "experiencer," as we have discussed in detail using the movie analogy. There are only causes and results; the results are according to the causes AND conditions at the time of bringing the results. That is Paticca Samuppāda. See, "Vision Is a Series of "Snapshots" - Movie Analogy."
- We will focus on that in detail in upcoming posts. However, this sutta briefly states the primary process.

## Sakkāya Nirodhaya Starts With Vedanā

10. The key to arriving at that UNDERSTANDING is stated in the next verse of the sutta, starting with, "Cakkhuñca, bhikkhave, paṭicca rūpe ca uppajjati cakkhuviññannaì, tiṇnam sañgati phasso, phassapaccayā uppajjati vedayitaim sukhaì vā dukkhaì vā adukkhamasukhaiं vā."

Translated: "Bhikkhus, dependent on the eye and forms, eye-consciousness arises; then the mind makes contact with "san gati"; that contact with "san gati" leads to the arising of "mind-made" feelings felt as pleasant or painful or neither-painful-nor-pleasant."

- Regardless of the sense faculty, those "mind-made" vedanā or "samphassa-jā-vedanä" CAN ARISE based on kāma guṇa AND one's gati.
- We discussed this part of the verse already in the posts, "Indriya Make Phassa and Āyatana Make Samphassa," "Vipāka Vedanā and "Samphassa jā Vedanā" in a Sensory Event," and "Kāma Guna Origin of Attachment (Tanhā)."

## Getting Attached to Vedanā Leads to the Growth of Anusaya

11. Then the subsequent verses introduce a critical word, anusaya. Based on sukha vedanā, dukkha vedan $\bar{a}$, and adukkhamasukha vedan $\bar{a}$, three corresponding types of anusaya result: rāgānusaya, patighānusaya, and avijjānusaya.

- Let us start with the verse that explains the origins of rāgānusaya: "So sukhāya vedanāya phuṭtho samāno abhinandati abhivadati ajjhosāya tittthati. Tassa rāgānusayo anuseti."
- Translated: "When one experiences a sukha vedanā, if one delights in it, welcomes it, and thinks and speaks highly of it, gets absorbed in it, then the underlying tendency for $r \bar{a} g a$ (rāgānusaya) gets stronger (i.e., rāgānusaya will grow)."
- Here, rāgānusaya comes from "rāga" + "anusaya." Now we need to get an idea about the meaning of anusaya first.

## What is Anusaya?

12. Anusaya is usually translated as "latent tendencies." That does give the basic idea. Such "latent tendencies are in our gati. Anusaya and "gati" are closely related. See, "The Law of Attraction, Habits, Character (Gati), and Cravings (Asavas)" and "Āsava, Anusaya, and Gati (Gathi)."

- Everyone has a set of gati (habits/character qualities). Each person has his/her own set of things/activities that she likes and dislikes. Some of these are not moral or immoral.
- But we also have moral (ethical) gati and corrupt (bad) gati. Here moral/immoral have a wide range, and we will discuss that later. But those deeds have kammic consequences. Those are the gati that are relevant.

13. By the way, notice that now we are talking about a "person" or a "self" who has sakkāya ditthi (and gati and anusaya)! That is why it is incorrect to say that there is "no-self" either.

- When we keep doing what we are used to, that habit will only GROW. That also means anusaya will grow and that growth due to the activity is "anuseti."
- Arahants do not have moral/immoral gati but kammically neutral gati (habits). Such practices include doing things in specific ways.

## Rāga Anusaya Grows by Getting Attached to Mind-Made Sukha Vedanā or Somanassa Vedanā

14. What the sutta states in verse \#10 are the following. When a "pleasing a rammana" comes to the mind, it may delight in that $\bar{a} r a m m a n ̣ a$. If so, it will welcome that $\bar{a} r a m m a n a$ and "get absorbed in it." That means the person would think highly about it, speak highly about it, and act on it to sustain that ārammaña.

- For example, if X sees an object that X likes, X will keep looking at it and start thinking about how good it is. X may tell another how good it is. Even later on, X may plan to experience that sight again. Those activities involve vacī and kāya sañkhāra.
- That is how the Paṭicca Samuppāda starts with "avijjā paccayā sañkhāra" and "sañkhāra paccayā viññāna."
- Here, $a v i j j \bar{a}$ is the ignorance of believing that there is a "self" experiencing that sensory input.

## Those Viñ̃̃āṇa Are Kamma Viññạ̣̄a

15. We remember that there could be six types of viññanna in the INITIAL sensory event that takes place due to kamma vipāka. Those are cakkhu, sota, ghāna, jivhā, kāya, or mano viññāna. They are ALL vipāka viññāna, which makes one aware of the sensory input.

- However, viññāna in "san̉khāra paccayā viññāṇa" generates kamma viñnāṇa. Such kamma viññāṇa can ONLY be mano viññāna. They have embedded energy because that person has decided to take further steps to enjoy that sensory experience again and again.
- In the Abhidhamma language, those sañkhāra have javana power. They create kammic energy for that kamma viñ̃āạa.
- In other words, that "person" has to spend time and effort to enjoy that sensory experience again. He has now created a "kamma bija" or expects a specific outcome.

16. For example, if a person $X$ saw and "attached" to an expensive item in a store, $X$ would talk about it with the spouse and make plans to come up with the money to pay for it. Until X buys that item, that "viññāna" will be there. The critical point here is that X already HAD a rāga anusaya for it, and by engaging in those follow-up activities, X "added" more energy to that. That addition is "anuseti."

- Different people have different types of anusaya. That is why not everyone attaches to a given $\bar{a} r a m m a n ̣ a$. Furthermore, each person's levels of anusaya CAN change with time. That anusaya can be REMOVED too, which is the way to Nibbāna.
- As you can imagine, the other two types of anusaya will "build up" the same way. With a "bad" $\bar{a} r a m m a n a, ~ d o s a ~ o r ~ a n g e r ~ a r i s e s, ~ a n d ~ p a t i g h a ̄ n u s a y a ~(p a t i g h a ~ a n u s a y a) ~ s t r e n g t h e n s . ~$
- Finally, the avijjānusaya (avijjā anusaya) builds up when acting with avijjā. We will discuss more of that in the next post.

## Difference Between Diṭthi Vipallāsa and Saññā Vipallāsa

I do not want to leave this post without clarifying the following point.
17. In the discussion forum at puredhamma.net, a legitimate question was asked: "Since a Sotāpanna has removed sakkāya ditṭhi, why is that a Sotāpanna would still value sensory pleasures, and may even commit some immoral deeds?"

- As we know, a Sotāpanna is incapable of doing ONLY "apāyagāmi" deeds that could lead to rebirths in the $a p \bar{a} y \bar{a}$ (plural of apāya.)
- There is a difference between "SEEING" (ditthi) the real nature of this world and having corresponding PERCEPTIONS (sañña $\bar{a}$ ) about that real nature. It is important to understand what is meant by sañ $\tilde{n} \bar{a}$; see "Saññā - What It Really Means."
- The Pāli word "vipallāsa" means "confusions" or "distortions." Wrong views lead to diṭthi vipallāsa and wrong perceptions lead to sañ̃̃̄̄ vipallāsa. More details at "Vipallāsa (Ditthi, Saññā, Citta) Affect Sañkhāra."
- With that terminology, a Sotāpanna has removed diṭthi vipallāsa but still has sañña vipallāsa.

18. In other words, the wrong views about a "self" (sakkāya ditthi) go away at the Sotāpanna stage. But the perception of a "self" (asmi māna) goes away in stages and disappears only at the Arahant stage.

- Sañ̃n̄ $\operatorname{vipallāsa~goes~away~at~the~Anāgāmi~stage,~and~citta~vipallāsa~(together~with~asmi~māna)~is~}$ removed at the Arahant stage. See "Vipallāsa (Ditthi, Saññā, Citta) Affect Sañkhāra."
- That is also why we CAN NOT say that "there is no-self." Until the attainment of Arahanthood, there is a perception of a "self."
- The critical point is that $I t$ is wrong to approach the analysis of sensory experiences based on a "self" or "no-self." Instead, we can explain everything regarding causes and effects or Paticca Samuppāda.
- Then it will also become clear that the Pāli word "atta"" does not really mean a "self" or a "soul" or a "ātma."

### 10.9 Paṭicca Samuppāda - Not 'Self' or 'No-Self'

Tanhā - The Origin of Suffering

Paticca Samuppāda - A 'Self' Exists Due to Avijiā
Kamma, Sañkhāra, and Abhisañkhāra
Vacī Sañkhāra - Sañkappa (Conscious Thoughts) and Vācā (Speech)

### 10.9.1 Taṇhā - The Origin of Suffering

November 9, 2019

## Taṇhā Is Attachment, Not Craving

1. Taṇh $\bar{a}$ is a badly misunderstood Pāli word. The common translation is "craving," and that is wrong. The craving usually is associated with a pleasurable ārammaṇa.

- Taṇhā means attachment to ANY ārammaṇa. It could be something that one likes OR dislikes OR even neutral (it may be just curiosity.)
- We may attach to a beautiful object or a person to varying degrees. It could just mean pausing to take a "second look" at something. It could be a much stronger attachment like "falling in love at first sight" with a person.
- But we also stop and take a second look at a person who just got run over by a car and died. That is not a pleasant sight, but we still got "attached" to that sight. We may think about it for a little while and then forget about it. But seeing one's worse enemy on the street will lead to a stronger "attachment." One may generate repulsive thoughts and may even say something harsh to that person.
- The point is that taṇhā leads to further "mind action" or "conscious thoughts" about a ārammaṇa. We discussed that in, "Kāma Guna - Origin of Attachment (Tanhā)."

## Tanh $\bar{a}$ - The Origin of Suffering

2. Tanhhā is also the origin of future suffering. The Buddha defined the "origin of suffering" or "dukkha samudaya" as follows in his first discourse, "WebLink: suttacentral: Dhammacakkappavattana Sutta (SN 56.11"': "Idamं kho pana, bhikkhave, dukkhasamudayain ariyasaccain-yāyaì tanhā ponobbhavikā nandirāgasahagatā tatratatrābhinandin̄̄, seyyathidami-kāma tanhā, bhava taṇhā, vibhava tanh $\bar{a}$."

- Translated: "Bhikkhus, what is the Noble Truth of the origin of suffering-It is attachments (tanh $\overline{\boldsymbol{a}}$ ) based on seeking delight (nandiräga) in various things here and there, which leads to rebirth -that is, attachments to sensual pleasures ( $\boldsymbol{k} \overline{\boldsymbol{a} m a} \tanh \overline{\boldsymbol{a}}$ ), to the existence (bhava tanh $\overline{\boldsymbol{a}}$ ), and the view of a single life (vibhava tanh $\bar{a}$.)
- The three types of taṇhā discussed at "Kāma Tanhā, Bhava Tanhā, Vibhava Tanhā."

3. Interestingly, in the "Cūlavedalla Sutta (MN 44), the same verse describes the origin of sakkāya diṭthi:
"'sakkāyasamudayo sakkāyasamudayo'ti, ayye, vuccati. Katamo nu kho, ayye, sakkāyasamudayo
vutto bhagavatā" ti? "Yāyaì, $\bar{a} v u s o ~ v i s a ̄ k h a, ~ t a n h h \bar{a} ~ p o n o b b h a v i k \bar{a} ~ n a n d i ̄ r a ̄ g a s a h a g a t a \bar{a}$ tatratatrābhinandin̄̄, seyyathidaim-kāma tanhā bhava taṇhā vibhava taṇhā; ayaì kho, $\bar{a} v u s o$ visākha, sakkāyasamudayo vutto bhagavatā" $t i$.

- That is not surprising since all immoral actions originate with the wrong view that worldly pleasures need to be pursued at any cost.
- If one does strong immoral deeds (pāpa kamma), one will be eligible for suffering in the apāyā. Even the desire to enjoy sensory pleasures will bind one to the kāma loka. The desire for jhānic pleasures leads to getting trapped in rūpa and arūpa loka. But there is no long-term happiness anywhere in any realm.
- That is because regardless of where the next birth is, one is not free from the $a p \bar{a} y \bar{a}$ in the long run. The possibility of rebirth in the apāya will be there until one attains the Sotāpanna stage by removing sakkāya ditṭhi. All possible suffering ends when one fully comprehends dukkha samudaya at the Arahant stage. We will discuss that in detail in the future.

## The Meaning of Tanhh $\bar{a}$ (Pada Nirutti)

4. Many Pāli words have their meanings in the word itself. Uncovering the meaning of a word that way is "pada nirutti." For example, "sakkāya" comes from "sath" + "kāya" or taking an aggregate of things or a collection (kāya) to be beneficial (sath.) That is why sakkāya ditṭhi originates when one considers that the five aggregates to be one's own and thus beneficial. [nirutti : (f.) [Sk. nirukti, nis+vac] one of the Vedāngas (see chalanga), explanation of words, grammatical analysis, etymological interpretation; pronunciation, dialect, way of speaking, expression.]

- Tanhha means getting "fused" or firmly attached. The word tanhhā comes from two words. "Thána" (pronounced like "thatch") means "place" (ъ) in Sinhala) and "h $\vec{a} "$ meaning getting fused/welded or attached ( (ఒぃว゚ٌอ in Sinhala). Note that "tan" in tanh $\bar{a}$ pronounced like in "thunder" and "h $\bar{a}$ " is pronounced like in "harm."
- That is consistent with the meaning derived from the Chachakka Sutta. See "Kāma Guna - Origin of Attachment (Tanhā)."

## Three Types of Tanh $\bar{a}$

5. The verses in \#2 and \#3 refer to three types of taṇh $\bar{a}$. They are kāma taṇhā, bhava taṇh $\bar{a}$, vibhava tanh $\bar{a}$.

- Each category represents the origin of a particular way attachment can happen. As we can imagine, kāma $\tanh \bar{a}$ originates due to our inherent kāma guṇa. There are sights, sounds, smells, tastes, touches, and dhamma $\bar{a}$ that we like to experience. If access to such things is blocked, we again get attached, but this time with anger.
- Bhava tanhā arises in those who believe in rebirth. They would like to be born as a human, deva, or a Brahma based on their gati.
- Those who do not believe in rebirth have vibhava tanhh $\bar{a}$.
- Let us discuss them briefly.

## Kāma Taṇhā

6. In kāma loka, all five physical sense faculties are present. Getting attached to anything via the five sense faculties is $\boldsymbol{k} \bar{a} m a \tanh \bar{a}$.

- Furthermore, attachment arising from the desire to enjoy taste, smell, and body touch can happen only in kāma loka. Those three require a "solid body" as we can imagine.
- In the rūpa lokas, living beings do not have "solid bodies." Yet, they can see and hear without having physical eyes or ears.
- Therefore, in rūpa lokas, taṇhā arise only due to sights and sounds. Thus an Anāgāmi, who will be born in a rūpa loka has some rūpa tannhā and sadda taṇhā because he/she may like to see a Buddha statue or listen to a discourse.
- In arūpa lokas, there is only the mind. Therefore, an attachment can be only to dhamm $\bar{a}$.

## Bhava Taṇhā

7. Bhava taṇhā arises from attachment to "any existence." Thus bhava tanhhā is present in kāma loka, rūpa loka, and arūpa loka, i.e., all 31 realms.

- Even in the kāma loka, there may be people who do not enjoy the "kāma" or sense pleasures; but they still want to live a quiet, peaceful life. They mostly have bhava taṇhā. They may like to be in a secluded place, cultivating jhāna; that is their desired "bhava." If they develop jhānā, they will be born in rūpa loka or arūpa loka due to their new "gati."
- There are other subtle forms of "bhava" too. Some like to become famous, earn a title, to get a highprofile job or a responsibility, etc. These attachments are not associated with sensual pleasures. They are also due to bhava taṇhā.

## Vibhava Taṇhā

8. Vibhava tanh $\overline{\boldsymbol{a}}$ arises from the wrong view of materialism (uccheda ditthi in the time of the Buddha; uccheda pronounced "uchcheda"). One believes that life ends at death. Here the mind is assumed to a byproduct of the body (brain). And thus, when the body dies, that is the end of the story.

- Therefore one believes that one needs to enjoy all possible pleasures of this life before dying. Such a person would typically have kāma taṇhā as well as vibhava taṇhā.
- It is easy to have vibhava tanhhā in modern society. That is especially true if one has not heard about the Buddha's message about a more complex world with 31 realms and a rebirth process. Our human sensory faculties cannot access such "hidden" aspects of this world. One believes only what one can see.

## Taṇhā Does Not Directly Lead to Rebirth

As we have seen in previous posts, for an average human, SOME ārammaṇa WILL automatically generate $\tanh \bar{a}$ within a split second. Only in an Arahant, taṇh $\bar{a}$ would NOT arise for ANY ārammaṇa. That is a crucial message of the Chachakka Sutta (MN 148.)
9. However, Tanhhā does not directly lead to rebirth (new existence). Paṭicca Samuppāda does not say, "Taṇhā paccayā bhavo." Instead, it is, "Taṇhā paccayā upādāna," followed by "upādāna paccayā bhavo."

- To make a new existence (bhava), the mind needs to "pull that ārammaña close" and start generating conscious thoughts about it. That happens because one either likes it or dislikes it. That is the "Taṇhā paccayā upādāna" step.
- That "Taṇhā paccayā upādāna" step is a bit involved. When the mind attaches to a ārammaṇa, it starts "examining" that ārammaṇa. That "examination" involves vitakka/vicāra or vacī sañkhāra.
- That is when one STARTS acting with avijja and generate sanikhāra (and therelby kamma viññāṇa via "sañkhāra paccayā viñ̃̄āna.") That is the start of a new Paṭicca Samuppāda cycle.
- More details in follow-up posts at, "Paticca Samuppāda - Not 'Self' or 'No-Self'." A simpler explanation of Paticca Samuppāda in the section, "Paticca Samuppāda."
All relevant posts are at, "Origin of Life."

### 10.9.2 Pațicca Samuppāda - A'Self' Exists Due to Avijjjā

## November 16, 2019; November 17, 2019

## Introduction

1. The "WebLink: suttacentral: Chachakka Sutta (MN 148)" discusses six parameters associated with each of six entities. The six parameters are internal āyatana, external āyatana, viññāna, phassa, vedanā, taṇhā. They are associated with each of the six types of internal ayatana we have: cakkhu, sota, ghāna, jivhā, $k \bar{a} y a$, and mano. Thus, there are thirty-six entities discussed.

- The focus of attention is àrammaṇa. For example, a woman walking in a shopping mall stops and looks at a dress in a shop window. A dress in the window has caught her attention. That dress is ārammaṇa.
- We MAY get attached (tanhhā) to a ārammaṇa coming through any of the six senses. That "getting
 following process. "Cakkhuñca pațicca rūpe ca uppajjati cakkhuviññānain, tị̣nàm sañgati phasso, phassa paccayā vedanā, vedanā paccayā tanhā̄."
- We discussed that process in detail in the earlier posts of the sub-section "Worldview of the Buddha."

## Taṇhā (Getting Stuck to a $\overline{\text { Arammana) Happens Instantaneously }}$

2. An "eye-catching object" is a rūpa ārammaṇa or rūpārammaṇa (a new word). With a rūpārammaṇa, a cakkhu viññāna (sensation of seeing) arises via "cakkhuñca paticca rūpe ca uppajjati cakkhuviññānaìn." (In the same way, saddārammaṇa, ghānārammaṇa, jivhārammaṇa, kāyārammaṇa, dhammārammaṇa give rise to sotaviññāna, ghanaviññāṇa, jivhāviññāṇa, kāyaviññāṇa, and manoviññāna.)

- Within a split-second of that, the mind COULD be stuck (taṇhā) in that $\bar{a} r a m m a n ̣ a$.
- If that ārammana is mind-pleasing, the mind MAY attach ("getting stuck" could be a better way to say it) via greed. If it is repulsive, "getting stuck" MAY occur via anger. Even if it is a neutral ārammaṇa, "getting stuck" can happen with ignorance.
- I know I keep repeating same things. But repetition is KEY to retention.
- Even though we focused on the Chachakka Sutta, the above sequence of events is in many suttā. Some of the prominent suttā are MN 18, SN 12.43 through SN 12.45, and several suttā in SN 35. It is critical to understand that this process happens automatically within a split-second.

## Taṇhā Arises Due to Sakkāya Diṭ̣hi (Diṭ̣hi Vipallāsa) AND Asmi Māna (Saññā Vipallāsa)

3. The sequence of events in \#1, \#2 does not require a "self." That sequence happens in an instant without any CONSCIOUS thinking.

- IF an attachment or "getting stuck" (tanhha) results, that is because one has "gati" to attach to such a $\bar{a} r a m m a n ̣ a$. That is there because one has wrong views of a "self" (sakkāya ditṭhi or diṭthi vipallāsa) AND also the wrong perception (saññā vipallāsa) of a "self."
- The wrong view of a "self" goes away at the Sotāpanna stage, and the incorrect perception of a "self" (saññā vipallāsa) goes away entirely only at the Arahant stage.
- With the removal of sakkāya ditṭhi, the tendency to do "apāyagāmi deeds" will stop. However, until the Arahant stage, one will still have saññā vipallāsa, and thus asmi māna, and will be capable of doing less severe immoral deeds (akusala kamma).
- That was discussed together with the terms ditṭhi vipallāsa and sañ̃̄̄̄ vipallāsa in the post, "An Apparent "Self' Is Involved in Kamma Generation." It may be a good idea to re-read that post and also
the post, "Vision Is a Series of "Snapshots" - Movie Analogy." There is no self" in ultimate reality, but one will have a sense or perception of a "self" until attaining the Arahant stage.

## Taṇhā - The Origin of Suffering

4. The previous post ("Tanhā - The Origin of Suffering,") I pointed out TWO critical facts:

- FIRST, tanhh $\bar{a}$ (attachment or "getting stuck" to various ārammana) is the ORIGIN of suffering. That is the First Noble Truth on suffering. That tanhhā could be due to a pleasing OR unpleasant ārammaṇa.
- However, taṇhā by itself, CANNOT AUTOMATICALLY lead to suffering. If that were the case, no one would be able to attain Nibbāna. That is because, as we have discussed, taṇh $\bar{a}$ happens within a fraction of a second of capturing the ārammaṇa.
- Therefore, the SECOND critical fact is the following. Unless one pulls that arrammana in and starts thinking about it (vitakka/vicāra), one WILL NOT accumulate abhisañkhāra (and thus kamma viññāna.) That would be done with $a v i j i j a \bar{a}$ (with the wrong perception of a 'self.') [vitakka/vicāra is of akusala type while savitakka/savicāra is of kusala type]
- That second process takes place starting with the "taṇhā paccayā upādāna" step in Paṭicca Samuppāda. We will discuss this below.

## There is a "Self" Doing Kamma With Wrong Views and Wrong Perceptions

5. That is why it is not correct to say that there is "no-self." For anyone who has not yet attained the Arahant stage, the perception of a "self" is there. See, "An Apparent "Self" Is Involved in Kamma Generation."
 Arahant based on ANY ārammaṇa. That is automatic. It is not that he/she consciously avoids taṇh $\bar{a}$ at that moment. The key is that an Arahant has removed ALL "gati" leading to any attachment (tanhhā.)

- The key to understanding Paṭicca Samuppāda is to comprehend how gati can be removed (and thereby $\tanh \overline{\boldsymbol{a}}$ stopped). We will be discussing this in the next few posts.

## Dukkha Nirodha (Stopping of Future Suffering) is Cessation of Taṇhā

6. The Buddha defined the "stopping or the cessation of suffering" or "dukkha nirodhaya" (Third Noble Truth) as follows in his first discourse, "WebLink: suttacentral: Dhammacakkappavattana Sutta (SN 56.11)": "Idaì kho pana, bhikkhave, dukkhanirodhaì ariyasaccam-yo tassāyeva taṇhāya asesavirāganirodho cāgo paținissaggo mutti anālayo." [asesa :[adj.] entire; all. cāgo : abandoning, forsaking; resigning, sacrificing, giving away; self-sacrifice, liberality. patinissaggo : forsaking, getting rid of. mutti :[f.] release; freedom.]

Translated: "Bhikkhus, what is the Noble Truth of the cessation of suffering-it is the complete cessation of tanh $\bar{a}$, the giving up and relinquishing of it, freedom from it by losing all desires (also called "āsava") for things in this world (anālayo).

- The word anālaya comes from na + alaya or "not desiring." As we have discussed, one attaches
 one is blocked from getting that then one may "attach" with anger. Therefore, craving or desire is at the root of tanhhā. Dosa (or patigha) is the "second manifestation of lobha or greed. See, "Kāma Guna Origin of Attachment (Tanhā)." [ālaya :[m.] 1. abode; roosting place; 2. desire; attachment; 3. pretence.]
- That is why Nibbāna is also "āsavakkhaya" or "āsava" + "khaya" or "removal of"āsava."
- I try to introduce these key Pāli words gradually and as needed.

## Paṭicca Samuppāda - Both "Self" and "No-Self" Are Incorrect Approaches

7. It is not beneficial to start with the concept of either a "self" or "no-self." But we HAVE TO use terms like "our thoughts," "he spoke," and "she did that," etc. That is because those things ARE DONE by an average human with the perception of a "self." Besides, we CANNOT communicate with each other without using such terminology. Even the Buddha said things like, "I will go there" or "I was born in such an existence in the past."

- But we need to "see" and understand the following. Causes (old kamma) and conditions (paccay $\bar{a}$ ) lead to results (kamma vipāka). Then, based on such vipāka, we take actions that create new kamma, which, in turn, will bring more vipāka. That is how the rebirth process continues!
- The wrong view (sakkāya dittthi) and wrong perception (asmi māna) of a "self" leads to such activities. Paticca Samuppāda explains that process.
- As long as one has those wrong views and perceptions of a "self," one will have certain gati (character.) Based on those gati, causes (kamma) for future results (vipāka) accumulated. When those vipāka bring results, more kamma generated. So, there is no end to this cyclic process. That is why there is no end to that cycle of kamma and vipäka!
- Those gati will diminish as one starts comprehending the true nature of this world. With that comprehension, wrong views and perceptions will lessen and eventually go away. That is the way to Nibbāna. It starts with Sammā Ditṭhi (removal of sakkāya ditṭhi), seeing the true nature of this world. Of course, one must first get rid of the ten types of micchā ditṭhi to get to mundane Sammā Ditṭhi. See, "Buddha Dhamma - In a Chart."

## The sequence of Events In \#1 Above Are in Paticca Samuppāda

8. The Pāli verse in \#1 above from the Chachakka Sutta is "cakkhuñca paṭicca rūpe ca uppajjati cakkhuviñnānami, tiụnaì sañgati phasso, phassa paccay $\bar{a}$ vedana $\bar{a}$, vedana $\bar{a}$ paccay $\bar{a}$ tanhhā." The steps stated in that verse are the same as "salāyatana paccayā phasso, phassa paccay $\bar{a}$ vedanā, vedan $\bar{a}$ paccayā taṇhä" in Paticca Samuppāda.

- The steps "cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññānaì, tiụnaím sañgati phasso" in the Chachakka Sutta merely describe in more detail what happens with the "salāyatana paccayā phasso" step in Paticca Samuppāda. Of course, "salāyatana" refers to all six sensory inputs, and cakkhu in "cakkhuñca paticca rūpe ca uppajjati cakkhuviññānaì, tiṇ̣à் sañgati phasso" refers to one of those six.
- Paticca Samuppāda cycle usually does not start with "avijjā paccayā sañkhāra." There must be a REASON to begin acting with $a v i j j \bar{a}$. The reason is "getting attached to sensory input," i.e., taṇh $\bar{a}$. And that happens because we have certain "gati" that have been built-up over past lives due to the ignorance of the Four Noble Truths, i.e., due to avijjā!
- Initial "attachment" (tanhhā) ALWAYS happens with the steps discussed in the Chachakka Sutta and embedded in the above verse. Any of the six sensory inputs can trigger it, and the sixth one is mano: "mānañca paṭicca dhamme ca uppajjati manoviññānaì, tiṇnamं sañgati phasso, phassa paccayā vedanā, vedanā paccayā taṇhā."
- Therefore, it is essential to realize that in real life, Paṭicca Samuppāda does NOT start with "avijjā paccayā sañkhārā." It begins with"salāyatana paccayā phasso" and proceeds to "phassa paccayā vedanā, vedanā paccayā taṇhā."
- It is only at that stage that a given "person" may start acting with avijj $\bar{a}$ and thus start the complicated step, "taṇhā paccayā upādāna."

## Based on Attachment (Taṇhā), One Starts Acting With Avijjāa

9. Let us discuss that critical step, "taṇhā paccayā upādāna."

- Tanhhā means attaching or "getting stuck" with a particular ārammaṇa. It is not correct to say that taṇh $\bar{a}$ is "craving." When one sees an enemy, one does not generate tanhhā via craving. Instead, the mind gets "stuck" in that ārammanna of an enemy with anger or dislike.
- If it is a "good a rammana," the mind will try to enjoy it more. If it is distasteful, then it will try to stop that. Either way, mind MAY generate (abhi) sañkhāra with kammic consequences.
- For example, a person with a tendency (gati) to engage in stealing may try to steal an "eye-catching item" from a store. Stealing is a bad kamma, and thus he/she will accumulate "bad kamma" that could bring "bad vipāka" in the future.

## What Does Upādāna Mean?

10. Upādāna means "pulling the ārammaṇa closer (in one's mind)" ("upa" + "ādāna," where "upa" means "close" and "ādāna" means "pull").

- Once getting attached (tanhhā) to a ārammaṇa, we do not let it go. The mind "pulls that ārammaña in." First, we start consciously thinking about it and may talk about it. Both those involve vacī sañkhāra (vitakka/vicāra).
- If we get "worked up," we may take bodily actions. We may hug a person we like or hit a person we don't like. Kāya sañkhāra in mind LEAD TO such physical actions. The brain helps carry out actions according to those intentions that arise in mind. See, "Brain - Interface between Mind and Body."
- By the way, mano (or citta) sañkhāra automatically comes to our minds. They involve vedanā/sañ̃̄̄̄. They do not involve conscious thinking (vitakka/vicāra.)
- It is with the "taṇhā paccayā upādāna" step that we start doing "avijjā paccayā sañkhāra" and start a new Paṭicca Samuppāda cycle.
- We will discuss sañkhāra in detail in the next post.

### 10.9.3 Kamma, Sañkhāra, and Abhisañkhāra - What Is "Intention"?

November 23, 2019; revised July 8, 2022; August 27, 2022

## Sañkhāra Create Causes for Future Suffering

1. Pațicca Samuppāda (PS) describes how future suffering arises due to sañkhāra done with avijjā. Intention plays a big role, and it depends on one level of avijj $\bar{a}$.

- The PS cycle starts with "avijjā paccayā sañkhārā" and ends with "jāti paccayā jarā, marana, soka-parideva-dukkha-domanassupāyasā sambhavan'ti." And then it says, "Evametassa kevalassa dukkhakkhandhassa samudayo hoti." or "that is how this whole mass of suffering arises."
- Therefore, the PS cycle generally addresses ALL TYPES of future suffering. That includes bad kamma vipāka DURING a given life and stronger kamma vipāka that lead to future REBIRTHS. In particular, rebirths in the four lowest realms (apayyā) lead to the worst kinds of suffering.
- All these FACTS appear in a long list of short suttā (plural of sutta) in the Anguttara Nikāya (10), starting with the "WebLink: suttacentral: Sādhu Sutta (AN 10.134)" and ending at AN 236 (over one hundred suttā!)
- I have translated several of them to English at, "Anġguttara Nikāya - Suttā on Key Concepts."

## Suffering (and Pleasures) Arise Due to Kamma Vipāka

2. According to those suttā, suffering (dukkha) arises due to the vipāka (results) of akusala kamma or apuñña kamma (simply translated as immoral deeds.)

- In the same way, pleasures (sukha) result from kusala kamma/puñña kamma (simply translated as moral deeds.)
- There is a big difference between kusala kamma and puñ̃̃a kamma. See, "Kilesa - Relationship to Akusala, Kusala, and Puñña Kamma."
- Until then, we may use kusala/puñña and also akusala/apuñña without much distinction. So, at this point, we are just assuming that kusala/puñña kamma are "good" and akusala/apuñña kamma are "bad."
- Even though we loosely translate kusala/akusala kamma as moral/immoral deeds, kammā are done via bodily actions, speech, or thoughts.

## Dasa Akusala - Seeds for Future Suffering

3. At a fundamental level, the Buddha identified three categories of akusala kamma. Those done with bodily actions (kāya kamma) are killing, stealing, sexual misconduct. There are four types of kamma done with speech (vaci kamma.) They are lying, slandering, harsh speech, and gossiping. Finally, three types done with thoughts (mano or citta kamma) are excess greed, excess anger, and wrong views.

- Those ten types of akusala kamma (dasa akusala) in Pāli are: Pānātipāto, adinnādānam், kāmesumicchācāro, musāvādo, pisuṇà vācā, pharusā vācā, samphappalāpo, abhijjhā, byāpādo, micchā diṭthi.
- Those are the ten types of akusala kamma separated into three categories.

## All Types of Kamma Originate In the Mind

4. When we look at the ten types of akusala kamma, we can see why kamma DOES NOT mean JUST bodily actions. The way of THINKING and SPEAKING, contribute to the accumulation of kamma which can bring vipāka in the future.

- It is critically important to understand this point. Some people speak very nice words and even appear to be engaged in "good deeds" but have very bad intentions/mindsets. For example, someone may pretend to speak nicely but could be thinking bad thoughts to him/herself about the person they are talking to. See. "Correct Meaning of Vacī Sañkhāra."
- Going through the motions of good actions/speech DOES NOT count for GENERATING good kammic energy.

The Buddha clarified this point very clearly. In the WebLink: suttacentral: Nibbedhika Sutta (AN 6.63): "Cetanāhain (cetanā aham), bhikkhave, kammaì vadāmi. Cetayitvā kammaí karoti-kāyena vācāya manasā."

That means: "Intention, II tell you, is kamma. One does kamma with intention (in mind)-via body, speech, and thoughts.

- Therefore, kammic ENERGY for ALL ten types of kamma are GENERATED in mind. Stated another way: MIND creates kammic energy associated with all ten types of kamma.
- I cannot emphasize enough the importance of understanding this CRITICAL point.

## Intentions are in Sainkhāra

5. It is cetanā in javana citta that PREPARES kamma viññāna or kamma bija using various types of cetasika. Such kamma viññāna or kamma bīja are PART OF dhammā.

- Some dhammā are just memories. see "Dhammā, Kamma, Sañkhāra, Mind - Critical Connections."

6. What we discussed in \#4 above can be stated in Buddha's terminology. The mind generates three types of sañkhāra: mano, vacī, and kāya sañkhāra. All three types of sañkhāra arise in mind.

- How do those intentions end up as speech and bodily actions?
- It is the brain that "carries out" bodily movements and speech INTENDED in kāya sankkhāra and vacī sañkhāra. The brain gets the body parts to move with the help of the muscles and the nervous system. Speech, similarly, is generated via the movement of the tongue and the muscles in the mouth area.
- Therefore, kāya sañkhāra LEAD to kāya kamma (killing, stealing, sexual misconduct.) Vacī sañkhāra LEAD to vacī kamma (lying, slandering, harsh speech, and gossiping.) Mano (or citta) sañkhāra LEAD to mano (or citta) kamma (excess greed, excess anger, and wrong views.)

## Mind/Physical Body to Pilot/Airplane Analogy

7. The seat of the mind (hadaya vatthu) is where thoughts arise. The hadaya vatthu is part of the manomaya kāya, mental body, or the gandhabba. The hadaya vatthu is in constant contact with the brain.

- In other words, the MIND decides what to do, and the brain carries out those commands. An analogy is how an airplane flies. The pilot decides on where to go, and the onboard computer carries out those commands.
- More details are in "Brain - Interface between Mind and Body."
- Modern scientific evidence on the importance of the hadaya vatthu is only at an early stage. The following quote is from "WebLink: heartmathorg: Exploring the Role of the Heart in Human Performance." "The heart is the most powerful source of electromagnetic energy in the human body, producing the largest rhythmic electromagnetic field of any of the body's organs. The heart's electrical field is about 60 times greater in amplitude than the electrical activity generated by the brain."
- However, hadaya vatthu is NOT the heart. It is in the mental body (gandhabba) but close to the physical heart.

## Not All Sañkhāra Will Have Kammic Consequences

8. Even though Paticca Samuppāda just states, "avijjā paccayā sañkhārā," not all sañkhāra will have kammic consequences. Stated differently: We do not act with avijjā all the time.

- For example, ANY bodily movement involves kāya sañkhāra. If one's mind decides to stand up, the brain gets that done by moving leg muscles. That does not have any kammic energy to bring future $v i p a ̄ k a$. Therefore, not all bodily actions have kammic consequences.
- Sañkhāra with kammic consequences are "strong sañkhāra" or "abhisañkhāra." Let us discuss that in detail first.

## Good or Bad Cetasika Responsible for "Intention" - Cetanā Is in Every Citta

9. If you swing your arm, that is a kaya kammā because that action involves moving a body part. That action was initiated by kāya sañkhāra generated in mind. But that does not have kammic consequences (except for the movement of the arm.)

- Now, if you swung your arm to get hold of a cup, that is also a kammically neutral action (kammā) or just a sañkhāra. You did not do either a moral or immoral act. The intention was to grab a cup, which
did not involve any sobhana or asobhana cetasika. That action is a kiriya (kriyā in Sanskrit or zoss in Sinhala).
- On the other hand, if you swung your arm to hit someone, it was done with anger. So, the dosa cetasika (an asobhana cetasika) was in your thoughts. Thus, it was an apuñ̃ǟ̄hisañkhāra (apuñña abhisañkhāra). That apuññābhisañkhāra in the mind led to an akusala/apuñ̃̃a kammā or an immoral deed.
- If you put your arms together to pay respects to the Buddha, it is a puññābhisañkhāra (puñña abhisañkhāra.) The saddhā cetasika (a sobhana cetasika) is in the mind. We can also call it a kusala/puñña kammā or a moral deed.
- Therefore, "good or bad" cetasika (mental factors) are the ones that bring intention to thoughts. The cetan $\bar{a}$ cetasika is in ALL thoughts. The cetana cetasika just incorporates the other relevant "good or bad" cetasika to a given thought to convey the "intention."

## Assāsa Passāsa (Breathing) Is Kāya Sañkhāra

10. The very basic $k \bar{a} y a$ sankkhāra are involved in breathing. It is also the most IMPORTANT $k \bar{a} y a$ sañkhāra since we cannot live without breathing.

- Any type of sañkhāra involves cetanā and thus sañkhāra involves citta vīthi. It does not seem like we breathe intentionally. That is because no javana citta are present in such citta vithi associated with breathing. They are parittārammaṇa citta vīthi. That means they are "weak."
- Of course, breathing has no kammic consequences. It is a "bodily action," but a critically important one.

## Apuñ̃̄ābhi saǹkhāra, Puñ̃̄ābhi sañkhāra, and Āneñjābhisañkhāra

11. We introduced two new words above that are relevant in generating kammic energy: apuñ̃̄ābhisañkhāra and puññābhisaṅkhāra. Here, apuññābhi sañkhāra lead to akusala (or apuñña or immoral) kamma. Good, moral deeds, speech, or thoughts with kammic energy involve puñ̃̄ābhisañkhāra.

- There is a third type of abhisañkhāra: āneñjābhisañkhāra (āneñja abhisañkhāra). These types of sañkhāra are in the minds of those who cultivate arūpāvacara jhāna, the highest four jhāna.
- Apuñ̃ābhisañkhāra lead to rebirth in the apāyā. These, of course, lead to akusala kamma.
- Puññābhisañkhāra leads to rebirth in the human, deva, and rūpāvacara Brahma realms. Puñña kamma is done with such puññābhisañkhāra. Note that cultivating rūpāvacara jhāna is a puñña kamma.
- Āneñjābhisañkhāra leads to rebirths in the arūpāvacara Brahma realms.

## Saǹkhāra in Paṭicca Samuppāda Are Abhisañkhāra

12. Even though the first step in Pațicca Samuppāda is simply, "avijjā paccayā sañkhārā̈," it refers to abhisañkhārā.

WebLink: suttacentral: Paticcasamuppāda Vibhanga, explains the term "avijjā paccayā sañkhārā" in akusala-mūla Paticca Samuppāda (that leads to suffering) as follows: "Tattha katame avijjā paccayā sañkhārā? Puñn̄ābhisañkhāro, apuñn̄ābhisañkhāro, āneñjābhisañkhāro, kāyasañkhāro, vacīsañkhāro, cittasañkhāro."

Translated: "What is avijjā paccayā sañkhārā? Puññābhisañkhāra, apuñ̃ābhisañkhāra, āneñjābhisañkhāra, kāyasañkhāra, vacīsañkhāra, cittasañkhāra." (here, citta sañkhāra is the same as mano sañkhāra).

- Those are all abhisaṅkhāra, even though the verse is simplified as "avijjā paccayā sañkhārāa."
- Two categories of sañkhāra are mentioned there. One category refers to types of kamma accrued (Puñ̃ābhisañkhāra, apuññābhisañkhāra, āneñjābhisañkhāra.)
- The other category points out the three modes: body, speech, or mind (kāya sañkhāra, vacī sañkhāra, citta sañkhāra, or mano sañkhāra).
- This is clarified in several suttā as well. for example, WebLink: suttacentral: Sañgīti Sutta (DN 33): "Tayo sañkhārā-puñnābhisañkhāro, apuññābhisaṅkhāro, āneñjābhisaǹkhāro."

13. Therefore, the word sañkhāra can have different meanings in different contexts. That is why sañkhāra SHOULD NOT be translated as just "mental formations."

- I hope you can see that translating sañkhāra as just "mental formations" does not provide much insight. Once one understands the basic concepts discussed above, it will be easier to see the real meaning of different types of sañkhāra.
- We will discuss kāya, vacī, and mano sañkhāra in detail in the next post. Then the critical connection of vitakka/vicāra with vacī sañkhāra will become clear.
- Also, see "Complexity of the Mind - Viññāna and Sanikhāra" and "Kamma are Done with Sañkhāra Types of Sañkhāra."

All posts at "Origin of Life."

### 10.9.4 Vacī Sañkhāra - Sañkappa (Conscious Thoughts) and Vācā (Speech)

November 30, 2019; December 1, 2019 (new \#14 also added); July 17, 2021; September 10, 2022 (esp. \#11)

## Introduction

1. Vacī Sañkhāra is looking into a ārammaṇa deeper (vitakka), and, in detail (vicāra). We introduced that in a previous post but will discuss it in more detail here.

- Vācā is, of course, speech. Sañkappa has been translated as "thoughts or intention." Here, we will see that sañkappa means "thoughts with intention." We will also discuss how vacī sañkhāra relates to both $v \bar{c} c \bar{a}$ and sañkappa.
- The first four steps in the Noble Eightfold Path are Sammā Ditṭhi, Sammā Sañkappa, Sammā Vācā, and Sammā Kammanta. One's thoughts depend on one's views, and one's speech and actions depend on how one thinks. This is why Sammā Ditt thi comes first and why "having correct views" about the nature of this world is at the forefront.

2. There are various types of sañkhāra. In the previous post, we discussed categorizing sañkhāra in two different ways.

- Three types depending on whether they lead to bodily actions, speech, or thoughts: kāyasañkhāra, vacīsañkhāra, and cittasañkhāra.
- There are three more types according to future vipāka: Puñ̃̃ābhisañkhāra, apuññābhisañkhāra, āneñjābhisañkhāra. These are discussed at \#14 below.
- Let us first review the first category briefly and then focus on vacī sañkhāra. I explained kāya and citta (or mano) sañkhāra in recent posts.

## Three Types of Sañkhāra Responsible for Actions, Speech, and Thoughts

3. There are succinct statements in the WebLink: suttacentral: Cūlavedalla Sutta (MN 44) on the types of sañkhāra generated in mind:
"Tayome, āvuso visäkha, sañkhārā-kāyasañkhāro, vacīsañkhāro, cittasañkhāro"ti.

- There are three types of saǹkhāra - kāya sañkhāra, vacī sañkhāra, citta sañkhāra.
"Katamo panāyye, kāyasañkhāro, katamo vacīsañkhāro, katamo cittasañkhāro"ti?
- What are kāya sañkhāra, What are vacī sañkhāra, What are citta sañkhāra (or mano sañkhāra)?
"Assāsapassāsā kho, āvuso visākha, kāyasan̉khāro, vitakkavicārā vacīsañkhāro, sañn̄a ca vedanā ca cittasañkhāro"ti.
- Assāsa passāsā are kāya sañkhāra, vitakka vicāra are vacī sañkhāra, saññā and vedanā constitute citta sañkhāra.
"Kasmā panāyye, assāsapassāsā kāyasañkhāro, kasmā vitakkavicārā vacīsañkhāro, kasmā sañn̄a ca vedanā ca cittasañkhāro" "ti?
- Why are the three types of sañkhāra categorized in that way?
"Assāsapassāsā kho, $\bar{a} v u s o ~ v i s a ̄ k h a, ~ k a ̄ y i k \bar{a} ~ e t e ~ d h a m m a ̄ ~ k \bar{a} y a p p a t ̣ i b a d d h a ̄, ~ t a s m a ̄ ~ a s s a ̄ s a p a s s a ̄ s a ̄ ~$ kāyasañkhāro. Pubbe kho, āvuso visākha, vitakketvā vicāretvā pacchā vācaì bhindati, tasmā vitakkavicārā vacīsañkhāro. Saññ̄ ca vedanā ca cetasikā ete dhammā cittappaṭibaddhā, tasmā saññā ca vedanā ca cittasañkhāro"ti.
- Assāsa passāsā (breathing in and out) is associated with the body (movements). Thus, assāsa passāsa is kāya sañkhāra.
- Vitakkalvicāra arise before speech "breaks out." Therefore, vitakka/vicāra are vacī sañkhāra.
- Sañ̃̄̄̄ and vedanā are associated with any citta. Thus, saññā/vedanā are citta sañkhāra.

## No Kammic Consequences for Citta (Mano) Sañkhāra

4. Citta (mano) sañkhāra does not have strong kammic consequences that can result in rebirth. As mentioned above in \#3, they encompass vedan $\bar{a}$ and sañña $\bar{a}$, which are in ALL citta. Therefore, even vipāka cittā have citta (mano) sañkhāra.

- As we discussed in the post, "Amazingly Fast Time Evolution of a Thought (Citta)," any thought goes through nine stages within a billionth of a second. The early stages are citta and mano. Those two stages already have vedanā and sañña.
- Bad (asobhana) or good (sobhana) mental factors (cetasika) are incorporated into thought only in the latter stages of that nine-step process. Furthermore, such cetasika involve in those latter stages ONLY IF there is an attachment ( $\tanh \bar{a}$ ) and one is consciously thinking about a ārammana.
- The six steps described in the Chachakka Sutta happen within a split second. There is no time to "think" and thus there cannot be any vacī or kāya sañkhāra. See \#6 below.

## Vacī or kāya sañkhāra Can Lead to Abhisañkhāra

5. Vacī or kāya sañkhāra MAY ALSO lead to actions that do not have kammic consequences. Such "harmless" vacī or kāya sañkhāra cannot become abhisañkhāra that can bring future vipāka, including rebirths.

- Breathing or walking to the kitchen to get a glass of water involves such "harmless" kāya sañkhāra. Thinking about what needs to be done at work tomorrow or talking to the spouse about dinner plans involves such vacī sañkhāra.
- Other $k \bar{a} y a$ and vacī sañkhāra lead to actions and speech that have kammic consequences. Those lead to abhisañkhāra. Such abhisañkhāra "prepare or give rise to" sañkhata. Thus, sañkhata are entities
that are "prepared" via sañkhāra or "arise" due to sañkhāra. Paṭicca Samuppāda describes that process and we will get to it.

## No Vacī or Kāya Sañkhāra Involved in Initial Sensory Experience

6. Some thoughts that have gone through the nine stages do not involve conscious thinking. Thus, no vacī or kāya sañkhāra are possible in such thoughts. Those are the vipāka citta described in the Chachakka Sutta (MN 148.)

- As discussed in the recent posts, the six steps in the Chachakka Sutta take place due to kamma $v i p a \bar{k} a$. During that vipāka stage, first, one of the six types of viññāna experienced. They all are vipāka viññanna. They are cakkhu, sota, ghāna, jivhā, kāya, and mano viññāna. The last step is "vedanā paccayā tanh $\bar{a}$."
- In all those six steps, one does not get to think. They happen automatically. It is important to realize that one consciously generates vacī or kāya sañkhāra with sobhana or asobhana cetasika. Only mano sañkhāra (without kammic consequences) is generated in those six steps.

## Paṭicca Samuppāda Starts With "Salāyatana Paccayā Phassa"

7. As we discussed in previous posts, the Paticca Samuppāda cycle starts not with "avijjā paccayā sañkhāra," but with "salāyatana paccayā phassa." This is why we spent a lot of time discussing the Chachakka Sutta (MN 148.) It may be a good idea to review those posts.

- There has to be a ārammaṇa strong enough to generate interest. For example, seeing an attractive/repulsive figure, tasting something tasty/bitter, hearing a soothing/loud noise, etc.

8. Such vipāka viññāna come about via, "cakkhuñca paticca rūpe ca uppajjati cakkhuviññaṇàm" through "mānañca paṭicca dhamme ca uppajjati manoviñ̃ñanaì" per Chachakka Sutta. We discussed in a previous post that those steps are equivalent to "salāyatana paccayā phasso, phassa paccay $\bar{a}$ vedanā, vedanā paccayā taṇhā" steps in Paṭicca Samuppāda. See, "Paticca Samuppāda - A "Self" Exists Due to Avijjā."

- In other words, during the vipāka stage, "avijjā paccayā sañkhāra" followed by "sañkhāra paccayā viññāna" DOES NOT take place, as we can see.
- After getting to "vedanā paccayā tanh $\bar{a}$ " with the initial sensory event on a new $\bar{a} r a m m a n a$, the next step in the Paticca Samuppāda cycle starts. The next step is "tanhhā paccayā upādāna." That is when kamma viññāna arises because we start acting with avijjā.
- Let us see how vacī and kāya sañkhāra arise once one gets attached and gets "stuck" in a ārammaṇa (tanhā.) That is the beginning of a complex process involved in the "taṇhā paccayā upādāna" step.

## Vitakka/Vicāra Initiate Abhisañkhāra

9. When one is "stuck" with a particular ārammaṇa, one starts CONSCIOUSLY thinking about it. That involves vitakka and vicāra mental factors (cetasika.) That means one starts "looking into that ārammaña deeper (vitakka), and, in detail (vicāra).

- We can get an idea with the following example. Suppose we go to a showroom to buy a car. If we get interested in a certain car, we scrutinize it. We ask questions from the salesman and get more information about that car. In the same way, when we get interested in any ārammana, we start thinking about different aspects of it.
- In particular, when we like a given ārammana (that car could be one), we start imagining how nice it would be to have it parked on the driveway and how the neighbors may be impressed by it. We often start "daydreaming" about how we will enjoy it. Those are all vacī sañkhāra with vitakka and vicāra.
- Of course, we may also start talking about how good it is. Speaking out also involves vitakka/vicāra.
- If any of those thoughts involve "bad" (asobhana) cetasika (like greed), then such conscious thoughts become vacī abhisañkhāra.

10. If we get interested in a ārammaṇa, we may take action too. We may go to other showrooms to look at similar models and compare prices. We may search the internet for other car dealers in the area, etc.

- Such actions involve moving body parts. As we will see below, kāya sañkhāra lead to those actions.
- If those thoughts involve "bad" (asobhana) cetasika, then such kāya sañkhāra becomes kāya abhisañkhāra.
- More information at, "Vitakka, Vicāra, Savitakka, Savicāra, and Avitakka, Avicāra." I recommend reading that post to get further details and Tipitaka references.

## Sañkappa Means Thinking and Thus Vac̄̄ Sañkhāra

11. Mahācattārīsaka Sutta (MN 117): "Katamo ca, bhikkhave, sammāsañkappo ariyo anāsavo lokuttaro maggañgo? Yo kho, bhikkhave, ariyacittassa anāsavacittassa ariyamaggasamañgino ariyamaggaim bhāvayato takko vitakko sañkappo appana $\bar{a}$ (fixing of thought on an object) byappan $\bar{a}$ cetaso abhiniropanā (application) vacīsañkhāro-ayaì, bhikkhave, sammāsañkappo ariyo anāsavo lokuttaro maggañgo. "

Translated: "What, bhikkhus, is sammā sañkappa that is noble, blameless, supramundane, a factor of the noble path? The thinking, re-thinking, Noble thoughts devoid of āsava - in one whose mind is noble, whose mind is devoid of $\bar{a} s a v a$ (anāsavo), who is on the noble path. That is samma sankappa that is noble and a factor of the path.

- Thus, it is obvious that Sammā Sañkappa means generating thoughts focused on making progress on the Path.
- They are "Noble vacī sañkhāra" with the comprehension of anicca, dukkha, anatta and thus focused on Nibbāna.
- By the way, such sañkhāra arise in the "Kusala-Mūla Paticca Samuppāda" starting with "kusala-mūla paccayā sañkhāra." Note the difference from the Akusala-Mūla Paticca Samuppāda that starts with "avijjā paccayā sañkhāra." We will discuss the Kusala-Mūla Paṭicca Samuppāda in the future in this series. It is discussed in the Paṭicca Samuppāda section, "Kusala-Mūla Paticca Samuppāda."

## Not All Sañkhārā̄ Are Due to Avijjā (and Taṇhā)

12. Now we can see how one starts doing sankh $\bar{a} r \boldsymbol{a}$ due to avijja only IF one is attached via taṇh $\bar{a}$. That is the beginning of a Paṭicca Samuppāda cycle: "avijjā paccayā sañkhārā."

- However, not all sañkhāra create kamma viñ̃āṇa that can bring good or bad kamma vipāka. For example, one may get thirsty (due to a a rammana, too) and decide to go to the kitchen to get a glass of water. Walking to the kitchen involves kāya sañkhāra (to get the body to move.) But that intention is neither good nor bad. It is kammically neutral. It was not due to avijj $\bar{a}$.
- All bodily activities, including breathing, are done with kāya sañkhāra. But "avijjā paccayā sañkhārā" comes into play ONLY IF bad or defiled intentions are in mind. There is no avijj $\bar{a}$ or taṇha involved in breathing or the activities mentioned above (thus they DO NOT lead to abhisañkhāra).

## Apuñ̃a Abhisañkhārā Done with Avijjā (and Taṇhā)

13. Now, let us consider the actions of a thief. A person is waiting to see a doctor and sees someone has dropped a wallet. The moment he sees the wallet, his mind attaches to it (tanhh $\bar{a}$ ). Then he thinks there could
be some money in the wallet and an easy way to get some "free money." Those conscious thoughts are vaci sañkhāra. Then he picks it up and puts it in his pocket. That last step involves kāya sañkhāra.

- Here he did bodily actions with kāya sañkhāra. He did that because he did not realize the future bad consequences of stealing. Thus "avijjā paccayā sañkhārā" generated bad thoughts of picking up the wallet AND putting it in his pocket.
- While he was doing that he had "bad sañkhāra" (with bad cetanā) in his mind. The cetanā (intention) was to steal. Such bad sañkhāra are apuñña abhisañkhāra. Both vacī and kāya sañkhāra, in this example, were apuñ̃̃a abhisañkhāra.

## Puñña Abhisañkhārā Also Done with Avijjā (and Taṇhā)

14. In the previous post, "Kamma, Sañkhāra, and Abhisañkhāra" (under \#12) I pointed out briefly that puññābhisañkhāra and āneñjābhisañkhāra are also done with avijjā.
 akusala-mula Paticca Samuppāda (that leads to suffering) as follows: "Tattha katame avijj $\bar{a}$ paccayā sañkhārā? Puññābhisañkhāro, apuñnābhisañkhāro, āneñjābhisañkhāro, kāyasañkhāro, vacīsañkhāro, cittasañkhāro."

Translated: "What is avijjā paccaȳ̄ sañkhārā? Puñ̃̃ābhisañkhāra, apuññābhisañkhāra, āneñjābhisaǹkhāra, kāyasañkhāra, vacīsañkhāra, cittasañkhāra." (here, citta sañkhāra is the same as mano sañkhāra). It is quite clear that apuñ̃āāhisañkhāra are due to avijjā. But why are the other two are said to be done due to $a v i j j a \bar{a}$ ?

- Puñ̃̃ābhisañkhāra are, of course, Moral and good deeds AND also the cultivation of rūpāvacara jhāna.
- Āneñjäbhisaǹkhāra involve cultivating arūpāvacara samāpatti.
- When a person who has not comprehended anicca, dukkha, or anatta engages in those two types of "good sañkhāra," they are still done with avijjā! That is because one has not yet grasped the dangers in remaining in the rebirth process.
- To get the basic idea, let us briefly consider the following example.

15. Now let us consider the same scenario of \#13 above with another average human. But this person has good, moral gati. He is always trying to do moral things and tries to abstain from doing immoral things.

- This person will pick up the wallet and take it to the receptionist. The person who dropped the wallet may come back looking for it. It is possible that the wallet had not only his driver's license but possibly credit cards and money. So, our good samaritan saved a lot of stress and work for the wallet owner.
- That is an example of a puñña abhisañkhāra. But if it is an abhisañkhāra, done via "avijjā paccayā sañkhārā." Is that not a contradiction since he did a "good deed"?
- To answer that question we need to understand the difference between the mundane eightfold path and the Noble Eightfold Path.

## Two Eightfold Paths - Mundane Eightfold Path and the Noble Eightfold Path

16. The Buddha said that there are two eightfold paths (Mahācattārīsaka Sutta, MN 117). One is the mundane path, where one does good deeds without the comprehension of the "real nature of this world (yathābhūta ñāna)." One gets to the mundane path by first getting rid of the ten types of micch $\bar{a}$ ditthi. I have discussed the two paths in the post, "What is Unique in Buddha Dhamma?"

- Once one gets rid of the ten types of micchā ditthi, another critical step involves getting to the Noble Eightfold Path. One must learn the "real nature of this world" or the anicca, dukkha, and
anatta nature from a Noble person who learned that from a Noble person. That lineage goes back all the way to the Buddha. See, "Four Conditions for Attaining Sotāpanna Magga/Phala."
- Only a Buddha can discover the anicca, dukkha, and anatta nature by himself. All others need to learn that from a Noble person (Ariy $\bar{a}$.) That is why most people are only exposed to the mundane eightfold path.
- We will discuss the anicca, dukkha, and anatta nature in upcoming posts once we finish going through the steps in Paṭicca Samuppāda. Of course, it has been discussed in the sub-section, "Anicca, Dukkha, Anatta." The current "Origin of Life" series attempts to get there systematically.

### 10.9.5 Taṇhā Paccayā Upādāna - Critical Step in Paṭicca Samuppāda

## December 7, 2019;revised December 10, 2019; October 14, 2020; October 9, 2022

"Taṇhā paccayā upādāna" is a critical step in Paṭicca Samuppāda (PS). That is where we can take CONTROL of the PS process.

## We Do Have Control Over Our Destiny

1. We started this series by discussing the Chachakka Sutta. That sutta describes the initial events that trigger the PS process. As we saw, "salāyatana paccayā phassa" step is where a new PS cycle gets started. See "Buddhist Worldview - Introduction."

- A mind does not arbitrarily start generating sañkhāra (corrupt or immoral thoughts) due to avijjā. That is why I say that a PS cycle does not begin with "avijjā paccayā sañkhāra." See the previous post, "Vacī Sañkhāra - Sañkappa (Conscious Thoughts) and Vācā (Speech)."
- Our focus is on the types of abhisañkhāra that can bring "bad kamma vipāka" in the future. Therefore, we are discussing the "akusala-mūla PS."

## Paṭicca Samuppāda Initiated by "Saḷāyatana Paccayā Phassa"

2. First, there must be a reason for a mind to generate abhisañkhāra (evil or immoral thoughts.) The Buddha pointed out that there are three primary reasons: lobha (greed), dosa (hate or anger), and moha (not knowing about kamma/vipāka and rebirth at the base level and not realizing the anicca, dukkha, anatta nature at a deeper level.)

- One MUST be tempted by greed or anger to do such bad kamma. That happens ONLY IF there is a STRONG sensory input coming through one of the six senses. For example, one generates angry thoughts if one sees an enemy. One may think about stealing only if one sees a valuable item and generates greed.
- That is why "salāyatana paccaya phassa" is the step that INITIATES kamma generation via the PS cycle. Salāyatana means the six internal ayatana or the six sense faculties (eyes, ears, nose, tongue, body, and mind.)

3. The "saḷāyatana paccayā phassa" combines two steps. For seeing, "Cakkhuñca paṭicca rūpe ca uppajjati cakkhu viññānaì, tiṇ̣à் sañgati phasso." Here, "sañgati phasso" is "say gati phasso" or "making contact with corresponding gati to accumulate "say."

Then the mind quickly goes through the "(sam)phassa paccayā vedan $\bar{a}$ " and "vedana $\bar{a}$ paccay $\bar{a}$ tanhh $\bar{a}$ " steps to end up with "tanh $\vec{a}$ " or "attachment to that $\bar{a} r a m m a n ̣ a " ~ i n ~ a ~ s p l i t-s e c o n d!~ W e ~ C A N N O T ~ s t o p ~$ those steps. They are automatic. They can take place as long as we have "gati to attach to that type of ārammana."

- We discussed that at length in several posts in discussing the Chachakka Sutta. See, "Is There a "Self"?"
- Removing tanh $\bar{a}$ involves controlling the next step in PS: "tanhhā paccayā upādāna." That is what we will focus on now.

## Difference Between Moha and Avijjā

4. Once one gets "attached" to a ārammaṇa, one is CAPABLE of doing akusala kamma (immoral deeds.) Some people are unaware that immoral acts (bad kamma) can lead to unpleasant vipāka in the future. Some bad kamma can lead to suffering-filled rebirths in $a p \bar{a} y \bar{a}$. That is the base level of moha, where one is morally blind. Someone with moha could do such immoral deeds without any remorse. See, "Lobha, Dosa, Moha versus Rāga, Patigha, Avijijā."

- Moha is reduced to the avijija level when one gets rid of the ten types of micchädiṭhi. Even at the lower level of avijjā, one is still CAPABLE of doing such "apāyagāmi actions" if the sensory input is strong enough. One could live a "moral life" most of the time but take a large bribe or engage in sexual misconduct if the ārammaña is strong enough. For example, one may not have taken a bribe for most of their life but be tempted "if the price is high enough."
- Even after one attains the Sotāpanna stage, one may still do some akusala kamma, but one's mind WILL NOT allow doing any "apāyagāmi deeds."
- We are now focusing on understanding how an average "moral person" accumulates bad kamma, starting at the "salāyatana paccayā phassa" step in Akusala-Mūla PS. A "moral person" has removed the ten types of micch $\bar{a}$ diṭthi but has not yet comprehended Tilakkhaṇa (anicca, dukkha, and anatta.)

## A "Moral Person" May Be Tempted to Do Apāyagāmī Deeds

5. Such a "moral person" has reduced moha to the avijjā level, but still is capable of doing "apāyagāmi" deeds. Even though they mainly act morally, they have "hidden defilements" (anusaya.) Those anusaya can come to the surface (as $\bar{a} s a v a$, ) if triggered by a tempting sensory input. That is what we discussed in \#3.

- Anusaya means "sleeping defilements." They can be "awakened" by a robust sensory input (ārammana) and brought up to the mind as "āsava." See, "Āsava, Anusaya, and Gati (Gathi)."
- Anusaya is like gunpowder in a matchstick. Striking that match on a rough surface will produce light. In the same way, when a defiled mind (with avijjā) comes into contact (phassa, or more accurately samphassa) with a strong ārammaña (say an attractive person), that could make greed or desire (āsava) come to the mind.
- Having such an anusaya is the same as having "bad gati." As one reduces anusaya (following the Eightfold Path), one's undesirable gati will also decrease. As we will see, gradually decreasing upādāna by being mindful is the key.

## Tanh $\bar{a}$ Is There As Long as One Has Bad Gati and $\bar{A} s a v a$

6. The critical point in the Chachakka Sutta is the following. One MAY get attached (tanhā) to a given $\bar{a} r a m m a n ̣ a ~ a s ~ l o n g ~ a s ~ o n e ~ h a s ~ " d e f i l e d ~ g a t i " ~ o r ~ t h e ~ s e v e n ~ t y p e s ~ o f ~ a n u s a y a: ~ d i t ̣ t h a ̄ n u s a y a ~(w r o n g ~ v i e w s), ~$ vicikicchānusaya (tendency to do the unwise), kāmarāga anusaya (temptation for sense pleasures), paṭigha anusaya (temptation for hatred), bhavarāga anusaya (craving for existence), māna anusaya (sense of "me"), and avijjā anusaya (ignorance); see, for example, "WebLink: suttacentral: Dutiva Anusaya Sutta (AN 7.12)."

- They all have greed, anger, and ignorance (of the Four Noble Truths) as their origins. See "Conditions for the Four Stages of Nibbāna."
 one acts unwisely (ayoniso manasikāra), one will go through the "tanhhā paccayā upādāna" step in PS and will start accumulate NEW kamma via "avijjā paccayā sañkhāra."
- Therefore, the key to Nibbāna is to stop the tendency to move automatically from taṇhā to upādāna. We will see that this is equivalent to removing gati, anusaya (and thereby āsava or cravings.)

## Connection to the Eightfold Path, Satipatṭhāna, Ānāpānasati

7. The key to getting to Nibbāna is to understand what happens in the "taṇhā paccayā upādāna" step. That is the first step after the last step, "vedanā paccay $\bar{a}$ taṇh $\bar{a}$ " discussed in the Cha Chakka Sutta.
" As we saw above, as long as one has "defiled gati" or $\bar{a} s a v a$, one WILL have tanh $\bar{a}$. The way to reduce and eventually remove $\tanh \bar{a} \bar{a}$ is to reduce and eliminate one's bad gati.

- We cannot remove taṇhā by sheer willpower. But we can control the "taṇhā paccayā upādāna" step by stopping vaci sañkhāra as they start arising. That is because we start "talking to ourselves" only when we get to the upādāna" stage. See "Difference Between Tanhā and Upādāna."
- Thus, as soon as we become aware that the mind has turned to a "defiled state," we need to change from that "wrong or immoral path" (micchā ditṭhi, micchā sañkappa, micchā vācā, micchā kammaṃta, micch $\bar{a}$ ajiva, micch $\bar{a}$ v $\bar{y} y \bar{a} m a$, micch $\bar{a}$ sati, and micch $\bar{a}$ samādhi) to the "moral path" and specifically to the Noble Path (sammā ditṭhi, sammā sañkappa, sammā vācā, sammā kammaṃta, sammā ajiva, sammā vāyāma, sammā sati, and sammā samādhi.)

8. Being mindful of such "bad ārammana" is Satipatṭhāna $=$ "sati" + "patṭhāna" (to establish) or "being mindful."

- Forcefully getting rid any of micchā ditṭhi, micchā sañkappa, micch $\bar{a} v \bar{a} c \bar{a}$, micch $\bar{a}$ kammaṃta, micchā ajiva, micchā vāyāma, micchā sati, and micchā samādhi is the "āpāna" (dispell) part of Ānāpānasati.
- Forcefully strengthening relevant factors of sammā ditthi, sammā sañkappa, sammā vācā, samm $\bar{a}$ kammaṃta, sammā ajiva, sammā vāyāma, sammā sati, and sammā samādhi is the "āna" (take in) part of Ānāpānasati.
- Now we can see that $\bar{A} n \bar{n} p \bar{a} n a s a t i$ is to focus the mind (sati) on "āna" and "āpāna" or "ānāpāna."

## VacīSañkhāra Responsible for Upādāna

9. When one gets "attached" or "gets stuck" in a $\bar{a} r a m m a n ̣ a ~ d u e ~ t o ~ t a n h h a ̄, ~ t h e ~ F I R S T ~ T H I N G ~ t h a t ~ h a p p e n s ~$ is that DEFILED thoughts arise in one's mind AUTOMATICALLY. Those are mano (or citta) sañkhāra.

- For example, if one sees a beautiful person, one may generate lustfil thoughts automatically. If one sees one's arch-enemy, one may create angry thoughts, etc. Such defiled arise due to "hidden defilements" (anusaya) or "bad gati."
- However, within moments, we become aware of such thoughts. Many of us continue to generate similar defiled thoughts CONSCIOUSLY at that stage. As soon as we become aware of such thoughts, they are now vacī sañkhāra.

10. We start analyzing that ārammana in various ways (vitakka/vicāra.) We may also start speaking about it. Both types are vaci sañkhāra. We have discussed that in detail in several posts. See "Vacī Sañkhāra Sañkappa (Conscious Thoughts) and Vācā (Speech)", "Difference Between Tanhā and Upādāna" and "Vitakka, Vicāra, Savitakka, Savicāra, and Avitakka, Avicāra."

- With vitakka/vicāra (vacī sañkhāra), our interest in that ārammana will get stronger. Then we may take physical actions involving kāya sañkhāra.
- By the way, vacī sañkhāra (talking to oneself without speaking) is the same as sañkappa. Vacī sañkhāra also leads to speech ( $v \bar{a} c \bar{a})$ as we discussed before.
- Of course, kāya sañkhāra leads to bodily actions.

11. The following is the time sequence:

- Mano (citta) sañkhāra arise first (and automatically) and do not involve conscious thinking. They DO NOT have strong kammic consequences.
- We start accumulating new kamma by generating vacī and kāya sañkhāra. Vacī sañkhāra lead to micchā sañkappa and micchā vācā. Kāya sañkhāra leads to micchā kammanta.

## Avijjā Is the Ignorance of Bad Consequences of Tanhhā/Upādāna

12. What we discussed above in \#7 through \#11 are all associated with the "taṇhā paccayā upādāna" step in PS. When the mind automatically "attaches to a ārammaṇa" (tanhhā), it starts generating sañkhāra via "avijjā paccayā (abhi)sañkhāra." That is how new PS processes start accumulating new kamma.

- If one does not realize the harmful consequences of getting attached via greed, anger, or ignorance, that means one is acting with avijja AT THAT TIME.
- It is critical to note that any "given person" does not always act with avijjā. Whether one will start thinking and acting with avijjä depends on the nature of the arammana (whether it matches his/her gati) and how strong the ärammaṇa is.
- If one does get "attached" or "get stuck" with a ārammaṇa, then one will start "pulling it closer." One wants to think and speak about the $\bar{a} r a m m a n a$ and take action.
- Upādāna means "pulling it closer (in one's mind)" ("upa" + "ādāna," where "upa" means "close" and "ādāna" means "pull").

13. That is how the "taṇhā paccayā upādāna" step starts a new PS cycle with "avijijā paccayā saǹkhāra."

- One will start generating vacī sañkhāra without speaking first. Those are micchā sañkappa. For example, upon seeing an enemy $(\mathrm{Y})$, person X may generate evil thoughts about Y .
- If emotions become stronger, X may speak out. In the above example, X may say something harsh to Y . Those are micchā vācā.
- If Y responds in kind and the situation escalates, X may hit that person. That is a micch $\bar{a}$ kammanta.That action was initiated by kāya sañkhāra.
- All such vacī and kāya sañkhāra arise via "avijjā paccayā sañkhāra."

## Paṭicca Samuppāda May Not Proceed Linearly

14. Now we can see how complicated the "taṇhā paccayā upādāna" step is. It went back to the "avijjā paccayā sañkhāra" step to initiate a new PS cycle.

- Now, those vacī sañkhārā and kāya sañkhārā lead to kamma viñnāṇa, via "sañkhāra paccayā viññāna" (and the rest of the PS cycle ending in "the whole mass of suffering.") That whole process may repeatedly run as long as one remains engaged with that ārammana.
- Such kamma viññāna are focused on hurting that person in the example of \#13. That viññāna, in turn, leads to more vacī and kāya sañkhāra via "viññāna paccayā sañkhāra." Note that this is the reverse of "sañkhāra paccayā viññāṇa."
- Therefore, PS steps do not necessarily go just one way. They can go backward. They can jump to different places in the cycle. As we saw, it jumped from the "taṇhā paccayā upādāna" step to the "avijjā paccayā sañkhāra" step.
- However, one can figure out such complexities when one understands the basic concepts.

## Connection to $\bar{A} n \bar{a} p \bar{a} n a s a t i ~ a n d ~ S a t i p a t t h \bar{a} n a$

15. That is also why it is CRITICAL to stop the vacī sañkhāra that arise immediately following the mano sañkhāra. In that initial stage, speech has not "broken out yet." We just become aware that we are generating lustful/hateful thoughts.

- We MUST stop vacī sañkhāra as they start arising. Then they will not lead to "bad speech" (via more vacī sañkhāra) or "bad actions" (via kāya sañkhāra.) This is discussed in the "WebLink: suttacentral: Vitakkasanthāna Sutta (MN 20)."
- That is the key to doing the correct Ānāpānasati bhāvanā and Satipațthāna bhāvanā! See " $\underline{\text { a }}$. Ānāpānasati Bhāvanā (Introduction)."
- We will discuss that and more steps in PS in the upcoming posts.

## Moha/Avijjā and Vipāka Viññāṇa/Kamma Viññ̄āna

## December 14, 2019; revised December 15, 2019

## Summary of Discussion Up To Now

1. In the subsection on "Worldview of the Buddha," we are discussing how the Buddha explained the sensory experience. More importantly, the Buddha taught how a "living being" generates kammic energies for future existences (bhava) based on "attachment" (tanhā) to a given sensory experience. As we have discussed, "attachment" can happen due to greed, hate, or an unwise mindset.

- First, we discussed how a sensory event starts when a ārammaña (sight, sound, smell, taste, touch, dhamm $\bar{a}$ ) comes to the mind when one of the six senses (internal $\bar{a} y$ atana) comes into contact with an external $\bar{a} y a t a n a$. Becoming aware of sensory input is one of the six types of vipāka viññāna: "cakkhu viññāna, sota viññāna, ghāna viññāna, jivhā viññanna, kāya viññāna, mano viññāṇa." [Indriya (sense faculty) and $\bar{a} y a t a n a$ (defiled sense faculty) have totally different meanings. For example, eyes are indriya when we just happen to see things, but they BECOME āyatana when they are used for pleasure, i.e., to deliberately look at sensual things to enjoy them.]
- Those six types of viññāna, including mano viññāna, are vipāka viññạ̄̄a. They DO NOT generate kammic energy. They are "experiences."

2. Then, one MAY "attach to" or "get stuck in" that sensory experience INSTANTLY. That means generating tanhha. Then the "taṇhā paccayā upādāna" step automatically follows. That is a step in the middle of the Paṭicca Samuppāda (PS) cycle.

- One will attach ( $\tanh \bar{a}$ ) only if one has "defiled gati." That means one likes or dislikes that sensory experience (could be connected with ignorance too.) If one attaches, then one will start thinking and speaking (with vacī sañkhāra) and even may take actions (with kāya sañkhāra) with a DEFILED MIND. That means those sañkhāra arise via, "avijjā paccayā sañkhāra." That is part of "upādāna" or "pulling that ārammaṇa close."
- Therefore, what we summarized here in \#2 is how the "taṇhā paccayā upādāna" step in PS initiates a new PS process that starts at "avijjā paccayā sañkhāra." That is how the PS cycle begins in real life, beginning with a ārammaṇa (as detailed in the Chachakka Sutta (MN 148).

## Summary in Charts

3. Since it is CRITICAL to understand what we discussed above, I have made the charts below to help us with the discussion.

Response to a ārammaṇa with Moha

Response to a ārammaṇa with Avijjā

## Response to a ārammana by an Arahant

One can download the charts for easy reading/printing: "WebLink: PDF file: Response to a ārammana with Moha," "WebLink: PDF file: Response to a arrammana with Avijia,", and "WebLink: PDF file: Response to a ārammana by an Arahant."

- Paṭicca Samuppāda referred to in ALL the above charts is the "Akusala-Mūla Paṭicca Samuppāda." That PS process leads to future suffering.
- Therefore, sañkhāra that do not arise in an Arahant are ONLY "bad or immoral sañkhāra." An Arahant will still generate mano, vacī, and kāya sañkhāra to think, speak, and take actions. He/she will be engaged in "puñña kriyä" or "moral deeds." Such "moral deeds" are NOT "puñña $\boldsymbol{a b h i s a n} k h \overline{a r a} \boldsymbol{a}$ " because one does them with full comprehension of the anicca nature. We will discuss this critical point later.

## Difference Between Moha and Avijja

4. Let us start with the chart on the left. That chart is for an extreme case of a "totally morally-blind" person. That mind is covered with defilements (moha.) Such a person would, just like an animal, go along with any temptation that comes to the mind. His/her "bad gati" will only get stronger.

- The chart in the middle applies to a wide range of humans with avijj $\bar{a}$. Avijj $\bar{a}$ is a lower form of moha. When one removes the ten types of micch $\bar{a}$ dittthi, moha reduces to the avijja level. Any human who knows right from wrong is an average human. It also includes those who are Ariyā (Sotāpanna Anugāmi and above) but not yet attained Arahanthood.
- Of course, any Ariya (Noble Person) is INCAPABLE of doing apāyagāmi deeds. An Anāgāmi is INCAPABLE of craving for sensual pleasures, etc. Therefore, as one move to higher stages of Nibbāna, one will "attach to" less and less ārammaṇa (sensory inputs.)
- But any average human - no matter how "moral" by conventional standards - is CAPABLE of doing even an apāyagāmi deed. The ārammaṇa must be strong enough to be tempted.
- An Arahant has a totally-purified mind and has no "bad gati" left. Therefore, he/she WILL NOT initiate an "Akusala-Mūla Paṭicca Samuppāda" cycle under ANY circumstance. That is indicated in the third chart.

## Difference Between Vipāka Viññāna and Kamma Viññāna

5. Above charts also help us clarify the difference between vipāka viññāna and kamma viññāna. Any sensory EXPERIENCE is a vipāka viññāṇa. Vipāka viññāṇa can come in through any of the six sense faculties, as shown at the top of the charts. Every living being, including an Arahant, experiences vipāka viñ̃̄̄ana. In other words, ANY living-being can see, hear, etc.

- If one attaches ( $\operatorname{tanhha} \bar{a}$ ) to a $\bar{a} r a m m a n ̣ a$, then that initiates the step "taṇh $\bar{a}$ paccayā upādāna" step in PS. That means one starts "pulling that ārammaṇa close (upādāna)." First, one starts thinking about it with vacī sañkhāra. One does that with the sense of a "me" involved in the sensory experience. As we have discussed, there is no need for a "me" or a "self" to experience a sensory input. See, "Chachakka Sutta - Six Types of Vipāka Viññāna."
- Therefore, at the beginning of that "taṇhā paccayā upādāna" step, one starts generating sañkhāra about that $\bar{a} r a m m a n ̣ a$ with the "avijja a paccayā sañkhāra" step in PS. That is when a PS cycle starts at the "beginning" and then runs through the end.
- The next step in PS after the "avijjā paccayā sañkhāra" step is "sañkhāra paccayā viññāna." That viññāna is a kamma viñ̃̃̄āna. Since it arises ONLY in mind, that is a mano viñ $\tilde{n} a ̄ n a$. This kamma viññāna appears at the bottom of the FIRST TWO charts. An Arahant does not generate kamma viñ̃̄̄̄na. Therefore, kamma viññāna is absent in the third chart.

## Kamma Viññạ̣̄a Generated with the View (diṭthi) and Perception (saññ̄̄) of "Me" or a "Self"

6. From the last bullet of \#5, it is clear that one's mind will NOT go through the Akusala-Mūla PS at ANY TIME only if one is an Arahant.

- That is because it is ONLY an Arahant would have "seen" the futility of attaching to ANY sensory input (ārammaṇa.) There is no sense of a "me" or a "self" in an Arahant.
- That is a point that we will discuss in detail in upcoming posts. But it is good to know about that point ahead of the time. It is CRITICAL to understand the material presented so far to be able to "keep up" with the upcoming posts when we discuss sakkāya dittthi.
- As we can see, ANYONE below the Arahant stage WILL attach to at least a few sensory inputs. That is because anyone below the Arahant will have at least a trace of avijja anusaya left.
- It is impossible for an average human even to comprehend that. That is why the Buddha emphasized that it is not correct to say that a "self" does not exist. The point is that for ANYONE below the Arahant stage of Nibbāna, a "self" with "gati" exists!
- However, anyone above the Sotāpanna Anugāmi can "see" that it is unfruitful to take anything in this world to be "mine," and also can lead to future suffering. That "seeing" is "with wisdom" and is lokuttara (or lokottara in Sinhala) Sammā Ditthi. A fish biting the tasty bait on a hook does not "see" that it will be subjected to much suffering. Just like that, an average human cannot "see" the suffering hidden in sensual pleasures. We will discuss details in future posts.
- One becomes a Sotāpanna Anugāmi when one comprehends Tilakkhaṇa (anicca, dukkha, anatta) to some extent. Even after that, the saññā (perception) of a "me" will be there. That perception will reduce with higher stages of magga phala and will disappear at the Arahant stage.

## Starting with a "Self" or "No-Self" is not the correct approach

7. As we summarized in \#5 above (and discussed in the post mentioned there), attachment to a arrammaṇa happens instantly. That requires no conscious thinking and thus is NOT possible to stop. As long as one has 'bad gati," one MAY attache to some sensory inputs (ārammaṇa.)

- The way to eliminate taṇhā is to reduce and finally remove one's "bad gati." Luckily, humans have the ABILITY to do that by understanding the PS process.
- Indeed, there is a "self" is in the PS process. However, that is not an unchanging "self" like a "soul" or a "ātma." I call it a "dynamic self," see "What Reincarnates? - Concept of a Lifestream." That "self" disappears when one attains the Arahant stage!

8. Therefore, until one becomes an Arahant, the there is a "self" that CAN make decisions on how to respond to sensory input. As shown in the middle chart above, anyone can stop any "bad vac $\bar{l}$ sañkhāra" that arises when tempted by a given sensory input. If that fails, one can stop kāya sañkhāra that lead to physical actions. In simple words, that means one should stop any bad conscious thoughts, bad speech, or bad (immoral) deeds as soon as one becomes aware of them.

- When one becomes a Sotāpanna Anugāmi by comprehending Tilakkhaṇa to some extent, one's "apāyagāmi gati" will disappear.
- Until then, one can practice $\bar{A} n \bar{a} p a \overline{n a s a t i ~ o r ~ S a t i p a t t t h a ̄ n a ~ B h a ̄ v a n a ̄ ~ t o ~ s t o p ~ s o m e ~ t e m p t a t i o n s . ~ O n e ~}$ does not need to have formal meditation sessions. It is utterly useless to have formal meditation sessions and not to act with mindfulness when one goes through daily activities. That is when one generates most of the defiled thoughts and actions.
- Formal meditations become more relevant after getting to the Sotāpanna stage. That is why "bhāvanāya pahātabbä" comes last in the Sabbāsava Sutta (MN 2). There, "dassanena pahātabbä" of "removal via correct vision" is first on that list. That is the "correct vision" required to be a Sotāpanna. One must first understand what to meditate on!

## Kamma Viññāna Have Future Expectations

9. What is the real difference between a vipāka viññāna and a kamma viññāna?

- Vipāka viññāña provide the sensory experience. One sees with cakkhu viññanna, hears with sota viññāṇa, tastes with jivhā viññāna, smell with ghāna viññāna, feel touch with kāya viññāṇa, and thoughts coming to the mind with mano viñ̃ān̄a.
- Kamma viññāṇa arise via "avijjā paccayā sañkhāra." When one gets attached to a ārammaṇa via greed or hate, for example, one has an EXPECTATION. If one likes the ārammaṇa, one wants more of it. If one dislikes it, one wants it to go away.
- Thus when one consciously thinks (vacī sañkhāra) and takes actions ( $k \bar{a} y a$ sañkhāra), there are "expectations" embedded in such sañkhāra. Those sañkhārā lead to kamma viññāna via "sañkhāra paccayā viññāna."

10. Those "expectations" in kamma viñ̃̃āna are energies generated by the mind in javana citta.

They stay "out there in the world" as dhammā. Those are part of the dhammā in "manañca paṭicca dhamme ca uppajjati mano viññānam.".

- Therefore, just like the other five types of $r \bar{u} p a$ are "out there in the world," dhamm $\bar{a}$ are "out there," too. They can be detected by the mana indriya, just like a sound detected by the sota indriya, for example. That is how our future expectations periodically come back to our minds, i.e., how we remember our plans for the future. Sigmund Freud called that the "subconscious." Of course, he had no idea about the actual mechanism.
- Dhammā are rūpa too. But they are just energies that are below suddhatthaka. They are "anidassanaì appatighai் dhammāyatanapariyāpannam்." They "cannot be seen or touched." See, "What are Rūpa? - Dhammā are Rūpa too!"
- The other five types of rūpa sensed via the five physical sense faculties are above the suddhatthaka level. Modern science is only aware of those five types.
- We will discuss dhammā in detail in the next post.

All posts on the new series at, "Origin of Life."

### 10.9.7 Icchā (Cravings) Lead to Upādāna and to Eventual Suffering

## December 21, 2019; re-written October 14, 2022 (\#4 revised later)

## Upādāna Is a Key Concept That Has Been Hidden

1. The Buddha declared that his Dhamma or teachings on suffering "had not been known to the world" before him. In his first discourse, WebLink: suttacentral: Dhammacakkappavattana Sutta (SN 56.11), he "defined" dukkha or suffering.

Idam kho pana, bhikkhave, dukkhaim ariyasaccam:
$j a ̄ t i p i ~ d u k k h a ̄, j a r a ̄ p i ~ d u k k h a ̄, ~ b y a ̄ d h i p i ~ d u k k h o, ~ m a r a n ̣ a m p i ~ d u k k h a ̄ \dot{m}, ~ a p p i y e h i ~ s a m p a y o g o ~ d u k k h o, ~$ piyehi vippayogo dukkho, yampicchaỉ (yam pi icchaì) na labhati tampi dukkhā्̄m-samkhittena pañcupādānakkhandhā (pañca upādāna khandhā) dukkhā. [saǹkhittena means being overthrown by defilements]

## Translated: Bhikkhus, What is the Noble Truth of Suffering?

"Birth is suffering; getting old is suffering; getting sick is suffering; death is suffering. Having to associate with things one does not like is suffering and having to separate from those one likes is suffering. If one does not get what one wants/craves (icch $\bar{a}$ ), that is suffering - in brief, the origin of suffering is the "pulling close" (upādāna) of the five aggregates of rūpa, vedanā, sañn̄̄, sañkhāra, viññāṇa (pañcupādānakkhandha). [iccha :[adj.] (in cpds.), wishing; longing; desirous of.]

- Everyone knows that "Birth is suffering, getting old is suffering, getting sick is suffering, dying is suffering. Having to associate with things that one does not like is suffering. Having to separate from those things one likes is suffering." That part is known to the world.
- It may be a bit harder to understand birth as suffering, but ANY birth ends with decay and death at the end, so it is not that difficult to "see."

## The "Hard-To See" Suffering That Is Hidden

2. What is "previously unheard" is that craving (icch $\bar{a}$ ) for sensory attractions leads to suffering in the future. When one craves something, one will start thinking and speaking (vacī sañkhāra), and doing things (with kāya sañkhāra) to "get possession" of it. That "pulling close" of "mind-pleasing things" is "upādāna" ("ирa" + "ādāna" as we discussed before.) [Upādāna means "pulling it closer (in one's mind)" ("upa" + "ādāna," where "upa" means "close" and "ādāna" means "pull"). [ $\bar{a} d \bar{a} n a:(n t)$ ), taking up; grasping.]]

- Since we do not "see" that hidden suffering, we tend to do immoral deeds to possess such "mindpleasing things." That means generating (mano, vacī, and $k \bar{a} y a$ ) sañkhāra due to our avijj $\bar{a}$ (ignorance of the core teachings of the Buddha, including the Pațicca Samuppāda process.)
- The harsh consequences of such immoral deeds (kamma vipāka) may not be seen immediately, or even in this life. That is why it is hard to "see" this hidden suffering.
- That is contrary to our daily experiences. We do everything to live a luxurious life with a beautiful house, an attractive spouse, a nice car, etc. We do not see "any bad consequences" of our efforts to pursue those "mind-pleasing things."

## A Fish Does Not "See" the Hidden Suffering in a Delicious Bait

3. As we will discuss, we are no different than a fish biting into a tasty bait, say, a worm. That fish does not see the hook hidden in the "delicious worm." It will be subjected to much suffering once it bites the worm, and the hook attaches to its mouth.

- The difficulty in our case is that our deeds to get those sensory pleasures may not show their CONSEQUENCES in this life. It is useless to follow Buddha Dhamma if one does not believe in rebirth or kamma/vipāka.
- All we tend to crave (icch $\overline{\boldsymbol{a}}$ ) are PARTS OF the five aggregates (pañcakkhandha). That small part is pañcupādānakkhandha. We like certain types of rūpa (people and things), certain types of vedanā (feelings), etc.
- That is why it is critical to understand how "pulling close" (upādāna) of sensory inputs (ārammaṇa) leads to future suffering. The akusala-mūla Pațicca Samuppāda (PS) ends up in "jarā, maraṇa, soka, parideva, dukkha, domanassa,.." or the "whole mass of suffering."

## Craving (Icchā) Starts the Paticca Samuppāda Process That Leads to Suffering

4. In the previous two posts, we discussed how an external sensory input (àrammana) triggers the "taṇh $\bar{a}$ paccayā upādāna" step in the PS. See, "Tanhā Paccayā Upādāna - Critical Step in Paticca Samuppāda" and "Moha/Avijijā and Vipāka Viññāna/Kamma Viññāña."

- Continuing that discussion, let us look at how that future suffering arises. The following chart summarizes what we discussed. It shows all the steps in the PS process, starting with "avijjā paccayā sañkhāra" to the end, "jarā, maraṇa, soka, parideva, dukkha, domanassa,.." or the "whole mass of suffering."
- However, the initiation of PS cycles is not at the "avijjā paccayā sañkhāra" step but the "(sam)phassa paccay $\bar{a}$ vedana $\bar{"}$ step. Attaching to a sensory input ( $\bar{a} r a m m a n a)$ with liking (icch $\bar{a})$ happens first. See \#3 of "Chachakka Sutta - Six Types of Vipāka Viññāna."

Open pdf for viewing or printing: "WebLink: PDF-file: Icchā to Upādāna to Suffering."

## Idappaccayatā Paṭicca Samuppāda Example

5. Idappaccayatā Pațicca Samuppāda explains phenomena occurring in real-time as they happen. That is easier to interpret compared to upapatti Paṭicca Samuppāda, which describes events leading to future lives, especially in rebirths. [idaím :[(Nom. and Acc. sing. of ima) nt.] this thing. paccayatā: :f.] causation. idappaccayat $\bar{a}:($ ida $\dot{m}+$ paccayat $\bar{a})$ [f.] having its foundation on this, i.e., causally connected.]

- Let us revisit a simple example that we discussed in \#13 of the recent post, "Vacī Sañkhāra - Sañkappa (Conscious Thoughts) and Vācā (Speech)."

A person is in the waiting room to see a doctor and sees that someone has dropped a wallet. The moment he sees the wallet, his mind attaches to it (tanhā). Then he thinks there could be some money in the wallet and that it is an easy way to get some "free money." That happens within moments of him seeing the wallet.

- "Seeing the wallet" is a cakkhu viññāna that resulted via, "Cakkhuñca paṭicca rūpe ca uppajjati cakkhu viññānam.". Within a split-second, he attaches to it (tanha $\bar{a})$ as we discussed in the posts on Chachakka Sutta (MN 148.)
- Then he starts thinking about how much money can be in that wallet, and how to pick it up without being noticed. Those are vacī sañkhāra that arise due to his ignorance (avijj $\bar{a}$ ) about their harmful consequences. Thus, his mind has generated "upādāna" for the wallet because he has a craving (icchā) for money.
- Thus, his mind starts the step, "taṇhā paccayā upādāna" in Paṭicca Samuppāda (PS.)

## Initiation of a new Paṭicca Samuppāda Process

6. Therefore, the "tanhhā paccayā upādāna" step now leads to the start of a brand new PS process with "avijjā paccayā sañkhāra" (see the chart above.) We discussed that in the previous post, "Moha/Avijijā and Vipāka Viññāna/Kamma Viññāna."

- Those conscious thoughts about the wallet are vacī sañkhāra. Now those sañkhāra lead to a NEW kamma viññāṇa. That viññāna has the expectation of picking up the wallet and keeping it for himself. That is a mano viññaña that arises in his mind and is different from the cakkhu viñ̃ $\bar{a} n a$ of "seeing the wallet."
- Now, that kamma viññāna leads to "nāmarūpa formation" in his mind. He runs various scenarios in his mind (vitakka/vicāra), both regarding picking up the wallet without being noticed and what he can do with the money in the wallet. That is "viññāna paccayā nāmarūpa."
- That immediately leads to the involvement of several internal ayatana. For example, he may look around to see whether anyone is watching. He may stand up and see whether the receptionist can see the area where he is sitting, etc. That is "nāmarūpa paccayā salāyatana."
- That, in turn, leads to "salāyatana paccayā (sam)phassa." His mind's defilements (or "san" or anusaya) affect all his thoughts and activities. That generates mind-made vedanā or "(sam)phassa paccay $\bar{a}$ (samphassa-j $\bar{a}$-)vedan $\vec{a} "$ followed by more PS cycles. Those are the steps described in the Chachakka Sutta.
- We need to remember that words like "phassa" and "vedana"" in the abbreviated PS must be interpreted as "samphassa" and "samphassa-j $\bar{a}$-vedan $\bar{a}$." See the previous posts in this series: "Worldview of the Buddha."

## Strengthened Upādāna Leads to a Temporary Bhava

7. His mind is now back to the "tanhhā paccayā upādāna" step in the PS process, and it reinforces that upādāna. The above steps may be repeated many times in his mind as he sits there and contemplates various aspects. Those, by the way, are vitakka/vicāra.

- With the strengthening of the upādāna, now his mindset changes to that of a thief's existence (bhava). That is "upādāna paccayā bhava." Then immediately, he is "born" (jāti) a thief. That is "bhava paccayā $\bar{a} t i$, " By the way, in upapatti Paṭicca Samuppāda, jāti can happen much later. The "bhava" remains energized as $d h a m m \bar{a}$; see below.
- Now that "thief' goes and picks up the wallet and puts it in his pocket. Now, "stealing of the wallet" is accomplished. That is the "marana" or "death" of that particular $j \bar{a} t i$ as a thief.
- However, there is more to it than just marana. "Jarā, maraṇa, soka, parideva, dukkha, domanassa,.." will also follow.
- Even though he got what he wanted, his mind is very agitated. Even though no one else was in the waiting room, he wondered whether the receptionist somehow saw his act. Also, now a new thought comes to his mind as to whether there is a video camera in the room. That "mental stress" is part of domanassa.

## The Process Is Over, but the Consequences Will Prevail

8. It is possible that there was a video camera in the room. If so, he could be charged with theft a few days later. Those are part of the "mass of suffering" due to the immoral act of stealing.

- But the critical point is the following. Even if he did not get caught, he would be paying for his immoral action in the future. The kammic energy of that immoral deed will follow him, waiting for an opportunity to bring a corresponding "bad vipāka" at some point.
- Kammic energy is in dhammā (with a long "a" at the end, not as in Buddha Dhamma.) Let us address that in brief.

## Dhammā Are Energies Created by Mind - With Kamma Viññāna

9. Dhammā are the underlying energies (or "kamma seeds" or "kamma bīja") created by the mind.

- A seed has the POTENTIAL to give rise to a tree under proper conditions like good soil, water, and sunlight. In the same way, dhammā (a kamma bīja) has the POTENTIAL to give rise to things (both living and inert) in this word.
- That is how such dhamma (or kamma seeds) can bring vipāka in the future.
- Just like an ordinary seed needs soil, water, and sunlight to germinate and bring about a tree, dhamm $\bar{a}$ needs proper conditions to bring about corresponding vipāka. That is also why kamma is not deterministic. For example, Angulimāla killed 999 people. That kammic energy was there even after Ven. Angulimāla attained Arahantship. However, with that Arahantship, his mind became pure, and any conditions to bring about the vipāka of such bad kamma could not materialize. See, "Account of Angulimāla - Many Insights to Buddha Dhamma."
- The role of dhammā is discussed in "Dhammā, Kamma, Sañkhāra, Mind - Critical Connections."

## Icchā (Cravings) Lead to Upādāna and to Eventual Suffering

10. What we discussed above is the key message embedded in the First Noble Truth of Dukkha Sacca (pronounced "sachcha.")

- It is craving (icchā) for "mind-pleasing sensory attractions in the world" that lead to taṇhā and upādāna and eventual suffering.
- Based on icch $\bar{a}$, we get "stuck in attractive sensory inputs" (tanh $\bar{a}$ ), and try to keep that $\bar{a} r a m m a n a$ as close as possible in mind (upādāna.) We do that in our minds by generating unwise thoughts (vacī sañkhāra), which leads to unwise speech (more vacī sañkhāra) and immoral actions (based on kāya sañkhāra). That is the start of an akusala-mūla PS process, "avijjā paccayā sañkhāra."
- That process, of course, inevitably leads to the last step in the PS process, "jarā, maraña, soka, parideva, dukkha, domanassa,.." or the "whole mass of suffering."

11. The "WebLink: suttacentral: Icch $\bar{a}$ Sutta (SN 1.69)" summarizes the importance of the icchā. One time, a deva came to the Buddha and asked:
"Kenassu bajjhatī loko, "By what is the world bound?
kissa vinayaya muccati; By the removal of what one is freed?
Kissassu vippahānena,
What is it that one must abandon sabbaì chindati bandhanan"ti. To cut off all bondage?"
[bajjhati :[pass. of bandhati] is bound or captivated; is caught.
vinaya: :m.] discipline; the code of monastic discipline; removal.
muccati : $[\mathrm{muc}+\mathrm{ya}]$ becomes free; to be saved or released.
vippahāna : (nt.) [vi+pahāna] leaving, abandoning, giving up.
chindati $:[$ chid $+\dot{\mathrm{m}}+\mathrm{a}]$ cuts; severs; destroys.
bandhana: $[\mathrm{nt}$.$] bound; fetter, attachment; imprisonment; binding; bondage; something to bind with.]$
The Buddha replied:
"Icchāya bajjhatī loko, icchāvinayāya muccati;
Icchāya vippahānena, sabbaì chindati bandhanan"ti.

## "By cravings, one is bound to the world;

By the removal of desire one is freed
Craving is what one must give up
To cut off all bondage."

- But, of course, the craving for "mind-pleasing things" cannot be removed by just willpower. One must understand the harmful consequences of such cravings. That understanding comes through moral living AND learning true and correct Buddha Dhamma.
- That is why Sammā Ditṭhi comes first in the Noble Eightfold Path. The other steps in the Path will follow once one comprehends the teachings. But a badly corrupt mind cannot grasp those teachings, which is why moral living is a prerequisite.

12. The following posts discuss more examples that may help solidify the understanding: "How Do Sense Faculties Become Internal Āyatana?" and "Key Steps of Kammic Energy Accumulation."

- The Idappaccayatā Pațicca Samuppāda is discussed in detail in "Paticca Samuppāda During a Lifetime."

## Dhammā, Kamma, Sañkhāra, Mind - Critical Connections

December 28, 2019; revised February 17, 2022

## Introduction

1. From the previous posts on Pațicca Samuppāda in this series, we can make the following conclusions:

- The MIND generates different types of sañkhārā. They are involved in all thoughts (mano and vaci sañkhārā), speech (vacī sañkhārā), and bodily actions (kāya sañkhārā.)
- Therefore, sañkhārā (generated with avijjā) are responsible for all ten types of akusala kamma. Of those ten, three with the mind, four with speech, and three with the body.
- Such kamma create energies (or kamma bīja) released to the world as "dhammāa." We will discuss some details here. This word dhammā is different from dhamma (teachings) in Buddha Dhamma.
- Please review those previous posts as needed: "Paticca Samuppāda - Not 'Self' or 'No-Self"

## Manopubbangamā Dhammā - Mind Is the Precursor of All

2. The first Dhammapada verse is "Manopubbangamā Dhammā.." There are, in fact, two verses that go together. Those two verses have the following meanings:

- All things and phenomena have the mind as their forerunner. They all are mind-made. If one speaks or acts with an evil mind (i.e., engages in dasa akusala), then suffering (dukha) will follow just as the wheels of a cart follow the footsteps of the ox that is pulling the wagon.
- All things and phenomena have the mind as their forerunner. They all are mind-made. If one speaks or acts with a purified mind (i.e., engages in dasa kusala and puñ̃̃a kamma), happiness (sukha) follows one like one's own shadow.

## Dhammā Are Energies Created by Mind - With Mano Viññāṇa (Kamma Viññạ̣̄a)

[^5]- The "seeds" here — dhammā (a kamma bïja) — are "created and fed" by "kamma viññ̄ạna."
- Only the mind can generate kamma viñ̃ãṇa. Such kamma viññaṇa arise via, "sañkhārā paccayā viññāna" in Paṭicca Samuppāda. Since that happens ONLY in mind, kamma viññāna are ALWAYS mano viññāna. A kamma viññāna has ENERGY. Such kamma viññāṇa encompass our future hopes and expectations.
- All the other five types of viññāna (cakkhu viññāṇa, sota viññạna, ghāna viññạna, jivhā viññāṇa, kāya viññāna) are ALWAYS vipāka viñ̃ñạna. Mano viññāna could be EITHER vipāka or kamma viññāṇa. To recall how vipāka viññāṇa arise, see, "Chachakka Sutta - Six Types of Vipāka Viññāna."
- Vipāka vedanā that we experience arise with vipāka viñ̃n̄āna. See, "Vipāka Vedanā and "Samphassa通 Vedanā" in a Sensory Event."

## An Example Of a "Mild" Kamma Viññāṇa

4. Let us consider an example of how a kamma viññāna arises and how it could grow with sañkhārā.

- Suppose X needs to buy a car. He saw a car in a showroom and "fell in love with it." Here the impactful ārammana was that moment of seeing his "dream car." A kamma bïja was born at that time with that expectation via "sañkhārā paccayā viññāna."
- He goes home and thinks about how to finance the purchase. He talks to his friends about how beautiful the car is, etc. All those are vacī sañkhārā based on that vehicle. Then he may go back to the showroom to look at it again and even to get a better price for the car. Those would involve $k \bar{a} y a$ sañkhārā.
- Every time he thinks, speaks and acts on issues relating to that car, he is "feeding that viññanna" for buying the vehicle. That happens with "sañkhārā paccayā viññāna," and makes that viññāna stronger. We could also say that the kamma bïja or dhamma associated with that viññanna would grow.
- The stronger that viññāṇa becomes, the more often will it "come back" to his mind (as a dhammā) via "manañca paṭicca dhamme ca uppajjati manoviññānami." That is what Sigmund Freud called "the subconscious." Of course, Freud had no idea of the working of the subconscious via kamma viññāna.
- Now, one day, X buys the car. At that time, the kamma viññāña (kamma bīja) for that expectation will go away. Even if he did not buy the vehicle, that kamma viññāna (kamma bīja) would have died if he lost his job unexpectedly and realized that he could not afford the car. In either case, it would no longer be in his "subconscious."

## An Example Of a "Strong" Kamma Viññāṇa Associated with a Pāpa Kamma

5. In the above example, we considered a relatively "mild" kamma. Even though some greed was involved, that kamma (buying a car) was not a pāpa kamma. A pāpa kamma is a strong akusala kamma that could make one eligible for rebirth in the apāy $\bar{a}$. Let us consider an example.

- Suppose X now wants to kill another human out of anger. The moment that he decides on that, his vacī sañkhāra creates a new kamma bïja (and a kamma viññāna) on deciding to kill. His mind is "stuck with the idea of killing that person." That is taṇhā. The conventional translation of tanhh $\bar{a}$ as "craving" is not quite right.
- From that moment, any time that X is thinking about how to carry out the killing, that kamma bïja (kamma viññanna) will grow. It happens via "sañkhāra paccayā viññāna," where sañkhāra are vacī sañkhāra involved in his planning. This is "upādāna" ("upa" + "ādāna" or "keeping it close in mind." He often thinks about how to kill that person. He dwells on it.
- Then, one day, X decides to shoot that person. Then he may go and buy a gun. That involves $k \bar{a} y a$ sañkhāra, and those will also contribute to the growth of that viññaña (kamma bïja.)
- Then X shoots and kills that person. That is the strongest kamma and it is a kaya kamma done with $k a ̄ y a ~ s a n ̃ k h a ̄ r a$. But all those vacī and kāya sañkhāra involved were abhisañkhāra.
- However, unlike in the previous case in \#4 above, that kamma viññāna (kamma bīja) does not go away. That is because it is an akusala kamma. Even though the expectation accomplished that kamma viñ̃ān̄a will instead be "established in the kamma bhava." It will "follow him" just as the wheels of a wagon follow the footsteps of the $\mathbf{o x}$ in $\# 2$ above. That kamma viññanna will be "with him" for billions of years waiting for an opportunity to bring its results (vipāka.)

## Abhidhamma Explanation

6. The following information is relevant but not essential. I include it for those who are familiar with Abhidhamma. It is a good idea to read it in any case, to get the basic idea. A mind creates ENERGY when it focuses on an ārammaña and attaches to that ārammaña. Then a particular strong citta vīthi (atimahantarammana or mahantarammana) runs in the mind.

- Towards the end of such a citta vīthi, seven especially powerful citta (javana citta) arise. Those javana cittā generate and release kammic ENERGY to the world. Those ENERGIES are dhammā or kamma bïja.
- Such ENERGIES generate in the steps, "avijjā paccayā sañkhārā, sañkhārā paccayā viññāna, viññāna paccayā nāmarupa" in Pațicca Samuppāda. That, of course, takes place during citta vīthi.
- These kammic energies generated in javana citta lie below the suddhatthaka level. A suddhaṭthaka is the smallest unit of matter in Buddha Dhamma. See, "The Origin of Matter - Suddhatthaka." [suddha : [pp. of sujjhati] become clean or pure. att haka :[nt.] a group of eight.]
- That is a very brief explanation. One could read about citta vīthi in Bhikkhu Bodhi's book, "Comprehensive Manual of Abhidhamma." As I said, it is not necessary to fully understand that process. But that could fill "some gaps in the picture."

## Dhammā Are Rūpa Too!

Dhamm $\bar{a}$ are also $r \bar{u} p \bar{a}$ in Buddha Dhamma. As we have discussed, dhamm $\bar{a}$ are pure energy that lies below "tangible matter" above the suddhattthaka stage.
7. Those energies released to the "nāma loka" or "immaterial world" stay there as dhammā. Therefore, $d h a m m \bar{a}$ are "out there" in the world, just like other types of $r \bar{u} p \bar{a}$. Our world consists of ru$p a$ loka and nāma loka. While rūpā are in the rūpa loka, dhammā belong to the nāma loka.

- Another name for kamma viñ̃ñ̄ṇa or dhammā is kamma bīja. In Buddha Dhamma, such energies also come under the category of " $r \bar{u} p a$." More on that below.
- While scientists can detect any of the other five kinds of $r \bar{u} p a$ with their instruments, they cannot detect dhamma $\bar{a}$. Only the mana indriya in the brain can detect dhamm $\bar{a}$ and pass them over to the hadaya vatthu (seat of the mind.)
- The world that we can "see" or "interact with" consists of the following. There are solid objects (people, animals, trees, houses, etc.) that we "see" with our eyes. They are "r $\bar{u} p a r \bar{u} p a$ " or simply " $r \bar{u} p a$." There are sounds that we hear (sadda rūpa.) Things that we smell are odors (gandha rūpa.) We taste the essence (rasa rūpa) in the food we eat. And we touch solid objects (photthabba rūpa.)
- On the other hand, "nāma loka" has records (namagotta) of all the "mental aspects" like vedana $\bar{a}$, sañ̃̄̄a, sañkhāra, viññāna. It also keeps records of kammic energies that we produce, which are dhamma $\overline{\text {. }}$
- Dhammā are in a different category compared to other types of "tangible rūpa." It may be a good idea to read the post "Our Two Worlds: Material and Immaterial."

8. Long before Einstein made the connection between matter and energy via his famous $\mathrm{E}=\mathrm{mc}^{\wedge} 2$ equation, the Buddha treated both matter and energy as " $r \bar{u} p a$."

- With advances in physics, now it is well-established that matter and energy are indistinguishable. For example, now scientists accept that light consists of particles (photons.)
- We can directly see some of those "rūpā," i.e., rūpa rūpa. We also know how other types of rūpa arise.. For example, "sadda rūpa" are sound energy. Still, scientists know that sound propagates through the air via "pressure waves." We are familiar with the five types of "rūpa" that we sense with our five physical senses (eyes, ears, nose, tongue, body.)
- Scientists cannot detect dhammā because they have tiny energies. They think memories are "stored in the brain." That is not compatible with the ability of some children to recall past lives. Of course, the Buddha could recall past lives as far back as he wished (without seeing a "beginning.") See, "Origin of Life - There is No Traceable Origin."

## Dhammā Are Anidassana Rūpa

9. The following information is relevant but not essential. It is a good idea to read it in any case, to get the basic idea. The Buddha stated that "dhamm $\bar{a}$ cannot be seen or made contact with (other than by the mana indriya.) Dhammā are "Vedanākkhandho ... pe ... viññānakkhandho, yañca rūpaì anidassanamं appatighaì dhammāyatana pariyāpannami.."

- That verse is in "WebLink: suttacentral: 2.3.2. Dukanikkhepa" of the Dhammasañgaṇī under the subsection 2.3.2.2.3. Sanidassanaduka.
- The critical point to remember is that dhammā include our memories (which are just records without energy) AND viññāṇa (which include kamma viñ̃āạa with kammic power.)

10. There is a lot to grasp here, but the main points are the following.
11. Dhammā (used generally in plural) include kamma viññāna or kamma bīja.
12. Dhamm $\bar{a}$ also include memories from the past, including those from past lives. It is just that one may not be able to recall past lives until one attains jhāna and cultivates "pubbenivāsānussati ñāna."
13. Those dhamm $\bar{a}$ (including memories or " $n \bar{a} m a$ gotta") are "out there" too, just like the other five types of $r \bar{u} p \bar{a}$ are "out there." But an average human is unaware of dhammā. It takes a Buddha (with a perfectly purified mind) to uncover such details about the world.

- That is why I stated that dhammā are in the "unseen world" or "immaterial world." Details at "Our Two Worlds: Material and Immaterial."

## Dhammā Behave Differently Compared to "Normal Rūpa"

11. Rūpa or "matter" behaves very differently below the suddhatthaka level. Again, we do not need to get into details, but it is essential to make that connection. For those interested, details at "The Origin of Matter Suddhatthaka."

- As discussed, those "gross or dense $r \bar{u} p \vec{a}$ " that we detect with the five senses are the only $r \bar{u} p \bar{a}$ that modern science can detect.
- However, scientists ran into problems when they started studying "matter' at very low density (like electrons and photons). "Matter" at the sub-atomic level behaves very differently, and those investigations led to the discovery of quantum mechanics. For example, electrons and photons do not obey the same laws as large particles like stones or tennis balls.
- Even though scientists have made progress with quantum mechanics, they still cannot explain some phenomena at the sub-atomic level. One key issue is that such "quantum particles" like electrons and photons seem to be interacting instantaneously across long distances. This phenomenon is known as "quantum entanglement." See "Quantum Entanglement - We Are All Connected."

12. Those dhammā are kamma bīja lie below the suddhatthaka level. They interact with the mana indriya instantaneously.

- All other types of $r \bar{u} p \bar{a}$ detectable with the five physical senses are above the suddhatthaka level. However, some sub-atomic particles (closer to the suddhatthaka level) like electrons display the ability to interact instantaneously among themselves, just like dhamm $\bar{a}$. See, "Quantum Entanglement - We Are All Connected." This effect mystified quantum physicists to this date.
- However, the Buddha explained all that 2500 years ago. I have tried to explain to the physics community over the past few years. They do not see that connection yet. But at some point, they will have to. For those who have a physics background, "Quantum Mechanics and Dhamma."

## Those Dhammā Could Bring Vipāka via Vipāka Viññāṇa

13. Under proper conditions (paccayā in Pațicca Samuppāda, kamma viññāna (or dhammā) COULD bring corresponding results (vipāka) and the associated viñ̃āṇa are vipāka viññāṇa. That happens via all SIX sense faculties. As we discussed in previous posts, "cakkhuñca paṭicca rūpe ca uppajjati cakkhu viññānaì" through "mānañca paticca dhamme ca uppajjati mano viñnāạaì." All those are vipāka viññạna.

- In other words, vipāka viññạ̄na materialize via all six sense inputs (eyes, ears, tongue, nose, body, and mind.) We discussed that in several earlier posts on the Chachakka Sutta (MN 148.)
- As we discussed in \#2, \#3 above, ONLY mano viññāna can also be kamma viññāṇa. Such kamma viññāna arise via "avijjā paccayā sañkhāra, sañkhāra paccayā viññ̄āna."

## Summary

14. The MIND generates sañkhārā with INTENTIONS to do, speak, or think. Such $k \bar{a} y a, v a c \bar{c}$, and mano sañkhārā lead to kamma done with actions, speech, and thoughts.

- The strong sañkhārā or abhisañkhārā generates kammic energy. Such energies can be called dhammā, kamma bija, or kamma viññāṇa. They can bring vipāka during a lifetime or bring future rebirths.

15. We have covered a lot of material in this post. It is impossible to go into details (if we do, we will not get to finish the discussion on Paticca Samuppāda for a long time!)

- It is not necessary to try to learn Abhidhamma in a rush. However, it is a good idea to try to understand the basic concepts.

## Pațicca Samuppāda - From Mind to Matter

January 11, 2020

## Where is the "Mind-to-Matter" Step in Paṭicca Samuppāda?

1. Akusala-mūla Pațicca Samuppāda starts with "avijjā paccayā sañkhāra" and ends with "bhava paccayā jāti, jāti paccayā jarā, marana,.."

- The first step involves generating defiled thoughts (mano, vacī, and kāya sañkhāra) due to avijijā (not being aware of the Four Noble Truths.) In the end, that leads to births of physical bodies ( $j a \bar{a} t i$ ) that will then undergo old age and death.

## Javana Citta Create Energy!

2. I laid the foundation for this post in a recent post, "Dhammā, Kamma, Sañkhāra, Mind - Critical Connections." Please review that as needed.

- The critical point is that our thoughts (specifically javana citta) CREATE energy! That may be hard to believe.
- Even a few hundred years ago, many people thought that the Buddha taught some other things that were "hard to believe." For example, Buddha taught that there are an uncountable number of planetary systems like our Solar system in the universe. However, before Galileo invented the telescope, people believed that Earth was at the center of the universe! See the "WebLink: en.wikipedia.org: Geocentric model."
- Even after reading the previous post mentioned above, many of you may not have caught on to the fact that the mind creates energy. And that is what leads to the "arising of physical bodies" in future existences (rebirths.) You may want to read that post after reading this one, and things will become more clear.

## Thoughts Create "Seeds" That Can Give Rise to Physical Bodies

3. In that previous post, we discussed that such minute amounts of energies created by our thoughts are PART OF dhamm $\bar{a}$ (with a long "a" at the end.)

- Of course, such minute amounts of energy cannot DIRECTLY create massive/dense bodies like ours.
- When a living being grasps a new existence (bhava), only a "mental body" or "manomaya kāya" for the new life appears. It is a "mental body" since it is mostly mental with only a trace of matter. Very little kammic energy is enough to create that "mental body."
- This "mental body" or "manomaya kāya" is the same as a gandhabba or a "patisandhi viññāṇa." One creates one's future via one's sañkhāra (i.e. that is the way one THINKS). Paticca Samuppāda describes that process.
- That is why it is CRITICAL to understand the previous three posts: "Dhammā, Kamma, Sañkhāra, Mind - Critical Connections," "Buddhist Explanations of Conception, Abortion, and Contraception," and "Cloning and Gandhabba."

4. The word "kāya" in Buddha Dhamma means a "collection." Thus, this "body" that is created by kammic energy consists mostly of the four "mental aggregates." It has only a trace of matter (much smaller than an atom in modern science.)

- However, it has all five aggregates of rūpa, vedanā, saññā, sañkhāra, and viññ̄n̄na. Of course, the "rūpa $k \bar{a} y a$ " is unbelievable small, but the "four mental aggregates are the same as those experienced by a living person with a physical body.
- That "mental body" or "manomaya kāya" is the same as gandhabba! However, after the initial formation, gandhabba can "solidify" somewhat by "taking in scents or aroma." Hence the name "gandhabba" ("gandha" + "abba" or "taking in scents.")
- For details on gandhabba, see, "Mental Body - Gandhabba."

## It is Kamma Viñ̃ạ̄̄a That Sets Up Energy for a New Existence (Bhava)

5. There are no "rūpa" in PS steps up to "viññ̄ạna." As we have discussed, a kamma viññāna that arises via "sañkhāra paccayā viññāna" is a type of "rūpa" because it has "energy." As Einstein showed with his famous equation, $\mathrm{E}=\mathrm{mc}^{\wedge} 2$, energy is also a manifestation of matter. Again, see "Dhammā, Kamma, Sañkhāra, Mind - Critical Connections."

- Then at the next step, there is "nāmarūpa." That is where a conventional "rrūpa" becomes "live." That is precisely what happens when a "patisandhi viññāna descends to a womb" and makes an inert zygote become alive! That occurs at the "viññāna paccayā nāmarūpa" step in Upapatti PS.
- The post "Buddhist Explanations of Conception, Abortion, and Contraception" explains how a "patisandhi viññāna" leads to the creation of a "new human body."
- Sexual intercourse only creates the "material basis" for a new life. An egg (from the mother) combines with sperm (from the father) to form a single cell, a zygote. That zygote is inert (a rūpa), just like the egg and the sperm. An existing "mental body" or a gandhabba (nāma with energy) needs to merge with that zygote to form the nāmarūpa or the fetus (with mind and body).
- Sexual intercourse is not necessary to form the zygote or the "material base" for a new "physical body." A zygote can be created in a laboratory, but still requires eggs from the mother; see, "Cloning and Gandhabba."

## "Nāmarūpa Paccayā Salāyatana" in Upapatti Paṭicca Samuppāda

6. That "live person" or the fetus will grow for nine months to complete the formation of all six sensory faculties. That is the "nāmarūpa paccayā salāyatana" step in upapatti PS. As we know, "salāyatana" represents the "six sensory faculties" of a living being with a "body and mind."

- Therefore, the transition starts with the step "sañkhāra paccayā viññāna," Then, it goes through the "viññāna paccayā nāmarūpa" step, before finalizing the formation of a "human with six sensory faculties" at the "nāmarūpa paccayā salāyatana" step.
- However, it is essential to understand that a "pațisandhi viññanna" leading to a rebirth must have been cultivated previously. Such a viññāna "builds up" over MANY "Idappaccayatā Paticca Samuppāda" cycles that take place DURING a life or even over many lives.

## Example of an Alcoholic Making an "Animal Bhava"

7. Let us consider an example to illustrate how one cultivates a pațisandhi viññāna suitable for an animal over time. Let us consider an alcoholic/drug addict. I am not talking about a person who takes an occasional drink. Instead, this person has an addiction to alcohol or drugs.

- As we have discussed in recent posts on the Chachakka Sutta (MN 148), one starts thinking about a certain ārammaṇa (in this case, drinking) when thought about that ārammaña comes to mind as a vipāka viñ̃̃āna. In this particular case, it could be seeing an alcohol bottle, hearing about an upcoming party, or just habitually remembering that "it is time to have a drink."
- As explained in those posts, one's mind quickly gets to "taṇhä" (or "getting stuck" in that ārammana.) Thus, a PS process would start at the "taṇhā paccayā upādāna" step. See, "Icchā (Cravings) Lead to Upādāna and to Eventual Suffering."
- That is when one starts THINKING about that a $r$ rammana that came to the mind. That is the "avijja $\bar{a}$ paccayā sañkhāra" step of a new PS cycle.

## Nāmarūpa in "Idappaccayatā Paticca Samuppāda" Are Just "Visuals"

8. Suppose the alcoholic/drug addict in our example is sitting at his desk at work. Due to his habit, an upcoming party may come to his mind via "manañca paticca dhamme ca uppajjati manoviññānam.."

- Of course, he will be instantly "stuck in that ārammaṇa," and the "taṇhā paccayā upādāna" step in PS gets him started on "avijja paccayā sañkhāra." Thus, he starts thinking about the experience that he is going to have in the upcoming party. Those are vacī sañkhāra.
- That leads to the arising of a viññāna (anticipation or the expectation of the possible enjoyments) via "sañkhāra paccayā viññāna." The javana citta in his thoughts start creating energy for that viññāna.
- That involves visualizing "party scenes" at the upcoming party and also his past experiences in similar situations. He will imagine the friends who will be there, what kind of alcohol, food, and other types of entertainment will be there. These are all "nāmarūpa" or visuals that arise in his mind. These nāmarūpa are very much like what we experience in a dream, just visuals.

## Some of those Viñ̃nāna and Nāmarūpa Cultivated Could be Compatible with Animal Mindsets

9. Some of those viñāāna and nāmarūpa cultivated by the alcoholic/drug addict in our example could be compatible with those of animals. That is a critical point.

- During some of these parties, alcohol or drug usage could get to extreme levels. Some people may pass out and could be unable to walk. They will be dragging themselves on the floor like animals.
- Some may be engaging in sexual misconduct. Such bodily actions are more potent than such cultivating vacī sañkhāra. However, in most cases, it is the cultivation of vacī sañkhāra (thinking about such activities with vitakka/vicāra) that lead to bodily actions.
- Both kinds of sañkhāra lead to the growth of patisandhi viñ̃ñaṇa suitable to bring about an animal birth in the future (in an Upapatti PS process.)

## Nāmarūpa In "Viññāṇa Paccayā Nāmarūpa" Are Two Kinds

10. It is critical to note that the "nāmarūpa" discussed in \#8 are different from those in \#5.

- The nāmarūpa in \#8 helps build that viññāna via the backward step, "nāmarūpa paccayā viññanna." When the alcoholic is making those "visualizations," he is cultivating that viññanna. Thus, each is helping grow the other. That often happens in "Idappaccayatā Paticca Samuppāda" cycles.
- For example, Ven. Sariputta in the "WebLink: suttacentral: Nalakalāpī Sutta (SN 12.67)": "Seyyathāpi, $\bar{a} v u s o$, dve nalakalāpiyo añnamañnaì nissāya tiṭtheyyumi. Evameva kho, āvuso, nāmarūpa paccayā viññāṇaì; viññāṇa paccayā nāmarūpaì;..." OR "Just as two sheaves of reeds might stand leaning against each other, so too, with nāmarūpa as condition, viññāna comes to be. With viññāna as condition, nāmarūpa comes to be.."
- On the other hand, the "viññāna paccayā nāmarūpa" step happens only once in upapatti PS cycles. That involves a special "paṭisandhi viññāna" (gandhabba.) When that paṭisandhi viññāṇa (or gandhabba) descends to the womb, it merges with the zygote and creates a new "nāmarūpa" or a "live fetus." See, \#5 above and the posts referred to there, "Buddhist Explanations of Conception, Abortion, and Contraception" and "Cloning and Gandhabba."

## It Is Important to Review Related/Past Posts Often

11. Another thing to remember is that even a given PS cycle does not proceed in just one direction. All those steps, as with many others in PS, go backward too. For example, "viññāna paccayā nāmarūpa" and "nāmarūpa paccayā viññāna" steps may go back and forth strengthening each other in many cases (see \#8, \#9 above.)

- I have explained this in several previous posts in this series: "Paticca Samuppāda - Not 'Self' or 'NoSelf" A vital case discussed in "Tanhā Paccayā Upādāna - Critical Step in Paticca Samuppāda."
- There is a lot to grasp in this post. Please make sure to read the related posts mentioned above, so that these concepts are well-understood.
- It is critical to have a good idea about these concepts to see how one makes one's future rebirths. Furthermore, the type of rebirth CORRESPONDS to the kind of abhi(sañkhāra) cultivated with "avijjā paccayā sañkhāra."
- That is how "mind to matter" transitions take place. And this is why the Buddha said that the mind is at the forefront.
- All relevant posts at, "Origin of Life."

## XI Dhamma and Philosophy

- Dhamma and Philosophy - Introduction
- Philosophy of the Mind
- Is Buddha Dhamma (Buddhism) a Religion?
- The Infinity Problem in Buddhism
- Free Will in Buddhism - Connection to Sañkhāra
o Subsection: Book Reviews
- "Why Does the World Exist?" by Jim Holt"
- "Waking Up" by Sam Harris"
- "The Language of God" by Francis Collins"
- "'Spark" by John Ratey"
- ""The Life of the Buddha" by Bhikkhu Ñānamoli""

### 11.1 Dhamma and Philosophy - Introduction

1. One may ask the question: "What does Buddhism have to do with philosophy?".

The Merriam-Webster online dictionary defines philosophy as:

- the study of ideas about knowledge, truth, the nature and meaning of life, etc.
- a particular set of ideas about knowledge, truth, the nature and meaning of life, etc.
- a set of ideas about how to do something or how to live

Other dictionaries and books define philosophy in a similar manner.
2. The origin of the word "philosophy" comes from the Greek words "phila" (meaning love) and "sophia" (meaning wisdom). Thus philosophy is "love of wisdom". It is said that Pythagoras (570 BCE) coined the term, and that is the basically the time the Western philosophers started looking for "natural explanations" instead of accepting that a Creator needed to be invoked to explain phenomena that we see around us.

- This method of "acquiring knowledge" was supposed to be based on reason, argument, and observation. But as we discuss at this website, any knowledge gained by that method is necessarily limited, because we have senses faculties that are very limited, and whatever deductions we make with unpurified minds are faulty and incomplete; see, "Dhamma and Science" section for an introduction. Science actually branched off from philosophy, first as "natural philosophy".
- Therefore, Buddha Dhamma has a lot to say about philosophy, even though there is no such thing as "Buddhist philosophy"; there is only "Buddha Dhamma" which describes the nature. The Buddha did not speculate on anything like philosophers. He said he experienced everything that he taught. One time a Brahmin asked the Buddha whether he believed devas and hell beings exist. The Buddha said he KNOWS they exist and could see those beings.
- Buddha Dhamma can sort out the philosophical arguments that have gone back to the Buddha's time (in the Western world); philosophical views have evolved over the intervening time, but Buddha Dhamma has not. Ironically, "the pure form of Dhamma" had been left out of the discussion mainly because "Mahāyāna forefathers" like Nagarjuna, Asanga, and Vasabandhu made up a "Buddhist philosophy".

3. Since Buddha Dhamma is a complete set of nature laws only for its faithful followers, it is logical to present it as a philosophy to those who are not familiar with it or who have not seen enough evidence to believe that claim. In presenting Buddha Dhamma as a philosophy the second definition is a more valid one, because these are not evolving ideas; rather, they were laid down 2500 years ago, and have been documented in the Tipiṭaka, the Pāli Canon.

- It is a set of ideas about knowledge and truth not only about human existence, but ALL that exists in the seen and unseen parts of "this world", which also encompasses not only the Solar system, but an infinite number of such planetary systems.
- This may sound as an arrogant claim, but it is not. One could scan different sections of this site and see that there is a complete theory about the whole existence; it may take another year or more to get even the "basics" of the Dhamma published. As of mid-2015, I have not yet been able to present even a fraction of the Abhidhamma material.

4. My basic incentive for creating this section is to make a request to the philosophy community: It is time to take a close look at Buddha's world view, and see how it compares with existing philosophical arguments on various topics. No one has done a serious study on the worldview of the Buddha.

- It has been difficult to make a true assessment of what the "real Buddha Dhamma"is, because there are so many different versions out there.
- I hope to make a logical presentation to convince the philosophy community. Please make any comments/requests, and I will try to address any serious request.

5. Perhaps as important, I want anyone reading the site to appreciate the significance of what the Buddha told us 2500 years ago. Compared to the pure Dhamma, all philosophical theories are at very early stages. Any interested reader can learn about the current philosophical arguments (and those going back to the early Greek philosophers) and then compare with Buddha Dhamma presented at this site.
6. Within the framework of the Buddha Dhamma all standard philosophical questions have been answered.

- These include, "the relation between the brain and mind", "the nature of death", "whether we have free will', etc. Thomas Nagel's short book listed below gives an introduction to some of such topics.
- Most existing literature on Buddhist philosophy says some of these questions are in the category of "questions that the Buddha refused to answer", which itself is an incorrect statement; see, "Misconceptions on the Topics the Buddha "Refused to Answer". The Buddha refused to answer questions posed by a person who was not capable of comprehending the answers. But he has given the answers in other places.
- We will discuss how Buddha Dhamma provides answers to these philosophical questions one by one, as sufficient background material is added to site.

## REFERENCES

For those who are interested on the subject, here are some references (both for philosophy in general and also on "Buddhist philosophy"; not in any particular order). Among those on "Buddhist philosophy", I have not read a single book that provides a true description of the Buddha's world view.

For those who are not familiar with the subject, I would recommend the first two introductory books on philosophy:
"What does it all mean?" by Thomas Nagel (1987) - Excellent introductory book and only 100 pages.
"The Making of a Philosopher", by Colin McGill (2003) - Another excellent introductory book.
"Buddhist Philosophy - Essential Readings", ed. by William Edelglass and Jay L. Garfield (2009).
"Mahāyāna Buddhism: The Doctrinal Foundations", by Paul Williams (2009)
"Buddhism as Philosophy", by Mark Siderits (2007).
"Buddhist Philosophy - A Historical Analysis", by David J. Kalupahana (1976).
"Causality: The Central Philosophy of Buddhism", by David J. Kalupahana (1975).
"A History of Buddhist Philosophy", by David J. Kalupahana (1992).
'Nagarjuna - The Philosophy of the Middle way", by David J. Kalupahana (1986).
"Causality and Chance in Modern Physics", by David Bohm (1957).
"Conversations on Consciousness", by Susan Blackmore (2006) - input from a number of philosophers.
"Mind - A Brief Introduction", by John R. Searle (2004).
"The Character of Consciousness", by David J. Chalmers (2010).
"Consciousness Explained", by D. C. Dennett (1991).
"The Quest for Consciousness: A Neuroscientific Approach", by C. Koch (2004).
"Rocks of Ages: Science and Religion" by Stephen Jay Gould (2002).
"The Self and Its Brain", by Karl R. Popper and John C. Eccles (1977).
Next, "Philosophy of the Mind", .........

### 11.2 Philosophy of the Mind

1. One nice thing about Buddha Dhamma is that there are no separate theories for the mind, meaning of existence, the physical world, or ANYTHING in this world. Thus I can refer to the section on "Buddha Dhamma" when I talk about the mind, the same way I refer to that section when I discuss "Dhamma and Science."
2. There seems to be three basic problems that the philosophers are trying to tackle regarding the mind (there are many others, but let us start with these):

- How does the mental experience arise in a physical body? Most scientists and philosophers say that it originates in the brain, but they have not been able to make the connection. This is the "mind-body problem".
- How can non-physical mental states of consciousness cause something in the physical world? For example, how can your intention ever cause a movement of your hand? This is the "problem of mental causation". Yet, the case for "physicalism" - that everything in this world is matter-based - is made with this as a premise.
- Finally, how your thoughts refer to something that is happening (or happened) in a distant city? This is called the "problem of intentionality". If you are thousand miles away from home, you can take "tour" of the home, room by room, in your mind.

3. The philosophers are divided into two camps in addressing the above problems:

- One camp says the "physical" and "mental" are two distinct realms. They do not think "mental" can arise from 'physical"; This camp is mostly religious and attribute the "mental" to the concept of a "soul". They are "dualists".
- The other camp is 'materialistic": they say the 'mental" arises from "physical". In the worst case, some materialists deny even the existence of a mental reality, even though I cannot quite understand what that means. Because they are obviously thinking about these concepts, which is "mental".

4. Let us look at the current status of these two camps:

- Following the extreme dualism of Rene Descartes, there have been many dualists, including Stephen Jay Gould whose "non-overlapping magisteria" in the late 1990's put matter and mind into non-overlapping disciplines: matter can be handled by science and morality and mind can be left to religion. However, these days only dualists left seem to be those who hold a dualist view for religious reasons, i.e., a soul.
- These days most philosophers are materialists. With the amazing progress of science and technology, it is hard for most people to believe anything that is not "confirmed" by science. And they think science, based on a purely materialistic approach, should be able to explain everything about 'this world". They believe that it is only a matter of time before brain activity will be able to explain the workings of the mind; see the reference list in "Dhamma and Philosophy - Introduction."
- The inadequacy of the materialist approach is detailed in a comprehensive manner by Thomas Nagel in his recent book, "Mind and Cosmos" (2012); it is an easy read with no fluff and only 128 pages. I was impressed by how close he came to advocating a "mind first" approach, just like in Buddha Dhamma (apparently he does not know anything about Buddha Dhamma and does not even mention it).

5. Mind is the ultimate cause of everything in this world. The Buddha said, "mano pubbangama dhamma, mano setta manomaya...". "Mind precedes all dhamma, all dhamma are mind made...". But Buddha's is not a dualist world view. Mind and matter are intimately connected.

- This is in sharp contrast to both the "dualistic" and "materialistic" views.
- Most people translate the above Pāli verse as, "mind precedes all mental phenomena....." So, we need to examine what "dhamma" means here.
- Dhamma explains how anything and everything in this world comes about "dhamma" means "to bear" or "to explain" or "how anything "comes about". Nothing happens without (multiple) causes.
- In the Sabba Sutta, the Buddha clearly defines what "sabba" or "all" that in "in this world": It is everything that can be experienced via the five physical senses and the mind. Specifically, eye and visible objects, ear and sound, nose and smells, tongue and tastes, body and touch, and the mind and concepts (these are the six internal and corresponding six external "ayatanas"), this is "the all".
- Is there anything that is not included within those 12 ayatanas? There is nothing else in the whole world that is not included in those 12 ayatanas. Six of those are "internal"; eye, ear, nose, tongue, body, and mind, and the other six are external, they exist "out there".
- Therefore, it is NOT correct to say that "dhamma" in the above verse includes only mental phenomena, as many translators of the sutt $\bar{a}$ have done. This is why I keep saying that we need to check consistency all the time. If one thing is not defined properly, then that error propagates and lead to contradictions.
- This "all" can also be expressed as the 31 realms of existence; of those 31 realms, normal humans experience only two realms (human and animal); see, "The Grand Unified Theory of Dhamma". But it is possible to experience other realms via developing mental power, i.e., jhānā: see, "Power of the Human Mind - Introduction" and the follow-up posts. Thus, the Buddha's world view is much more expansive than the ones that are subjected to current scientific and philosophical investigations.

6. According to Buddha Dhamma, the ultimate realities in this world are just 28 types of rūpa (matter), citta, and 52 types of cetasika. Then different combinations of the cetasika in citta gives rise to 89 (121) types of citta.

- Of course citta and cetasika constitute the mind, and 28 types of rūpa constitute matter.
- Another way to state the same thing is in terms of the 6 dhatus: pathavi, āpo, tejo, vāyo, akasa (space), and viññāna. The 28 types of rūpa mentioned above (including akasa dhātu) are derived from the satara mahā bhūta: pathavi, āpo, tejo, vāyo. Viñ̃̄āṇa constitutes of citta and cetasika.
- All inert things and plants in this world (31 realms) are made of rūpa. All sentient beings "are made of" $r \bar{u} p a$ and have viññāna (citta and cetasika), i.e, a mind.
- As I will explain in a separate post, $r \bar{u} p a$ are ultimately caused by the mind; see, "The Origin of Matter Suddhatthaka." But rūpa are inherently unstable (this is basically the root cause for suffering in the material world), and there is a fundamental law in physics which states the fact that matter is unstable and the universe itself"runs down"; see, "Second Law of Thermodynamics is Part of Anicca!."
- When the mind is released from the material body, one attains Nibbāna, i.e., one is never reborn "in this world". It is the material body that is subject to decay and death, and lead to suffering.

7. The reason that I started this website is that it is not possible to provide a reasonable explanation of the Buddha's world view in an essay or even in several essays. At the website, I can make references to related posts. I hope it would be a rewarding experience for anyone who is willing to allocate some time to read AND contemplate.

- Another reason to start the website is that I want to have it all out in the open, so anyone can challenge any inconsistency. I want to find the truth myself, and the only way to do that is to get as many as possible to look at the emerging picture and make corrections to any errors anyone can find.
- Therefore, I would appreciate any comments pointing to any errors or inconsistencies anywhere on the site, in addition to suggestions for relevant topics to discuss.
- There is more to follow. This is an introduction.
- How "physical" arises from "mental" in the most fundamental sense is really complex and we may not get to that for a while. First we will concentrate on how physical bodies of the living beings arise with causes from the "mental". I will be building up the Abhidhamma section and then will refer frequently to that section as we proceed.

8. It is time to make a paradigm change: Consciousness is not only ontologically fundamental, it takes precedence over matter. Mind can create matter. Right now we have evidence that the mind can change the brain; see, "Truine Brain - How the Mind Rewires the Brain via Meditation/Habits." If the brain creates the mind, how can the mind alter the brain?
9. Here are a couple of papers on the subject related to the "mind body problem" for those who are interested (click on them to open):

### 11.3 Is Buddha Dhamma (Buddhism) a Religion?

## October 21, 2015; revised November 8, 2015

It is best to learn (or even investigate) Buddha Dhamma with a mindset pretty much the same as when one is trying to learn about a new concept, say in mathematics or science. There are some key assumptions (axioms) involved, which cannot be proven, but do make sense especially if one takes time to contemplate. This is contrary to conventional religions.

1. Merriam-Webster defines "religion" as:

- the belief in a god or in a group of gods
- an organized system of beliefs, ceremonies, and rules used to worship a god or a group of gods
- an interest, a belief, or an activity that is very important to a person or group

The Oxford dictionary has the following definitions:

- The belief in and worship of a superhuman controlling power, especially a personal God or gods
- A particular system of faith and worship
- A pursuit or interest to which someone ascribes supreme importance

2. The word "religion" invokes the idea of a Creator God in most people's minds. Even though this is correct for most major religions of the world, it is definitely not correct for Buddha Dhamma.

- The foundation of Buddha Dhamma is that the world has been in existence "forever" (no First Cause and thus it was not created). Universes come and go, but there have been living beings at all times.
- It may first appear to be inconsistent with the current "Big Bang theory" that says our universe started some 14 billions years ago in a "Big Bang". In fact, major religions embraced the idea of a Big Bang when it was first proposed, since it had connotations of creation. However, when the inflationary theory that describes the Big Bang (proposed in the 1990's) says there are multiple, parallel universes. Thus, the hope for a unique "event of creation" fizzled out.
- Of course "Big Bang theory" is just that, a theory. There are some scientists who do not believe everything "popped up" all of a sudden in a Big Bang. They believe that universes are cyclic, i.e., they transform and evolve; see, for example, "'Endless Universe - Beyond the Big Bang", by P. J. Steinhardt and N. Turok (2007).

3. So, Buddha Dhamma does not count as a religion if one takes the first two definitions from either Merriam-Webster or Oxford dictionary. Yet, it can be included in the third category.

- One could say that most major religions are theistic, i.e., based on the belief of a Creator.
- Buddha Dhamma can be categorized as an atheistic religion, in the sense that there is no assumption of a Creator. It must be noted that in Buddha Dhamma there are beings called "devas" (sometimes translated as "gods") in other realms; they cannot affect our lives in a significant way, much less than creating universes.

4. However, I prefer to label Buddha Dhamma as the "ultimate science". It encompasses all of nature's laws not only pertaining to matter, but also pertaining to the mind. It is the Grand Unified Theory that the scientists are striving to discover, but they are only focusing on the material side.

- Scientists are beginning to realize the importance of the mind. In fact, many scientists are attempting to make a connection between quantum theory and the mind. This is NOT going to work, because any "matter-based theory" cannot explain the mind. Mind is the forerunner: "Manopubbangamā Dhammā..."
- As I build the Abhidhamma section, it will become clear why the mind takes precedence over matter. And it will also become clear why the Buddha is the top-most scientist. He was only concerned with sharing what he discovered with the others.
- The "new found knowledge" about innumerable planetary systems existing in our universe was known to the Buddha and is described in the Tipitaka; see, "Dhamma and Science."
- The Buddha was not interested in "starting a religion" so that he could be worshipped by the masses. Instead of residing in many luxurious residences like the Jetavanaramaya in his last days, he chose to travel by foot to Kusinara enduring many hardships on the way. He wanted to show that his body was not exempt from suffering.

5. When I listen to current debates between those who believe in a Creator and those who don't (atheists), I think the following summarizes the key ideas from each group:

- Atheists correctly point out that there is no evidence supporting the idea of a Creator God. Our ancestors could not fathom the workings of our complex world, and envisioned a Creator, who was supposed to have created the humans and a suitable habitat for them. But many "mysteries" of our world have been resolved with the advance of science, and in fact, these findings contradict key ideas in major religions.
- Those on the other side do not have any "winning points" or scientific evidence, but they insist that the idea of a "totally physical world" goes against our experiences and innate feelings that cannot be denied. That there must be something in addition to a physical body, i.e., there is a "conscious experience" that cannot be attributed to atoms and molecules in our bodies.

6. Buddha Dhamma encompasses both these key points. First, on the side of the atheists, there is no need for a Creator. Natural processes can account for not only what happens on Earth, but an uncountable number of habitable planetary systems in a vast universe.

- On the other hand, science can account for only how the material world evolves. There is something other than inert matter in this world as the theologians argue, and that is consciousness. Consciousness cannot be derived from inter matter. There are six elemental entity types in this world: pathavi, $\overline{a p o}$, tejo, vāyo, akasa (space), and viññāna (consciousness). Consciousness thus cannot be derived from other five. The first four have deeper meanings than just earth, water, fire, and wind; we will discuss this in a future post.
- However, consciousness was not imparted by a Creator. Furthermore, contrary to what most theologians believe, animals are conscious too (even though their consciousness is at a lower level compared to humans).
- This is why one could say Buddha Dhamma is an "atheistic religion", within a narrow context.

7. Some people tell me that Buddha Dhamma is not that different from other religions because there are certain "assumptions" that need to be believed "on faith", for example, that there is a rebirth process. In fact, it is true that "not believing in the possibility of a rebirth process" is a wrong view that could make one eligible to be born in the lower four realms or the ap $\bar{a} y \bar{a}$ where suffering is much more compared to in the human realm; see, "The Grand Unified Theory of Dhamma."

- However, the axiom of a rebirth process is not be taken as a tenet, like in the case of the Ten Commandments; it is up to oneself to examine and accept or reject that concept. Even a Buddha cannot make anyone be "forced to believe" in anything.
- Thus, there is a difference in what is meant by "faith" in Buddha Dhamma, compared to that in theistic religions. In any theistic religion, one has to accept the idea of a Creator without question; it is THE basis of any major theistic religion.
- Buddha Dhamma just describes the nature of this world; this The Grand Unified Theory of Dhamma has some basic axioms just like geometry or the theory of relativity. These "assumptions" can be verified to be correct if one takes time to examine the evidence.
- One could start off by not embracing these basic assumptions, but not rejecting them outright either. One could keep an open mind and explore the key ideas in Buddha Dhamma and decide for oneself whether those assumptions start to make sense as one proceeds.
- In fact, accepting such assumptions on blind faith will not do any good for anyone. One has to comprehend WHY those HAVE TO BE correct in order to make sense of this world that we live in. One has to spend time and critically evaluate the key concepts in Buddha Dhamma.

8. Buddha dhamma based on some key axioms like the rebirth process and the existence of other types of beings in 29 more realms (other than the human and animal realms), has the explanatory power to explain anything in this world, ranging from the existence of innumerable planetary systems (which was only accepted within the past few hundred years by science) to how morality comes about without a Creator; see, "Dhamma and Science" and "Origin of Morality (and Immorality) in Buddhism."

- It may take me another year or two to get the more deeper concepts explained, but I think there is enough material at the site to see that the knowledge of the Buddha (who was a human being just like us) cannot be matched by any other human. It took us the workings of many brilliant scientists from Galileo to Newton to Einstein to realize the vastness of this universe, which the Buddha described 2500 years ago.
- But the even more astounding fact is that the Buddha described in detail how the consciousness arises in a living being, in addition to describing the material world. Science is still under the "wrong view" that consciousness can arise in the brain out of inert matter. I am just beginning to layout the basics of Abhidhamma that have been hidden in the past several hundred years, and have been revealed by a very special Thero in Sri Lanka.
- Whenever possible, I try make connections to current findings in science, and to show the new confirmations as well the wrong concepts still embraced by science. Time will reveal that Buddha Dhamma, in its pure form, cannot be refuted. I have started to add the date of posting of essays, so that we can keep track of these predictions over the coming years.
- And there are no "mysteries" in Buddha Dhamma, even though some concepts are still not amenable to science.

9. I just read the recently published book, "Life on the Edge" by Johnjoe McFadden and Jim Al-Khaliil (2014) which describes how scientists are slowly, but surely, revealing many "mysteries of nature". These are all consistent with Buddha Dhamma, and I can point out a couple of "possible future breakthroughs".

- Scientists will be able to extend the lifespans of humans. There is no set limit to human lifetime in Buddha Dhamma, with lifetimes extending to thousands of years at times.
- It may even be possible to make conditions in a laboratory (chemical concoctions) that allows a lifeform to arise. This does NOT mean that scientists will be able to CREATE LIFE. Buddha Dhamma describes how animals and humans can exist in the "gandhabba state" until a suitable conditions for it to start building a physical body become available; see, "Manomaya Kāya." When a human baby is conceived, for example, what happens is that a matching "gandhabba" taking possession of the zygote in the womb or even out in the laboratory; see, "Buddhist Explanations of Conception, Abortion, and Contraception."
- If careful experiments are designed, it will be possible to demonstrate even now that small insects "can be born" out of decaying leaves; what happens is that decaying leaves lead to the formation of the "seed" (right chemical concoction) necessary for a "gandhabba" of that insect species to start a new physical body.

10. For those who would like to look into arguments on why theistic religions do not make sense, below is a compilation of arguments by Sam Harris, a prominent atheist.

- By the way, Buddha Dhamma does not agree with some of the positions of Mr. Harris (issues on how consciousness arises, as we discussed in \#9 above). For example, at the end of the video (last several minutes) he talks about human embryos not being qualified as "human", i.e., there is no life there. There

Mr. Harris says a zygote is the same as any other trillions of cells in a body. That is not even consistent with modern science.

- Modern science has not pinpointed when life begins in a zygote; see, "Buddhist Explanations of Conception, Abortion, and Contraception." This is why I am saying that science is incomplete; it does not know about the "gandhabba state" of a human discussed in \#9 above. By the way, a "gandhabba" is not a soul; see, "Ghost in the Machine - Synonym for the Manomaya Kāya?." I have other posts at the site that provide more details, but it may not be for another year or so until all the details are presented.
- With regard to the mind, science is still at the same stage that it was 500 years ago regarding the material world, i.e., when most people thought stars were embedded in a celestial sphere around the Earth; see, "Dhamma and Science."

Please note : The video seems to start around 43 minutes into the presentation. You may need to manually reset to the start of the video.

### 11.4 The Infinity Problem in Buddhism

July 15, 2017; Revised February 5, 2018; Re-written March 23, 2021; revised August 13, 2022; August 14, 2022; re-written September 24, 2022
The infinity problem in Buddhism is the following. "Each of us" has been in the rebirth process for an infinite time. Thus, "each of us" has been exposed to Buddha Dhamma countless times, i.e., made infinite attempts to attain Nibbāna. How is it possible that all of "us" have not attained Nibbāna?

## Introduction - "Infinite Monkey Problem"

1. The question is based on the following statement in several suttä in Anamatagga Samyutta starting with the "WebLink: suttacentral: Tinakattha Sutta (SN 15.1)", "There is no discernible beginning to the rebirth process." In other words, we have had an infinite time to attain Nibbāna (because an infinite number of Buddhas must have been born too.) So, why have we all not attained Nibbāna yet?"

- This issue has been discussed in discussion forums without a conclusion. See "WebLink: dhammalwheel.com: The problem of infinity in Buddhism" at Dhamma Wheel and "WebLink: suttacentral: The infinity problem in Buddhism" at the Sutta Central forum in 2017.
- This question seems to have its origin in the "WebLink: wikipedia.org: Infinite Monkey Theorem," which states that a monkey hitting keys at random on a typewriter keyboard for an infinite amount of time will almost surely type any given text, such as the complete works of William Shakespeare.
- By the way, this infinite monkey theorem is another evidence of how unimaginably large infinity is: "Infinity - How Big Is It?."

## Detailed Analysis of the Infinite Monkey Theorem

2. First, the monkey theorem is based on a monkey typing on a keyboard and generating random letters. It is assumed that the same monkey will keep typing on the keyboard non-stop for an infinite time.

For example, the probability that the monkey will come up with the word "banana" would be less than $\mathbf{1}$ in $\mathbf{1 5}$ billion, but not zero. Thus it is a theoretically possible outcome, even though improbable.

- But the enormity comes to view when you realize that you have to get a WHOLE TEXT correctly without making too many errors at a stretch (in one continuous period.) For example, to get TWO words correctly, like "yellow banana," has a probability that is the multiplication of the probabilities of getting each word right. The probability that a monkey gets those two words correctly is less than 1 in a billionbillion ( 1 in $10^{\wedge} 18$ ). That is extremely small.

3. The above Wikipedia article says: ".the probability that monkeys filling the entire observable universe would type a single complete work, such as Shakespeare's Hamlet, is so tiny that the chance of it occurring during a period hundreds of thousands of orders of magnitude longer than the age of the universe is extremely low (but technically not zero)."

- That is because scientists estimate the age of our current universe to be only about 14 billion years. Infinity cannot be assigned a number. Any large number you can think about CAN NOT BE the largest number because you can just add 1 to that number to make it bigger. There is no ending! Thus, given an infinite time, it is theoretically possible that a monkey could type out the complete works of William Shakespeare.
- However, as we see below, the rebirth process involving a "lifestream" can not be compared to the same monkey typing on a keyboard for an eternity.

## Two Relevant Issues

4. We will discuss TWO aspects of this issue.

- First, we will show that the infinite monkey theorem's MECHANISM does not apply to the rebirth process. The rebirth process DOES NOT involve a "person/soul/ätman" traveling the Sainsāra (like a single monkey typing for an infinite time.) Nothing like a soul "moves" from this life to the next. Even the next moment in life arises based on causes and conditions based on the present moment, i.e., via the Patticca Samuppāda process.
- Second, we will show that even if an infinite number of living beings has attained Nibbāna, there will still be an infinite number left!

## First Issue

## There Is No "Person" Traveling the Rebirth Process

5. During the rebirth process, various forms of life manifest. Even though we live human lives now, we have lived in most of the 31 realms described by the Buddha. We have been born a Deva, a Brahma, an animal, a hell-being, etc. countless times!

- The concept of a "lifestream" moving from life in one realm to another (rather than a soul incarnating or appearing in different forms) is what the Buddha described. See "What Reincarnates? - Concept of a Lifestream."
- No "unchanging/permanent essence" like a soul moves from one life to the next. If that were the case, stopping the rebirth process and attaining Nibbāna would be impossible! How can a permanent entity cease to exist?
- What is taken to the next life is anusayalgati/samyojana. None of those is permanent. Each one can change even momentarily!
- Furthermore, all those entities are associated with suffering. Elimination of anusaya/gati/samyojana is the end of suffering, not the end of an entity like a soul or an ātman. See "Yamaka Sutta (SN 22.85) Arahanthood Is Not Annihilation but End of Suffering."

6. When one understands that by comprehending "Paticca Samuppāda, Tilakkhana, Four Noble Truths," one becomes a Sotāpanna by removing significant parts of anusaya/gati/samyojana. That is getting rid of the wrong view of a "soul/ātman" or "sakkāya ditṭhi." See "Sakkāya Ditthi and Tilakkhana."

- As that Sotāpanna progresses on the Noble Eightfold Path, more of the anusaya/gati/samiyojana are removed. See "Kilesa - Relationship to Akusala, Kusala, and Puñña Kamma" and "Anusaya, Gati, Bhava - Connection to Manomaya Kāya (Gandhabba)."
- With the attainment of the Arahant stage, ALL anusaya/gatilsainyojana will be lost from the mind. At the death of the Arahant, there is nothing left that can initiate another birth, and thus, the rebirth process stops.

## Path to Nibbāna Is Not a Mechanical Process

7. Therefore, reaching Nibbāna CANNOT be considered a mechanical process and, thus, CANNOT be compared to a monkey hitting arbitrary keys on a keyboard to generate Shakespeare's Hamlet.

- We can consider a monkey typing a single letter to a living-being hearing the correct Buddha Dhamma. Therefore, we can call that a "single-shot" at Nibbāna, corresponding to a single keystroke by a monkey.
- However, a mathematician could still say that there will be an infinite number of such "single-shots" by a living being over an INFINITE time.

8. But the key issue is that it is NOT the same person who heard the correct Buddha Dhamma infinite times!

- Therefore, the problem is with the question itself. The infinity problem in Buddhism is phrased as follows: "Each of us" has been in the rebirth process for an infinite time. How is it possible that all of us have not attained Nibbāna?
- That question assumes that a fixed person/soul/ātman is repeatedly reborn! Paṭicca Samuppāda explains that there is no such permanent entity being reborn. See "What Reincarnates? Concept of a Lifestream."
- We went through the above discussion to show that the two processes cannot be equated. Now, we address the SECOND issue mentioned in \#4 above.

## Second Issue

## Infinite Number May Have Attained Nibbāna

9. It is indeed possible that an infinite number of living beings HAVE ATTAINED Nibbāna in the past.

- Not only that, an infinite number of living beings may have attained Buddhahood in the past. Of course, attaining the Buddhahood is infinitely more difficult than attaining Arahanthood.
- Therefore, the infinite set of living beings who have attained Nibbāna is "much larger" than the infinite set of living beings who have attained Buddhahood.
- The key to this puzzle is to realize that "many levels of infinity" exist. It has been revealed by mathematicians within the past hundred years, thanks to the pioneering work of the mathematician George Cantor. See "WebLink: storyofmathematics.com: George Cantor - The Man Who Founded Set Theory." The following video provides good insights too.
WebLink: youtube: Cantor's Infinity Paradox | Set Theory

## A Nice Visualization of Infinity Within Infinity - The Infinite Hotel Paradox

10. The following video explains why there can be "smaller infinities" types within infinity. In particular, the set of positive integers is a "smaller infinity." Those who have attained Nibbāna fall under that category. Regardless of how many have attained Nibbāna, more could attain Nibbāna.

- The following video discusses an infinite number of buses filled with an infinite number of guests arriving at an infinite hotel. It is shown that the infinite hotel can accommodate all of them and more!

WebLink: youtube: The Infinite Hotel Paradox - Jeff Dekofsky

- I have set the video to stop around 2:10 minutes. It is enough to see that the hotel can accommodate an infinite number of guests at any time. During the presence of a Buddha Sāsana, only a finite number of living beings (humans, Devas, and Brahmas) attain Nibbāna.
- The rest of the video is more mathematical and shows that even an infinite number of buses with an infinite number of passengers in each bus can be accommodated! You can watch the whole video by clicking "watch on Youtube."

## Other Related Issues

11. Of course, several other questions now arise: Where do all these infinite numbers of living beings live? Do they all live in our Solar system? It will take many more future posts to explain these fully, but we can summarize them as follows.

- Brief answers to those questions are as follows: According to the Buddha, an uncountable number of planetary systems are populated with living beings. While an uncountable number of living beings live in our Solar system, there are an uncountable number of such planetary systems (cakkavāla) in the world.

Each cluster of 10,000 such cakkavāla can have a Buddha appearing periodically. Thus, there could have been an infinite number of Buddhās.

- Such details are in suttas in the Tipitaka, mostly in the Dīgha Nikāya. I briefly discussed one sutta: "Buddhism and Evolution - Aggañña Sutta (DN 27)."

## Summary/Additional Resource

12. Infinity is a very complex concept. There are many levels of infinity. Infinity minus infinity can still be infinity.

- Therefore, even as there have been an infinite number of Buddhā and an even higher infinity of those who attained Arahanthood, there are still an infinite number of living beings (including us) who have not yet attained Nibbāna.
- Even more importantly, there is no contradiction per the "infinite monkey theorem" because the premise/assumption of that theorem does not hold for the rebirth process.
- Thus, there is no contradiction in either case.

### 11.5 Free Will in Buddhism - Connection to Sañkhāra

## November 3, 2018; revised July 6, 2019; June 11, 2022

Free will is at the core of Buddhism (Buddha Dhamma). Without free will, attaining Nibbāna is not possible. Connection to vacī and kāya sañkhāra discussed.

## Introduction

1. Free will is at the core of Buddhism (Buddha Dhamma). If one does not have free will, one would not be able to attain Nibbāna.

- In a mundane sense also, the applicability of free will should be obvious. Free will is what determines (within certain limits) whether one will become a successful businessman or a master thief.
- When I said "within limits", we can only compare situations for two people who are born with comparable capabilities. For example, one born with an "ahetuka birth" (born with brain defects) will never be able to achieve much success.
- However, a person born with a "normal level of intelligence" (tihetuka or dvihetuka births) can make decisions that can lead to a wide variety of possible outcomes in the future. For example, one could become a great scientist or a ruthless dictator. Both require a "sharp mind".

2. In the following video by Sam Harris, we can clearly see where modern philosophers get stuck on the issue of free will.

WebLink: youtube: Sam Harris on the Illusion of Free Will

- He agrees that things happen due to causes, but he cannot figure out the causes of many things. He says, "you don't pick your parents, you don't pick your body...". But we do, in a way. That is explained with paṭicca samuppāda in Buddha Dhamma. We even choose our rebirths too; see, "Upapatti Paticca Samuppāda (How We Create Our Own Rebirths)."
- As long as he does not believe in rebirth, Sam Harris will never be able to understand those "missing causes". The rebirth picture provides those "missing causes". Laws of kamma (causes and effects) operate over many rebirths. One cannot analyze the current life in isolation.
- Furthermore, we need to include animals and beings in the other 29 realms too, in order to fully explain the laws of kamma.
- Nature treats every single living being fairly, according to what they have done in the past.
- One is born into a given existence (human, animal, deva, etc), a given family (good, bad), under different conditions (healthy, handicapped, poor, etc), and so on based on one's gati. One's gati are based on the types of sañkhāra that one cultivates (basically how one thinks, speaks, and acts).

## Background Material in Buddha Dhamma

3. Continuing with the key points in \#2: Another key point is that "kammic energy" that leads to future vipāka (results) is generated in one's javana citta. Don't be put off by that word. Javana cittā are basically thoughts that arise in one's mind when one is generating conscious thoughts about speaking/doing moral or immoral deeds.

- Vacī and kāya sañkhāra become abhisañkhāra (strong sañkhāra) that can lead to future vipāka, ONLY IF those actions or speech are either moral (good vipāka) or immoral (bad vipāka).
- That is the difference between sañkhāra and abhisañkhāra; see, "Sañkhāra - What It Really Means."

4. Vacī sañkhāra are responsible for our speech (either out loud or just to ourselves). When we do something (walk, play, etc) we move our bodies with kāya sañkhāra that arise in the mind (basically in the gandhabba). We have control over both those.

- On the other hand, when thoughts arise automatically due to sensory input, those are mano sañkhāra.
- That is the difference between mano sañkhāra (which arises without our DIRECT control) and vacī sañkhāra/kāya sañkhāra (which we have control over).
- Whether just sañkhāra or abhisañkhāra, this distinction holds. For example, we can stop saying anything anytime. We can stop raising our hand anytime we want to, whether it is to say "Hi" to someone (sañkhāra) or to hit someone (abhisañkhāra).

5. As we have discussed before, the word "sañkhāra" comes from "san"+ "khāra" or actions that involve "san"; see, "What is "San"? Meaning of Sansāra (or Samsāra)."

- "San" is responsible for just getting things done to live the current life (even everyday activities).
- However, if they involve moral/immoral actions that can bring results (vipäka) in future lives, then those arise due to "strong san" or "abhi san" and thus become "abhisañkhāra."
- Kammä are actions (done with sañkhāra that arise in the mind). Most are neutral kamma: They do not bring significant vipāka.
- Such moral or immoral strong kamma - done with abhisankhāra - are the ones that lead to kamma vipāka in the future (either in this life or in future lives).

## Key Idea: Vacī/kāya Saṅkhāra are Willful

6. Let us look at some examples now.

- Thinking about going to the bathroom is a vacī sañkhāra (kammically neutral). One gets the body to move to the bathroom using kāya sañkhāra.
- Thinking about killing a human being involves abhisañkhāra with high kammic consequences or vacī abhisañkhāra; doing the actual killing is done with kāya abhisañkhāra. Those can lead to rebirth in the apāyā because both are based on immoral or apuñña abhisañkhāra (or apuññābhisañkhāra).
- On the other hand, puñ̃na abhisañkhāra (or puññābhisañkhāra) (thoughts responsible for good speech and actions) have good kammic consequences and can lead to "good births" (human, Deva, or Brahma). Even more importantly, they are essential for making progress on the Path.

7. I keep repeating these because it is very important to understand these key ideas.

- All sañkhāra arise in the mental body (gandhabba).
- Then the brain helps to put those into action/speech (i.e., moving body parts).
- Most of those actions/speeches are kammically neutral.
- Good kammā that will have good vipāka in the future are done with abhisañkhāra that have sobhana cetasika (compassion, non-greed, etc). Bad kammā that will have bad vipāka in the future are done with abhisañkhāra that have asobhana cetasika (anger, greed, etc.); see, "Living Dhamma Fundamentals."
- Sañkhāra is the generic word used in the suttā, even if it could be abhisañkhāra. One needs to be able to see which ones are abhisañkhāra based on the actual situation.

8. Mano sañkhāra are those that automatically arise in a mind due to a sensory input, based on one's gati.

- We don't really experience those initial mano sañkhāra and we only experience them when it comes to the next stage called vacī sañkhāra ("talking to oneself").
- This is an important point. Even if one does not say a word when one is "thinking to oneself" that is called $v a c \bar{l} \operatorname{san} k h a \bar{r} a$. If one gets really interested, one may speak out and that is still a vacī sañkhāra.
- If one's interest builds up, one may even take bodily action. Those bodily actions are done with kāya sañkhāra that arise in the mind.
- I strongly urge everyone to re-read the posts: "Difference Between Tanhā and Upādāna" and "Correct Meaning of Vacī Sañkhāra."
- The strength of kammic energy created increases in the following order: mano, vacī, kāya sañkhāra.

## Mano Saṅkhāra Arise Based on Our Gati

9. As we discussed many times, we get "attached" to something AUTOMATICALLY based on our gati and arise as mano sañkhāra. It is important to understand the concept of "gati" (character/habits); see, "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsava)."

- If the attachment is strong enough, the mind will now start thinking about it consciously, i.e., vacī sañkhāra arise and we become aware of these vacī sañkhāra.
- Now, we have the ability to be mindful and think about its consequences and move away from it, as soon as we become aware of this "attachment" to something. Therefore, we can stop such thoughts at the vaci sañkhāra stage; see, "Correct Meaning of Vacī Sañkhāra."
- However, our minds like to enjoy such vacī sañkhāra. It is easy to do and is very tempting. Many people get their sexual satisfaction from just "daydreaming" about either an event in the past or sexual encounters that they would like to have in the future.
- In order to change mano sañkhāra, we need to change our gati; see, "Difference Between Tanhā and Upādāna."

10. Please read \#9 again. That is the key to understanding "free will".

- We have total control over vacī sañkhāra and kāya sañkhāra.
- The reason is that there is a "time delay" between the mind (in the gandhabba) deciding to speak or make a bodily movement and the time takes for the brain to carry out those commands and to move parts of the physical body; see, "Brain - Interface between Mind and Body."
- However, animals do not have this "safety barrier". Lower animals do not have a neocortex. Even in monkeys, the neocortex is only partially developed. Thus, their mano sañkhāra automatically continue as $v a c \bar{\imath}$ and kāya sañkhāra. Also, see, "Truine Brain: How the Mind Rewires the Brain via Meditation/Habits."
- Those are the reasons why humans have free will and animals do not.

## Key Concepts in Satipaṭthāna and $\overline{A n} \bar{a} p \bar{a} n a$

11. Therefore, the concept of free will becomes clear if one can understand the concepts of mano, vaci and kāya sañkhāra.

- In fact, in order to have a firm grasp of Satipatthāna and Ānapāna meditations, it is essential to understand what is meant by "mindfulness" and how vacī and kāya sañkhāra are different from mano sañkhāra.
- The bottom line this: Once we become aware of an action that we are about to take, we have the total freedom to choose to either go ahead with it or stop it.
- We should stop any bad actions that we are about to do and continue with any good actions. That is the basis of Satipatṭhāna and Ānāpāna meditations.
- All we need to do is to cultivate the habit of "catching one's response early enough". "Being mindful" is just that; see, " $\underline{6}$. Ānāpānasati Bhāvanā (Introduction)" and "Mahā Satipatthāna Sutta."

12. If one can understand the post, "Difference Between Tanhā and Upādāna," one can not only see that free will is "built-in" for humans, but one will also be able to see how one can purify one's mind and make progress on the Noble Path.

- As explained in that post - and the reference posts mentioned there - only mano sañkhāra arise without our control.
- We have total control over vacī and kāya sañkhāra, at least when one gets better in practicing Satipaṭ̂hāna/Ānāpāna.
- This is also why humans are different from animals: Humans have the ability to think for themselves and make rational decisions.

## Libet's Experiments on Free Will

13. Scientists misinterpret the experiments on the famous "Libet's experiments" simply because they believe that the mind resides in the brain. Therefore, they wrongly conclude that the "brain activity starts" before one makes a decision; see, "Neuroscience says there is no Free Will? - That is a Misinterpretation!."

- Libet's experiment is very simple: A person was asked to move his/her own finger whenever at his/her will, and scientists monitored that person's brain activity. They concluded that the brain started the "finger moving" process before the person made the decision to move the finger!
- If the brain indeed started the decision-making process, that would confirm that humans do not have free will. But then the question arises what triggered that brain activity? Of course, scientists or philosophers do not have an answer to that question. If human decisions are random, this world would be a very chaotic place.
- However, the explanation is simple with the concept of a mental body (gandhabba) controlling the physical body with the help of the brain.
- As explained in the above post, the decision made by the gandhabba started the brain activity. Scientists did not correctly monitor the time at which the person made the decision, because their "model" was incorrect.

14. Gandhabba or the "mental body" or the "manomaya kāya" is a key concept that has been neglected in even the current Theravāda texts. This concept is ironically somewhat similar to the "ghost in the machine" concept; see, "Ghost in the Machine - Synonym for the Manomaya Kāya?."

- There are several subsections at the website that discuss this concept: "Mental Body - Gandhabba," "Gandhabba (Manomaya Kāya)," and "The Grand Unified Theory of Dhamma."

### 11.6 Book Reviews

"Why Does the World Exist?" by Jim Holt"
"Waking Up" by Sam Harris"
""The Language of God" by Francis Collins"
""Spark" by John Ratey"
""The Life of the Buddha" by Bhikkhu Ñānamoli"

### 11.6.1 "Why Does the World Exist?" by Jim Holt

## Revised October 1, 2021

1. I started writing this post while reading the popular book "Why Does the World Exist? - An Existential Detective Story" by Jim Holt (2012). It is a good book with many thought-provoking questions. Here I would like to point out that most of those questions have answers in Buddha Dhamma.

- On p. 269, equating the Nibbānic bliss to the annihilation of a person, he asks, "...But how can you enjoy something if you do not exist?". To address this question, I initially started the post with the title, "Does Nibbāna Mean Annihilation of a "Person"?". Still, I started addressing other issues in the book and eventually changed the title to be the same as the book title.
- Even many Buddhists are terrified of the idea of Nibbāna, thinking that it means destruction. That is why even many Bhikkhus like to give "blessings" to the effect, "May you attain Nibbāna at the end of much pleasures in the heavenly worlds". That illustrates a total lack of understanding of the profound message of the Buddha.

2. The problem is in the question itself. If a person is to be annihilated, a "person" needs to exist in the first place. Now this is a very deep issue that needs some knowledge of Buddha Dhamma to understand. As the Buddha said in his first sermon, his Dhamma is, "pubbe ananussutesu dhammesu....." or "a concept that has not been known to the world before..."

- To annihilate, something "concrete" must exist. The Brahmins of the day of the Buddha believed there is a permanent "āthma" associated with a prson (a "soul" in the present day.). It is very difficult for all of us to get rid of the perception of "me" or "myself". In fact, that perception is totally removed only at the Arahant stage of Nibbāna; it keeps decreasing as one advances on the Path.
- Thus as long as one "belongs to this world of 31 realms", one always thinks in terms of "me" and "the external world". This is why the Buddha rejected the concept of "no-self" even though most people incorrectly translate anatta as "no-self"; see, "The Grand Unified Theory of Dhamma."
- On the other hand, the Buddha said that it is also incorrect to say there is "self". This is because any "person" changes even moment-to-moment; see, "What Reincarnates? - Concept of a Lifestream."
- In rejecting both "self" and "no-self" extremes, the Buddha said, "this changing being" or "a lifestream" changes moment-to-moment due to changes in the causes that support that lifestream. This is not something that I can explain in one essay and is explained via many posts at the site, including the important section on Pațicca Samuppāda.
- In the book there is a separate chapter on, "The Self - Do I Really Exist?". I will discuss that chapter below, and point out a few more related facts.

3. The book's main theme is "why is there something rather than nothing?" or "how did the world got started?". It summarizes most of the arguments that have accumulated over thousands of years, and of course, come to the inevitable question on "the nature of the Creator God who would not need a cause for being there".

- However, regarding the two questions on existence as expressed above, the Buddha's answer is the simplest: The world has existed forever and it is not possible to pinpoint a specific first cause. The proof is very simple: Suppose there is a first cause; then what caused that? QED.
- Thus in the scientific basis of cause and effect, the absence of a first cause is built in.
- On p. 82 of the book, Jim Holt did point out, "..Scientific thinkers, by and large, have not shared such qualms about eternity. Neither Galileo nor Newton nor Einstein had any problem conceiving of a universe that was infinite in time. Indeed, Einstein added to his field equations a fudge factor - the infamous "cosmological constant" - to ensure that they would yield a universe that was static and eternal."
- And a few philosophers have discussed the problem with "first cause" arguments, as Jim Holt noted. Talking about the late philosopher John Mackie on p. 206, ". Obviously, as Mackie observed, no explanation in terms of a "first cause" could answer the ultimate question of existence, for such an explanation would merely raise the further question of why that first cause -whether it be God, an unstable chunk of false vacuum, or some still more exotic entity- itself existed'.

4. If one accepts that the world has existed forever, then many other questions discussed in the book do not even arise. Thus $100 \%$ of the questions discussed are answered if we start off with the premise that the world has existed forever AND the root causes (greed, hate, and ignorance) for the existence of the world given by the Buddha.

- For example, on p. 7, Leibniz's Principle of Sufficient Reason is discussed: For every truth, there must be a reason why it is so and not otherwise; and for every thing, there must be a reason for that thing's existence. This is basically "cause and effect". The Buddha said that the world exists because of greed, hate, and ignorance; and those causes have no beginning.
- This is related to the issue of the mind taking precedence over matter, and I am slowly building evidence for that in the website. There are some introductory posts in the "Abhidhamma" and "Dhamma and Philosophy" sections.
- On p. 188, Jim Holt discusses the fact that all science says about the "stuff that makes up our world" is that mass is equivalent to energy, "....but it gives us no idea of what energy really is...". This is exactly what is explained in Abhidhamma, and I will get to it eventually. He goes on to say, "...As Bertrand Russell noted in his 1927 book, The Analysis of Matter, when it comes to the intrinsic nature of the entities making up the world, science is silent".
- He also briefly discuss another big issue in philosophy on p. 192: "The conclusion of the philosophers ......that there is more to consciousness than the mere processing of information. If this is true, then science, insofar as it describes the world as a play of information states, would seem to leave out a part of reality: the subjective, irreducibly qualitative part". Actually, as we will see, Buddha's answer solves both this and the issue above in one fell swoop.
- A world without a beginning also gives an answer to the question of "why do I exist" (p. 18). We all have "existed" forever; there is no beginning so the question has no meaning. Another frequently asked question is, "what is the meaning of life?". There is no meaning to life: The bottom line is that we all suffer in this existence ON THE AVERAGE, IN THE LONG TERM while we meander aimlessly among the 31 realms of existence; see, "Evidence for Rebirth."

5. Now the only critical question is how do we know that the Buddha's world view is correct? The answer is that it can explain the complex world around us; it has the "explanatory power". Also see, "Vagaries of Life and the Way to Seek Good Births" and "Good Explanations - Key to Weeding out Bad Versions of Dhamma," among many other posts.

- Furthermore, one can EXPERIENCE the truth of Buddha's teachings and the results for oneself. I have described part of my experience in following the Path in, "11. Magga Phala via Cultivation of Saptha Bojjanga." Do not be discouraged by the title of the post.

6. Now let me briefly discuss the late chapter on, "The Self - Do I Really Exist?". Here Jim Holt comes across the answer himself (p. 256): Talking about Descartes' famous phrase, "I think, therefore I exist", he says, "... ..Did Descartes here infer more than he was entitled to? As many commentators have pointed out (beginning with Georg Lichtenberg in the eighteenth century), the "I" in his ultimate premise is not quite legitimate. All Descartes could assert with certainty was "there are thoughts". He never proved that thoughts require a thinker......" (bold face mine).
7. This is exactly what the Buddha said. There are thoughts, but no REAL thinker; there is the PERCEPTION of a thinker in "one's mind" until one's mind is purified to the level of an Arahant and it becomes clear that there is no "thinker". However, the irony is that until that wisdom is gained, "one's suffering" is real. The suffering is there simply because one thinks there is a real thinker!

- But one cannot honestly say, "there is no-self' as most people try to do unless one is an Arahant; one is just trying to fool oneself in saying that. When something bad happens to "anything that belongs to oneself" one INEVITABLY feels the pain associated with it; see, "Anatta and Dukkha - True Meanings."
- When the mind is purified (i.e., is absent of greed, hate, and ignorance) perception of "self" goes away at the Arahant stage, then the suffering associated with "one's stuff" is not there anymore. When one comprehends the concept of anicca to some extent, this will become clear to some extent. In other words, Nibbānic bliss or nirämisa sukha increases as one advances on the Path, with the mind being purified at each step; see, "Three Kinds of Happiness - What is Nirāmisa Sukha?", and "Nirāmisa Sukha."
- Thus we cannot forcibly get rid of the sense of "I". Only through the true understanding of the Three Characteristics of this world, anicca, dukkha, anatta, that one can slowly start getting rid of that sense of 'I" or "self". Until then there is neither a "self" nor "no-self', but just a stream of thoughts; see, "What Reincarnates? - Concept of a Lifestream." Only at the death of an Arahant that stream of thoughts is ended and the mind becomes free of any attachment to the material world of the 31 realms; see, "Nibbāna - Is it Difficult to Understand?," and "What are Rūpa? Relation to Nibbāna."

## "Waking Up" by Sam Harris

## Revised August 28, 2022

## Sam Harris, "Waking Up: A Guide to Spirituality Without Religion" (2014).

1. I am quite encouraged by the fact that many people are beginning to see through something contrary to basic human instincts: That it is possible to find a different and more permanent form of happiness that is not related to material things.

- Right at the start of the book, when he talks about his first "meditation retreat" at the age of 16 under harsh conditions in the wilderness, the author says he was puzzled by the positive reaction of the older people in the group, "...How could someone's happiness increase when all the material sources of pleasure and distraction had been removed?" (p.2).
- But now, with many years of experience in meditation and studies on human nature as a neuroscientist, he can understand it: "..Unlike many atheists, I have spent much of my life seeking experiences of the kind that gave ride to world's religions. Despite the painful results of my first few days alone in the mountains of Colorado, I later studied with a wide range of monks, lamas, yogis, and other contemplatives, some of whom had lived for decades in seclusion doing nothing but meditating. In the process, I spent two years on silent retreat myself (in increments of one week to three months), practicing various techniques of meditation for twelve to eighteen hours a day" (pp. 13-14).

2. Harris, like many others, has found that something about human life cannot be explained away just in terms of the workings of the material world. But he cannot pinpoint the source of that "something extra."

- As Harris explains, modern science has obliterated the concept of a "divine influence" as has been put forth by various religions. So I was quite interested to see his conclusion on the "source of this extra something."

3. On p.8, he makes a very valid statement: "Spirituality must be distinguished from religion - because of people of every faith, and of none, have had the same sorts of spiritual experiences....Nothing that a Christian, a Muslim, and a Hindu can experience - self-transcending love, ecstasy, bliss, inner light - constitutes evidence in support of their traditional beliefs, because their beliefs are logically incompatible with one another. A deeper principle must be at work". (my highlighting).

- This is exactly what I have been trying to emphasize on this website.
- In the next very paragraph, he says what he found that deeper principle to be: "That principle is the subject of this book: The feeling that we call " $I$ " is an illusion" (p. 9). This is probably the "no-self" theory that is erroneously presented as Buddha's concept of "anatta"; see, "Anicca, Dukkha, Anatta Wrong Interpretations."
- However, on that same page, he also summarizes most of my conclusions about religions in general, including "Buddhism" the way as it is practiced by most in both Theravāda and Mahāyāna sects.

4. I will quote the relevant sentences from pp. 9-10: "I am often asked what will replace religion. The answer, I believe, is nothing and everything. Nothing need replace its ludicrous and divisive doctrines....But what about love, compassion, moral goodness, and self-transcendence? Many people will imagine that religion is the true repository of their virtues. To change this we must talk about the full range of human experience in a way that is as free as the best science already is".

- And through the rest of the book, he goes through that process. I agree with most, except that while "Buddhism" may be a religion, Buddha Dhamma is certainly not (if religion is defined as providing salvation via following set rituals or having blind faith in an entity or a supreme being).

5. The key to Mr. Harris's not understanding Buddha Dhamma becomes apparent on p. 28: "We can also grant that Eastern wisdom has not produced societies or political institutions that are any better than their Western counterparts. In fact, one could argue that India has survived as the world's largest democracy only because of institutions that were built under British rule. Nor has the East led the world in scientific discovery. Nevertheless, there is something to the notion of uniquely Eastern wisdom, and most of it has been concentrated in or derived from the tradition of Buddhism".

- The problem is that Mr. Harris has not been exposed to Buddha Dhamma, the "non-religious" original teachings.
- The focus of Buddha Dhamma, as delivered by the Buddha, was not on enhancing mundane life and on building a better society. It was focused on the fact that it is a "waste of time" to try to build large cities, develop technology, and in general, to spend too much time on "making things better for this life" because this life is only a brief stop-over in a much longer journey.

6. If one understood the key message of the Buddha, one would see that this life is too short to be "wasted" on such things. This is due to three key foundational aspects of Buddha Dhamma:

- Even though wrought with some suffering, human life is the best in all of the 31 realms of this world for attaining Nibbāna; see the description of the wider world of 31 realms in "The Grand Unified Theory of Dhamma."
- In the process of rebirth, we spend only a tiny amount of time in this life of about 100 years; see "Evidence for Rebirth."
- And immersing in mundane sense pleasures becomes only a hindrance to attaining the "true and permanent happiness" of Nibbāna; see "Three Kinds of Happiness - What is Nirāmisa Sukha" and "Nirāmisa Sukha?".
- Of course, the Mahāyāna version of "Buddhism," or even the Theravāda version, has veered away from this key message of the Buddha.

7. Yet, I must hasten to point out two additional points:

- The Buddha stated that not everyone could comprehend this key message. Thus, he did provide advice for those who did not wish to pursue Nibbāna and asked for advice on how to live a moral and fulfilling family life while enjoying sensual pleasures. In Chapter IV of Bhikkhu Bodhi's popular book, "In the Buddha's Words" (2005), such advice from different sutta has been extracted into one place; this book also has other categories separated like good rebirths, mind, etc.
- The Buddha never tried to change or influence the political systems that were in place, even though he praised the democratic system that was in place in the small autonomous region of Vajji, which was a republic similar to the one we have now in the United States. Other than openly criticizing the caste system, he stayed away from politics.

8. I am impressed that Mr. Harris has been able to catch at least a glimmer of the uniqueness in Buddha Dhamma even though he has not been exposed to the true teachings of the Buddha: "Buddhism in particular possesses a literature on the nature of the mind that has no peer in Western religion or Western science. Some of these teachings are cluttered with metaphysical assumptions that should provoke our doubts, but many aren't. And when engaged as a set of hypotheses by which to investigate the mind and deepen one's ethical life, Buddhism can be an entirely rational enterprise" (p. 29).

- The author is highly impressed with the Buddhist "vipassana" meditation. However, what he describes in just breath meditation or "samatha meditation"; see, "Bhāvanā (Meditation)".

9. And he has the concept of Enlightenment (Nibbāna) all wrong (this says a lot about the Mahāyāna "Buddhism" that he has been exposed to): "...the state of "full enlightenment" - is generally described as "omniscient." Just what this means is open to a fair bit of caviling. But however narrowly defined, the claim is absurd' (p. 43).

- To understand the concept of Nibbāna, one must understand the worldview of the Buddha as described in the posts mentioned above, and then one needs to read other posts at this site describing Nibbāna (just search with the keyword Nibbāna at the top right box on Keyword Search).

10. Interestingly, there is no mention of purifying the mind of defilements, which is key to true Buddhist meditation; see "The Importance of Purifying the Mind."

- I do not blame the author, of course, but it is sad to see how far "Buddhism" has veered off from the original message of the Buddha.
- It is these three root causes of greed, hate, and ignorance (and the counterparts of non-greed, non-hate, and wisdom) that clarify the basis of morality that he has puzzled over in two other books, "The Moral Landscape" (2011) and "Free Will" (2012).
- As Mr. Harris correctly points out in "The Moral Landscape," 'there is no such thing as Christian or Muslim morality." There is no "Buddhist morality" either. Morality is universal and comes out naturally based on benevolence, compassion, and wisdom having precedence over greed, hate, and ignorance; see "Origin of Morality (and Immorality) in Buddhism."

11. Chapter 2 is on consciousness. The author has a good introduction, and his thinking about consciousness may be expressed here: "I am sympathetic with those who, like the philosopher Colin McGinn and the psychologist Steven Pinker, have suggested that perhaps the emergence of consciousness is simply incomprehensible in human terms" (p. 57).

- The Buddha has fully explained consciousness. Consciousness is NOT an emergent property, it is a fundamental entity. I have several introductory posts on consciousness on the site; see "What is Consciousness?" and follow-up posts.
- I hope those who are interested will read the comprehensive description of the mind provided by the Buddha in the Abhidhamma section of this site, which may not be ready for a comprehensive analysis for several more months. But there are a few introductory posts there.

12. The rest of the book is about the author's experience of trying different meditation types. It is too bad that he was not exposed to real Buddhist meditation. On the other hand, even in countries where Theravāda Buddhism is practiced, breath meditation is widely taught.

- Overall, I am impressed that even with the minimum exposure Mr. Harris had to Buddha Dhamma, he has been able to see that "there is something hidden there." I am glad to say that the Buddha did teach a much deeper doctrine, and I am sure he and many others in the West will be enthusiastic about finding the true message of the Buddha.
- The author knows that as an atheist, he was treading into unknown territory in talking about spiritual experiences: ".......many of my fellow atheists consider all talk of spirituality to be a sign of mental illness, conscious imposture, or self-deception. This is a problem, because millions of people have had experiences for which spiritual and mystical seem the only terms available" (p.11).
- However, once one understands the true message of the Buddha, one can see that there is nothing in his doctrine that goes against the beliefs and convictions of most atheists; Buddha Dhamma describes Nature's laws at a fundamental level.
- The only difference between science and Buddha Dhamma is that science assumes that mental phenomena can be derived from material phenomena. In Buddha Dhamma, the mind is at the forefront; see "Philosophy of the Mind."

13. I encourage those interested to read the book because the author has not only contemplated the subjects of morality, questions on existence, world religions, etc. but has also tried to experience different meditation techniques. I only wish he had been exposed to the true teachings of the Buddha so that he could perhaps make stronger statements about the value of the Buddha Dhamma in addition to finding much more benefits for himself.

### 11.6.3 "The Language of God" by Francis Collins

## Revised August 9, 2019; August 28, 2022

This is a top-rated book (published in 2007), as apparent from many reviews on Amazon. The author is a respected scientist and director of the National Institutes of Health (NIH). This post is based on a review I posted on the Amazon site in 2012.

- I have read numerous books to find solid arguments for believing in a Creator. The author has put together the best case he could also use previous ideas of C. S. Lewis and others. The main points in the book can be summarized as follows (not in the order presented in the book):

1. God is responsible for the "Big Bang," i.e., the creation of the universe, and for creating the just right physical parameters (fine-tuning) that enabled human life on planet Earth.
2. The "Intelligent Design" theory needs to be abandoned since it may damage the case for the existence of God.
3. Darwin's theory of evolution does account for leading to the appearance of a "human-like" creature, even though the theory explains the evolution of more complex animals.

- Whether this creature further evolved by itself to be human or whether at some point, God directly instilled a conscience in this creature, he leaves it open.
- Either way, God is responsible for the existence of morality in humans. He prefers to call "BioLogos" the theory of "Theistic Evolution."

4. The existence of "Moral Law" (the ability to differentiate right from wrong) is the fundamental basis for his belief in God.
5. The issue of "pain and suffering" was problematic for C. S. Lewis, and the present author also encountered difficulties in addressing it.

## My comments are as follows:

1. Proponents of the Big Bang theory say that Big Bang was not just one event, but such events are supposed to be frequent. Thus there is no need to invoke a higher power.

- Stephen Hawking, whose book "A Brief History of Time" that the author quoted to make a case for God's role, has since come out with a new book, "The Grand Design" (2010). In that book, he clearly states that the need for a Creator God is no longer there based on new evidence.
- Also, in the inflationary theory, Big Bangs occur all the time, and there is no need to invoke a fine-tuning of physical parameters; see "The Beginning of Infinity" by David Deutsch.

2. Actually "Intelligent Design" is a somewhat better theory than the hypothesis of a God because the proponents of that theory have put forth some formidable arguments for it.

- Of course, I do not subscribe to that theory (which some say is making a case for a Creator God without admitting it). However, Collins does not make a better case for the Creator God hypothesis.
- The problem with the "Intelligent Design" theory is that, of course, the question arises as to how that designer came into being! Many people say it is the same as the God hypothesis.
- If anyone is interested in learning about the "Intelligent Design" theory, a good book is "Signature in the Cell" by Stephen Meyer (2009).

3. The question is, "In this sequence did God instill moral values in the evolving creature?". Is there a clearcut transition from a robotic animal to a human with moral values?

- The "uniqueness of a human," according to the author, is the ability to know right from wrong. Humans indeed have this quality stronger than animals. Some animals also have at least a glimpse of this quality. If you have a pet, especially a dog, you know that it has feelings and even its mind to do things, i.e., it is not like a robot.
- While people sometimes sacrifice their own lives to save others, people like Hitler and Pol Pot have committed unmentionable atrocities. And that was with planning (not just on impulse).
- In Buddha Dhamma, both moral and immoral choices are in the "human psyche"; based on many complex factors (sansāric habits or "gati," family, friends, associates, etc.), people choose to be moral or immoral at different times depending on the situation. Of course, greed, hate, and ignorance play a significant role; see, "Living Dhamma."

4. Now on the existence of "moral law": From \#3 above, it is clear that even though morality is in the human psyche, it does not have a "binding effect" on humans. Humans are, in general, more "moral" than animals. But within the broader world described by the Buddha Dhamma, other sentient beings (Devas and Brahmā ) are more "moral" than humans.

- If the man is to be judged by just one life, why is everyone not given the same chance (including "same morality')? People are born poor, rich, healthy, unhealthy, etc., and some die even before getting a chance to prove their worthiness.
- These apparent "vagaries of life" are a strong argument for the case that this life is only one of many. Furthermore, the diversity that we observe is due to the effects of past actions (kamma vipāka); see "Vagaries of Life and the Way to seek "Good Rebirths."
- The basis of morality (as well as immorality) comes naturally in Buddha Dhamma. See "Origin of Morality (and Immorality) in Buddhism."

5. Of course, according to Buddha Dhamma, the issue of "pain and suffering" - not only in this life but in the cycle of rebirths - is the fundamental problem of existence.

- Again, the "pain and suffering" issue is unexplainable by any approach based on just one life. Like modern science, Buddha Dhamma has a foundation in "causes and effects." Suffering and happiness arise due to past causes, and since most of these effects (e.g., disability at birth, poverty) are even apparent at birth, "past" means past lives.

### 11.6.4 "Spark" by John Ratey

## Early post of 2014; revised August 28, 2019

1. There is a good book, "Spark: The Revolutionary New Science of Exercise and the Brain" by John J. Ratey (2013). It discusses new findings on the effects of regular exercise on the brain as well as the body. (Most of the books I review are likely to be available at public libraries).
2. The book discusses how exercise can keep the brain working at higher efficiency and lower stress and anxiety. Also, regular exercise can rid of addictions, and even Attention Deficit Hyperactivity Disorder, ADHD. It also talks about women's hormonal changes and aging too.
3. The key is to engage in a moderate exercise program up to 6 days a week. And to ratchet it up to highintensity once-in-a-while, even for a minute at a time. For example, if you jog, try to run fast for 30 seconds to 1 min once-in-awhile. That is called "interval running."

- The maximum heart rate for a person is $220-\mathrm{AGE}$.
- low-intensity exercise: $55 \%-65 \%$ of max rate
- moderate: $65 \%-75 \%$
- high intensity: $75 \%-90 \%$

4. There are "wristwatch type" heart rate monitors available. But you basically "know" when you are at low intensity (walking), moderate (jogging/slow running), and high (dashing to catch a bus or running a $100-$ meter race).

- Should not do high intensity unless you have been active for a while.
- In the anaerobic range (high intensity), the brain releases human growth hormones (HGH). That is a natural way to "get high."
- Even low-intensity workouts release many other beneficial chemicals. But in high-intensity workouts, they all get a boost. All these are good for the sustenance/growth of neurons so that your memory can be improved.
- But should not do high-intensity regularly unless one is in great shape.
- He also mentions yoga as an enjoyable activity. Any exercise, i.e., just walking, is better than none.
- He discusses how children in a school district in PA are avoiding obesity and health problems and getting good grades because the schools have good exercise programs.
- I find that the best time to meditate is after a good workout and a shower. The body and the mind are refreshed and alert.

5. We are born with a body and a mind that are results of specific kamma vipāka in the past. But we are not bound by either; we can improve both. That does not mean we should try to "beautify" the body; we should make it healthy. The physical body is a "temporary shell" that will be with us for about 100 years, and if we do not take care of it, that will lead to much discomfort.

- We can make conditions conducive to get "good kamma seeds" and to prevent "bad kamma seeds" from bearing fruits; see, "Anantara and Samanantara Paccaya." Do not be discouraged by those Pāli words. The post is easy to understand.

6. Exercise and meditate! That is key to a long healthy life as well for "cooling down" in the sense of getting some long-lasting peace-of-mind or attaining one of the four stages of Nibbāna.

- As we get old, it is imperative to keep both body and mind in good condition. It is hard to concentrate, let alone meditate, with an aching body or a defiled mind.
- Walking a mile or two a day can keep one reasonably healthy. For the mind, solving word puzzles or reading a book is better than watching television.

### 11.6.5 "The Life of the Buddha" by Bhikkhu Ñāṇamoli

October 13, 2018; revised November 15, 2020

## "The Life of the Buddha" Is a Good Resouce

1. "The Life of the Buddha" by Bhikkhu Ñānamoli is good to read and even to keep as a reference (page numbers quoted are for the 2001 First BPS Pariyatti edition). It is a good book for two reasons:

- A chronological record of the Buddha's life (after the Buddhahood),
- Detailed accounts of events that are not in the sutt $\bar{a}$ (taken from the Vinaya Pitaka).

## Need to Consult All Three Piṭaka

2. The Buddha said that if there is any doubt or a concept that is not clear, one should check with Sutta, Vinaya, and Abhidhamma. These basically refer to the Tipiṭaka (three baskets) of Sutta Piṭaka, Vinaya Pitaka, and Abhidhamma Pitaka.

- Most people refer to the Sutta Piṭaka and forget about the other two. Abhidhamma Piṭaka is a bit hard to understand, and without a firm grasp of basics it is harder.
- Most people think that the Vinaya Pitaka is just for the bhikkhus and bhikkhunis. But there are sections in the Vinaya Pitaka that have details that are not in the suttā. Furthermore, those sections in the Vinaya Piṭaka are easy to understand, as we see below.

## An Example

3. I will provide the following as an example of what is in this book that is not available in any sutta. It describes how the five ascetics attained the Sotāpanna stage over several days with the delivery of the Dhammacakkappavattana Sutta.

Here is a direct quote from p. 45 of the book (starting from the point where the Buddha had just finished the first delivery of the Dhammacakkappavattana Sutta):
"Then Añ̃ata Kondañña, who had seen and reached and found and penetrated the Dhamma, whose uncertainties were left behind, whose doubts had vanished, who had gained perfect confidence and became independent of others in the Teacher's Dispensation (My Comment: i.e., became a Sotāpanna), said to the Blessed One: "Blessed One, I wish to go forth under the Blessed One and to receive the full admission?"
"Come, bhikkhu," the Blessed One said, "The Dhamma is well proclaimed. Live the holy life for the complete ending of suffering." And that was his full admission.

Then the Blessed One taught and instructed the rest of the bhikkhus with a talk on the Dhamma. As he did so, there arose in the venerable Vappa and the venerable Bhaddiya, the spotless, immaculate vision of the

Dhamma (My Comment: i.e., became Sotāpannas). All that is subjected to arising is subjected to cessation. They, too, asked for and received the full admission.

These, having seen dhamma, attained dhamma, knowing dhamma ... having attained without another's help to full confidence in the teacher's instruction, spoke thus to the Blessed One: 'May we, Blessed One, receive the going forth in the Blessed One's presence, may we receive ordination?"

Then living on the food they brought to him, the Blessed One taught and instructed the rest of the bhikkhus with a talk on the Dhamma. All six lived on the food brought back by the three of them. Then there arose in the venerable Mahānāma and the venerable Assaji the spotless, immaculate vision of the Dhamma (My Comment: i.e., became Sotāpannas), and they too asked for and received the full admission".

## Important Deductions

4. We can learn several important facts from the above account.

- Only Ven. Koṇadañña attained the Sotāpanna stage in the first round in the first night of the delivery of the sutta. It actually took several days for all five ascetics to attain the Sotāpanna stage.
- Buddha actually did not just recite the sutta as it appears in the Tipiṭaka. That recital would have been finished within 15 minutes!
- So, we can see that what is in the Tipiṭaka are HIGHLY CONDENSED summaries of those discourses and possibly many discussions.

## Many Suttā Provide Only Concise Summaries

5. What we see as the Dhammacakkappavattana Sutta today is a highly condensed version of the material that was taught by the Buddha over several days, as is clear from \#3 above.

- It appears that the Buddha himself summarized the material in each sutta in a short concise way to a limited number of verses that were suitable for oral transmission (easy to remember). A sutta is supposed to be explained in detail; see, "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."
- We must remember that all the suttā in the Tipitaka were transmitted down several generations over about 500 years before it was written down. It was not even remotely possible to include all that was discussed over those several days!

## Word-by-Word Translation is a Terrible Practice

6. What happens these days is that even highly condensed sutt $\bar{a}$ are translated word-by-word into English. This is a terrible practice. It is no different from just reciting a sutta!

- One can finish reading a sutta in 15 minutes, and ONE would not understand any of the deep concepts embedded in the sutta.
- Then how could one understand the sutta by just reading a word-by-word translation of a sutta?

7. In fact, this could be why many people to believe that one can attain Nibbāna by just reciting a sutta or a set of verses. This practice is sometimes called "mantra chanting." But there is no basis for that belief.

- Nibbāna can be attained ONLY by cleansing one's mind.
- The MENTAL stress arises ONLY due to lobha, dosa, moha in one's mind.
- As one cleanses one's mind, the mental stress will decrease. This decrease is gradual in the beginning. It will have significant drops at the Sotāpanna Anugāmi stage and then more drops at Sotāpanna, Sakadāgāmi, Anāgāmi stages.
- An Arahant does not have any mental stress. He/she may have physical suffering, but that also will end at death. No more physical or mental suffering!

## There is Value in Chanting Suttā

8. Of course, there is a value in even chanting a sutta. They have been formulated in a format to "calm down the mind," even if one did not understand the meaning; see, "Buddhist Chanting."

- It would be much better if one understood the basic message of the sutta.
- One could get to the Sotāpanna stage ONLY BY fully understanding the concepts discussed in a major sutta like the Dhammacakkappavattana Sutta.

## But Some verses Need Detailed Explanations

9. A related key point is that upon attaining the Buddhahood, the Buddha wondered whether the humans will ever be able to understand the deep Dhamma he had just uncovered.

- This is stated on p. 37 of this book. The Buddha was really doubtful whether humans will comprehend his Dhamma, and Brahma Sahampati made an invitation to the Buddha, saying that many beings in the world can understand Buddha Dhamma. He would know because he had become an Anägāmi by listening to Dhamma by a previous Buddha.
- So, the point is that if one thinks one can make progress on the Path by just chanting suttā or even learning the word-by-word translations, one would be very much mistaken.
- In some cases, it can take a book to really do justice in explaining a single verse in some of the deep suttā!
- However, some long suttā, especially in the Dīgha Nikāya, can be translated word-by-word for the most part, since there may not be any deep concepts discussed there.

## Other Good Aspects of the Book

10. Another good aspect of the book is that it provides the background for delivering of some major sutt $\bar{a}$ or verses.

- For example, there is a detailed account (pp. 55-60) of how the Buddha had to perform even a few miracles to convince Uruvela Kassapa, his two brother, and 1000 of their followers before they agreed to listen to the Aditta Pariyaya Sutta or the Fire Sermon.
- So, we can see that it was not easy in those early days for the Buddha to even convince some of the ascetics who had their own beliefs of what Nibbāna was about.

11. The subsequent chapters provide a good chronological account of what happened until the Parinibbāna. One can get a sense of which major sutt $\bar{a}$ were delivered at around what time.

- There are accounts on the two chief disciples, and short accounts of other important personalities such as Anāthpiṇ̣ika, Angulimāla, Visākha, etc. Chapter 7 describes the formation of the order of bhikkhunis.
- Several encounters with the Māra Devaputta are scattered throughout the book.
- One paragraph on p. 109 is on how the Buddha visited the Tāvatimsa deva realm and delivered Abhidhamma. A summary was conveyed to Ven. Sariputta, who expanded it with the help of his students, to the form that we have today.
- There is a chapter on Devadatta, which describes events that are not found in suttā, how he attained (anāriya) jhānāa and iddhi (super-normal powers) powers, how he appeared on the lap of Prince Ajatasattu as a baby using his iddhi powers.
- It provides a good account of Devadatta's efforts to take the life of the Buddha, and how he lost all those super-normal powers and $j h a \bar{n} \bar{a}$ at the end.

12. There is a relatively long chapter on "The Doctrine", including the Four Noble Truths and the Noble Eightfold Path.

- Then, there is another relatively long chapter on the final year of the Buddha's life, including Parinibbāna.
- The final chapter is on the First Buddhist Council (Sangāyanā) that took place 3 months after the Parinibbāna of the Buddha.

## XII Bhāvanā (Meditation)

The numbered posts are to be read in that order. Even for those who are practicing Buddhists, I recommend starting at the Introduction (\#1), and going down the list of topics at least the first time.

- It would be a good idea to read the posts in the following subsection at some point, in order to get an idea about the reasoning behind this approach: "Essential Buddhism."
- 1. Introduction to Buddhist Meditation
- 2. The Basics in Meditation
- 3. The Second Level
$\circ$ 4. What do all these Different Meditation Techniques Mean?
- 5. Ariya Metta Bhāvanā (Loving Kindness Meditation)

○ 6. Ānāpānasati Bhāvanā (Introduction)

### 12.1 1. Introduction to Buddhist Meditation

Revised September 7, 2019; March 16, 2021; June 20, 2022
The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section discuss meditation subjects. They clarify unresolved questions and help gain samädhi. The first 11 posts should be followed in that order, at least initially.

## Rāgakkhayo Nibbānan, Dosakkhayo Nibbānan, Mohakkhayo Nibbānan

1. Buddhist meditation is based on gradually reducing greed, and anger/hate, developing wisdom by getting rid of wrong views, and following the Noble Eightfold Path.

- We can get an idea of what "Buddhist Meditation" is by looking at the Path described by the Buddha to achieve various stages of Nibbāna. Nibbāna is not an esoteric concept many people believe. That is why I like the synonyms "niveema" or "cooling down." Nibbāna can be EXPERIENCED even in the early stages.

2. The Buddha defined Nibbāna as "Rāgakkhayo Nibbānan, Dosakkhayo Nibbānan, Mohakkhayo Nibbānan." Nibbāna is the removal of greed, anger, and ignorance from one's mind. That gives the essence of how this "cooling down" results. [SN 38.1 A Question About Extinguishment Nibbānapañhāsutta "Friend, the ending of greed, hate, and delusion is called extinguishment." "Yo kho, $\bar{a} v u s o$, rāgakkhayo dosakkhayo mohakkhayo-idaì vuccati nibbānan"ti.]

- The more one gets rid of greed, hate, and ignorance, the more one experiences Nibbāna or "niveema" or "cooling down."
- One does not, and one cannot, get rid of greed, hate, and ignorance in a few days. It is a gradual process. One can experience the "cooling down" to the extent one can purify the mind. And there will be ups and downs, especially in the early days. Thus ONE MUST HAVE THE RESOLVE to stay on the Path.
- Some people stay with breath meditation for "stress reduction" and avoid anything to do with Nibbāna. They equate Nibbāna with extinction, but there is no need to worry; one has that mindset means that one is nowhere close to Nibbāna. I am not saying this in a derogatory way, but just as a fact. Until one experiences some "cooling down" and gets some idea about anicca, dukkha, and anatta, it is tough to get an idea of what Nibbāna is.

3. Meditation provides ways to achieve this "cooling down" for any person. There are three types of people who are interested in meditation:

- Many people want to practice some basic meditation that the Buddha advocated for achieving some "inner peace."
- Some are convinced about the rebirth process but are mainly concerned about getting a "good birth" in the next life.
- This site's main goal is to provide enough material for one to attain the first stage of Nibbāna, the Sotāpanna stage. After that, one does not need outside help to complete the rest of the journey. However, many people are either not ready to take that task yet. They have doubts about the existence of 31 realms, the process of rebirth, or Nibbāna.

## Nibbāna Is Cooling Down

4. In several posts, I have tried to explain what this "cooling down" is. You may want to read them. They vary from a basic description to more in-depth details. They all deal with reducing greed, hate, and ignorance from our minds.

- The words greed and hate are clear, but many do not understand what is meant by ignorance. The post, "What is Avijija (Ignorance)?" gives a bit deeper description. But since it is essential, I want to say a few words here about ignorance.
- The "traditional method" for achieving some "cooling down" or "calming sensation" is to do "breath meditation" or "kasiṇa meditation." As I questioned in several posts, how can greed, hate, or ignorance be removed via concentrating on one's breath or some kasina object? Such meditation techniques DO NOT remove ignorance and only SUPPRESS greed and hatred.

5. We need to start gradually reducing greed and hate from our minds; this is called "sila" (pronounced "seela") or moral living. Then one's mind becomes clear, and one starts feeling the nirāmisa sukha. Then it will become easier to grasp Dhamma concepts and get rid of avijjā.

- Buddha Dhamma is for the wise; it is not to be followed by blind faith but with understanding. One needs to learn and "see" Dhamma first. A sustained "Cooling down" cannot be attained via following a set procedure like watching the breath.
- One could go a long way (up to the Sotāpanna stage) just by learning Dhamma and comprehending the key concepts. When one grasps the key concepts, it dawns on one that it does not make sense to be too greedy. Or hate someone with a level of hatred that makes one's heart "heat up" to uncomfortable degrees.
- Thus through a better understanding of Dhamma (i.e., removing ignorance), one automatically "cools down." Removing ignorance via learning Dhamma leads automatically to reducing greed and hate.

## Correct World View is Critical

6. That is why "Samma Dittthi" or "Correct Vision" comes first in the Noble Eightfold Path. Actually "samm $\vec{a}$ " means "san" + "m $\vec{a} "$ or "removing defilements"; but for brevity, we will use the word "correct." But keep in mind that "sammā ditthi" means "removing defilements through correct vision." I cannot emphasize enough the importance of learning Dhamma. That is the first BIG step. Without understanding the message of the Buddha, how can one follow his Path?

- When one starts to understand the key Dhamma concepts, one regularly thinks about such ideas and how they should be kept in mind while going through daily chores. That is "samma sañkappa" or "correct concepts." That automatically leads to "samm $\bar{a} v \bar{a} c \bar{a} "$ (correct speech), "samm $\bar{a}$ kammanta" (correct action), and sammā ājīva (correct livelihood).
- When those five steps, one becomes attuned to correct mindfulness ("sammā sati"). Yes. There is "incorrect mindfulness" ("micchā sati," pronounced "michchā sathi") too, like when a master thief plans a robbery. One needs to be "engaged" or focused on accomplishing any task, either good or bad.

7. With cultivated "sammā sati," one will be able to "see" the consequences of any action very quickly. Then one can decide whether to go ahead with it (since only good can come out of that action) or to abandon it (because it is not beneficial for oneself or to others).

- When one sees the benefits of these steps (i.e., "cooling down"), one will be motivated to work harder on all these steps, i.e., one cultivates "sammā vāyāma" (correct effort).
- The culmination is "sammā samādhi" (correct calm state of mind). Yes. There is a "micchā samādhi" too. When that master thief is planning a big robbery, he gets into a kind of samādhi also. He feels a sense of calm too, but that will have terrible consequences down the road.
- The latter three develop at the same time. One could get into "sammā samādhi" just via "samm $\bar{a}$ diṭthi." When one listens attentively to a Dhamma talk or gets absorbed in reading about a key Dhamma concept, one could get into "samādhi." A jhānic state is a deeper samādhi state.

## Reading About Concepts Is Not Enough

8. That is why I recommend everyone to read these posts during quiet time. One will absorb more, and just by contemplating the material while reading, one could quickly get into samadhi. That is what meditation is all about. "Absorbing the good" will automatically force the "bad" out, and one gets into samādhi automatically; we will talk about this "ānāpāna" process in the following posts.

- It may get to the point where one can sit down and get into a jhāna within a minute or two. But not all can get into $j h \bar{a} n a$, and that is not necessary either. Any jhāna attained will be anāriya jhāna, until one attains the Anāgāmi stage. What is necessary is to get to samādhi or "calmed mind."
- I hope you will experience the LONG TERM benefits from the procedures we discuss in this post and the follow-up posts. Initially, it will be a bit slow. But if one sticks with it for a few months, one should see a change in oneself that is not merely temporary relief. For some, it will be faster.

9. In this life, we feel two kinds of suffering: bodily pains and aches and various diseases and mental distress (disappointments to depression).

- Bodily ailments take time to recover. But even those can be reduced by careful planning and being mindful too. If one engages in physical activity (ranging from walking to rigorous exercise) and be cognizant of what one eats, many such ailments will reduce over time.
- Mental suffering could have direct causes in greed, hate, and ignorance. While some are due to past kamma, most can be avoided or reduced by being mindful of what one thinks, speaks, and does. Any thought, speech, or bodily action arising from a greedy, hateful, or ignorant view will cause mental anguish sooner or later.
- The easiest way to determine whether any action is inappropriate is to contemplate the consequences. An action rooted in greed, hate, or ignorance can harm oneself or another being.

## Buddhist meditation Is The Noble Eightfold Path

10. Thus, Buddhist meditation is basically to cultivate the Noble Eightfold Path.

- By preventing killing, stealing, verbal abuse, etc., what we are effectively doing is to "put out existing fires" in our minds and prevent such "fiuture fires" from starting. That is "niveema" or "cooling down" or Nibbāna.
- We should also do things conducive to a calm mindset - associating with like-minded people, actively engaging in moral behavior that makes the heart joyful, etc.
- The most important thing is to learn Dhamma to "see" how all this will permanently liberate one's mind. Then the change will become "permanent".

11. When perfected, one will be doing meditation all day long while doing daily chores. That is what is stated as "āsevitāya, bhāvithāya, bahuleekathāya." That means, "associate and use what is good, and do that as much as possible."
[See, AN 8.1 Mettāsutta āsevitāay bhāvitāya bahulīkatāya
"Friends, the emancipation of heart's (cetovimutti) by loving-kindness (Metta) expected eight good results: associated, developed, and practiced frequently, made a habit of, made a basis of (practised thoroughly), has been implemented, acquainted with, and thoroughly undertaken.
"Mettāya, bhikkhave, cetovimuttiyā āsevitāya bhāvitāya bahulīkatāya yānīkatāya vatthukatāya anuṭ!hitāya paricitāya susamāraddhāya aṭthānisam̀sā pāṭikañkhā.
cetovimutti: [f.] emancipation of heart.
$\overline{\text { assevita }}:[\mathrm{pp}$. of āsevati] associated; practised; frequented.
bhāvita : [pp. of bhāveti] increased; cultivated; developed.
bahulīkata: [pp. of bahulikaroti] took up seriously; increased. (adj. ), practised frequently.
yānīkata : [adj. ] made a habit of, mastered.
vatthukata : [adj. ] made a basis of, practised thoroughly.
anutṭhita : a. [anuṭthahati's pp.] has been implemented, has been affected, has been experienced (to).
paricita : [pp. of paricināti] practised; attended; acquainted with; accumulated; accustomed.
susamāraddha: [pp. ] thoroughly undertaken.
$\bar{a} n i s a m i s a:[\mathrm{m}$.$] profit; merit; good result.$
pätikañkha: :[adj.] to be desire or expected.]

- In a formal meditation session, one does the same. It is best to read a post or two on a given Dhamma concept before (or during) the meditation session and then contemplate those ideas. It is important to compare those concepts with one's life experiences. Then things will become clear with time. For example, why it is unfruitful to "live life lavishly, especially if that involves hurting oneself or others."
- You will be surprised that this process itself will get you to samādhi, and even jhānā in the long term. But we will discuss some other variations too.
- As I have mentioned in several posts, one could even get to the Sotāpanna stage just by comprehending the key Dhamma concepts to some extent.

## Mind Is At The Forefront

12. Buddha Dhamma is all about the mind; Anything we say or do also starts with a thought. The Buddha said, "manopubbangama $\bar{a}$ dhamm $\bar{a} . . . "$ ", 'the mind takes precedence over everything else..".

- It should be clear from the above discussion that Buddha's meditation techniques are compatible with Nature's laws. Regardless of whether one has a religious background or is an atheist, one can follow those guidelines.
- One becomes a "Bhauddhaya"" or a "Buddhist" in his/her mind. If one understands some basic Dhamma concepts and lives by them, then one is automatically a Buddhist. When one gets started on the Path with a firm determination, Dhamma will guide one to be on the right path. ("Dhammo have rakkhati dhammacārim."')
- The foremost goal is to live a moral life without causing harm to oneself or others and to seek some "peace of mind" from the hectic modern life. That is our starting point.

13. I also recommend listening to the following discourse for anyone seriously considering Buddhist meditation (You may need to adjust the volume control on your computer):

## "The Hidden Suffering that We All Can Understand"

WebLink: The Hidden Suffering that We All Can Understand
That is in the post "Starting on the Path Even without Belief in Rebirth" in the "Living Dhamma Overview" subsection of the "Living Dhamma" section.

Next, " 2 . The Basics in Meditation", $\qquad$

### 12.2 2. The Basics in Meditation

Revised August 17, 2019; March 16, 2021; June 29, 2022
We discuss EIGHT elements of a firm foundation for Buddhist meditation. These are EIGHT steps to be followed at all times, not just during formal meditation.

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section discuss meditation subjects. They clarify unresolved questions and help gain samädhi. The first 11 posts should be followed in that order, at least initially.

1. Those who are doing breath meditation or "watching the stomach rise and fall" know that it is relatively easy for some to calm the mind compared to others. Some cannot even keep a calm mind for more than a few minutes; distractions start "popping up."

- This "popping up" is due to the five hindrances (pañca nīvaranáa) that I have described in "Key to Calming the Mind - The Five Hindrances.". These are the "residues" or "gunk" that we have deep inside our minds that start bubbling up to the surface when we sit down to meditate.

2. Let us take the simile of water well contaminated with all the rotten stuff fallen into it over many years; our minds have accumulated gunk over repeated births, not just in this life. When we are engaged in stressful day-to-day activities, those activities stir up the "gunk," and the mind gets clouded. It is like taking a long pole and stirring the well water; the "gunk" at the bottom comes up.

- The two "primary rotten things" we have are the first two on the list of the five hindrances: kāmacchanda (excessive greed) and vyāpāda (deep hate). Even though the word vyāpāda is commonly used, the correct Pāli word is byāpāda.
- Vicikicchā is the uncertainty about how to properly respond to external stimuli (sensory inputs.) The natural tendency is to attach to mind-pleasing stimuli and do whatever it takes to enjoy them. One does these because of the ignorance of anicca, dukkha, and anatta. Vicikicchā is sort of like a "favorite list" from the main ingredients of excessive greed and deep hate, the first two hindrances. Kankh $\overline{\boldsymbol{a}}$ vicikicch $\bar{a}$ is a worse form of vicikicch $\bar{a}$ manifested as having doubts about the Buddha's teachings (because they discourage such attachments.)
- Thina middha or inability to concentrate on Dhamma concepts; one feels lethargic when reading/listening to Dhamma. That is because one does not understand the basic concepts of Buddha Dhamma. An "unsettled" or "excited" mind (uddhacca-kukkucca) is also personal and arises when one feels "superior" or "inferior" compared to others.
- The five hindrances are discussed in "Key to Calming the Mind - The Five Hindrances."

3. When we engage in day-to-day activities, we see, hear, smell, taste, touch, and also think about all sorts of things. If such things cause kāmacchanda or vyāpāda to arise, then some combination of five hindrances can burden our minds. All these are "external stirrers" that make our minds look like whirlpools. All these gang up to get the mind to stress out and "heat up." That is the tension that we feel on a busy day. We need to "cool down"; we need "niveema."

- One way to "cool down" is to turn off those external stirrers temporarily. Some people do this in a "breath meditation" session: One goes to a quiet place and closes their eyes; this will turn off mainly the five physical senses (i.e., we do not see, hear, smell, taste, or touch). That helps to calm the mind of some people, especially if they have practiced it.
- But it is not possible to turn off the sixth one, the mind itself. The mind likes to move around and not to be focused. Many people try to fix their minds on one object, say the breath or the rising of the stomach. That provides only a temporary solution. See, " 8 . The Basic Formal Ānāpānasati Meditation."
- Some people try to "turn off the mind" or try to stop thoughts from arising. That is DANGEROUS. We need to PURIFY the mind, not turn it off. The Buddha had a perfectly pure but very active mind. When one follows the Path, one's mind will become sharper, not inactive.

## The "Big Eight" to Avoid

4. However, if our minds have too much gunk (defilements), then they can disturb/stress our minds even without the aid of "a stirrer." It is like an abandoned old well. It has dirty water, and one needs to REMOVE the existing dirty water first.

- Similarly, if one is engaged in immoral behavior, then the mind is like a well that has dirty and turbulent water. That is due to the BIG EIGHT defilements: killing, stealing, sexual misconduct, lying, gossiping, slandering, harsh speech, and constantly thinking about "mind-made" or "planned" sensual or immoral activities.
- Good examples of the last one: "making up sexual activities" or "how to retaliate to an enemy." it is VERY important to stay from silently engaging in generating angry/lustful thoughts. Many people tend to do that because they think "I am not hurting anyone." But that is not true. You are hurting yourself! A deeper analysis of this issue in "Correct Meaning of Vacī Sanikhāra."

5. The mind calms down (or gets to samädhi) when one lives a moral life (sīla.) Stopping the BIG EIGHT is the start of a moral life (sila.) With that calmed mind (samādhi), one can comprehend deeper aspects of Buddha Dhamma and cultivate wisdom (paññā.) That is the initial order: sīla, samādhi, paññ̄ See, "Sila, Samādhi, Pañ̃ñā to Paññā, Sila, Samādhi."

- However, one must take a gradual approach: "Is It Necessary for a Buddhist to Eliminate Sensual Desires?".
- Just focusing the mind on one object, like the breath, cannot remove those defilements. It can only suppress them temporarily. That is the fundamental problem with "breath meditation."

## 6. Thus, it would be hard to achieve calmness even with breath meditation if one is actively engaged in the BIG EIGHT.

- What we discussed above is a simple version of Kāyānupassanā, the first step in Satipaṭthāna; see, "Satipatthāna - Introduction."
- If one is habitually engaged in one or more of those eight activities, the first thing to do is try to get rid of them. First, start with the worst habit and proceed gradually until all are bad habits removed. It is like emptying the well of the dirty water.
- That is a BIG STEP. It may take a little while, depending on how much "gunk" is there. But one thing is not to rush out and try to do much. That could be stressfil too. The best thing to do is abstain from one or two big ones and experience the "cooling down" that results from it.
- Vain talk is a habit that should be gotten rid of early. It does not do any good for oneself or others. One will inevitably say something inappropriate (possibly slandering and lying too, which are also in the BIG EIGHT) when one gets carried away during the vain talk. Getting rid of it will help with being able to calm the mind quickly.
- The mind needs to see the benefits of doing something before it gets on board. That is why, initially, it may take a firm determination to stick with the plan.
- It is important NOT to get used to "breath meditation." If you are used to it, I urge you to gradually stop and try the procedures described here at least for a couple of months. We want LONG TERM results. Many people get addicted to "breath meditation" to get temporary relief. THAT IS A MISTAKE.

7. Getting rid of bad old habits and installing new good habits is a KEY in the meditation practice; we will talk about habits ("gati," which become "āsavas" over time) in more detail in the next section. Here are some basic ideas that would be helpful:

- To form a new habit takes some effort initially. I tried it out by making a new habit of peeling oranges with my left hand (I am right-handed). Initially, it was hard, and the main problem was that I kept forgetting to use my left hand. I had to set the alarm to remind myself first. But after a few days, I started
remembering, and after a week or two, the new habit was working. Now I automatically do it, and now it is a bit strange to try to peel oranges with the right hand!
- When we make a new habit, a set of neurons in the brain start to wire together for that task; the more we do it, the stronger the neural connections become. That is what happens when we learn to ride a bike, drive a car, or zillions of other things that we do without even thinking about it; see, "Truine Brain: How the Mind Rewires the Brain via Meditation/Habits" and "How Habits are Formed and Broken - A Scientific View."
- In breaking a habit, one needs to do the reverse. When one starts to smoke less and less, the neural connections for that task will become weaker. After a while, it will become more natural NOT TO smoke. The brain will stop giving that signal. So it is critical to have the determination to hold off the urge in the beginning. Try to replace that activity with something else at that time. One can remove any bad habit that way. It is the same principle.

8. The primary formal meditation technique is in the next section. Those who need time to get rid of the BIG EIGHT can also monitor the progress by doing such formal meditation sessions. It is essential to realize that all defilements (bad habits) are removed only at the Arahant stage. So, there is no point in getting discouraged if it takes time to stop bad habits; the key is to make progress and not go backward.

- Sometimes when one starts on the Ariya Bhāvanā, things may look worse before getting better. It is like trying to cool a hot iron by sprinkling water on it when all that smoke comes out and may appear to be getting worse. But one needs to be persistent. One needs to keep in mind that uncountable beings have attained "cooling down" by having faith in the Buddha.

Next, "3. The Second Level - Key to Purify the Mind", $\qquad$

## 3. The Second Level - Key to Purify the Mind

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section discuss meditation subjects. They clarify unresolved questions and help gain samädhi. The first 11 posts should be followed in that order, at least initially.

1. Let us go back to the example of the abandoned well. Now we have done a decent job of cleaning the dirty water that had been there for a long time, i.e., we have reduced at least some of the main immoral acts, the BIG EIGHT.

- Now we need to make sure that things do not fall into the well while we try to make the water even more cleaner; if there is no barrier around it, when it rains mud water can fall into the well. As with the well, we need to make sure that we keep those BIG EIGHT out of our minds as much as possible. This is 'sīla" (pronounced "seela") or moral living.

2. In order to make sure that we will not drift back to the old ways, we need to cultivate moral mindfulness ("sati"): we need to be on the "lookout" for any temptations to break the BIG EIGHT. But there is a catch that most people do not comprehend: bad habits and cravings or "gati/āsavas" that we have are not only from this life, but possibly from previous lives as well.
3. Again, we can use the old water well as an example: When we drained the water out of the well, the well starts filling up with water from underground fresh water oozing through cracks (from underground aquifers) which is pure.

- However, if there is a rotten stuff at the bottom of the well that had been there for a long time, then that pure water gets contaminated. Our bad habits (gathi/āsavas) are like the dirt at the bottom of the well.

4. The water in the above well will now look relatively more clear if it is undisturbed, i.e, when we let the water to settle down. This is effectively what we do in breath meditation or any such samatha meditation. When someone is abstaining from the BIG EIGHT, it is relatively easy to calm the mind by going to a quiet place, closing the eyes, and then focusing one object, say the breath.

- Such meditations are anāriya meditations; they provide only temporary relief. One could also get into anāriya jhānā this way, with lots of practice, especially if one could live a secluded life. Ancient yogis who lived moral lives and stayed away from other humans in forests could attain higher $j h \bar{a} n \bar{a}$.
- What happens here is that the five hindrances are kept SUPPRESSED. It is like the rotten stuff kept undisturbed at the bottom of the well.
- If one takes a long pole and stir the well, those contaminants start coming up.

5. In the same way, when someone comes out of the quiet place, one gets "disturbed" with external sense stimuli (i.e., when a particularly strong sense object is presented). For someone with a lot of lust, it could be a picture of an attractive person. If someone has a lot of hate towards another, then hateful thoughts can come to the surface just by someone mentioning that person's name.

- This "bubbling up of bad stuff to the surface" is called "anusaya." To stop such anusaya, those gathi/āsava need to be removed (gradually).
- These terms are explained in, "Gathi (Gati), Anusaya, and Āsava."
- This is why people who have a very calm and peaceful experience at a meditation resort come back to regular hectic life and see that experience fade away gradually. That is because it WAS a temporary solution. What we have in mind here is a more permanent solution. But this approach takes a bit more time.

6. So, how do we really clean the well? It is not enough to let the gunk to sink back to the bottom; we need to remove the gunk that has accumulated at the bottom of the well. There could even be toxic things down there. Thus it takes an effort to remove all those. Once those are removed, there is nothing down there that
can contaminate the fresh water coming out. When the well fills up we only need to make sure that things do not fall back in to contaminate the well.

- Similarly, what we need to do with our minds is to remove the bad habits (gathi/āsavas) that have been accumulated over countless past lives and reinforced in this life. If we have hate in our minds, that hate can triggered easily. This is why some people are prone to "flare-ups" than others. If we have extreme greed, we can be tempted easily to act immorally for sense satisfaction through any of the six senses.
- Even though the main ones are greed and hate, there are uncountable number of combinations (when included with ignorance). That is why we see uncountable number of habits/personalities/tendencies in different people. No two persons are alike, even identical twins.

7. Looking at the five hindrances, the main culprits are of course, greed, hate, and vicikicch $\bar{a}$ (the particular set of things one has a liking for, which can be things liked or disliked). The other two help bring out these: the "lazy mind" will not take any effort to suppress bad thoughts; the "dispersed mind" is too dispersed to be focused, to think clearly. All these are intimately connected to the habits (gati/āsavas).

- By the way, if one can remove all the gathi/āsavas, that is when one attains Nibbāna. The Buddha realized the "āsavakkhaya nana" just before attaining the Buddhahood. Āsavakkhaya is "āsava"+"khaya" or removing the temptations; "khaya" is the getting rid of "san"; see, "What is "San"? - Meaning of Sansāra (or Samisāra)."
- Here we are trying to remove some easily removable less potent habits, and at least try to reduce the big ones. The good news is that we can EXPERIENCE the relief or "cooling down" or "niveema" each time we either remove a small bad habit or lessen the severity of bigger ones. We don't have to remove ALL bad habits/cravings in order to experience the "cooling down".

8. After making a commitment to abstain from the BIG EIGHT as much as possible, we need to sort out our bad habits.

- Make a list with little things on the top and more serious things towards the bottom. We all have greed and hate; those are the "big ones"; what we need to do here is try to remove easily identifiable smaller bad habits; for example, explosive temper, stinginess, seeking too much sense pleasures (i.e., being addicted to alcohol, drugs, even excess eating).
- It is important to get rid of the ones at the top (the easy ones), and that will provide incentive to continue. If one tries to tackle the big ones straight away, one might get discouraged and give up the whole effort.

9. Of course, focusing on the BIG EIGHT is very important. If one is engaging in killing animals for pleasure (eg., fishing), then that needs to be stopped if one is serious about meditation. If one is making a living by stealing from others, that needs to be stopped. If one is engaged in sexual activities with other married people, that needs to be stopped, etc.

- Those are common sense things too. If one looks at one's actions and see that it can cause harm for oneself AND/OR others, then one needs to seriously start thinking ways to initially reduce and eventually to stop such actions.

10. There are several posts on habits and gati/āsavas; you may want to find and read them. And contemplate on those ideas. An English discourse on this topic is given in the post, "How Are Gati and Kilesa Incorporated into Thoughts?."

- As I emphasized at the beginning, one has to make an effort; even the Buddha could only show the way. We need to examine what he suggested, think through to make sure they make sense. Then the mind gets on-board, especially when it starts seeing the benefits, even small benefits.
- The key is to get started; when one accomplishes even a small goal that provides the fuel to go further.

11. One could and should use the "four bases of mental power (satara iddhipāda)" in accomplishing these goals. Tackle one goal at a time. As you accomplish more and more goals, the iddhipāda (chanda, citta,
viriya, vīmaimsā) will grow as well. These are the critical factors that the yogis used to cultivate mundane (anāriya) jhānā and gain extraordinary mental powers too.

- Chanda is the desire to achieve the goal. Citta is the determination one makes and the viriya is the effort that one puts in to get it done. Vīmainsā is careful examination of the benefits of breaking the habit and the possible repercussions of keeping the habit. As the four iddhipāda grow (with accomplishment of more and more goals), the vimaims $\bar{a}$ faculty grows in particular; this is a facet of wisdom (pañña $\bar{a}$.

12. In trying to remove any bad habit, it is essential to look at the negative repercussions or bad consequences (called ādeenava or ādinava) from that activity. Let us take the bad habit of getting into a rage as an example:

- Think about the unpleasant feeling of getting "heated up" in a moment of rage. Of course, at the moment of rage one may actually enjoy it: In extreme cases, this is why there are people dead with 30-40 stab wounds, when all it takes to kill a person a couple of stabs; such is the danger of getting into a rage. One feels bad about it only later, and then it is too late.
- Even worse are the samisāric consequences: If rage becomes a dominant characteristic of one's personality, it is possible that this is what will be grasped at the moment of death and a birth of a "similar kind" could result, i.e., birth in a burning hell (this is the principle of Paticca Samuppāda: "pati+ichcha" leading to "sama + uppada").

13. Let us take a few examples to see how some bad habits can be tackled:

- Many people have bad temper (which could develop into hate) which is a result of $v y \bar{a} p \bar{a} d a$. Yes. This is a sansāric habit, and unlike many other habits, this one is hard to control when triggered. This is one that needs to be dealt with when the anger is absent. The best is do the Mett $\bar{a} B h \bar{a} v a n \bar{a}$. We will use the Ariya Mettā Bhāvanā later. For now, one could close the eyes at a quite time, and sincerely say, "May all beings be free of suffering, free of ailments, free of anger, and be happy". If you have a particular person that you are not in good terms, repeat with his/her name. We cannot remove the anger in the mind of that person. We can only remove the anger within ourselves. Do this a couple of times a day and if you do it sincerely it will give results (for YOU to have a peace of mind).
- If you are a person with cravings for sense pleasures (I do not mean necessities), your mind is likely to be frequently seeking such things. Try to cut down on such activities, and also try to do more giving. Donate to charities, give a few dollars to a homeless person. All these will make you feel better; this is called pīti ("preethi" in Sinhala or joy).
- Also, when you simplify your life, the burden on your mind will be less, and you will get a different kind of joy than that from sense pleasures; this is "niveema" or "cool down," or nirāmisa sukha; see, "Nirāmisa Sukha."
- Alcohol or cigarette addiction is another example. Instead of trying to stop such a habit "cold turkey," it is better to cut down gradually. But one MUST have the discipline (the importance of cultivating the iddhipāda comes here) to stick to the plan, and not go back. It also helps to find a replacement activity at that time (taking a less potent drink or chewing a gum, etc). One of the four iddhipāda that is essential here is citta or determination.

14. Now we are at a point where I can introduce the real ānāpānasati bhāvanā that was described by the Buddha.

Next, " 4 . What do all these Different Meditation Techniques Mean?",

## 4. What do all these Different Meditation Techniques Mean?

## Revised April 11, 2020; September 4, 2022

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section discuss meditation subjects. They clarify unresolved questions and help to gain samādhi. The first 11 posts should be followed in that order, at least initially.

1. Buddha Dhamma is focused on purifying the mind of greed, hatred, and ignorance. As the mind is purified, it gains nirāmisa sukha which can be experienced at various levels from the beginning. If one can "stick to" this program for a couple of months, one can look back and see the change in oneself. One should have a more peaceful, calm mind that has "cooled down".

- A mind is impure because it attaches to "things in this world" with the misconception that things in this world (31 realms) can be maintained to one's satisfaction, i.e., with the perception of nicca. Thus the prevailing mindset is that happiness (sukha) should be attained by employing any means. And once attained it can be maintained and thus one is in total control of one's affairs (atta).
- These three misconceptions of nicca, sukha, and atta are the three culprits that keep us bound to "this world" of 31 realms, i.e., the endless rebirth process or samisāra. The Buddha showed that the actual reality of "this world" is described by the three characteristics of anicca, dukkha, and anatta: No matter how hard we try, we cannot maintain things to our satisfaction in the long term (anicca). Thus we get distraught (dukkha), and thus we are not in control and become helpless when born in bad realms like the animal realm (anatta).
- More details in the first discourse at, "Tilakkhana - English Discourses."

2. I am NOT saying that one should not work hard to get a good education and job. That MUST be done. It is impossible to have peace of mind if one is hungry and homeless. But we also need to be aware of the FACT that all mundane achievements are temporary. Even if we get to live this life without a major catastrophe, we have to leave all behind when we die.

- One acts with greed, hate, and ignorance and makes the mind impure because of the wrong perceptions of nicca, sukha, and atta. Then one is capable of immoral acts to get some temporary satisfaction because the bad consequences of such actions may not be clear. However, when one truly understands the reality (i.e., anicca, dukkha, anatta,) such immoral actions become unlikely.
- For that stage to be reached, one has to train one's mind to "take in the good" and "reject the bad". For that, a change in one's habits (with Ānāpānasati meditation) is necessary.

The following is a logical sequence for meditation:
3. First, one must sort out what is good and bad and the consequences of good and bad actions. This is why the vision, Sammā Diț̣thi, comes first in the Noble Eightfold Path. To get to Sammā Diț̣hi, one needs to "sort out the good from the bad."

- Vipassanā (vi+passa means "to see clearly" and discard. Here, where "vi" means "special" and "passa" is to "see." Vidassana (vi+dassana means sort out by clear vision, whereas "dassana" means the vision) means the same thing. Understanding Buddha Dhamma and acquiring the vision are needed to sort out the "good" from the "bad".
- I cannot emphasize enough the importance of vipassanā (vidassana) or insight meditation. Without the "correct" vision, one could strive for the whole life and not get anywhere: one has to understand the true nature of this world (anicca, dukkha, anatta), the Four Noble Truths, and the Noble Eightfold Path. It is not memorization, but understanding that counts.

4. A huge amount of defilements are removed from one's mind with this insight meditation. The key is to understand the "anicca nature of this world". It is the first type of meditation that is needed. One can attain the Sotāpanna stage without doing any other types of meditation discussed below.

The Buddha once took a bit of soil to a fingertip and told the bhikkhus that, "if the amount of defilements a Sotāpanna needs to get rid of is comparable to this amount of soil, then a normal human being has to get rid of an equivalent to the soil in the whole Earth".

- That is not a misprint or an exaggeration. A Sotāpanna is bound to attain Nibbāna within a maximum of seven "bhava." A normal human being could be trapped in the rebirth process for trillions of years to come. We have been through the rebirth process for countless trillions; see "Infinity -How Big is It?".
- Many say, "I do like my life. Why would I not want to be reborn?". The problem is, that future rebirths may not be in the human realm. We have no idea what we have done in our past lives. Thus even if we live a perfectly moral life, there are no guarantees that we will get a good rebirth. This is why understanding kamma, rebirth, etc via insight meditation is important.

5. How does one do insight meditation? Listening to discourses and reading Dhamma concepts are the two main forms of getting the correct information. Then one could contemplate those concepts in sitting meditation. But reading up on Dhamma concepts during a quiet time is meditation; also see, "How to Cultivate the Anicca Sañña" and the follow-up post.

- Once some understanding is reached via vipassana (vidassana) bhāvana or insight meditation, one can start the next two key steps. Mettā bhāvanā and various forms of anupassanā bhāvanā.
- Once one understands the true status of affairs in the wider world of 31 realms, one can really comprehend the amount of suffering that has been hidden. With that understanding, one can engage in the Ariya mett $\bar{a} b h \bar{a} v a n \bar{a}$, an excellent way to pay back our old debts to other beings. This is the second way to purify our minds too.
- I hope I have conveyed the idea that the bulk of work can be done with just insight meditation, contemplating "anicca, dukkha, anatta." However, doing the other two types of bhāvanā, i.e., mett $\bar{a}$ $b h \bar{a} v a n a \bar{a}$ and $\bar{a} n \bar{a} p \bar{a} n a s a t i$, can be helpful for insight meditation too.

6. The last and third way to purify the mind is via anupassana. Anupassana means "discard according to the principles learned" ("anu" means according to, and "passana" means to "see." Another meaning of "anu" is defilements, which is "to be able to see one's defilements"). Anupassanā can take various forms.

- Ānāpānasati bhāvanā is the foundation. Once "ana" and "pana" are sorted out by vipassana (vidassana), one needs to engage in $\bar{A} n \bar{a} p a \overline{n a s a t i}$ all the time. This means one needs to be mindful of what one is about to do and ensure it is the "right thing to do".
- When one starts understanding anicca, dukkha, and anatta, one can start doing the aniccānupassana $\bar{a}$, dukkhānupassanā, and anattānupassanā, and four more related "anupassanā". I will elaborate on this later.
- Satipațthāna bhāvanā (with kāyānupassanā, vedanānupassanā, cittānupassanā, and dhammānupassanā) includes all the bhāvanā techniques that we have discussed so far. It is THE ultimate encompassing everything needed to attain stress relief. It can take one to Arahanthood. $\bar{A} n a \bar{p} \bar{n} n a s a t i$ (not breath meditation) is essentially the same as Satipatṭhana, and that is the first step to attaining the Sotāpanna stage. See "Elephant in the Room 3 - Ānāpānasati."

7. Thus one could make things simpler by just doing insight meditation, $\overline{\text { An}} \bar{a} p \bar{p} n a s a t i$, and the mett $\bar{a}$ bhāvana $\bar{a}$. That is all one needs to do to have a "better state of mind" or even to become a Sotāpanna.
8. The problem with meditation techniques taught even in Theravāda schools these days is the following. They are either breath meditation or chantings. How can one remove defilements by watching the breath? Even though it can calm the mind, there are no long-term benefits. Watching the breath CANNOT reduce defilements from the mind.

- Another popular technique is just to contemplate impermanence. They keep repeating, "my body is impermanent; it is subjected to decay and death." Has anyone achieved any progress doing that for even
twenty, or thirty years? A Buddha does not need to tell us that. All people, belonging to any religion, know impermanence is a fact of life!
- Yet another popular "chanting" is to contemplate the "foulness of the body". That is not what the Buddha meant by the "patikula manasikāra bhāvanā." Again, everyone knows that our bodies are subject to decay and death; see "Mahā Satipatthāna Sutta."

Next, "5. Ariya Mettā Bhāvanā (Loving Kindness Meditation)",

## 5. Ariya Mettā Bhāvanā (Loving Kindness Meditation)

## Revised February 11, 2020

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section are on possible meditation subjects. They can be used to clarify unresolved questions, and to get to samādhi. The first 11 posts should be followed in that order, at least initially.

## Introduction

1. We all have acquired innumerable "bad kamma vipāka" in this cycle of rebirths (samisāra) that has no beginning. There is a very simple recipe for stopping many of such "bad kamma vipāka" from coming to fruition by "wearing out" and ultimately removing the "kamma seeds" (kamma bïja) associated with them.

- We acquire a bad "kamma seed" when we do something wrong to a living being, and we become indebted to that being. Just like we can become "debt-free" by paying off debts, we can pay off that debt. The problem is that we have become indebted to innumerable beings in previous rebirths. In the Mettāsahagata Sutta (SN46.54) and other suttā, the Buddha has explained how much of this debt can be paid off by doing the Ariya metta bhāvanā and also by transferring merits to "all beings" when we do a good deed; see, "Transfer of Merits (Pattidana) - How Does it Happen?."
- Here we focus on the Ariya Mettā Bhāvanā. First some background material to clarify what this means. Also see, "Karaniya Mettā Sutts - Mettā Bhāvanā."

## Mundane Mettā Bhāvanā

2. The standard or mundane Mettā bhāvana (loving kindness meditation) goes something like, 'May myself and all beings be free of suffering, healthy, happy, and be free of all suffering", or some similar (longer) passages.

- Any type of such meditation is of course good. It makes your own mind calm down, and makes you think about the (mundane) welfare of the other beings.

## Ariya Mettā Bhāvanā

3. However, the Ariya Mettt $\bar{a} B h \bar{a} v a n \bar{a}$ has a much more deeper meaning. It is done with at least some idea of the complexity of "this world" with 31 realms and the status of the beings in those realms. In order to cultivate true compassion and loving-kindness one NEEDS TO FEEL the possible suffering in all those realms; see, "The Grand Unified Theory of Dhamma":

- The beings in the lowest four realms (apāyā) undergo unimaginable suffering, both physical and mental.
- In the lowest five realms (the $a p \bar{a} y \bar{a}$ and the human realm), beings have physical bodies that are subject to sicknesses, body aches, and getting old before dying.
- The sixth through eleventh realms are that of the devas. They have spontaneous births with fully formed (but less dense) bodies that are not subjected to sickness, aches and pains. There are no visible signs of old age until close to death. But they also have all five physical senses just like the lower five realms. But their physical bodies are much more dense, "Body Types in 31 Realms - Important of Manomaya Kāya."
- The higher 20 realms that include rūpa loka and arūpa loka have even less dense bodies than the devas, and do not have the physical sense faculties for taste, smell, and body touch. Thus any suffering they have is all mental, and not as intense as in the lower realms.

## The Difference With the Sotāpanna stage

4. Therefore, no living being is free of FUTURE suffering in any of the 31 realms, because unless the Sotāpanna stage of Nibbāna has been attained, even the beings in the highest realm can end up even in the apāy $\bar{a}$ (lowest four realms) in future rebirths.

- And the only way to attain the Sotāpanna stage of Nibbāna is by comprehending the Three Characteristics of this world of 31 realms: anicca, dukkha, anatta.
- The first level of understanding of anicca, dukkha, anatta leads to the Sotāpanna stage; when one attains the Sotāpanna stage, one becomes free from the ap $\bar{a} y \bar{a}$ FOREVER. This happens via the inability of the mind of a Sotāpanna to generate certain citt $\bar{a}$ with "apāyagām $\vec{\imath}$ " kammic power; see, "Akusala Citta - How a Sotāpanna avoids Apayagami Citta" and "Conditions for the Four Stages of Nibbāna".

## Higher Stages of Magga Phala

5. When the next stage of Nibbāna (Sakadāgāmī stage) is attained, one becomes free of births in the lower five realms where suffering due to physical ailments and diseases are possible. Thus one PERMANENTLY becomes "healthy" by attaining the Sakadāgāmī stage.

- At the Anāgāmī stage, one removes more akusala citta (and other fulfill other conditions; see, "Conditions for the Four Stages of Nibbāna"), and will never be born again in kāma loka including the deva realm. Thus one becomes PERMANENTLY free of any physical suffering.
- Then at the Arahant stage, all defilements are removed from the mind, and one will never be reborn in any of the 31 realms. The mind truly becomes free and one attains permanent nirāmisa sukha; see, "Three Kinds of Happiness - What is nirāmisa sukha?" and other posts on nirāmisa sukha.
- As you can see, the Ariya Mett $\bar{a} B h \bar{a} v a n \bar{a}$ is similar in structure to the conventional one, but the words have deeper meanings. For example, by saying "be healthy" now it is meant to be healthy forever. That means not to be born ever with a body that is subject to diseases and old age.

## Elements of the Ariya Mettā Bhāvanā

## 6. Now we can see how the Ariya Mett $\bar{a} B h \bar{a} v a n \bar{a}$ is formulated:

- "May myself and all living beings attain the Sotāpanna stage and be free from suffering in the apāyā forever"
'May myself and all living beings attain the Sakadāgāmī stage and be healthy forever".
'May myself and all living beings attain the Anāgāmī stage and be content (attain peaceful happiness) forever".
'May myself and all living beings attain the Arahant stage and be free from all suffering and attain the full Nibbānic bliss".
- All four Brahma Vihāra (mettā, karuṇā, muditā, upekkhā) cultivate with this bhāvanā.
- Off course, the Bhāvanā becomes increasingly effective as one starts to comprehend Tilakkhaṇa better.

## Just Chanting Is Not Enough

7. What matters is not the particular set of word used, but what is felt in one's heart. In order to do that one needs to truly comprehend that there is REAL SUFFERING in this world, not only at the human or animal realms but in many other realms.

- The impact of the Mettt $\bar{a} B \bar{a} v a n \bar{a}$ increases gradually with an increased understanding of anicca, dukkha, anatta, because then one realizes the dangers and suffering that all living beings face in future lives.
- The potential of the Metta $\operatorname{Bh} \bar{a} v a n \bar{a}$ is enormous. The Buddha said one could attain the Anāgām $\bar{c}$ stage by correctly doing the Mett $\bar{a} B h \bar{a} v a n \bar{a}$. But that entails understanding anicca, dukkha, anatta, i.e., attaining the Sotāpanna stage or at least embark on the path to Sotāpanna stage.
- However, even before attaining the Sotāpanna stage, one could reap many benefits by doing this correct Ariya Mettā Bhāvanā; see, "Kamma, Debt, and Meditation."

## Essential of Meditation

8. It is best to do Ariya Mettā Bhāvanā and Vipassanā Bhāvanā (meditation on anicca, dukkha, anatta and other dhamma concepts) in a sitting meditation session every day; see, " 4 . What do all these Different Meditation Techniques Mean?."

- Initially, 10-15 minutes would be good for formal meditation. That time will automatically increase as the nirāmisa sukha sets in one starts seeing the benefits. Later on, one could stay in meditation for hours.
- Of course, Ānāpānasati needs to be practiced the whole day. Ānāpānasati means being aware of what is "taken in" ( $\bar{n} n a$ ) and what is "discarded" ( $\bar{p} \bar{a} n a$.) See, "7. What is Ānāpāna?" and other related posts in the meditation section.
- Listening to discourses and reading about Dhamma are also forms of meditation. That should be done during quiet times so the key concepts can be absorbed.

## Results Will Grow With Better Understanding

9. The Ariya Mett $\bar{a} B h \bar{a} v a n \bar{a}$ is one of the most POTENT tools that we have. It is a simple concept, but the main difficulty is with the "Ariya" part. One needs to comprehend anicca, dukkha, anatta for the bhāvan $\bar{a}$ to be fully effective.

- Still, even the mundane version stated in \#2 above is a good start. As one follows the Path and understands the concepts better (not the book knowledge), the javana power in one's thoughts become strong, and the bhāvanā becomes stronger and more effective.
- In the Abhidhamma language, the most potent kusala citta is the "somanassa sahagata ñāna sampayutta asañkhārika citta," i.e., the "thought that arises with joy and wisdom automatically". This thought also gets stronger with increasing wisdom and gets stronger as one gets to Sotäpanna magga, Sotāpanna phala, etc and optimum only at the Arahant stage.
- Yet even when one is following the mundane eightfold path, this citta is there, at a lower strength. One needs to be cultivate it. See, "Buddha Dhamma - In a Chart," and "What is Unique in Buddha Dhamma."

Next, " $\underline{6}$. Ānāpānasati Bhāvanā (Introduction)", ........

## 6. Ānāpānasati Bhāvanā (Introduction)

## Revised July 22, 2020

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section discuss meditation subjects. They clarify unresolved questions and help gain samädhi. The first 11 posts should be followed in that order, at least initially.

1. I hope that several key points are clear from the discussion in the post, " 3 . The Second Level - Key to Purify the Mind":

- Bad habits (gati/āsava) are associated with one more immoral or unworthy acts, speech, or thoughts. We need to discard those.
- To counter the bad habits, one needs to cultivate good habits. For this, we need to improve moral behavior by engaging in ethical activities that bring joy to the heart.
- AND we need to do this all the time; we cannot let bad habits come back, which means we need to be on the lookout for any lapses in our practice. And we need to be on the lookout for opportunities to do moral acts that are beneficial for oneself and others.

2. In a general sense the Päli word $\bar{a} n \bar{a} p \bar{a} n a$, "āna" includes anything that needs to "taken in" for the betterment of life, and "āpana" the opposite. For example, we should eat only foods that are good for the body and stay away from or discard bad foods.

- Nowadays, "āna" is taken to be "breathe in" and "āpana" is assumed to be "breathe out." Now, "sati" means mindfulness, and thus, the word "ānāpānasati" interpreted as "mindfully breathing in and mindfully breathing out." That is the mundane (or "padaparama") interpretation of "ānapāna."
- Buddha meant something deeper that would help cleanse the mind.

3. The Buddha described bhāvanā as follows: "āsevitāya, bhāvitāya, bahuleekathāya,..." or "keep close association, use often, and use all the time (what is good)......" When one is making an effort to form a new habit, one should be thinking about it and doing things to support that whenever possible. Trying to do it in a formal meditation session will not be enough.

- We discussed the current scientific explanation of how repeated acts help form habits by strengthening a set of neural connections in the brain. See, "Truine Brain: How the Mind Rewires the Brain via Meditation/Habits." The same thing works to break bad habits by NOT doing it whenever that comes to the mind. Then existing neural connections will get weaker.
- What is to contemplate: To be mindful to "take in good things (kusala or moral things), and to "discard bad things (akusala or immoral things)." That is the real meaning of ānāpānasati bhāvanā.

4. Now, with all the discussion we have had up to this point, how can just a process of "breathing in" and 'breathing out" mindfully GET RID OF either the bad habits (gati/ās $\bar{a} v \bar{a})$ or the five hindrances?

- Of course, that is not possible.
- But it CAN do one thing, as we mentioned before. If we sit in a quiet place with the eyes closed (i.e., turn off the five physical senses in effect), AND fix the mind on the breath, we can get the five hindrances to settle down and not come up (assuming that we are staying away from committing the BIG EIGHT immoral acts).
- However, this calming down or getting to Samatha is a TEMPORARY solution. The moment we come back to the real world with all its distractions and temptations, those habits take over.

5. The breath meditation needs to be used appropriately, with the understanding that it can provide only temporary relief. This breath meditation is the same meditation that was used by the Hindu yogis to attain mundane (Anāriya) jhānā even before the Buddha.

- Since the time Buddhaghosa's Visuddhimagga was accepted as the basis of Theravāda Dhamma (in the fifth century CE), this "literal interpretation" of the ānāpānasati has been used.
- The real ānāpānasati bhāvanā is not described in the Visuddhimagga and is not described in any Mahāyāna or even Theravāda texts today. One needs to go directly to the Tipiṭaka to find it; it is described in many suttā, for example, the Assāsa sutta. I could not find an English translation of this sutta. Another one Arittha Sutta, and the translation published at the Access to insight site is not complete, even though it does contain Buddha's admonition to Ven. Arittha that in and out-breathing is only one version of $\bar{A} n \bar{a} p a \overline{n a s a t i}$ (in the sutta it says it is NOT the Ariya or Noble version) : WebLink: ACCESSTOINSIGHT: Arittha Sutta: To Arittha
- Arittha Sutta: To Arittha (On Mindfulness of Breathing)

6. Thus there are two interpretations of the $\bar{A} n \bar{a} p \bar{a} n a s a t i ~ B h \bar{a} v a n \bar{a}$. One is the conventional "breathing" version and the other is the real version recommended by the Buddha, which has a wider interpretation, including breathing to a minor extent.

- The correct meaning is in many suttā. Of course, the main sutta is "WebLink: suttacentral: Ānāpānasati Sutta (MN 118).'The Ānäpānasati sutta is the condensed version of the Buddha's discourses on $\bar{A} n \bar{a} p \bar{a} n a s a t i ~ B h a ̄ v a n a \bar{a}$. As with most main suttā, the discourse was condensed into the form for easy transmission. Other suttā, mostly by Ven. Sariputta, have explained the terms like "āna" and "āpana" in detail (like the Assāsa Sutta).
- I have discussed the sutta at a bit deeper level in " 7 . What is Ānāpāna?" and " 8 . The Basic Formal Anāpānasati Meditation."
- See, "Is Ānāpānasati Breath Meditation?," where I provide a detailed discussion based on the Tipitaka.
- Furthermore, Sinhala commentaries (Atthakath $\bar{a}$ ) were also written to explain the main sutt $\bar{a}$. Unfortunately, these atthakath $\bar{a}$ were burned down shortly after Buddhaghosa wrote his Visuddhimagga and other books. However, three important ones (Paṭisambhidā Magga Pakarana, Pitakopadesa, and Netthipakarana) have survived because they had been included in the Tipitaka. What I describe here is from those books in the Tipitaka.
- Buddhaghosa was a Hindu before converting to be a Buddhist later on; see, "The Life and Work of Buddhaghosa" by B. C. Law (1927). Some say he became a Buddhist in order to introduce Hindu concepts to Buddha Dhamma. Either that or he just used whatever he understood to be the Ānāpānasati without any malicious intentions. Either way, the correct interpretation had been hidden for all these years; see, "Buddhaghosa's Visuddhimagga - A Focused Analysis."

7. The key message of the Buddha was that we need to remove the greed, hate, and ignorance that we all have in our minds, and by doing that we can experience the nirāmisa sukha that is of better quality and of permanent nature. Let us now discuss the basic meditation technique that will start us on the correct path to achieve lasting happiness.

- More evidence from the Tipiṭaka: "Is Ānāpānasati Breath Meditation?."

Next, "7. What is Ānāpāna?", ........

### 12.6.1 Arittha Sutta - To Arittha (On Mindfulness of Breathing)

SN 54.6
PTS: $\underline{\text { v } 314}$
CDB ii 1768
Arittha Sutta: To Arittha
(On Mindfulness of Breathing)
translated from the Pāli by
Thanissaro Bhikkhu
© 2006

At Savatthi. There the Blessed One said, "Monks, do you develop mindfulness of in-\&-out breathing?"
When this was said, Ven. Arittha replied to the Blessed One, " $I$ develop mindfulness of in-\&-out breathing, lord."
"But how do you develop mindfulness of in-\&-out breathing, Arittha?"
"Having abandoned sensual desire for past sensual pleasures, lord, having done away with sensual desire for future sensual pleasures, and having thoroughly subdued perceptions of irritation with regard to internal \& external events, I breathe in mindfully and breathe out mindfully."[1]
'There is that mindfulness of in-\&-out breathing, Arittha. I don't say that there isn't. But as to how mindfulness of in-\&-out breathing is brought in detail to its culmination, listen and pay close attention. I will speak."
"As you say, lord," Ven. Aritha responded to the Blessed One.
The Blessed One said, "And how, Arittha, is mindfulness of in-\&-out breathing brought in detail to its culmination? There is the case where a monk, having gone to the wilderness, to the shade of a tree, or to an empty building, sits down folding his legs crosswise, holding his body erect, and setting mindfulness to the fore.[2] Always mindful, he breathes in; mindful he breathes out.
"[1] Breathing in long, he discerns, 'I am breathing in long'; or breathing out long, he discerns, 'I am breathing out long.' [2] Or breathing in short, he discerns, 'I am breathing in short'; or breathing out short, he discerns, 'I am breathing out short.' [3] He trains himself, 'I will breathe in sensitive to the entire body.'[3] He trains himself, 'I will breathe out sensitive to the entire body.' [4] He trains himself, 'I will breathe in calming bodily fabrication.'[4] He trains himself, 'I will breathe out calming bodily fabrication.'
"[5] He trains himself, 'I will breathe in sensitive to rapture.' He trains himself, 'I will breathe out sensitive to rapture.' [6] He trains himself, 'I will breathe in sensitive to pleasure.' He trains himself, 'I will breathe out sensitive to pleasure.' [7] He trains himself, 'I will breathe in sensitive to mental fabrication.'[5] He trains himself, 'I will breathe out sensitive to mental fabrication.' [8] He trains himself, 'I will breathe in calming mental fabrication.' He trains himself, 'I will breathe out calming mental fabrication.'
"[9] He trains himself, 'I will breathe in sensitive to the mind.' He trains himself, 'I will breathe out sensitive to the mind.' [10] He trains himself, 'I will breathe in satisfying the mind.' He trains himself, 'I will breathe out satisfying the mind.' [11] He trains himself, 'I will breathe in steadying the mind.' He trains himself, 'I will breathe out steadying the mind.' [12] He trains himself, 'I will breathe in releasing the mind.' He trains himself, 'I will breathe out releasing the mind.'[6]
"[13] He trains himself, 'I will breathe in focusing on inconstancy.' He trains himself, 'I will breathe out focusing on inconstancy.' [14] He trains himself, 'I will breathe in focusing on dispassion.'[7] He trains himself, 'I will breathe out focusing on dispassion.' [15] He trains himself, 'I will breathe in focusing on cessation.' He trains himself, 'I will breathe out focusing on cessation.' [16] He trains himself, 'I will breathe in focusing on relinquishment.' He trains himself, 'I will breathe out focusing on relinquishment.'
"This, Arittha, is how mindfulness of in-\&-out breathing is brought in detail to its culmination."

## Notes

1. The Commentary reads this statement as indicating that Arittha has attained the third level of Awakening, non-return, but it is also possible to interpret the statement on a more mundane level: Arittha is simply practicing mindfulness in the present moment, having temporarily subdued desire for past and future sensual pleasures, and having temporarily subdued any thought of irritation with regard to the present.
2. To the fore (parimukham): The Abhidhamma takes an etymological approach to this term, defining it as around (pari-) the mouth (mukham). In the Vinaya, however, it is used in a context (Cv.V.27.4) where it undoubtedly means the front of the chest. There is also the possibility that the term could be used idiomatically as "to the front," which is how I have translated it here.
3. The commentaries insist that "body" here means the breath, but this is unlikely in this context, for the next step - without further explanation - refers to the breath as "bodily fabrication." If the Buddha were using two different terms to refer to the breath in such close proximity, he would have been careful to signal that he was redefining his terms (as he does below, when explaining that the first four steps in breath meditation correspond to the practice of focusing on the body in and of itself as a frame of reference). The step of breathing in and out sensitive to the entire body relates to the many similes in the suttā depicting jhāna as a state of whole-body awareness (see MN 119).
4. 'In- \&-out breaths are bodily; these are things tied up with the body. That's why in- $\&$-out breaths are bodily fabrications." - MN 44.
5. "Perceptions \& feelings are mental; these are things tied up with the mind. That's why perceptions \& feelings are mental fabrications." - MN 44.
6. AN 9.34 shows how the mind, step by step, is temporarily released from burdensome mental states of greater and greater refinement as it advances through the stages of jhāna.
7. Lit., "fading."

### 12.7 7. What is Ānāpāna?

Revised April 2, 2017 (\#4); September 2, 2019; July 23, 2020; June 6, 2022; October 11, 2002
The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section discuss meditation subjects. They clarify unresolved questions and help gain samädhi. The first 11 posts should be followed in that order, at least initially.

1. The "WebLink: suttacentral: Ānāpānasati Sutta, (MN 118)" has the following verse:
" $\underline{\text { Ānāpānassati, bhikkhave, bhāvitā bahulīkatā mahapphalā hoti mahānisamisā. } \underline{A} n \bar{a} p a \overline{n a s s a t i, ~}}$ bhikkhave, bhāvitā bahulīkatā cattāro satipatthāne paripūreti. Cattāro satipatthān̄̄ bhāvitā bahulīkatā satta bojihhange paripūrenti. Satta bojihañgā bhāvitā bahulīkata vijjāvimuttion paripūrenti."

That means: "Ānāpānasati, Bhikkhus, when practiced frequently bears many fruits and leads to many benefits. Ānāpānasati, Bhikkhus, when cultivated and pursued, brings the four Satipatthānā to their completion. The four Satipatṭhāna, when cultivated and pursued, bring the seven Bojjhañgā to their completion. The seven Bojjhañgā, when cultivated and pursued, bring vijjā (opposite of avijjā) and vimutti (or Nibbāna) to their completion."

- Now, if ānāpāna means "breathing in and breathing out", how can that lead to the completion of the four satipatṭhānās, the seven bojjhañgas, removal of avijja, and the attainment of Nibbāna? Can anyone seriously think that is possible?
- Instead, ānāpāna MEANS cultivating Satipatṭhāna, Satta Bojjhañga, etc., by "taking in morals" and "expelling immoral" as we discuss below.

2. Satipatthhāna Bhāvanā is a more detailed version of the $\bar{A} n \bar{a} p a \bar{a} a s a t i ~ B h \bar{a} v a n \bar{a}$. Thus it is essential to
 Satipatṭhāna Bhāvanā.

- Section 4 on "Dhammānupassanā" describes how the cultivation of the four types of Satipaṭthāna leads to the removal of the five hindrances and fulfillment of the seven Bojjhañga to their completion. See, "WebLink: suttacentral: Satipatthāna Sutta (MN 10)." That confirms the statements in the $\overline{\text { Annāpānasati Sutta mentioned above. }}$

3. First, let us figure out exactly what the Buddha meant by "āna" and "āpanna" in "āna+ $\bar{a} p \bar{a} n a+s a t i$ " which rhymes as ānāpānasati; of course "sati" is mindfulness.

- "Āna" is taking in; In Sinhala, "ānayānaya" is "import". "āpāna" is discarding; In Sinhala, "apānayānaya" is "export". Thus "āna"+"āpāna" or ānāpāna is "taking in/discarding" or import/export.
- "Assa" is the same as "āna", and "passa" is the same as "āpāna". In Sri Lanka, parents tell their child to

- When cleaning the room, the child needs to get rid of the clutter (passa) but also can take in (assa) something like a flower vase to make the room look more pleasant, or to take in a chair that can be useful.

4. During the time of the Buddha itself, auxiliary suttā as well as commentaries ("Atthakatha") were written to explain the keywords/phrases in the main suttā that were abbreviated for easy transmission; see, "Preservation of Dhamma."

There are two crucial suttā, "WebLink: suttacentral: Assāsappatta Sutta (SN 38.5)" and the "WebLink: suttacentral: Paramassāsappatta Sutta (SN 38.6)" that describe how one should "take in" kusala thoughts and "discard" akusala thoughts; that is "āna" + "āpāna" (ānāpāna) or "assa/passa", for cleaning up (the
mind). The English translation there is hopeless, but one can get the idea by looking at the Pāli version. You don't need to be an expert on Pāli to see that.

- In the Mahasaccaka Sutta, "assa/passa" was also used to indicate "in and out breathing" when the Buddha was describing to Saccaka how he engaged in the "breath meditation" per instructions by Ālāra Kālāma and Uddaka Rāmaputta while he was searching for the truth as Bodhisatta.
- But the following verses of that sutta describe how he gave up on that technique and moved onto the correct path.
- So, we must ensure a given phrase is used in the proper context, depending on the situation.
- For example, there are several conventional and deeper meanings to the keywords "atta" and "anatta," and one needs to be able to figure out which meaning to use for a given case; see, "Attā Hi Attano Nātho," "Anatta - the Opposite of Which Atta?," and links in those posts.

5. When one knows what kusala/akusala kamma are, the first thing to do is to prevent from doing akusala kamma and to make an effort to do kusala kamma by engaging in meritorious actions (puñña kriya); see, "Ten Immoral Actions (Dasa Akusala)," and "Punna Kamma - Dāna, Sīla, Bhāvanā."

- Thus when one leads a moral life, one automatically engages in the primary form of $\overline{\text { An}} \overline{\text { app }} \bar{p} n a s a t i$.
- AND, one cannot do a proper formal Ānāpānasati meditation and get to even samādhi, let alone a jhāna unless one leads a moral life. The five hindrances are too strong to be suppressed; see, "Key to Calming the Mind - Five Hindrances."

6. Formal $\overline{\text { Annanpanasati Bhā }} \boldsymbol{v} \boldsymbol{a n} \bar{a}$ can be done in a formal sitting or walking meditation session while engaging in the basic version (taking in what is good/discarding what is evil) all the time.

- There is no need to do Samatha Bhāvanā separately. If one does a formal $\bar{A} n \bar{a} p \bar{a} n a s a t i$ session with the eyes closed in a quiet place, one will automatically get into sama $d h i$. Let good thoughts grow, and discard evil thoughts. Very simple.
- Another thing to do in a formal meditation session is to contemplate a particular dhamma concept like anicca, dukkha, or anatta. That means focusing on "āna".
- When one gets to samādhi, the mind goes on "auto-pilot"; you will feel that your mind is taking charge and you need to exert less effort to keep the focus.

7. When one does the basic version while engaged in other activities, one is only mindful of what one is engaged in, i.e., the task at hand. That task presumably does not involve any of the BIG EIGHT we discussed previously; see "The Basics in Meditation." It could be a technical task or a daily chore like washing dishes or driving. Be mindful of just the task (washing, driving, etc). Here one will NOT get into samādhi, so there is no danger of injuring oneself; Many people get into accidents while driving because they are not being mindful of driving.

- However, if one does not have a specific task (say, when riding a bus or waiting at the doctor's office), one could be engaged in Ānāpānasati Bhāvanā. When our minds are not focused on something (like in the cases mentioned above,) all sorts of ideas bubble up. As we discussed in "The Basics in Meditation." These are due to deeply-ingrained habits or $\bar{a} s a v \bar{a}$ that we have acquired not only in this life but also from previous lives.

8. The more we keep reviving or re-living this habit (i.e., doing ana/apāna or assa/passa), we strengthen that good habit (gati).

- We have come all this way in the cycle of rebirths that are mostly filled with suffering because of our bad habits (gati) that have been percolated into a very dense state of deep-seated cravings ( $\bar{a} s a v \bar{a}$ ). It may take some time to develop this "āna/pāna" but you will see results in a few weeks to a few months.

9. In the ānapānapabba of the Satipatṭhāna sutta, it says, "..so sato vā assa sati, sato va passa sati. Dīghaim vā assasanto dīghaím assasāmī ti pajānāti, dīghaì va passasanto dīghaim passasāmī $t i$
pajānāti, ......" Here it DOES NOT mean 'take long breaths in, expel long breaths out'; instead, it means, "get rid of long-established (deeply-rooted) bad habits, and cultivate the long-established good habits".

- Similarly, the next sentence ("..rassam va assasanto...") is not about short breaths, but about those good habits that you started to work on recently, and those bad habits that started to creep into your mind recently (if there are any).
- One cannot purify one's mind by breathing in/out, even though it can get one's mind to calm down (Samatha). The correct way of doing it is doing both Samatha and Vipassanā together.

10. When we think a bit more about this, we realize that what needs to be discarded are micchā ditṭhi (wrong views), micch $\bar{a}$ sañkappa (wrong thoughts or ideas), micch $\bar{a} v \bar{a} c \bar{a}$ (incorrect, harmful speech), micch $\bar{a}$ kammanta (incorrect/harmful actions), micch $\bar{a} \bar{a} j \bar{i} v a$ (incorrect/harmful way of living), micch $\bar{a}$ $v \bar{a} y \bar{a} m a$ (tendency to strive on immoral activities), micch $\bar{a}$ sati (tendency to focus on immoral activities); when one does all that micch $\bar{a}$ samādhi (tendency to get absorbed in immoral ideas/actions) is the result.

- In the same way, what we need to "take in" are sammā ditthi, sammā sañkappa, sammā vācā, sammā kammanta, sammā $\bar{a} \bar{j} v a$, samm $\bar{a}$ v $\bar{y} \bar{a} m a$, samm $\bar{a}$ sati, and when one keeps doing that one automatically gets to sammā samādhi.
- Put in another way, Ānāpānasati is nothing but "taking in" the Noble Eightfold Path and "discarding" the opposite.

11. The longer one "takes in" or "lives" the Noble Eightfold Path and "rejects" the opposite, the easier it becomes to get to samādhi in a formal meditation session. As samādhi grows little by little, one day, one will automatically get into the first Ariya jhāna. However, one more thing is needed before getting to the Ariya $j h a \overline{n a}$, an understanding of anicca, dukkha, and anatta. See "Is Ānāpānasati Breath Meditation?"

- Keep practicing "ānāpāna" as much as possible throughout the day. With time, you will feel the "cooling down" or "nivāna" or "a taste of Nibbāna."
- Buddha Dhamma is NOT about following rituals. It is all about cleansing one's mind, which takes effort and concentration. Initially, it could be challenging, but as one gains samādhi bit by bit, one gets motivated. In a few months, one can look back at one's life and see that it has changed for the better.
- Even though one can start with discarding immoral deeds and cultivating or taking in morals, one needs to know the real meanings of "san," anicca, and anatta to do the Ānāpānasati Bhāvanā in a deeper sense: (i) One needs to comprehend which "san" or defilements to be discarded; see, "San." (ii) One needs to know the deeper meanings of Tilakkhaṇa; see, "Anicca, Dukkha, Anatta."

Yasmim samaye, bhikkhave, bhikkhuno passaddhakāyassa sukhino cittam samādhiyati, samādhisambojjhañgo tasmim samaye bhikkhuno āraddho hoti, samādhisambojjhañgam tasmim samaye bhikkhu bhāveti, samādhisambojjhango tasmim samaye bhikkhuno bhāvanāpāripūrim gacchati. (6)

So tathāsamāhitam cittam sādhukam ajjhupekkhitā hoti. Yasmim samaye, bhikkhave, bhikkhu tathāsamāhitam cittam sādhukam ajjhupekkhitā hoti, upekkhāsambojjhanggo tasmim samaye bhikkhuno āraddho hoti, upekkhāsambojjhanggam tasmim samaye bhikkhu bhāveti, upekkhāsambojjhañgo tasmim samaye bhikkhuno bhāvanāpāripūrim gacchati. Evamं bhāvitā kho, bhikkhave, cattāro satipatṭhānā evam bahulikatā satta sambojjhange paripūrenti. (7)

Kathamं bhāvitā ca, bhikkhave, satta bojjhangā kathamं bahulikatā vijjāvimuttim paripūrenti? Idha, bhikkhave, bhikkhu satisambojjhañgam bhāveti vivekanissitam virāganissitam nirodhanissitam vossaggapariṇāmim. Dhammavicayasambojjhanggam bhāveti ... pe ... vīriyasambojjhañgamं bhāveti ... pitisambojjhangam bhāveti ... passaddhisambojjhañgam bhāveti ... samādhisambojjhañgaṁ bhāveti ... upekkhāsambojjhangama bhāveti vivekanissitam virāganissitam nirodhanissitam vossaggapariṇāmim. Evam bhāvitā kho, bhikkhave, satta bojjhañgā evamं bahulikatā vijjāvimuttim paripūrentǐ'ti.

Idamavoca bhagavā. Attamanā te bhikkhū bhagavato bhāsitam abhinandunti.
Ānāpānassatisuttam niṭ̣hitam atṭhamam.

### 12.8 Is Ānāpānasati Breath Meditation?

June 2, 2017; revised September 2, 2017; April 25, 2020; August 20, 2022

## Introduction

1. If you Google "Ānāpānasati", almost all websites that come up identify it as "Buddhist breath meditation" or "mindfulness of breathing". But Tipiṭaka sutt $\bar{a}$ lead to the conclusion that breath meditation is not Buddhist Ānāpānasati Bhāvanā.

- Breath meditation was practiced by yogis even at the time of the Buddha. So, breath meditation predates Buddha's Ānāpāna Bhāvanā. Buddha rejected it because it does not lead to Nibbāna or PERMANENT relief from suffering.
- There are many sutt $\bar{a}$ in the Tipiṭaka that clearly state that Nibbāna can be attained with the $\bar{A} n \bar{a} p \bar{a} n a$ Bhāvanā . It automatically fulfills Satipatthāna, Satta Bojjhañga, and all 37 Factors of Enlightenment. Therefore, $\bar{A} n \bar{a} p \bar{a} n a s a t i$ is infinitely deeper than just focusing on one's breath.
- I will provide evidence for those two statements below. First, let us see what can be accomplished with Buddhist Ānāpānasati bhāvanā.

## $\bar{A} n \bar{a} p a ̄ n a s s a t i$ by Itself Is Sufficient to Attain Nibbāna

2. According to the WebLink: suttacentral: Ānāpānassati Sutta (MN 118): "..Ānāpānassati, bhikkhave, bhāvitā bahulīkatā cattāro satipatṭhāne paripūreti. Cattāro satipaṭthānā bhāvitā bahulīkatā satta bojjhañge paripūrenti. Satta bojjhañgā bhāvitā bahulīkatā vijjāvimuttim paripūrenti."

- Translated, ". Ānāpānassati, when used (bhāvitā) and used frequently (bahulīkatā), completes (paripūreti) four types of Satipaṭthāna. Cattāro satipațthāna, when used and used frequently, completes Satta Bojjhañga. Satta Bojjhañga when used and used frequently, completes the full release (Nibbāna or Arahanthood)".
- The same statement was made in the WebLink: suttacentral: Ananda Sutta (SN 54.13). Most of the suttā in WebLink: suttacentral: Ānāpāna Sainyutta (SN 54) have that phrase or the phrase: ".."Ānāpānassati, bhikkhave, bhāvitā bahulīkatā mahapphalā hoti mahānisamisā." Here, "mahapphalā" ("mahā" + "phala") means the four Noble stages: Sotāpanna, Sakadāgāmī, Anāgāmī, Arahant.
- Therefore, it is clear that $\bar{a} n \bar{a} p \bar{a} n a s s a t i, ~ b y ~ i t s e l f, ~ c a n ~ l e a d ~ t o ~ a l l ~ t h e ~ w a y ~ t o ~ t h e ~ A r a h a n t h o o d . ~ T h u s, ~$ one does not need to do "separate vipassana (insight) meditation after getting to Samatha with $\bar{A} n \bar{a} p \bar{a} n a s s a t i "$ as some suggest.

## Can Nibbāna be Attained With Breath Meditation?

3. The key question is: "Can breath-meditation, by itself, lead to Arahanthood? That is the critical question that needs to be contemplated by those who equate $\bar{A} n \bar{a} p a \overline{n a s s a t i}$ to breathing meditation.

- Nibbāna is the removal of greed, hate, and ignorance: "rāgakkhayo dosakkhayo mohakkhayo idaì $v u c c a t i ~ n i b b a ̄ n a n t i$." This verse is in many suttā, for example, in WebLink: suttacentral: Nibbāna pañhā Sutta (SN 38.1).
- If Ānāpānassati means breath meditation, how could keeping the mind on one's breath by itself REMOVE rāga, dosa, and moha from one's mind?

4. The conventional (and erroneous) teaching in many texts today is that one needs to get to samādhi with $\bar{A} n a \bar{a} \bar{a} n a s s a t i$ and then one needs to do Vipassanā or insight meditation to attain magga phala.

- However, from the above-discussed suttā, it is quite clear that $\bar{A} n \bar{a} p a \overline{n a s s a t i}$ by itself can lead to even Arahanthood!
- Of course, this erroneous interpretation — that breath meditation is Buddhist Annāpāna bhāvanā — is not something that current practitioners came up with. It can be traced back to Buddhaghosa's Visuddhimagga, see "Buddhaghosa's Visuddhimagga - A Focused Analysis."

## The Aritṭha Sutta

5. The incorrect version of Ānāpānassati was there even before the Buddha. In the WebLink: suttacentral: Arittha Sutta (SN 54.06), the Buddha, upon finding out that Bhikkhu Ariṭ़ha was practicing the incorrect breath meditation as Ānāpānassati, told him the following. "..Atthesā, ariṭ! ha, ānāpānassati, nesā natthīti vadāmi. Api ca, ariṭtha, yathā ānāpānassati vitthārena paripuṇnā hoti taí suṇāhi, sādhukaì manasi karohi; bhāsissām $\vec{\imath}$ ’ii.

- Translated, "..There is that ānāpānassati, Aritṭha. I don’t say that there isn't. But I will describe the real (yath $\bar{a}) ~ \bar{a} n \bar{a} p a \overline{n a s s a t i, ~ l i s t e n ~ a n d ~ p a y ~ c l o s e ~ a t t e n t i o n . ~ I ~ w i l l ~ s p e a k . " ~}$
- Furthermore, breath meditation was used by yogis at that time even to attain higher jhāna. However, those anāriya jhāna are attained by just SUPPRESSING defilements (kilesa) and will not lead to ANY magga phala. Those who cultivate such anāriya jhāna will also have their next birth in Brahma realms, but after that they can be reborn even in the $a p \bar{a} y \bar{a}$.

## Assāsa/Passāsa And Āna/Āpāna

6. The main reason for the incorrect interpretation of $\bar{A} n \bar{a} p a \overline{n a s s a t i}$ as breath meditation is that in many suttā it is described as assāsa/passāsa, which conventionally means taking in/putting out of something, and particularly breathing in/breathing out.

- Āna/āpāna (which rhymes as ānāpāna) in general means taking in/putting out something. It can be breath or anything else.
 kusala/getting rid of akusala, or, equivalently, taking in the Noble Eightfold Path/discarding the micch $\bar{a}$ eightfold path.
- That should be clear to anyone who knows that Nibbāna is attained via getting rid of dasa akusala.

## Evidence from the Tipitaka

7. The WebLink: suttacentral: Assāsappatta Sutta (SN38.5), it is specifically says what needs to be "taken in" (assāsa):

- "Katamo panāvuso maggo katamā patipadā etassa assāsassa sacchikiriyāyāti (what needs to be 'taken in"). Ayameva kho, āvuso, ariyo atṭhañgiko maggo etassa assāsassa sacchikiriyāya (it is the Noble Eightfold Path that needs to be "taken in"). Seyyathïdaim (namely): sammāditṭhi sammāsañkappo sammāvācā sammākammanto sammāājīvo sammāvāyāmo sammāsati sammāsamādhi". [patipad $\bar{a}:[\mathrm{f}$.$] line of conduct; mode of progress. sacchikiriy \bar{a}:[\mathrm{f}$.$] realisation;$ experiencing.]
- WebLink: suttacentral: Parama assāsa Sutta (AN38.6) has the same statement, emphasizing the term "parama" or "superior."
- Therefore, there should not be any confusion about what assāsa means.
 magga phala is described in the WebLink: suttacentral: Padīpopama sutta (SN 54.8), also called the Dīpa Sutta.
- "So satova assāsati, satova passāsati" means "He maintains his mind on dhamma that should be taken in (kusala or moral) and those that should be gotten rid of (akusala or immoral)".
- "paținissaggānupassī assasissāmī’ti sikkhati, 'patinissaggānupassī passasissāmī'ti sikkhati" means, "one cultivates discipline (sikkhati) by removing bonds that bind one to the rebirth process (patinissaganupassi) by taking in morals (assasissāmi) and getting rid of immoral (passasissāmì)".

## Meaning Embedded in Ānāpāna

9. As is the case with many Pāli words, the meaning of the word $\bar{A} n \bar{a} p \bar{a} n a$ is embedded in the word itself. The two words "āna" and "āpāna" combine to rhyme as $\bar{a} n \bar{a} p \bar{a} n a$. When "sati" is added for being mindful of that, it becomes ānāpānassati.

- "A$n$ n" is taking in; In Sinhala, "ānanaya" is "import". "Apāna" is discarding; In Sinhala, "apannanaya" is "export". Thus "āna" + "āpāna" or ānāpāna is "taking in/discarding" or import/export.
- "Assa" is the same as " $\overline{n n a ", ~ a n d ~ " p a s s a " ~ i s ~ t h e ~ s a m e ~ a s ~ " a ̄ p a ̄ n a " . ~ I n ~ S r i ~ L a n k a, ~ p a r e n t s ~ t e l l ~ t h e i r ~ c h i l d ~ t o ~}$ clean his/her room by saying, "kāmaraya (room) assa passa (or aspas) karāganna" ("m0 mbcs qes?exsp ฉ๐๐๐รงคว")
- When cleaning the room, the child needs to get rid of the clutter (passa) but also can take in (assa) something like a flower vase to make the room look more pleasant or to take in a chair that can be useful.
- So, one does not throw away everything or take in everything. One needs to be selective in taking in "good things" and throwing away "bad things." That is where mindfulness comes in. That cannot be done with breath.

## Breath Meditation Can be Harmful

10. Most people are reluctant to give up the wrong "breath meditation" practice simply because they are attached to a "state of well-being" that can be reached with it. But that relief is only temporary.

- It is even possible to attain anāriya jhānā with breath meditation. Yet, those jhānā are also temporary because the defilements are only SUPPRESSED. On the other hand, the Ariya jhānā attained via correct $\bar{A} n \bar{a} p a \overline{n a s a t i ~ B h a ̄ v a n a ̄ ~ a r e ~ p e r m a n e n t . ~ T h a t ~ i s ~ b e c a u s e ~ e v e n ~ t o ~ a t t a i n ~ t h e ~ f i r s t ~ A r i y a ~ j h a ̄ n a, ~ o n e ~}$ MUST have first removed kāma rāga, not merely suppressed it. See "Samādhi, Jhāna, Magga Phala Introduction" and "Mundane versus Supramundane Jhāna."
- It must also be mentioned that breath meditation can be used to calm down one's mind. But one should not expect to make much progress towards Nibbāna using it. If one gets "addicted" to it (as I have seen many people do), it could be a serious distraction to the Noble Path. See "Breath Meditation Is Addictive and Harmful in the Long Run."

## $\bar{A} n a \bar{p} \bar{a} n a s a t i \operatorname{Bha} \bar{a} v a n a \bar{a}$ Is Not Only a Formal Meditation

11. As I have emphasized in the "Bhāvanā (Meditation)" section and the subsection "Mahā Satipatthāna Sutta," one should not restrict either Ānāpānasati or Satipatṭhāna bhāvanā to formal sessions conducted sitting down at an isolated place.

- When the Buddha said, "..Ānāpānassati, bhikkhave, bhāvitā bahulīkatā."" in \#2 above, he meant doing it as much as possible, anywhere possible. That means basically all the time! One just needs to be mindful of one's actions, speech, and thoughts, stopping bad ones and cultivating good ones.
- This is the fundamental approach to practice, see the "Living Dhamma" section for a step-by-step process that can be used by even those who do not believe in the basic tenets of Buddha Dhamma, like rebirth or kamma.
- In particular, see, "Ānāpānasati Eliminates Mental Stress Permanently" and "Ānāpāna and Satipatthāna Fundamentals."

## Mistranslated Verses

12. Some people believe that $\bar{A} n \bar{a} p \bar{q} n a s a t i$ or Satipatṭhāna bhāvanā should be done in formal sessions. That belief has origins in the verse, "Idha, bhikkhave, bhikkhu aranna gato vā rukkhamüla gato vā sunnāgāra gato vā nisidati pallankaì ābhujitvā, ujumं kāyaì paṇidhāya, parimukhaì satim upaṭ!hapetv $\bar{a}$ ", that appears in multiple suttā explaining both $\bar{A} n a \bar{p} \bar{a} n a s s a t i$ and Satipattāna bhāvan $\bar{a}$.

- In most English translations this verse is written as, "There is the case where a monk, having gone to the wilderness, to the foot of a tree, or an empty building, sits down folding his legs crosswise, holding his body erect, and setting mindfulness to the fore."
- But there is a deeper meaning to this verse. For example, in the word "rukkhamūla," "rukkha" is "tree" and "mūla" is the "root"; even though the top of a tree sways back and forth with the wind, the tree trunk close to the root is very stable. Thus "rukkham $\bar{u} l a$ gato $v \vec{a}$ " means getting to a stable mindset. The conventional interpretation says, "having gone to the foot of a tree".
- The deeper meaning of that complete verse is discussed in detail in "Prerequisites for the Satipatthāna Bhāvanā." Then the verse can be stated something like, "get into a calm and stable mindset that is devoid of greed, hate, and ignorance; keep a modest attitude without any sense of superiority; be forthright and honest, and keep the mind on the main object of cooling down the mind." That can be done anywhere, a formal session is not needed, even though that could be helpful.
- One could also use conventional meaning for formal sessions. But the deeper meaning is much more important even in formal sessions.

## Only Three Commentaries Can be Trusted

13. If anyone has any evidence to the contrary from the Tipitaka, please comment on the "Discussion Forum." I will be happy to address any such issues.

- Only three commentaries (Patisambhidāmagga, Petakopadesa, and Nettippakarana [Netti]) can be trusted. Those are in the Tipitaka. All other later commentaries have many inconsistencies and outright misinterpretations; see, for example, "Buddhaghosa's Visuddhimagga - A Focused Analysis."

## 8. The Basic Formal Ānāpānasati Meditation

## Revised June 17, 2022

## The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section discuss meditation subjects. They clarify unresolved questions and help gain samädhi. The first 11 posts should be followed in that order, at least initially.

1. As we discussed in the previous posts of this series, it is important to live a moral life without engaging in the BIG EIGHT in order to achieve the full benefits of meditation. One could start even while making progress on the BIG EIGHT, and these formal sessions will help with those as well.
2. Now let us talk about how to do the correct $\bar{A} n \bar{a} p \bar{p} n a s a t i$ meditation as taught by the Buddha; see, "ㄱ. What is Ānāpāna?."

- First pick out a quiet time slot that you can allocate without having to worry about other tasks. Initially, 10-15 minutes a day would be fine and you can extend the time to several hours when the benefits of proper meditation become clear and you start feeling the nirāmisa sukha.

3. Pick out a room away from external disturbances as much as possible. A room that can be darkened and the door can be closed would be ideal. Sit in a comfortable chair with an armrest, and this becomes important when one starts getting into samādhi, because the body could become less rigid and tends to slide off(however, some people tend to "freeze" just like in samādhi statues in the beginning).

- Anyway, do not make the chair too comfortable because you may fall asleep. With practice this sleepiness will automatically go away, when the mind starts liking the meditation sessions, i.e., when one of the pañcan̄̄varaṇa, thina-middha, is automatically removed. One comes out of samādhi energized.

4. Sit in the chair with the hands-on lap and eyes closed. What we will be trying to do is to ward off any thoughts of lust, cravings, etc. (kāmacchanda), any thoughts of hate ( vyāpāda) in particular, and also any stray thoughts such as on kids or other pending tasks. We want to experience the "cooling down" due to the absence of kāmacchanda and vyāpāda, and also to focus the mind on a Dhamma concept. For those who are starting out, it may be good to do the following first:

- In order to keep the mind from running away, keep saying in your mind, 'May all beings be happy and healthy". Or, you could think about some act of generosity that you did recently. But all of a sudden you may drift to a thought of some type of sensual pleasure (involving any of the senses). Deliberately get rid of that thought and focus the mind back on the original task.
- If a hateful thought (towards someone or something) comes to mind, forcefully stop that thought as well. Here you should deliberately think good thoughts about that person. It is important to remember that even the vilest person has friends/family that love that person. Sincerely say, "May X be happy and healthy". Even if you have good reasons to despise that person, it is important to realize that our task is to remove the hateful feelings that WE have. When we do that, in the future we will not generate strong hateful feelings even if someone does something that may appear to be against us.
- Thinking about the serenity of a Buddha statue helps in the case of both kāmacchanda and vyāpāda (and any stray thought).

5. Once one gets some practice sitting in one place with a focused mind for a little while, one should start meditating or contemplating on Dhamma concepts. It may be a good idea to start with the introductory posts (posts above this post).

- After that, one could read one of the posts from the "Key Dhamma Concepts" on the top menu just before the meditation session and then contemplate those concepts; for example, one could think about examples on "anicca": We cannot maintain anything to our satisfaction over the long term. If you are old enough you have many examples on your own. If you are young, you can still maintain your body, hair, teeth, etc to your liking but when you get to middle age, you will see that it is an impossible task. The
easiest is to think about your parents/grand parents and see how their bodies have changed, how they are unable to keep their bodies the way they would like.
- For this purpose, I have also added new posts on how one can look at the world through Buddha Dhamma in this section. The posts that I have added after the "Myths about Meditation" are good ones to read before the session and then to meditate on those ideas; for example, " A Simple Way to Enhance Merits (Kusala) and Avoid Demerits (Akusala)." The other three posts below that one may be a bit advanced for some; if so, browse around and find ones that are suitable. Eventually, the key concepts in the "Key Dhamma Concepts" section need to be grasped. I encourage everyone to read the posts in the "Moral Living and Fundamentals" section first.
- You could actually read any post from any area of the site and use that as a "focal point" on the meditation session later on. Not all sections are relevant to everyone. Different people can get to samādhi focusing on different topics. The only posts that is absolutely necessary are the ones on anicca, dukkha, and anatta. But if they are hard to grasp, one should probably start at the "Moral Living" section. It is a matter of getting used to new concepts. In meditation, one will automatically "drift to samädhi" when the concepts become clear; the mind becomes awake and clear.

6. Inevitably, your mind will try to wander off during the session. Stopping lustful and hateful thoughts is the main task of this formal meditation session. If any distracting thought comes to the mind, DO NOT let it "run wild"; this is what is called "being mindful". Keep a sharp eye on such stray thoughts and put a stop soon as they surface.

- The other three hindrances (thina-middha, uddhacca-kukkucca, and vicikicchā) will automatically come down. You will be surprised how refreshed you feel after a "good meditation session".
- Initially, it may be hard, but if you are persistent you should be able to see the results within a week to a month depending on the situation with the BIG EIGHT. Those will also gradually diminish too.
- Once one gets the mind to calm down some, one could start focusing on the good/bad habits that one has, in addition to "taking in" Dhamma concepts.

7. In the Anapanapabba of the Satipatṭhāna sutta, it says, "..so sato va assa sati, sato va passa sati. Digham va assasanto digham assasami ti pajanati, digham va passasanto digham passasami $t i$ pajanati, ......" Here it DOES NOT mean "take long breaths in, expel long breaths out"; rather it means, "get rid of old bad habits, and cultivate the old good habits."

- Similarly, the very next sentence ("..rassam va assasanto ...") is not about short breaths, but about those good habits that you started to work on recently, and those bad habits that started to creep in to your mind recently (if there is any).
- This is why understanding how habits are formed and become āsavā is important; there are several posts on this subject.
- There is no way that one can purify one's mind by breathing in/out, even though it can get one's mind to calm down (samatha). The correct way of doing it does both Samatha and Vipassana together.
- In the above verse, sati is a very important term; it is not mere concentration, but contemplation with an understanding of anicca, dukkha, and anatta (actually any form of meditation cannot be done effectively without at least some understanding of anicca, dukkha, anatta).

8. The key to success is to do this as often as possible. You do not need to be in a quiet place either, even though it helps especially initially. As you make progress, try to do it while riding the subway or a bus (but not while driving!), while waiting at the doctor's office, during a lunch break, etc.
9. When one starts on Ariya Bhāvanā, sometimes things may look worse before getting better. It is like trying to cool a hot iron by sprinkling water on it when all that smoke comes out and may appear to be
getting worse. But one needs to be persistent. One needs to keep in mind that uncountable beings have attained "cooling down" by having faith in the Buddha.

- Understanding key Dhamma concepts is key to any type of meditation. Whenever you have time, try to read on different topics. Things will start "falling into place" at some point if it hasn't yet. From that point on, one will start feeling the joy of Dhamma and will be seeking to clarify things with enthusiasm. It is a good addition to have!

### 12.10 Possible Effects in Meditation - Kundalini Awakening

June 25, 2016; revised July 19, 2016; August 9, 2021
In the post, "Can Buddhist Meditation be Dangerous?" in the Section "Myths or Realities," I discussed some possible effects of meditation, both in conventional and in true Buddhist meditations. Here I will focus on Buddhist meditation and explain the physical and mental changes that one may experience. However, this does not mean everyone will experience these; these symptoms cannot be generalized, and some may not even feel them.

1. It is possible that one may encounter some soothing physical sensations first and then even some discomforts when one starts seriously cleansing one's mind. I did not want to discuss this topic until I had enough background material to explain the origins of such effects.

- Some people may feel such first experiences to be not bad at all and even get attached to them. I believe that what is known in Hinduism as "kundalini awakening" manifests this effect. Those are supposed to be encountered in anāriya meditation techniques, where one stops the cleansing process at this stage. It is the goal of most of those non-Buddhist meditators.
- In genuine Buddhist meditation also one may experience certain such effects. However, they will not be painful.
- Before reading this post, it is advisable first to read the introductory post, "Can Buddhist Meditation be Dangerous?," because certain body sensations encountered in the early stages of meditation are discussed in that post.

2. Fully understanding the current post requires some background material on the concept of gandhabba; Click to hear pronunciation:

## WebLink: Listen to "Gandhabba" pronounciation

The inert physical body is made alive by the gandhabba (or "manomaya kaya") that comes out of the physical body in the case of "out-of-body experiences"; see, "Manomaya Kāya and Out-of-Body Experience (OBE)."

- There are many posts at the site that explain various aspects of the gandhabba; see the sections "Gandhabba (Manomaya Kāya)," "The Grand Unified Theory of Dhamma," and "Udayavaya Ñāna."
- While it is not necessary to learn about the gandhabba to attain Nibbāna, if one needs to understand the mechanisms underlying these "meditation experiences," it is the bridge between mind and the physical body. In any case, it is good to know about these possible effects (more of which are discussed below), so that if one gets to experience them, one would not be perplexed.

3. The gandhabba has an "energy body," an invisible blueprint of the physical body. And that fine body is the one that controls the heavy physical body according to the commands from the mind, which is also located in the gandhabba (at the hadaya vatthu).

- The best way to visualize this is to imagine the gandhabba is a fine mesh that overlaps the physical body. It can move any part of the physical body, and is able to move any part that it wishes to move. For example, when the gandhabba moves its fine arm, the physical arm moves with it.
- This is how we control our physical bodies. Of course, there are more details with the brain acting out as an intermediary; see, "Brain - Interface between Mind and Body."
- For example, most of the energy to move the heavy body parts comes from the our food. Gandhabba sends the '

4. The nervous system of the physical body overlaps the fine nervous system of the gandhabba and tries to maintain that overlap all the time. If one sits down cross-legged, for example, the nervous system of the physical body may shift from that of the gandhabba. Then the physical nervous system will try to adjust for that shift, pulling the attached muscles with it.

- That is why it could become uncomfortable, especially for those not used to sitting cross-legged (when one gets used to it, the physical system will learn to adjust quickly).
- Therefore, this effect does not indicate progress in the meditation program. Significant effects are discussed below.

5. Our thoughts (i.e., the cittaja kaya) can influence the fine body (utuja kaya) of the gandhabba. In fact, the utuja kāaa arises out of suddhatthaka produced by the cittaja kaya and the kammaja kaya.

- Thus the fine body of the gandhabba can be affected by two methods: by the kammaja kaya (i.e. by kamma vipāka) AND by the cittaja kaya or according to how we think.
- The first effect can bring about aches and pains in the physical body due to kamma vipāka (by shifting the gandhabba's body to out-of-balance in a short time, so we can feel the shift). These are mostly experienced as we get old (e.g., chronic back pains) and are, of course, not due to meditation. Some of these may get better with meditation.

6. In addition to the shifts caused by kamma vipāka, we can change the equilibrium position of the gandhabba's fine nervous system with consistent thoughts over long periods of time. For example, if we think hateful thoughts a lot, the nervous system of the gandhabba may twist in a certain way; if we think mostly greedy thoughts, it may shift differently.

- Thus, as we think defiled thoughts and act on them regularly, it leads to gradual twisting nerve bundles [meridians being repaired for easy access by the gandhabba] in the gandhabba, and physical muscles also get twisted accordingly. Since it is a gradual process compared to the first effect, we do not normally feel it (until we get old).
- However, when we start cleansing our minds the fine body of the gandhabba tries to come back to its equilibrium position. During a good meditation session, this can happen fairly quickly, and that is when one starts feeling such nerve [meridian] (and muscle) movements. We are basically trying to "undo" those twists in nerve bundles that occurred over years and years.
- This is why this effect is much less in young children. Their nerves have not yet being shifted too much.

7. Thus, the second effect has its origins in our thoughts. Normally such effects occur above the waist, along the spine, neck, and in the head. This is related to the fact that nerve bundles [meridians] propagate through the spine and also there are cranial nerves in the brain. Thus "Kundalini awakening" is an example of this category.

- This effect is experienced by different meditators somewhat differently. But the dominant feature is the "pressure waves" that arise above the waist and are normally located around the spine, neck, throat, and head. These have been attributed to energy centers or "chakras" in Kundalini awakening; see, "WebLink: wiki: Kundalini."
- That is why they say that the kundalini energy is "uncoiled" (or "awakened") during meditation. But this is nothing more than the out-of-balance nervous systems coming back to the equilibrium position. In anāriya meditations, there is not much further cleansing is possible. To proceed further, one needs to comprehend the anicca nature of this world.

8. In Buddhist or Ariya meditations, one should start contemplating the anicca nature when one starts any body sensations. Body sensations indicate that the mind is beginning to affect the body and has made progressed in the cleansing process. Of course, those Hindu yogis who got to this stage had prevented from immoral acts and suppressed such thoughts, and thus had gained a tranquility of mind at least temporarily.

- But if one does not permanently cleanse one's mind, with the comprehension of the true nature of this world (anicca, dukkha, anatta), such corrections are temporary. They can go right back to the twisted positions. Thus one may experience such effects to varying degrees.

9. When one starts comprehending the anicca nature, this "unwinding process" can accelerate (and the body sensations too). This is when one may even start feeling significant discomfort or even mild pain.

- If the body is really "out-of-alignment," the realignment process can lead to different types of sensations; some may be mild, but some could be even a bit painful.

10. Many people experience sweating, which is definitely part of the "cleansing process." Our defiled thoughts lead to the generation of "impurities" in various body sites. The pure citta generated in meditation can burn them, and the body will get rid of the waste via sweat. Thus sweating is also possible during a good meditation session (in the early stages of progress; of course, all these go away eventually).

- Another related symptom is becoming thirsty during a good session; the mouth can get dry. It is good to keep a glass of water close by if that is the case.
- By the way, one can move around even while in a jhāna. In fact, when one cultivates the $j h \bar{a} n a$, one can open eyes and not be bothered by it. I can confirm that. In fact, those who have abhiññ̄ $\bar{a}$ powers are said to be able to do regular work while using abhiññ̄a powers.
- For example, a famous story in the Tipiṭaka describes how Ven. Chullapanthaka had created a thousand copies of himself with abhiñña powers and how they were all sweeping the temple premises.

11. Here is another experience that I have heard people described according to my teacher Thero's recorded desanās:

- "Something propagated from the neck area to the top of the head and stayed there during the session. This happened during subsequent sessions too". Such a "propagation" is probably more like a "pressure wave". This is another "kundalini type" effect.
- When these "pressure waves" are strong, it may be a bit painful too. But be rest assured that those effects will gradually go away as one continues when the nervous system comes back to equilibrium. However, if such sensations persist outside the meditation session, it may be a good idea to go for a medical examination since it could be due to a medical condition.

12. There is actually a way to reduce these sensations to some extent. This was suggested by my teacher Thero in a desana $\bar{a}$ that I listened to. Even if one meditates with the eyes closed (as most people should do in the early stages), the eye balls inside eyelids are in constant motion; they move around a lot.

- One should try to focus the eyes on the nose area. This is done sort of by one's mind, but the eyeballs keep steady, pointing towards nose. In my case, it stopped most of the sensations in the head. Eventually, of course, these sensations go away, once one attains "equilibrium." Then one can proceed even with the eyes open but still focused towards the nose/mouth area.
- Now I do not have any of those "pressure waves" that experienced in the throat area and recently those in the head area also went away. Some of these effects had been there for the past year and a half.
- Getting to the first Ariya jhāna means one has reached the Anāgāmī stage, where one loses desire for all sense pleasures (i.e, transcend kāma loka). See \#9 of "Power of the Human Mind - Ariya Jhānā."

13. Our thoughts or our "cittaja kaya" are the most important of the four types of "kaya" that we have. For a discussion of those four types of bodies, see, "Āhāra (Food) in Udayavaya Ñāna," in the Section: Udayavaya Nāna.

- As discussed there, our physical bodies (karaja kaya) that we value so much are there only for about 100 years, while our human bhava or human existence can last many hundreds of years. The other three types of bodies of kaya that we have are kammaja kaya, cittaja kaya, and utuja kaya. All three of these prevail through the whole human bhava (of course, they undergo constant change); they make a "big transition" when a new bhava is grasped at the cuti-patisandhi moment).
- And it is this cittaja kaya (or basically our thought stream) that is the most important. If we use the cittaja kaya wisely, we can make progress in our mundane lives as well as in pursuing Nibbāna. We will discuss this in detail in the last post on the Udayavaya $\tilde{N}$ āna in an upcoming post.

14. The key point here is that if one starts feeling these body sensations, one has cleansed the mind to the point of being able to comprehend anicca, dukkha, anatta (or any other Dhamma concept) with more ease; see, "Buddha Dhamma - In a Chart," and the post discussed there.

- At this stage (i.e., when feeling thirst, sweating, body sensations, etc.), one is likely to be somewhere

- Of course it is also possible that one could have already comprehended anicca, dukkha, anatta and has attained the Sotāpanna stage without any such symptoms. Each person needs to decide that for themselves; see, "How Does One Know whether the Sotāpanna Stage is Reached?." The fundamental guide is whether one has removed those "apāyagāmī gati" via cleansing the mind. The physical body may or may not give those clues that we discussed above.
- For attaining magga phala, jhānā are not necessary. Furthermore, Ariya jhānā cannot be attained without attaining at least the Sotāpanna stage first; see, "11. Magga Phala and Ariya Jhānā via Cultivation of Saptha Bojianga."
- Mental (and associated physical) phenomena are highly personal. Thus above discussed symptoms may or may not be experienced by a particular person.

### 12.11 9. Key to Ānāpānasati - How to Change Habits and Character (Gati)

## The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section are on possible meditation subjects. They can clarify unresolved questions, and lead to samädhi. But one must contemplate on them.

Meditation is all about purifying one's mind. We all have individualized cravings and habits that we have acquired in our past lives that continue during this life unless we act to change or stop them. We need to cultivate good habits and stop bad ones. The only way to do this is to be mindful of our actions and stop bad actions as they start as thoughts in our minds. Most bad thoughts arise due to bad habits; they just "pop up".

- Introduction to Character or Personality (Gati)
- A Broad View of the "Person" Trying to be a "Better Person"
- How Character (Gati) Leads to Bhava and Jāti
- How Habits are Formed and Broken - A Scientific View

### 12.11.1 Introduction to Character or Personality (Gati)

1. Here is a good place to see why the Buddha rejected both the concept of a "self" AND a "no-self" (or "soul" AND "no-soul'". We first need to realize that the task of purifying the mind is very personal; only you know about your mind and only you can purify it. The perception of a "no-self" is a bad starting point to do this cleansing.

- We can easily see that "a person" changes over time, both physically and mentally (see the next post). Thus it is easy to see that a concept of a "soul" or "self" does not hold water.
- However, each of us is DIFFERENT, and UNIQUE; no two are the same even at a fixed time. Even though each person changes, the change itself is unique to "that person" and CAN BE initiated by that person. What makes one person different from another is his/her character (gati).
- For those people who say, "there is no-self" or "there is no real me", I ask: "Then is it OK if someone hits you with a stick or hurt you badly in some way?". Obviously, that is not fine. Just by denying something that is as real as suffering itself, will not make the problem go away. Just being philosophical is not going to make the problem disappear.
- This is why the Buddha rejected both extremes of "self" and "no-self".

2. Actually as one increasingly realizes the fruitlessness of struggling to seek sense pleasures, the feeling of "self" starts to decrease. An Arahant is the closest to a "self-less person"; but even an Arahant has some unique character qualities: nothing to do with greed, hate, and delusion, but more like kammically neutral habits.

- For example, there is this story about a very young Arahant. One day a man came to take this bhikkhu to his house for a "dāna", which consists of a lunch followed by a gift (usually things that are needed for a bhikkhu like a robe, a towel, etc). On the way, they ran into some puddles on the ground and the young bhikkhu jumped over one. The man thought, "Oh, this bhikkhu is not even disciplined let alone having any magga phala; maybe I should not give him the gift". They came across a few more puddles and the bhikkhu went around them. So, the man asked, "Why did you jump over only that one?". The bhikkhu told him, "If I jumped over anymore puddles, I would probably lose my lunch too". It turned out that the bhikkhu was an Arahant with abhiññā powers and read the man's mind! Also it is said that the bhikkhu was born a monkey for many lives in the recent past, and he still had that sansāric "monkey habit" of jumping over things.

3. Habits are formed via repeated use. The Buddha said, "yā yan tanhā pono bhavitha....." or "bhava or habits are formed by tanh $\bar{a}$ for various things, activities. Remember that Tanh $\bar{a}$ means "getting attached to something via greed, hate, of ignorance"; see, "Tanhā - How we Attach via Greed, Hate, and Ignorance."
4. What we are concerned about is only getting rid of immoral habits and cultivating moral habits. This will make oneself a "better person" long before one even thinks about attaining Nibbāna. This can be done with simple process called "āna-pāna" or "taking in good habits" and "discarding bad habits".

- The Buddha said, "bhāve thabbancha bhavithan, pahee thabbancha paheenan" or "keep doing what is good, get rid of those that are not good". The meaning is a bit deeper than that because "bhāve" there refers to making "bhava". The more one does something, it becomes one's "bhava". And the less one willfully stops doing, that "bhava" tends to go away. This is what the neurologists are re-discovering today; see, "How Habits are Formed and Broken - A Scientific View."

5. The bad habits need to be stopped each time it surfaces, right there. The Buddha said, "ette san uppajjamana uppajati, paheeyamana paheeyathi" or "each time a "san" (a bad habit) resurfaces, it needs to be recognized and stopped right then."

- Therefore, one must do this not only in sitting meditation sessions, but as much as possible, whenever possible.
- This is what the Buddha also meant by "asevitaya, bhavithaya, bahuleekathaya," or "associate, use, and do as much as possible whenever possible" everything that helps with A $\bar{n} \bar{p} p \bar{n} n a s a t i$. These are described in the post, "Habits, Goals. and Character (Gati)".

6. I cannot emphasize enough the importance of understanding what is truly involved in annāpānasati. The recent findings on the workings of the brain really helps clarify and highlight some key points that the Buddha emphasized. I think it will help anyone understand the process much better. But first we will take a brief look at how these character qualities are inherited.

Next, "A Broad View of the "Person" Trying to be a "Better Person"",

### 12.11.2 A Broad View of the "Person" Trying to be a "Better Person"

## Revised November 28, 2018

1. Let us see how and why we act with greed, hate, and ignorance. Stated simply, all we do during a day does not happen by chance.

- Our actions are based on our "character" (more correctly gati) AND "our way of thinking about this world based on our views about the world"; "gati" is pronounced as "gati".
- For example, if one does not believe in a rebirth process, or the law of kamma (that each action has consequences), then it may be easier to seek enjoyment at the expense of other beings.

2. What our character or world view today is due to a complex combination of many things, but the main factors are: (i) sansāric habits (also called gati and āsavas), (ii) biological parents who provide parts of the physical body (this is also related to kamma vipāka), (iii) the environment that one grew up AND the current environment (i.e., physical environment and people one associates with).

- Even though the complexity of a "person" cannot be reduced to simple things, those are major ones. As the Buddha pointed out in the Sabbasava sutta (see, "Habits, Goals. and Character (Gati)"), the main things that CAN BE changed NOW are "physical environment and people one associates with" which is a part of (iii) above. If we are talking about a child, then (iii) applies in its entirety.
- Once these "external influences" are taken care of, next is to purify the mind by "taking in" good things and "discarding" bad things or "ānāpāna"; see, "7. What is Ānāpāna?."

3. When we are conceived in the mother's womb, a "blueprint" of the new life is in the form of a manomaya $k \bar{a} y a$ (which is made of undetectably fine matter) descends to the womb and combines with the zygote formed by the combination of an egg from the mother and the sperm from the father.

- This manomaya kāya is the same as gandhabba or pațisandhi viñ̃̄āṇa.

4. The manomaya kāya comes with three rūpa kalapas called the kaya dasaka (blueprint for the physical body), bhava dasaka (whether male or female), and vatthu dasaka (mind element, which has the "gati" in it) that were determined by the kamma vipāka that led to the birth; we will discuss these later in the Abhidhamma section.

- Thus the physical body of the new life is now going to be affected by not only the kaya dasaka, but also the genetic material in the egg and the sperm (DNA of the parents). As the fetus grows, it will also be affected by the food intake by the mother as well as her mental state, home environment, etc. After the birth until death, the physical body (as well as the mind) will be affected by many other factors including the diet and the environment.
- This is discussed in detail at: "Buddhist Explanations of Conception, Abortion, and Contraception."

5. Thus there is no "unchanging self" either mentally or physically; everything is in constant flux. But one cannot say "there is no-self' either because the character qualities (gati and $\bar{a} s a v a$ ) that comes in with the manomaya kāya will keep "evolving"; even though they change, there is a continuation of a particular lifestream.

- Each person or animal that born is unique with a complex set of mental and physical parameters that evolve moment-to-moment like a flowing river; see, "What Reincarnates? Concept of a Lifestream".
- We will discuss some of these factors in various sections, but the key point I wanted to get across is the fact that each person has a unique set of character qualities (gati and $\bar{a} s a v a$ ) that have evolved over uncountable number of lives in the past. And those are the key to one's destiny. One has the power to change those.

6. What makes one person different from another is this set of "gati and $\bar{s} a v a$ ", which can be loosely translated as, "character qualities and deep-seated cravings". Some people are calm and quiet while others are rough and boisterous; some like music while other like to watch things or engage in physical activities; the possibilities are endless and there are innumerable combinations of them. That is why each person is different.

- Hidden in these apparently harmless "habits" and "cravings" are the defilements or the tendencies to engage in certain types of activities that are harmful to oneself or the others.
- The key is to focus on the glaring character flaws first: if one engaged in activities such as fishing or hunting, that means willfully taking the life of other beings for one's pleasure. Does that makes sense within the wider world view of any given being repeatedly born in any of the 31 realms? Within that broader view, we can see that any animal, how small or insignificant, has an attachment to its life; and we could have had that very life in the past.
- Take another example of a transaction between two people. The goal should be to make a decent profit for oneself making sure one covers the cost and make enough profit to "stay in business and provide for the family", but not to make the transaction too burdensome on the other party. As we discussed in the post, "Kamma, Debt, and Meditation", one could get into deep debt to other people and beings by exploiting them in many different ways.

7. The easiest way to deal with this is to look at each action mindfully and decide whether that act is "fair" to everyone involved. Of course one could check to see any of the ten defilements (dasa akusala) are committed by that action; see, "Ten Immoral Actions (Dasa Akusala)."

- As I keep saying, one needs to focus on the more extreme violations first. There is no point in worrying about inadvertently killing some insects while gardening if one is engaged in lying and deceit or killing
animals for pleasure. It is good to get an idea of the severity of different acts; see, "How to Evaluate Weights of Different Kamma".

8. This is why it is important to learn Dhamma as much as possible, while engaging in meditation. The Path becomes clear as one learns the subtleties in key Dhamma concepts.

- I am amazed how much I learn each and every day; it is like a picture becoming clearer by the day. You start to see the even smallest detail, and instead of becoming distraught you get a sense of clarity and peacefulness by cleansing the mind. You realize that no one is perfect until the Arahanthood and the key is to make progress, no matter where you are. Each step in the right direction makes you feel better.

Next, "How Habits are Formed and Broken - A Scientific View",

### 12.11.3 How Character (Gati) Leads to Bhava and Jāti

$J a ̄ t i$ (births) depend on gati (habits/character.) Therefore, it is critical to cultivating "good gati."

## Revised August 9, 2021

1. A special knowledge that the Buddha gained at the Enlightenment was the āsavakkhaya ñaña. This is the key to stop the suffering FROM ARISING via getting rid of the deep-seated cravings (āsava) that we all have. Āsavakkhaya ñāna ("āsava" + "khaya," where "khaya" is the opposite of "san"; see, "What is "San"?) is the knowledge on how to remove those cravings (āsava).
2. Throughout the site, I keep emphasizing the importance of understanding (not memorizing) the meanings of the key Pāli words like gati, anusaya, āsava, bhava, jāti, samisāra, and dukkha; they are intimately interconnected in many ways including Paṭicca Samuppāda. The way to stop future suffering (dukkha) from arising and reach Nibbāna is to break the perpetual cycle that lead to a new $j \bar{a} t i$ (birth) at each death.

- Our problems do not go away at death (committing suicide is a bad idea); they merely get started in a new phase with a new body, which could be worse than what we have now; see, "What Reincarnates? Concept of a Lifestream."
- The connections among bhava and jāti on one side and āsava, anusaya, and gati on the other side are intimate, and need to be understood well; see, "Samsāric Habits, Character (Gati), and Cravings (Āsava)," before reading the rest of this post.

3. And this understanding is needed even if one is not seriously thinking about Nibbāna. The whole key to suffering, in general, is embedded in these intricate relationships.

- Bhava and $j a \bar{a} t i$ also happen during this very life; jāti could mean birth of a new desire; see, "Idappaccayatā Paticca Samuppāda" and "Bhava and Jāti - States of Existence and Births Therein."
- It may be a bit confusing for a new person to this site, but have patience and read the inter-connected posts. I have links everywhere to pertinent posts/material. Once you understand the underlying connections, it will clarify everything, like a fog being lifted.
- I have set up links to open them in new windows so that you can go back forth between posts easily and try to "fill-in-the-gaps."

4. A perpetual cycle that is ever-present in the sansāric cycle of rebirths is described in the following verse:
"uppado pavattaì, pavatta nimittaì
nimitta pațisandhi, pațisandhi gati"

- "Uppada" means arising. When āsava (cravings) arise due the triggering of anusaya (hidden temptations,) we need to stop that temptation and break the cycle at "pavattaim" (which means keeping it or go with it).
- If we go along with the temptation ("pavatta"), then it becomes a nimitta (literally a "sign"). A nimitta is a characteristic that is associated with that particular act. For example, for an alcoholic, a picture of an alcohol bottle or a bar (or where one normally drinks), or even seeing a friend with whom one drinks often, can be a nimitta; when any of such a "symbol" comes to the mind, it reminds of the drinking act and gets one in the "mood."

5. Most times, the patisandhi (linking the next rebirth) takes place via a nimitta; this is what is meant by "nimitta pattisandhi" above. At the dying moment, what comes to the mind is likely to be something that one often does, which could become the link to the next life.

- A drug addict, if lucky to be born human again, will be attracted to a mother who is a drug addict.
- For a person with lot of hate, what comes to the mind at the dying moment could be a picture of an arch enemy; then the kammic power shows him a gun or a knife and he will be likely to attack the person with that weapon (in a dream-like state); the next moment he will be in an apaya (hell), which is the "matching place."

6. The worst thing is that the old habits continue and even strengthened in this new life; this is why "pattisandhi gati" meant above. Suppose a drug addict born to an addicted mother is adopted by another family and raised in a drug-free environment. Still, if that child becomes exposed to drugs later in life, he could be tempted to use drugs because of his sansāric habit.

- This is the danger in the rebirth process or sainsāra; one keeps going down the slippery slope unless one changes one's habits with effort. And reversing that trend can be done only in a human life.
- Sentient beings in most realms do not act willfully but according to their sansāric habits. We can see only the animal realm. Clearly, animals do things mechanically (almost like robots, but not quite only because they have FEELINGS). Only the beings in higher realms have genuine free-will and it is optimum for humans.
- You can see that many animals have unique characteristics: such characteristics and habits are associated with that particular existence (bhava). For example, some birds have been building the same type of nests from begimningless time through countless world cycles; but they are unable to make it any better. Migrating birds know exactly where to fly. New born turtles head to the sea right after the eggs are hatched; see the video:

## WebLink: YOUTUBE: New Born, Baby Sea Turtles Race to the Ocean!

7. However, humans can change their destiny. They have free will and the ability to come up with "new ideas." We keep building new things, discovering new things, and making progress.

- We need to keep in mind that we can also purify our minds and become free of this unending and suffering-laden rebirth process. If we ever get birth in one of the lower realms, we will be stuck there for a long time to come.
- The way to purify our minds is to get rid of bad habits. Excessive greed (this includes addictions to anything, including food, money, property, alcohol, drugs, etc.) and anger are the first two things one needs to work on.
- This does not mean one has to give away one's wealth; just don't be too attached to them. One has "earned" that wealth from previous good deeds, so one does not need to feel bad about it. But those things last only about 100 years, and who knows what we will inherit in the next life.

8. And the key to be permanently free of the $a p \bar{a} y \bar{a}$ is to get rid of those bad character qualities (gati) that can give us birth in those four realms.

- We can avoid the niraya (hell) by getting rid of hate; we can stay away from peta (hungry ghost) worlds by getting rid of greed, we can make sure to not get a birth in the asura realm by not getting "free rides," and making our own living honestly ("a"+"süra" means "not able" or those who depend on others).
- An animal birth results from gati that have all three roots of greed, hate, and ignorance; animal realm is called "thirisan" in Pāli or Sinhala: "thiri" is three and "san" is greed, hate, and ignorance. Thus an animal birth is caused by gati that have all three immoral roots.
- In the same way, we can make it possible to be born a deva by being generous to others; we can make it possible to become a Brahma by cultivating mett $\bar{a}$, karuṇa, mudi $t \bar{a}$, upekkh $\bar{a}$; and we can optimize chances for a human birth by cultivating wisdom as well.

9. But no matter how well we live this life, we do not know what kind of "kammic baggage" we carry from previous lives. Thus the only way to avoid the four lower realms (apāyā) with CERTAINTY is to attain the Sotāpanna stage of Nibbāna. And we can do this by comprehending anicca, dukkha, anatta, the true nature of this world.

- When one truly comprehends anicca, dukkha, anatta, one's mind automatically rejects actions that are bound to maintain and cultivate bad gati, and encourage actions that will cultivate good gati. If this is done to the level of getting rid of the four greedy citta with wrong vision and the citta with vicikicch $\bar{a}$, then one becomes PERMANENTLY free of the ap $\bar{a} y \bar{a}$; see, "Akusala Citta - How a Sotāpanna Avoids Apāyagāmi Citta."

10. Finally, another interesting video from the animal world shows how ants build sophisticated cities. But unlike humans, the ability to do that does not come from ingenious minds; ants have been doing the same for eternity. It is a "characteristic" that is naturally associated with the "ant bhava." Each ant "knows" what to do, just like the baby turtles who race to the sea just after being hatched. It is the same with how birds know where to fly in their long migrations.

- There is so much that the Buddha explained to the world, but the world is still unaware of.

## WebLink: YOUTUBE: Giant Ant Hill Excavated

11. More details on the importance of gati in the rebirth process are discussed in, "Patisandhi Citta - How the Next Life is Determined According to Gati."

### 12.12 Karaniya Metta Sutta - Metta Bhāvanā

October 7, 2018; revised September 6, 2019; revised \#5 on February 11, 2021
Karaniya Metta Sutta is one of the popular suttā in Buddhist countries. However, like many suttā, it has not been appropriately translated in most current English translations.

1. First of all, the actual name of the sutta is Karaniyamattha Sutta. It comes from "karaniyama" meaning "essential to do" (س® CSOO (kalayutuma means "requires") in Sinhala) and "attha" meaning "oneself." That means this sutta summarizes what one must do (to make progress on the Path). But this is not a significant error since Metta bhāvanā is there too.

- Those "requirements" are in the first three verses.
- The actual "Metta bhāvan $\vec{a}$ " part is in verses 4 through 8.
- Verse 9 says that one should do this bhāvanā in all four postures. This bhāvanā is the "Brahma Vihāra" or "living like a Brahma" or "living with the mindset of a Brahma."
- Verse 10: When one fulfills the "requirements" at the basic level, one will get to the Sotāpanna stage. With the cultivation of Metta bhāvanā, one will get to be an Anāgāmi (not born in a womb again).

|  | Pali | English |
| :---: | :---: | :---: |
| 1 | Karañīyamattha kusalena, <br> Yantam santaì padà் <br> abhisamecca; <br> Sakko ujū ca suhujū ca, <br> Sūvaco cassa mudu anatimān̄̄ | What kusala should be done by one who is seeking cooling down (by seeing the unfruitful nature of this world): moral, upright and disciplined, with pleasing manners and humble. |
| 2 | Santussako ca subharo ca, Appakicco ca sallaukavutti; Santindriyo ca nipako ca, Appagabbho kulesuananugiddho | Always happy, bearing only good (gati), with few mundane duties and simple life, with senses calmed and a cooled mind, with few burdens (possessions), and treating everyone the same (regardless of race, color, etc.). |
| 3 | Na ca khuddamsamācare kiñci, Yena viñ̃̄̄̄ pare upavadeyyum; Sukhino va khemino hontu, Sabbe sattā bhavantu sukhitattā | Not engaging in harmful/lowly actions (and this thought that one always holds), may all beings attain Nibbāna (and get to the ultimate happiness). |
| 4 | Ye keci pānabhūtatthi, <br> Tasā vā thāvarā vā anavasesā; Dīghā vā ye mahantā vā, Majjhimā rassakānukathūlā | Whoever there may be with a breath of life, trapped by greed for so long in saysāra, may they be free of fear and greed without exception. |
| 5 | Ditṭhā vā ye va aditṭhā, <br> Ye ca dūre vasanti avidūre; <br> Bhūtā vā sambhavesī vā, <br> Sabbe sattā bhavantu sukhitattā | Those who are seen or unseen, those dwelling far or near, those born as well as those seeking birth (gandhabbā), may all beings attain Nibbāna. |
| 6 | Na paroparam nikubbetha, Nātimaññetha katthacinam kañci; Byārosanā patighasañña, Näñ̃amaññassa dukkhamiccheyya | May no one deceive another, treat everyone like close relatives. May they not wish each other harm, and by seeing the unfruitful nature of this world, may they be free of suffering. |
| 7 | Mātā yathā niyamimputtam àysā ekaputtamanurakkhe; Evampi sabbabhūtesu, Mānasamibhāva ye aparimānaì | Just as a mother would protect her only child with her life, may this protection affect all beings on an equal footing. |

|  | Pali | English |
| :---: | :---: | :---: |
| 8 | Mettañca sabbalokasmim, Mānasambbhāva ye aparimānain; Uddham் adho ca tiriyañca, Asambādhaì averam asapattaìm | May all cultivate mettā towards all beings on an equal footing, those who live above, below, or across. May all be unhindered and without enmity. |
| 9 | Tiṭthà̇ caramं nisinno $v \bar{a}$, Sayāno vā yāvatassa vighatamiddho; <br> Etaì satim adhittheyya, <br> Brahmametaì Vihāram idhamāhu | Whether standing, walking, sitting or lying down, may all sustain this mettā mindset (what the Buddha called Brahma Vihāra). |
| 10 | Ditṭhiñca anupaggamma, Sïlavā dassanena sampanno; <br> Kāmesu vinaya gedhamं, <br> Na hi jātugabbaseyyam punaretī"t $t$ | Being moral based on right vision (a Sotāpanna), and by removing kāma rāga with effort one will never again be in a womb (Sakadāgāmi or higher). |

Note: The pdf file of the sutta itself can be downloaded here: "WebLink: PDF File: Karaniya Metta Sutta."
2. Deeper explanations are in some words like "abhisamecca" ("abhi" + "san" + "avecca"), and "dukkhamicceyya" ("dukkham" + "avecceyya").

- Avecca is the keyword in both cases, and I discussed the deep connection to "icca" and thus Tilakkhaṇa in the post, "Sotapatti Anga - The Four Qualities of a Sotāpanna" (starting at \#9 in the post).
- If anyone needs more explanations of other words, we can discuss it at the discussion forum, but we will look at one more next.

3. Another keyword is "mānasaimbhāva," which comes from "mānasan" and "bhava," meaning one's mind (ideally) does not contaminate beyond the "mānasam"" stage.

- When thoughts (citta) arise, they get contaminated within a fraction of a second due to one's gati. That is discussed in the post, "Amazingly Fast Time Evolution of a Thought (Citta)."
- Therefore, the goal is to improve one's gati, so that one's citta will not contaminate beyond the "mānasaì" stage (reached the Arahant stage). One should strive to approach that mindset right now, at least while meditating.
- As one gets closer to that stage, one will have true mettā AUTOMATICALLY for increasingly more and more living beings. At Arahanthood, one will have boundless mettā to all: "mānasaíbhāva ye aparimānaì."

4. The first three verses in the sutta state how one gets to the Sotāpanna stage by getting to the Ariyakanta silla (unbreakable moral conduct). That is when one will have aveccappasāda (unbreakable faith in the Buddha, Dhamma, Sangha). That is discussed in detail in the post, "Sotapatti Anga - The Four Qualities of a Sotāpanna."

- Then by cultivating mettā, one can gradually get rid of $k \bar{a} m a$ rāga and get to the Sakadāgāmi and Anāgāmi stages.
- However, this is an excellent sutta to listen to and to recite even before getting to the Sotāpanna stage. It is better to recite Päli verses with an understanding of the meaning of those verses. The sound itself is beneficial, especially when pronounced correctly, as done by the Thero in the recording below.
- It is also good to play the recording in the background while doing other things or during meditation. In Asian countries, this it is common practice to play this sutta in the mornings, while everyone is getting ready to go to school or work.

5. A recital of the sutta by Waharaka Thero is below:

WebLink: Karaniya Metta Sutta in mp3
Note: In the recital, the sutta ends around 4:45. The Thero starts reciting the following verse:
"Nakkhatta-yakkha-bhūtānaì
Pāpaggahā nivāranā
Parittassānubhāvena
Hantu mayhaí upaddave"
It is a verse from "Mahā Jayamañgala Gātha" where merits are offered to other beings. See, p. 42 of the following booklet, which is a useful guide:
"WebLink: buddhistelibrary.org: Vandanā: The Album of Pāli Devotional Chanting \& Hymns"

### 12.13 <br> 10. Attaining the Sotāpanna Stage via Removing Ditṭhāsava

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section discuss meditation subjects. They clarify unresolved questions and gain samädhi. The first 11 posts should be followed in that order, at least initially.

July 30, 2015: I have re-written the two posts \#10 and \#11 (previously titled, "10. Magga Phala and Ariya Jhānā via Cultivation of Satta Bojjhañga" and " 11 . How to Select and "Grow" Meditation Procedures for Magga Phala") that were written some time back with different titles. Over the past two months, I have clarified some subtle issues in my experience and technical details. Revised August 5, 2017; September 19, 2018 (updated links).

- First, the order of things: samādhi, magga phala, and then Ariya jhānā in that order; see, "Possible Outcomes of Meditation - Samādhi, Jhāna, Magga Phala."
 "Sotāpanna Stage of Nibbāna" section for details on this and many other aspects.

1. First, it would be challenging to get to even a state of samādhi if one is not keeping up the "conventional" five precepts: abstaining from killing, stealing, sexual misconduct, lying, and using drugs or getting intoxicated. Those things make the mind restless, and hard for the mind to focus attention (the five hindrances "cover the mind"). Just strictly obeying the five precepts may not be effective if one's mind is full of jealousy, extreme greed, hate, etc.; see "The Five Precepts - What the Buddha Meant by Them."

- Just like one cannot see the bottom of a well if it is highly contaminated, the mind (and the body) will not "feel anything" even in a formal meditation session if the mind is "highly contaminated." And there is no point in trying to take out the "small defilements" (such as abstaining from taking a glass of wine) if one is engaged in immoral activities.
- With the "big defilements" removed, one starts seeing a little bit further down the well; similarly, one's mind will become lighter, with less stress, even when not in a formal meditation session. Siting down in a quiet place makes it easier to get to some state of "samādhi," or tranquility.
- The Buddha said that "kusala sìla" leads to the tranquility of the body and mind, leading to samādhi. The "kusala silla" accomplished via gaining Sammā Ditṭhi (to some extent) is all that is needed to attain the upacāra samādhi needed for the Sotāpanna magga/phala. All three samyojana removed at the Sotāpanna stage (sakkāya ditṭhi, vicikicchā, silabbata parāmāsa) are associated with the wrong vision or ditṭhi.

2. Many believe one needs to "get to samādhi" using a separate meditation technique such as conventional breath meditation. Even though one could do that, it would be a waste of time. One can get to samādhi by listening or reading attentively to CORRECT dhamma.

- There is not even a single reference in the Tipitaka where the Buddha asked anyone to do a "Samatha $B h \bar{a} v a n \bar{a}$ " first and then to "vipassana bhāvanā." When one comprehends Dhamma, one's mind gets calm, and through that Samatha state, one can get to magga phala.
- After attaining the Sotāpanna stage, one can get to Ariya jhānā by focusing on that "state of cooling down" that one has already achieved to some extent, to get to jhānā.
- One needs formal meditation techniques to attain higher magga phala, i.e., above the Sotāpanna stage; the reason will become clear shortly. However, it is fine to do formal meditation even to attain the Sotāpanna stage. In the following, I will describe what I went through.

3. To get to samādhi, contemplating Dhamma concepts will make it easier and faster. Also, one can stay in "meditation" for a longer time. Different names used are insight meditation (vipassana), many forms of "anupassanā," and cultivating the "dhamma vicaya" sabbojjhañga. Concomitantly, one must do the correct version of "Ānāpānasati" at all times.

- In principle, working towards the Sotāpanna stage does not require formal meditation techniques even though meditation can help; countless people attained the Sotāpanna or even higher stages of Nibbāna just by listening to a Dhamma discourse.
- It is quite essential to understand this point. Many people have one or more misconceptions about reaching the Sotāpanna stage. (i) Giving up all worldly possessions, (ii) Becoming a bhikkhu or living in seclusion, and (iii) One needs many meditation techniques.
- To clarify this issue, let us examine what is involved in attaining the Sotāpanna stage.

4. Removal of cravings for worldly pleasures or āsavas (āsavakkhaya) leads to Nibbāna; see, "Āsava, Anusaya (Temptation), and Gati (Gathi)."

- Out of the four $\bar{a} s a v a \bar{s}$ that we have, only one goes away at the Sotāpanna stage: dittasava or the craving for wrong worldviews. In the Sabbasava Sutta, this is referred to as removal by clear vision ("dassanena pahātabbā," where dassanena is vision and pahātabba is removal).
- The other three āsavas of kāmāsava (craving for sense pleasures), bhavāsava (desire to live somewhere in the 31 realms of this world), and avijjāsava (ignorance of anicca, dukkha, and anatta) go away at the higher stages of Nibbāna; see the above post.

5. The critical point is that one does "apāyagāmi apuññābhisañkhāra" (or strong immoral deeds that make one eligible to be born in the lower four realms) only when one has wrong worldviews. Contrary to most people's beliefs, one does not need to lose the craving for sense pleasures to attain the Sotāpanna stage. Kāma āsava is reduced in stages in the Sotāpanna and Sakadāgāmī stages and is removed only at the Anāgāmī stage.

- That is why learning dhamma concepts and getting rid of "dittthis" or "wrong views" is key in attaining the Sotāpanna stage, as I emphasized in several posts; if you enter "diṭthi" in the Search box on the top right, you will see many relevant posts.
- We all have many ditthis. These can be removed only by learning the world's true nature, i.e., by learning Dhamma.
- One meaning of Sotāpanna ("sota" + "paññ̄̄") is "one who has cultivated wisdom by listening to Dhamma"; in the days of the Buddha, that was how one learned Dhamma, by listening.

6. Even before meeting my teacher Theros, I had been thinking about dhamma concepts for 3-4 years and trying to get a consistent picture in my mind. Even at that time, I could focus my mind and quickly get to samādhi.

- When I "got stuck" trying to figure out what a particular concept means concerning others, I would look through books and listen to desanās (discourses) on the internet. At this stage, I realized that most of the explanations did not make sense and were not consistent with other key concepts.
- For example, I struggled to explain the rebirth stories to many children. If "being born human" is so difficult as explained in many suttā (see, "Rebirth - Connection to Suffering in the First Noble Truth"), then how can all those children remember their recent past lives? Furthermore, there were "gaps" from the time they died in their previous life to the time they were born in this life.
- Once I met my teacher Thero, I clarified that issue along with numerous others: Birth is different from "human bhava"; see, "Bhava and Jāti - States of Existence and Births Therein." Also, when one dies and has energy left in the "human bhava," one becomes a gandhabba and has to wait until a suitable womb becomes available; see "Mental Body - Gandhabba."
- Thus rebirth in the human realm does not happen instantaneously. One could be in the gandhabba state for years before being directed to a suitable womb. And one can be born in the human realm many times before the kammic energy for that "human bhava" is exhausted.

7. However, I could get to samādhi even before resolving many of these issues. I was making steady progress with the concepts that I could quickly grasp. I would sit at the desk, contemplate, and feel my body lighter and my mind calm. It was much better than just wasting time doing "breath meditation."

- If I sat in a quiet place and meditated (contemplating a Dhamma concept), my mind would "latch on to it," and I could get to an anāriya jhānic experience. That started a year before I learned the true meanings of "anicca, dukkha, and anatta."
- It started with "tingling sensations inside my brain"; I could feel things happening there. And then I could feel "needle pricks" all over the body, and my body would start "freezing," mostly the upper body. These "symptoms" are not common to all.
- Learning Dhamma is a critical part of "kusala sīla," especially for the Sotāpanna stage. Kusala sīla automatically leads to samādhi, as discussed in the "Na Cetanākaranīya Sutta."

8. After I heard the "true meanings of anicca, dukkha, anatta," I made progress very quickly. Looking back now, I may have attained the Sotāpanna stage while listening to that first desana. However, it took me some time to realize and convince myself. One needs to look back at the progress one has made and see that one is now incapable of committing immoral deeds that would make one eligible for rebirth in the apa $\bar{a} y \bar{a}$.

- I was overjoyed with comprehending the "foundation of Buddha Dhamma." It does not make sense to struggle to seek more worldly pleasures and possessions. That is guaranteed to be a failure in the long run. One spends one's whole life making money to enjoy such "pleasures," and before one realizes it, one has come to old age. I would call or e-mail my friends and tell them they needed to listen to desanas by those Theros.
- It took me a little while to realize that most of them could not figure out what I was excited about. Now, looking back, I realize that their minds were not ready. They were too busy making "more money." It was a revelation for me, who had been seriously struggling for a few years. But most people who just spent a bit of their time reading critical concepts do not "connect." Reading Dhamma should not be done the same way as reading a newspaper or a novel; one needs to be engaged.
- After getting the true meaning of "anicca, dukkha, anatta," I spent the next few months scouring the internet for the desanas of those Theros. After five months, I traveled to Sri Lanka and brought back more material to listen to. It was so fulfilling and exciting; I was learning at a very rapid pace. At that time I didn't even think about jhānā, but I could feel "jhānic effects," i.e., my samādhi was getting intense, even though I was not trying to cultivate them.
- September 19, 2018 update: I have been listening to only those desanas by Waharaka Thero for the
 of Waharaka Thero."

9. Even though I had an inkling about reaching the Sotāpanna stage soon after listening to that desan $\bar{a}$, I developed the $j h \bar{a} n \bar{a}$ some months later. However, those turned out not to be Ariya jhānā though, since they can be attained only by an Anägāmi; see, "11. Magga Phala and Ariya Jhānā via Cultivation of Satta Bojihañga."

- These and other aspects of Ariya and anāriya jhāna are discussed in the section: "Samādhi, Jhāna (Dhyāna), Magga Phala."
- Once I finished investigating and "filling the gaps," the $j h \bar{a} n \bar{a}$ came almost automatically. The meditation experience I described in \#7 became much stronger; I could close my eyes and "feel the change in the head and the body" within minutes (and, nowadays, within seconds).

10. The above is what I mean when I say, "feel the results of meditation." One can feel it in the body as well as in mind. Let us first discuss the reasons for the "body effect" and the "mind effect."

- We have a very complex nervous system that the brain uses to control various body parts and communicate with the five physical senses. A "duplicate nervous system" is associated with the
manomaya kaya, and as we grow up, those two systems get somewhat displaced. The displacement becomes more prominent when we start enhancing all types of bad habits; they go "out of sync."
- When we start learning Dhamma and avoid the most egregious acts, the two nervous systems try to get to the ideal overlap positions, and one could feel that. That becomes noticeable during meditation. Some people may feel aches and pains, sweating, etc. That is why I had said in other posts that things MAY look worse before getting better. In a way, such "body signals" are a good sign; it means the body is starting to respond.

11. Now to the "mind effect." Many people tell me that they cannot keep their minds focused on even their breath for too long. That is a sansāric habit; the mind does not like staying in one place. It wants to "know" about everything happening in the vicinity and randomly think about past events or plans.

- The only way to remove this "bad habit" is to start thinking about Dhamma concepts slowly. And that cannot be forced either. Unless and until the mind sees the benefits of learning Dhamma, it can be a "chore" to some people. But once one gets some traction, one starts enjoying the "taste of Dhamma," and it is easy to stay focused.
- The key here is that when one learns Dhamma, "ditṭhāsava" (or craving for wrong worldviews) starts to dissolve, initially slowly, but picks up speed as one starts grasping concepts.
- The two critical components of pñnca nīvaraṇa (kāmacchanda and vyāpāda) reduce as diṭthāsava reduced. That, in turn, lead to the reduction of the other three of the pañca nīvaraṇa. This process goes all the way to the Sotāpanna stage.

12. Of course, I did not realize until after meeting my teacher Thero (online) that what I had been doing all along was a crude version of the Satta Bojjhañga Bhāvanā. The crucial part of that is dhamma vicaya (contemplating Dhamma concepts). [vicaya:[m.] investigation.]

- That is how one cultivates the "anicca sañ̃̄ $\bar{a}$ " which is the key to removing defilements permanently. See "What is the only Akusala Removed by a Sotāpanna?" and "How to Cultivate the Anicca Saññā."
- The formal Satta Bojjhañga bhāvanā is discussed in the next post, "11. Magga Phala and Ariya Jhānā via Cultivation of Satta Bojjhangga."
- It is also important to realize that even an Arahant will not lose the sense of taste; one increasingly will lose CRAVINGS for them; see, "Kāma Guna, Kāma, Kāma Rāga, Kāmacchanda."

13. November 11, 2016: I get many questions on this topic, i.e., how to verify one is progressing towards the Sotāpanna stage. The new section, "Living Dhamma," provides a systematic way to achieve that goal and provides guidelines on checking one's progress.

- January 23, 2020: The new "Origin of Life" section attempts to start "at the beginning" and get to more in-depth concepts of anicca, dukkha, and anatta. The deeper I get into the fundamental concepts, I realize there is much more! However, basic comprehension becomes more natural too. I may need to go back and revise many of the old posts. So, I would encourage everyone to read the new series with a deeper understanding.

### 12.14 <br> 11. Magga Phala via Cultivation of Satta Bojjhanga

The top 11 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section are on possible meditation subjects and can be used to clarify unresolved questions, and to gain samādhi. The first 11 posts should be followed in that order, at least initially.

Revised August 5, 2017; September 19, 2018; revised April 24, 2020

## Introduction

1. There are many ways to get to magga phala. What I have followed is Bojjhañga Bhāvanā and metta Bhāvanā. As explained in the previous post, I first did a crude version of the Bojjhañga Bhāvanā for a few years without even realizing that it was effectively a Bojjhañga Bhāvanā.

- Now I practice Bojjhañga Bhāvanā/Ariya Metta Bhāvanā in sitting meditation and ānāpānasati (and satipaṭthāna) during other times, i.e., suppressing any thoughts/speech/actions that should be discarded and cultivating the opposite. Nowadays, It has become a habit and the moment something not appropriate comes to the mind, I become aware of it. As I keep saying, cultivating good habits (gati) is the key to progress.

## $\overline{A n} \bar{a} p \bar{a} n a s a t i \operatorname{Bh} \bar{a} v a n a \bar{a}$ Comes First

2. Ānāpānasati (and Satipatthāna) helps one to get rid of bad habits/cultivate good habits, and thus change one's gati and āsavā; see, " $\underline{\text { g. Key to Ānāpānasati - How to Change Habits and Character (Gati)," and "Is }}$ Ānāpānasati Breath Meditation?."

- Bojjhañga Bhāvanā helps the mind to get to samādhi while also cultivating the Bojjhañga dhamma. Satta Bojjhañga (Seven Factors of Enlightenment) are listed in the " 37 Factors of Enlightenment"; a brief description is given below.
- The other part of my sitting meditation is Ariya Metta Bhāvanā; see, " 5 . Ariya Metta Bhāvanā (Loving Kindness Meditation)." This routine works well for me.
- Of course, there are many paths to Nibbāna (and to the Sotāpanna stage), and this is the one I took (almost inadvertently). Still, it is critical to realize that attaining the Sotāpanna stage ONLY REQUIRES removing wrong world views or diṭthi, i.e., getting rid of ditthāsava. But this may not be an easy step, because one needs to realize the anicca nature of this world.

## What Are Bojjhaniga?

3. The word Bojjhañga comes from "Bodhi" + "añga.") Of course, "Bodhi" means "bhava uddha" or "Enlightenment" and "añga" means "part."

- Thus, the seven factors in the Satta Bojjhañga are seven factors (satta means seven) conducive to attaining Nibbāna.

4. The key here is that during the Bojjhañga Bhāvanā, one only does "āna" or "taking in good things"; see, "7. What is Ānāpāna?." However, "pāna" or "removing the bad" happens automatically via wisdom gained, i.e., via enhanced vision or sammā ditthi. One's mind is automatically focused on thinking about a Dhamma concept, and once one gets some traction, the mind will get "latched on to it".

- In the early days, when I started contemplating a Dhamma concept I automatically got to samādhi (not $j h a \overline{n a}$ ), i.e., the mind became concentrated on that and the body and the mind both became lighter. I also experimented with breath meditation) at that time.
- This habit of contemplating on dhamma concepts naturally got established as cultivating dhamma vicaya in Satta Bojjhañga Bhāvanā once I met my teacher Thero.

## The necessity to Comprehend Tilakkhana

5. I was able to make real progress only after learning the true meanings of anicca, dukkha, anatta; see, "10. Attaining the Sotāpanna Stage via Removing Ditthāsava."

- Waharaka Thero has explained how to systematically cultivate the seven Bojjhañga dhamma. That involves first establishing sati (moral mindfulness) based on those correct interpretations of anicca, dukkha, anatta. See, "Anicca, Dukkha, Anatta," and the follow-up posts.
- Of course, one must remove the ten types of micchā diṭthi before being able to comprehend Tilakkhaṇa. See, "Micchā Ditthi, Gandhabba, and Sotāpanna Stage."

## The Seven Bojjhañga

6. The seven Bojjhañga Dhamma are sati (mindfulness), dhamma vicaya (investigation of dhamma concepts; pronounced "dhamma vichaya"), viriya (effort), pīti (joy), passaddhi (tranquility), samādhi (onepointedness), and upekkhā (equanimity). I will have a post on this later, but I have discussed most of these terms in other posts.

- It is important to again clarify what sati is. Many people think sati is "concentration" or just "paying attention". It is much more than that. It is "paying attention" WITH a frame of mind based on some understanding of anicca, dukkha, anatta: One has contemplated on the "big picture" of the Buddha with 31 realms and a rebirth process that has led to much suffering in the long run.
- Even though one may be enjoying life right now, one knows that it will be of negligible duration compared to the sainsāric (or samisäric) time scale. This is the theme of this website, and there are many posts that one can read.

## Sati Comes First

7. During the whole time of the Bojjhañga Bhāvanā, sati must be there; that frame of mind must be there. Dhamma vicaya is a critical evaluation of a given dhamma concept. One can choose a topic or two for a given session and then contemplate on it. One could do this not only in a formal way, but also just while reading a web post or a book on the subject. Each individual is different, so one needs to figure out which is more suitable.

- One can compare the concept with one's own life experience, and also others' that one can see. For example, when contemplating on anicca, there are several video clips on various posts giving visuals on the inability of anyone to maintain anything, including one's own body, to one's satisfaction in the long run. Also, one can contemplate on the rebirth process and see whether it makes sense, one can contemplate on different applications of Paticca samuppāda, etc.
- When one comprehends a given concept, that leads to the cultivation of the pitti (pronounced "peethi" or "preethi" in Sinhala) sabbojjhañga. This is part of nirāmisa sukha that I have talked about; one starts feeling happiness or a "lightness" making the mind serene. I am sure at least some of you have experienced this while reading posts. This gives one confidence that one is on the right path, and thus one will be motivated to make more effort, i.e., it cultivates the viriya sabbojjhañga.

## First Phase - Learning and Contemplation

8. Thus dhamma vicaya, piti, and viriya sabbojjhañga are cultivated together (of course sati must be there too). At some point though, the mind and especially the body (head) may get tired. If one is making a lot of progress, one may start to experience some pressures in the head or body; not headaches, but just pressure. Some feel like "ants crawling in the head"; the brain and the body (including the nervous system) are adjusting and there is nothing bad about this.

- When this happens one is making progress; the body feeling the effective meditation. Not only our minds but our bodies have been contaminated too, and the nervous systems have been distorted with respect to that in the manomaya kāya. Some of the "pressures" that one feels are due to the "twisting back" of the nervous system to the proper place. These effects may be minimal for some people; this is what I experienced.
- And this burning of defilements leads to the generation of contaminants that need to be expelled and cleansed, via proper breathing (this is not "ānāpāna"). We should not focus on the breath like in the mundane "breath meditation". We are just getting rid of certain "utuja ruppa" that had been in the body due to defilements of greed, hate, and ignorance.
- At this point one should stop the contemplation process and start breathing in and out to cleanse the body; sometimes the body itself automatically gets rid of those things via a long out-breath. This will lead to passaddhi (tranquility) of both the body and the mind, and one gets to samādhi gradually. One needs to think about the lightness of the body and the mind (passaddhi) and the nirāmisa sukha (from samādhi) that results. One also should think about upekkhā (equanimity) too.
- When the body and the mind calm down enough and when one feels relaxed, one should go back to cultivating the previous three sabbojjhañga, i.e., start on the contemplation process of dhamma vicaya.

## Second Phase - Relaxation

9. Thus one should go back and forth between the two routines with three sabbojjhañga each. The sati sabbojjhañga must be there all the time. This is called the two-step cultivation of Bojjhañga dhamma.

- The Buddha compared this process to the washing of dirty cloth by hand. One needs to apply soap and wring the cloth to release the contaminants. But then one needs to soak it in clean water and remove the dirt that came out. After that, if the cloth is still dirty, one applies soap again, and then again wash it. This process needs to be repeated until all the dirt is gone and the cloth becomes clean. And one needs to do it with mindfulness: if there is a stubborn stain left in one place, one may need to use a different chemical to get rid of that spot (i.e., use the appropriate Bhāvanā: asubha Bhāvanā to get rid of sense cravings, metta Bhāvanā to get rid of hateful thoughts, dhamma concepts to get rid of micchā dittthi, etc ) and wash in clean water again. Thus one needs to be mindful (sati) during the whole process.
- In the same way, one goes back and forth between the two routines with sati. Time takes to get to magga phala depends on the individual. Ariya jhānās can be attained only after getting to the Anāgāmi stage; see, "

## Continuing With $\bar{A} n \bar{a} p \bar{a} n a s a t i ~ B h a ̄ v a n a ̄ ~$

10. The Bojjhañga Bhāvanā is formal meditation. As we have seen, one needs to sit down comfortably in a quiet place and contemplate.

- However, Bojjhañga Bhāvanā cannot be done in isolation. One needs to do the Ānāpānasati $B h \bar{a} v a n a \overline{a t}$ all times to get rid of bad habits and to cultivate good habits, and to live a moral life.
- Once one gains some traction and sees some benefits, one will become motivated.

## Alternating Between the Two Phases

11. Initially one should focus on anicca, dukkha, or anatta as the dhamma vicaya subject. Then once some understanding is gained, one's mind attains certain overall cleanliness. After that, like using different kinds of chemicals to get rid of coffee stains or a tar stain, one needs to choose different types of topics (or even meditation techniques) to broaden the understanding/to remove a certain obstacle. Buddha Dhamma is all about cleansing the mind via wisdom, via understanding the true nature of this world.

- Also, it really helps to do the metta Bhāvanā as a part of daily routine. The Buddha stated that If done properly (i.e., with understanding of anicca, dukkha, anatta), the metta Bhāvanā can lead to the Anāgāmi stage; see, " 5 . Ariya Metta Bhāvanā (Loving Kindness Meditation)."
- If one has too many cravings, one could use the "asubha anussati"; if one tends to procrastinate, one could cultivate the "maranānussati". We will talk about these in the future.
- But first, it is important to focus on anicca, dukkha, anatta. At the same time, it may be a good idea to get some idea of the "big picture", i.e., the rebirth process, the 31 realms, etc and then some idea about kamma, sañkhāra, Paṭicca samuppāda, etc. All these are pieces of a puzzle; even though it may look daunting at the beginning when the big pieces are in place, one starts to get a better idea as for where small pieces may fit in. Anicca, dukkha, anatta are the biggest pieces.
- Thus contemplating anicca, dukkha, anatta is a key topic for dhamma vicaya. I still do it every day, at least for a short time. It is said that one really understands anicca nature of this world only at the Arahant stage.

## Attainment of the Phala Moment

11. The Sotāpanna stage (magga/phala) is attained in two consecutive citta. However, it is not noticeable at that time. One realizes that with time, mainly by realizing that one's outlook on life has changed. In particular, the tendency to socialize is likely to be reduced, but there may be exceptions; one realizes how important it is to spend the remaining little time in this life on making spiritual progress and to enhance the "cooling down".

- In trying to attain the first Ariya jhāna, one could start with the Satta Bojjhañga Bhāvanā with the frame of mind of the unfruitfulmess of anything in this world in the long run (anicca, dukkha, anatta); then all mundane thought objects (based on greed and hate) are suspended from the mind. Then one can think about the peacefulness of Nibbāna (the partial effect one experiences upon attaining the Sotāpanna stage), i.e., the change in one's state of mind.
- I use the phrase, "etaì santaim etaì pan̄ītaì yadidaì sabbasañkhārasamatho sabbūpadhipaṭinissaggo taṇhākkhayo virāgo nirodho nibbānan'ti. (WebLink: suttacentral: Mahāmālukya Sutta (MN 64). I emphasize that I have not yet attained the first Ariya jhāna yet, as of August 5, 2017. It is not possible to attain the first Ariya jhāna until one completely removes kāma rāga, as I have realized recently; see, "Dasa Samyojana - Bonds in Rebirth Process." Whatever jhāna that I had must be anāriya jhāna.
- Here is a recording of the Pāli verse by the Venerable Thero (you need to set volume control at your computer):

## WebLink: Listen to verse on Ethan santhang ethan panithang

- One could say in English, "It is peaceful, it is serene, the expelling of all sañkhāra, breaking of bonds, removing greed and hate; Nibbāna", OR "This is peaceful, this is excellent, that is achieved by calming all sainkhāra, breaking all bonds leading to rebirth, ceasing of all attachments, stopping of the samisāric journey, cessation of all causes, which is Nibbāna".
- What matters in not the actual words, but the understanding one has in one's mind. It is best to recite the Pāli verse and recall the meaning while chanting.

## Attainment of Jhāna Is a Possibility

12. It is important to realize that one could attain anāriya jhāna while working towards the Sotāpanna stage (or even higher stages of Nibbāna) by contemplating on the true version of anicca, dukkha, anatta.

- Jhāna are mental states corresponding to rūpāvacara brahma realms, which are realms in this world. They can be attained by either SUPPRESSING or REMOVING kāma rāga, which correspond to anāriya and Ariya jhāna. Either way, one will get to the SAME jhānic state.
- Since even to get to the first Ariya jhāna by REMOVING kāma rāga, one would have to be an Anāgāmi to attain the first Ariya jhāna. That is easy to verify for oneself, since one would lose the craving for any sense pleasures, including sex.
- These and other aspects of Ariya and anāriya jhāna are discussed in the section: "Samādhi, Jhāna (Dhyāna), Magga Phala."
- It is also important to realize that even an Arahant will not lose the sense of taste; one increasingly will lose CRAVINGS for them; see, "Kāma Guna, Kāma, Kāma Rāga, Kāmacchanda."

13. November 11, 2016: I get many questions on this topic, i.e., how to verify one is making progress towards the Sotāpanna stage. The new section, "Living Dhamma," provides a systematic way to achieve that goal, in addition to providing guidelines on how to check one's progress.

- April 24, 2020: I recently finished a long discussion at a deeper level in the new "Origin of Life" section. This is a bit more advanced section.
- These are just different ways of trying to understand the Buddha Dhamma. It is a vast subject.

### 12.15 12. Key Factors to be Considered when "Meditating" for the Sotapanna Stage

## November 13, 2015; revised August 28, 2022

1. First, one needs to understand what is meant by the Sotāpanna stage of Nibbāna. Many people start meditating without an idea of the goal: It is fine to do breath meditation if one only needs to calm down. Others are doing things needed to attain the Arahant stage, which will not work either because one needs to understand the concept of anicca first, i.e., learning the key concepts comes first (dassanena pahātabba).

- If one's goal is to attain the Sotāpanna stage, then one should first read the posts in the "Sotāpanna Stage of Nibbāna" section to get an idea of what is meant by a Sotāpanna and what is involved in getting there.
- There are many misconceptions about the Sotāpanna stage, and those posts could clarify them. I spent a lot of time doing unnecessary things, so I just wanted to make it easier for those who are just starting or doing the wrong things to get there. Of course, one should decide whether what I say is consistent with Buddha Dhamma.

2. I must also point out that many have been "brainwashed" to think that the Sotāpanna stage is impossible to achieve now. It is disheartening to see even some "mahā Theros" in Sri Lanka have given up striving for even the Sotāpanna stage (presumably because they had used the wrong concepts for many years and could not make any progress). But the Buddha clearly stated that his Buddha Sāsana will be there for 5000 years, and we are only halfway through. There will be numerous Arahants also in the near future.

- Many have attained the Sotāpanna stage and beyond within the past few years, and that number is growing. Pure Buddha Dhamma that had been hidden is out and is beginning to spread. Many who have reaped the benefits are trying their best to get the message out. Most of those efforts are in Sri Lanka or the Sinhala language at this early stage.
- Even though it may not be possible for some (those with dvihetuka births) to attain the Sotāpanna stage in this lifetime, an all-out effort will help at least in their future lives. Those who can make it (with tihetuka births) simply have done more in past lives. By the way, if you come across any unknown Pāli words, just enter that word in the Search box, and there will be relevant posts listed.
- In any case, any efforts will have tangible outcomes in this life itself.
- The Buddha clearly stated that there are no language, race, cultural, caste barriers in attaining magga phala, or the four stages of Nibbāna. The critical thing is that one needs to follow the original, pure Dhamma of the Buddha and comprehend his message.
- The key message of the Buddha is that nothing in this material world (31 realms) can be maintained to our satisfaction in the long run (anicca nature.) Thus through uncountable rebirths, we mainly encounter suffering. Some of us may not be experiencing suffering in this life right now, but that does not mean it will be the same in future lives (or even at old age in this life).

3. Secondly, having a road map is NECESSARY to reach an unknown destination. Starting to meditate without an idea of what to meditate on, like just getting in the car and driving without a map showing where the destination is.

- Again, the posts in the "Sotāpanna Stage of Nibbāna" section will be useful.
- The "map" to reveal Nibbāna is the comprehension of the key concepts like anicca. When one reaches the Sotāpanna stage, it is like finding the correct map. Then only one can start driving (i.e., kammatṭhāna or "meditation recitals") to reach the final destination. Reciting things without understanding is fruitless.
- Please contemplate this aspect; I cannot emphasize it enough. Finding the map is the hardest and most important part.
- I have started a new section where a step-by-step process is described to follow; see "Living Dhamma." It can also help one figure out where one is on the Path and clarify many fundamental issues.

4. Third point - related to the second point - is that we need to examine what "bh $\bar{a} v a n \vec{a} "$ (meditation) means when striving for the Sotāpanna stage. It is NOT a formal meditation technique (reciting a given kammat!thāna) that is mainly needed here.

- However, the Buddha said that even listening to discourse is bhāvanā. One could attain the Sotāpanna stage just by listening to a discourse. When listening attentively, one's mind gets focused on it, comes to samādhi, and can get to magga phala via upacāra samādhi.
- What is needed to get to the Sotāpanna stage is the contemplation of the key Dhamma concepts, in particular anicca, dukkha, and anatta, but also to try to get an understanding of the Buddha's world view, with 31 realms of existence, beginningless rebirth process, infinite number of planetary systems (cakkavāla), Pațicca Samuppāda, etc. This is how to "find the correct map" mentioned in \#3 above.
- As explained in those posts in the "Sotāpanna Stage of Nibbāna" section, this meditation (bhāvanā) involves mainly the contemplation (citta) and examination of dhamma concepts (dhamma vicaya and $v \bar{m} m a \dot{m} s \bar{a}$ ). The four bases of mental power (chanda, citta, viriya, vīmaimsā) are very helpful to be cultivated; see "The Four Bases of Mental Power (Cattāro Iddhipāda)."
- In the above, "chanda" is the liking to attain Nibbāna cultivated by learning and forming a desire to learn more Dhamma. I can assure you there is no other pleasure like the "pleasure of knowing the truth, the pleasure of discovering true Dhamma."
- Formal meditation techniques are needed mainly after the Sotāpanna stage, as described in the subsection Key Points from the Sabbāsava Sutta under the post, "The Sotāpanna Stage."

5. Fourth is to have a clear idea of the priority items to get done regarding sila (moral behavior). In one of the early meditation posts, I pointed out that one needs to sort out the "big problems" to take care of before tackling smaller problems. If a vessel leaks due to multiple holes, one needs to seal the big leaks first. Spending precious time trying to plug smaller holes when the water is pouring out through the big holes is a waste of time.

- In the following, I will address the fact that many people have misconceptions about the relative weights of kamma. Please bear with me and read carefully, because some of these ideas go against established and common wrong views. I have discussed some in "How to Evaluate Weights of Different Kamma."

6. For example, many people are afraid of even accidentally killing a mosquito but do not have any problem making plans to hurt another human or spread rumors about another.

- Then others think taking an occasional alcoholic beverage is immoral but spend hours thinking about other sense pleasures. By the way, it is not the sensory pleasures that is the problem, it is constantly thinking about them; this is a subtle but important point; see, "Assāda, Ādīnava, Nissarana Introduction."
- Of course, killing any living being should be avoided, and it is best to avoid drinking alcohol (especially if one tends to get drunk; the problem with drinking is that it makes the mind more exposed to the pañca nīvarana; one's ability to think is diminished when drunk).
- My point is that hurting another human will have much more potent kamma vipäka than killing many mosquito or taking an occasional drink.

7. We can get some ideas on these issues by looking at the Vinaya rules for the bhikkhus. These are the rules of conduct for the bhikkhus. There are 227 rules for fully ordained monks (bhikkhus) and 311 for nuns (bhikkhunis).

- These rules are called patimokkha ("pati" is getting bonded and "mokkha" or "moksha" in Sanskrit is "Nibbāna") because they help stay out of trouble and stay on the path to Nibbāna for the bhikkhus. Remember that in the Satipațthāna sutta, "mukha" in "mukha nimitta" also means Nibbāna.

These rules are categorized according to their importance (or the severity of consequences for breaking them). The top four belong to the class called "pārājika," meaning a bhikkhu who breaks any one of the four has been "defeated" and thus needs to leave the monastic order. [päräjika : [adj.] one who has committed the gravest transgression of the rules for bhikkhus.]

1. Sexual intercourse: any voluntary sexual interaction between a bhikkhu and a living being, except for mouth-to-mouth kissing, which falls under the Sañghādisesa (next level below the pārājika level). [sañghädisesa : [unexplained as regards etym. ; Geiger, P. Gr. § 383, after S. Lévi, = sañgh'âtisesa; but atisesa does not occur in Pāli] requiring suspension from the Order; a class of offences which can be decided only by a formal sañgha-kamma.]
2. Stealing: the robbery of anything worth more than $1 / 24$ troy ounce of gold (as determined by local law).
3. Intentionally bringing about the death of a human being, even if it is still an embryo - whether by killing the person, arranging for an assassin to kill the person, inciting the person to die, or describing the advantages of death.
4. Deliberately lying to another person that one has attained a superior state, such as claiming to be an arahant when one knows one is not, or claiming to have attained one of the jhān $\bar{a}$ when one knows one has not.
5. The next level is the Sañghādisesa. The thirteen Sanghādisesa rules require an initial and subsequent meeting of the sangha (communal meetings). If the monk breaks any rule here, he has to undergo a period of probation or discipline, after which, if he shows himself to be repentant, he may be reinstated by a sanggha of not less than twenty monks.

- Like the pārājikas, the Sañghādisesa can only come about through the monk's intention and cannot be accidentally invoked. However, if the bhikkhu does not go through this to absolve him/herself, then the consequences will be even harsher. These thirteen rules are not relevant to our discussion here, but you can read them at: WebLink: WIKI: Patimokkha
- Two more layers, aniyata, and Nissaggiya pacittiya, pertain to bhikkhus and are again irrelevant to our discussion. They are even less potent and can be overcome by confessing to another bhikkhu and deciding not to repeat.

9. The last set of rules is the "weakest," i.e., with the least consequences compared to all others. They are the 92 "pacittiya" rules, which are minor violations and can be overcome by confessing to another bhikkhu and deciding not to repeat them. The ones relevant to our discussion are:

- 10. Should any bhikkhu dig soil or have it dug, it must be confessed (to avoid killing small animals/insects).
- 51. The drinking of alcohol or fermented liquor is to be confessed.

10. Many people think "life is a life," but that is not so. Here digging soil is not allowed for bhikkhus because many lifeforms (insects, worms) are killed in that process. But this act is listed under the last section of the Vinaya rules (with the least consequences).

- We know that killing an Arahant or one's parents is an "ānantariya kamma," a very potent kamma that will send one to the apa $\bar{a} y \bar{a}$ in the next birth.
- And as we saw in \#7 above, killing or giving the advice to kill even a fetus is a kamma that makes a bhikkhu lose his/her ordination. Killing small insects (inadvertently) by digging soil is a much less potent kamma, as listed in \#9 above.
- Human life is precious because only a human can strive and attain magga phala, AND it is very difficult to get a "human bhava." But even among humans, there is great variation: an Arahant or one's parents are ranked way higher. The importance of parents is related to the fact that it is extremely hard for a gandhabba to find a suitable womb. I will discuss this in detail later.
- We also see that drinking alcohol is a minor offense, even for a bhikkhu, as listed in \#9 above. Bhikkhus do not drink alcohol anyway, but this rule came about because of a particular incident at the time of Buddha.

11. It can also be deduced that stealing is a misdeed with harsh consequences since it is included as a "pārājika" for the bhikkhus.

- We must realize that stealing has many subtle forms, in addition to "taking something that belongs to another without permission." In society, not doing one's part is also a form of stealing. One is benefiting from others' work without contributing to it.
- We also become indebted automatically to our parents, teachers, friends, etc. Even though they may not expect a "payback," we must "respond in kind" whenever an opportunity arises.
- More can be found in the post, "Kamma, Debt, and Meditation."

12. Finally, I would like to point out that it is difficult to quantify the weight of a given kamma generically. For example, "killing an animal" is a very generic statement, and such an act has a broad range of kamma vipāka.

- When you slap a mosquito that bit you while reading a book almost without realizing it, it has very little kammic power. On the other hand, when one aims a gun at a deer and fires to kill it, that will have much more kammic power.
- One way to easily figure out the difference between those two acts is to think in terms of "javana power" of a citta. This goes together with the "intention" and "how bad one wants to get it done." In the above example, you can almost visualize the difference in the mindsets of killing a mosquito versus deer. For more details, see "Javana of a Citta - The Root of Mental Power" and "What is Intention in Kamma?"
- Hitting a person to cause minor pain is done with less javana in the citta. But hitting a person with an iron rod intending to kill has much more javana power, as you can imagine.

13. These are things one needs to contemplate to truly understand the Buddha Dhamma; that is the real vipassana or insight meditation. Getting to the Sotāpanna stage requires learning about such basic things on one's own by thinking about real life.

- Buddha Dhamma is not a "set of rules and rituals" to blindly follow. That is exactly why many people have not been able to make any progress and have even given up.
- When one starts thinking critically and attentively, one develops the four types of (cattāro) iddhipāda discussed in \#4 above. Once one gets traction by understanding a few basic things, Dhamma will be the guiding force to generate chanda (desire) to investigate more and to find more. It is boring and fruitless to blindly follow precepts and rituals that will not get one anywhere.

14. November 11, 2016: I get many questions on this topic, i.e., how to verify one is progressing towards the Sotāpanna stage. The new section, "Living Dhamma," provides a systematic way to achieve that goal and guidelines for checking one's progress.

## 13. Kammattana (Recitations) for the Sotāpanna Stage

## December 5, 2015

1. There are two ways to look at the effectiveness of recitations. First, one could gain some benefit when LISTENING TO recitations (such as recorded chanting of sutta), even without understanding what is said in the sutt $\bar{a}$. However, that benefit will increase if one understood the content.

- The effectiveness of recitations in MEDITATION SESSIONS is somewhat similar. There are many people who have been practicing various types of recitations (kammattana) for 10, 20, 30, or more years without significant results (i.e., magga phala), even though they are likely to feel some calming effect.
- Reciting phrases (in any language) can be quite beneficial if the meanings of those phrases are understood in either of the above cases. Recitation in Pāli can be a bit more effective, since Pāli words tend to condense a lot of meaning. If one starts off with at least some understanding, recitation on a regular basis will help understand the concept at a deeper level.
- For example, the concept of anicca is understood gradually - with a glimpse of it grasped on the way to the Sotāpanna stage, getting a firm foothold at the Sotāpanna stage, strengthening at the Sakad $\bar{a} g \bar{a} m \bar{\imath}$ and $A n a \bar{g} g \bar{m} \bar{\imath}$ stages - and is fully comprehended at the Arahant stage.
- A systematic procedure to get to sammā samādhi to be able to comprehend anicca, dukkha, anatta, is described in the "Living Dhamma" section. It can also help one figure out where one in the Path, and to clarify many fundamental issues. It is not possible to comprehend Tilakkhaṇa until one's mind is purified to some extent. Then one's mind can easily grasp concepts rather than just memorizing them.

2. A mundane example is learning the multiplication table. Some get it easier than others. But with practice anyone can master it. All one needs is to spend some time reciting and memorizing the table, even though only memorization may not be helpful in the final objective, i.e., solving a bit more complex problems.

- We know that this "learning process" can be speeded up by using what one learned in solving some problems. Rather than just memorizing the multiplication table, if one applied it to solve some multiplication problems, the learning time can be drastically reduced and also it is easier to keep in the memory for longer time.
- This is what the Buddha meant by "bhavanaya bahuleekathaya......" Bhāvanā (or meditation) is what one uses frequently: one needs to be thinking about it and examine it in many different situations as much as possible. Then the concept starts to "sink in". Formal recitations can be part of this process. [bahulīkata: [pp. of bahulikaroti] took up seriously; increased. (adj.), practiced frequently.]
- Reciting a phrase repeatedly while contemplating on it (kammattana) is an excellent way to retain and comprehend a given concept, once the concept is at least vaguely understood.

3. Another important benefit of a good recitation session is in subsiding the five hindrances (pañcanīvarana) that makes the mind agitated and not receptive; see, "Key to Calming the Mind - The Five Hindrances." When one is focusing on Dhamma - even by just reciting verses - those greedy, hateful, and irrelevant thoughts are at least temporarily subsided and the mind will not be lethargic or agitated.

- In this respect, just listening to Pāli suttā could be beneficial too. In many Buddhist countries, many people start off the day with chanting of suttā (pirith) in the background. When I was little, I used to wake up to the chanting of pirith on the radio (my mother used to do turn it on the first thing in the morning).
- If the sutt $\bar{a}$ are recited the right way, just listening to them can make the mind calm. I have posted audio files of several sutt $\bar{a}$ by my teacher Thero including a 75 minute session in the post: "Sutta Chanting (with Pāli Text)."

4. Yet another critical benefit is to make the conditions conducive to attract previous "good kamma," and make the mind "tune into" receiving such merits. Each of us has done innumerable good and bad kamma in our previous lives, and they are waiting for "right conditions" to bring their results (vipāka).

- For example, there may be a good TV (or radio) program being broadcast. But if the television (or the radio) is not "tuned in" to the right station, one would not be able to watch (or listen to) the program.
- "Making the conditions right" can bring about both good and bad kamma vipāka too. If one associates with bad friends, that is making conditions for bad kamma vipāka to bring fruits. On the other hand associating with good friends and listening/reading Dhamma can make one's life better. This is discussed in detail in the posts, "Anantara and Samanantara Paccaya" and "Transfer of Merits (Pattidana) - How Does it Happen?."
- I have mentioned in many posts that the effectiveness of absorbing material at this website can be much improved by reading them at a quiet time. In the same way, a meditation session can be made more effective by calming the mind by doing some well-planned recitations. That itself can be a meditation session. What I do is, in the middle of recitations contemplate about relevant Dhamma concepts or my own daily experiences, i.e., do insight meditation in the middle of the recitation itself.

5. One should tailor the recitation session to match one's own personality and needs. For example, if one has a temper, one should spend more time doing metta bhāvanā; if one has excessive greed (for sense pleasures) one could spend more time doing asubha bhāvana (unfruitful nature of things), which is basically to contemplate on the fact that ANY object that is providing sense pleasure is going to decay and destruct at the end.
6. I have thought a lot about how to present a "kammattana program". But it is difficult to decide what kammattana to discuss because each individual is different, and has own preferences and needs. I may still do that in pieces in the future, and I have discussed basic features of some in other posts.

- Here, I think it is better to just provide an audio of recitation session that I go through each day. This is just to give an example of how it can be done, and I know that it helps me in calming my mind and making it more receptive and alert.
- This is somewhat modified compared to what I actually do, because I do some parts in Sinhala which most of you will not understand, and I have also tailored this for those who are seeking the Sotāpanna stage of Nibbāna.

7. It is best to do these recitations in a quiet room, sitting comfortably - but not too comfortably - so that one would not fall asleep initially. Once one gets used to it, one will never fall asleep. Also, it may be better to actually say the words initially to avoid the mind to wander around; one could just recite in the mind later on.
October 13, 2016: I have removed the audio file temporarily until I make a better one. After I started the "Living Dhamma" section, I realized a way to present material in a better way.

But I leave the pdf of the text file:
WebLink: PDF File: Kammattana Example

## Notes:

1. I am assuming that anyone who is interested in these kammattana (i.e., those who have the desire to strive for the Sotāpanna stage) have already read the relevant key posts at Sotāpanna Stage of Nibbāna. Now, let us discuss different sections of the WebLink: PDF File: Kammattana Example.

- Also, the Search button on the top right is very useful for finding relevant posts for any given keyword or a phrase that is not clear.

2. In reciting precepts, instead of the "Pānātipātā Veramani Sikkāhāpadam Samādiyāmi", which says "I promise not take another life of a living being", it is more truthful to say, "I promise not to take another life with any liking for it" (Pānātipātā pativirato hoti), unless one is dedicating a day to strictly observe the precepts.

- For example, if one needs to apply a medication to a wound, that will kill many microscopic living beings; yet, one has to do that in order to heal the wound; thus in day-to-day life, we may have to take actions like that we would not like to; this is what is meant by "pativirato hoti", i.e., one would not do it unless necessary. But if one is observing precepts, one could avoid applying the medication on that day.
- Same for the other four precepts.

3. Note the break in between "itipi so bhagava...". Many people recite it as "itipiso bhagava...", which has a very different and inappropriate meaning.

- I really need to discuss the meanings of these three phrases, and hope to get it done in the "Buddhist Chanting" section in the future.

4. The phrase, "Natti me sanaran annan Buddho me saranan varan" means, "I have no other refuge than that of the Buddha".

- "etena sacca vajjena sotti me hotu sabbada" means something to the effect of "may the truth in my refuge in Buddha, Dhamma, Sangha lead to my well being and success in my efforts".
- "etena sacca vajjena sotti te hotu sabbada" means something to the effect of "may this truth lead to the well being and success in others' efforts".

5. The next phrase (in Sinhala, I am unable to come up with a suitable English or Pāli phrase) means, "I will be truthful to myself, see things as they are, be pure in mind, and endeavor to generate only pure thoughts (prabhasvara or pabasara citta). I plan to write separate posts discussing some of these kammattana. Even a single phrase is so condensed that one could write many posts on each.

- For example, "avanka" comes from "vanka" or "bent" or "not straightforward". If someone is not truthful, then that is "vanka"; "avanka" is the opposite of "vanka."

6. The next three phrases are also very important. I recite it every day. The phrase, "Kayena vaca cittena pamadena maya katan, accayam khama me Bhante bhuripanna Tathagata", means: "If I have done any wrong inadvertently (or due to ignorance) by thoughts, speech, or mind to the Buddha, may I be forgiven for that".

- And then the same phrase directed to Dhamma and Sañgha. For example, I always worry about inadvertently explaining some concept in a way which may not be quite right. Also, when dealing with people, we don't know whether we inadvertently hurt their feelings or do something that they see as inappropriate (and it is possible that such a person may be a Noble person).

7. The next set of phrases are for cultivating anicca sañ̃̄̄̄ and related other factors. The phrase, "Aniccanupassi viharati, nicca sañn̄̄ pajahati" means "I will live my life cultivating the anicca saññā and reject that things in this world can be kept to my satisfaction (i.e., reject the nicca sañ̃ $\bar{a}$ )". Similar meaning can be deduced for the following three phrases.

- In the phrase, "Nibbidanupassi viharati, abhinandana pajahati", nibbida means "stay away from valuing sense pleasures" and viharati means "live accordingly". Abhinandana means "valuing sense pleasures", and pajahati means "avoid".
- "Nirodhanupassi viharati, samudayan pajahati", means stop the wheeling process and reject generating more "san" ("san" + "udaya" combines to give "samudaya"); see, "What is 'San'?."
- "Patinissagganupassi viharati, sambhavan pajahati" means "I will endeavor to break all bonds to this world, and stop making new bhava."
- The last three recitals in this section with "Anissitoca viharati, na ca kinci loke upadiyati" confirm one's conviction that "it is unfruitful to stay in this world of 31 realms, there is nothing in this world that worth craving for (upādāna)".

8. The set of three phrases that come next also help cultivate anicca sañ $\tilde{n} \bar{a}$, and one could review or do insight meditation on anicca, dukkha, anatta right after that.
9. The next section is on metta bhāvanā. I normally recite this in Sinhala, but these English phrases give almost the same meaning. This is also discussed in the post, "5. Ariya Metta Bhāvanā (Loving Kindness Meditation)."

- The relevance to different types of akusala citta is discussed in the post, "Akusala Citta - How a Sotāpanna Avoids Apayagami Citta." The 12 types of akusala citta are discussed in, "Akusala Citta and Akusala Vipāka Citta."

10. The next phrase is the standard phrase to use when cultivating jhāna: see, "11. Magga Phala and Ariya Jhānā via Cultivation of Saptha Bojjanga." Even though it is supposed to be fully effective only after attaining the Sotāpanna stage, it can be used by anyone who has been exposed to the true meanings of anicca, dukkha, anatta, and is pursuing the Sotāpanna stage.

- One could get into at least some kind of samādhi by this time, and do some insight meditation here. Actually, at any of the above kammattana sections, one could do insight meditation related to that section. I normally do this and my sessions sometimes last for much longer times.

11. In the subsequent sections, we start giving merits to all living beings. The phrase, "Idam me nati nan hotu Sukhita hontu natayo", means "May all my relatives (which does include all living beings in the through samisāra) attain peace and happiness due to these merits".

- The next phrase, "ldam vo nati nan hotu Sukhita hontu natayo", can have multiple meanings. If one is doing a group session, it could mean "relatives of others in the group". If one is by oneself, it could mean "distant relatives", who may even be in worlds far away from the Earth.
- Thus when one recites both phrases, it does include all living beings.

12. The next section gives merits to devas (which include brahmā as well), bhūta, and preta, and then to all beings (sabbe satta). It is another way of giving merits as in \#11.

- Then the next phrase in English is straightforward. I specifically included this so that anyone can use this with full understanding. If one had (even inadvertently) done a bad deed to someone that day, one could be thinking about that person and ask for forgiveness. This is a very effective way to calm the mind and reduce tensions, and I hope to write a post on this. If done sincerely, one should be able to see the effects in real life. You may notice that the tensions with that person automatically reduced.
- What happens is that those strong javana citta that you generate can produce cittaja rūpa that can affect that person even over long distances. It is again related to what we discussed in \#4 of the main section (above the current "Notes" section).

13. Then we end the session with the phrase "Idam me puññan āsavakkhaya vahan hotu, sabba dukkha nirujjati" that is recited three times. It means, "May the merits that I have acquired help remove my $\bar{a} s a v a$ (cravings), and lead to the end of all suffering".

- It is to be noted here that "asavakkhaya vahan hotu" is really, "asavakkhaya aham hotu" or "may (these merits) be hetu for cleansing of my asava." It just rhymes as, "asavakkhaya vahan hotu".

14. Of course the above is an example of what one could do. One could use all the kammattana (and add more), or use only the ones that one likes. I don't use them all in a given session, but do use some of them all the time. I just start the session with the first few and select phrases as I proceed. Sometimes, I get into insight meditation (contemplating relevant ideas, connecting with other concepts, etc) following a given phrase and just do that for the whole session.
15. November 11, 2016: I get many questions on this topic, i.e., how to verify one is making progress towards the Sotāpanna stage. The new section, "Living Dhamma," provides a systematic way to achieve that goal, in addition to providing guidelines on how to check one's progress.

### 12.17 New Approach to Meditation

This section has been moved to, "Living Dhamma." Please check there for the follow-up posts.

### 12.18 Anussati and Anupassanā - Being Mindful and Removing Defilements

April 16, 2018; revised August 10, 2022

## Anussati and Anupassana

1. Anussati and anupassanā are two Pāli words that have related but different meanings. It helps to understand the difference because many people today incorrectly use various types of anussati as kammatthāna (meditation subjects). [anussati : [f.] recollection; memory; mindfulness. anupassana $\bar{a}$ : [f.] 1. consideration; 2. realisation.]

- If one understands $\bar{A} n \bar{a} p \bar{p} n a$ and Satipaṭthāna, they are other ways of saying the same thing. They are all different angles of looking at the goal (Nibbāna) and how to get there, i.e., how to cultivate the Path.
- It is ALWAYS good to remember that Nibbāna is attained via getting rid of greed, hate, and ignorance (lobha, dosa, and moha) from one's mind. The only thing to remember is that without comprehending Tilakkhanna, that process cannot be completed. Everything else is just more details on how to get there.
- "Anu" can have two different meanings. One is "according to" or "via this process." The other is "food" for bad viñ̃̄āna, which are essential "keles" or "kilesa" or "defilements." But here, it is the first meaning that is mainly relevant.
[kilesa :'defilements', are mind-defiling, unwholesome qualities. Vis. M. XXII, 49, 65: There are 10 defilements, thus called because they are themselves defiled, and because they defile the mental factors associated with them. They are: (1) greed (lobha), (2) hate (dosa), (3) delusion (moha), (4) conceit (māna), (5) speculative views (diṭthi), (6) skeptical doubt (vicikicchā ), (7) mental torpor (thīna), (8) restlessness (uddhacca); (9) shamelessness (ahirika ), (10) lack of moral dread (fearlessness) or unconscientiousness (anottappa). For 1-3, s. mūla; 4, s. māna; 5, s. ditṭhi; 6-8, s. nīvaraṇa; 9 and 10, s. ahirika - anottappa.]
[upakkilesa : 'impurities', corruptions, imperfections (a frequent rendering by 'defilements' is better reserved for kilesa, q. v. ). A list of $\mathbf{1 6}$ moral 'impurities of the mind' (cittassa upakkilesa) is mentioned and explained in M. 7 \& 8 (WHEEI. 61/62): 1. covetousness and unrighteous greed (abhijjhā-visamalobha), 2. ill will (byāpāda), 3. anger (kodha), 4. hostility (upanāha), 5. denigration (makkha), 6. domineering (palāsa), 7. envy (issā), 8. stinginess (macchariya), 9. hypocrisy (māyā), 10. fraud (sātheyya), 11. obstinacy (thambha), 12. presumption (sārambha), 13. conceit (māna), 14. arrogance (atimāna), 15. vanity (mada), 16. negligence (pamāda).]
- Now we can see the origins of those two words (pada nirutti).

## Buddhānussati, Mettānussati, Asubhānussati, Maranānussati

2. First, let us discuss anussati, which comes from "anu" + "sati." Of course, sati is a mindset (with the Tilakkhaṇa in the background); therefore, anussati means the mindset focused on attaining Nibbāna.

- There are several types of anussati, but four are lumped together as "caturārakkh $\overrightarrow{\boldsymbol{a}}$ " or "Four Protections" that one should try to keep with oneself all the time, which will help one to stay out of trouble.
- This is expressed in the following verse (I have not found the source in the Tipitaka):
"Buddhānussati metta ca, asubham maranānussati; iti ima caturarākkhā, Bhikkhu bhaveyya silava"
Translated: "Buddhānussati, mettānussati, asubhānussati, maranānussati; these are the Four Protections for a Bhikkhu cultivating sīla (moral behavior)."
- These are four things that one should ALWAYS keep in mind to protect one's mind from getting defiled.

3. We already know that "Buddha" comes from "bhava" + "uddha," or uprooting bhava, i.e, stopping the rebirth process to stop future suffering. So, Buddhānussati means keeping that key message in mind.

- Asubha means "unfruitful" and even "harmful." Getting attached to sense pleasures is harmful in the long run, just like a fish biting on a tasty worm on a hook will be subjected to suffering. So, asubhānussati means always to be mindful of the bad consequences of material things that are appealing at the first sight.
- Mettānussati is to keep in mind always that all living beings are in the same boat, suffering in the long run, and thus to have compassionate thoughts about all of them. Of course, that can be implemented at various levels depending on one's progress (mundane mettā to Ariya mettā).
- Especially when one becomes aware of the true meanings of Tilakkhana, one realizes not only the fruitlessness of seeking happiness in this world, but one becomes AFRAID of possible future suffering. When that realization comes, one will make an accelerated effort to cultivate the Path because death can come at any time.

4. Therefore, these four types of anussati are the four types of "mindfulness" that one should always keep in mind. Not only when meditating but even more important when interacting with society.

- These Four Protections, with practice, will help enormously in maintaining Satipațthāna or Ānāpāna while interacting with others.
- For example, suppose someone says something nasty. Instead of getting mad and retaliating, one should immediately recall that one's goal is "bhava uddha," which requires seeing the asubha nature and cultivating mett $\bar{a}$. That one may not have much time leff to get this done (maranānussati).

5. As is the case in many cases, those Four Protections have mundane meanings too. These could also be helpful. Following are the mundane meanings.

- Buddhānussati is to contemplate the nine supreme qualities of the Buddha. This is, of course, a good thing to do.
- Asubhānussati as contemplating the "foulness for the body." That is a misinterpretation. One could do asubha bhāvana to contemplate the real nature of the body. A given male or female body can be enticing when the body is young, but they will both degrade with time.
- Mettānussati is to keep repeating, "May all beings be happy and healthy." Again, not a bad thing to do.
- Maranānussati as reciting "jīvitain aniyatam, maraṇa niyatam" or "this life is impermanent, death is a certainty." While the statement is true, recitation alone cannot do much to remove defilements and purify the mind.

## Aniccānupassanā, Dukkhānupassanā, Anattānupassanā, Asubhānupassanā

6. Now let us discuss anupassanā . In contrast to anusssati, anupassanā is more relevant to formal meditation.

- "Passa" means to "get rid of," as we mentioned while interpreting "assa passa" in discussing ānāpāna bhāvanā.; see \#3 of "7. What is Ānāpāna?."
- Therefore, anupassanā means getting rid of defilements according to the prefix used in front.
- While there are four types of anupassana $\bar{a}$, three are associated directly with Tilakkhana: aniccānupassanā, dukkhānupassanā, anattānupassanā, and fourth is asubhānupassanā. [See; WebLink: suttacentral: Patisambhidāmagga Paññāvagga 3.9. Vipassanākathā for aniccānupassanā, dukkhānupassanā, anattānupassanā and WebLink: suttacentral: Itivuttaka 85 Asubhānupassīsutta for asubhānupassanā]
- Normal humans take this world to be of nicca, sukha, atta, and subha nature. The key to Nibbāna is to realize the true nature: anicca, dukkha, anatta, and asubha.

7. Thus, aniccānupassanā means getting rid of defilements by contemplating on anicca nature.

- Similarly, dukkhānupassanā and anattānupassanā mean getting rid of defilements by contemplating dukkha and anatta nature.
- We have not discussed asubhānupassanā up to this point. This becomes more important for a Sotāpanna to get to the Sakadāgāmi/Anāgāmi stages by contemplating the bad consequences of sense pleasures that appear so enticing.

8. Therefore, for one trying to get to the Sotāpanna stage, the first three anupassanā are more important. However, asubhānupassanā cannot hurt (and even could be beneficial) because that helps calm the mind.

- We need to remember that the tāpa (or burning or "excited-ness of the mind") comes from $k \bar{a} m a c c h a n d a$ and vyāpāda: greed and hate. Both arise due to excess greed or "blindness due to excess desire for sense pleasures"; see, "The Cooling Down Process (Nibbāna) - How Root Causes are Removed" and "Kāma Guna, Kāma, Kāma Rāga, Kāmacchanda".
- For anyone interested in meditation, such basics need to be understood: "Living Dhamma Fundamentals." I can see from the discussion forum that many people worry too much about "deep concepts" without a proper understanding of fundamentals.

## Understanding Dhamma: A Step-by-Step Process

9. We also need to keep in mind that one cannot just start doing formal meditations on these anupassan $\bar{a}$. It is a step-by-step process. One needs to understand Tilakkhaṇa (anicca, dukkha, anatta): "Anicca, Dukkha, Anatta."

- Even before that, one needs to get rid of the ten types of micchā ditṭhi by cultivating the mundane eightfold path: "Buddha Dhamma - In a Chart."

The reason for that was discussed in the recent post, "Buddha Dhamma for an Inquiring Mind - Part I." If one has either of the following two views, then it is NOT possible to comprehend Tilakkhana:

- The next life is going to be forever, in heaven or hell.
- This life is all one has. When one dies, it is over. No rebirth or hell or heaven.

10. There are many reasons why those two views will block the path to Nibbāna. Following are a few key reasons:

- Neither of the above views can accommodate the laws of kamma: That one's actions WILL have consequences, which are much more complex than just leading to hell or heaven (and then getting stuck there forever).
- It is impossible to have a consistent picture (world view) without getting rid of wrong views like there is no rebirth process or the gandhabba concept is wrong; see, "Micchā Ditthi, Gandhabba, and Sotāpanna Stage."
- If one has the above views, one cannot comprehend the dukkha nature. The fact that most future suffering is in the apāy $\overline{\mathrm{a}}$ s and that one needs to stay away from dasa akusala done with powerful and immoral javana citta that "power-up" such births in the apāyā.

## Conclusions

11. I know that I keep repeating some things. But I can see many people skip essentials because they desire to get there quickly. I admire their enthusiasm but do not want people to have false hopes. On the other hand, "just learning concepts" is not enough either, so one MUST put all this to practice, i.e., stay away from
dasa akusala (and keep in mind that micchā ditṭhi is the worst of them; see the post mentioned in \#10 above).

- The bottom line is, if one can truly see the anicca nature, one will have the anicca sañña and will avoid dasa akusala with a high degree of fear of the apāy $\bar{a}$ : "dukkhaim bhayattena."
- Thus one will automatically have Buddhānussati, the desire to reach Nibbāna.
- Furthermore, it will sink into the mind that those enticing things in the world are, in fact, of asubha nature (asubhānussati). One will also realize that all living beings are in the same boat and thus will have mettānussati.

12. Finally, one will also have maranānussati established in one's mind: that one needs to make haste and cultivate the path before death comes, the timing of which is unknown.

- If one reads the WebLink: dhammatalks.net: Maranasati Sutta (AN 6.19), it is clear that the Buddha advised bhikkhus to be keenly aware that death can come at any time and thus to CULTIVATE THE PATH without delay and that maranānussati was not a specific kammaṭ̣hāna. [kammatth $\boldsymbol{a} \boldsymbol{n} \boldsymbol{a}$ : lit. 'working-ground' (i.e. for meditation), is the term in the Com. for 'subjects of meditation'; s.bhāvanā.]
- Another English translation of the sutta is: "WebLink: suttacentral: Mindfulness of Death."

### 12.19 Myths about Meditation

Early post; revised September 11, 2018; December 17, 2019; March 10, 2021

## Nibbāna Is Not Possible With Rituals

1. Once I attended a meditation retreat. Everyone was sitting down on the floor with crossed legs, but after a while, many people "could not endure the pain" and were stretching their legs out or were fidgeting. It was apparent (to me) that many people could not think about anything else but their pain due to the uncomfortable posture. That went on for two days. Other than those who were long-time meditators and were comfortable with the lotus position, I do not believe the others enjoyed the retreat that much.

- Such nonsensical "rituals" are part of the set of wrong views that one needs to remove before attaining the Sotāpanna stage. This particular practice is a "sīlabbata parāmāsa" or "engaging in rituals."
- Such practices do not make sens. Sitting in the lotus position is not a requirement for meditation. Meditation is contemplation. That can be done in any posture, sitting, standing, walking, or lying down.

## We Need to Know What to Meditate On!

2. It is helpfil to think about the goal of meditation. The ultimate goal is to remove greed, hate, and ignorance from our minds and attain Nibbāna. One needs to understand the fundamental concepts of Buddha Dhamma first.

- But even for those who are just interested in achieving some "cooling down" from everyday stresses, it is the same fundamental idea at work. We need to keep greedy, hateful, and ignorant thoughts from arising in our minds. The more we do that, the more relaxed our minds will become.
- Many people automatically associate "breath meditation" with "Buddhist meditation" and spend years on it, and end up discouraged; see a person account, "WebLink: PDF-file: Meditation-Experience-of-Paññobhāsa-Bhikkhu."
- The correct Ānāpānasati Bhāvanā is NOT breath mediation; see the posts at, "Bhāvanā (Meditation)."
- Purification of the mind is the way to achieve temporary relief to the mind. In the long run, it helps attain even the Arahantship. There is no one else monitoring one's progress. It is one's mind that is keeping tabs on one's progress.
- When one does a "formal meditation," one should sit in a comfortable position. It could be the lotus position for those who have practiced it. One could be in the lotus position for several hours when one gets good at it. It is just sitting in a chair for most people, one that is not too comfortable that one may fall asleep!

## Bad Idea to Remove ALL Thoughts

3. Getting rid of evil thoughts can be and should be done ALL THE TIME. The Buddha said, "bhāvanāya bahuleekathāya." That means "meditate as much as possible, whenever possible." And it is done in all possible postures: sitting, standing, walking, and lying down.

- Ven. Ānanda is the only known person to attain Arahanthood while not in any of those four postures. He was making an all-out effort to become an Arahant before the first Dhamma Sangāyanā (Buddhist Council.) Only Arahants were able to attend. But since Ven. Ānanda was the only one who had memorized the whole of the Sutta Pitaka; he needed to attend the Sangāyan $\bar{a}$. The night before the Sangāyanā, he had been exhausted by the effort. But he was still thinking about a Dhamma concept while getting into the bed. He sat down on the bed and raised his legs to lie down. Before his head touched the pillow, that particular point came clear to him, and the "Arahant phala citta" was realized.
- Another story from the Tipitaka relevant to \#1 above is about a minister of King of Kosala, named Santati. He attained Arahanthood while listening to a single verse by the Buddha: "WebLink: tipitaka.net: Dhammapada Verse 142."

## Removing ALL Thoughts Lead to Births in the Asañ $\tilde{n} \bar{a}$ Realm

4. I have seen many meditation programs that describe Nibbāna as removing perception or sañ̃̄̄̄a from the mind.

- Many people wrongly advise that one needs to remove ALL THOUGHTS from one's mind to attain Nibbāna. One time a Deva expressed the same idea to the Buddha: "Isn't Nibbāna attained via removing all thoughts?". The Buddha replied, "No. Nibbāna is realized by removing greedy, hateful, and ignorant thoughts." That account is in the "WebLink: suttacentral: Manonīvarana Sutta (SN 1.24)."
- Some others say that when a thought comes to the mind (about a loved one, a place, or anything material), to say "that does not exist" and forget it. Just because the Buddha said everything changes rapidly, he did not mean phenomena did not exist. Things do not exist for eternity either, because they are continually changing. That is the same argument that we discussed in "What Reincarnates? - Concept of a Life-stream": the Buddha rejected both "self" and "no-self" Paticca Samuppāda explains all phenomena. They arise due to causes and would not occur if such reasons are absent.
- If one cultivates asaññ̄ $\bar{a}$ meditation (by removing all thought that come to the mind), may be born in the realm of asañña Arahmā. In that realm, no thoughts arise in mind. One would stay there for a very long time, only to come back to the human plane and start the rebirth process all over.
- All the above meditation techniques are dangerous. As one develops them, one may become forgetful; sañ̃̄ $\bar{a}$ or perception is a critical mental factor associated with recognizing external objects. If one starts losing memory, that will be a sign that one is on the wrong path.

## Nibbāna is the Removal of Greed, Anger, and Ignorance

5. An Arahant has not removed the capacity to generate thoughts OR perceptions. An Arahant has removed greed, hate, and ignorance (about the Four Noble Truths). Thoughts arise in him/her with saññā, i.e., he/she can identify people or things. They can experience the whole world just like any other human: they can see, hear, taste, smell, touch, or think about any place.

- The only difference is that an Arahant will not generate any greedy, hateful, or ignorant thoughts about anything.
- The concept of Nibbāna is straightforward: "ragakkhayo Nibbanamं, dosakkhayo Nibbanam், mohakkhayo Nibbanam゙". [Extinction of greed (or desire), hatred (or aversion, anger), ignorance (or delusion) gives rise to Nibbāna.]

## Nibbāna Is Approached With the Removal of Greedy, Angry, and Unwise Thoughts

#### Abstract

6. And one CAN experience the "cooling down" as one makes progress on removing greed, hate, and ignorance, even before the Sotāpanna stage. Instead of becoming forgetful, one's mind will become more sharp and alert. One will be able to remember things BETTER, not less. One will become happier, not gloomy or depressed. It is hard for ordinary people to fathom how much stress is associated with a mind contaminated with greed, hate, and ignorance. - The constant stress in an average human mind arises due to greed, anger, and ignorance. That is why people seek sense pleasure, basically to get some relief. But the problem is that any such relief is temporary. Furthermore, many people do immoral things to get such pleasures. So it can make things much worse. Not only does one not get permanent relief, but one will have to pay for the bad kamma that were accumulated by such immoral acts (lying, stealing, sexual misconduct, etc.).

- That is why one can feel the relief right away when one starts living a "clean, simple life." That should be the "base" for beginning meditation. It is impossible to make any progress, no matter how much time one allocated to "meditation", if one is engaged in immoral behavior. One needs to start reducing the BIG EIGHT.
- What the Buddha prescribed was simple yet profound. As one clears the mind of the five hindrances (pañcan̄̄varaṇa) via living a clean life AND start doing the proper Ānāpānasati Bhāvanā, the progress will accelerate with time because one's mind start being able to see more clearly. One will be able to quickly grasp the real meaning of anicca, dukkha, anatta.

## Do All Things "Appear, Destruct in a Moment, and Re-Appear"?

7. Another series of "desan $\bar{a}$ " that I listened to described how an advanced meditator could actually "see" the "formation/breakup" of the material world. That person says that one could see the "impermanence" described in the "The Grand Unified Theory of Dhamma" post. He explained how he got so afraid when the "world disappeared" momentarily before re-formation!

- A citta never arises as a single unit. It appears in a citta vīthi (series of cittā ) which generally have 17 citta if the citta vīthi occur due to an external sense input coming through one of the five physical sense inputs (eyes, ears, nose, tongue, and body). And that there are many billions of thought moments per second. However, only a Buddha can actually "see" such a fast time scale.
- The Buddha described to Ven. Sāriputta such minute details in summary form, and it took Ven. Sāriputta, and his immediate followers, hundreds of years to finalize a detailed description of mental/physical phenomena based on such information provided by the Buddha. They were able to complete the Abhidhamma Piṭaka only by the third Dhamma Sangāyanā.
- Even in many textbooks on Abhidhamma, sometimes it is stated that ".. r $\bar{u} p a$ is very short-lived - it endures only for $\mathbf{1 7}$ conscious moments. What arises is almost instantly gone". That is wrong! That is the lifetime of a "hadaya rūpa." A hadaya rūpa is generated in the hadaya vatthu by a sense event through one of the five physical senses. The lifetime of a hadaya rūpa is the time taken to experience that external sense event, i.e., 17 thought moments. (During that short time, the mind grasps an impression of the external $r \bar{u} p a$ ); see, "Does any Object (Rūpa) Last only 17 Thought Moments?."

## Fake Teachings Are Not Restricted to Mahāyāna

8. The problems with Mahāyāna teachings have become apparent due to the advances made in science and technology. See, "Key Problems with Mahāyāna Teachings"" and "Saddharma Pundarika Sutra (Lotus Sutra) - A Focused Analysis."

- However, some of the "fake teachings" that I mention in this post originated in Theravāda countries, particularly in Sri Lanka. That is why it is critically important to learn pure Dhamma before or, at least, during meditation.
- How can one follow the path of the Buddha without knowing the actual path? "Bhāvanāya pahātabba"" (or removal of defilements via meditation) comes AFTER "dassanena pahātabba"" (or eradication of defilements due to wrong views via understanding the true Dhamma.) That is also why Sammā Ditṭhi is first and Sammā Samādhi is last in the Noble Eightfold Path.
- I highly encourage everyone to read as many posts as possible to learn about Dhamma. Regardless of one's familiarity with Buddha Dhamma, one should read those posts in the "Moral Living and Fundamentals" section at least once because they provide the foundation. I know from experience the following. It is hard to comprehend the related advanced material if one does not get the basics right.

## "Feeling Better" Does Not Necessarily Indicate That One Is on the Correct Path

9. In "weeding out" the wrong approaches, a key point to understand is that there are many ways to "feel better." A drug user can instantly get into a "relaxed state of mind" by taking a drug. We don't do that because (i) we know it is a temporary solution, AND (ii) it has terrible consequences.

- Getting "addicted to" anāriya (non-Buddhist) meditations like breath or kasiṇa meditation is only somewhat better. Many get addicted to them because they do not seem to have any adverse consequences in this life. Even though that may be true, they do have harmful implications for the long term because one is wasting one's precious time in this human life on something that does not help in avoiding rebirth in the apa$y \bar{a}$.
- Just because one starts feeling better using a particular technique does not mean it is THE solution. That is why one needs to look at the UNDERLYING BASIS of that approach. I have come across several groups where they are convinced of their "technique" because they "feel better" with what they do. As we just discussed, a "good experience" does not rule out a "better experience" with the correct approach.
- The only way to make a sound judgement of "any theory" or "approach" is to critically examine it and see whether it can explain the realities that we see around us. Can it explain why people are born different? Similarly, why some live relatively better than others, why do only some people get horrible diseases, why do animals experience pain but still cannot do anything about it (i.e., why they have limited minds)? Only pure Buddha Dhamma can explain all these and more.

## Formal and Informal Meditations

10. Finally, once one looks at the evidence and decides on the Path, meditation can be "formal" or "informal." To engage in formal meditation, one allocates a time and place, and it could be any of the following:

- Conventional sitting or walking meditation session. But this is not the only formal way to meditate.
- Listening to a Dhamma discourse delivered by an Ariya (one who has grasped anicca, dukkha, anatta) is an excellent formal meditation session.
- Reading (and contemplating) on a Dhamma concept, say anicca, is also formal meditation. If one reads/listens when the mind is calm, one will grasp more.

11. Informal meditation is possible at any time, anywhere.

- Merely thinking about a Dhamma concept or trying to clarify a Dhamma concept is meditation. That can happen at any time. While lying in bed trying to fall asleep, waiting at the doctor's office, riding a bus or subway, etc. Instead of daydreaming or generating greedy, hateful, or useless thoughts, one could spend that time contemplating Dhamma.

## Suppression or Removal of Five Hindrances Lead to Samādhi

12. In all these cases, one can experience a calming effect due to the five hindrances' suppression. That can lead to even deeper Samādhi if one's mind becomes focused on the Dhamma concept. One could develop a habit of doing informal meditations. But avoid doing that while driving or even when concentrating on a task at work! That WILL have terrible consequences. One needs to use wisdom (being mindful of consequences) while cultivating understanding.

- Five hindrances discussed at "Key to Calming the Mind - The Five Hindrances."

Next, "Is Suffering the Same as the First Noble Truth on Suffering?",

### 12.20 A Simple Way to Enhance Merits (Kusala) and Avoid Demerits (Akusala)

## Revised February 28, 2019; revised May 17, 2019; August 22, 2022

1. This is an important post that should be read carefully. Grasping the basic concept here can prevent many akusala kamma (unmeritorious deeds) and boost the power of a kusala/puñña kamma (meritorious deeds). In addition, it shows the consistency and universality of Buddha Dhamma.
2. The potency of a kamma (good or bad) depends on two key factors. First we need to clarify some basic ideas.

- Any action or speech originates as a "thought". As described in the Abhidhamma section, a citta is of duration much less than a BILLIONTH of a second. Such fast thoughts do not even register in our minds. Once in a while a burst of cittā on a given object gets latched on and stays long enough to register in our minds. Then we consciously think about it and make a decision.
- For example, when I walked to the kitchen to make tea this afternoon, it started as what seemed to be thought of as "having a tea." In reality, that "thought" itself was due to billions of citta going through my mind; the initial "vague idea of having a tea" very quickly got built up by numerous follow-up cittā until I had to get up and walk to the kitchen.

3. Most such "initial thoughts" just do not cascade into strong enough thoughts to make us physically move or even speak out. If the "impulse of the thought" (or "javana") is not strong enough, we just disregard it.

- If you think about it, you will realize that thousands, millions of stray thoughts pass our minds each day. When we ride a bus just staring out of the window, we see zillion things go by and each thing seen is a thought. We do not remember most of it afterward.
- On the other hand, powerful sense inputs prompt us to instantaneous action or speech. Sometimes, we just stay on that stream of thoughts: some people laugh out loud just thinking about a happy event. Other times, if thoughts of a hated person come to mind, one's face gets dark, and muscles get tightened.
- A mother hearing her child cry out is lifted out of her seat instantaneously: She hears the cry in a series of "citta vithi" of "thought streams" coming through the ear door. Subsequently, millions of "mind-door" citta vīthi run within a fraction of a second, identifying that it is a crying sound and it is coming from her child. Subsequently, millions more citta vithi start running, trying to analyze what could be the problem, and then more citta vithi will prompt her to get out of the seat and move towards the source of that sound. All this happens within a fraction of a second, without her being consciously aware.

4. Not all thoughts on the same subject have the same kammic power.

- If some insects get killed while someone is walking on the ground or while cleaning the house, that will have no kammic consequences; because the intention associated with those actions was not to kill any living being.
- As we will see below, several key things contribute to the kammic power: the intention, what kind of knowledge is behind that intention, and whether one does the act enthusiastically are all key factors.

5. Now let us take an example to see how these different factors contribute to the strength of a kamma. Suppose a person who does not know that stealing is a bad thing to do and that it will have bad consequences steals something from a shop. Since he does it with the wrong vision (ten types of micch $\bar{a}$ ditthi), he does not feel remorse for it. Thus the kammic strength is very high; see "Micchā Ditthi, Gandhabba, and Sotāpanna Stage."

- But if he does it on the urging or prompting of another, then it will have less strong kammic consequences since he did not think about doing it on his own, and thus the "javana" or the "impulse power" of the citta is less strong.
- Now, if he comes up with the idea of stealing by himself AND enjoys doing it, that is the worst.

6. So, now we can see different levels of kammic strengths associated with the SAME ACT of stealing:

- 01 If done with wrong vision, with pleasure, and without prompting, it will have the highest strength (of course, this will be the highest BAD strength).
- 02 If done with wrong vision, with pleasure, and with prompting, it will have the next lower strength.
- 05 If done with the wrong vision, with a neutral feeling, and without prompting, it will have the next lower strength.
- 06 If done with the wrong vision, with a neutral feeling, and with prompting, it will have the next lower strength.
- 01 Somanassasahagatam diṭthigatasampayuttain asañkhārikain ekain.
- 02 Somanassasahagatam ditt!higatasampayuttain sasañkhārikaì ekaì.
- 05 Upekkhāsahagatai் ditṭhigatasampayuttaì asañkhārikain ekai்.
- 06 Upekkhāsahagataì ditthigatasampayuttaim sasañkhārikai் ekai்.

Now in the next four cases, the same act was done by a person who did know that it was a bad act and it will have bad consequences and would do it with at least some hesitation, and thus the "javana" or the "impulse of the thought" would be less, and consequently, the kammic power will be less. So, now we have the last four cases:

- 03 If done WITHOUT wrong vision, with pleasure, and without prompting, it will have the highest (GOOD) strength.
- 04 If done WITHOUT wrong vision, with pleasure, and with prompting, it will have the next highest strength.
- 07 If done WITHOUT wrong vision, with a neutral feeling, and without prompting, it will have the next highest strength.
- 08 If done WITHOUT wrong vision, with a neutral feeling, and with prompting, it will have the least strength.
- 03 Somanassasahagatamin diṭthigatavippayuttain asañkhārikaì ekaì.
- 04 Somanassasahagatain ditthigatavippayuttaim sasañkhārikaì ekam்.
- 07 Upekkhāsahagatai் diṭthigatavippayuttain asañkhārikai் ekam்.
- 08 Upekkhāsahagatai் dițthigatavippayuttaì sasañkhārikaì ekai்.

7. Thus, it is clear that just having an understanding of Dhamma (that it is unfruitful to gain anything at the expense of other beings) will automatically make the kammic power less potent; but this "knowledge" is not the "book knowledge"; it is not effective if one has read about it, but the mind has not grasped it. Wisdom and "book knowledge" are two different things.

- If you think about it deeply, it should become clear that it is the comprehension of anicca, dukkha, and anatta that leads to true knowledge (pañ $\tilde{n} \bar{a}$ ) and helps get rid of avijjä (ignorance). It involves understanding the true nature of this world and that one's actions are bound to have consequences.
- It works in the other way too. Good actions will lead to good results.

8. Thus, the same reasoning is true for meritorious acts (puñnalkusala kamma). There are eight levels, depending on whether one does a meritorious act with/without knowledge, with joy/with a neutral feeling, and without/with prompting, just like in the case of the greed-based akusala citta. Let us take the case of someone donating to build a shelter for homeless people.

- This kusala kamma (meritorious deed) done with knowledge, joy, and without prompting has the highest merit.
- And THE SAME puñña kamma done WITHOUT knowledge, with a neutral feeling, and with prompting has the LEAST effectiveness.
- Thus the same deed done without comprehension of Tilakkhaṇa is a puñ̃̃a kamma. The same deed done with comprehension of Tilakkhana is a kusala kamma.
- The intermediate six are just analogous to the ones for the greed-based akusala kamma.

9. Let us examine how these categories play out in the real world for the above mentioned meritorious act of building a shelter for the homeless:

- If someone understands the value of giving, does it out of the kindness felt for those homeless people, does it without wishing for anything in return, and will be doing it with knowledge. And thus, it will be done without prompting and with natural joy in the heart, realizing that one is making a difference in many people's lives. This is the highest merit.
- If a person did the same deed, but initially it took some prompting from others or even him/herself, it was not spontaneous and thus will have somewhat less "javana" in the thought process.
- Those two scenarios without joy would have even less "javana" in the thought process. Here one may write a check and may not think much about it afterward. But in the above two cases, the person may stay engaged with the act of building the shelter and gains joyful feeling every time he/she thinks about it.
- Now, those four cases can be repeated for a person who does not understand the true impact of that action. The kammic power will be reduced accordingly. Thus a person who does not have an understanding of kammic consequences, the true nature of this world (i.e., that we all may go through such hard times or worse in other lives, etc.), just writes a check out of necessity, may be even to get some votes (i.e., prompting by oneself after seeing the benefits for one's political career) will have the least benefits.
- Thus understanding Dhamma (true nature of the world) leads to spontaneous meritorious actions done with a joyful heart; this leads to saddh $\bar{a}$ (true faith), citta pasāda (joy), and adhimokkha (resolve) to get the maximum impact of the impulse kammic power (javana). Adhimokkha (resolve) is a key factor in the kusala-mūla paṭicca samuppāda, see, "Kusala-Mūla Paticca Samuppāda."

## Notes:

1. This post clarifies the types of different citta given in Abhidhamma. See "Akusala Citta and Akusala Vipāka Citta" and \#4 of "Conditions for the Four Stages of Nibbāna."
2. There are two akusala kamma rooted in hate and two rooted in ignorance. The ways to sort those are different. I will write another post on them.
3. The above description is a simpler version of a post that I did recently: "Javana of a Citta - The Root of Mental Power." It may be a good idea to read that too.

### 12.21 Pañca Indriya and Pañca Bala - Five Faculties and Five Powers

Revised July 18, 2021; July 21, 2021

1. These are included in the 37 factors of Enlightenment; see, " 37 Factors of Enlightenment".
2. "Indriya" means leader. When cultivated an indriya becomes more powerful or "Bala".

- The five mental faculties (Pañca Indriya) are saddhā (faith), viriya (effort), sati (mindfulness), samādhi (concentration), and paññā (wisdom), and there are five corresponding powers (Pañca Bala).
- Those two sets of five factors each are very important in following the Noble Eightfold Path.
- The eye, ear, nose, tongue, and body are the five physical faculties (indriya). They are a different type of "indriya." They are leaders in providing access to seeing, hearing, smelling, tasting, and touching. The Pañca Indriya are the "mental" leaders helping with comprehending Dhamma.

3. Let us first discuss the five faculties.

- Saddhā is foremost; without faith (saddhā), one does not have the conviction to follow the Path. However, faith has to be based on wisdom (pañ̃$\overline{\boldsymbol{a}}$ ), i.e., one's faith is built upon seeing the truth of Buddha Dhamma, at least partially.
- Saddhā comes from "sath" or truth and "dhä" meaning "dhāranaya" or "grasp". Thus one will have saddh $\bar{a}$ when one grasps the true nature of this world (tilakkhana) at least to some extent.
- Blind faith is actually a hindrance to progress since one will be following the wrong path. Furthermore, blind faith will not last long, since it is on a shaky foundation. Saddhā of a Sotāpanna is unshakeable, and will never be lost or even reduced.

Thus we can see the saddhā and paññ̄̄ need to progress together.
4. When saddhā and paññā are developed to a certain extent (before the Sotāpanna stage), one realizes the fruitlessness and the dangers of the sansāric journey. Thus one is motivated to make an effort (viriya).

Furthermore, one realizes that one needs to be mindful in one's actions, and thus sati (mindfuiness) starts to build. One realizes that one has to act with yoniso manasikara.

At the same time, one realizes that when the mind is not calm, one can make bad decisions; thus one starts working on calming the mind and to attain a level of concentration (samādhi). Concentration is not really a good translation for samādhi; one does not need to force concentration; rather samādhi comes about when one takes precautions to not to get into "bad situations"; see, "What is Samādhi? - Three Kinds of Mindfulness".
5. Different people have the five faculties developed to different degrees (developed in this life AND also carried from previous lives), and normally one could stand out. The Buddha has shown the following way to identify the predominance of different faculties in a person.

- If someone has a relatively more developed saddh $\bar{a}$, that person is likely to be peaceful and helpful to others with a kind heart. He/she will have no trouble in following the first precept of not harming any other being.
- Then there are people who can easily bear hardships and are very determined; they have a developed viriya (effort) indriya. They can easily keep the second precept (not taking what is not given), and be satisfied with what one earns by one's hard work.
- Those who do not pursue sense fulfillment aggressively have less kāmachanda and are not likely to have any problems with the third precept. They are likely to have a developed mindfulness (sati) faculty.
- When the samādhi indriya is strong, that person is likely to be quiet and does not like to engage in idle chatter; thus keeping the fourth precept on right speech will be easy for them.
- Someone with paññā (wisdom) will be able to comprehend anicca, dukkha, anatta easily and thus to realize the fruitlessness and the dangers of the sansāric journey. Such a person will be able to keep the hardest fifth precept on controlling the mind; see, "The Five Precepts - What the Buddha Meant by Them".

6. Once one identifies the strong faculty, one should try to exploit that to move forward; the other faculties always pitch in to help, so they will grow too. It is important to cultivate all five faculties until they become powers (Bala), but one needs to exploit the predominant one.

- If someone tells a child, "this is not your actual Mom; she is somewhere else", the child will not only refuse to believe that but will run to the mother and give a hug just to show how confident he is. In the same way, saddhā based on paññā can only make one's resolve be strengthened by obstacles.
- For example, when one does not have saddh $\bar{a}$, one can be influenced to change the course by an outside influence. But if $s a d d h \bar{a}$, built on pañ $\tilde{n} \bar{a}$, is strong no matter how strong the influence is one's faith will not be shaken.
- The Buddha gave a simile to understand how indriya can become Bala to overcome difficulties: When a river runs into an obstacle like a large boulder, it splits and goes around it, and merge together after the obstacle. But the indriya needs to be strong enough to do that.
- When indriya (faculties) are strengthened, they become Bala (powers).

7. When the faculties are being cultivated, it is important to try to balance them, while utilizing the predominant faculty's power.

- Some people have pañ̃̃̄a and may say, "it is useless to take precepts or chant "Tisarana" or chant/listen to $s u t t \bar{a}$; it is better to learn Dhamma". But those activities do help in getting the mind to be receptive to Dhamma; see, "Buddhist Chanting."
- On the other hand, just reciting those verses is not enough. In order to recite them with understanding, one needs to learn Dhamma and cultivate paññā.
- Normally, saddhā and pañ̃̄̄̄ go together and need to be balanced. Similarly, viriya (effort) and samādhi (concentration) need to be balanced. For example, when doing formal meditation, too much of an effort can be a drawback for samādhi. As the Buddha told Sona the musician, the strings on a violin need to be just right, not too tight, and not too loose.
- Sati (mindfulness) must be leading and must always be there.
- Sati can be compared to the steering wheel of a car; saddhā and paññā can be compared to one set wheels, and viriya and samādhi can be compared to the other set of wheels. The wheels must be in balance and the steering wheel must be kept at the correct position all the time for the car to go forward. If the wheels are not balanced, the car will just go in circles; if the steering wheel is not managed, the car will go off the road.

8. These five (saddhā, viriya, sati, samādhi, paññā) are cetasika (mental factors). They help define one's character (gati) for the better, and these five are important ones to "take in" or "āna" in ānāpāna sati.
9. The five faculties exercise control in their respective domains: saddh $\bar{a}$ in the domain of adhimokkha (decision or resolve), viriya in paggaha (exertion), sati in upatthāna (awareness), samādhi in avikkhepa (non-distraction), and pañ̃̄̄̄ in dassana (view or vision). When they become Bala (powers), they become unshakable by their opposites - indecision, laziness, negligence, agitation, and delusion or ignorance.

- It is important to realize the value of citta pasāda (joy) and adhimokkha (resolve) that results from saddh $\bar{a}$ based on true understanding: adhimokkha is an intermediate step in Kusala-mūla patticca samuppāda on the way to Nibbāna, see, "Kusala-Mūla Paticca Samuppāda."
- Also, citta pasada and adhimokkha that arise in doing meritorious acts with joy in the heart are key to optimizing the merits; see, "A Simple Way to Enhance Merits (Kusala) and Avoid Demerits (Akusala)," and "Javana of a Citta - The Root of Mental Power."

10. The five indriya become five Bala and are well balanced only for an Arahant. We can reap many benefits even before reaching that ultimate goal by cultivating them, making sure to try to keep them balanced.

- Even for an Arahant, there are some leftover "imperfections" even though they are not defilements; these are some "hard-to-get-rid-of" quirks in personal behavior. For example, there is this story about a very young Arahant who had the habit of jumping over puddles instead of going around them; he had been born a monkey for many lives in the recent past and had carried that habit over to this life.
- Only a Sammā Sambuddha (like Buddha Gotama) is perfect in every respect. This is why he is called "Tathāgata" ("tatha" for "what should be" or the "real nature"; pronounced "thathāgatha").

### 12.22 Possible Outcomes of Meditation - Samādhi, Jhāna, Magga Phala

## Revised May 30, 2018; February 10, 2020

## Introduction

1. As we discuss in the "Bhāvanā (Meditation)" section, meditation is of two types.

- One is done at all times, being "morally mindful." Then the other type is the formal meditation where one contemplates on a given "procedure" while sitting down or walking.
- In Buddhist meditation, the first is more important than the second.

2. Then there are three possible outcomes of meditation: Samādhi, jhāna, and magga phala.

- One gets to samādhi by focusing the mind on one thing. Frequently a mind jumps incessantly from one thing to another. A sound pulls the mind one way, a sight another way, smell, etc., and the mind itself likes to jump around.
- When one is thinking about a greedy or angry thought, the "scatteredness" of the mind is intensified.
- Regardless of the cause, this makes the mind tired.

## What is Samādhi?

3. Samādhi ("sama"+"adhi" where "sama" means "equilibrium" and "adhi" means "dominance") means turning the mind towards an equilibrium state away from distractions (especially greedy, angry, or foolish thoughts.)

- The opposite of the Pāli word "sama" is "visama." When either the body or the mind gets "away from equilibrium," that is "visama" and we become uncomfortable. [sama :[adj.] even; equal; level; similar. (m.), calmness; tranquillity. visama : [adj.] uneven; unequal; disharmonious.]
- A good analogy is the following. We become restless if our environment becomes too hot. Then we try to find a way to cool ourselves. We get very uncomfortable if we are in a "too cold" environment also. Then we try to be warm by turning on a heater or wrapping ourselves with blankets.
- However, if the room temperature is moderate and away from both those extremes, then we feel comfortable. We feel contended.
- A similar effect takes place when the mind stops going to the extremes. A greedy or angry mind is in a "visama" state and is away from samādhi.
- However, if the focus is a dhamma concept, then the mind moves toward "equilibrium."

## Getting to Samādhi

4. Unless one has experienced Samādhi, or especially jhāna, one may not even realize that one's mind is always under stress. Of course, when a deadline approaches and the mind goes to overdrive, we notice that. One can truly appreciate this only after experiencing the tranquility of a focused mind. The mind gets "sensitized" as one gets to Samādhi.

- Most people do not realize how "inherently stressed" our minds are. We get used to things and do not feel even hardships. Only when we get to a "better state," we feel the difference, and then it is hard to go back to the "lower state".
- For example, one who has lived a life of poverty has gotten used to it. However, if one is able to upgrade the lifestyle to a higher level, then one can FEEL the difference and now it will be very tough to go back. One becomes "sensitized". We will encounter this word "sensitized" in many cases when we discuss the Satipaṭthāna sutta.

5. There are three kinds of Samādhi when categorized according to morality, i.e., what the focus is on. There is micch $\bar{a}$ Samādhi and two types of Sammā Samādhi, one mundane (for living a better life) and one supermundane (focusing on Nibbāna).

- A suicide bomber who is assembling a bomb must focus on his task. Otherwise, he will blow himself up. He gets into a micchā samādhi.
- Most people meditate to get some "peace of mind", to get some relief from the pressures of hectic life by focusing on the breath. That is a form of samādhi. When one focuses on a neutral object, like breath, one gets to such a "neutral kind of samādhi".
- The best kind of samādhi is attained when one focuses on a dhamma concept, which takes the mind off pañcanīvaraṇa. See, "Key to Calming the Mind - The Five Hindrances."
- There is a post on different types of samādhi: "What is Samādhi? - Three Kinds of Mindfulness."

## Jhāna Is a Deeper Level of Samādhi

6. Jhāna is a deeper level of samādhi, where the mind really gets absorbed in the object (ärammaña). Then the tranquility is optimized, and there are eight levels of $j h \bar{a} n \bar{a}$. The first four are the ones experienced by beings in the 16 realms of the rūpa loka, and the last four in the 4 realms of the arūpa loka.

- Jhānā CANNOT be attained via micchā samādhi.
- The jhānā attained via Sammā Samādhi are two types, corresponding to Ariya jhānā and anāriya $j h \bar{a} n \bar{a}$; see, "Power of the Human Mind - Anariya or Mundane Jhānā" and "Power of the Human Mind - Ariya Jhānā."
- Even though one can get to anāriya jhānā by just focusing on the breath, it does require one to live a moral life. One who is not at least following the conventional five precepts will not be able to cultivate them; see, "Jhānic Experience in Detail - Sāmaññaphala Sutta (DN 2)."
- Of course, the uniqueness of Buddhist meditation is the supermundane Sammā Samādhi, leading to Ariya jhānā, and the four stages of Nibbāna.
- However, one could be distracted from attaining a magga phala if one starts enjoying anāriya $j h \bar{a} n \bar{a}$. Therefore, it is best NOT to attain anāriya jhānā. However, some people can easily get to anāriya jhānā if they had cultivated jhānā in recent previous lives.

## Permanent Removal of Suffering Attained Only With Magga Phala

7. Thus the highest levels of "peace of mind" are at the four stages of Nibbāna or magga phala: Sotāpanna, Sakadāgāmī, Anāgāmū, and Arahant. However, it is not necessary to PRACTICE Ariya jhānā to attain magga phala.

- For example, one could attain the Sotāpanna stage without practicing jhānā. What is needed for achieving the Sotāpanna stage is upacāra/anuloma samādhi; see, "Citta Vithi - Processing of Sense Inputs."
- Furthermore, unless one has practiced it before, a Sotāpanna cannot automatically get into a jhāna. However, it will be easy for a Sotāpanna to attain jhānā with practice.
- We need to remember that $j h \bar{a} n \bar{a}$ are mental states of higher-lying Brahma realms. They still belong to the 31 realms of "this world." One needs to lose cravings for jhanic pleasures to attain the Arahanthood.

## Jhāna Not Necessary to Attain Magga Phala

8. What is required to attain magga phala is samādhi. Jhānā are NOT necessary to achieve magga phala.

- We know that there are jāti Sotāpannas born in the human realm. But if a jhāna were REQUIRED to attain the Sotāpanna stage, then that person WOULD NOT be born in the human realm, but in a Brahma-realm corresponding that jhāna. Waharaka Thero emphasizes that in the following desana $\bar{a}$ :

## WebLink: PureDhamma: Listen to Are Jhāna Required for Magga Phala

- Furthermore, just by listening to correct Buddha Dhamma and/or attaining jhāna does not make one become a Sotāpanna. The Thero points out that Devadatta ended up in an apāya, even though he had not only cultivated jhāna but had supernormal powers (iddhi) too. Devadatta listened to many discourses from the Buddha but was not able to attain the Sotāpanna stage of Nibbāna.

## Getting to Ariya jhānā - Only After Anāgāmi Stage

9. One gets to anāriya jhāna by SUPPRESSING kāma rāga and paṭigha. One gets to Ariya jhāna by REMOVING kāma rāga and patigha. See, "Power of the Human Mind - Ariya Jhānā." But before one can use this technique to attain Ariya jhānā, one needs to attain the Anägāmi stage.

- One sits down in a quiet place and first contemplates on anicca, dukkha, anatta nature. One then keeps repeating the following (or the English translation; what matters is one has to have the understanding.) "Etaì santaì etaìm paṇìtaìm, yadidai் sabbasañkhārasamatho sabbūpadhipatinissaggo taṇhākkhayo virāgo nirodho nibbānan'ti." That means, 'It is the only peace, the only happiness: prevent sañkhāra from arising (via) eliminating taṇhā and excess greed and thus stopping the arising of defilements, which is Nibbāna." ['etaiं santamं etaím pañ̄̄taim yadidamं sabbasañkhārasamatho sabbūpadhipaținissaggo taṇhākkhayo virāgo nirodho nibbānan'ti, which means, 'It is peaceful (santaim), it is supreme (pañītaì), which is the calming of sañkhāra and breaking of bond (upadhi) via eliminating tanh $\bar{a}$ and excess greed (rāga), and thus stopping the arising (nirodho) of defilements (sañkhāra, upadhi, taṇhā, and rāga), which is Nibbāna." AN 9.36 Jhāna Sutta upadhi : 'substratum of existence' or bond. In the Com. there are enumerated 4 kinds : the 5 groups (khandha), sensuous desire (kāma), mental defilements (kilesa), kamma.]
- The reciting of a certain phrase (meaningfully, with understanding) is called a "kammatthāna." A given meditation technique is also called a kammatthāna.
- Two important points. (1). One can either say it out quietly or say it in one's mind, (2) This is not chanting; just saying the words will be just a waste of time. One needs to comprehend, to some extent, what is meant by anicca, dukkha, anatta, i.e., some idea of what Nibbāna (or "cooling down" is).
- If one has experienced any kind of "cooling down," it is best to recall that while saying the above phrase. For example, if one does not flare up like one used to, or if one has less attachment to things, that is the best to recall.
- Unlike the Sotāpanna stage, it is relatively easy to confirm the attainment of Ariya jhāna. One must have REMOVED kāma rāga (craving for sensual pleasures, including the urge for sex) even to attain the first Ariya jhāna.

## Summary

10. Thus reaching magga phala and Ariya jhānā REQUIRE the understanding of anicca, dukkha, anatta, the Three Characteristics of existence. Without the "correct vision" or Sammā Ditthi at some level, the mind does not see the unfruitful nature of sense pleasures or the "superiority" of nirämisa sukha.

Next, "Are you not getting expected results from meditation?",

### 12.23 <br> What is Samādhi? - Three Kinds of Mindfulness

Revised May 16, 2019; revised February 13, 2021

## What Is Samādhi?

1. Samādhi ("sama" + "adhi" where "sama" means "same" and "adhi" means "dominance") means the object becomes the priority. Then the mind becomes focused on it. As we discussed in many posts, when the mind becomes focused on one object (ārammana), the ekaggatā cetasika takes over and makes the mind latched "on to it."

- That is how one gets to not only samādhi but also anāriya jhāna using breath meditation, just by focusing the mind on the breath.
- One gets to samādhi on whatever activity one gets absorbed in.
- Being mindful depends on the situation. The kind of mindfulness needed while driving a car is different from the mindfulness required to design something (or read a book). And the mindfulness required to attain a jhāna needs to be different from those two.

## Many Kinds of Samādhi

2. There can be numerous kinds of samādhi. There can be micch $\bar{a}$ samādhi too. For example, when setting up a bomb, one focuses the mind on that that firmly (otherwise it may blow up) and may get into samādhi.

Here we distinguish three types of samādhi or mindfulness:

- Momentary mindfulness (khaṇika samādhi)
- Access mindfulness (upacāra, pronounced "upachāra," samādhi)
- Absorption mindfulness (appanā samādhi)

Let us discuss each type separately.

## Momentary Mindfulness or Khaṇika Samādhi

3. We should always have the momentary mindfulness or khanika samādhi. Here we frequently change the focus from one object to another based on the need.

- We can use momentary mindfulness during the day when we are active. When we talk to someone, we should be mindful of what we say. The more one practices, one will be able to control one's speech by being mindful. It is the same with any physical activity too. When we are about to cross the street, we should be aware of the traffic, etc.
- Many people take this the wrong way, and use it as a formal meditation. It is kind of silly to do the wrong "walking meditation" by saying "lifting the foot," "putting it down," etc., like a robot. That is what happens when Buddha's teachings get distorted.
- For example, when driving, we need to pay attention to the road and then apply brakes if the car in front gets too close. We need to keep an eye on the traffic and be prepared to take quick action. Focusing the mind on the job at hand here translates to shifting the focus to different tasks in an optimum way to drive the car safely.

## Access Concentration or Upacāra Samādhi

4. Access concentration (upacāra samādhi) is more focused. While reading an exciting book, one gets absorbed in it. One cannot be thinking about other things while reading.

- On the supermundane (lokuttara) side, when listening to a Dhamma discourse or reading about a Dhamma concept, one can get into access concentration or upacāra samādhi. Reading a web post on a Dhamma concept can calm one down if done at a quiet time. If read with understanding and focused mind, it is possible to get into a somewhat deeper samādhi.
- All following activities involve access concentration. A programmer writing computer code, a surgeon doing surgery, an architect designing a building, a scientist thinking about a new theory, etc. These are all mundane Samādhi. But one can still feel a kind of in a trance if one gets absorbed in any task.

## Appanā Samādhi or Absorption in Concentration

5. Appanā Samādhi or absorption in concentrations can lead to a jhānic state with practice. Here one needs to find a quiet place and need to close one's eyes and concentrate on just one object.

- In Ariya meditations, the focus is something related to Nibbāna. It could be a Dhamma concept or Nibbāna itself. Ariya Metta Bhāvanā is another.
- In anāriya meditations, this object is usually either a kasina object or the breath or the stomach's falling/rising.

## Some Examples

6. Now, let us look at some general features of the three types.

- For someone with practice, it is possible to get into appanā samādhi (jhāna) very quickly. Thus the difference between the three types of samādhi is not in the time scale. Instead, it is on the goal or the situation at hand.
- Workplace or home accidents happen when one loses momentary mindfulness. If one loses attention on the task at hand, one can pull the wrong switch, cut oneself while chopping vegetables, or even tripping while walking.
- One can be reading something for hours and not get anything in, if the mind wanders off. One can be sitting in meditation for hours and not get into samādhi if the mind wanders off.

## Sammā Samādhi and Five Hindrances

7. In all these three types, achieving mindfulness comes naturally if the five hindrances do not cover the mind; see, "Key to Calming the Mind - The Five Hindrances."

- If one has greedy or hateful thoughts (kāmachanda and vyāpāda), it is challenging to calm the mind.
- Even a simple task can become aggravating and frustrating under the following conditions. One's mind is lethargic (thina middha), one is agitated by being high-minded or low-minded (uddhacca kukkucca), or one does not have a clear idea of the task (vicikicch $\bar{a}$ ).

8. Thus, it helps to live a moral life, i.e., avoid the ten immoral acts as much as possible. And it pays off to make preparations ahead of time.

- Especially for the upacāra and appanā samādhi, one could make sure to get other tasks out of the way beforehand. Then meditation does not have to be interrupted in the middle. Simple things like going to the bathroom and making sure one does not have a full stomach before sitting down to meditate can make a difference.
- Preliminary procedures such as reciting precepts or offering flowers or incense to the Buddha before a formal meditation session is also a part of "getting the mind ready." As we will discuss later, attaining "citta pasāda" or a "joyful mind" has a valid reason behind it.

## Sammā Samādhi and Sammā Sati

9. Samādhi is the endpoint of being mindful (sati).

- Samādhi is a synonym for the cetasika (mental factor) of ekaggatā, i.e., having a focus. One can cultivate it by being mindful the correct way, i.e., via sammā sati.

## Different Types of Samädhi

10. Finally, it is also possible to get into micch $\bar{a}$ samādhi, the opposite of sammā samādhi. A master thief plotting a grand robbery can get focused and be absorbed in that immoral activity. The same is true for a serial killer planning a killing.

- Thus, there are three kinds of samādhi when categorized according to morality. One is micch $\bar{a}$ samādhi. The other two are sammā samādhi: one mundane (for living a better life) and one supermundane (focusing on Nibbāna).

11. One could get into upacāra samādhi by reading this post paying attention to the material. One may need to read related posts or other articles to absorb the material. When the minds gets "absorbed in the issue," it is in a state of samādhi. Of course, that is possible only if the material is interesting for oneself.

- If correctly done, one will have a lower heartbeat, and a calmer and peaceful mind at the end of the reading session. People have attained even magga phala by attentively listening to Dhamma discourses.

### 12.24 Getting to Samādhi via Formal Mediation Sessions

March 25, 2016; revised December 1, 2017

1. It does make sense to do formal meditation even at the very beginning when one decides to follow the Path of the Buddha, but AFTER one has at least read about the correct interpretation of "Anicca, Dukkha, Anatta." In the following I will discuss the importance of a daily (or few days a week) formal meditation session.

- When one starts seeing the dangers of staying "in this world" (anicca nature), one needs to reassure the mind that there is an alternative, i.e., Nibbāna or Niveema. Thus, simultaneously with contemplating anicca nature, one needs to encourage the mind to taste the nirāmisa sukha that results from it by cultivating samādhi. A formal meditation session provides that.
- The Buddha gave a simile to explain this effect. In the old days, when people took to the oceans to look for new lands, they took caged birds with them. When they were lost and wanted to find whether they were close to land, they released a bird and shooed it away frightening it. The bird would fly around looking for safety (i.e., land) but will be forced to come back to the ship if no land is found; but if it can see land, it will not come back to the ship. When the mind starts seeing the dangers of amisa sukha or "worldly pleasures", we need to encourage it to enjoy the nirāmisa sukha, i.e., that there is a better alternative.

2. Even before one gets to $j h \bar{a} n \bar{a}$, one can experience "cooling down" when one engages in regular formal meditation. Looking back to my early days, I remember getting to some sort of samādhi while sitting at the desk and contemplating on a Dhamma concept. The body became light and breathing became slow due to the calmness of the mind.

- It is hard to feel "samatha" or "samādhi" if one is not sitting down or lying down.
- Furthermore, it gives one confidence that one is making progress if one can see the "improvement" in being able to stay in "samādhi" for longer times with practice. To emphasize, this samādhi does not need be a jhāna. It is just being able to stay in one place with a focused mind and with palpable lightness in the body and the mind.

3. Many people who do breath meditation say that it is a samatha bhāvanā to calm the mind BEFORE doing vidassana (insight) meditation. But that is a waste of time. One can get to samatha by doing vidassana (vipassana) or insight meditation.

- As I have discussed in other posts, one should find a quiet place and sit comfortably. One could start the session with Tiratana vandana to calm the mind; see, "Buddhist Chanting." One could make the room dark and light a candle and/or incense to "set the background". Those activities help some people to get into the proper mindset.
- Then one could just start contemplating on a Dhamma concept. One could either listen to part of a desanā or read part of an essay and then start contemplating on that. This is insight meditation.
- Some people who do breath meditation have difficulty in maintaining their focus on the breath; other random thoughts start creeping in. However, if one starts seeing the value of Dhamma and becomes truly interested in learning Dhamma, it will become easier to concentrate on a Dhamma concept. Thus one initially should pick a topic of interest to oneself.

4. With time, it becomes easier to get to samādhi by gradually purifying the mind. But it is important to figure out which areas to focus on in order to gain maximum benefits.

- First, it is important to realize that there are two main categories of "bad deeds" that can have negative consequences; see, "Lobha, Dosa, Moha versus Raga, Patigha, Avijiā" for details.
- Those done with lobha (excess greed), dosa (hate), and moha (covered mind) can lead to birth in the apāy $\bar{a}$ (four lowest realms). Permanent reduction of lobha, dosa, moha to rāga, patigha, avijj $\bar{a}$ happens when one attains the Sotāpanna stage.
- Those done with rāga (craving for sense pleasures), pattigha (friction), and avijja (ignorance) can only lead to rebirth in the higher realms in the kāma loka (human and deva realms), and in rupi and arupi brahma loka. Thus one can concentrate on those after getting to the Sotāpanna stage, but one can start thinking about them too in order to help comprehend the anicca nature as discussed further below.

5. Therefore, our main goal should be to avoid those actions that can lead to rebirth in the $a p \bar{a} y \bar{a}$, i.e., avoid those actions done with lobha, dosa, moha.

- In simplest terms, this means getting rid of micchā ditthi and comprehending anicca nature. One of the strongest kind of micchā ditthi prevalent today is materialism: One believes that at death one ceases to exist, i.e., one believes that the mind is a byproduct of the body (brain), and thus when the body dies, that is the end of story. This is also called vibhava tanh $\bar{a}$.
- It is a good idea to review the relevant posts on micchā ditthi to make sure one understands them. The ten types of micchā ditṭhi are discussed in "Three Kinds of Ditthi, Eightfold Paths, and Samādhi." There are also many posts on "anicca, dukkha, anatta."
- Starting on the Eightfold Path for a Sotāpanna Anugami begins with getting rid of micchā ditṭhi, comprehending anicca, and thereby comprehending first stage of samm $\bar{a}$ ditṭhi; see, "Buddha Dhamma - In a Chart" and the post in there.

6. By sorting out priorities (the order of things to be done), we can save a lot of time in getting to the Sotāpanna stage.

- One has the potential to be born in the $a p \bar{a} y \bar{a}$ if one has remnants of gathi suitable for those four realms; there are many posts on gathi, bhava, and jathi at the site to read and contemplate on.
- It is imperative to be mindful and avoid actions compatible with "apāya gathi." In the meditation sessions, one could think back to the previous few days and see whether there were any such instances and make a determination to not to repeat such acts. Once it becomes a habit, one can even catch oneself doing it and stop right then.
- For example, if someone does something bad to you, and if you start thinking about "how to get back" in retaliation, that is done with hate and need to be stopped. However, it is OK if one "gets mad" momentarily at such an unprovoked, harsh act by someone. It is only at the Anāgāmī stage that one will automatically stop "getting mad". Even then there may be some annoyance at that person. Only an Arahant has perfect upekkha and will not be bothered to the slightest by ANY provocation.
- Another example is extreme greed (lobha) where one tends to do "whatever it takes" to get what one wants, and also wishing that others should not get those things. Enjoying sense pleasures ( $k \bar{a} m a \operatorname{rāga}$ ) that are acquired through legitimate means is not a hindrance to attain the Sotäpanna stage. Thus engaging in sex with a spouse is done with kāma rāga, but that with another's spouse or a child, for example, is done with lobha.
- A successful meditation program goes hand in hand with a moral lifestyle. They feed on each other.

7. It is also very important to be aware of the dasa kusala, dasa akusala, and also puñ̃̃a kriya; see, "Kilesa - Relationship To Akusala, Kusala, And Puñ̃na Kamma Kamma," "Ten Immoral Actions (Dasa Akusala)" and "Puñña Kamma - Dāna, Sila, Bhāvanā."

- Puñña kriya help one attain the right mindset for meditation. Also, puñña kriya increasingly become stronger kusala kriya as one's understanding of anicca, dukkha, anatta grows.
- A Sotāpanna has COMPLETELY removed only micchā diṭthi from the dasa akusala. Only an Arahant is completely free from dasa akusala; see, "What is the only Akusala Removed by a Sotāpanna?."
- Of course, the tendency to do dasa akusala start decreasing from the time one starts on the mundane eightfold path, even before the Noble Eightfold Path; see, "Buddha Dhamma - In a Chart."
- In terms of Abhidhamma, the apāyagāmī strength of all dasa akusala will be removed at the Sotāpanna stage due to the removal of the 4 ditṭhi sampayutta lobha citta and the vicikicch $\bar{a}$ sampyutta moha citta; see, "Akusala Citta - How a Sotāpanna Avoids Apayagami Citta." Thus if a Sotāpanna commits any of the remaining 9 akusala kamma their strength would be much reduced, because one has removed gathi suitable to be born in the apa$y \bar{a}$, mainly by getting rid of micch $\bar{a}$ ditṭhi.

8. Many people worry about sense pleasures way too early. It is not necessary to forcefully suppress normal sense desires before the Sotāpanna stage, even though it may happen to some extent automatically. Kāma rāga (and patigha) are removed via the Sakadāgāmī and Anāgāmī stages.

- If a vessel is leaking due to multiple holes, one needs to fix the bigger holes first. Trying to plug small holes which are leaking slowly, while water is draining rapidly through gaping big holes, is a waste of time.

9. On the other hand, contemplating on the bad consequences of sense pleasures can lead to a better understanding of anicca (unfruitfulness of worldy things) and the First Noble Truth. In addition to the suffering due to obvious causes such as an ailment or a headache, we are not even aware of most of the suffering that we endure.

- In fact, in a twisted way, we perceive most of our sufferings as enjoyments. It is a "made-up" enjoyment and is called "assāda" ( $\bar{a} s v \bar{a} d a$ in Sinhala).
- This is also a good "meditation topic", and could help one to get to samādhi. However, this should be done when one can come to a stage where one starts to comprehend such concepts. Each person is different, so one should keep trying different options.

10. For example, we enjoy eating, especially if the food is tasty. But why do we have to eat? This seems like a foolish question, but there are beings (brahma $\bar{a}$ ) who do not need to eat anything. They are sustained by their kammic power (previous good kamma). Devas have to consume amurtha to sustain themselves, but that is a very fine food and there is no residue (i.e., they do not defecate or even sweat).

- On the other hand, we have to work hard to make money to buy food, spend time and energy to cook, and then "enjoy a meal" that lasts may be half an hour.
- But all that suffering (working to make money, going to grocery store, cooking, etc) is masked by "made-up mind pleasures" or assāda: We look forward to that meal and forget about all that suffering!
- On the way back from work we may start getting hungry, but that will be masked because we will be thinking only about the meal that is waiting for us.
- Is this any different from a cow who pulls a heavy cart, but forgets about all that suffering because it is focusing on a bundle of hay dangling in front of it?

11. Let us consider another type of hidden suffering that is associated with cleaning ourselves. In the morning, we brush our teeth, take a shower, shave, apply all kinds of fragrances and go to work very happily. We don't even notice the hidden suffering associated with all that work!

- One could experience another facet of that suffering if one can skip a day or two of doing those things. It will be very uncomfortable even for ourselves let alone for the others.

12. In fact, most of the things that we do in a given day are done to just maintain our bodies, our houses, our environment in a presentable condition. Yet, we do not see the suffering associated with all those activities. That is another way to comprehend anicca nature.

- One may think that thinking about such things could make one depressed. That is certainly possible if one did not know about the anicca nature, and also that by following the 37 Factors of Enlightenment one can be released from that suffering.
- The comprehension of the true (anicca) nature of this world, and the hidden sufferings associated with it gives one "anuloma shanthi." This is the joy that comes from grasping the true nature of this world.
- Then by realizing that there is a way to REMOVE future suffering (by following the 37 Factors of Enlightenment), provides one with "sammatta niyama."
- Thus as one makes progress, it is a good idea to think about specific cases where one has gained a "peace of mind". That itself can lead to samādhi. One needs to realize BOTH the dangers of the rebirths process (anicca nature) AND the benefits of following the Path (Niveema or cooling down).
- When one starts experiencing BOTH anuloma shanthi and sammatta niyama, one becomes a Sotāpanna Anugami, which inevitably leads to the Sotāpanna stage; see, "Sotāpanna Anugāmi and a Sotāpanna."

13. Finally, I want to emphasize the importance of trying to extend the duration of the formal meditation session gradually.

- At some point one will start feeling body sensations. And then the mind will "switch over" to a different state. When that first happened to me a few years ago, I was startled. At that point one could let the mind "take over", i.e., stop contemplating and let the samādhi "grow" and possibly lead to jhānā (it is easier for those who have the sansāric habit; but jhānā are not necessary for magga phala). Now one has attained a higher level of samādhi. One could of course continue with insight meditation.
- This is when one starts feeling enhanced nirāmisa sukha. It is not really a "pleasurable feeling" in the sense of what you experience in eating a nice meal, listening to a favorite song, etc. It is rather a calmness of an unburdened mind. Until one experiences it, one is not aware of the real stress that our minds are normally under. One comes out of the meditation session refreshed and alert.
- I would say it is possible that one could start experiencing some kind of benefit when the session is naturally lengthened to half an hour or may be an hour. I am just basing this on my own experience. If people are willing to share their experiences, I can update this post in the future (or even present someone's experience in a separate post). That could help motivate others.

### 12.25 Are you not getting expected results from meditation?

## Revised December 1, 2017

Some people try to attain Nibbānic bliss by trying to "give up all attachment to this world" in their minds during meditation. However, until the mind truly realizes the dangers of this world (the rebirth process), it is unable to give up those attachments.

- One has to attain at least the Sotāpanna stage by "seeing the true nature of this world" before one's mindset becomes amenable to "giving up". This is the hardest part to understand.
- Even before that one needs to get rid the 10 types of micch $\bar{a}$ diṭthi as discussed below.

1. During the time of the Buddha there was a bhikkhu named Potila, who was well-versed with deep Dhamma concepts and was a well known teacher; he had developed abhiñ̃̃̄̄ powers as well, but had not attained even the Sotāpanna stage. His desanās (discourses) were deep and only those at the Anāgām $\bar{l}$ stage (at least Sotāpanna stage) could follow them and get to Arahanthood. One day he went to see the Buddha, paid respects, and told the Buddha that he had been a Dhamma teacher during the times of several earlier Buddhas too, and helped many to attain Nibbāna (Arahantship). [Bhikkhu Potila - see, Potṭhilatthera Vatthu - Dhammapda verse 282]

- The Buddha asked him whether he has attained any magga phala and Bhikkhu Potila admitted that he had not. The Buddha just commented: 'Thucca Potila" and turned his attention to other matters; thucca (pronounced "thuchcha") in Pāli means despicable or "lowly".

2. So, bhikkhu Potila, who had expected praise from the Buddha for helping others, realized that he needs to work on his own salvation before helping others. He strived by himself and could not make any progress; he was trying very hard to "give up all attachments", following the same instructions he was giving others. But no matter how hard he tried, he could not succeed.

- When he sought help from other bhikkhus, they were reluctant to become his teacher because everyone knew he was very knowledgeable in Dhamma. Eventually, he went to this very young Arahant, who was well-known for his teaching abilities, and sought help. The young Arahant agreed to help, only if bhikkhu Potila agreed to carry out everything as instructed, and Potila agreed.
- The young Arahant decided to use an unusual kammatthana (instructions). He took Potila to a large area covered by mud, and asked him to wade into the mud and keep going until told to stop. Potila started wading in mud and kept going until he was told to stop when the mud was all the way up to his chin; he was barely able to move at this point because mud was heavy.

3. The Arahant told him that, "if someone is stuck in mud like that any knowledge about cleaning oneself by taking a bath is not going to help. One needs to get out of the mud first".

- Then he asked Potila to come back. Potila had great difficulty in moving forward initially, since he was all the way up to the chin in thick and heavy mud. While dragging himself out of the mud with great difficulty, Potila realized what the young Arahant was talking about. It is not possible to get out of mud until one realizes that one is stuck there, and getting out of mud required sheer will power. Similarly, he had not realized that he was stuck at a much lower moral level; he needed to cleanse his mind first.
- The "giving up" part comes with a mind that has removed the wrong visions (micchā ditt excessive greed for sensual pleasures. These cannot be removed just by reading or listening about that.

4. Of course one can remove some of it by reading, listening, and contemplating on the validity of the reasons that the Buddha has given, especially on micchā ditthi. One has to realize that kamma (or one's actions) are likely to have their results either in this life or the next, and thus the rebirth process must be valid. Remaining types of micchā ditṭhi are also related to kamma and rebirth. The 10 types of micch $\bar{a}$ dittthi are discussed in "Micchā Ditthi, Gandhabba, and Sotāpanna Stage".

- The second level of removal of micchā ditt "Micchā Ditthi, Gandhabba, and Sotāpanna Stage".

5. The simile can be made even better by looking at what happens to ants who get stuck in honey. Here unlike mud, the sense pleasures are appealing and there is no incentive to get out either. Those ants who get stuck in honey, would not even try to get out because they are too busy enjoying the honey. Even when they are barely stuck, and can move out of honey, they would not because they like the taste of honey. Just like that, any living being, whether a human or even the lowly worm, likes to indulge in the sense pleasures, and thus gets stuck.

## - And even when one realizes that one needs to get out of "the honey pot" it is hard, at least initially.

- For that one needs to see the perils of staying in this rebirth process, where birth in lower four realms will lead to unimaginable suffering. Even if one can strive to be born in higher realms, that will not last long. This is "anicca": no matter how hard we try to find refuge in the $\mathbf{3 1}$ realms it is not possible to do so in the long run.

6. With much effort, Potila slowly made his way up to the waist level, and started feeling the lightness of being free of mud. He could now move faster too. He felt the relief when he was out of the mud, and was asked to go and take a shower. Now, cleaning up with soap could be done; but while stuck in mud, there was no use of soap and water. Just like that the deep Dhamma that he had memorized was of no use to him while he was still stuck in mud.

- Eventually, when one comes out of the mud that is like the Sotäpanna level. One is still covered with mud, i.e., one still likes to enjoy sense pleasure. But now one KNOWS that one needs to take a shower, use soap and shampoo, and remove all that mud.

7. What Potila was doing was to give discourses on deep Dhamma that could help an Anāgāmī attain the Arahanthood. Most of those who benefited from bhikkhu Potila's discourses were, ironically, Anāgāmīs. Potila was just reciting the Dhamma without real comprehension but those who benefited were capable of comprehending the true meanings. After that kammatthana, Potila was able to attain the Sotāpanna stage and soon became an Arahant.
(By the way, one cannot attain the Sotāpanna stage by taking instructions from an Anariya, i.e., one who had not attained at least the Sotāpanna stage. But once one attains the Sotāpanna stage, one can learn by himself or from anyone else and get to the higher stages. This is why it was only Sotāpannas or above (mostly $A n \bar{a} g \bar{a} m \bar{u} s$ ) who could benefit from bhikkhu Potila's discourses).

- I believe this actual incident involving bhikkhu Potila highlights a very important point. No matter how much one reads on deep concepts of Dhamma, it is hard to get the idea to sink in unless one's mind is purified to a certain extent. It is critical first to break through the heavy fog of being covered by many wrong concepts and strong attachments. When one breaks through that initial "wall of resistance", then it is easier to comprehend deeper concepts; see "Lobha, Dosa, Moha versus Raga, Patigha, Avijjā."

8. One needs to make progress in a systematic way. Just like it is not possible to learn high school math without learning basic addition/subtraction, one MUST understand the basic concepts first. If one is engaged in killing, stealing, sexual misbehavior, lying, gossiping, getting "drunk" with alcohol, drugs, power, beauty, money, etc, it is not possible to calm the mind to a basic level. And this is the hard part. One is stuck in mud (more like honey, because it feels good to be stuck there).

- And while stuck in mud (or honey), no matter how much meditation one does, it is not possible to get LONG TERM relief. One may be able to go to a meditation retreat and be away from all those "honeyfilled" attractions and enjoy some sense of calmness; but that goes away soon after coming back to "real life" with all those temptations.
- One needs to slowly work one's way through the mud (or honey, because that is how it seems initially first). This is the HARDEST part. No matter how much one READS, that is not going to make much difference until one sets up the stage for the mind to see the reality.
- By the way, this is also why those who meditate on 'there is no self' (there is no 'me') cannot make any progress either. One needs to comprehend the "pointlessness in striving to accumulate material things for oneself' first. If one could tell a full blown lie, hurt someone else, sexually misbehave, etc, then isn't that done to gain something for "me"?

## 9. Here is a rough step-by-step I would recommend (this is of course not for everyone; just for those who know they are stuck in honey):

A. If one is hurting others to get sense pleasure, that should be stopped first. It is double jeopardy; one is not only "getting stuck" due to excess greed, but also going to suffer consequences of harming others. One is not only getting attached to "pleasurable things" but also accumulating bad kamma by hurting others.

- For example, if one is killing animals for fun (sport), stealing valuables from others, having sexual relationships with other married people or young children, planning to hurt someone (even for retaliation), or spreading rumors about someone just to get some pleasure out of it, getting drunk and verbally/physically abusing others, all those would be included here.
- Such immoral activities are the worst, and are called "pāpa kamma". Both lobha and dosa (dvesha) are involved here and one's mind is said to totally covered with ignorance (moha); see, "Lobha, Dosa, Moha versus Raga, Patigha, Avijijā."
- Thus someone in this stage is deeply in mud all the way up to the chin.
B. One notch lower is being capable to do things (of course not always) with EXTREME greed, even if it does not hurt others directly; here one is only up to waist to shoulder level in mud. These are normally the things one does to seek "perceived happiness" by going to extremes.
- When one cannot get "high enough" with alcohol one tends to try drugs, because one has been "desensitized". We all know of many movies stars etc. who get into this trend and end up committing suicide because nothing at the end can bring more pleasure to a highly "de-sensitized" mind.
- Another indication of extreme behavior is living beyond one's means. This is of course relative. If one is living a small (but comfortable) house and wants to move in to a bigger house just for the sake of that by stretching one's resources, that is a sign of extreme greed. If one is already living in a mansion that one has inherited or earned, and there is no financial burden, then there is nothing wrong with that since that will not burden the mind. However, in general, the more fancier the item is, whether a house or a car or anything else, it normally takes more time and effort to "maintain", and inevitably there is a degree of attachment because of the perceived value.
- Such extreme greed could also lead to actions of hate, when someone else gets in the way. Then one may do "pāpa kamma" here as well; it is possible that actions of hate gets one to the higher level.

It is not possible to discuss all possibilities, but one should be able to figure out many such cases. No one else can decide these for anyone. Only each person knows about one's own status of mind. However, any sensible person can make some kind of a judgement for oneself, but not for others.
C. If one is at stage A or B above, one should read those posts in the "Moral Living and Fundamentals" section. It could be helpful to go back and read those as one makes progress, and see that one understands more things than previously. This is hard to explain, but is true. A clear mind sees things much more easily.

- For those who are in stage A or B should read posts \#1 through \#3 below first.
D. Once one gets to the B stage, one should start reading the posts on the "Key Dhamma Concepts" and in particular learn and comprehend anicca, dukkha, anatta.

This is the real key step, to get started on the next stage. Once one gets some traction, there is nothing there to hold back someone from attaining the Sotāpanna stage. It had been hard for hundreds of years only because the correct concepts were hidden. Once one gets some traction, one can start doing any of the bhāvanā.

- As Carl Sagan said, "..think about all those emperors and kings who committed unmentionable atrocities just to have a sense of superiority and power for maybe 50 years. They are all gone"; see, "The Pale Blue Dot........." Even though Dr. Sagan did not know, that is another way to state what anicca is.
- All those emperors and kings will be stuck in the animal or lower realms for billions of years to come. On the other hand, a peasant who lived within his/her means and led a moral life could be living in a deva/brahma realm for billions of years.
- The main point here is that there is no point in trying to seek sense pleasures or accumulate wealth for 80-100 years maximum, because at the end we will not be able to KEEP ANYTHING to our satisfaction. We may have a billion dollars, but if our bodies are worn out, will we be able to get ANY sense pleasures? Will we be able to keep any part of our bodies to our satisfaction? Many people try to "beat the aging process" by using temporary fixes such as botox, but any such effect will also will be temporary.
- It is not possible to really grasp the meaning of anicca, dukkha, anatta, if one is stuck in mud or honey.
E. When one comes out of the mud and start walking (with mud on the body), that is like the Sotāpanna stage. Now one does not even need anyone's help, even though that can help expedite the process; one can figure things out by oneself.
- There are many who know many suttā by heart or abhidhamma concepts, but nowhere close to the Sotāpanna stage.
- We need to understand that Buddha Dhamma is not about JUST LEARNING concepts (even though learning plays a big part), it is all about using what is learned for purifying the mind. As the mind becomes clear, one will start seeing the reality better. In the Buddha's days, illiterate people were able learn Dhamma just by listening, and even attained Arahanthood.
E. The final stage is to realize that even birth in such deva/brahma worlds will be temporary. At some point in the future, they are all going to commit some bad deed and end up in the four lower realms for long times; that is just the nature of this world, where sense pleasures can lure anyone to commit bad actions. But there is no point in talking about that stage, until one gets above the A and B stages, and become a Sotāpanna.
F. The series of posts that I am writing on the Satipatthāna Sutta goes through this process too, from stage A. Therefore, it may be a good idea to read those posts from the beginning as well. The first introductory posts are full of Pāli words, but just go through them briefly even if you do not fully understand. They WILL become clear later, if not now.
- When one starts following the Path, one is bound to break the trend once in a while. A child learning to walk will fall many times. Many people get discouraged when they do an immoral act occasionally; but just to realize that one did a mistake, and that it bothers one's mind, means one HAS MADE PROGRESS. That is why one needs to have the perseverance to get back up with a renewed determination. Just like a child WILL learn to walk, one WILL get better with time.
G. Of course I do not know the level of each person coming to the website. Only each person knows where he/she is relative to the above steps.
- If one truly can purify one's mind and comprehend anicca, dukkha, anatta, that is all it takes to attain the Sotāpanna stage.
- There is material ranging from the basic level to very advanced levels and even more will be posted in the future. This is for the sake of completeness, and also to make sure that any scholar or interested person can gauge the depth of Buddha's true teachings.
- There are also people who really start comprehending Dhamma and start enjoying finding about further details; no other type of "pleasure activity" can match the "enjoyment of Dhamma". Buddha Dhamma is the ultimate "book of nature".
- Furthermore, reading widely on different topics will help build saddhā (faith), which is NOT blind faith but faith built on understanding. When one sees how little modern science knows in comparison to the Buddha, it helps build faith. And pañ $\tilde{a}$ (wisdom) and saddhā grow together.

Next, "1. Introduction to Buddhist Meditation", ..........

## How to Attain Samādhi via "Vipassana Pubbanga Samatha" Bhavana

1. Anariya bhāvanā methods (which include breath, stomach rising/falling, or just repeated recitation of a passage, such as "May all beings be happy and healthy") can suppress the five hindrances and can lead to mundane samādhi. But the effects are temporary, as anyone participated in meditation retreats knows; it feels really good at the retreat, but after coming back and getting into the normal hectic life, that feeling of calmness fades away with time.
2. The Buddha compared such meditation techniques to riding a mule. His most recommended method was "vipassana pubbanga samatha", which he compared to riding a race horse.

- Vipassana means "sort out and get rid of undesired thoughts that come to the mind", pubbangama means precedes, and samatha is calming the mind or attain samādhi.
- Thus in "vipassana pubbanga samatha" meditation, when one does the vipassana bhāvanā, it automatically leads to samatha or samādhi and (Ariya) jhānā.

3. In the Ariya bhāvanā or the "vipassana pubbanga samatha", one's mind is constantly working to GET RID OF the defiled thoughts, not merely to suppress them as in the Anariya version. As one cultivates this Ariya bhāvana aver time, the five hindrances are slowly REMOVED from the mind and the mind gradually shifts towards a permanently calm state. Thus, it becomes easier and easier to attain samādhi, since the five hindrances are gradually removed.

- We talked about a contaminated water well in "The Basics in Meditation" post above. In Anariya bhāvana what is done is basically let the dirt to settle to the bottom of the well by not further stirring the water. The water eventually becomes relatively clear, but in a new session one needs to do it all over.
- In contrast, in the Ariya version, one is constantly REMOVING dirt from the well. Therefore, session after session dirt is removed, and eventually there will be very little dirt to remove and thus the mind will get to samādhi very quickly.

4. In the beginning, it is better to do formal meditation sessions. As one gains practice, one could do it while waiting in the doctor's office or riding a bus.

- First, sit in a quiet place as described in the "The Basic Formal Ānāpānasati Meditation" post. Close your eyes and let the mind relax. Thoughts will invariably start popping up. Disregard any neutral thoughts and immediately get rid of any greedy or hateful thoughts as they start coming up.
- It will be helpful to contemplate the negative consequences of such thoughts.
- For example, if thoughts about an unkindly deed someone did to you comes to the mind, think about the bad consequences of "doing tit for tat": that will only enhance and cultivate defilements in YOUR mind. We do not have control over what others do; but we can control our minds. The more your mind becomes free of any hateful thoughts, the chances of having to face such adversary situations will diminish. You may be surprised, but that is true. Just have perseverance for a few weeks.
- In another example, if you start thinking a greedy thought, say for a tasty, high calorie snack, think about the bad consequences (gaining weight, getting addicted to such impulsive thoughts, etc), and also think about being able to have the confidence of self-control.

5. Do not try to remove all thoughts that come to the mind. This is very dangerous advice that some meditation teachers give. We need to remove ONLY those thoughts that have greed, hate, or ignorance associated with them.

- If any good, meritorious thoughts come to the mind, cultivate them; think further along those good thoughts. It could be a good deed that you did like helping someone, or an alms giving that you participated in, etc.
- If neutral thoughts come to the mind, let them just pass by. Do not cultivate them, but do not try to suppress them either.

6. It could be hard to do this in the beginning. But if you really want to make progress (chanda), can have the determination (citta), make the effort (viriya), and actively engage in looking at the bad consequences of bad thoughts and the possible benefits of good thoughts (vīmainsā), you WILL make progress, AND it will get easier with time. These four iddhipāda will also be cultivated on the way; see the post on "The Four Bases of Mental Power (Cattāro Iddhipāda)".
7. When you actively suppress kāmachanda (excess greed) and $v y \bar{a} p \bar{a} d a$ (hate) by this procedure, the other three hindrances (thina middha, uddhacca kukkucca, and vicikicch $\bar{a}$ ) will automatically reduce. Thus all five hindrances will be gradually removed and your mind will become "free of gunk". See the post on "Key to Calming the Mind - The Five Hindrances".
8. As you make progress, your mind will gain a calmness, a relief, that is permanent. It will get easier and easier to "get to samādhi". The Buddha compared the relief gained by this bhāvana as follows: paying off a big loan that had been a burden to the mind, being released from jail, recovering from a major disease, gaining freedom from slavery, and reaching safety after crossing a dangerous desert. If someone has all those five experiences at the same time, the Buddha said, that is the kind of relief one gets by removing the five hindrances.

- This is the nirāmisa sukha that one gains, when one approaches Nibbāna or Nivana; see the post, "How to Taste Nibbāna". Nibbāna is "cooling down", it cannot matched by any sense pleasure, and it is permanent. One can experience it in varying degrees as one cultivates this Ariya meditation.

## XIII Abhidhamma

### 13.1 Abhidhamma - Introduction

Revised January 9, 2019; August 4, 2019; September 8, 2019; July 19, 2022 (\#9 added); July 25,
2022 (\#10-11 added)

1. "Abhi" means "higher" or "deeper." Thus Abhidhamma is a more in-depth, fundamental description of Buddha Dhamma.

- The result is the same as the material in the sutt $\bar{a}$. Still, Abhidhamma provides a "bottom up" description of the existence, starting with 82 "most basic units" within the four ultimate entities of citta, cetasika, rūpa, and Nibbāna. That was a monumental task, and it took almost 500 years to finalize it at the third Buddhist Council.
- The 81 'basic units" that make up this world are one pure citta, 52 cetasika, and 28 types of $r \bar{u} p a$. Depending on the combinations of cetasika that arise with citta, 89 (or 121) types of contaminated citta (or viññāna) can occur. That will become clear as we discuss it further.
- Abhidhamma Pitaka is fully consistent with the other two Piṭaka of the Tipiṭaka.

2. In the suttā, the Buddha explained the Dhamma concepts using everyday language. And most people can attain Nibbāna without knowing anything about Abhidhamma.

- However, one could study Abhidhamma and see WHY Buddha Dhamma is not a religion but is the ultimate explanation of nature, the Grand Unified Theory. That can lead to a "faith-based understanding" of Buddha Dhamma. It has a thousand-fold more explanatory power than modern science. And for those who like to "get to the bottom of understanding something," Abhidhamma will bring joy to the heart.

Let us take the example of making a cake:

- All one needs to know are the ingredients and how to mix them, and the proper procedures to bake them. That is analogous to sutt $\bar{a}$.
- Abhidhamma's approach is comparable to starting at the atomic level of the ingredients. Then one can describe how those fundamental entities combine to make flour, oil, eggs, etc. Furthermore, one would know the choice of those ingredients and WHY the cake needs to baking at a specific temperature.
- It is mind-boggling what Abhidhamma can accomplish.
- However, instead of being a boring "recipe book," learning Abhidhamma can be a delightful experience if one starts with an understanding of the basics. Furthermore, one can get a much deeper understanding of the Dhamma concepts.

3. Abhidhamma provides a complete, consistent description of the whole existence (encompassing the 31 realms). With this description, there can be no unexplained phenomena at any level. A logician like the late Dr. Kurt Gödel could have a great time with it; see "Gödel's Incompleteness Theorem."

- The scope of Abhidhamma is somewhat comparable to what the scientists are trying to do with a Grand Unified Theory to describe the behavior of inert matter. Einstein devoted the latter part of his life to developing one and failed, and scientists are still far from achieving it. And even if accomplished, it will be able to describe ONLY the behavior of inert matter, not of living beings.

4. Abhidhamma is the Grand Unified Theory of the Buddha. I introduced it in the post, "The Grand Unified Theory of Dhamma." In this Abhidhamma section, I will try to provide further details. My goal is to describe it in an easy-to-grasp simple manner.

- When I taught physics to undergraduate students, I told them not to memorize anything but to grasp the essence of the material. Many students (and adults) try to memorize descriptions of a concept but have no idea how to apply that concept. I used to give them all the complex equations and any other hard-tomemorize material in the tests; what they needed to do was to apply them in solving problems.
- My approach is the same here. For example, in the "Tables and Summaries" post, different types of cittā (loosely-speaking "thoughts") are listed. There is no need to memorize them. One should understand a given Dhamma concept starting from the basics: for example, which citt $\bar{a}$ are immoral and can lead one to rebirth in the $a p \bar{a} y \bar{a}$ and WHY.

5. For example, a key concept in Buddha Dhamma is saññā (translated to English as "perception"). But it is much more complicated than "knowing and identifying an object"; see "Sañ̃ña - What It Really Means."

- One of my first goals in the Abhidhamma section is to describe sañ $\tilde{n} a$ and the critical role played by the brain. For that, we first need to understand the connection between the brain and the mind (they are NOT the same). See "Brain - Interface between Mind and Body."
- Abhidhamma can make one addicted to it, as I have become addicted to it. When one starts to grasp how this complex world works, understanding even a bit more of it can bring joy to the heart.

6. However, I must say that even if one can understand the whole of the Abhidhamma theory, one MAY NOT understand the Buddha's message. One must understand the true meanings of anicca, dukkha, and anatta.

- I had so many unresolved questions on parts of Abhidhamma until I listened to the first desana from one of my teachers on July 30, 2013, on anicca, dukkha, and anatta. It was like lifting a fog, and by the end of that desanā, I knew I would be able to 'fill in the blanks" to improve my understanding.
- Abhidhamma can solidify and "fill in the blanks" of Buddha Dhamma from the suttā, which can be exhilarating.

## Background of the Development of Abhidhamma Theory

7. Following is a brief background on how the Abhidhamma Piṭaka of the Tipitaka was developed over roughly 250 years by the lineage of bhikkhus, starting with Ven. Sāriputta. Of course, Ven. Sāriputta was one of the two chief disciples of the Buddha: While Ven. Mahā Moggallāna excelled in supernatural powers, Ven. Sāriputta excelled in Dhamma. He was only second to the Buddha in Dhamma knowledge.

- The minute details on the structure of a citta vīthi (a series of citta) of 17 thought moments, with each citta lasting sub-billionth of a second, can be seen only by a Buddha. The Buddha described such minute details to Ven. Sāriputta. Then Ven. Sāriputta and his group of bhikkhus (and their subsequent lineage) completed the monumental task of making a complete description of the Abhidhamma theory, starting with the fundamental entities.
- As I mentioned earlier, that is a million times more complicated task than putting together a Grand Unified Theory of inert matter (as scientists are attempting to do today). Because a living being has an inert body but a complex mind which makes that inert body "alive."

8. At the First Buddhist Council, just three months after the Parinibbāna of the Buddha, only a theoretical framework was recited. More was added at the second Council, and the task was completed only at the third Council. This completed Tipitaka was written down in 29 BCE at the Fourth Buddhist Council; see "Preservation of the Buddha Dhamma."

- A false statement in many books is the following statement. Abhidhamma was "invented" by bhikkhus after the Parinibbāna of the Buddha.
- Those who make such statements have not either studied Abhidhamma or have not been able to understand the in-depth analyses in Abhidhamma. The minute details of the very fast citta vīthi are discernible only to the mind of a Buddha.
- It is essential to realize that hundreds of Arahants at the Fourth Council wrote the whole Tipitaka. That included the complete Abhidhamma Piṭaka.

9. The description of the events leading to the First Buddhist Council, just three months after the Parinibbāna of the Buddha, is described in the "WebLink: suttacentral: 21. Pañcasatikakkhandhaka" section of the "Cūlavagga" of the "Theravāda Vinaya Piṭaka."

- At the end of that section is a small section with the title, "Tassuddānaim." That summarizes the events of the First Council.
- The following verse is in there: "Upālim vinayam pucchi, suttantānandapaṇ̣itaín; Piṭakaim tīni saǹgītim, akaìsu jinasāvakā."
- That says: "Venerable Upāli recited the Vinaya (Upäliim vinayaim pucchi,) Ven. Ānanda recited the Suttas (suttantānandapanditaim or suttanta annanda panditaì), and all of the 500 Arahants present recited ALL THREE Piṭaka (Piṭakaì tīni sañgītim, akainsu jinasāvakā.) [tīni : see tayo. tayo: [nom. plu. of $t i$ ] three (persons).]
- Thus, there is clear evidence that all three Piṭaka of the Tipiṭaka were recited at the First Council.
- However, only a basic framework of Abhidhamma was available at that First Council. Further refinements/expansions were added to the Abhidhamma Pittaka at the Second and Third Councils. The finalized version was written down at the Fourth Council.

10. In the "Introduction" to his book (Ref. 1), Bhikkhu Bodhi has a subsection on "The Origins of Abhidhamma" (see pp. 9-11 of Ref. 1.) There, he has provided a brief background which I will summarize.

- The Buddha explained Abhidhamma in detail to an assembly of Devas in the Tāvatimsa Deva realm over three months. Each day, the Buddha would descend to Earth for his almsround, meet Venerable Sariputta, and give him a summary of that day's discourse.
- Having learned Abhidhamma from the Buddha, Ven. Sariputta taught it to his 500 student-bhikkhus. However, they had to expand that summary to the form we have in seven books today. That task was completed only by the Third Council, as mentioned in \#9 above.
- The "WebLink: suttacentral: Lomasakangiyabhaddekaratta Sutta (MN 134)" confirms that the Buddha spent in the Tāvatimsa Deva realm: "Ekamidaì, bhikkhu, samayamं bhagavā devesu tāvatimsesu viharati pāricchattakamūle paṇ̣ukambalasilāyam.." OR "One time, the Buddha was staying among the Devas of Tāvatimsa realm."

11. There is also a verse close to the beginning of the "WebLink: suttacentral: Dhutañgapañha (Mil 6.4.2)" section of "Milindapañha" of the Tipitaka directly saying that. It is in Ven. Nagasena's answer to a question by King Milinda on the vast numbers of humans and Devas who attained magga phala while listening to the Buddha.

- "..Nagare rājagahe paññāsasahassāni tīni ca satasahassāni ariyasāvakā bhagavato upāsakaupāsikāyo, puna tattheva dhanapālahatthināgadamane navuti pānakotiyo, pārāyanasamāgame pāsāṇakacetive cuddasa pānakotiyo, puna indasālaguhāyaì asīti devatākoṭiyo, puna bārānasiyaì isipatane migadāye paṭhame dhammadesane atṭhārasa brahmakotityo aparimān̄ā ca devatāyo, puna tāvatimsabhavane panḍukambalasilāyam abhidhammadesanāya asīti devatākotiyo,."
- The "WebLink: suttacentral: English translation (Mil 6.4.2)" there is as follows: "..In the city of Rājagaha three hundred and fifty thousand devout laymen and devout laywomen, disciples of the Blessed One, were walking in the Paths. And there again at the taming of Dhanapāla the great elephant nine hundred million living beings, and again at the meeting at the Pāsānika cetiya on the occasion of the Pārāyana discourse one hundred and forty million living beings, and again at the Indasāla cave eight hundred millions of gods, and again at Benares in the deer park Isipatana at the first preaching of the Dhamma one hundred and eighty million Brahmā gods and innumerable others, and again in the heaven of the Thirty-Three at the preaching of the Abhidhamma on the Pandu Kambala Rock eight hundred millions of the gods,."
- Much merits to the reader TripleGemStudent for providing me with this reference.

## Weakening of Buddha Sāsana

12. The absence of Arahants (in significant numbers) started around the second century CE and coincided with the rise of Mahāyāna and the "contamination" of Theravada, which culminated in the Visuddhimagga of Buddhaghosa; see "Historical Timeline of Edward Conze."

- As we discuss more topics, it will become clear that only Arahants with superior mental power can accomplish the complex task of completing the Abhidhamma Pitiaka. It was compiled without an easy way of recording, let alone having access to computers.
- I have given a breakdown of the Abhidhamma Piṭaka in the post, "Preservation of Dhamma."

13. August 12, 2015: I have brought the subsections on "Mind and Consciousness" and "Gandhabba (Manomaya Kāya)" from "Dhamma Concepts" to the "Abhidhamma" section since it is imperative to understand those basic concepts first. Reading those subsections (and "Citta and Cetasika") is a good idea before reading further in the Abhidhamma section.

- It is not necessary to understand the material in all those essays. But the more of those basic concepts one understands, the easier it becomes to grasp the content in subsequent articles.
- Also, we all keep increasing our understanding as we learn Dhamma. I learn new things daily and update the posts as much as possible. The more one learns, the more one can "see the inconsistencies" in other versions of "Buddhism," and possibly in my essays; some of these posts date back to 2014. Please don't hesitate to point out any inconsistencies on this website. I would be grateful. There is a "Comments" tab under each post.

14. September 8, 2019: I have written a series of posts in a new subsection to introduce fundamental concepts in Abhidhamma at "Essential Abhidhamma - The Basics."

## REFERENCES

1. "WebLink: PDF Download: Bhikkhu Bodhi-Comprehensive Manual of Abhidhamma," by Bhikkhu Bodhi (2000); this is a revised and updated version of Ref. 2 below. A pdf file can be downloaded (click the link to open the pdf).
2. "WebLink: PDF Download: A Manual of Abhidhamma," Fifth Edition by Narada Thero (1987).
3. "WebLink: PDF Download: Buddha Abhidhamma - Ultimate Science," by Dr. Mehm Tin Mon; this is a very good FREE publication (click the link to open the e-book); please read the following warning about all three references.

Unfortunately, some concepts in all three references are not correct. In particular, most existing Theravāda texts (except the Pāli Tipiṭaka of course) have incorrect interpretations of anicca, dukkha, and anatta. Also, in all three references, kasina and breath meditation is presented as Buddhist meditations. I will try to point out such problems in relevant posts.

Cetasika - Connection to Gati

### 13.2.1 Amazingly Fast Time Evolution of a Thought (Citta)

August 23, 2018; revised (\#18 added) September 12, 2018; January 6, 2019; May 16, 2020; September 22, 2021

## Introduction

1. Even though only one word in the English language ("thought") describes "a unit of cognition" or "a thought," the Buddha explained that such a "thought" arises as a citta, and goes through nine stages of "contamination" to become viññānakkhandha. What we experience is this viññānakkhandha of the "aggregate of viññāṇa." See, "The Five Aggregates (Pañcakkhandha)."

- However, even a contaminated citta is still called a citta for convenience, even in the sutt $\bar{a}$. So, one needs to determine the meaning depending on the context. One needs to have an idea of those nine stages.
- Some of these terms in the nine stages are used interchangeably to as "a thought" in many Buddhist textbooks and internet sites on Buddhism (e.g., citta, mano, viñ̃̃āna.) That is NOT correct.

2. I will make this a post simple because everyone must get the basic idea of how a thought is "contaminated" within a split second.

- It is not possible to stop the contamination of a citta within such a short time. I have even seen some well-known, and respected Dhamma teachers say that one can willfully keep a "pabhassara citta" (uncontaminated citta) from being contaminated.
- I hope this post will make it clear that such a thing is not possible. One's cittā are contaminated depending on one's gati and the sensory input (ārammana) in question. The key to STOPPING cittā from getting contaminated is to change one's gati over time.
- That is done by following the Noble Path, and specifically by practicing the correct $\bar{A} n \bar{a} p \bar{a} n a$ and Satipaṭ! $\mathrm{ta} n a$ Bhāvanā. Not by the "fake breath meditation." That will become clear by the end of the post.

## Nine Stages of a Thought (Citta)

3. Those nine stages of contamination during the lifetime of the fundamental unit of cognition (within a billionth of a second) are citta, mano, mānasan, hadayan, pandaran, mano manāyatanam, mana indriyam (or manindriyam), viññāna, viññānakkhandha. [Yaí cittaì mano mānasaí hadayaì paṇ̂araí mano manāyatanamं manindriyaim viññānamं viññānakkhandho...] A Tipitaka reference is given in the post, "Pabhassara Citta, Radiant Mind, and Bhavanga.""

- Amazingly, these nine steps occur within a split second, and the Buddha said there are billions of citta arising within the blink of an eye. Each citta has three stages: uppāda, țhiti, bhañga (rising, stability, dissolution). Those nine steps occur before it comes to the bhanga or the termination stage.
- It may be hard to believe, but we can prove this true with the following example.

4. Suppose three people A, B, C, are sitting in a small coffee shop. They are all facing the door, and person X walks in. Suppose that person $X$ is a close friend of $A$, the worst enemy of $B$, and that $C$ does not know X . We will also assume that all are males.

- So, let us see what happens within a split second. A recognizes X as his friend, and a smile comes to his face. B recognizes X as his enemy, and his face gets darkened.
- On the other hand, C's mind does not register anything about X , and X is just another person to him. He immediately goes back to whatever he was doing.

5. That is an example of a "cakkhu viñ̃̃äna," a "seeing event." It is over within a split second, just like taking a photo with a camera takes only a split second, where the image in captured on the screen instantaneously.

- However, something very complicated happens in a human mind when a "seeing event" occurs.
- It is critically important to go slow and analyze what happens to see how complicated this process is (for a human mind) to capture that "seeing event." It is far more complex than just recording "a picture" in a camera.

6. Within that split second, A recognizes X as his good friend, and pleasant emotions arise in his mind, and he becomes happy. B recognizes X as his worse enemy, and destructive emotions arise in his mind, and he becomes angry. On the other hand, C identifies X as a man or a woman, and no feelings occur.

- We don't think twice about these observations usually. But if one carefully analyzes what happens, one can easily see that this is an amazingly complex process.
- How does the SAME "seeing event" (seeing X) lead to all these very different changes in the minds of three people? (and the emotions even show up on their faces!)
- No one but a Buddha can see this fast time evolution of a citta.
- The Buddha has analyzed this process in minute detail. We will discuss only the critical basic features here.

## Nothing Faster in the World Than the Arising of a Citta

7. Buddha said it is hard to find any phenomena in this world that change faster than the mind: "WebLink: suttacentral: Añguttara Nikāya (1.48)."

The short sutta says: "Nāhaín, bhikkhave, aññai் ekadhammampi samanupassāmi yaí evai் lahuparivattaì yathayidaì cittaì. Yāvañcidamं, bhikkhave, upamāpi na sukarā yāva lahuparivattaì cittan"ti."

Translated: "I consider, bhikkhus, that there is no phenomenon that comes and goes so quickly as citta. It is not easy to find an analogy (a simile) to show how quickly citta can change."

## Three Features of a Seeing Event (Cakkhu Viññāṇa)

## 8. The "seeing event" has three essential features:

- One gets into an emotional state (pleasant, unpleasant, or neutral, which is called sukha, dukha, and upekkhā in Pāli), which is vedana $\overline{\text {. }}$
- One recognizes the object, and that is called sañña.
- Based on vedanā and saññā, one also generates other mental characteristics such as anger, joy. Those are none other than sañkhāra.
- Of course, this holds for all six types of vipāka viññāna.

## 9. Viñ̃āana is the overall sense experience encompassing all those three: vedanā, sañ̃̄ā, sañkhāra.

- But viññāna can be more than the sum of those three. See, "Viññāna - What It Really Means."
- We can safely say that viññanna (or more correctly viñ̃äṇakkhandha) is the overall sensory experience, INCLUDING one's expectations based on that sensory experience. That is why one's facial expressions may change too, according to such expectations.

10. So, we can see that those three people, A, B, and C will have three different "states of mind" upon that seeing event (ārammaṇa).

- That "mindset" with a set of vedanā, sañ̃ $\bar{a}$, and sañkhāra is called a viñ$\tilde{n} \bar{a} n a$.
- Viññāna is the overall sensory experience that includes all those. And that takes place within a split second.
- There are six types of vipāka viññāṇa corresponding to the six sense faculties. See, "Viññāna - What It Really Means."

## Importance of Character/Habit (Gati)

11. Several key important basic features come out from this simple example.

- There is no single entity called "viñãāna." When we hear something a "sota viñ̃̄āṇa" arises, when we taste something a jivhā viññanna occurs, etc. Altogether six types of vipāka viññ̄ana are associated with the six sense faculties we have. Those are cakkhu (see), sota (hear), ghāna (smell), jivhā (taste), $k \bar{a} y a$ (touch), and mano (mind).
- Any of those will lead to the following outcomes: Sukha, dukha, or upekkhā vedanā arise. One recognizes what type of picture, sound, etc., and that is (saññ̄ $\bar{a}$.) Then other types of cetasika occurring (called sainkhāra) depending on the ārammaña (sound heard, etc.) AND the "nature" of the person (character/habits or gati).
- Gati is sometimes written as gathi as is pronounced in conventional English. However, there is a "Tipitaka English convent" adopted in the 1800s to keep the words short; see, "Tipitaka English" Convention Adopted by Early European Scholars - Part 1."
- Each person has a unique (but changing) set of good and bad gati. I am not going to discuss this here, but there are many posts on the website on gati.

## Dependence on the "Thought Object" (Ārammana)

12. Let us take a different scenario. Let us assume that X is B 's girlfriend - who is not in good terms with A - and that C is a young male who has never seen X .

- Now, we see that the moods of A and B will reverse. A will be instantaneously unhappy to see X , and B will be happy to X .
- Regarding C, the situation could be different than before. If X appears attractive to him, C may instantaneously form a lustful state of mind.

13. So, we see that the type of cakkhu viñ̃ān̄a depends primarily on two things. It depends on the person experiencing it and the sense object in question (called an ārammaṇa in Pāli).

- In the above two cases, A and B experienced different types of vipāka viñ̃ñaña (seeing something "good" or "bad.") But their experiences reversed when the sense object changed (situation in \#4 versus that in \#12.)
- In the case of C seeing an attractive woman, even though he had no prior contact with her, lustful viññāna arose in C, due to his "lustful" gati.
- If C were an Arahant, C would only generate a upekkhā viññāṇa when seeing the X. An Arahant has removed all gati; one needs to learn about gati to understand this point.

14. Now we see that for a given person, there is no permanently set of good or bad viñ $\tilde{n} \tilde{a} \boldsymbol{\eta} a$. What kind of viññan̄a arises depends on the gati of the person and the sense object.

- We usually call someone a "good person" based on their overall character, i.e., if that person displays more "good character" than "bad character" over time. But only an Arahant can be called a "definitely a moral person," acting $100 \%$ morally all the time.
- Even though this is a complex subject, the basic features are those mentioned above. One needs to analyze different situations in one's mind to get these ideas firmly grasped. That is actual vipassanā meditation!
- One needs to understand how the mind works to make progress on the Path. The Buddha said that the world had never known his Dhamma. And it has the MIND in the forefront. Furthermore, the mind is the most complex entity in the world.

## Simple Explanation of the Nine Steps

15. The first stage, citta, is just awareness that comes with the "uncontaminated" vedanā and saññā and five other universal mental factors (cetasika): phassa, cetanā, manasikara, ekaggatā, and jivitindriya. One is just aware that one is alive and is experiencing something.

- At the "mano" stage, the mind has "measured" what the object is (〇 ßீ๑ [mcenīma or Measurement] in Sinhala). For example, whether it is a tree or a human or a bird.
- In the following "mānasaì" stage, the mind can distinguish among different species. For example, whether it is just a woman or one's mother or a parrot or a hummingbird. That is the "pure and complete awareness": one sees the external world as it is. An Arahant‘s mind will not contaminate beyond this stage.
 attached to the object (or repulsed by it) based on one's prior experiences and gati.
- This attachment gets stronger in the following several stages, and by the time it reaches the viñ̃āna stage, it can be fully "corrupted."
- Finally, that viñãāna gets incorporated to the aggregate of viññāṇa or the viññannakkhandha. With each thought, the viññānakkhandha grows.

17. One crucial observation is that C's mind stopped at the "mānasam" stage. (That is only partially correct, but we don't need to get to details here). However, in the second example, it got contaminated.

- Of course, an Arahant‘s mind will never get contaminated beyond the "mānasan" stage for ANY sense object.
- Specifically, no lobha, dosa, or moha will arise in an Arahant, regardless of what the sensory input.

18. Hopefully, the above basic description will clarify how a citta gets contaminated automatically according to one's personality (gati) and the sense object.

- The critical point is that we do not control those initial citta that arises automatically at the first exposure to the sense object.
- However, when we become aware of this initial response, we CAN control our subsequent citta by being mindful. That is the key to $\bar{A} n a \bar{p} a \overline{n a}$ and Satipatṭhāna meditations and is a different topic. For details, see "Bhāvanā (Meditation)" and "Living Dhamma" and "Paticca Samuppada" sections.

19. Finally, another critical point is that the six types of viñāāna that we just discussed are all vipāka viññāna. These arise due to past kamma, i.e., as kamma vipāka.

- Then there are kamma viñ̃̃āña that we create ourselves; see, "Kamma Viññāna - Link Between Mind and Matter."
- When the Buddha said that we need to stop defiled kamma viññanna from arising, he was referring to the kamma viñ̃āạna. We have control over kamma viññāna. But we do not have control over vipāka viññāna, which are due to past kamma.
- Details on kamma viññāna in the post "Do I Have "A Mind" That Is Fixed and "Mine"?". At a given moment one's state of mind depends on one's gati (character and habits) AND the external sense object.

### 13.2.2 <br> The Amazing Mind - Critical Role of Nāmagotta (Memories)

September 6, 2018; revised September 7, 2018; October 7, 2019; March 10, 2020; June 6, 2021; June 10, 2021; September 16, 2021 (revised \#1); September 22, 2021 (revised \#1)

## Nāmagotta (Part of Pañcakkhandha) Are Memories

1. Here, we will discuss the critical importance of nāmagotta (our memory records). This discussion will be helpful in understanding the post. "Anatta in Anattalakkhana Sutta - Part 1."

- It is important to note that "nāmagotta" has records of all our past events. As we know, each aggregate (khandha) includes all past events. For example, $r \bar{u} p a k k h a n d h a$ includes the $r \bar{u} p a$ we are experiencing now and all past rūpa we have experienced. See, "Difference Between Physical Rūpa and Rūpakkhandha." That holds for the other four aggregates too. Thus, nāmagotta consists of the "past components of pañcakkhandha."
- Let us take person X. If someone shows $X$ an apple, he will say, "that is an apple, and I know how it smells and tastes." Suppose X loses all memory right after that. Now, will X be able to identify that as an apple? Of course not.
- That is another amazing thing about the mind. It can search one's previous experiences with a given object (in this case, an apple) and remember what an apple looks like, tastes like, etc., i.e., all the distinctive properties of an apple. And it can do that in a billionth of a second!
- We discussed this in detail: "Amazingly Fast Time Evolution of a Thought (Citta)."

Important Aside: A mind is constantly interacting with pañcakkhandha and also constantly adding to the pañcakkhandha.

- Pañcakkhandha becomes panca upādāna khandha (pañcupādānakkhandha) when the mind attaches to an ārammaṇa based on gati (character/habits). That initial "attachment" happens within a billionth of a second.
- But if we are mindfiul, we can stop that "attachment" when it is leading to unwise actions. That will slowly change our gati. That will lead to better responses to various types of a $\begin{gathered}\text { rammana over time. That is the }\end{gathered}$ basis of true Ānāpānasati/Satipaṭthāna.
- Of course, practicing Ānāpānasati/Satipatt thāna becomes easier with a true understanding of the anatta nature. Then the mind will wee the unfruitfulness of especially immoral deeds seeking temporary pleasures.)

## Without Memories, There Would Be Only Be a Zombie (or a Robot)

2. Think carefully about the following. If X loses all memories, he will not know what to do with a plate of food put in front of him; he would not identify that as a pizza, a sandwich, etc.

- X will not know how to go home if he is at work when memory loss happens. X would not know even what is meant by "home" and that he is supposed to go home at a particular time.
- If he gets the urge to go to the bathroom, X will not know where the bathroom is.
- You can think about the zillions of things that we take for granted every day that X will not be able to do. X will not be able to function at all!

3. That is why a baby of a few months of age does not recognize anything and does not have any control over "bathroom functions."

- A baby's brain is not developed and thus cannot make contact with the mano loka, where memories are; see, "Nāmagotta, Bhava, Kamma Bīa, and Mano Loka (Mind Plane)" and "Recent Evidence for Unbroken Memory Records (HSAM)."
- Thus a baby is TOTALLY dependent on parents until about a year old until the brain develops to some extent.
- The manasikāra cetasika helps put together memories based on the "rūpa" received from the brain.

## Perception or Identification (Sañ$\tilde{n} \bar{a}$ ) Requires Memories

4. Now, suppose that person X , who has lost all his memories, takes a bite of the apple. Of course, he will taste the sweetness, but he will not be able to IDENTIFY that as "apple taste."

- Furthermore, X may not even generate a liking or the desire to take another bite unless he is hungry.
- That also proves that the CRAVING for the taste of apple was not in the apple. Cravings are associated with one's āsava. And those āsava cannot manifest unless one's memories are intact and hidden anusaya can be triggered.

5. With his memories lost, X's vedanā and saññ̄a will be pretty close to "uncontaminated" pabhassara citta. He will experience a taste (without identifying it as a taste of apple). But he will not generate any sobhana or asobhana cetasika based on any type of attractive or repulsive sense input.

- But of course, he has not attained the Arahant stage. His āsava will be with him, just as a newborn baby will have all its $\bar{a} s a v a$ with it.
- If X lost his memory due to brain damage, his $\bar{a} s a v a$ would not resurface until the next birth if the brain is permanently damaged.
- Details at "Āsava, Anusaya, and Gati (Gathi)." Many examples are discussed in, "Patient H.M. Different Roles of Brain in Memory."

## The Account of Patient H.M.

6. That has happened to a person, and his story is in the book "Patient H.M. : A Story of Memory, Madness, and Family Secrets" by Luke Dittrich.

- Here we must remember that our memories are in the nāma loka can be recalled only by the mana indriya in the brain. See, "Namagotta, Bhava, Kamma Bija, and Mano Loka (Mind Plane)," "Memory, Brain, Mind, Nama Loka, Kamma Bhava, Kamma Vipāka," "Gandhabba Sensing the World - With and Without a Physical Body," and "Brain - Interface between Mind and Body." One needs to spend some time clarifying this key concept.
- The surgeons had inadvertently removed part of the brain of "patient H.M." that contained the mana indirya (surgeons were trying to stop regular seizures that the patient was experiencing by removing tiny parts of his brain).
- With more studies in the future, we may identify the mana indirya in the brain.

## Brain is Required to Capture the External Sensory Object

7. That is why a newborn baby (within a year or so from birth) has a minimal perception capability. The brain has not developed to process all the information that comes through the sense faculties.

- Therefore, a newborn baby's brain cannot transfer anything useful to the hadaya vatthu to identify objects or match each with the set of āsava/anusaya and generate cravings or dislikes for that sensory input.
- A baby's hidden āsava will not show up until its brain develops. According to the Buddha, the brain function attains its total capacity around seven years of age: One can even attain Arahanthood if one is over seven.
- The role of the brain is discussed in "Brain and the Gandhabba" and "Brain - Interface between Mind and Body." Those who really want to investigate this issue can find a lot of information there. I have tried to present a consistent picture using both Buddha Dhamma and recent scientific findings.

## The Difference Between an Arahant and Patient H.M.

8. We can get a good idea of how Arahant's mind works by considering a person X discussed in \#1 through \#5 above (or patient H.M. IN \#6) who has lost all his memories. The only difference is that X or H.M., all anusaya are intact, but they cannot be "triggered."

- For an Arahant, all gati and āsava/anusaya have gone away via cultivating pañ̃̃ā.
- But an Arahant will have all his memories intact. If he has developed abhiññā powers, he will be able to recall memories not only from this life but many, many lives in the past.

## Habits/Cravings (and Thus Gati and $\overline{\text { Asava/Anusaya) Change With Time }}$

9. Most of our cravings are associated with our past habits and desires. Each person has a unique set, AND that set of habits/cravings will change over time.

- All gati and āsava/anusaya arise or — are with oneself — because of the inability to get rid of evils due to ignorance of the fundamental nature of this world: anicca, dukkha, anatta, asubha, etc.
- When one is on the Path, one will gradually get rid of "bad gati" and cultivate "good gati." Then, at some point, one will be able to comprehend the anicca nature. Then one's pañ̃̄n̄ will grow leading to the PERMANENT removal of anusaya in four stages of Nibbāna.
- One should read up on those Pāli terms if one does not understand them. Translating those terms to English does not make sense because no single English word will convey the same meaning as a Pāli word.
- That is NOT memorization. One should comprehend what is MEANT by a Pāli word, not memorize it.

10. Suppose X is a young male. When X - if he has lost ALL his memories - sees an attractive woman, he will see her as an attractive person. But he will not generate any lust for her, no matter how beautiful she is. It is just "seeing" for him. Note here that he would have lost all memories regarding his past sexual activities (in fact, this is why a baby does not generate sexual thoughts.)

- That "picture," which comes to mind, cannot match it with X's past experiences with women. His kāma rāga anusaya is still there but not awakened. The same is true for a baby.
- Similarly, X will not generate any angry thoughts when seeing "an enemy"; he does not recollect the past encounters with the person.
- In the same way, X may touch a red-hot iron because he has no idea that it can burn.
- That is also why babies touch or even try to eat anything and everything. They have no prior experience that some of those could be harmful. In the same way, until that baby grows up and has had sexual experiences, kāma rāga anusaya will stay dormant.
- To emphasize, in the case of X, he had NOT his hidden defilements (anusaya.) IF he gets his memories back, his lust towards attractive women or anger towards an old enemy will trigger. We can make it even simpler: If you lose ALL your memories of your father, would you be able to recognize him when you see him? If you cannot recognize him, would you generate affectionate thoughts when you see him? Of course not.
- There are several real-life medical situations where people had lost memories due to different reasons: "Patient H.M. - Different Roles of Brain in Memory."

## "Live in Just the Present Moment"?

11. These days, there are many "philosopher-types" (like Ekhart Tolle or even Buddhist teachers) who say "forget the past and live in the moment."

- That is utter nonsense.
- One CANNOT forget the past AND live in the present. The Buddha said to live the present moment mindfully, making sure not to make bad decisions.
- The Buddha had a perfect memory. He could remember things as far back as he wished. Often he would give accounts of what had happened in past lives and teach people how to learn lessons from the past.

## An Example from the Tipitaka

12. Finally, in the beginning of the "WebLink: suttacentral: Mahāmālukya Sutta (MN 64)," the Buddha points out this fact that sakkāya ditthi cannot arise in a new-born baby. That is because of what we discussed above. There is no way to trigger the hidden anusaya in that baby's mind.

- To quote the above translation: "For a young tender infant lying prone does not even have the notion 'identity,' so how could identity view (sakkāya diṭthi) arise in him? "
- The Pāli verse is: "Daharassa hi, mālukyaputta, kumārassa mandassa uttānaseyyakassa sakkāyotipi na hoti, kuto panassa uppajjissati sakkāyadițthi? ."
- I had forgotten the name of the sutta. Thanks to reader Siebe for pointing this out at the discussion forum.

### 13.2.3 Citta and Cetasika - How Viññāṇa (Consciousness) Arises

## Revised February 17, 2020

## Necessary Background

1. It is a good idea to read the posts, "Amazingly Fast Time Evolution of a Thought (Citta)" and "Viññāna What It Really Means" first.

- It may be a good idea to read at least the introductory post on the manomaya kāya before reading this post: "Gandhabba (Manomaya Kāya) - Introduction."
- When one learns Abhidhamma, one can see why the Buddha rejected both "self" and "no-self" concepts. A "living being" is a momentarily changing entity. It is not possible to say "it does not exist,"
because it does exist. It is just that it continuously evolves ON ITS OWN PATH determined by "gati" at each stage. There is a "dynamic self," which has its own identity or personality or "gati" (which also evolve.)

## Citta and Cetasika Arise Together

2. The name citta came from "chitra," the name for a painting in Pāli or Sinhala. A pure citta has only seven mental factors (cetasika). Cetasika provide "colors for the picture," so to speak.

- But the seven cetasika that are in every citta (universal cetasika or "sabba citta sadharana cetasika") may be considered "colorless." A pure citta is like a blank sheet of paper on which these "snapshots" painted.
- There are a set of 14 "bad cetasika" and a set of 25 "good cetasika." For a rough visual, we may think of the "bad cetasika" as dark colors (black, brown, etc.), and the "good cetasika" as pleasant colors such as green or yellow. Then there are six other "occasionals" (i.e., appear only in some citt $\bar{a}$ ) that are also "colorless," and those can arise with either good or bad cetasika; see, "Cetasika (Mental Factors)."
- Cetasika arise with a citta, decay with a citta, and take the same thought object (ārammaña) as the citta. But a given citta has either good OR bad cetasika; they do not mix.
- And a citta is of very short duration; it lasts much less than a billionth of a second; see, "What is a Thought?" in the next post.

## Sensory Experience Comes in "Snapshots"

3. A living being experiences the "world out there" in a series of very fast "snapshots"; it grasps the "world" in a snapshot called a citta (pronounced "chiththa") that lasts much less than a billionth of a second. As soon as the mind sees that "snapshot", it is gone. But the mind gives us an illusory sense of a permanent "world." It does that by making that "snapshot" meaningful. That requires incorporating our memories as well as our hopes for the future. Let us see how this process as described in Abhidhamma.

- The mind does this with the help of a cetasika (pronounced "chethasika") in that citta called manasikara. We will discuss this later, but I am just trying to get across the basic idea.
- Pāli words are spelled differently compared to "Standard English" spelling. See, ""Tipitaka English" Convention Adopted by Early European Scholars - Part 1" and ""Tipitaka English" Convention Adopted by Early European Scholars - Part 2."

4. Therefore, we can visualize each "moment of awareness" of the outside world by the mind like a snapshot. As soon as it comes, it is gone.

Then how does our mind see the outside world as "permanent?" Also, how does it decide a given situation as 'good' or 'bad?' Often, two people look at the same thing and perceive it differently (one may perceive it as as "good" and the other as "bad.")

- Two of the universal cetasika (manasikāra and cetanā,) are responsible for such variations.
- As we discussed in other posts, a record of the "snapshot" that decays is permanently recorded in the mental plane, and these records are called nāma gotta; see, "Difference Between Dhamma and Sañkhāra (Sañkhata)."
- In the same way, our hopes and visions for the future are also in the mental plane. Of course, the past nāma gotta are permanent while the imprints for the future keep changing. The manasikāra cetasika brings in memories from the past and hopes for the future into the current citta, thus a "permanent like" view of the world is composed of the cetanā cetasika, which is responsible for "putting together a citta."
- Furthermore, in one person, "good" cetasika may arise due to a sensory input, but if the "gati" of the other person is opposite, a set of "bad" cetasika may arise in the other person. The cetana cetasika combines them to form a "good" or a "bad" awareness.

## How Do We See?

5. It is basically the same kind of process happens when we see, hear, taste, smell, touch, or think. Let us explain the concept of vision.

- The basic sequence of events in capturing any "input" via the five physical senses was described in "Gandhabba (Manomaya Kāya) - Introduction."
- If we keep looking at a picture on the wall, nothing changes because it is a static picture.
- Now let us think about what happens when we look at a water fountain. The water fountain looks like a sort of a solid object. But in reality, there are trillions of water particles rising and falling each second. We do not "see" individual water particles but just the appearance of a "sort of solid object with a certain shape."
- In a "thought" (citta), the manasikāra and cetanā cetasika help the mind put together a "composite" of what is happening to give a more or less "solid appearance."
- Same thing happens in seeing a continuous "ring of fire" when one swirls a light in a circular motion. At a given moment, the light is at a fixed position, but if we move the light fast enough, only see a "composite picture" in the shape of a continuous ring of light.

## The Movie Analogy

6. Another example is a motion picture. When making a movie, many many static pictures are taken and then play them back at fast enough speed. If the playback speed is too slow, we can see individual pictures, but above a certain "projection rate," it looks like real motion. Here is a video that illustrates this well:

## WebLink: YOUTUBE: Animation basics: The optical illusion of motion

## Our Sensory Experience Is Very Similar to the "Movie Analogy"

7. When we see the outside world, what happens is very similar to the above. At the end of the video it is stated that the "movie" we see is an illusion. As the Buddha explained, that holds for real life as well. In real life when we see someone coming towards us, what we actually see is a series of "static pictures" or citta projected at a very fast rate in our minds. That gives us the illusion of a "movie like experience."

- In the above video, it is suggested that all the information from the "previous static frames" were put together by the brain. However, that is true only to a certain extent.
- The brain does put together the individual frames. But it is the mind that incorporates past memories and IDENTIFIES who is in the picture.
- We not only "see" the video, but we also RECOGNIZE what is seen. We identify a given actor, we can even remember previous movies with that actor, we KNOW all about the scenes in the background, etc. It is not possible for the brain to have access to all those memories. This is a point that needs a lot of thought.
- What happens according to Abhidhamma is the following. The brain periodically sends packets of acquired data put together by the cortex in the brain to the hadaya vatthu, which is basically the seat of the mind. Citta vith $h$ arise in accepting that information from the brain, and it is the mind that does all the compiling (with the help of the manasikāra and cetanā cetasika) and that is how we EXPERIENCE it.
- I will go into more details later, but those are the key points.

8. We need to keep in mind that all animals have this capability too. A dog basically sees its environment just like we do and instantly recognizes the objects in the picture. Even an ant does too, even though its "world" is much more limited.

- Think about how a tiny ant can process all that information that allows it to move in a reasonable fast pace in hunting for food. It knows its territory, certain smells, and also remembers how to get back to its nest. All that information is NOT in that tiny body of an ant. More things to think about!

## Brain Is Very Fast Computer

9. In the above video, it is shown that the slowest projection rate where the brain seems to process data is about 20 frames per second; this correspond to a data packet of about 50 millisecond duration. This is consistent with a recent findings from MIT that says the minimum time needed is about 20 milliseconds: WebLink: Detecting Meaning in Rapid Pictures-Potter-2014.

- This is consistent with the Abhidhammic picture of the brain capturing segments of visual data and transmitting that information to the hadaya vatthu, which is the "mind door." That takes place via the cakkhu pasäda that is located on the manomaya kāya close to the hadaya vatthu.
- Abhidhamma, of course, does not mention how long the brain captures visual data for a "seeing event" before sending it to the hadaya vatthu. But it does say that this information is now converted by the brain to a format suitable for transmission to the hadaya vatthu, and is sent there via a "ray system" (kiraña.) I assume that this encoded information is sent at the speed of light. Thus, the information gets to the hadaya vatthu almost instantaneously. Note that the hadaya vatthu is located on the manomaya kāya, but is close to the heart

## But The Mind Is Faster

10. Of course we not only see things, but we also hear, smell, taste, touch, and think other thoughts all at the SAME TIME, it seems.

- The mind processes the information sent by the brain in a billionth of a second, much faster than the brain can process. So, the mind is mostly idle, "waiting for data from the brain."
- Therefore, the "sensing rate" is limited by the relatively slow processing speed of the brain. According to current scientific studies mentioned above, brain processing happens at the millisecond time scale, a thousand-times slower than the mind. However, it is still more than fast enough for us to experience simultaneity in all sensory inputs.

## Science Helping to "Fill-in-the-Blanks"

11. The scientific studies on the "minimum duration of a detectable event" are still at early stages (see \#9 above.) We may be able to put together a more precise sequence of events in the future. Yet we have enough data to put together a qualitative picture of what happens.

- This is an excellent example of how science can help us "fill in the blanks" of the overall picture that the Buddha provided. Of course, such a scientific background was not there 2500 years ago.
- Once the Buddha was in a Simpāsa forest near Kosambi, and he took a few leaves into his hand and told the bhikkhus, "what I have taught you compared to what I know is like these few leaves compared to the leaves in this forest. But what I have taught you is more than enough for you to attain Nibbāna."
- Thus modern science can provide us with details about the "big picture" of the Buddha, and we should be grateful to all those scientists for that knowledge. However, we should use that knowledge wisely and should not get carried away in spending too much time on such details.
Next, "What is a Thought?",

### 13.2.4 State of Mind in the Absence of Citta Vithi - Bhavanga

September 23, 2018; revised January 18, 2021; Re-written November 22, 2021; revised August 31, 2022 (several esp. \#14)
"Bhavañga state of mind" is different from "bhavañga citta" that arises in a citta vīthi.

## Bhavañga State of a Mind

1. At the cuti-patisandhi moment of grasping a new bhava, a new hadaya vatthu (seat of the mind) arises due to kammic energy. Since a human bhava is grasped with a "good nimitta" associated with a "good gati," the bhavañga state associated with that hadaya vatthu will reflect that gati.

- That natural, "born-with" bhavañga state will be there until grasping the next bhava. For example, even if one becomes unconscious, the mind will be in the bhavañga state. A bhavanga state does not have "conscious thoughts" or citttā (plural of citta.)
- That "natural bhavañga" (unlike any "temporary bhava" that we will discuss below) cannot be "felt." For example, while unconscious we don't "feel" anything, but the hadaya vatthu (seat of the mind) is in the bhavañga state.
- It is easier for some to grasp concepts than others. One factor for that is that one's bhavañga is "better" than another. In other words, one with a tihetuka birth will have a better natural bhavañga state than one with a dvihetuka birth.
- I had written a post about bhavañga sometime back (which describes it from another angle), which you may want to read now to "seal in" your understanding: "Bhava and Bhavañga - Simply Explained!."

2. When a mind is not occupied with any specific ārammaṇa (i.e., when it is not focused on a sensory input), it is in the natural bhavanga state.

- As we discussed above, that "natural state of mind" or "the bhavañga" is good in a human. Animals mostly live in fear and uncertainty.
- However, one does not feel it as good or bad. If you see someone just staring into space (and if that person is not in deep thought), that mind is in the bhavañga state. If you talk to him, he would be startled into "wakefulness". If you ask him what he was thinking about, he cannot answer because his mind was not on a particular ārammaṇa. It was in the bhavañga state.
- The bhavañga state can be compared to a started car in neutral gear. It is a dormant state. The mind becomes active when it comes out of the bhavañga state.
- Thinking happens only with an active mind with cittā, and cittā can arise ONLY in citta vīthi. See, "Citta Vithi - Processing of Sense Inputs."

## Switching from Bhavañga to Active Citta Vīthi - an Analogy

4. I have read the following nice analogy, but have forgotten where it was. In this analogy, a man is sitting in the middle of an enclosed small hut with six windows. He is sitting at a desk in the middle of the hut but can easily look up and see any of the six windows.

- The mental body (gandhabba) trapped inside the physical human body is like the man sitting at the table in the hut. Note that a gandhabba is essentially hadaya vatthu and five pasāda rūpa. But those are the critical components where the mental activity occurs, i.e., citta arises.
- When the mind is focused on the bhavañga state, that is comparable to the man absorbed in reading a book sitting at that table. He is not aware of what is happening outside the hut at all.
- In the same way, the gandhabba in the bhavañga state has no awareness of what is happening outside the human body. It is focused on the bhavañga (the nimitta grasped at the beginning of this bhava).

5. The man in the hut could be distracted from the book if a disturbance happens at one of the windows. For example, suppose someone outside comes to a window and knocks on it. Then the man would look up from the book at the window where the disturbance was.

- This is like a sense signal from one of five physical sense doors coming to one of the five pasāda rūpa around the hadaya vatthu. The hadaya vatthu - surrounded by the five pasāda rūpa - is like the man sitting in the hut with windows.
- The only difference is that signals for the mana indriya come directly to the hadaya vatthu, instead of through a sixth pasāda rūpa. Those signals (namagotta and dhammā) come through the mana indriya in the brain directly to hadaya vatthu.

## Coming Out of the Bhavanga State

6. When the seat of the mind (hadaya vatthu) gets a signal from one of the six sense doors, it comes out of the bhavañga state and starts investigating the sensory input. If the sensory input is significant, it will act on it by generating javana citta in a citta vithi.

- As we mentioned in the link in \#2 above, a series of citta $\bar{a}$ arises in citta vīthi. A citta vīthi is based on an ārammaṇa coming through one of the five physical senses always will have 17 citt $\bar{a}$. A citta vīthi can also arise directly in mind ( manodvāra) and manodvāra citta vīthi have 12 or more cittā.
- When an ārammaṇa comes to the mind, the mind "comes out of the bhavañga state". That takes 3 cittā labeled as "atīta bhavañga (AB)" "bhavañga calana (BC), and "bhavañga uccheda (BU)."
- In simple terms, that means it takes three thought-moments (citt $\bar{a})$ for the mind to "get out of the bhavañga state" and start paying attention to the ārammaṇa. That activity takes place in citta vīthi. Let us look at the basic structure of a citta vīthi.

## Components of a Citta Vīthi

7. When a signal comes to one of the five pasāda rūpa, the hadaya vatthu's attention to the bhavañga state will be disturbed. Then three cittā will rise to break away from the bhavanga state.

- Those three citta are called atīta bhavañga (atīta means "old" or "past" in Pāli or Sinhala), bhavañga calana (calana - pronounced "chalana" - means move or vibrate), and bhavañga uccheda (uccheda means to "cut-off").
- Just like it would take the man in the hut a few moments to become aware of the disturbance at the window and to look up, it will take those three cittās to pass before the hadaya vatthu "breaks away" from the bhavanga state. Then it will investigate what the disturbance is.

8. Now, hadaya vatthu, with the next citta will look to see which of the five pasāda rūpa is disturbed. That citta is called the "pañcadvārāvajjana citta," where pañca dvāra means "five doors" referring to the five physical senses.

- If it turns out that the signal is coming through the ghāna pasāda rūpa (i.e., a smell), then the mind will turn to that door. Then a ghānadvāra citta arises. That will be the fifth citta in the citta vīthi.
- Now the mind will "accept" that signal; this is called a "sampațicchana citta."
- Then it will fully realize that signal with the next citta: "santīraṇa citta."
- Up to this point, there have been three bhavañga citta, a pañcadvārāvajjana citta, a ghānadvāra citta (or any one of the five pañcadvāra citta), a sampaṭicchana citta, and a santīraṇa citta; seven cittās in all. All these are vipāka citta.

9. The eighth citta in the citta vithi is called a "votthapana citta." This is a very important citta, where one's mind decides to take action based on the sensory input it receives.

- How to respond to a given sense input (arrammana) is automatically decided by the mind, based on one's gati (pronounced "gathi") and the particular sensory input.
- We have discussed gati before: see, for example, "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsavas)," "How Are Gati and Kilesa Incorporated into Thoughts?," "Cetasika - Connection to Gati," and "Āsava, Anusaya, and Gati (Gati)."
- Depending on the sensory input and one's gati, the mind may decide to ignore the sensory input or take action if it gets attracted to it.
- Possible actions will include one or more of the following: Thinking along the same lines to oneself/talking out about it (with vacī sañkhāra), and possibly taking bodily actions (with kāya sañkhāra).

10. Such actions are implemented with seven javana citta; see, "Javana of a Citta - The Root of Mental Power." This is where mano/vacīlkāya sañkhāra arises. Therefore, the seven javana citta, after the votthapana citta are kamma-generating citta.

- All kammic energies are generated in the seven javana cittā. This is where vacī sañkhāra and kāya sañkhāra are generated. Then physical actions and speech are implemented by the brain, as needed.
- After seven javana cittā, the citta vīthi ends with two tadārammaṇa (T) or bhavañga citta (B), as we discuss next. Note that B here represents a citta, not the bhavanga state. However, it has the same "qualities as the bhavañga state."

## A Pañcadvāra Citta Vīthi

11. Now we can represent a pañcadvāra citta vith hi as follows:
[bhavañga state] "AB BC BU PD CV Sam San V J J J J J J J T T" [temporary bhavañga state] OR [bhavañga state] "AB BC BU PD CV Sam San V J J J J J J J BB" [bhavañga state]

- The difference depends on the strength of the sensory input that triggered the citta vithi. Let us discuss that now.

## Two Tadārammaṇa or Two Bhavañga Citta?

12. If the sense input was particularly strong (like a death in the family), that is a special case. Then those last two cittās will be tadārammaṇa (T), as shown in \#11 above. Here tadārammaṇa indicates a "strong sensory input." Such a strong sensory input is registered in the mind temporarily and "that state of mind" can linger for some time. That time duration can range from a few minutes to several days.

- Such a very strong citta vīthi is called an atimahāntārammana (very strong) citta vīthi. The sensory event "sinks into the mind" and the mind stays in that state for a while before settling back to the natural bhavanga state. This is the situation depicted in the first citta vithi of $\# 11$.
- For example, if one gets frightened by a chasing dog, that agitated and frightened state may last for many minutes. If a parent or a child dies, the resulting sadness may last several days.
- However, eventually, the mind will return to the natural bhavañga state.

13. If the impact of the sensory input is not that strong, but enough for one to think about it, say something, or take action, then the seven javana will still flow. However, it will NOT register in the mind as a tadārammaṇa (which means "a strong thought object"). It is strong because it still generated javana citta.

- In that case, the last two citta will fall back to the "natural bhavañga mindset", B, so now the citta vīthi is: "AB BC BU PD CV Sam San V J J J J J J J B B". This is the situation depicted in the second citta vìthi of \#11.
- Such a citta vīthi is called a mahāntārammana (strong) citta vīthi.

14. If the sense input is not strong enough to generate interest in the mind, no javana citta will be generated.

- In that case, citta will fall back to the natural bhavanga state right after the votthapana citta: "AB BC BU PD CV Sam San V B B B B B B B B B".
- Such citta vīthi are called parittārammana (weak) or atiparittārammna (very weak) citta vīthi. Parittārammaṇa citta vīthi are involved in dreaming. Atiparittārammṇa citta vīthi are involved in breathing. We don't even notice such citta vīthi of the last and weakest type.
- For more details, see; "Javana of a Citta - The Root of Mental Power."

## Strong Sensory Input Leaves the Mind in a Temporary Bhavañga State

15. This is the situation we discussed in \#12 above. Let us discuss some examples.

- For example, many people get into a "state of sorrow" after hearing about the sudden death of a parent, spouse, etc. Even when they are not thinking about that person, they may be just sitting somewhere with very clear features of sadness on their faces.
- Sometimes people get very scared and it shows on their faces, but they cannot even think. They are too scared to think or to speak: "frozen in fear".
- The same thing happens when one gets very angry: They may not say anything but we can see the anger in their faces. They themselves may not know what to do.

16. So, there are many such cases where we just get into a certain state of mind, which can be called "a temporary existence or bhava": the above three examples correspond to "sad bhava", "scared bhava", and "angry bhava" respectively.

- Such a "temporary bhava" or "temporary state of mind" can last many minutes or even days. These may be denoted by $B_{T}$, compared to one's natural bhavañga state, which we can denote by $B$. After some time, the $\mathrm{B}_{\mathrm{T}}$ state will slowly fade away to fall back to the natural B state.
- Active citta vīthi run during such a temporary $\mathrm{B}_{\mathrm{T}}$ state would be influenced by that $\mathrm{B}_{\mathrm{T}}$ state. For example, if one becomes temporarily angry, his following actions could be influenced by that anger.
- The natural bhavanga state (B) is the mindset grasped at the cuti-patisandhi moment; see \#1 above.

## Connection of "Temporary Bhava" to Gati

17. We can see right away that "angry bhava" comes easily to those who are easy to get angry. Such people can be "triggered" easily. Just saying some wrong words can make them angry.

- The same is true for other types of "temporary bhava". Some can be easily frightened. Some can be easily tempted with sense pleasures.
- The tendency to easily get into such "temporary bhava $\left(\mathrm{B}_{\mathrm{T}}\right)$ " will be reduced when one progresses on the Path.
- When one finally gets to the Arahant stage, one will not get into any "temporary bhava"; one has lost all such gati. One will have "an unshakable calm state of mind".
- Thus, for an Arahant, only the natural bhavañga state (B) will be there until death. Of course, any anusaya that was there initially will be gone.

### 13.2.5 <br> Bhava and Bhavanga - Simply Explained!

## January 19, 2018; revised February 5, 2018; January 19, 2021; September 10, 2022

1. There is much confusion about these two key Pāli words: bhava and bhavañga. By clarifying what is meant by them, it would be much easier to comprehend many concepts in Buddha Dhamma, for example, how laws of kamma are enforced by nature via Paticca Samuppāda.

- Even in current Theravāda texts, there is confusion about the difference between bhava and $j \bar{a} t i$. If you have not read the post, "Bhava and Jäti - States of Existence and Births Therein," I recommend reading that first.
- Please do not be discouraged by the Pāli terms. Some have no suitable English terms, and it is better to learn their meanings and use the Pāli terms. Read through first, even if you don't get the full meaning. It will become clear. I will make it simple in this post.
- I will make one or two more posts on this subject to include references from the Tipitaka.

2. Bhava means "the potential for existence" in EITHER one of the 31 realms of possible existence (we can see just the human and animal realms) or some specific state of mind within the current life.

- The first category includes human bhava, animal bhava, Tusita deva bhava, peta bhava, Ābhassarā Brahma bhava, etc., i.e., existence in one of the 31 possible realms. As we will see below, many such "potential bhava" exist for each living being. A new bhava will be grasped at the end of the current bhava based on the relative energies of various bhava (kamma bïja) cultivated in one's past.
- Even during this lifetime, we "live under different existences" based on significant life events. This is the second category. For example, a normally "good person" may become violent for a short time upon seeing his wife in bed with another man, or one will live in a "state of sorrow" for many days upon the death of a loved one.
- Both those are "bhava," states of existence.

3. Bhavañga ("bhava" + "anga," where añga means "part") therefore means a "state of mind" that is inseparable from any existence.

- When not disturbed by a strong external sense input (via the five physical senses or the mana indriya), a human mind is in its natural bhavanga state received at the beginning of this human bhava. Each person's bhavanga state is different (based on the sense object taken in at the patisandhi moment) and feels "neutral" to each person. For example, when one is in deep sleep or "just staring out into space," one's mind is likely to be in one's natural bhavanga state, which we can denote by B.
- On the other hand, when one's mind is deeply affected by some event like in the examples we mentioned above, then the mind goes into a "temporary bhavañga state" corresponding to that event ("state of rage" when angry or "state of sadness" upon the death of a loved one). We can denote this by $\mathbf{B}_{\mathrm{T}}$.

4. Now, this "state of mind" $\left(\mathrm{B}\right.$ or $\left.\mathrm{B}_{\mathrm{T}}\right)$ could be interrupted by a citta vīthi triggered by an external sensory input coming through one of the five physical senses or the mana indriya.

- For example, when another loved one comes to pay respects to the dead loved one (who is in a "sad $\mathrm{B}_{\mathrm{T}}{ }^{\circ}$ ), one's mind may become happy for a few minutes upon seeing that person. Then they may recall a past event about the dead person, and both may get sad again. That "sad temporary bhavañga state" $\left(\mathrm{B}_{\mathrm{T}}\right)$ may not go away for several days. And then the mind will gradually fall back to the natural bhavañga state, B .
- That temporary state of mind may last only minutes or hours for less strong life events.
- For example, if one sees an old friend on the street, one's mind may become happy and talks excitedly. After the friend departs, that "happy" $\mathrm{B}_{\mathrm{T}}$ state may linger for a while. But then it would be suppressed when another thought process starts based on a different ārammaṇa.

5. Therefore, within a given day, one's mind could enter several $\mathrm{B}_{\mathrm{T}}$ states. But unless a $\mathrm{B}_{\mathrm{T}}$ state is triggered by a significant life event like losing a loved one, the mind would fall back to the natural B state when one wakes up the next morning.

- For the reasons discussed above, the natural bhavañga state, B, could be called the "uppatti bhavañga," and those temporary bhavañga states, $\mathrm{B}_{\mathrm{T}}$, could be called "pavutti bhavañga."
- However, such labels are not used in the suttā or Abhidhamma. I mention that to make the connection better.

6. Please reread the above discussion. That should help one get the basic ideas about what bhava and bhavañga are. It is important to note that bhavanga is a state of mind, not citta vīthi (thoughts).

- Another way to describe a bhavañga state is to say that while the mind is in that state, one has corresponding gati (gathi). This is also an important aspect.
- For example, when one gets into a $\mathrm{B}_{\mathrm{T}}$ state of anger, then one, of course, has predominantly "angry gati" during that time. Furthermore, one who generally has cultivated "angry gati" is likely to easily get into a $\mathrm{B}_{\mathrm{T}}$ state.
- By the way, the Sinhala word for bhava is just "Bava"(ออ). For example, when one sees an eye-catching

7. Another important aspect is that when one is in an "angry $\mathrm{B}_{\mathrm{T}}$ state," it is easier to generate more angry thoughts. This is due to the "Anantatra and Samanantara Paccaya": That "state of mind" is receptive to more angry thoughts. This is why it is important to try to get the mind away from the angry state to focus on something entirely different.

- It is good to contemplate the above basic ideas with examples from one's life. For example, when one is angry at someone, it is easier to recall such bad past experiences and suppress any past good experiences coming to mind.

8. When one has a calm state of mind when reading/listening to Dhamma, it is easier to generate compassionate thoughts about others. Therefore, it is important to "set the background" when starting an important task.

- This is why people go to a temple, offered flowers, etc., recite $g \bar{a} t h \bar{a}$, before sitting down to listen to a desan $\bar{a}$ by a bhikkhu. The state of mind is critical. One cannot comprehend deep Dhamma if the mind is angry or even in an excited state (like thinking about a sick child at home, for example).
- This is why it is a good idea to at least recite the qualities of the Triple Gem (Buddha, Dhamma, Sañgha) before starting a formal meditation session; see "Buddhist Chanting."

9. Another important application of the "Annantara and Samanantara Paccaya" relevant to this case is that while in a human bhava, only kamma vipäka are "compatible" with the human bhava and human gati (and thus human body) can bring in vipāka.

- Even if one has kamma bīja suitable to bring harsh vipāka experienced in the apāy $\bar{a}$, they will not be able to bring vipāka as long as one is with a human body. Similarly, any highly pleasurable vipāka has to wait until one is born in a deva bhava with a fine body suitable to experience such good vipāka.
- An animal always lives with fear for its life; that is part of bhavañga. Similarly, a tihetuka human has a natural, pleasant demeanor, an ahetuka human (disabled, etc.) has a weakened mindset. A dvihetuka is in between.

10. Yet another is the state of mind at the dying moment, when the grasping of a new bhava is getting close (if bhava energy is to run out at death, i.e., if there are no more $j \bar{a} t i$ left in the current bhava).

- Here the kammic power will start bringing various thoughts to mind via the mana indriya compatible with the strongest kamma bi$\vec{j} a$. For example, one who is about to grasp a new life in hell (niraya) may start recalling some fear-generating events (even from previous lives), and one's mind could be bent to a "fearful temporary bhavañga state $\left(\mathrm{B}_{\mathrm{T}}\right)$." Then more and more such fearful events will start coming into the mind.
- This is why some dying people's fear can be seen in their eyes, even if their bodies have become nonresponding.
- Some people start to yell with fear when they see an especially unpleasant bhava coming their way. Flashes of the existence awaiting will come to their minds, such as burning in hell, being cut by sharp weapons, or just seeing others engulfed in flames.
- On the good side, some people will remain calm with a pleasant look on their faces, even if their bodies are becoming non-responding. Some smile when they see the scenery of the happy environment they are going to.
- This basic knowledge can explain many phenomena like that.

11. For those familiar with Abhidhamma, bhavañga citta are called "dvāramutta citta" or citta that arise without needing a sense door. Let me clarify this in simple terms.

- When we hear something, that sound comes through our ears, and many citta vithi will be generated at the manodvāra (mind-door) after that initial sotadvāra citta vithi. A seeing event may be started by a picture seen with eyes, etc.
- This is a swift process. For example, we get sensory inputs to the ears and eyes when watching a movie. But citta vith flow so fast that the mind will fall to a bhavañga state $\left(\mathrm{B}\right.$ or $\left.\mathrm{B}_{\mathrm{T}}\right)$ even between the rapidly incoming citta vīthi.
- Therefore, what we see, hear, taste, smell, or body touch are all due to citta vīthi. Even our thoughts generated by the mind (coming through the mana indriya), are due to citta vithi.

12. In contrast, a bhavañga state ( B or $\mathrm{B}_{\mathrm{T}}$ ) DOES NOT come through any of the five physical senses (eyes, ears, nose, tongue, body) or the mana indriya in the brain. That is why it is called "dvāramutta citta" or "citta that arise without the need for a sense door."

- Therefore, bhavañga is a "stationary state of mind" that falls back to when there are no running citta vīthi.
- Note that the mana indriya - where concepts and memories come to the mind - is unknown to scientists; see, "Brain - Interface between Mind and Body."
- Bhavañga $\left(\mathrm{B}\right.$ or $\left.\mathrm{B}_{\mathrm{T}}\right)$ is a state of mind with a corresponding gati. There are no associated citta vithi. But of course, some bhavañga citta can appear in a citta vīthi; see "Citta Vithi - Processing of Sense Inputs."

13. It is also important to note that the series of cittā do not flow continuously. It is the kammic energy that runs without a break during saimsāra.

- For example, when one is born in the asañña realm, no citta is generated for 500 mahā kappa. Remember that a mahā kappa is our solar system's age, which lasts about 15 billion years!
- During that whole time, the body of that being in the asañña realm is kept alive by the kammic energy for that bhava, and the bhavañga is active during that time. As we emphasized above, bhavañga is a state of mind.

14. Please keep in mind that it is unnecessary to learn the material in \#11 and \#12 above if one can grasp the basic idea of what is meant by bhava and bhavañga. That is enough to grasp important concepts at a bit deeper level.

- We will continue this discussion in one or more upcoming posts.

### 13.2.6 Citta Vithi - Processing of Sense Inputs

Revised April 26, 2018; revised May 30, 2018; October 17, 2019; February 24, 2020; January 18, 2021; August 9, 2021; October 27, 2021; May 27, 2022; July 9, 2022; August 31, 2022

## Introduction

1. Thoughts (citta) do not arise as individual citta; see, "Essential Abhidhamma - The Basics." They appear in mind due to sensory inputs via the six senses. Those are cakkhu, sota, ghāna, jivhā, and kāya indriya, corresponding respectively to the eye, ear, nose, tongue, and body, and mana indriya (located in the brain; see, "Brain - Interface between Mind and Body").

- Sensory input through any of the five physical senses received and analyzed by the mind in a "citta $v \bar{t} h i "$ (series of cittā with 17 citt $\bar{a}$.) Those are pañcadvāra citta vīthi. Pañcadvāra ("pañca" + "dvāra" where "pañca" is five and "dvāra" is a door) means five (physical) doors. See the post, "What is Mind? How do we Experience the Outside World?."
- Vīthi is pronounced "veethi." The actual Pāli (and Sinhala) term is veethi (meaning "road") since, like a road, the flow is continuous. But vīthi has become the established English word, just like "pīti" for the actual word "preethi." And citta pronounced "chiththā."
- That is because the convention for spelling Pāli words differs from "standard English." See "TTipitaka English" Convention Adopted by Early European Scholars - Part 1" and "Tipitaka English" Convention Adopted by Early European Scholars - Part 2."
- When we THINK ABOUT those external sense inputs, that involves only manodvāra citta vīthi, and those typically have 10-12 citt $\bar{a}$ in them.
- Here we will describe both types of citta vitthi.

2. According to citta niyāma (or Law of Cittā), a pañcadvāra citta vīthi proceeds in a standard way for an object with great intensity (atimahantārammaṇa citta vīthi). That means the object is of "high interest," and the conditions to grasp that object (arammana) are optimum. For example, if it is a visual object, that visible object is of high interest, and the light conditions for seeing it are good.

## Pañcadvāra Citta Vīthi

The sequence of cittā in a pañcadvāra citta vīthi is as follows:
$\left.\begin{array}{|c|c|c|}\hline \text { \# in the Series } & \text { Citta Type } & \text { Symbol } \\ \hline 1 & \text { Atīt Bhavañga (Past Bhavañga) } & \mathrm{AB} \\ \hline 2 & \text { Bhavañga Calana (Vibrating Bhavañga) } & \mathrm{BC} \\ \hline 3 & \text { Bhavanga Upaccheda (Arrest Bhavañga) } & \mathrm{BU} \\ \hline 4 & \begin{array}{c}\text { Pañcadvāravajjana } \\ \text { (Sense-door adverting consciousness) }\end{array} & \mathrm{PD} \\ \hline 5 & \text { Cakkku Viñn̄āana (eye-door perceiving consciousness) - for } \\ \text { example }\end{array}\right] \mathrm{CV}$

| 7 | Santïrana (Investigating consciousness) | San |
| :---: | :---: | :---: |
| 8 | Votthapana (Determining consciousness) | V |
| $9-15$ | Javana | J |
| 16,17 | Tadārammana (Registering consciousness) | T |

3. When the mind is not dealing with a pañcadvāra citta vīthi or a manodvāra citta vīthi, it is in a "dormant state" called the bhavañga. Bhavañga ("bhava" + "anga" where "anga" means "part of'), thus represents the particular "bhava" of the living being, in this case, a "human bhava." The conventional English term is "life continuum," but we will use bhavañga.

- For a discussion on bhavañga, see "State of Mind in the Absence of Citta Vithi - Bhavañga."
- The bhavañga state is conventionally represented by the following series as if they are a series of bhavañga citta:

## ..B B B B B B B B

However, bhavañga citta can arise only within a citta vīthi.

- When the mind is in the bhavañga state, we do not "feel" anything. Like an eye cannot see itself, the mind in the bhavanga state cannot "see itself." That is the "dormant state" in-between sense inputs. When one is in deep sleep or unconscious, the mind is entirely in the bhavanga state.
- The mind is generally in the bhavañga state. It comes off the bhavañga state when an object of interest comes through one of the five physical senses (cakkhu, sota, ghāna, jivhā, or kāya indriya.) A "dhamm $\vec{a}$ " coming to the "mana indriya" can do that too.
- As we will see later, the mind is in the bhavañga (B) state most of the time even if the mind feels very active. Even while watching a movie, the mind is mainly in the bhavañga state (in between various types of manodvāra and pañcadvāra citta vīthi.) Yet, our brains are stressed to the limit since they need to analyze the movie's sights and sounds at a rapid pace. See "Vision Is a Series of "Snapshots" - Movie Analogy."

4. We can represent the pañcadvāra citta vithi in the above Table as follows:

B B B B B "AB BC BU PD CV Sam San V J J J J J J J T T" $\mathrm{B}_{\mathrm{T}} \mathrm{B}_{\mathrm{T}} \mathrm{B}_{\mathrm{T}} \mathrm{B}_{\mathrm{T}} \ldots \ldots$
Note that this is the strongest citta vīthi. There are many variations WITHIN this citta vīthi; some do not have T or even J citta. Different types of pañcadvāra citta vīthi are discussed in detail in "A Comprehensive Manual of Abhidhamma" by Bhikkhu Bodhi (2000).

- In the above case, the bhavañga temporarily changes to $\mathrm{B}_{\mathrm{T}}$ due to the strong sensory input. See "State of Mind in the Absence of Citta Vithi - Bhavañga."
- In the above example, we took a "cakkhu viññanna" event, i.e., what happens when a picture comes to the mind via the "eye indriya" and the mind investigates that picture.
- First, the "mind comes off the bhavanga state, and that takes three thought moments: AB (atita bhavañga), BC (bhavañga calana), and BU (bhavañga upaccheda). Here "atīta" (or "atheetha") means "past," "calana" (pronounced "chalana") means "move" or "vibrate," and "upaccheda" (or "upachcheda") means "stop" or "break away."
- Then the mind looks at the "five physical senses or pañcadvāra (PD)" and determines through which of the five sense inputs it is coming, and then picks the relevant door, which in the present case we assumed to be cakkhu viñ̃̃āṇa (CV).
- Then it investigates what that "picture" is with the sampaticcana (Sam) citta and decides what type (like, dislike, etc.) with the santīraña (San) citta. Based on those, the Votthapana (V) citta determines what actions to take.
- The all-important seven javana citta arise based on that determination made with the votthapana citta (V). That is where the mind does potent kamma.
- The votthapana citta is the same as manodvāra citta (MD), where the decision is made (see below in manodvāra citta vīthi).

5. In the last two Tadārammana (T) cittā, the mind takes in the "flavor" or the "essence" of the sense object. Then it falls back to the bhavañga state at the termination of the pañcadvāra citta vīthi. Only the very strong (mahantaārammanna) citta vīthi have them, and such strong impressions are "retained in one's memory" for some time (i.e., one will not forget immediately.)

- Until one loses that "temporary memory," it becomes one's 'temporary bhavañga." For example, when one hears about the death of a parent, one will become sad, and that "sad state of mind" will be there for days.
- For a discussion on that, see "State of Mind in the Absence of Citta Vithi - Bhavañga."
- Of course, ALL happenings get recorded as nāmagotta. Even unimportant events get recorded. The ability to recall events depends on one's capabilities. Sometimes, such limited capabilities become possible due to "puñña iddhi" for even average humans. See "Recent Evidence for Unbroken Memory Records (HSAM)."

## The Simile of Tasting a Mango

6. A pañcadvāra citta vīthi is the procedure by which the mind experiences an external object (sight, sound, taste, etc.). The following analogy is in some commentaries to the Tipitaka.

- Suppose a weary traveler is asleep at the foot of a mango tree. This state of being asleep is analogous to the bhavanga state. Now a ripe mango drops to the ground near the traveler. This event resembles a visible object of great intensity coming to the "eye door."
- The mango falling awakens the traveler and causes him to raise his head. This event is similar to the appearance of the visible object at the eye door, causing the bhavanga to vibrate twice and become arrested; now, he is not asleep anymore.
- The traveler opens his eyes and looks around to inquire about the disturbance. That is similar to the pañcadvāravajjana (PD) citta adverting the mind towards the sense object.

7. The traveler sees the fallen mango. That is analogous to the eye-consciousness of seeing the object (CV). Now the man picks up the mango, which is similar to the sampatticchana (Sam) citta receiving the cakkhu viññāna. By the way, sampaṭicchana comes from "san" + "paṭicca"; you can contemplate on this to get the basic idea; see, "What is "San"? Meaning of Sansāra (or Samsāra)?".

- Then the man inspects the mango to see whether it is suitable for eating. That is similar to the santīraña citta ("san" + "tirana" or "theerana," where "theerana" means "decide on whether the sense object is good or bad") investigating the sense object.
- Then the man decides that the mango is good and edible. That is similar to the votthapana ("vottha" +
 votthapana is pronounced, "voththapana." If it were a rotten mango, one would decide to throw it away.
- If one understands Sinhala, it is easier to understand Pāli. As I have mentioned, the Sinhala language is close to Pāli and not Sanskrit.

8. The man bites the mango seven times, eating and enjoying the taste. That is similar to the occurrence of seven javana citt $\bar{a}$ enjoying the taste of the sense object. These are the "actions corresponding to the decision made with the votthapana citta"; if the mango tastes bad, the mind will generate appropriate javana citta to throw the mango. We will discuss such complex processes later.

- Then the man gathers the remnants of the fruit and the juice sticking to his teeth with his tongue and swallows twice. That is similar to the two tadārammaṇa (T) citttā following the javana citt $\bar{a}$.
- Task completed, the man falls back to sleep. That is similar to the resumption of the bhavañga state.

## Three Manodvāra Citta Vīthi will follow Each Pañcadvāra Citta Vīthi

9. According to the Tipiṭaka, three manodvāra citta vīthi will follow each pañcadvāra citta vīthi. The javana citt $\bar{a}$ in those three citta vīthi become increasingly intense, and it is the javana citta $\bar{a}$ of the last manodvāra citta vīthi that instructs the brain to get the body to act (and initiate speech).

- We will discuss this in detail in future posts. But it takes three more manodvāra citta vīthi to complete the sequence of a thought process initiated by a pañcadvāra citta vīthi. When one gets "absorbed" (for example, keeps looking at an attractive picture), one may be generating numerous of such "one plus three processes," with the mind falling back to the bhavanga state repeatedly in between.
- It will be easier to visualize this process by understanding what happens when we look at an object, for example, in scientific terms; see "Citta and Cetasika - How Viññāna (Consciousness) Arises" (especially starting with \#4 of that post).

Now let us look at a typical manodvāra citta vīthi.

## Manodvāra Citta Vīthi

| \# in the Series | Citta Type | Symbol |
| :--- | :--- | :--- |
| 1 | Bhavañga Calana (Vibrating Bhavañga) | BC |
| 2 | Bhavañga Upaccheda (Arrest Bhavañga) | BU |
| 3 | Manodvāravajjana (Mind-door adverting consciousness) | MD |
| $4-10$ | Javana | J |
| 11,12 | Tadārammana (Registering consciousness) | T |

10. We can represent the manodvāra citta vīthi in the above Table as follows:

B B B B B "BC BU MD J J J J J J J T T" B B B B B.....

- Here it takes only two thought moments to be released from the "bhavañga state": BC (bhavañga calana), and BU (bhavaṅga upaccheda).
- The mind already knows the ārammana (thought object).
- The manodvāra citta (MD) is the same as the votthapana citta, where the decision is made.
- Then seven javana cittā arise, and then the citta vīthi ends with the two Tadārammaṇa (T) cittā.
- Like in the case of a pañcadvāra citta vīthi, we also considered an object with high intensity as an example. We will discuss the variations when handling signals of lower intensities as the need arises. However, this discussion is sufficient to understand how the two types of citta vithi function in the cognitive processes.

11. Now, we can write the complete sequence of citta for a sense event initiated by a pañcadvāra citta vīthi as:

B B B B B "AB BC BU PD CV Sam San V J J J J J J J T T MD J J J J J J J T T MD J J J J J J J T T MD J J J J J J J T T" B B B B B.....

- As mentioned above, three manodvāra citta vīthi will run following the initial pañcadvāra citta vīthi. The object is recognized only after the four citta vithi. But that happens within a billionth of a second.

12. Conversely, manodvāra citta vīthi can arise by themselves.

- Furthermore, even though the length of a manodvāra citta vīthi usually is 10-12 cittā for ordinary people, a single manodvāra citta vīthi can have many javana cittā while in a jhāna.
- In a jhāna, such long manodvāra citta vīthi are interrupted by pañcadvāra citta vīthi arising in between. That is why one could hear external sounds while in a jhāna.

13. But in a jhāna samāpatti, javana citta can keep arising for long times, as long as one had determined at the start:

B B B B B "BC BU MD J J J J J J J J J J J

- Thus, one becomes unaware of what happens in the outside world during that time. There is no way to get back to the bhavañga state or for a pañcadvāra citta vīthi or another manodvāra citta vīthi to arise. Before getting into the samāpatti, one decides how long to stay in the samāpatti.
- People who can get into jhāna samāpatti can display the real power of javana citta.
- A crude analogy: Suppose one is trying to light an oil lamp (oil-soaked wick) with the light of a matchstick. If one is not holding the lighted matchstick steady and the light moves in and out of the vicinity of the wick, it will not light. But if one can hold the light steady, it will light up quickly. Here, the mind is "locked on" that javana citta!
- The following is another analogy for those who are familiar with lasers. One can drill holes in a metal plate using a laser beam. But the metal spot will not heat up and evaporate unless the laser beam is held steady at that spot. Being in a jhāna samāpatti is like keeping a laser beam steady on one spot for a long time.

## Citta Vīthi for Attainment of Magga Phala

B B B "BC BU MD P U A G Pa Fr Fr" B B B
B B B "BC BU MD U A G Pa Fr Fr Fr" B B B
14. The first is the magga phala citta vithi for an average person; the second is for one with "higher wisdom."

- B, BC, BU, and MD are, as discussed above.
- Then it goes through the Parikamma (P), Upacāra (U), Anuloma (A), Gotrabu (G), Path (magga) (Pa), and Fruit (phala) (Fr). [upacāra : [m.] neighbourhood; preparative or preliminary action.]
- As you can see, there is no connection to jhäna. In particular, the magga phala citta vīthi does not go through a jhāna citta. Also, the Gotrabu (change of lineage) citta for magga phala is COMPLETELY DIFFERENT than that in the case of a jhāna citta vith $h$.
- The change of lineage here is to become an Ariya or a Noble Person.
- The change to an Ariya happens even before the Sotāpanna phala moment, at the Gotrabu (G) moment. Gotra means "lineage" and Gotrabu is the change of lineage. Thus, one would become a Sotāpanna Anugāmi with the Gotrabu citta.

## Citta Vīthi for Attainment of Jhāna

B B B "BC BU MD P U A G Jh" B B B
B B B "BC BU MD U A G Jh" B B B
15. The first above is the jhāna citta vith $h$ for an average person. The second is for one with "higher wisdom."

- See above for explanations on B, BC, BU, MD, P, U, A, and G.
- However, Gotrabu (change of lineage) for jhāna differs from magga phala.
- Then it goes through a Jhāna (Jh) citta.

## Parikamma, Upacāra, Anuloma, and Gotrabu

16. Getting to a magga phala or a jhāna does not happen in a single step. One first gets into the parikamma stage and may stay there for some time. Same for other stages until getting to the gotrabu stage.
At the gotrabu stage, the change becomes permanent; it is a "change of lineage."

- The intermediate steps of parikamma, upacāra, and anuloma can be labeled preparation, approach/access, and "getting close to the change of lineage."

### 13.2.7 Javana of a Citta - The Root of Mental Power

Revised July 15, 2020; July 22, 2022; July 30, 2022

## Javana Cittā Are Associated with Abhisañkhāra

1. The power of the human mind has been discussed in several posts starting with "Power of the Human Mind - Introduction." There are different kinds of cittū ; the powerful ones are javana cittā ("javana" means an arrow in flight; it can be highly potent).

- Such javana cittā are responsible for abhisañkhāra, those sañkhāra that are potent and will lead to (good or bad) consequences. Puñ̃̃ābhisañkhāra is the meritorious abhisañkhāra that will lead to good results, and apuñ̃̄ābhisañkhāra is the immoral abhisañkhāra that leads to adverse outcomes.
- Javana cittā arise in pañcadvāra citttā vīthi and manodvāra cittā vīthi when the object (ārammaṇa) is evident and robust; see, "Citta Vithi - Processing of Sense Inputs."

## Vipāka Cittā Do Not Have Javana Power

2. Out of the 54 types of citt $\bar{a}$ in the k $\bar{a} m a$ loka (the 11 lower realms including the human realm), 29 are javana citt $\bar{a}: 12$ akusala cittā, eight mahā kusala citt $\bar{a}$, eight mahā kiriya citta $\bar{a}$, and the functional smileproducing cittā (the latter nine cittā only for an Arahant).

- A kusala citta generates power for rebirth in the human or above realm, and helps progress towards Nibbāna or "cooling down."
- When one does an akusala citt $\bar{a}$, one generates power to form kammic energy for rebirth in the apāy $\bar{a}$ (lowest four realms).
- Thus for average human beings, there are only 20 citt $\bar{a}$ out of 54 that are javana citt $\bar{a}: 12$ for doing evil deeds and 8 for good deeds (here deeds means thought, speech, or bodily action).
- Thus, vipāka cittā do not have javana cittā. Therefore, in detecting any sensory input (seeing, hearing, etc.), javana cittā is absent. They are prittārammaṇa (slight) and atiparittārammaṇa (very slight) citta vīthi. However, based on these vipāka citta vīthi, we MAY instantly initiate potent atimahattārammaṇa (very high) and mahattārammaṇa (great) citta vīthi that will have javana cittō in them.
- Therefore, if we start making plans (buy that picture, re-listen to that song, etc.) based on those visuals, sounds, etc., then subsequent citta vīthi will have javana cittā in them, leading to abhisañkhāra (GENERATE kammic power).

Javana Power Depends on the Type of Citta
3. Not all akusala javana cittā have the same power. Also see "How to Evaluate Weights of Different Kamma" and "12. Key Factors to be Considered when "Meditating" for the Sotāpanna Stage."

- Out of the eight greed-rooted citt $\bar{a}$, those four done with pleasure (somanassa-sahagata) are more robust than the done with neutral feeling.
- Next, those associated with micch $\bar{a}$ dittthi (or ditṭhi-sahagata) are more powerful than the four generated without wrong vision (or ditt hi-vippayutta).
- The power of greed-rooted citt $\bar{a}$ depends on whether they arose spontaneously (sometimes erroneously labelled as asañkhārika) or occurred intending to receive something in return, i.e., sasañkhārika.
- The two hate-rooted akusala citt $\bar{a}$ always arise with displeasure and are associated with aversion (dislike.) One that is spontaneous (unprompted) is stronger than the prompted.
- The two ignorance-rooted akusala citt $\bar{a}$ always arise with neutral feelings. The one based on vicikicch $\bar{a}$ is stronger than that based on uddhacca.

## Javana Strength of Akusala Citta

4. The above list gives the order of strength of the akusala citt $\bar{a}$ and appears in that order in "Conditions for the Four Stages of Nibbāna."

- Thus the first lobha citta that is "connected with the wrong view, accompanied by pleasure" or in Pāli, "somanassa-sahagata, ditthi-sampayutta citta" is the strongest akusala javana citta.
- The last of the 12 akusala citta is "one accompanied by equanimity and associated with highmindedness" or, in Pāli, "upekkha-sahagata uddhacca-sampayutta citta."

## Javana Strength of Kusala Citta

5. The power of the human mind can work both ways, for the good or the bad. Now let us see how the eight mahā kusala (wholesome) cittā rank according to the javana power.

- Here again, four done with a joyous heart (somanassa-sahagata) take precedence over those done with neutral feeling.
- Next, those done with knowledge, called "ñāna-sampayutta," have higher power compared to those done without knowledge ( $\tilde{n} \bar{a} n a-v i p p a y u t t a)$. Here, knowledge could be at two levels: (i) understanding how the laws of kamma work and (ii) understanding anicca, dukkha, and anatta in addition to (i).
- Finally, they are sorted by whether the response is spontaneous (higher-merits) or prompted/induced by an expectation of a profit (sasañkhārika).

6. Thus, the most potent kusala citta is "one accompanied by joy, associated with knowledge" or in Pāli, "somanassa-sahagata, ñāna-sampayutta citta".

Here one does a good deed with a complete understanding of its benefits and thus with a joyous heart. The action is spontaneous and joyful BECAUSE one is fully aware of its ethical consequences. Since it is automatic, the knowledge must be in one's mind.

- The weakest kusala citta is "one accompanied by the neutral mind, dissociated with knowledge, and for one's advantage" or in Pāli, "upekkha-sahagata, ñāna-vippayutta, sasañkhārika citta." Here one may do a good deed without knowledge and on the prompting of others or after some deliberation. Such acts will bring benefits, but since they have less javana power, the benefits are less.

## Some Examples of "Javana Power"

7. Let us take some examples for clarification.

- Some people are so deep on the wrong path that they enjoy committing evil deeds. Or, they get into a mindset where such deeds become enjoyable. We have heard of a person killed by multiple stabbings with the body gruesomely mutilated. Such an act is the worst of the worst.
- It should be easy to imagine why the javana for citta associated with such "passionate" killings are very intense. The killer is absorbed in that act and is generating potent mental power to carry out the physical act; by the way, any physical activity originates in citta. Thoughts lead to actions. See, 'Neuroscience says there is no Free Will? - That is a Misinterpretation".
- That is also why a kamma becomes a "kamma patha" or a "strong kamma" for bodily action. See "Details of Kamma - Intention, Who Is Affected, Kamma Patha." One needs a strong javana to carry out that task. If one is aware of the consequences of such acts (i.e., do not have micchā ditthi or wrong vision), then even if one started stabbing, one may likely that one may catch oneself and stop.

8. Conversely, even the smallest act of kindness can bring many benefits if done with complete understanding and a joyous heart. Here the "mental power" or the javana comes through knowledge. We see these kinds of 'small acts of kindness" all the time, and we can even share in those merits when our hearts become joyful too.

- Writing a check for a lot of money is easy for a wealthy person. If done to get publicity or due to "outside pressure," it would not bring many benefits. If a poor person shares what they can with another in a worse situation with joy, that will bring much more benefit.

## Saimvega - Indication of Javana Strength

9. High javana power manifests as "sanvega" (san + vega, where "vega" means fast) or one's emotions. See, "What is "San"? - Meaning of Samsāra" for the meaning of "san"). Therefore, "samivega" depicts a potent emotional condition. If it is for the "good," one will be doing puññābhi sañkhāra (meritorious acts), and an evil deed done with "sam்vega" will be a potent apuññābhi sañkhāra (immoral actions).

- In the literature, "sanvega" is commonly written as "saimvega"; as with many other such words, replacing "san" with "saim" leads to distortion of the meaning of the word. Other such misspelled words are sà̇̀sāra, samvedana, samyoga, and sam̀vara; see, "What is "San"? - Meaning of Samsāra."
- However, some words like "samm $\vec{a} "$ ("san" + "mā") are correct because that is phonetically correct.
- In the Sinhala language, "sainvega" is commonly used to describe emotionally intense situations, mostly sad situations. However, we can see that it can apply to any emotional situation.

## Emotions Felt Close to the Heart, Not in the Brain

10. The mind and the heart are in close contact. Even that person who derived pleasure by stabbing someone many times will have a heavy heart until death, no matter how bad a person they are. It is in human nature. Of course, when we do a meritorious act, too, we feel joy in our hearts.

- We "feel" close to the heart because citta arises in the "hadaya vatthu" close to the physical heart. The hadaya vatthu is in the manomaya kāya, like an "energy field" spread through the physical body. See "Manomaya Kāya (Gandhabba) and the Physical Body" and "Ghost in the Machine - Synonym for the Manomaya Kāya?."

## Javana Strength Depends on the Level of Desire (Good or Bad)

11. The javana power in our thoughts significantly affects "how engaged we are." The potency of a good or an immoral citta depends on the strength of the desire to get it done. Three out of four bases of mental power, chanda, citta, viriya, originate due to this; see "The Four Bases of Mental Power (Cattāro Iddhipāda)."

- And the fourth factor of $v \overline{\operatorname{lomam}} \dot{\sin }$ (reasoning/investigation) is vital because that is how one gains the allimportant $\tilde{n} \bar{a} n a$ (wisdom); see \#5,\#6 above. When one truly comprehends anicca, dukkha, and anatta, that leads to the cultivation/growth of the pañ̃̃ $\bar{a}$ cetasika, reducing ignorance (avijjā).

## It Is Good to "Re-live" Past Good Experiences

12. Another thing that comes out of this analysis is that it is good to contemplate the past good deeds and "re-live" that experience to gain citta pasāda or a joyful mind.

- Similarly, it is NOT good to do that for past evil deeds. It is better to forget them and get a new start. If something like that comes to the mind, focus the mind on a good deed.
- That is part of "Ānāpāna." We need to keep and cultivate "good things" and "discard" bad things; see, "7. What is Ānāpāna?."
- Our thoughts are what ultimately matter, and they arise due to our character (gati); the more we do "Ānāpāna" correctly, the more our "gati" will change for the better.

13. Finally, These javana citta have the power to produce suddhatthaka, the fundamental building blocks of $r \bar{u} p a$; see "The Origin of Matter - Suddhatthaka."

Next, "Cuti-Patisandhi - An Abhidhamma Description",

### 13.2.8 Cetasika - Connection to Gati

## Revised March 26, 2022; August 26, 2022

Cetasika that arise in citta influence a person's moral and immoral character (gati).

## Seven Universal Cetasika

1. In the introductory posts in Abhidhamma we saw that there are seven universal cetasika (mental factors) that arise with every citta (loosely translated as a thought, but not correct); citta is pronounced "chiththā" and cetasika pronounced "chethasikā."

- The seven universal cetasika are essential in forming any kind of citta, whether immoral (akusala) citta, moral (kusala) citta, or a citta that does not have any kammic potential.
- Some other cetasika provide "character" to citt $\bar{a}$. Whether a given citta is good or bad depends on whether a "good" or "bad" set of cetasika arises with it; see, "Citta and Cetasika - How Viññāna (Consciousness) Arises." They are listed in "Cetasika (Mental Factors)," and you may want to print them out for reference when reading this post. There is no need to memorize them. With time, one may even know them by heart.
- Out of the 54 types of citt $\bar{a}$ in the kāma loka, there are 12 akusala citta and 8 kusala citta. The other 34 are vipāka citta and kiriya citta which do not generate kammic power.

## Six Cetasika That May Appear in Kusala or Akusala Citta

2. Then, there are six cetasika called particulars (also called occasional) or pakinnaka that MAY appear in any citta. Therefore they do not determine the PURPOSE of the citta, but they HELP with any type of purpose that was intended.

- For example, viriya cetasika could be in a kusala citta and it can also be in an akusala citta. In either case, the viriya cetasika will HELP intensify the effort with that citta.

## Cetasika That Appear Only in Kusala or Akusala Citta

3. Out of a total of 52 cetasika, the other $39(=52-7-6)$ cetasika determine whether a given citta will be an akusala citta or a kusala citta.

- 14 cetasika (called asobhana or immoral or bad cetasika) could be present in an akusala citta. Out of those, 4 ALWAYS are present in any akusala citta; those 4 are asobhana universals.
- The other 25 cetasika (called sobhana or moral or good cetasika) can be present only in kusala citta, and 19 of those are ALWAYS in any given kusala citta; those 19 are sobhana universals.
- Therefore, 11 cetasika (7 universal plus four universal immoral) arise with every akusala citta. There may be other immoral and particular cetasika as well.
- There are 26 cetasika ( 7 universal plus 19 universal morals) that arise with every kusala citta. Six more moral cetasika may arise in some kusala citta.

## Sainsāric Habits ("Gati") and Cetasika

4. Therefore, sobhana and asobhana cetasika determine the kammic nature of a citta. If we want to eliminate all akusala citta, we need to remove the 14 asobhana cetasika from our minds (they come up automatically with our gati and $\bar{a} s a v \bar{a})$.

- In other words, our samsāric habits ("gati") and cravings (" $\bar{a} s a v \vec{a} ")$ are embedded in the 14 asobhana (and 25 sobhana) cetasika, such as lobha and dosa. For example, one may have dominant "lobha gati" (excess greed) or "dosa gati" (strong hate). But typically, we have a mixture of many different inter-mixed gati.
- In the same way, cultivating good "gati" and "cravings" (basically for moral deeds) leads to "good cetasika."

## Sainsāric Habits ("Gati") and Asobhana Cetasika in Akusala Citta

5. As we follow the Noble Eightfold Path, the 14 asobhana cetasika are reduced in strength and eventually removed. When reaching the Sotāpanna stage, the two asobhana cetasika of ditthi and vicikicchā are REMOVED, and all others reduced to some extent. In particular, lobha is reduced to rāga level, and dosa is reduced to patigha. That is why a Sotāpanna will never be born in the apāy $\bar{a}$.

- Raga has 3 components: kāma rāga, rūpa rāga, and arūpa rāga, corresponding to attachment to the kāma loka, rūpa loka, and arūpa loka respectively. At the Sakadāgāmī stage, kāma rāga and patigha are REDUCED to the level that one will never be born at or below the human realm.
- At the Anāgāmī stage, both kāma rāga and patigha are REMOVED. Thus all bonds to kāma loka are broken, and one will never be born again in kāma loka.
- All asobhana cetasika are removed at the Arahant stage.

6. We can easily see why four immoral universal cetasika arise with every akusala citta. These four are: moha (delusion or moral blindness), ahirika (shamelessness of wrong), anottappa (fearlessness of immoral), and uddhacca (restlessness).

- We do not realize, but when we get greedy or hateful enough, we can become morally blind. One loses any sense of decency just for a short time, but that is enough to commit an immoral act.
- Then we lose the fear of doing wrong and the shame of doing wrong because our minds are covered (it takes only a fraction of a second to generate a citta and sometimes even to act on it if the javana is strong enough). That inevitably leads to a restless mind (uddhacca) too.

7. Now, let us discuss the seven pairs in the universal moral cetasika list, starting with the pair of kāyapassaddhi (tranquility of mental body, which leads to the tranquility of the physical body itself); cittapassaddhi (tranquility of consciousness). These seven pairs are states of mind and body that correspond to some "cooling down." When doing a kusala kamma, the body and mind relax and "cool down." That is the first glimpse of Nibbāna as one is already on the mundane eightfold path.

- That is why the Buddha said that the state of mind does affect the state of the body. When one starts on the lokuttara eightfold path, these cetasika all get more robust, one starts feeling the "nirāmisa sukha," and thus one becomes motivated to follow the Path.
- But it is important to emphasize (as I have stated many times), that things COULD get worse before getting better. When one deprives the mind of things it has gotten used to, it does not like that. Until it sees the benefits of staying on the Path, it may try to pull one firmly in the "wrong direction." One needs to be persistent, and this is where one needs to cultivate the cattāro iddhipāda (chanda, citta, viriya, and vīmamisā).

8. It is important to realize that the 19 universal moral cetasika can arise in ANYONE regardless of one's religion or any other "label." All of them will arise when doing a good deed (or speech or thought). They can occur when one is on the mundane eightfold Path (nothing to do with a religion per se); see "Buddha Dhamma - In a Chart." [per se: by or in itself or themselves; intrinsically.]

- Also, note that hiri (shame of immoral deeds) and ottappa (fear of the consequences of evil deeds) are the two that are opposed to the immoral ones of ahiri and anottappa. That means one can sort out right from wrong (moral from corrupt) in that instance.
- Then there is saddhā (faith) and sati (mindfulness), which grow even more after embarking on the Path. Here, saddh $\bar{a}$ is not the faith in Buddha, Dhamma, Sangha, but the faith that such a moral act will bring about good outcomes.
- And sati is NOT Sammā Sati, but just the mindfulness of being involved in a moral act. However, once one gets on the lokuttara eightfold Path, it can become Sammā Sati.
- The other two familiar ones are alobha and adosa cetasika; they are opposite to the immoral ones of lobha and dosa. Alobha is a not mere absence of lobha but also embodies generosity. Adosa is not the mere absence of dosa but embodies compassion.
- Then there is tatramajjhattata (neutrality of mind; "majjhatta" means "in the middle"). That is not upekkhā, one of the Satta Bojjhañga; see " 37 Factors of Enlightenment."
- Thus far, we have discussed the 19 universal moral cetasika in \#7 and \#8. Now let us discuss the six moral cetasika that arise only with some kusala citta.

## Six Sobhana Cetasika Require Understanding of Tilakkhaṇa

9. It is easier to list the six moral cetasika that do not necessarily arise with each kusala citta. These are the ones that NEED TO BE CULTIVATED with the comprehension of anicca, dukkha, anatta.

- They are $\operatorname{Samma} \bar{a} \bar{a} c \bar{a}$ (speech that is conducive to eliminating "san"), Sammā Kammanta (actions that are conducive to eliminating "san"), Sammā$\overline{A j j} \bar{i} v a$ (a lifestyle that is conducive to eliminating "san"), karuṇā ("Ariya" compassion), muditā ("Ariya" appreciative joy), and pañña (wisdom) which is the same as Sammā Ditṭhi.
- Of course, those are developed to some extent when someone lives one's life morally, but they will NEVER grow to higher stages until one understands anicca, dukkha, and anatta, at least to some extent.
- That is why samm $\bar{a} v \bar{a} c \bar{a}$ is not just "good speech" or samma $\bar{a}$ kammanta is not just "good deeds." Sammā ("san" + " $m a a^{\prime}$ ) means 'to remove 'san'," i.e., done with an understanding of anicca, dukkha, anatta; see, "Why is Correct Interpretation of Anicca, Dukkha, Anatta so Important?."

## Amoha Is Not Paññā

10. However, amoha does not mean wisdom (pañn$\tilde{a} \overline{)}$ ! Amoha is not a cetasika but is a root cause. It is in all kusala citta in the sense that the immoral cetasika of moha is not present at that moment, i.e., the mind is not "covered."

- Some people interpret amoha to be paññā; not so. Paññā (wisdom) or lokuttara Sammā Ditṭhi needs to be cultivated via comprehending anicca, dukkha, and anatta, and starts when one is on the Sotāpanna magga; see, "Buddha Dhamma - In a Chart" and "What is Unique in Buddha Dhamma."
- The more pañ̃̃̄a one has, the more likely one would generate amoha thoughts more frequently!
- No matter how intelligent one is, one cannot start cultivating pañña until one hears the correct interpretations of anicca, dukkha, and anatta.

## Directing Pakiṇnaka Cetasika Toward Noble Path

11. Now, let us briefly revisit the six particulars (also called occasional) or pakiṇnaka that we mentioned in \#2 above. They are vitakka (focused application), vicāra (sustained application), adhimokkha (dominate), viriya (effort), pīti (joy), chanda (desire).

- As we can readily see, these six can be in kusala or akusala citta and make them stronger.
- That is why it is said that "Dhammo ha ve rakkhati dhammacārim" or "dhamma will guide one in the direction of dhamma that one follows", applies to both moral AND immoral paths.
- Vitakka (focused application of thoughts), when cultivated in the lokuttara Path, can become sammā sañkappa. Similarly, viriya (effort) can become sammā vāyāma.

## Good and Bad Gati Associated with Sobhana and Asobhana Cetasika

12. Therefore, Abhidhamma helps us understand the connection between cetasika and gati and how "bad gati" are removed at each stage of Nibbāna (see \#5 above). We can also see from the above discussion how 8 of the cetasika (related to "good gati") turn into components of the Noble Eightfold Path when one starts on the Sotāpanna magga. We discussed only seven above (highlighted in bold red). The eighth one is the universal cetasika, ekaggatā (one-pointedness) which can become sammā samādhi.

- However, depending on one's behavior and understanding, all these eight could be developed in the direction of the immoral (micch $\bar{a}$ eightfold path), mundane moral (lokiya eightfold path), or the lokuttara Noble Eightfold Path; see "Three Kinds of Ditthi, Eightfold Paths, and Samādhi."
- Looking from different perspectives, there could be many types of samādhi. For a discussion on three other types of samādhi, see "What is Samādhi? - Three Kinds of Mindfuilness."

13. This world is very complex. And the Buddha has analyzed it in many different ways. But they are all selfconsistent. If one can get some traction, there is no other pleasure better than finding out about this world, the pleasure of Dhamma.

- "Sabbaratim dhammarati jināti" means "from all tastes in the world, the taste of Dhamma wins." Here "rati" means "taste." Thus, the "taste of Dhamma" optimizes for an Anāgāmī.
- However, at Arahanthood, one loses all interest in worldly things, including Dhamma. The Buddha said, "A boat is needed only to cross a river; one should not carry it after crossing it. Just like that, even my Dhamma needs to be used only to find the true nature of this world, and then it should be discarded too".

### 13.3 Mind and Consciousness

What is Mind? How do we Experience the Outside World?
What is a Thought?
What is in a Thought? Why Gati are so Important
What is Consciousness?

1. Thoughts (Citta), Consciousness (Viññāna), and Mind (Hadaya Vatthu) - Introduction
2. Viññāna (Consciousness) can be of Many Different Types and Forms
3. Viññāna, Thoughts, and the Subconscious

### 13.3.1 What is Mind? How do we Experience the Outside World?

## Revised January 17, 2019

1. Everything that we experience comes through six "doors" or "āyatana" we have to the outside worlds: eye, ear, nose, tongue, body, and the mind. Through those six doors we can see pictures, hear sounds, smell odors, taste food, feel things physically by touch, and be aware of concepts (say, mundane things like remembering past events or make plans about future events, or think about a black hole in the middle of the universe or a mathematical concept).

- The six sense faculties (and the corresponding six external "āyatana" which are rūpa, sadda, gandha, rasa, pottabba, dhamma or visuals, sounds, smells, tastes, touches, and concepts) are what the Buddha called "sabba," or "everything." These are 12 āyatana ( 6 internal and 6 external).

2. All those sense experiences are done with citta or thoughts. But this is probably not a good translation. We normally associate a "thought" with an idea or one visual event, etc., a moment of "experience." But citta is very fast and no one can experience a single citta which lasts a billionth of a second or less; see, "Citta and Cetasika - How Viññāna (Consciousness) Arises."

- Don't be fooled by the title of that post. It has a simple description of how the "mind" puts together all six sense inputs to give the illusion that we see, hear, smell, taste, touch, and think all at the same time (at least start reading at \#3 there).
- It is a good idea to also read the posts, "Amazingly Fast Time Evolution of a Thought (Citta)" and "Viññāna - What It Really Means" first.

3. When we look at an object, the "eye" generates visual consciousness (cakkhu viñ̃̃āna): Comprehending what is seen is accomplished via a series of very fast thought processes. There are billions of thoughts per second, so each citta or thought moment is billionth of a second; see, "The Grand Unified Theory of Dhamma." Let us see how the mind "sees" an object in a series of very fast "snapshots" alternating between the "eye" and the "mind":

- The "eye" captures a snapshot of the object and the brain transfers that captured information to mind: that process takes 17 thought moments or citt $\bar{a}$ (let us abbreviate it as TM); this series of TM is called a "sense input citta vīthi" (or pañcadvāra citta vīthi). Next the mind analyzes that "imprint" with three citta vīthi that involve only the mind. These latter "mind-only citta vīthi" (manodvāra citta vīthi) are shorter, around ten TM, and try to discern what the object is. It may first try to discern the color of the object for example.
- Then the "eye" takes another snapshot and transfers that "imprint" to the mind, which in turn receives it in a pañcadvāra citta vīthi containing 17 TM , analyzes that in 3 more manodvāra citta vīthi containing about 10 TM , and makes better sense of the color. This "back and forth" process goes on until the object is determined.
- This process is slowed down only due to the time needed for the brain to put together the information captured by one of the five sense faculties (pañcadvāra), for example, the eyes. This time is of the order of 10 milliseconds; see, "What is a Thought?." Thus there can only be about 100 ( 600 if they are processed in parallel) or so "sense events" per second; since science show that the brain has different regions for processing different sense inputs, the latter number (600) is probably right.

4. Since these citta vithi run very fast, once the brain sends an "information packet" to the mind it is processed very quickly, within billionth of a second. Thus the process is slowed down only by the brain. Still, everything about the object is grasped in a small fraction of a second.

- Now, many of you may be thinking, "this looks like some far off theory made up by someone." The Buddha said he experienced everything that he taught. Phenomena in this fast time scale are discernible only to a Buddha.
- Once the Buddha explained the key aspects to Ven. Sariputta, it was Ven. Sariputta and his group of Bhikkhus that developed the Abhidhamma, where all these details were worked out. It took generations of bhikkhus to develop the Abhidhamma to the final form that was recited at the Third Sangayana (Buddhist Council) and was written down in the Tipitaka in 29 BCE (we know that there were many Arahants before 100-200 CE; see the timeline in "Incorrect Theravāda Interpretations - Historical Timeline"). For us, the truth of these minute details become apparent as all observable phenomena are EXPLAINED using all three forms of Dhamma in the Tipitaka: Sutta, Vinaya, and Abhidhamma).

5. As all this information comes in, the mind recognizes the object; this is sañ$\tilde{\boldsymbol{a}} \overline{\boldsymbol{a}}$ or perception. Based on that recognition feelings (vedan $\overline{\boldsymbol{a}}$ ) are generated (for example when we see a friend we generate a happy feeling; if it is someone we don't like, it is a unhappy feeling, etc).

- Once everything about the object is grasped, then if it is an "interesting object", the mind may start its own "wheeling around" process: the "pati +iccha sama+uppada" or paṭicca samuppāda process leading to the accumulation of sañkhāra: see, "Paticca Samuppāda - Introduction," "Nibbāna - Is it Difficult to Understand," "Sañkhāra, Kamma, Kamma Bīja, Kamma Vipāka," and other related posts. All these tie up together, but one needs to be a bit patient since there are many inter-coupled concepts.

6. Thus experiencing a visual object in the above example generates all kinds of mental phenomena: vedana, saññā, sañkhāra, and during this whole process we have the viñ̃āṇa or citta flowing. Viñ̃āṇ̄a is the momentary consciousness, a citta. In the above example, it alternates between visual consciousness (cakkhu viññāna) and the mind consciousness (mano viññāna).

- The baseline state of a citta, i.e., when the mind is not looking at an external object or thinking about it, is called "bhavañga." Here we do not "feel" anything, for example when we are in deep sleep. The mind falls back to the bhavañga state even in between pañcadvāra citta vīthi.

7. Same kind of process happens with any of the five physical senses (the "back and forth switching" between the sense faculty and the mind). When someone is just remembering a past event or planning something, those are exclusively mind processes (only manodvāra citta vīthi take place).

Now let us look at some details on how the mind processes all the "signals" from the real world where multiple "signals" come in.

- When we watch a movie, what happens is the projector projects about 30-50 static pictures per second on the screen; a movie is a series of static pictures. When the projection rate is above 30 frames a second or so, our eyes see a continuous movie, not individual frames. Thus even though cittā run at billions per second, we do not "experience" them individually, not even close.
- This fast rate of citta vīthis (which, as we saw above run at about 100 citta vīthis per second) also make it possible to perceive all six inputs from the outside world "simultaneously"; at least we experience them as "simultaneous." For example, we can be watching a movie and enjoying some popcorn; so we see and hear the movie, and taste popcorn and feel the popcorn cup, and also may be thinking about something related to the scene on the screen; all at the "same time."
- Citta vīthi just alternate among the six sense inputs; it is possible only because there are hundreds of citta vith $h i$ per second. Since it happens so fast, we experience them all as "simultaneous", just like the static pictures projected at a fast rate on a movie screen are perceived as a continuous "movie."
- Not only that, but the mind can ignore a multitude of "signals" that are of no interest to one's own habits ("gathi") or cravings ("āsavas"). And those depend on the individual. Two friends could be walking on the street, and one (woman) stops abruptly and starts looking at a dress on a shop window. The other (man) looks at it, shrugs, and wants to move on; he would not have even noticed it.

8. As we saw, information to the mind comes via the brain. All five physical sense inputs (vision, hearing, smell, taste, touch) come through the brain. Thinking about concepts involves the brain too (those involve only the manodvāra citta vīthi), and that happens much faster compared to the processes associated with the five physical senses; we will discuss that later.

- When someone gets old, the brain starts functioning less efficiently; see, "Manomaya Kāya and Out-ofBody Experience (OBE)." Or, the brain may get damaged due to a kamma vipāka; for example, getting Alzheimer's disease is a kamma vipāka.
- As the body gets old, various other body parts also start functioning less efficiently and are also vulnerable for many kamma vipāka to come to fruition. Kamma vipāka are not deterministic; they come to bear fruit only when conditions become suitable (see, "Sañkhāra, Kamma, Kamma Bīja, Kamma Vipāka"). Thus meditation and regular exercise help keep both the body and the mind (through an efficiently working brain) in good condition.

9. In any case, the mind goes to the "baseline or dormant state" called "bhavaña" even in between these citta vithi. When the mind is fairly inactive, say when someone is dozing off, the mind is mostly in the bhavanga state. When someone is unconscious or in deep sleep, it is in the bhavañga state for the whole duration. When seeing a dream, the mind is active.

- Even when citta vithis run at a fast rate of about 600 per second (say, while watching a movie or while playing a competitive sport), the mind drops to the bhavañga state while the brain is processing those "10 millisecond information packets", as discussed above.
- The above discussion is all about receiving information from the outside world and then getting attached to "things" ("tanhā"), generating mano sañkhāra, etc.

10. Based on that process, we may decide to take further action too, either verbally or bodily, thus generating vacī sañkhāra and kaya sañkhāra: We may speak or do some physical activity. All those are done with the mind too, and each action done with thought process or citta vithi.

- This is why the Buddha said, "mano pubbangama dhamma, ,,,", i.e., "mind precedes everything that we do...." We cannot even lift a finger without generating a citta vīthi, i.e., without the initiation by the mind. The physical body, with the brain acting as a "sophisticated control center", helps the mind to achieve whatever physical activity it wishes; see, "Neuroscience says there is no Free Will? - That is a Misinterpretation!."

Further reading: "A Comprehensive Manual of Abhidhamma," by Bhikkhu Bodhi (2010). This book has summarized citta and cetasika very well. But discussions on paṭicca samuppāda or anicca, dukkha, anatta are not correct.

Next, "What is Consciousness?",

### 13.3.2 What is Consciousness?

## Revised July 16, 2020

1. Philosophers through the ages have struggled to figure out how consciousness arises in a human being. For "materialists" everything that makes a human being originates in the body, and they have been trying to explain consciousness in terms of something that comes out from the workings of the brain.

- For the "dualist" consciousness is totally distinct from the material body, and falls into the realm of theistic religion (related to a "soul").
- According to the Buddha, consciousness, together with the body, are two of the five "aggregates" that a human being consists of. And Consciousness does not arise from the body, but arises with the body at the conception.

2. First of all, let us define consciousness.

- The Buddha said that being conscious is "being aware," but with feelings and perceptions, and the ability to "recall the past."
- There are several definitions of consciousness in modern science, but the general consensus among the scientists and philosophers is that the state of being conscious is a condition of being aware of one's surroundings as well as one's own existence (or self-awareness).
- Therefore, we could say that science and Buddhism are attributing similar the same meaning to the word "consciousness".
- However, the Buddha's definition of consciousness takes into account the critical roles played by the vedanā (feelings), saññ̄̄ (perceptions), and the manasikāra cetasika among 52 other mental factors (cetasika), which combine to produce the viññāna which can be roughly translated as consciousness.

3. As to the origins of consciousness, we have three "theories":

- Contemporary science is totally matter-based: the universe started with the "big-bang" which created all existing matter, and all living beings "evolved" from this inert matter, and thus consciousness also evolved by some (yet unknown) manner.
- The theistic religions believe, of course, that humans were created with built-in consciousness by an Almighty-God, and animals were also created (sans consciousness).
- The Buddha's is different from both above: It states that living beings (humans and animals) with built-in consciousness are different from inert matter, but they were not created. Rather, there is no traceable beginning to sentient life; life always existed, and it will exist forever (until Nibbāna is attained). Everything has a cause, so does life.

4. Consciousness is more than registration of a visual event, or an auditory event, for example. It has associated a variety of mental factors such as sañña (perception) and vedan $\bar{a}$ (feelings).

- A camera captures an image of a cat, but it is not aware of the presence of the cat. On the other hand, a dog sees a cat and becomes aware of its presence. It not only sees the cat, but knows exactly where it is and can try to catch it.
- Have you ever thought about how we can not only see things, but know exactly where they are? Without this ability, we can not even walk without bumping into things. How do we know that the person in front of us is only a few feet away? Consciousness is associated with a sentient being with a MIND. Science cannot yet explain this capability.

5. There is also the issue of the phenomenal quality of the conscious experience: qualia, subjective feelings, the redness of red, the warmness of warmth, etc. How do these arise in a being made up of inert atoms? There are basically two approaches to solve this problem in modern philosophy and science:

- One is that it arises as an emergent property in the neuronal activities in the brain. The other is the proposal of duality by Rene Descartes in the 17th century that persists to the present; see, for example, David Chalmers, "The Character of Consciousness", (2010).
- A subset of these scientists believe that consciousness is associated with the microtubules in a cell (for example, see "The Emerging Physics of Consciousness" Ed. by Jack A. Tuszynski (2006) and John Smythies, "Brain and Consciousness: The Ghost in the Machines", Journal of Scientific Exploration, vol.

23, No. 1, pp. 37-50, (2009)). Despite much research, the question of how qualia and subjective feelings arise from dead matter remains a mystery.

- Just because a cell responds that does not necessarily mean it has consciousness; the cell can expand and contract (chemical reactions) in response to environmental stimuli. In a way, something similar happens when a plant turns towards sunlight; of course, plant life is not sentient. Thus, just because an entity responses to outside influence does not necessarily mean the entity is "mentally aware" of the outside influence, i.e., that it is conscious.

6. Therefore, all these scientists and philosophers are a long way off of solving the issue of the four mental aggregates of feelings, perceptions, volitional formations (sankkhāra), and consciousness that make up the mental aspects of a human being. They are mainly focusing on consciousness and perception at this early stage, and even then are totally disregarding the intrinsic mental nature. It will be interesting to see what progress they can make by just taking a totally materialistic approach.
7. There is evidence, though, that some leading scientists are beginning to suspect that a complete "world view" cannot be achieved without taking into account the mental aspects. This trend started with the invention of quantum mechanics at the beginning of the 20th century, and is gaining traction slowly. Some interesting ideas are discussed in a number of books including "Wholeness and the Implicate Order" (by David Bohm, 1980), "Quantum Enigma" (by Bruce Rosenblum and Fred Kuttner, 2006), "Biocentrism" (by Robert Lanza, 2009).

- However, attempts to explain the mind as a manifestation of quantum phenomena will also fail, because it is the mind that precedes matter; see, "The Double Slit Experiment - Correlation between Mind and Matter?."

8. Consciousness (viñ̃̄āna) discussed in this section does NOT take account the fact that consciousness of any living being (other than an Arahant) is contaminated by defilements. This our awareness is not pure; it is like looking through a foggy window. This is discussed in the "Viññāna (Defiled Consciousness)" and "Expanding Consciousness by Purifying the Mind."

Next, "1. Thoughts (Citta), Consciousness (Viññāna), and Mind (Hadaya Vatthu) - Introduction",

### 13.3.3 What is a Thought?

## Revised January 24, 2019

There are many confusing terms in Abhidhamma like citta and mano which have been differently interpreted in different books. In order to clarify these concepts, I am writing a few posts in the "Dhamma Concepts" section under "Mind and Consciousness" starting with: "1. Thoughts (Citta), Consciousness (Viññāna), and Mind (Hadaya Vatthu) - Introduction." I highly recommend reading those, and especially, " $\underline{3}$. Viññāna, Thoughts, and the Subconscious."

1. In Buddha Dhamma, a thought or a citta is the briefest moment of awareness experienced by a sentient being. Citta is pronounced "chiththa." There are well over billion of cittā (plural of citta) in the blink of eye.

- Let us keep in mind that a citta takes much smaller than a billionth of a second. What we experience is the cumulative effect of millions of citt $\bar{a}$.

2. A pure citta only has seven cetasika (phassa, sañ̃̄ā, vedanā, cetana, ekaggata, jivitindriya, and manasikara) in it; see, "Cetasika (Mental Factors)." Thus it is the purest form a "thought", but it is too brief for anyone to experience.

- The first thing to note is that one will never be able to experience a single thought if we mean by a thought to be a citta, even though we say, "I just had a thought". The briefest awareness that we actually experience is probably a fraction of a second; Scientists say it is about 10 milliseconds. But that 10 millisecond time is mostly spent by the brain in processing the sense input; once that is done, a series of
citta with 17 citt $\bar{a}$ flow in a very brief time (less than a billionth of a second), and that is what is registered in the mind. We will discuss this later in detail.
- This series of citta with 17 citt $\bar{a}$ is called a citta vīthi (pronounced "chiththa veethi"); see below.

3. Even a single citta has three phases: uppada (rising), thiti or thithi (reached peak but still changes), and bhanga (dissolution). Thus a citta arises and fades away very fast.

- Only a Buddha can see such details as I pointed out in the Introduction. Even people with highest abhiññā powers (attained via jhān $\bar{a}$ ) cannot even come close to seeing such details.
- This is why Abhidhamma is a special section of Buddha Dhamma that needs to take "as is", i.e., we just have to believe what the Buddha said. We cannot hope to verify these details by our own experience (for example that there are a certain number of citta in a citta vithi as discussed below). Yet, Abhidhamma is very valuable in clarifying any issue down to the minute detail.

4. A pure citta with 7 cetasika does not last. Even though it starts as such a pure citta, within the duration of the citta itself (less than a billionth of a second), it gets contaminated by either a set of bad cetasika like lobha (greed), issa (envy) or a set of good cetasika like saddhā (faith) and sati (mindfulness).

- Before it starts decaying, it goes through NINE STAGES to become viñ̃̃ānakkhandho (this is NOT the aggregate as in the common usage of viñ̃änakkhandha; rather, here the mind has coupled the information in the previous stages of this citta with past viñ̃ān̄a and future viññanna that are in the mind and has made a "composite").
- However, the convention is to call this whole process still a citta.
- All this happens in less than a billionth of a second! This process keeps repeating in the citta to follow and the process is cumulative, i.e., as more and more citta flow by, the awareness of the event gets stronger, and we actually begin to feel it.
- It may be a good idea to read about citta vīthi before proceeding: "Citta Vithi - Processing of Sense Inputs."

5. Thus what we experience is the cumulative effect of numerous citta vithis. That is why the Buddha talked about kandhas (which means "heaps" in Pāli or Sinhala) as in "heaps" of feelings (vedanākkhandha), perceptions (sañ̃̄ākkhandha), volitions (sañkhārakkhandha), and consciousness (viñ̃āạakkhandha); those are the "heaps" that we actually experience in a "thought".

- If cittā fly by that fast, and captures six kinds of possible "inputs" (through the five physical senses and the mind itself), how do we "experience" seeing, hearing, etc "at the same time" but still sort them out?

6. This is because the mind is the most powerful entity in this world. All five physical senses just provide traces of inputs ("memory imprints"), and billions of them arise and perish each second. The mind keeps a record of all past events and MAKES A COMPOSITE SENSE EXPERIENCE moment-by-moment.

- For example when we hear someone say "apple", even the letter "a" is comprehended by the mind via billions of citta; then " p " is captured, and by that time " a " sound is gone from the ear.
- We speak (and are able to understand) about 150 words/minute. The minimum "packet of information" that the brain (not the mind) can process is estimated to be about a hundredth of a second (10 milliseconds) by the scientists. This comes about 1-2 letters in such a "packet".
- When it has captured the whole word "apple", the mind automatically matches that with all the past memories and instantly produces an awareness or a mental picture of an apple; past memories, as well as hopes for future, are recalled by the mansikāra cetasika and the citta is "put together" by the cetanā cetasika.

7. The mind can do this because it can process billions of citta vithi per second!

- But there is a "bottleneck" at the brain, which takes a relatively long time to process. The brain takes a relatively long time to process a "packet" of information that comes in.
- Therefore, the mind falls back to the bhavanga state in between the comprehending of information packets. For example, right after receiving the letter "a", it falls to the bhavañga state and waits until the next packet with " p " comes.

8. Furthermore, the mind is capable of processing multiple inputs (received via the five senses) that are coming in mixed up.

- For example, after hearing the letter "a" that comes through the ears, the mind may get a "packet" with information about the smell of the apple. But the mind is capable of "sorting out" these different inputs.
- It is also able to carry out its own mental processes (thinking and coming to conclusions about what is perceived through the five senses by comparing it with past memories) such a fast speed, that it appears to be done in "real-time".
- There is nothing that is faster than the mind in this world; see, "Amazingly Fast Time Evolution of a Thought (Citta)." Also, see the previous post, "Citta and Cetasika - How Viññāna (Consciousness) Arises."

9. Now the mind "knows" what that person was referring to, and has a mental image of an apple.

- If someone hears the word, "lemon", one could even feel the sour taste of lemon; the mind brings it back from the past memories.
- Even if we see just the outline of a familiar person at a distance, the mind "fills in the blanks" and flashes an image of that person in your mind so you know who it is.

10. One sensory "event" does not happen in one citta. A sensory event from one of the five physical senses is captured by a single citta (say, cakkhudvāra citta for a seeing event), but that information is processed by a string of citt $\bar{a}$ with 17 citt $\bar{a}$ in it; this "string of citt $\bar{a}$ " is called a citta vithi (pronounced "chiththa veethi'). A citta vīthi for 'seeing" is referred to as a citta vithi at the "eye door" or the eye, one for "hearing" occurs at the "ear door" or the ear, etc.

- When one citta vīthi provides a sensory input, that information is then processed by three citta vīthis that involves only the mind; this citta vithi "at the mind-door" is variable; it has around 12 citta normally. But in a jhāna samāpatti, which is solely a mind door process, there can be a very large number of citta without interruption.
- Thus there are two types of citta vith hi involved in processing a sensory input: a long one with 17 citta to CAPTURE an input from one of the five physical senses (pancadvara) AND three manodvara citta $v \bar{t} t h i$ (at the mind-door) with about 12 citta. Both types are thus involved in cognition (awareness) processes; there are other processes by the mind that we will discuss later.
- Only one citta vìthi runs at a given time; they do not overlap.

11. Thus it is mind-boggling if we try to imagine the frantic pace the mind works at. At this point, it may be a good idea to look at an analogy to simplify things a bit.

- A movie is generated by a series of static pictures. When a movie is projected on a screen, static pictures are projected at a rate of about 30 frames a second, and we see the movie as a continuous progression of events; if the projection rate is low, we can see it frame by frame or as "packets of information" separately. When we watch the movie, we do not perceive those static pictures or "packets of information", but we perceive a continuous progression without any gaps.
- This was described in \#4 of the previous post, "Citta and Cetasika - How Vinnana (Consciousness) Arises."

12. In the same way, when we perceive that our mind is hearing a word, but in reality that word is the result of many citta vithi originated at the ear door; and the scene that appears simultaneous is the composite of many citta vithi coming through the eye door and none of it happens "at the same time".

- Just like the movie projected at 30-50 frames a second, citta vithi are generated at many frames a second. (I had previously mentioned billions of citt $\bar{a}$ and that is not correct; the flow of citta vīthi is subsided by the processing time of about 10 milliseconds needed by the brain to process each each sense input). Thus we feel that we are watching, hearing, tasting, smelling, touching, and thinking all at the same time.
- To repeat for emphasis: Our minds processes probably less than 100 citta vithi per second. However, each citta vīthi with 17 citta (for five sense inputs) or about 10 citta (for mind inputs) and each of those citta vīthi take less than billionth of a second. Even though it takes the brain to process a sense input about 20 milliseconds or so, that information is grasped by the mind in less than a billionth of a second.
- While the brain is processing a sensory input, the mind falls back to the bhavañga state.

13. Just like a movie reel, there is actually a tape (not a physical one) that is recorded in the "mind plane"; this is the origin of the "nama gotta" discussed in, "Difference Between Dhamma and Sañkhāra." That tape is there forever, and allows one with abhiñ̃̃̄̄ powers to look back to any time in the past; see, "Recent Evidence for Unbroken Memory Records (HSAM)."

- Therefore in order to verify rebirth or to look at really old memories, all one needs to do is to develop abhiññā powers! And there are people, including my teacher Theros, who can do this today.

14. A citta evolves into viññāṇa and that is actually what we experience; see, "Amazingly Fast Time Evolution of a Thought (Citta)" and "Viññāna - Consciousness Together With Future Expectations."

- There is only one citta at a time. But there is a memory, as we just discussed. And that memory is normally hidden because the mind is covered up by the defilement, and when one develops abhiñ̃ $\bar{n} \bar{a}$ powers what one is really doing is to clean up the mind so everything becomes clear.
- One who develops abhiññ̄a powers through anāriya jhānā just let the gunk settle at bottom and see just the upper layers; but one who has developed abhiññā powers through Ariya jhānā is doing that by "cleaning up" the gunk so a much more penetration to deeper past is possible; see, "Solution to a Wandering Mind - Abandon Everything?."

15. Thus any of individual sense experiences are VERY BRIEF (the duration of a citta vīthi). It is the mind that puts everything together and presents us with a "movie- like" experience. This is what the Buddha meant when he told Bahiya Daruciriya in the Bāhiya Sutta (Udāna 1.10). From that sutta, "diṭthe ditṭhamattaì bhavissati, sute sutamattaì bhavissati, mute mutamattaì bhavissati, viññ̄āe viññātamattam bhavissatī'ti" or "seeing is just a trace of seeing, hearing is just a trace of hearing, enjoying is just a trace of enjoyment, experiencing is just a trace of experience".

- It is the mind (specifically the viñāāna khandha or the aggregate of consciousness) that put everything together and present it as a smooth movie-like experience.
- Here, ditța, suta muta, viññāta mean "seeing, hearing, enjoying (with smell, taste, and touch), and consciousness respectively; "mantan" means "a mātra" in Sinhala or "a trace" in English. Thus "seeing" is just trace of a visual event lasting only a billionth of a second. Then it passes away and a new one comes in. It is like taking a series of pictures with a camera. It is the mind that makes everything appear solid, permanent, and stable. This is the deeper meaning of that verse.

16. If all this appear too technical, do not worry about it. It took me a long time to figure it out. I got the final details worked out recently by also combining information from recent scientific studies. The Buddha could not use today's technical terms, but what he said in summary form is completely compatible with science. But science is still way behind in terms of the bigger picture.

Next, "What is in a Thought? Why Gati are so Important?",

### 13.3.4 What is in a Thought? Why Gati are so Important?

## Revised March 1, 2020

There are many confusing terms in Abhidhamma like citta and mano which have been differently interpreted in different books. In order to clarify these concepts, I am writing a few posts in the "Dhamma Concepts" section under "Mind and Consciousness" starting with: "Thoughts (Citta), Consciousness (Viññāna), and Mind (Hadaya Vatthu) - Introduction."

1. In the previous post, we saw that a thought (citta; pronounced "chittha") lasts much less than a billionth of a second. The more surprising part is that each citta has structure! Each citta "contains" multiple cetasika (mental factors.) Actually it is more accurate to say that each citta rises with a number of cetasika and they all perish together within a billionth of a second.

- Of course, a citta does not arise by itself. It is in a citta vīthi involved in "sensing the outside world." That can occur via one of the six senses. Such a citta vīthi has either 17 citt $\bar{a}$ (for those sensing events involving the five physical senses) or about 10 citt $\bar{a}$ in citta vīthi involving only the mind. In between those, the mind is at the "bhavañga" state, which is commonly described as "bhavañga citta."
- The citta (including those "bhavañga citta") flow CONTINUOUSLY within a life and then start a new stream at the next life; there is no break in between the two lives.
- The stream of thoughts we have, has been running non-stop since the beginning-less time; see, "What Reincarnates? - The Concept of a Lifestream".
- However, we do not "feel" all the citta. There are "gaps" in between citta vith $h$ mainly with the mind in the Bhavañga state.

2. The cetasika (mental factors) provide different qualities to each citta. A citta is moral (kusala), immoral (akusala), or neutral (kriya) depending on the what type of cetasika rise with it.

A complete description of 52 cetasika are given in, "Cetasika (mental factors)". A brief summary:

- There are 7 universal cetasika that rise with ANY citta.
- Six others CAN appear in any citta, i.e., only some of them may be in a given citta.
- There are 14 asobhana cetasika (non-beautiful mental factors) that appear only in akusala citta.
- There are 25 sobhana cetasik $\bar{a}$ (beautiful mental factors.) Nineteen sobhana cetasik $\bar{a}$ appear in each and every kusala citta, and thus, those 19 are called beautiful universals.

3. Let us first discuss the 7 universal cetasika. These arise with ANY citta. A citta with just these is called a "pabhassara citta" because it is the "purest form" of a citta. It becomes a "viññanna citta" as it develops in time within a billionth of a second! See, "Citta, Mano, Viñ̃nāna - Stages of a Thought."

- What we actually experience are "viññāna citta," as viññāna khanda (aggregate of viññāṇa or a "heap of viññāna").

The 7 universal cetasika that arise with any citta are:

- Phassa (contact), sañ̃̄̄̄ (perception), vedanā (feeling), cetana (intention), ekaggata (onepointedness), jivitindriya (life faculty), and manasikara (memory).

4. The phassa (contact) cetasika is what makes contact with the "object of the citta" whether it is sense input from one of the five physical senses or a concept that makes contact with the mind.

- In Paṭicca Samuppāda, this is the phassa in the step "saḷāyatana paccayā phasso". Of course, salāyatana are the six senses. Thus it is phassa that makes it possible for the mind to make contact with the world.
- Sañ̃̄̄̄ (perception) identifies the object by working with manasikāra (memory), and vedanā (feeling) arises.
- Depending on the object, one will generate good, bad, or neutral feeling, and also different types of cetasika (greed, shame, compassion, etc) can arise; cetanā (intention) puts it all together and "prepares" the citta. Based on the types of cetasika in the citta, it could be a good or bad thought. This is why cetanā can be good or bad, and the Buddha said: "cetanā is kamma."
- Ekaggatā is the ability to keep the mind on one object. J̄̄vitindriya maintains life in the current life (keeps the body alive) until death. And manasikāra is the all-important memory. Manasikāra has ALL memories (or nāma gotta) from the beginning-less time; see, "Difference between Dhamma and Sañkhāra" for a discussion on nāma gotta.
- This is why the present citta is the precursor to the next citta and that next citta is NOT totally different from the previous citta; manasikāra, for example, just keeps building up on the past citta. "Cause and effect" is at work from citta to citta, maintaining the "personality" or "gati" of the given lifestream. This is why the Buddha rejected the notion of a "no-self", as well as a "self".
- Yet it is important to realize that "gati" can change even in a citta, for example, one attains the Arahanthood with a single citta (of course with billions of citta vith making gradual progress towards it).

5. So, we can see the basic working of a citta with these 7 universals; they carry out the most fundamental and vital functions of recognizing the object, matching it with old memories and figuring out what it is, and also sukha, dukha, or neutral feeling arise because of that recognition.

- Yet all that does not happen in a single citta. When an "input" comes through one of the six senses, it is captured by a citta vīthi containing 17 citta for a physical sense input and about 10 citta for a mind input as we discussed in the previous post. Then that "captured event" is discerned and analyzed by three follow-ups "manodvāra citta vīthi", i.e., by the mind.
- Even then we actually experience only the "net result" of millions of such citta vithi, as we mentioned in the previous post. But due to the extreme rapidity of these processes, we feel like we are using all six in real time. We are not. The mind is always analyzing a set of events that have already gone by. This is discussed in the Bāhiya Sutta (Ud 1.10), "diṭthe ditṭamattam bhavissati .........". What we experience NOW is what has already transpired.

6. But invariably other cetasika (other than the 7 universal) arise as the citta develops in time, and the citta becomes kusala citta, akusala citta or a kriya (neutral) citta depending on the cetasika that arise with the citta.

- Sobhana cetasika arise with kusala citta and asobhana cetasika arise with an akusala citta.
- These cetasika types do not mix, i.e., no sobhana cetasika arise with an akusala citta etc.

7. Now the question arises: If citta arise and fall and go by so rapidly, how do we willfully stop akusala citta from arising? Especially when exposed to a tempting external object like an eye-catching figure.

And the answer lies in a very simple concept that I have discussed in many posts:

- This is where one's character qualities (gati) and āsava come into play. One automatically responds with the "set of values" one has.
- By changing one's habits one can change one's character (gati) and eventually change one's deep-rooted cravings ( $\bar{a} s a v \bar{a}$ ). Even though the answer is simple, it takes a long time to get rid of bad habits and cultivate good habits, at least initially.
- The with time, as that gati loses its power, one will be less and less tempted when subjected to the same sensory input. For example, this could be the sight of an attractive figure or an enemy.

8. The key to reducing such bad gati is to forcefully suppress that bad-thought as soon as you become aware of it. Even though a bad thought arises automatically, one becomes aware of it after a few seconds.

- As soon as you become aware of a bad thought you should think about the bad consequences and forcefully stop that thought stream. Just start thinking about something good or start doing something that needs your full attention.
- When you keep doing this for a while, that tendency will slowly reduce, i.e., that bad gati will lose its power.
- For example, if one needs to quit smoking, as soon as one starts lighting a cigarette one should think about the bad consequences of smoking and throw it away. Keep some mints handy and pop one in your mouth. Finding a "replacement activity" always helps to break a bad habit.
- If it is hateful thought, one could stop it and start thinking about something good. Recalling something pleasant, say a picture of the Buddha, can help. Always have a "replacement" ready.
- One needs to keep doing this faithfully in order to make the old habit weak.

9. When one gets rid of bad habits and cultivates good habits, the ne ural connections in one's brain get rewired. The brain changes gradually and that is how the thoughts change. This is the an easy answer to using the modern science.

- But there is a deeper analysis. Not only the physical brain changes but also our manomaya kāya is transformed. Eventually, that is what controls the brain; see, the couple of posts on manomaya kāya and also, "Neuroscience says there is no Free Will? - That is a Misinterpretation!" for details.
- This idea of gradually changing one's habits holds the KEY in making progress on the Path or even on achieving mundane goals, as I have discussed in other posts.

10. Therefore, initially one responds with one's current set of values or gati. But after a few moments, one CAN think about the consequences and make corrections to the initial automatic reaction.

- This is further explained in terms of the instant reaction coming from the limbic system in the brain and the "reasoned out" corrective action coming from the neo-cortex or "the thinking brain"; see, "Truine Brain How the Mind Rewires the Brain via Meditation/Habits."
- And that is how we slowly change our gati, by willfully making corrections to the initial "auto-response". This is what makes us different from animals. Animals do not have this ability, at least not to our level.
- The more you "catch" such "inappropriate auto-responses" and stop them, the more effectively we can get rid of bad habits, cultivate good habits and change our gati (character) in the right direction. This is "ānāpāna sati", i.e., one keeps good thoughts and gets rid of bad thoughts willfully; see, "What is Ānāpāna?" in the Meditation section.

11. As mentioned above, cetasik $\bar{a}$ present in a given citta determines the quality and/or the function of the citta.

- An immoral (akusala) citta have one or more immoral roots; avijjā (delusion cetasika) is in any immoral citta.
- A moral (kusala) citta will always have non-greed and non-hate cetasika. Wisdom (paññā) cetasika rises only in citta with all three roots ( tihetuka citta).
- We have come across many of the cetasika in the posts on various topics: the five hindrances are of course included in the 14 asobhana cetasika.
- The four bases of mental power (cattāro iddhipāda) are four of the sobhana cetasika, i.e., chanda, citta, viriya, vīmainsā. Here citta means "thinking about the goal" and thus is sammā sañkappa when
fully cultivated. Vīmaimsā is another name for pañña and becomes sammā ditthi when fully cultivated; see, " 37 Factors of Enlightenment."
- Some of the factors in the Noble Eightfold Path are directly in the set of sobhana cetasika, for example, sammā vācā, sammā kammanta, and sammā ajjīva. Other cetasika like sati and paññ̄a, when cultivated become sammā sati and sammā ditṭhi.
- Similarly, ekaggatā in the universal cetasika set becomes sammā samādhi, and viriya and vitakka in the set of particulars become sammā vāyāma and sammā sañkappa when cultivated.

12. As we noted, we can control a bad series of thoughts like planning a robbery or even making a quick plan to steal an item from a store. There is enough time to think about the consequences of such a bad action and deliberately stop such thoughts. But one needs to be in a fairly stable "state-of-mind" to be able to do that. When the mind is agitated, the mind cannot see "right from wrong". The five hindrances are covering the mind.

- Sometimes people commit horrendous crimes in the spur-of-the-moment. One can get into a rage and shoot someone with a gun that is close by. How do we stop such quick reactions? By being mindful to control that bad gati, which is the tendency to get mad at the slightest provocation. See \#10 above.
- When one keeps reducing one's "bad gati," those really dangerous gati - which could lead to rebirth in the apāy $\bar{a}$ - will be permanently eliminated when one becomes a Sotāpanna. With that achieved, that mindset persists even in future lives. As we saw, a patisandhi citta in the new life arises based on the cuti citta of the past life, so it has all the "gati" from a past life. Changing to a "gati" of a Sotāpanna is a change in the lineage (gotrabhu.) One becomes an Ariya or a Noble person forever.

### 13.3.5 1. Thoughts (Citta), Consciousness (Viññāṇa), and Mind (Hadaya Vatthu) - Introduction

It will be beneficial to read this post even if one is not interested in learning Abhidhamma.

1. After writing a few posts in the Abhidhamma section, I realized that it is a good idea to write introductory posts on English meanings of some Päli key words related to the mind. In the end, words do not matter and what matters is grasping of the concepts involved. But conveying the concept correctly REQUIRES the use of right words.

- This is a bit of a problem because there are no words in English that truly conveys the meaning of some Pāli key words when talking about the mind (like mano and viñ̃än̄a). Thus what I need to do is to write several introductory posts describing such keywords (like what I did for anicca, dukkha, anatta).
- More details will be given in the Abhidhamma section, but the posts that appear in this section provide just the basics.

2. A Citta (pronounced "chiththa") is widely translated as a "thought", viññāna as "consciousness" and mano as "mind". I am going to keep using the former two, but am going to use "hadaya vatthu" as the Päli word for mind. Let us first discuss the reason for using this term for the mind.

- Hadaya vatthu is where citta (thoughts) arise; thus it is appropriate to call it the mind or even more appropriately "seat of the mind". Hadaya vatthu is the "link" between the "mano loka" (mind plane) and the "material plane" whether it is in kāma loka, rūpa loka or arūpa loka (i.e., anywhere in the 31 realms). Mind or the hadaya vatthu is a very fine $r \bar{u} p a$ (matter); in technical terms, hadaya vatthu is formed at patisandhi as a vatthu dasaka.
- By the way this hadaya vatthu is the only trace of matter associated with a living being in the arūpa loka. It is much smaller than an atom; only a form of "suddhāshtaka [suddhatṭhaka]" in the form of a "dasaka."
- For example, if a cuti-patisandhi transition occurs from a cat to a human, then the "cat hadaya vatthu" dies and a "human hadaya vatthu" is formed and the very next citta arises in the "human hadaya vatthu" or the "human mind" in the "human gandhabba"; see, "Cuti-Patsandhi Transition Abhidhamma Description". With that in mind, let us discuss the ultimate "primary elements".

3. In the absolute sense (paramatta), there are four entities: citta, cetasika (pronounced "chetasika"), rūpa (pronounced "rüpa"), and Nibbāna. The last one, Nibbāna, does not belong to "this world" of 31 realms. Therefore, there are only citta, cetasika, and $r \bar{u} p a$ that are in anything and everything in this world.

- Citta and cetasika are "nama" and all tangible things are made of "rupa".
- There are 89 (or 121) types of citta; 52 kinds of cetasika, and 28 kinds of $r \bar{u} p a$. These are all listed in the "Tables and Summaries" section.

4. A citta (thought) does not arise by itself, but arises with a number of cetasika (mental factors). There are 7 cetasika that arise with ANY citta, and normally there are other cetasika that arise in addition to those seven. This is discussed in "Cetasika (Mental Factors)".

- There are "good" and "bad" cetasika. The familiar ones are lobha, dosa, moha and alobha, adosa, amoha, but there are many others. These determine whether a given citta is a "good" (kusala) citta or a "bad" (akusala) citta. There are only good or bad cetasika in a given citta; they do not mix.

5. Even though a citta arises and perishes within less than billionth of a second, it gets contaminated during its lifetime. Starting as a "pure citta" ("pabasvara citta" which is also called "prabhasvara citta" in Sanskrit) with those 7 universal cetasika, it gradually degrades by incorporating many other cetasika into a "contaminated citta" or viññāṇa. Without going into details, the nine steps are:

- citta, mano, manasan, hadayan, pandaran, mana indriyan, manayatan, viññāna, vinnanakkhandho. [Yaì cittaì mano mānasai் hadayaì paṇ̣araì mano manāyatanaì manindriyaì viññānaim viññanạakkhandho...] But this happens during the life of the citta itself (in billionth of a second) according to the "gathi" that we have. This is why we cannot control our initial thoughts; but as those initial thoughts turn to speech and bodily actions, we may have time to control them.
- But we still use the term "citta" to denote the final outcome; in order to differentiate the one that the sequences started off, we call it a "pure citta" or a "pabasvara citta."
- What we end up is basically what we call vinnanakhandha, and all this happens within a billionth of a second. This "contamination process" cannot be controlled willfully at that early stage; it happens automatically based on one's "gathi." The only thing we can do is to change our "gathi."

6. We can use the following analogy: If we start off with a glass of pure water that can be compared to a pure citta with just the 7 universal cetasika. If we add a bit of sugar (mano), salt (manasan) it gets a bit contaminated but we cannot see the contamination. Now we add a bit of brown sugar and we can see the water turning to brown; this is like the hadayan stage. Then we keep adding chocolate, milk, etc, the water gets really contaminated; but it is still mostly water. A contaminated citta is like at the viññanna stage; it is a citta that is contaminated.

- The citta of an Arahant does not contaminate beyond the masanan stage (While in the "Arahant phala samapatti" enjoying Nibbānic bliss, an Arahant has the pabasvara citta or the pure citta). All others get to the viññanna stage, but of course the "level of contamination" is much lower even by the time one gets to the Sotāpanna stage, because one has gotten rid of any "gathi" associated with the apāy $\bar{a}$.
- As we can see, it is not possible to control such a fast process by sheer will power; it is a matter of "cleansing the mind" progressively of the contaminants of greed, hate, and ignorance.
- Now we can see why "mano" cannot be the mind. "Mano" is just a bit "contaminated" citta. It gets progressively contaminated and by the time it comes to the "viññāna" step it has captured all relevant cetasika for that ārammaña or the "thought object".
- At the last step, a very profound thing happens. The manasikara cetasika brings in to play all relevant past viññāṇa (which are fixed as "nama gotta") as well as one's "hopes and dreams" for the future that are relevant to the "event in question". For example, if the thought occurs due to seeing a nice house, one may compare that house with houses like that one has seen before AND one's "dream house" that one is hoping to build one day. Therefore, in the "final version", a citta is a very complex entity that reflects not only the "nature of the object seen" but also one's own likes/dislikes for it.
- This last stage of the citta or Viññanna is the "composite awareness" for that particular event, which also has one's own likings, dislikings, etc for that particular event; see, "Citta, Mano, Viññāna - Stages of a Thought."

7. And we do not, and cannot, just perceive a single or even a few vinnanakkandho; rather what we "feel" as a "thought" is the sum of many such vinnanakkandho, and we still call that a "citta" or a "thought"; see, "What is a Thought?" and "Citta and Cetasika - How Viññāna (Consciousness) Arises".

- We also alternatively call such sense experiences "citta," "thoughts," "consciousness," and "viñ̃āạna."
- Thus it is critical to understand that what we mean by viñ̃ān̄a in general is the sum total of many cittā; in paticca samuppāda, at the "avijjā paccayā viññāna," viññāna means this sum total of many cittā or even more accurately the sum total of many of vinnanakkhandho.

8. Now I would like to point out a few important conventions:

- It is important to remember that a thought can have many meanings even in English: WebLink: WIKI: Thought
- Normally "citta" is used to denote a thought, and "viññāna" is used to denote the "awareness" associated with a thought. It is fine to do that most of the time, but if a discussion gets technical one could come back to this post and refresh memory as to the details.
- And as you can imagine, such an "average of thoughts" may have many type of cognitions and underlying "awarenesses", and we will talk about the different types of viñ̃̃āna in the next post, "2. Viññāna (Consciousness) can be of Many Different Types and Forms".

## 2. Viññāna (Consciousness) can be of Many Different Types and Forms

## Revised August 4, 2021; July 1, 2022

1. Viññāna is unique to sentient beings. Plants are alive but have no viññāna; they respond to the environments but are not capable of "thinking." Sentient beings are aware that they are alive and just that basic awareness of "being alive" is not really a viñ̃̃āna.

- This purest level of viñ̃̄āṇa (the awareness of being alive) is called the "citta" (pronounced "chiththa") stage.
- A citta arises with 7 concomitant "mental factors" (cetasika, pronounced "chetasika"), and this is described in "Citta and Cetasika - How Viññāna (Consciousness) Arises." To emphasize, a pure citta arises with universal cetasika; a citta always has those 7 cetasika .

However, a citta gets "contaminated" by other cetasika as soon as it arises. Within the lifetime of a citta (which is less than a billionth of a second), it progressively gets contaminated by "good" or "bad" cetasika, and this happens in nine stages! See the previous post: "Thoughts (Citta), Consciousness (Viññāna), and Mind (Hadaya Vatthu) - Introduction."
2. As discussed in " $\subset$ Citta and Cetasika - How Viññāna (Consciousness) Arises," additional cetasikā provide "color" to a citta: if a set of "good cetasika" arise with the citta it becomes a "good thought" or a "good viññāna"; if it is a set of "bad cetasika," then the thought or the viññaña is bad (those cetasika do not mix). Also, there are neutral thoughts or neutral viññāna that are neither good nor bad.

- Viññāṇa can be experienced in many different ways; since it is hard to come up with different names for each case, they are all bundled together as viñ̃̃āna. Words like citta, viññāna, mano, as well as cakkhu viññāna, sota viññāna, etc., and vipāka viññāna are used in different contexts, and that can be confusing to many regardless of whether their native language is English, Chinese, or even Sinhala, which is the closest language to Pāli. But each term has its own "subtle identity," and as we discuss more, those subtle differences will become clear.

3. Viññāna is often translated as "consciousness," but viñ $\tilde{n} a \underline{n} a$ can be used in many different contexts like "subconscious" or "layers of consciousness."

- The same problem is encountered by those who speak the Sinhala language because there the word "sitha" (ひூூ) is used on many occasions to represent the Pāli words citta, mano, and viññāna. Similarly, in Sinhala, "yati sitha" ( $\omega$ §ో万) is used to denote the subconscious.
- This "subconscious" in English (as introduced by Sigmund Freud) is not a separate citta (there can be only one citta at a time). But, each citta can have "layers of consciousness"; the manasikāra cetasika plays a big role here.
- For example, at a given time, we may have several "subconscious" viññāna (expectations): we may have plans to buy a certain car, getting ready to go on a trip next week, in the process of building a house, etc.; all these are in the subconscious and each citta. If we see a car on the road that looks like the car we are interested in, the viñ̃̄āna alerts us to it, and we take a good look at it.
- As the Buddha advised bhikkhus, what really matters is to convey the meaning. Just like in the case of Pațicca Samuppāda or taṇhā, it is best to use the Pāli words and comprehend their meanings; those key words convey deep meanings that may take several words or even sentences in any other language to get the idea across.

## Types of Viññāna associated with Kamma and the Sense Doors

Viññaṇa is complex and can be presented in different types and forms. We will start by looking at "two categories" of viñ̃̄āṇa.
4. First, we can categorize them according to kamma (or sañkhāra) associated with the viññ̄āna: Kamma viñnāna and vipāka viññāna.

Let us describe in plain English what these terms mean.

- We can put viññ̄āna into two categories: Those viñ̃ñ̄ṇa that arise while doing a kamma (sañkhāra) is a kamma viññanna. For example, when one steals something, one has an awareness of that; that is the "viññāna that one is stealing."
- Then some arise as kamma vipāka, and thus we do not have much control over them; they just happen to us and are called avyākata viññāna or vipāka viññāna. I like the term vipāka viññāna than avyākata viñ̃āṇa because then it is easy to differentiate those two kinds. For example, when one is walking on the road and sees something valuable on the roadside; that is a cakkhu viññāna (seeing something) and also a vipāka viññāna (due to a kamma vipāka).

5. When traveling by car and looking out of a window, we see many different things. But most of it we do not pay any attention to, even though we are "aware" that we see things. Those are vipāka viññāna, they are "presented to us," but most of them may not interest us.

- Then all of a sudden, we see something that "piques our interest," say, a nice house by the roadside. Then we focus on that and may keep looking at it until it moves out of our range. That is a vipāka viññāna that triggered a "gati" in us; it was of interest. And it could put us in a position to acquire more kamma by initiating a kamma viññaṇa. An easy way to remember is that "kamma viññanna" are those arising via "sañkhāra paccayā viññāṇa" in Paṭicca Samuppāda; see \#6 below.
- For example, if we really got interested in that house, we may start thinking about how nice would it be if we could build and live in a house like that. Now we are making sañkhāra (i.e., generating kamma) based on that "seeing event." Thus such thoughts (or viññāna) that followed the initial vipāka viñ̃āạna of "seeing the house" are kamma viññāna.
- Our life experiences belong to basically one of those two categories.

6. Vipāka viññāṇa arise with sensory input; only these can be truly called "consciousness." We can differentiate them into six categories, this time based on the sense door: thus we have cakkhu viññāna (vision consciousness), and sota (sound), ghāṇa (smell), jivhā (taste), kāya (touch), and mano (mind) viññāna (consciousnesses).

- In the previous example, the both types of viññāna were all initiated by cakkhu viññ̄āa, a "seeing event or consciousness." At the kamma viññāna stage, they turned to an "expectation" (more that consciousness) because those thoughts about acquiring a house originated in our minds.
- Thus if you contemplate a bit on this, you can see that we can put ALL our experiences into one of those two "divisions," i.e., we can analyze them to be in the vipāka viññāna or kamma viññāṇa categories.

7. Let us discuss something fundamental to Pațicca Samuppāda.

- The Paṭicca Samuppāda cycle starts with "avijjā paccayā sañkhāra", and "sañkhāra paccayā viññāna". This viññāna is NOT a vipāka viññạ̄na, but only a kamma viñnäạa.
- When we see something, hear something, etc., those are things that HAPPEN to us. Thus there is no avijjā (or ignorance) initiating that consciousness. There is no kusala-mūla or akusala-mūla Paṭicca Samuppāda cycle associated with such a consciousness (vipāka viññāna).
- However, if we now decide to act on it (say, take another look at it because we like it), then we may be initiating a sañkhāra (kamma) event: now this new event initiates an Idappaccayatā Paṭicca Samuppāda cycle with "avijjā paccayā sañkhāra," which leads to, "sañkhāra paccayā viññạ̄a," i.e., this viñ̃̄āna was initiated by a sañkhāra; thus it is a kamma viññāṇa.

8. Usually, what happens in our lives is that we are bombarded with sensory inputs via all six senses. We tend to turn our attention to many because we are afraid that "we may miss out on something." This is the root cause of the lack of "peace" in our minds because we are constantly moving our attention among the six senses, going back and forth. If we have too many "likings," our mind will be pulled in all different directions trying to follow all those sense inputs.

- We can reduce this effect by avoiding busy environments (i.e., going to a secluded place). But, we still cannot "turn off the sixth sense input," i.e., the mind, unless we purify our minds. This is the key to meditation. It is not possible to have "peace of mind" if the mind is burdened with greed, hate, and ignorance (wrong vision or micchā ditṭhi).

9. Thus, an Arahant can have a peaceful mind even when in the busiest place. A Sotāpanna can do that to a certain extent too.

- Even before any of the "magga phala" is attained, one can easily get to samādhi and then to jhānā by gradually getting rid of the defilements associated with "wrong vision" just by learning Dhamma (mainly anicca, dukkha, anatta).
- Then we can reduce the number of different types of kamma viñ̃nāna going through the mind ("Sounds like my neighbor's car leaving, I wonder whether she is going to the mall?", 'I wonder what (my enemy) is up to today?", "I wish I could have a body like that!", "How come I don't have a nice house like that?"; these are all types of kamma viññāna that we burden our minds with unnecessarily.
- And it is important to realize that it is not easy to turn those off, they WILL BE turned off automatically when we purify our minds first by learning Dhamma ("What is the use of thinking about unnecessary things? There are better things to think about that provide lasting happiness").

Next, "3. Viññāna, Thoughts, and the Subconscious",

### 13.3.7 3. Viññāṇa, Thoughts, and the Subconscious

Revised February 25, 2020

## Cetasikā (Mental Factors) Determine the Nature of a Citta (Thought)

1. A thought (citta) arises based on a specific thought object (ārammaṇa), say thinking about buying a car or going for a walk. There is only one citta at a time, but each lasts less than a billionth of a second. The word citta is pronounced "chiththa." See, ""Tipitaka English" Convention Adopted by Early European Scholars - Part 1."

- Cittā (plural of citta) flow at a very fast rate. We do not experience individual citta, but the overall effect of billions of cittā that arise in a second.
- Each citta has many cetasika (mental factors) in it, including the all-important saññā, phassa, manasikāra cetasika.
- Then there are "good" and "bad" cetasika in a citta that describes the "quality" of the citta.
- When someone is angry, most cittā at that time will have anger/hate (patigha and/or dosa cetasika.) When the same person is feeding a hungry person his/her cittā at that time will have the benevolence and/or loving-kindness cetasik $\bar{a}$.
- The good and bad cetasikā do not mix, i.e., one either has a good thought or a bad thought. For discussion on cetasika, see, "Cetasika (Mental Factors)."

## What Is Viñnāāna? - Role of Cetasikā

2. Even though we simply think about a "thought," a thought is really a complex entity, that goes through nine stages within a billionth of a second. It ends as viññāna or viññānakkhandha. See, "Citta, Mano, Viññāna - Stages of a Thought." Viññāna represents the overall experience of "thought" and is largely described by the cetasik $\bar{a}$ in those citt $\bar{a}$.

- Of course, no one experience a viññāna due to a single citta; rather what one experiences is the average of millions or billions of cittā. A bunch or a heap is called khandha in Pāli or Sinhala. Thus what we experience is a viññānakkhandha or the overall effect of a bunch or a heap of cittā.
- Viñ̃̄āṇa is complex and multifaceted. But they are primarily of two types: vipāka viñ̃̃āna and kamma viññāna See, "Viññāṇa - What It Really Means."
- We can look at those two types in a simple way as follows.

3. The manasikāra and saññā cetasika are in each and every citta, and they can incorporate all past memories, habits (gati) and cravings ( $\bar{a} s a v \bar{a}$ ) to a given citta. It is the cetana cetasika that "puts it all together." Only the mind of a Buddha can "see" such amazing details. It all happens within a billionth of a second!

- Our gati and $\bar{a} s a v \bar{a}$ (plural of $\bar{a} s a v a$ ) may not be displayed in each citta. Rather, they lie dormant, waiting for a "trigger" to come up. For example, greedy thoughts arise only when a "pleasing thought object" is in play, as in seeing a tasty dish or an attractive person.
- Therefore, the way we think (viñ̃̃āna) depend on our gati (habits/character,) āsavā (cravings,) AND the particular "thought object" or ārammaṇa.
- Of course, we can get rid of certain gati/āsava and cultivate new ones.
- The main goal of Ānāpāna and Satipatṭhāna meditations is to remove bad gati/āsava and to cultivate good gati. See, "Is Ānāpānasati Breath Meditation?" and "9. Key to Ānāpānasati - How to Change Habits and Character (Gati)."

## Vipāka Viññāṇa and Kamma Viññāṇa

4. The mind is directed to a new thought object (or arammaña) with a vipāka viññāna that may come through any of the six sensory inputs. For example, we may be walking down the street, but an attractive item in a shop window may catch our attention.

- Now, if we like that item, we may start thinking about buying it. That is a kamma viññāna. Now we have generated a new viññāna with a desire to buy that item. A kamma viññāna has an expectation. We may not buy it at that time. But if we go home and again start thinking about it (generating vaci sañkhāra,) then we build up that viññāna via "sañkhāra paccayā viññāna" step in Paticca Samuppāda. Therefore, a kamma viññāna arises only in the mind.
- Without getting deep into the issue, we can just say that a kamma viññāna is an expectation. Once formed, a kamma viññāna will stay with us at least for a while. It will grow only if we keep thinking, speaking or doing things (with $v a c \bar{c}$ and $k \bar{a} y a ~ s a n ̃ k h a ̄ r a) ~ r e l a t e d ~ t o ~ t h a t ~ e x p e c t a t i o n . ~$

## Kamma Viññāṇa Come Back as Vipāka Viñṇ̣̃̄̄a

5. When we build such an expectation, the memory of that can come back as a vipāka viñ̃̃āna at a later time.

- For example, the memory of that item in the shop window in \#3 above may come back to the mind via one of the six senses later on. For example, we may hear about it on the radio, we may hear someone else talking about it, etc. It may even "pop into the mind" too.
- That item in the shop window is a "thought object" or a ārammana.
- Then if we keep thinking, speaking, doing things related to that ārammaṇa, that associated viñãāṇa will grow.

## What is Subconscious?

6. Such vipāka viññāna are waiting in the background to bring their fruits. There may be many types hiding beneath the surface. This is what Sigmund Freud called the "sub-conscious".

- When I am paying for my groceries, my thoughts stay focused on that transaction. But there can be many types of viññāna lurking "in the background". I may be building a house, studying for an exam, planning a trip, planning a birthday party for my child, etc. and all those "viññaṇa" are working in the background even though I am not thinking about any of them at the time I am paying for my groceries.
- However, any of those, and even some things that I had not been thinking about for a long time, can be there in the "subconscious". But there is no separate "subconscious" as such.
- All these different types of viññāna cannot be there in a single thought (citta), and there is only one citta at a time; see, "What is a Thought?". Then how is it possible for many types of viññāna to be lurking in the background? That is what we discussed in \#2, \#3 above. Based on the particular ārammana, the cetanā cetasika "transforms" a pure citta to the "contaminated" viññaṇa stage in several steps.

7. The more one does something repeatedly, there starts a kamma viññāna for that particular event or behavior. For example, when one starts smoking, a viññāna starts building, and the more one smokes, the stronger the viññāna gets. This is called "feeding the viññāna" by doing it again and again. In other words, habits are formed via repeatedly feeding the viñ̃̄̄̄na for that habit.

- When a certain viññāna is pleasing to the mind, that viññanna tries to get fed frequently. When someone has the habit of smoking the viñ̃āạa for that tries to deviate his/her attention to smoking at every
possible opportunity. For example, if a smoker sees an advertisement for smoking, that "triggers" the liking or the viññaña for smoking that was in the subconscious.

8. But it works the same way for a viññāna that got established with a dislike also. For example, if someone did something really awful to you in the past, the hearing of his/her name will bring back that viññāna.

- This is why we get "attached" ( $\operatorname{tanhh} \bar{a})$ to things we like as well for things we dislike and is the meaning of $\operatorname{tanhh} \bar{a}$ (get bonded via greed or hate); see, "Tanhā - How We Attach Via Greed, Hate, and Ignorance."

## Viññạ̄a Are Not Permanent

9. Not all viññāna keep accumulating in the background. Those weaker ones, especially if don't get fed, diminish and disappear.

- For example, suppose I had planned an overseas trip and had been making preparations for it. The more preparations I make and the more thoughts I have of the trip, those are "food for that viññana", and it grows. If I see a new article with that country's name, I would immediately read the article. But suppose, a major war breaks out in that country before my trip; then I would cancel that trip right away. I will no longer be planning for the trip and my mind will "not be interested" in it anymore. Since that viññāna for "visiting that country" is not going to get fed anymore, it will be gone in a short time.
- We don't even need to actually physically do the activity to "feed the viññāna" or make a habit stronger. There are studies that show that one could improve the game of basketball, for example, by just visualize practicing, and getting the ball mentally. These are called "mano sañcetana $\vec{a}$ ". Focusing attention on a given task can be very powerful.
- One's associations strongly influence which of those different types of viññaṇa will grow by "getting fed" frequently. If one starts associating with people who drink regularly, one's viññāna for "getting drunk" will grow as one keeps feeding that viññāna by drinking frequently.

## Summary

12. A built-up viññāna can form a habit (gati.) As the habit or the gati gets stronger, it can be carried over to the next life, possibly in two ways.

- If a human dies and has time left in the "human bhava" then when he/she is reborn as a human most of the previous gati will be there.
- A really strong habit could lead to a "pațisandhi viññāna" at the dying moment and can lead to a corresponding "bhava" based on that particular gati. For example, an extremely greedy person, may acquire a "peta bhava" at the dying moment and be born as a "peta" or a hungry ghost.

13. Thus viã̃̃āṇa is very complex. It is not just "awareness." Viññāna also has one's "hopes and dreams" as well as "likes, dislikes, and habits". It also includes the "subconscious." It is a complex combination of the 52 cetasikā.

- Of course, not all cetasikā are involved in a given citta or in our thoughts. Sobhana (good) cetasikā do not arise with asobhana (bad) cetasikā in a given citta.
- See, "Cetasika (Mental Factors)" for a discussion on cetasikā.

### 13.4 Role of the Brain in Human Consciousness

Brain - Interface between Mind and Body
Body Types in Different Realms - Importance of Manomaya Kāya (located at The Grand Unified Theory of Dhamma)

### 13.4.1 Brain - Interface between Mind and Body

April 22, 2016; revised September 22, 2019; \#17 added March 31, 2021

## The brain is Not the Mind

1. Contrary to what scientists believe, our minds are not in the brain (this is another prediction from Buddha Dhamma that will be proven correct in the future).

- The "mind door" where citta (or thoughts) arise is at the hadaya vatthu is not located not in our physical bodies. It is in the manomaya kāya of the gandhabba; see, "Gandhabba (Manomaya Kāya)Introduction."
- The gandhabba has a subtle body and it is not a "body" in the sense we usually think about. It is more like an energy field that overlaps the physical body; see, "Ghost in the Machine - Synonym for the Manomaya Kāya?."
- The hadaya vatthu overlaps the heart in the physical body. When we hear traumatic news, we feel a burning sensation close to the heart, and not in the head. We don't say, "Oh, my head felt like burning when I heard the news." It is the heart area that feels it. (Head may start hurting later if one keeps thinking about the loss).
- On the other hand, when we overuse our five physical senses or when we think hard about a difficult problem, it is the head that hurts. Because in those situations, the brain has to do a lot of processing. While watching a movie, our brains work overtime to convert those sensory inputs from the eyes (cakkhu indriya) and the ears (sota indriya). When we think about a hard problem, the mana indriya in the brain has to work hard; see below.

## Two Overlapping "Bodies" - Physical Body and Gandhabba (Mental Body)

2. A physical body is a temporary shelter or a "shell" for the gandhabba's subtle body. The gandhabba receives sense inputs from the outside world via the physical body. See, "Body Types in Different Realms Importance of Manomaya Kāya."

- Since a given physical body has a lifetime of around 100 years, we have to "build a new physical body" when the current one decays and finally dies. (That is if we have extra kammic energy for the human bhava); see, "Bhava and Jāti - States of Existence and Births Therein."

3. Before entering the mother's womb, the gandhabba has a very fine "body," more like an "energy packet." Thus, it cannot experience taste or touch, even though some can "digest odors" and become a bit denser.

- A gandhabba waiting for a womb usually is about the size of a fully-grown human, but it has very little "matter" that is visible to us. At the moment of "okkanti" or entering the mother's womb, he/she will enter THROUGH the mother's body and collapse to the size of the zygote when taking possession of it; see, "Buddhist Explanations of Conception, Abortion, and Contraception."
- Thus a gandhabba, when outside waiting for a suitable womb, is just like a ghost shown in the movies. Of course, a human cannot see it even using technological advances. It is much smaller in mass than the first cell formed by the union of the mother and father, the zygote.
- The physical body grows starting with that single cell (zygote) using the nutrition from the mother. After the baby is born, it grows to the full size of an adult by consuming food.
- Thus it is useful to have this visual, where a very fine gandhabba trapped inside a physical body of over a hundred pounds controls it.

## Brain - Interface Between the Physical Body and Gandhabba

4. Once inside a physical body, gandhabba has to use the physical body to interact with the outside world. It is like being trapped in a solid shell. Initially, its mind will be in the bhavañga state (see, "Citta Vithi Processing of Sense Inputs") and will not be conscious about its environment, except for body sensations.

- In a human, the brain first processes the signals coming through the "physical senses" (eyes, ears, etc.). The brain transmits that information to the five pasāda rūpa located in the gandhabba. Those pasāda rūpa then pass that information to the hadaya vatthu (seat of the mind) in the gandhabba; see, "Gandhabba (Manomaya Kāya)- Introduction."
- That is how our minds receive information from the external world.
- Now the question arises: "How do the sense inputs coming through the eyes, ears, tongue, nose, and the body, are transmitted to the pasāda rūpa located close to the hadaya vatthu?." Note that the hadaya vatthu overlaps the physical heart.

5. It is the brain that acts as the intermediary between those physical sense inputs and the five pasāda rūpa. It processes the incoming information to a form that can be understood by the mind (hadaya vatthu).

- First, the sense inputs coming in to the physical body through the eyes, ears, tongue, nose, and body go to specific regions of the brain. That has been well-researched by scientists over the past hundred years. The following figure shows the specific areas of the brain that analyze the data from the five senses.

- Science is unable to explain how the mind comprehends the corresponding signals after the processing of those signals. For example, in vision, there is no "picture" formed in the back of the head; see "On Intelligence" by Jeff Hawkins (2005) for a helpful discussion.

6. The signals for vision, sounds, smells, and taste come into the body through specific body parts. In contrast, the touch sensations can come from anywhere in the body, and conveyed via an intricate system of nerves:

- These nerve signals go to the brain for processing (see the "touch and pressure" processing area in the figure in \#5 above).

## Gandhabba (Mental Body) Overlaps the Physical Body

7. By the way, it is essential to note that the misty gandhabba has a similar "nervous system" that overlaps the physical nervous system shown above. Yes. That is extremely fine, more like an "energy field." That is not entirely relevant to the present discussion, but the physical body is there to impart kamma vipāka via body aches, diseases, and injuries.

- The physical nervous system has to align with the nervous system of the gandhabba. That alignment could change (due to kamma vipāka), which makes our body's nervous system go out-of-alignment for proper body function leading to aches and pains. See, \#6 of "11. Magga Phala and Ariya Jhānā via Cultivation of Saptha Bojijanga."

8. The signals from the other four senses go to specific brain areas (indicated in the figure in \#5 above) via specialized neural pathways. For example, the optical nerve carries the visual signal to the brain:

- Once the brain processes those sensory inputs from the five physical senses, they are "transmitted" to the corresponding five pasāda rūpa in the gandhabba (manomaya kāya). See below.

## Mana Indriya in the Brain

9. So far, we have identified five of gandhabba's "windows to the outside world" from his/her "shell" or the physical body: eyes, ears, nose, tongue, and the body.

- What about the "dhamma" that are the finest rūpa (these are called mano rūpa) that interact with the physical body? That is how we think about "random things" out of the blue. For example, we may be washing dishes in the kitchen, and all of a sudden, thoughts about a friend or a relative may come to mind.
- Thoughts about a friend - who may be a thousand miles away - come through the mana indriya in the head (inside the brain). Of course, science is not aware of that.
- We discussed this in a previous post: "What are Dhamma? - A Deeper Analysis."

10. So, how do the signals processed in the brain due to incoming vision, sound, smell, taste, touch, and dhamma are passed to the five pasāda rūpa and the hadaya vatthu? Details in "Gandhabba (Manomaya Kāya)- Introduction."

- It is well-known that there are electromagnetic brain waves of different types (alpha, beta, theta, and gamma). I will write a post on this in the future. These waves are called "kirana" in the Tipitaka.

## The Origin of Citta Vīthi

11. When information comes to one of the five pasāda rūpa, it passes on that signal to the hadaya vatthu by impinging (hitting) the hadaya vatthu. That results in the hadaya vatthu vibrating 17 times, just like a clamped blade vibrates a certain number of times when hit by an object; see, "Gandhabba (Manomaya Kāya) - Introduction" and "Citta Vithi - Processing of Sense Inputs."

- That is the origin of a citta vīthi of 17 citta. Each citta in a citta vīthi corresponds to a single vibration of hadaya vatthu. This 17 thought-moment time is the lifetime of a hadaya rūpa (vibrational energy) of the hadaya vatthu.
- It is a common mistake to take this to mean that any r $\boldsymbol{r} \boldsymbol{p} \boldsymbol{a}$ has a lifetime of 17 thought moments. That is a terrible mistake; see, "Does any Object (Rūpa) Last only 17 Thought Moments?."
- It is not possible to describe these details in one or even several posts. One may need to look through other posts to clarify some concepts. The "Search" button on the top right is an excellent resource for this task.

12. Any of the five pasāda rūpa has to strike the hadaya vatthu to pass on its signal. However, signals from the mana indriya can exchange information with the hadaya vatthu directly.

- When the mana indriya interacts with the hadaya vatthu, that also results in citta vīthi. Such manodvāra citta vīthi do not have a fixed length.
- Still, only one of the six sense-signals can be in contact with the hadaya vatthu at a given time. But since the process is swift, billions of citta vīthi can run through the hadaya vatthu "in the blink of an eye".

## Two Inter-Dependent "Bodies"

13. Therefore, this whole process involves interaction between two overlapping systems. The physical body and the corresponding subtle "energy body" of the gandhabba.

- When the gandhabba escapes from the body under stressful situations, it can float above the physical body. Then the physical body becomes inert until the gandhabba returns to it; see, "Manomaya Kāya and Out-of-Body Experience (OBE)."

14. Thus it is clear that the brain plays a significant role in shaping our future. Similarly, the five physical senses play vital roles too.

- If one of the five physical senses are damaged, we lose the corresponding "window to the external world". We will not be able to see If both eyes are damaged. If the sensors inside the ears go bad, we will not be able to hear, etc.
- But the most critical is, of course, the brain. If the brain is damaged, sensory signals cannot be processed, and we will not be able to interact with the external world. Thus, being brain dead is virtually equivalent to being dead.
- However, if one's brain becomes damaged due to an accident, for example, it will not affect the gandhabba inside. It is just that the gandhabba will not be able to communicate with the external world. And if damage to the brain results in the death of the physical body, the gandhabba will just come out of the dead body and will wait for a suitable womb.

## Next Existence Determined by Gati and Kamma Vipāka

15. It does not matter whether one gets killed due to an accident or dies due to an illness or old age. The gandhabba's future is determined by his/her gati (or gathi), past kamma (kamma bija), etc.

- If the physical body dies in an accident, the gandhabba will immediately come out of the dead body. Then it will wait for a suitable womb if there is still more kammic energy left for the human bhava (in an accident, that is likely).
- But if one gets to old age and dies or dies due to illness - and if one has exhausted kammic energy for the human bhava - then the cuti-patisandhi will happen at that time. If one is to become a deva, a deva will appear instantaneously in the corresponding deva world. If one is to become an animal, an animal gandhabba will emerge from the dead body and will have to wait for a suitable womb to become available.

16. It is also clear why we need to take good care of the body, our sense faculties, and of course, our brains. Gandhabba's (our) ability to make decisions depends on all those faculties working in optimum condition.

- We have a short lifetime of around 100 years to get rid of our defiled (immoral) gati. We also need to cultivate good (moral) gati, and comprehend the real nature of this world (anicca, dukkha, anatta), and be free from future suffering.
- We need to try to get to the Sotāpanna stage of Nibbāna and be free from the four lowest realms ( $a p \bar{a} y \bar{a})$. At least, we must make progress towards that goal so that in a future life, we will have a tihetuka birth that makes it easier to attain Nibbāna.
- To accomplish those things, we need to eat well, exercise well, and take care of our bodies to perform optimally. It is also necessary to stay away from drugs and alcohol. And to associate with those who have similar goals (and stay away from those with bad habits).

17. Some scientists/philosophers are beginning to understand that memories are not stored in the brain. See, "WebLink: getpocket.com: The Empty Brain."

Thanks to reader Diogo Roberto R. Freitas for alerting me to the above article.

### 13.5 Gandhabba (Manomaya Kāya)

Gandhabba (Manomaya Kāya) - Introduction

Does any Object (Rūpa) Last only 17 Thought Moments? Moved to Paticca Samuppāda $\rightarrow$ Understanding the Terms in Paticca Samuppāda

Hidden World of the Gandhabba: Netherworld (Paraloka)
Ghost in the Machine - Synonym for the Manomaya Kāya?
Manomaya Kāya (Gandhabba) and the Physical Body
Brain - Interface between Mind and Body
Manomaya Kāya and Out-of-Body Experience (OBE)
Cuti-Patisandhi - An Abhidhamma Description
These posts complement some of the posts in the "Udayavaya Nāna" section, which is important for the Sotāpanna stage of Nibbāna. All these are pieces of a complex puzzle, but they are all inter-consistent. So, don't worry if you do not understand it all; with time it will all make sense and will lead to unbreakable faith in Buddha Dhamma even through future lives. Faith comes via true understanding.

### 13.5.1 Gandhabba (Manomaya Kāya) - Introduction

## Revised April 22, 2016; revised February 16, 2021

## Gandhabba Is the Essential "Seed" for the Physical Human Body

1. A human-being is born at the cuti-patisandhi moment first with just the "mental body." That is the manomaya kāya or a gandhabba. Once that gandhabba "descends" to a womb, the physical body starts growing.

- In most realms, beings are born fully formed (opapātika births). But in the human and animal realms, first, the blueprint of that life-form arises at the cuti-patisandhi moment .
- Once born a gandhabba, It can make many new physical bodies in a given bhava. For example, a "human bhava" may last many hundreds of years. But a human body lives only about 80 years. Therefore a "human gandhabba" can make many "human bodies" during existence as a human; see, "Bhava and Jāti - States of Existence and Births Therein."
- This is why there are resemblances of both mental and physical characteristics between the two lives in rebirth stories.

## An Example

2. Let us take the example of a being born many times as a cow making a transition to a human bhava at the end of the "cow bhava" (an infrequent event).

- The transition from a cow to a human occurs in the last citta vithi of the "cow life". See, "CutiPatisandhi - An Abhidhamma Description." At the end of that citta vitthi, a human gandhabba comes out of the cow's dead body. That gandhabba has a subtle body that cannot be seen, but it is a "blueprint" of the human body. But the "gross physical features" will be partially determined by the parents of the new life.
- This gandhabba now awaits a suitable womb to be available. Of course, the gandhabba cannot decide on a womb. Instead, when a right womb becomes available (i.e., matching the "gati" of the gandhabba), it will be pulled into the womb by the kammic energy.
- When a sperm fertilizes an egg in a womb, a single cell called zygote results. But there is no life there until the gandhabba enters the womb and is incorporated with that zygote. Now the zygote becomes an embryo, then a fetus, and once out of the womb grows to a full-size human according to that blueprint in the gandhabba.
- More details can be found at, see, "Buddhist Explanations of Conception, Abortion, and Contraception."

3. At the cow-human transition in the last citta vith $h$ of the cow life, some significant changes occur in that lifestream. The concept of a lifestream, which is really a very basic introduction, is discussed in "What Reincarnates? -Concept of a Lifestream."

- Of course, the most significant change is that now the lifeform has a mind that is at the human level, not at the animal level; the baseline "consciousness level" has shifted. This is expressed in several ways in the manomaya kāya of the gandhabba.
- At the cuti-patisandhi transition, the kammic energy creates three very fine rūpa called vatthu dasaka, kāya dasaka, and bhava dasaka. We will discuss these in detail later, but they basically correspond, respectively, to the mind-door (or the mind), the blueprint for the human body, and dominant features including male or female character (it is not just the sex type, since rūpi Brahma $\bar{a}$ also have bhava dasaka, but are gender-neutral).
- As the physical body grows, first inside the womb and then outside the womb, the subtle body of the manomaya kāya expands with it when the physical body grows from the single cell. Thus overlapping the physical body that we see, there is a subtle body (manomaya kāya) of the gandhabba. Gandhabba means the same as the manomaya kāya.
- Therefore, the gandhabba is really like a "driver" driving or navigating the physical body; see, "Ghost in the Machine - Synonym for the Manomaya Kāya?."

## How Does the Gandhabba See and Hear Outside the Physical Body?

4. The subtle body of the gandhabba or the manomaya kāya has all key "sensing units" of hadaya vatthu (mind-door) surrounded by the five pasāda rūpa (cakkhu, sota, jivhā, gandha, and kāya.) A gandhabba is in the form of a very subtle matter at the suddhatthaka level. It is an invisible "energy body." A physical body would be inert without a gandhabba inside.

- The gandhabba, when outside the physical body, can experience the world without eyes, ears, etc. See \#6 of, "Out-of-Body Experience (OBE) and Manomaya Kāya."
- The gandhabba sometimes comes out of the physical body in traumatic situations like during heart operations. Then it can see doctors operating on its own physical body! Such "out-of-body experiences" (OBE) have been reported; see, "Manomaya Kāya and Out-of-Body Experience (OBE)."
- The main thing to remember is that hadaya vatthu is the mind-door. It is surrounded by the five pasāda rūpa (cakkhu, sota, jivhā, gandha, and kāya.) The pasāda rūpa correspond to the five physical senses of the eye and ear, tongue, nose, and touch.

## Gandhabba Inside the Physical Body

5. The physical body is really a "shell" controlled by the mind (hadaya vatthu).

- When a gandhabba is inside a physical body, "seeing" and "hearing" happens with the help of the physical eye and the physical ear. It is like being inside a military tank. One needs to use the sensors mounted on the tank to see and hear what is going on outside.
- For details, see, "Out-of-Body Experience (OBE) and Manomaya Kāya."

6. The world is experienced through the physical body, and this interaction is slow compared to the fast pace of the citta. The sensory data are collected by the five physical senses of eye, ear, nose, tongue, and
body. They are then transmitted to the brain via the central nervous system, which takes millisecond scale time.

- At the brain, data for a specific time interval (possibly around 10 milliseconds; see, "Citta and Cetasika How Viññ̄āna (Consciousness) Arises") are processed and then converted to a format suitable for transmission to the five pasāda rūpa and the hadaya vatthu, via a fast "ray system" (called "Kirana" in Pāli or Sinhala).
- Individual "packets of information" from each of the five senses are then transmitted to the corresponding pasāda rūpa located on the manomaya kāya, which overlaps the physical body; information from the mana indriya are sent to the hadaya vatthu.

## Detailed Explanation

7. For example, let us consider a "packet of data" sent from the physical eye to the brain. This information is processed by the brain, converted to a "ray system," and is transmitted to the cakkhu pasāda. Now the cakkhu pasāda vibrates and hits the hadaya vatthu that is located close to it. (The five pasāda rūpa surrounds by the hadaya vatthu. That causes the hadaya vatthu to vibrate 17 times, much like a gong hit by an iron rod vibrating for a certain fixed number of times.

- The 17 vibrations of the hadaya vatthu correspond to the 17 citta in a citta vīthi. Such a citta vīthi is called a pañcadvārāvajjana citta vīthi because it is initiated by one of the five physical senses or pancadvara ("panca" or five + "dvara" or "door").
- Imagine a blade clamped at one edge and is hit by an object on the other edge; it vibrates for a certain FIXED number of times per second; that number is called the frequency of vibration and is fixed for a given material. And one can see the blade vibrating. Pretty much the same thing happens when the hadaya vatthu vibrates when hit by one of the pasāda rūpa, and this "vibration" is called a hadaya rūpa, which thus has a lifetime of 17 citta or thought moments. Therefore, the hadaya rūpa is not a physical rūpa but basically is a mode of vibration.
- The misconception that any rūpa has a lifetime of 17 thought moments arose because of not understanding that it is the hadaya rūpa with 17 thought moments.
- In other words, this information packet is received and processed by the hadaya vatthu within those 17 citt $\bar{a}$. The information is fully received by the fourth citta (vibration,) and then the rest of the citta in that citta vīthi deal with this information. This "information processing" by the hadaya vatthu will not be completed until three more citta vīthi run by the hadaya vatthu itself. Such citta vithi initiated by the mind itself is called a manodvara citta vith $h$, where manodvara means the "mind-door".
- Information packets from the mana indriya are sent directly to the hadaya vatthu.

8. Thus, we can see a huge difference in time between the physical body acquiring senses data (time of the order of 10 milliseconds) and the mind processing that information within a billionth of a second using one pancadvara citta vīthi and three manodvara citta vithi.

- Even if the five senses keep sending data continuously, the mind is "just sitting there" most of the time. Let us examine this in a bit detail: Suppose the brain keeps sending data from the eye non-stop; since each "packet" takes, say 10 milliseconds, then in a second, there will be 100 "data packets" of vision coming in. If the brain is going at full speed, it can send at most $500(=100 \times 5)$ "data packets" from all 5 physical senses in a second. The mind will then be spending less than a millionth of a second in processing all that data since it takes less than a billionth of a second to process one "data packet" (from the previous bullet).
- During those gaps, the hadaya vatthu also interacts (both ways) with the mana indriya. It also gives instructions to the mana indriya on how to control the physical body in response to the sensory inputs.
- Thus most of the time, the mind is just sitting there, which is called the "bhavanga" state of mind. In this state, the mind is actually taking the object that came to the mind at the patisandhi (rebirth) moment in that last citta vīthi of the last life. Bhavañga ("bhava" + "anga" or associated) denotes that this state of the mind is characteristic of this new life, in the present case as a human. Just like the eye cannot see itself, the mind cannot see this "bhavanga." It is the current state of mind itself.

## The Bhavaña

9. In the example that we started with, the "cow mind" has now switched over to a "human mind." It has the object taken at the patisandhi moment. But we do not become aware of what is in the bhavañga.

- You may remember that there are times when one just stares blankly "out into space," and if someone asked, "what were you thinking about?" we would be hard-pressed to recall anything that we were thinking about. Here the mind was mostly in the bhavañga state; we are aware that we were alive but did not have "actual thoughts" going through the mind.
- In reality, even when we think we are fully engaged, the mind is mostly in the bhavañga state. As we discussed in a previous bullet, it takes very little time for the mind to process data. Even if all five physical senses keep sending data about the outside world non-stop, the mind takes less than a millionth of a second to process data coming in within a second!

## The Mind Decides on Actions

10. However, the sixth sense or the mind (hadaya vatthu) itself is also initiating citta vithi either to process information from the five physical senses or "think about those senses inputs." Furthermore, it also start citta vithi to get the physical body to speak and do any work. That information is relayed to the mana indriya, which works with the brain to carry out those instructions.

- For example, if the mind gets interested in a sound, it can direct the body to walk towards that sound source. To do this, it sends instructions to the mana indriya in the brain via the same "ray system" instantaneously. The mana indriya then decodes that information - and working with other parts of the brain - sends instructions to the muscles in the legs (via the nervous system) to move. Those bodily movements take time because the mechanical motions are comparatively slow.
- Speech is done in the same way. The mind sends the information to the brain, and the brain gets the vocal cords to move to produce the sounds. Here is a short video showing how the muscle movements give rise to sounds:

## WebLink: YOUTUBE: Inside the Voice

## Brain Is Just a Fancy Computer That Follows Instructions by the Mind

11. Thus, we can see that the brain is just a very fancy computer, carrying out the mind's instructions.

- Now the questions arise, "Why is nature going through all this trouble to give us a physical body that is cumbersome and slow?". The main answer is that this is to impart kamma vipāka.
- For example, a deva has a subtle body that is not subject to aches and diseases as for humans; that was acquired by a good kamma vipāka. On the other hand, there are some petas (hungry ghosts) who suffer from hunger. They have large bodies but tiny mouths.
- In the human realm, our individual bodies are "pre-designed" by kamma vipāka to impart varying degrees of suffering. That is why some people are relatively healthy, while others have health problems. There are, of course, ways to reduce or even get rid of such problems. One could make suitable conditions (eating well, exercise, etc.) for a healthy body.
- We do not realize the constant stresses that we are subjected to (both physical and mental) because we are used to them. By living a moral life, we can begin to experience the nirāmisa sukha achieved by
"liberating the mind from burdensome thoughts." When one gets to $j h \bar{a} n a$, this is further enhanced, and at higher jhāna, one sees quite significant relief from "dissociating from the body." Then one makes a big jump in attaining the Sotāpanna stage.

It is possible that I may not have clearly explained some concepts. If you send me a comment referring to the corresponding item number, I can clarify it. Also, when you read other posts in this section, things will become more apparent. This basic description is critical if one is really serious about learning Abhidhamma.

### 13.5.2 <br> Hidden World of the Gandhabba: Netherworld (ParaLoka)

## February 18, 2016; updated April 5, 2016; July 14, 2021

[Title changed (see the red highlights) from Hidden World of the Gandhabba: Netherworld (Para Loka) to Hidden World of the Gandhabba: Netherworld (ParaLoka)]

## Gandhabba Is Human

1. I have discussed the fact that when a living being gets a "human bhava" it does not necessarily mean that it is born with a human body during all that time; see, "Bhava and Jāti - States of Existence and Births Therein."

- For example, when a human dies and still has kammic energy left for the human bhava, then it is very unlikely that it will be conceived as a human baby right away. At death, a "human gandhabba" with a fine body leaves the dead body and has to wait in that state until a suitable womb becomes available. There are a large (uncountable?) number of such human gandhabbā waiting for a suitable womb.
- This is one reason that a mother and father are so revered. No matter how bad they may be in some cases, just the fact that they made it possible for a gandhabba to have a human body, makes them invaluable.

## Gandhabba Is a Human (or Animal) Without a Physical Body

2. Beings are born as humans because they crave the sensory pleasures associated with the human body. The most valued are the tastes and the bodily pleasures. A gandhabba has an "energy body" that we cannot see weighing much less than 0.01 g ; see, "Manomaya Kāya (Gandhabba) and the Physical Body." A gandhabba born at the cuti-patisandhi moment is much smaller than an atom in modern science. Some could inhale aroma (gandha) and get a bit denser, thus the name "gandhabba" ("gandha" + "abba").

- A gandhabba is unable to taste solid food or experience physical touch. But they can see and hear very well. Thus their life is miserable since they can see normal humans engaging in "pleasurable activities". That is what they crave too, but they are unable to experience them.
- When a zygote is created in a womb as a result of intercourse (see, "Buddhist Explanations of Conception, Abortion, and Contraception"'), there are a huge number of gandhabbā waiting to "get hold of that zygote". But of course, they don't have a choice; only the gandhabba matching the "gati" of the father - and especially the mother - is pulled into the womb.

3. Therefore, even though a human "bhava" may last thousands of years, the actual time that one is "born with a human body" (human $j \bar{a} t i)$ could be a fraction of that time. This is another reason why a "human birth" is so precious that it should not be wasted.

- Among the 31 realms, it is only in the human and animal realms that physical bodies can manifest from time to time within a bhava. Within animal bhava, some animals are born via eggs, while others are "womb-born." There are an uncountable number of "animal gandhabbä" waiting for a suitable womb at any given time.

## Gandhabbas Live in Paraloka

4. Both the human and animal gandhabbā can be said to live in "paraloka" ("paralowa" in Sinhala); see "Micchā Ditthi, Gandhabba, and Sotāpanna Stage." . It is a world that a normal human cannot see, even though they can see us. Of course there is no English word for it, but "netherworld" or "the hidden world" seems to convey the idea.

- Paraloka is not a distinct realm in the 31 realms. Just like human and animal realms co-exist, the paraloka co-exists with the human and animal realms, but we normally cannot see those beings in the para loka (unless one develops abhiññā powers). One can imagine there is another world with human and animal gandhabbā.
WebLink: Listen to Pronunciation "paralowa" or 36 eஏə is the Sinhala word, for the Pāli word "paraloka"
- Those with "human (or animal) bhava" spend their time either in "this world that we can see" or in the "paraloka" or the "hidden world" (netherworld).
- Many people are not even aware of the existence of "para loka," because (like the concept of the gandhabba), it is not discussed in the Visuddhimagga. It is unfortunate that current Theravāda relies on Visuddhimagga (written by an Anariya) rather than the Tipitaka.

## Tirokuțta - "Able to Go Through Walls"

5. The "Tirokutta Sutta (kp 7)" in the Khuddakapätha describes a "tirokutṭ"" who hangs around the home that he/she departed from. An English translation there: "Outside the Walls."

- The meaning of the word "tirokutta" becomes apparent in the "Dutivasamanabrāhmana Sutta (51.17)." The phrase, "tirokutṭain tiropākāraì tiropabbataì asajjamānā agamaìsu, seyyathāpi $\bar{a} k \bar{a} s e "$ appears in the beginning of that sutta. That means, "going unimpeded through a wall, a rampart, or a mountain as if through space."
- Therefore, "tirokutta" is a being who can travel unimpeded through the walls. Those with iddhi (supernormal) powers can do that as detailed in the Dutiyasamaṇabrāhmana Sutta (51.17.)
- However, the Tirokuttta Sutta (kp 7) is specifically about persons who died and have come back to "hang around" their formal homes. These could be gandhabbās or petās (pretās in Sinhala.)
- However, gandhabbās are not petās (pretās in Sinhala). Petās (pretās in Sinhala) do not make "dense bodies" as human and animal gandhabbas do.

## Petās (Pretās in Sinhala) Are Different from Gandhabbās

6. The idea behind giving a special offerings ("dāna") to the bhikkhus after the death of a person is mainly for the benefit of the gandhabbā (and also petās (pretās in Sinhala). This is a common practice in Buddhist countries. Normally it is done after seven days and after three months etc of death, and I will discuss the reasons for those specific dates in a future post.

- Not all beings can receive merits. Especially those in the niraya (hell) are unable to do so because they don't have the right mindset to receive merits (absence of samanantara paccayā). See "Anantara and Samanantara Paccayā."
- Those who can benefit most are the gandhabbas and petās (pretās in Sinhala).
- Also, note that gandhabba are totally distinct from petās (pretās in Sinhala) or hell beings in the niraya. Only gandhabbas live in "paraloka" waiting for suitable wombs. Petās (pretās in Sinhala) and hell beings have instantaneous (opapātika) births, just like devas and Brahmā.

7. It has been described how the Buddha saw human beings wander from life-to-life when he first comprehended the cutūpapāda ñāna during the night of his Enlightenment; "cutūpapāda" comes from "cuti" for death and "upapāda" for birth.

- Thus cutūpapāda ñāna is the knowledge about the rebirth process. But this particular description was restricted to births and deaths associated with a single human bhava.
- Cuti is pronounced "chuthi", and "cutūpapāda ñāna" is pronounced "chuthupapāda gnāna".
- WebLink: Listen to Pronunciation: "cuti and cutūpapāda ñāna"

8. That description by the Buddha was not about the general wandering among the 31 realms, but is on how a being in a human bhava wanders from human birth to human birth with gandhabba states in between (i.e., going back and forth between "this world that we can see" and the "other world that we cannot see" or the para loka).

- The description is as follows: If one is situated in the upper level of a building at a four-way junction, he can see the street below. He can see many people wandering in the street (gandhabb $\bar{a}$ wandering around). Sometimes, one goes into a house and stays there for a long time. This is compared to a gandhabba entering a womb and making himself a physical body; that house is the analogy of a physical body.
- Then at the death of that physical body, the gandhabba comes out and starts wandering again (a person walking on the street); he may be wandering the streets for a long time before entering "another house", i.e., to get a chance to go into a matching womb.
- Sometimes, he may enter a house and may come right out. This can be compared to an unsuccessful pregnancy. A gandhabba taking hold of a zygote, but for some reason cannot stay there and has to come out, mostly because it turns out to be a mismatch of "gati" of the potential mother.
- Thus it describes a human being going back and forth between "this world" and the "other world" or the "netherworld" ("para loka"). Once the kammic energy of the human bhava is exhausted, a new "bhava" is grasped.
- If the new bhava is not human or animal, then one would be born instantaneously in another realm (brahma, deva, asura, peta (preta in Sinhala), or niraya). There are no gandhabbā associated with those realms.
- Thus we can see that bhava and $j \bar{a} t i$ mean the same in all the other realms. In those realms, bhava automatically leads to $j \bar{a} t i$. For example, one with deva bhava is always a deva.

## Rebirths With Human Bodies

9. When one studies the accounts of people (of mostly children) describing their rebirth stories, there are always "gaps" between births; see, the references (books) cited in "Evidence of Rebirth." For example, see, "Children Who Remember Previous Lives: A Question of Reincarnation", by Ian Stevenson (2000).

- During those "gaps" in between successive human births, they had been in the gandhabba state, i.e., they were in para loka.
- When one dies in an accident especially at a younger age, it is more likely that their kammic energy for the human bhava had not been exhausted. Thus they are more likely to be in the gandhabba state, waiting for a suitable womb.
- This is why in most rebirth stories the previous life tends to have been terminated by an unexpected incident (killed by someone, a natural disaster, etc).
- This "memory from the past life" fades away as children grow, and that is why it is mostly children who provide these accounts. As they grow old, these memories disappear gradually.

10. A gandhabba changes with time (just like everything else). In fact, it is even possible that if a gandhabba properly receives merits from a giving (dāna) mentioned in \#5 above, he/she can gain a deva or Brahma bhava and be born instantly in such a realm.

- On the other hand, another human gandhabba, who had been engaged in behavior appropriate for an animal (say, a dog) in the previous human life, could cultivate those "dog sañkhāra" as a gandhabba and slowly transform into a "dog gandhabba" while in paraloka.
- When we think about these possibilities we realize how complex life is, and why we need to be mindful of the consequences of our actions. Not only that, we need to avoid doing things mechanically and understand the reasons behind even meritorious actions like alms-giving (dāna). I have seen many alms givings that are conducted in a "party-like" atmosphere. One needs to do it with the proper mindset with the gandhabba(s) in mind.

## Other Related Issues

11. Another interesting bit of deduction is how the concept of a soul or "āthma" came to be established by the ancient Hindu yogis. Even to attain higher anāriya jhān̄̄ (above the fourth jhāna) that enables one to acquire the ability to see previous lives, one has to have that "gati" of cultivating jhānā through recent human lives. Therefore, such a yogi with powerful abhiñ̃̃̄̄ powers can be expected to have had many recent human lives.

- Thus it is possible that such yogis would have been born human hundreds of times (with gandhabba states in between). When they looked at their previous lives, they could see that every time they died a gandhabba came out, and sooner or later took hold of another human body. Thus it is this gandhabba that they thought was the indestructible "āthma" or "soul". They could look back hundreds of lives and always see that they were born as human again and again.
- Thus, in the Hindu scripture Bhagavad Gita, getting hold of a new body is compared to discarding an old suit and wearing a new suit. As far as those yogis could see, it was the same gandhabba that came back in a different physical appearance! Thus for them it appeared that there was an unchanging entity coming back in a different form; this is why it is called "reincarnation".

12. Our world is much more complex than we can ever imagine. The Buddha said that only a Buddha can truly comprehend the complexity of this world: There are four "unthinkable" or "acinteyya" subjects for us; see, "WebLink: suttacentral: Acinteyva Sutta (AN 4.77)". English translation there: "WebLink: suttacentral: Unconjecturable (AN 4.77 by Ven. Thanissaro)".

- Even though we do not need to comprehend everything (and we cannot), it is beneficial to learn these concepts at least to some extent.
- If one can comprehend anicca, these in-depth analyses are not needed. But especially these days, humans do not have the ability to grasp anicca right away. So, learning Dhamma and appreciating the unmatched knowledge of the Buddha gives one the confidence to persevere in one's efforts.

### 13.5.3 Ghost in the Machine - Synonym for the Manomaya Kāya?

## Revised July 14, 2019

1. The "mind-body problem" has been a central problem of philosophy since Descartes formulated it over 350 years ago. René Descartes proposed that while the physical body is subjected to the physical laws, there is a soul associated with a human body which is normally called the "mind" and it is non-material; for him, having a mind amounted to having an immaterial soul, outside the physical space, whose essence consisted in thinking. This is the so-called "Cartesian dualism".

- Here mind and body are on equal footing, each in its own domain.

2. Philosophers no longer take this "dualism" view seriously. Instead current philosophers have adopted a "material monism" that claim that our world is fundamentally material; this is materialism or physicalism. The only question they are debating on is how the "mental" arises from "material", i.e., how thoughts arise in a material brain.

- We must note that the Buddha's worldview is totally different from both the above. It is "mental monism", i.e., that our world is fundamentally mental. This is why he said his Dhamma is "pubbe anunussetu dhammesu" or a Dhamma (or a theory on nature) that was not known to the world.
- This world view of the Buddha has been hidden for many centuries.
- This is of course a paradigm shift and a shocking one too at the first glance. But I hope to convince you with evidence gathered from various fields of study and illustrate the consistency across diverse disciplines.
- It must be mentioned that this monism is not the "mental monism" (or "idealism") that a few philosophers have proposed. They say that material things are mere imagination. On the contrary, the physical world is very real, it is just that it cannot provide any lasting happiness because of its transient nature.

3. In 1949 Gilbert Ryle introduced the phrase "ghost in the machine" to ridicule the concept of Cartesian dualism in his book, "The Concept of Mind". It is said that with that book, he put the final nail in the coffin of Cartesian dualism. Of course, the "ghost" is the soul or the mind and the machine is the body, in "ghost in the machine".

- In Buddha Dhamma, it is not a called a "ghost" but a "gandhabba"; see, "Mental Body - Gandhabba."
- And unlike in Decartes' ghost, gandhabba has a trace of matter. Furthermore, even the basic building block of a physical body (cell) has origins in the mind. Therefore, mind and matter are inter-related and inter-dependent; see, "Origin of Life - There is No Traceable Origin."

4. I think the ghost in machine analog is actually a good one to describe a human or an animal. The body actually plays a secondary role, and the mind is the controlling entity. But the "ghost" or the manomaya $\boldsymbol{k} \bar{a} y a$ is NOT all mental; it has a fine form of matter even though it would not be detectable by current scientific instruments.

I must emphasize that this concept is NOT a version of dualism. Mind and body are interdependent: "viññ̄ạna paccayā nāmarūpa" and "nāmarūpa paccayā viññạna"; a manomaya kāya has both nāmarūpa and mind.

- This manomaya kāya is made by the last citta vīthi of the previous existence (bhava), which is called cuti (pronounced "chuthi") citta; see, "What is a Thought?" in the Abhidhamma section. Thus this fine material form was PRODUCED by the mind. This is why it is said, "mano pubbangama $\bar{a}$ dhamm $\bar{a} . . .$. .", i.e., "the mind precedes EVERYTHING...".
- You probably have seen pictures of a "misty ghostly figure" rising out of a physical body in literature on "astral projection" or "out-of-body experience". That is a good visual, but of course only people with abhiññ̄ $\bar{a}$ powers can see them.
- Many people have, though, experienced this out-of-body experience usually under stressful conditions. Most common is the case when a patient undergoes an operation and is unconscious, but recalls later how he/she was able to see the operation from above. This seems to happen more often to women than to men; see, "Manomaya Kāya and Out-of-Body Experience (OBE)."

5. When one has cultivated abhiññā powers, one can bring out the gandhabba or the manomaya kāya out of the physical body. Then the body is lifeless, until the gandhabba comes back into the body. The "ghost" or the manomaya kāya can now see and hear without the aid of a physical ear or eye. Thus it can "focus" on events happening far away, and can see and hear what is going on at that place.

- All this may sound very esoteric but there is a lot out there that is not "captured" by our five physical senses; see, "The 4 percent Universe : Dark Matter, Dark Energy, and the Race to Discover the Rest of Reality" by Richard Panek (2011).
- Our eyes can see only an infinitesimally small part of the electromagnetic spectrum from 390 nm - 700 nm . The human audible range is commonly given as 20 to $20,000 \mathrm{~Hz}$, though there is considerable variation between individuals. Modern scientific instruments can expand these, for example, to see in the infrared frequencies with infrared cameras, etc.
- The "ghost" does not need light to see, or a sound wave to travel in air to hear.

6. The manomaya kāya has all six senses in the sense that all five pasāda rūpa corresponding to the five physical senses and also the hadaya vatthu that is the "seat of consciousness". The hadaya vatthu, where citta (thoughts) are originated, lines up with the physical heart, not the brain. Thus we can say that mind is located close to the heart, and is not in the brain; brain is like a computer that helps run the physical body; see, "Neuroscience Says there is no Free Will - That is a Misinterpretation!."

- The five pasāda rūpa in the manomaya kāya are also located close to the hadaya vatthu. Signals between the five physical sense faculties (eye, ear, etc) - called five indriya - and the five pasāda rūpa, and also between the (frontal cortex of the) brain and the hadaya vatthu, occur via a "ray system", probably electromagnetic, and are thus very fast.
- However, the "eye" is not just the "eye ball" but includes associated processing units in the brain, which is the visual cortex. It is the visual cortex that sends the signal to the "cakkhu pasäda" located close to the hadaya vatthu. When the cakkhu pasāda receives a signal from the visual cortex ("eye indriya"), it hits the hadaya vatthu which in turn vibrates 17 times corresponding to a "citta vith hi."
- The same process occurs for the other four physical senses. The "motor cortex" sends/receives signals from all body parts using the central nervous system, and sends "ray signals" to the "kāya pasāda." I will discuss this in detail later.
- The five pasāda rūpa are located around the hadaya vatthu much like the five small balls (clappers) are situated around the "main clapper" in temple bells in Sri Lanka (I am not sure whether this true in other countries). Such a bell symbolizes the five pasāda rūpa around the hadaya vatthu.
- When the "ghost" is inside the physical body, it cannot see or hear without the aid of the physical senses of eyes and ears. Similarly, the mind cannot "think" without the aid of the brain.
- This is why the efficiency of all six senses degrade with time: Because the physical body degrades. As we get old, all six physical sense faculties of eyes, ears, nose, tongue, body (outer skin), and the brain degrade, and lose their effectiveness.

7. Thus in the visualization as a "ghost," the manomaya kāya has all six senses. But it cannot use the kāya pasāda outside the physical body since not enough "matter' is in the gandhabba to "feel" the touching sensation. Similarly, the manomaya kāya ("ghost") cannot taste or smell when it is outside the physical body.

- Thus the gandhabba can only see and hear when outside the physical body. And it can do those without any limitations imposed by physical eye or physical ear, i.e. it can see and hear things far away.

8. When a human dies, if there is still kammic energy left for the "human bhava", i.e., the potential to be born as a human, then there is no patisandhi citta at death. A pattisandhi ("pati" + "sandhi" = bind to a new life) happens when a transition to a "new bhava", for example to a "deva bhava" or an "animal bhava", happens. If the "bhava" remains the same and the next birth is also human, the manomaya kāya ("ghost" in this new terminology) or the gandhabba just comes out and waits until a suitable womb becomes available. The old physical body is now lifeless and just decays.
9. If the kammic energy for the "human bhava" is exhausted at death, then in the last citta vithi the transition to a new "bhava" takes place. Then a new manomaya kāya for the new existence (bhava) is
formed within that final citta vīthi, and at the end of that citta vīthi, the new manomaya kāya corresponding to the new life comes out of the dead body. If it is deva, then a new deva is instantly born in the deva loka. If it is an animal, say a dog, then a manomaya kāya (or gandhabba) that resembles the form of a dog comes out of the dead body and will wait until a suitable "dog womb" becomes available.

- As mentioned in other posts, births in 29 realms happen instantaneously, i.e, a fully formed figure is born at the very instant of death in the previous life. An intermediate "gandhabba state" with a manomaya $k \bar{a} y a$ (a "ghost" in the current analogy) that needs to wait for a suitable womb is involved only for birth in human and animal realms.

10. There is another interesting facet: The kammic energy automatically prepares the "blueprint of the body" to deliver the kamma vipäka (consequences of previous actions). Thus the physical body has "built-in" defects and flaws that may become evident at birth or at different stages of life: for example a cancer may develop at latter stages of life. This is the reason why some people are born handicapped; some have healthy bodies, beautiful bodies, ugly bodies, and a healthy person may die suddenly too; the varieties are endless.

- Furthermore, the nervous system is also setup to induce various effects as kamma vipāka. The incessant "urge to do something" works at different levels for different people. This actually reveals a deeper meaning of the First Noble Truth of Suffering; if you are ready for a deeper analysis, see, "Anicca - The Incessant Distress ("Pilana")".

11. Therefore, the concept of a "ghost in the machine" may be useful to describe the gandhabba state or the separation of the manomaya kāya from the physical body in the cases of out-of-body experience (OBE), or with abhiññā powers. However, it must be kept in mind that in this case, the "ghost" does not depict an unchanging soul and also it is not totally "mental"; it has very fine material (rūpa) associated with it, that is invisible to the naked eye, but is visible to someone with abhiññā powers.

- Contrary to the idea of a soul, the manomaya kāya will keep changing even during an given existence and will make a huge transition at a new existence, for example when an animal is reborn a human or vice versa.

12. The main usefulness of this "ghost in the machine" concept is to accurately describe the physical body for what it really is: a temporary "residence" for the gandhabba. The "residence" decays with time and finally dies and then the gandhabba needs to find a new "residence". The gandhabba derives its uniqueness or the "personality" via sansāric habits (gati and āsavas), and the gandhabba has the power to change those habits; see, "Habits, Goals, and Character (Gati)."

- Further information can be found on several posts on the manomaya kāya and gati (or gathi). You can do a keyword search using the "Search" button on the top right.

13. Here is a recent article by the philosopher Colin McGinn on the current theories on the "mind body problem" (click to open the pdf):

## WebLink: PDF file: All machine and no ghost - McGinn-2012

- Also see, Thomas Nagel’s book: 'Mind \& Cosmos: Why the Materialist Neo-Darwinian Conception of Nature is Almost Certainly False" (2012).
- Obviously, both of them have had no exposure to Buddha Dhamma. But I am very much impressed that they have came to the conclusion that mind MUST play a central role.

14. A gandhabba with a fine body cannot "seen" with our eyes, because they are "more energy that matter". It is possible that the entities detected by "ghost detectors" are such gandhabbas.

- There are "ghost detector" apps made by many soffware companies that can detect "ghosts"; if you Google, "ghost detector" you can explore more on that. Even though right now this is done mostly for fun, it will be shown to be correct concept in the future. These detectors detect "packets of energy" that we cannot see with our eyes.
- Whether these ghost detectors actually can detect gandhabbas or not I am not sure. But the concept matches what is described in the Tipitaka.

July 14, 2019: I recently started a new subsection, "Origin of Life" to point out that not only the mental body (gandhabba), but also the physical body (which is a vast collection of cells), have their origins in the mind.

### 13.5.4 Manomaya Kāya (Gandhabba) and the Physical Body

Revised April 20, 2016; July 31, 2017; September 6, 2019; March 14, 2021; July 16, 2022

## Introduction

1. Manomaya kāya means a "mental body." We should not perceive the "mental body" in the same way as the physical body of ours. The mental body is mostly energy than matter. It is called a "body" more in the sense of a "collection," as in a "body of water" or a "body of evidence."

- The Pāli term for a physical body is āhāraja kāya or karaja kāya.
- The mental body or "manomaya kāya" is also called gandhabba kāya or simply gandhabba. The manomaya kāya is made of three parts called utuja, kammaja, cittaja.

2. Therefore, we have four types of bodies (kāya): āhāraja, utuja, kammaja, cittaja. The āhāraja kāya is the physical body. The other three are parts of our "mental body," the gandhabba.

- It is easy to visualize a "person" consisting of two overlapping bodies: the physical body that we see and the gandhabba with an "energy body" (it is not a body in a sense we are used to but more like a "misty ghost"). The fine body of the gandhabba "overlaps" the physical body.
- The gandhabba makes the physical body "alive." Without it, the physical body is like a piece of wood and is inert. If you touch a dead body you will feel the difference compared to touching a live person.
- A dead body is comparable to a metal wire without a current flowing through it. When a current flows through the wire, it becomes "energized."
- In the Tirokudda Sutta in the Khuddaka Nikāya, gandhabba is called a "tirokudda."

3. The physical body (karaja kāya) that we see is built from the food we eat (āhāraja kāya). Starting with a single cell (zygote) in the womb, it grows by taking food from the mother.

- The gandhabba consists of the other three kāya: kammaja, cittaja, utuja.
- Under stressful conditions (or with abhiñ̃ñ̄ powers), the misty gandhabba can come out of the physical body, and the physical body is no longer under the control of the gandhabba. But it is not dead because the $j \bar{\imath} v i t i n d r i y a$ that maintains life is still there.
- Only at death do both the gandhabba and the jīvitindriya leave, and the body becomes inert like a log.

## Kammaja Kāya is Primary

4. Let us follow the time sequence of how a gandhabba evolves to acquire a physical body (in human and animal realms only.) That happens via several steps per Tipiṭaka: "jāti sañjāti okkanti abhinibbatti khandhānaim pātubhāvo āyatanānaim patilābho." See, "WebLink: suttacentral: Vibhañga Sutta (SN 12.2)."

The basis of all the other three $k \bar{a} y a$ is the kammaja kaya; it arises from the kamma seed responsible for that particular bhava or existence at the cuti-patisandhi moment.

- A kammaja kāya has three components called "dasaka" or "ten units." Those ten units are eight suddhatthaka and modes of rotation and spin. The three components are vatthu dasaka (hadaya $v a t t h u$ or the seat of mind), kāya dasaka (blueprint of the final human body), and bhava dasaka. The
latter is loosely translated as man/woman nature, but it encompasses many other features related to one's gati or bhava).
- More details at "The Origin of Matter - Suddhatthaka" and "Gandhabba - Only in Human and Animal Realms."
- The formation of the kammaja kāya is called the " $j \bar{a} t i "$ moment of birth.

5. Immediately following its birth, kammaja kāya gives rise to a thought stream (cittaja kāya).

- Both kammaja and cittaja kāya start producing fine rūpa and immediately give rise to a very light physical form called the utuja kāya. At this stage, cakkhu, sota, ghāna, and jivhā dasaka are also present. That is called the "sanjāti" moment of birth.
- This subtle body with three kāya (kammaja, cittaja, utuja) is a gandhabba. Since all three types of $k \bar{a} y a$ have their origin in mind, the gandhabba is a "mind-made body" or a manomaya kāya. But soon, it will acquire a faint physical body by inhaling aroma (gandha $+a b b a$ ), thus the name gandhabba. Therefore a gandhabba would have all four 'bodies" (kammaja, cittaja, utuja, karaja).
- The five sets of dasaka (kāya, cakkhu, sota, ghāna, and jivhā) arrange around the hadaya vatthu (vatthu dasaka) in the subtle or "misty" body of the gandhabba. This gandhabba may exist in that state for a long time, waiting for a suitable womb.
- That manomaya kāya or the gandhabba will now have to wait for a suitable womb to enter. That could take months or years.

## Gandhabba Descending to a Womb

6. When a suitable womb becomes available, this fine gandhabba enters the uterus. At that time, it collapses to a size smaller than a single cell and merges with the single cell (zygote) formed by the union of mother and father. This moment of entering a womb is called the "okkanti moment" of birth.

- The physical body (karaja kāya) results from that single cell (zygote). It grows first by extracting food from the mother's womb and then consuming regular food once born as a baby.
- The physical body grows according to the "blueprint" in the subtle body of the gandhabba. The subtle body of the gandhabba expands with it so that it overlaps the physical body. For example, there is a nervous system in the gandhabba that overlays the physical nervous system.
- The initial growth stage of the fetus inside the womb is the "abhinibbatti stage" of birth.

7. Then, the fetus inside the womb starts developing and forms the physical senses and the brain over many weeks. The eyes, ears, nose, tongue, and nervous system grow during this time. Furthermore, the brain develops too. It will have processing units to analyze signals from those five physical senses.

- In Buddha Dhamma, the cakkhu indriya is NOT just eyes but also includes the brain's associated processing centers. Similarly, for the other four indriya: sota, ghāna, jivhā, and kāya.
- Signals generated in these five indriya get to the five pasāda rūpa located around the hadaya vatthu (seat of the mind) as described in "Gandhabba (Manomaya Kāya)- Introduction."
- The "khandhānan pātilābho" stage of birth is complete with the formation of all six sense faculties.
- When that baby is born (i.e., comes out of the womb), that physical body can use all six āyatana (eyes, ears, nose, tongue, body, and mind) to interact with the external world. The final stage of the birth process is "āyatanan pātilābho."
- A better description of āyatana at "Contact Between Āyatana Leads to Vipāka Viññāna."

8. Ven. Sariputta discussed that sequence of events when he analyzed the Dhammacakka Pavattana Sutta in detail to the bhikkhus in the WebLink: suttacentral: Sacca Vibhanga Sutta (Majihima Nikaya 141):
"Katamā cāvuso, jāti? Yā tesaì tesam sattānam tamhi tamhi sattanikāye jāti sañjāti okkanti abhinibbatti khandhānaiं pātubhāvo āyatanānaì paṭilābho, ayamं vuccatāvuso: 'jāti.""

- Those who do not believe in the gandhabba state (i.e., a gandhabba) need to contemplate that point. The gandhabba state is there only in human and animal realms.
- At death, if that human bhava has more kammic energy left, the gandhabba comes out of the dead physical body and waits for a new womb.
- If kammic energy for the human bhava is exhausted, then a cuti-patisandhi transition occurs, and the above discussed time sequence is repeated. A brand new gandhabba in a new bhava emerges from the dead body. For a technical analysis of this process, see, "Cuti-Patisandhi - An Abhidhamma Description."

## The Manomaya Kāya

9. We can get an idea of the fineness of the manomaya kaya from the following comparison. The average human weighs about $70 \mathrm{~kg}(70,000 \mathrm{~g})$ and has a body volume of about 70 L ; the Density of a typical fog (that we can barely see) is approximately 0.1 g per cubic meter. Thus the weight "of the fog of volume equivalent of a human body" is about 0.01 g .

- Thus a "human body made of fog" weighs only a tiny fraction of the average human weight.
- For another comparison, the weight of a mustard seed is about 0.002 g .
- A gandhabba would have a "misty body" like a human figure made of fog, but will be MUCH SMALLER weight; it is immeasurably small. Sexual intercourse between a man and woman creates a zygote (a human cell) in the womb. Then a gandhabba descends to the uterus and takes hold of the zygote; see, "Buddhist Explanations of Conception, Abortion, and Contraception."
- My late Noble teacher, Waharaka Thero, has seen how a gandhabba enters a womb. When getting closer to the mother, gandhabba rotates rapidly and loses all its body other than the hadaya vatthu, $j \bar{v} i t i n d r i y a$, and bhava dasaka. So it becomes much smaller than an atom in modern science (at the suddhatthaka level). That tiny body (which would not be seen even by the most powerful microscope) is pulled into the womb through the mother's body and gets attached to the zygote in the womb. I heard him describe this in a desana.
- So, a human body starts with two cells from the mother and father (which make the zygote) and an even smaller gandhabba. Thus virtually all the weight of a human comes from nutrients. First from the mother's body, and once comes out the womb by eating food.

10. We can easily see the role of the manomaya kāya with the actions by its three components:

- Kammaja kāya is the most important. It is the blueprint for that existence (bhava). It has the blueprint of the physical body too.
- Cittaja kāya is what we EXPERIENCE moment-to-moment. We see, hear, smell, taste, touch, and think about concepts with thoughts: cakkhu, sota, gandha, rasa, phoṭthabba, and mano viñ̃̄āṇa.
- Those thoughts NORMALLY depend on our habits (gati), āsava (cravings), and kamma vipāka, all in the kammaja kāya; see, "What is Mind? How Do We Experience the Outside World?."
- If thoughts arise ONLY DUE TO our past kamma and the habits and cravings acquired through them, then kamma would be deterministic. And we will be like robots (which is the case for many beings, like animals). LUCKILY, we can THINK on our own (unlike animals) and change our destinies.

11. That last sentence summarizes the message of the Buddha. Please do not lose this opportunity to get out of this saminäric suffering when we have this precious human life, which will last only about 100 years.

- Even if we are reborn humans, what guarantees will we have to listen or read about Buddha Dhamma?

12. If anything is "transferred" from one existence (bhava) to another, those would be the "gati" and " $\bar{a} a v \bar{a}$ " of that lifestream. But they also keep evolving. If we do not act mindfully, we let our minds "go with the flow." Then our actions will be determined by our samisāric habits. That would only further strengthen such habits. That is why it is essential to identify bad habits, eliminate them, and cultivate good ones.

- That is the process of mind purification called Bhāvanā (Meditation) detailed in Satipatthāna (see "Mahā Satipatthāna Sutta"), Ānāpāna sati (" 6 . Ānāpānasati Bhāvanā (Introduction)"). I have also written about the Sabbāsava sutta: "Habits and Goals," and a bit more in-depth analysis in "Key Points in the Sabbāsava Sutta" at the end of the post, "The Sotāpanna Stage."
- Also, see the post, "The Importance of Purifying the Mind."

## Living Beings in Other Realms Have Different "Bodies" and Different Manomaya Kāya

13. The above description is valid for humans and animals. In Brahma realms, there are only manomaya $k \bar{a} y a$ and no physical body. There are physical bodies in the deva realms, but those are much less dense than human bodies.

- In other realms, different mechanisms (mainly opapātika births) operate; see, "Gandhabba - Only in Human and Animal Realms."

14. In the post, "What Reincarnates? - Concept of a Lifestream," we mainly talked about the cittaja kāya, the stream of thoughts, and the physical body. We saw that, If an animal dies and is reborn a human:

- The physical body in the animal realm is very different from that in the human realm.
- The cittaja kaya, or the stream of thoughts associated with animal existence (bhava), is also very different from the cittaja kāya of human existence (bhava). That is what is meant by "bhava paccayā $j \bar{a} t i$ " in the Paṭicca Samuppāda: the birth is according to the bhava that latched on at the moment of death, i.e., "upādāna paccayā bhavo"; see, "Akusala-Mūla Pațicca Samuppāda."

15. Thus, it is clear that both the physical body and manomaya kāya make "quantum jumps" (large instantaneous change) when switching from one existence (say an animal) to another (say a human).

- The kammaja kāya has all the kammic potentialities (kamma seeds) acquired up to any given time; see, "Sañkhāra, Kamma, Kamma Bīja, Kamma Vipāka," and "Samisāric Habits and Āsavas." But one of those seeds becomes operative for the "new bhava," and becomes the "bhavañga" for that life. The remaining kamma seeds are all 'tag-along" in the new bhava, and one of those will rise to the next bhava or existence; the same "gati" are in all seeds. Thus, whether an animal or a human, the new life will display somewhat similar habits (gati) and cravings ( $\bar{s} a v \bar{a}$ ).
- That is why "no-self" was not approved or rejected by the Buddha: the new life is not the same as the old life. But it is not completely different either, because those gati and $\bar{a} s a v \bar{a}$ propagate (but they all keep changing too). And similarly, the Buddha neither approved nor rejected the idea of a "self."
- A living being is a "life-stream" that changes moment-to-moment based on cause and effect: Paticca Samuppāda. Even though there is no "unchanging entity" such as a "soul," the life-stream has its characteristics (gati and $\bar{a} s a v \bar{a})$, which also keep evolving.

More on the Manomaya kāya at: "Manomaya Kāya and Out-of-Body Experience (OBE)."
Next, "Ghost in the Machine - Synonym for the Manomaya Kāya?",

Re-written October 24, 2019; revised January 30, 2020; February 16, 2021 (\#6 added); July 16, 2022

## Two Types of Bodies - Physical Body and Manomaya Kāya

1. We humans have two "bodies." Manomaya kāya is the "mental body" (with a trace of matter) born at the beginning of human existence or human bhava. That manomaya kaya is pulled into a womb when a "matching womb" becomes available, which is the start of a "physical body." Within a human bhava, there can be many "human births (jāti)" with different "physical bodies." See, "Bhava and Jāti - States of Existence and Births Therein."

- More details on the two types of "bodies" at "Manomaya Kāya (gandhabba) and the Physical Body."

2. One could visualize the manomaya kāya or the "mental body" as an "energy field" (it has some fine $r \bar{u} p a$, too) overlapping the solid physical body. All vital functions happen in the mental body. Thoughts generate in the seat of the mind (hadaya vatthu). There are five pasāda rūpa (cakkhu, sota, ghāna, jivhā, kāya) around the hadaya vatthu responsible for detecting sights, sounds, smell, taste, and touch.

- That manomaya kāya can leave the solid physical body under some conditions. Those who have cultivated supernormal powers (iddhi) can willfully come out of the physical body. During heart operations, manomaya $k \bar{a} y a$ of some patients come out, as discussed below. In both cases, manomaya $k \bar{a} y a$ can see and hear without the aid of physical eyes and ears.
- That is hard to visualize for us. But as you read more posts on the manomaya kāya, you will see that it makes perfect sense.
- We experience the world with the "mental body" or the monomaya kāya (also called a gandhabba.) This is explained in, "Ghost 1990 Movie - Good Depiction of Gandhabba Concept."

## When Inside the Physical Body Manomaya Kāya Depends on the Physical Body

3. When the manomaya kaya is attached to the physical body, the hadaya vatthu needs the physical body's help to see, hear, smell, taste, feel the touch, and recall memories. One can think of the manomaya kāya as being "trapped inside" the physical body. Physical eyes need to capture images of external objects; ears need to capture sounds; the nose helps smell; the tongue helps taste, and the body's nervous system feels the touch.

- The brain analyzes all those "signals" and transmits them to the five pasāda rūpa located in the manomaya kāya around the hadaya vatthu.
- The brain is part of the physical body and is the interface between the physical and mental body (manomaya kāya).

4. The seat of the mind (hadaya vatthu) and the five "internal senses" (pasāda rūpa) are born with the manomaya kāya at the time of human bhava (patisandhi). All these are very fine rūpa that our eyes cannot see. Thus one can visualize the manomaya k $\bar{a} y a$ as an "energy field" that overlaps the physical body and provides vitality to the inert physical body.

- The Buddha compared the situation of a manomaya kāya separating from the physical body to a sword pulled out of its sheath or a snake shedding its skin. Once the manomaya kāya leaves, the body is like an inert log. And that is precisely what happens when one dies. The vitality is gone the instant the manomaya kāya comes out.

## Manomaya Kāya of a Human (or an Animal) is "Gandhabba"

5. When a person dies, if he/she has more kammic energy left in the human "bhava," then the manomaya kāya leaves of the dead body. Then it will wait until another suitable womb becomes available. The manomaya kāya is still in the human bhava, but we cannot see it. It is in "paraloka" or the "netherworld."

- While waiting in the paraloka, they could inhale aroma (gandha) from plants and food and get denser. Thus the name "gandhabba" ("gandha" + "abba" where "abba" means "taking in").
- That is why the manomaya kāya of a human (or an animal) is called "gandhabba." For more details, see "Clarification of"Mental Body" and "Physical Body" - Different Types of "Kāya."
- This gandhabba may stay in that form for even years until pulled into a suitable womb with matching "gati."

## How Does the Gandhabba See and Hear Outside the Physical Body?

6. When outside a physical body, gandhabba sees and hears differently. Seeing does not involve light, and hearing does not require air.

- Perhaps the best way to think about this is how Brahma sees. As we have discussed, Brahma does not have physical eyes and ears. A Brahma is just like a gandhabba.
- Furthermore, Brahma realms are well above the Earth, and there is insufficient air for sound to travel. Brahmā can hear without sound waves traveling through the air. In the same way, they can see without light. Those mechanisms are not perceivable to us.
- That is why they can see and hear over very long distances. This is meant by "Dibba cakkhu/Dibba sota" or "divine eye/divine ear."
- Therefore, gandhabbā can see and hear over long distances. That does not require light/air or (physical) eyes/ears.

7. Therefore, a gandhabba can see and hear more flexibly. The capabilities of the physical eye and physical ear are much limited.

- A gandhabba cannot smell, taste, or touch because its body is too subtle (it is more like an energy field.) Thus, it cannot make physical contact.
- When the manomaya kaya is separated from the physical body, it can see and hear without eyes and ears. "Seeing" does not need light (one could look at things far away), and "hearing" does not need air as a medium for the sound to propagate (one could hear sounds from far away). Both mechanisms involve "Kirana" (or "rays" in English, similar to electromagnetic radiation).
- Furthermore, the gandhabba can "travel" very fast; it is not physical travel. For example, the sutta talk about the Buddha or Arahants with iddhi powers traveling to deva loka in a time comparable to the time taken to "stretch a bent arm."

## Gandhabba Inside the Physical Body

8. When the manomaya kāya (gandhabba) merges with the physical body, "seeing" and "hearing" happens with the help of the physical eye and the physical ear. It is like being inside a military tank. One needs to use the sensors mounted on the tank to see and hear what is going on outside.

- Now, "seeing" happens with the help of the physical eye. The physical eye is like a camera that takes a picture. The brain processes that image and sends it to the cakkhu pasāda rūpa in the manomaya $k \bar{a} y a$. Same with the ear. Thus, eyes and ears can be considered sensors mounted on that military tank.
- Therefore, seeing and hearing also degrade with old age, as the physical eyes and physical ears age.
- The brain is like the computer in that tank that processes the information coming in through the sensors.
- Therefore, if there is damage to any of these three "physical instruments" (brain, eyes, ears), the ability to think, see, or hear can be degraded or lost. See "Our Mental Body - Gandhabba" and "Brain Interface between Mind and Body."

9. However, actual "seeing" and "hearing" still happen at the two pasāda rūpa (internal eye and internal ear) associated with the manomaya kāya.

- For example, have you ever wondered how to judge the distances as we move around, avoiding bumping into things and each other? The physical eye cannot "judge distances"; see, "The Sense of Being Stared At" by Rupert Sheldrake (2003, p.12). Our eyes can see many things simultaneously and judge the relative distances of all things. This ability is in the pasāda rūpa and not in the eyes or the brain.

## Out-of-Body Experiences (OBE)

10. The hadaya vatthu of the manomaya kāya (gandhabba) overlaps the physical heart when the two bodies are together. However, in some situations, the manomaya kāya can separate from the physical body. That leads to "out-of-body experience (OBE)."

- In his book, "Travels," the famous author of Jurassic Park, Michael Crichton (1988, p. 307,) mentions his ability to "shift my awareness out of my body and move it around the bedroom." He says, "..I didn't think anything about it... I assumed that anybody could do it.. ."
- Recently, a woman described how she thought that "everybody could do it": ABCNEWS: Woman Has 'Out of Body' Experiences Whenever She Wants
- A series of books, including "Journeys of the Body," has been written by Robert A. Monroe based on his experiences.

## Near-Death Experiences (NDE)

11. Only a few people can experience OBE at will. Typically, OBE happens under stressful conditions, most commonly during heart operations. These have a unique name of near-death experiences (NDE.) The following video provides a good summary:

## WebLink: youtube: Near Death Experiences \& Evidence of the Afterlife

- Of course, there are many books on NDE. "Consciousness Beyond Life" by Pim van Lommel (2010) gives detailed accounts of NDE case studies experienced by people undergoing heart operations.
- A recent book, "Dying to be me: My Journey from Cancer, to Near Death, to True Healing," by Anita Moorjani (2012), describes the NDE experience in detail.

## Our Thoughts Do Not Arise in the Brain, and We Do Not See With Our Eyes

12. The mind-door is the hadaya vatthu in the gandhabba or the manomaya kāya. Thoughts arise in the hadaya vatthu in the gandhabba, even when the gandhabba is INSIDE a physical human body. See, "Gandhabba Sensing the World - With and Without a Physical Body."

- "Seeing" happens in the cakkhu pasāda rūpa in the gandhabba. When outside a human body, that cakkhu pasāda can see by itself.
- When inside a human body, that cakkhu pasāda is shielded by the body. In that case, the visual signal must come through the eyes, processed by the brain, and that signal is transmitted to the cakkhu pasäda rūpa.
- Sometimes, people are born with the cakkhu pasāda rūpa, but the optic nerve (or the physical eye itself) may be damaged. They cannot see because the brain is not getting a signal from the eyes. But if the gandhabba can come out of the body, it can see by itself without needing the help of the brain. The following video clearly illustrates this situation.
WebLink: youbetube: Near Death Experience - Blind woman 'sees' while out of body
- However, in other cases, one may be born blind because one may not have the cakkhu pasāda rūpa. In that case, even if the gandhabba comes out of the body, it would not be able to see.
- All five sensory faculties are in the gandhabba, or the manomaya kāya. The brain first processes those signals, and then those signals arrive at the corresponding pasāda rūpa. Each pasāda rūpa transfers the signal to the hadaya vatthu and it is the hadaya vatthu that really "sees," "hears," etc.

More information at, "Mental Body - Gandhabba" and "Gandhabba (Manomaya Kāya)."
A new series of posts discusses life in great detail, "Origin of Life."

### 13.5.6 Cuti-Patisandhi - An Abhidhamma Description

Revised May 26, 2021; re-written September 7, 2022

## Paṭisandhi Does Not Happen in a Womb

1. Many people believe that pattisandhi, or the linking to a new life, happens in a womb (in human and animal realms). But that is not correct. Patisandhi citta is experienced in the next very citta after the cuti citta of the old life in the last citta vitthi of the dying person.

- The new life form (gandhabba) emerges from the dead body right after the last citta vīthi (However, if the next life is an opapātika one, the life-form arises fully formed). Here we will discuss the case where the new life is either human or animal and thus a gandhabba is formed; see "Manomaya Kāya (Gandhabba) and the Physical Body" and "Ghost in the Machine - Synonym for the Manomaya Kāya?".
- A human baby is born in a series of steps following the paṭisandhi moment. See \#8 of "Antaräbhava and Gandhabba."

2. Pațisandhi ("pati"" is to "bind" and "sandhi" is a "joint" in Pāli or Sinhala.) Thus patisandhi means joining a new life at the end of the old. That happens a thought-moment after the last citta of the current bhava.

- If the next life of a human is human or animal, then the gandhabba for that life comes out of that body at the end of that last citta vīthi. Of course, the gandhabba has a very fine body, which can be seen only by a person with abhiññ̄a powers.
- On the other hand, if a human bhava ends and Deva bhava start, a fully-formed Deva will appear in a Deva realm at the end of the last citta vithi of the human bhava.
- The following analysis is technical and suitable only for those familiar with citta vithi processes in Abhidhamma. However, the conclusions are informative, so you may want to go through them. Citta vīthi is discussed in "Citta Vithi - Processing of Sense Inputs."

## Paṭisandhi Takes Place in the Last Citta Vīthi of the Current Bhava

3. The last citta vīthi of the old life with 17 citta run in the standard way: atīta bhavañga, bhavañga calana, bhavañga upaccheda, pañcadvārāvajjana, cakkhu viññāṇa, sampaṭiccana, santīraṇa, votthapana, and then javana sequence ( 7 javana citta) starts. After the fifth javana citta, there are two more javana citta left. The sixth is the cuti citta, and the seventh and last javana is the patisandhi citta.

- In the last citta vīthi, a previous kamma vipāka provides an ārammaṇa (thought object) associated with that kamma vipāka through one of the five sense doors: it is normally a visual or a sound associated with the new existence (bhava). Even though the person's physical faculties may be weak, the person will see or hear very clearly whatever the nimitta presented by the kamma vipāka.
- Then at the votthapana citta, the mind decides to act on that ārammaña based on the person's gati. The person has no control over it. It is called "kammaja purejāta; cittaja pacchajāta," i.e., kamma vipāka comes first, and then accordingly, the javana citta flow grasping that new bhava:

[^6]Tasmā punabbhovo hoti, evan loko pavattati"
OR,
"kamma lead to vipāka; (the ignorant being) attaches to ārammaṇa arising due to vipāka and does more kamma

Thus the cycle of rebirth repeats, and that is how the world exists."

## Vipāka Brings in Ārammaṇa

4. First, a vipāka brings in an ārammaṇa. An ignorant person gets involved in it and makes a new kamma, "kamma sambhava." That "vipāko kamma sambhavo" process is initiated at the votthapana citta. The votthapana citta decides how to proceed with the ārammaña (object) from the kamma vipāka. The living being normally gets attached to that object via greed/hate/ignorance. That can lead to two effects:
i. generates new kamma in javana citta in regular citta vīthi. See "Vipāka Vedanā and "Samphassa jā Vedana"" in a Sensory Event."
ii. grasps a new existence (bhava) in javana citta if it is the last citta vithi for that existence.

- Thus "vipāko kamma sambhavo" starts with the first javana citta. Each subsequent javana strengthens via āsevana paccayā from the previous javana. Thus, after five javana-citta, kammicenergy is optimized. That holds for both above cases.

## Last Citta Vīthi for an Existence

5. The sixth javana-citta is the cuti citta, and the next patisandhi citta grasps the new bhava.

- Cuti citta happens in the last citta vīthi just after the actual cuti (death) because it is pacchajāta to kammaja cuti event.
- Linking to the next life happens at the 7th javana citta or the patisandhi citta.
- That last citta vīthi marks the death of that old hadaya vatthu. A new hadaya vatthu arises at the patisandhi moment for the next manomaya kāya. That is a human gandhabba if the new one is a human bhava.

## Kamma Vipāka Brings in a Specific Ārammaṇa

6. The last citta vīthi brings the kammic vipāka to energize the next bhava. If the mind grasps the àrammaṇa brought in by that vipāka citta, then javana citta will arise to power the new life: "kamma vipāka vaḍ̣̣hanti." The "vipāko kamma sambhavo" happens at the votthapana citta, i.e., a decision is made on whether to accept that $\bar{a} r a m m a n a$. That decision depends on the level of avijj $\bar{a}$ (arising due to one's gati and āsavā, as well as the ārammaṇa in question).

- A Paṭicca Samuppāda cycle starts with an ārammaṇa coming in via one of the six sensory faculties. Thus a PS cycle starts at the "phassa paccayā vedanā" step. See \#12 of "Difference Between Tanhā and Upādāna" and \#7 of "Contact Between Āyatana Leads to Vipāka Viññāna."
- For example, at the death of Ven. Angulimāla, kammic energy would have brought in an ārammaṇa that re-creates the killing of another human. If Angulimāla still were a killer, his mind would have grasped that nimitta; that would have led to rebirth in niraya (hell.) However, since he became an Arahant, his mind would not grasp it. Ven. Angulimāla did not grasp ANY ārammaṇa and thus was not reborn anywhere.
- Thus, unless "phassa paccayā vedanā" becomes "samphassa paccayā samphassa-j̄̄̄-vedanā," PS will not proceed to the "tanhhā paccayā upādāna" step to grasp the new bhava. See "Dukkha Samudaya Starts With Samphassa-Jā-Vedanā."
- The above example illustrates the stopping of the Upapatti Paticca Samuppāda at the "phassa paccayā vedanā" step in "Akusala-Mūla Upapatti Paticca Samuppāda."
- This "vipāka kamma sambhavo" starts with the first javana citta and builds up gradually up to the fifth javana citta. Now the sixth javana, cuti citta, had been determined from the beginning of the citta vìthi. The seventh javana citta grasps the new existence (bhava.)

## Last Citta Vīthi

7. Now, let us look in detail at the last citta vīthi of the old life. This citta vīthi got started by the last bit of kammic energy from the old life, and it will run its course of 17 citta before it ends. It is like throwing a stone. The person throwing the stone would have released all the energy by the time the stone leaves his hand. But the stone will be traveling until all that energy is spent. In the same way, even though the kammic energy for the old life has ended, the last citta vīthi will run its course of 17 citta, including the last two bhavañga citta after the seven javana citta.

- Cuti or death is not a citta; it is the end of the kammic energy of the old life. Cuti (or the death of the old hadaya vatthu) happens just after initiating the last citta vīthi, and the cuti citta is in the last citta vīthi. Paṭisandhi is not a citta either.
- Here the old bhavañga has ended too, but there are two bhavañga citta left in the last citta vīthi. The new vatthu rupa cannot be formed until this last citta vīthi runs its course. That is because as soon as one is formed, it will start its citta vīthi, and no two vīthi can be there simultaneously.
- At the very end of that last citta vithi (after the last two bhavañga citta,) kammic energy creates the manomaya kaya for the new existence (bhava.) Thus, patisandhi, or the arising of the new hadaya vatthu, happens just after that last citta vīthi.
- In other words, cuti happens at the beginning - and patisandhi at the end - of the last citta vithi. There is a "gap" of 17 citta in between.
- Therefore, cuti/patisandhi are different from cuti cittalpatisandhi citta. It is a subtle point. Don't worry if you don't understand that subtle point.

## New Hadaya Vatthu Arises at the end of the Last Citta Vīthi

8. When this last citta vithi ends, the old hadaya vatthu is dead too; it had exhausted all its kammic power. The next citta vithi starts with a new hadaya vatthu of the new life powered by a new kamma $b \ddot{j} a$. The new hadaya vatthu is formed by the new kamma seed grasped at the 7th javana (the patisandhi citta), and the first citta vīthi for the new life starts immediately.

- If a human bhava ends and the next bhava is an animal, then that animal gandhabba comes out of that body at the end of that last citta vithi.
- On the other hand, if a human bhava ends and Deva bhava start, a fully-formed Deva will appear in a Deva realm at the end of the last citta vìthi of the human bhava.
- Let us consider a specific example.

## Human to Animal Bhava

9. If a human dies and the next life is an animal, that animal gandhabba out of the dead human body. It has the blueprint for the new physical body of that animal.

- That animal gandhabba now has to wait for a suitable womb. It is not that gandhabba decides which womb is good; rather, when a womb that matches the gati of the gandhabba becomes available, gandhabba will be pulled into it by the kammic energy. That is true for humans and animals.
- A single cell called zygote results when a sperm fertilizes an egg in a womb. But there is no life there until the gandhabba enters the womb and is incorporated with that zygote. Now the zygote becomes an embryo, then a fetus, and once out of the womb, grows to a full-size human or an animal according to that blueprint.
- Science has been unable to explain how all the complex body parts of a human or animal develop, starting from a single cell. This is how it happens. The blueprint for all the complex body parts is in the gandhabba, not in that single cell; see "Buddhist Explanations of Conception, Abortion, and Contraception."

### 13.6 Abhidhamma via Science

July 15, 2016; revised February 16, 2021

1. In this section, I have two goals:

- Introduce Abhidhamma in a scientific way that can be understood not only by people with scientific backgrounds but anyone with an interest. It will complement the other section on Abhidhamma, which necessarily involves a lot of Pāli terminologies.
- To demonstrate that the current hypothesis by scientists that consciousness originates in the brain is not correct.

2. I will also make predictions in this section on what the scientists are likely to confirm in the future.

- We all are impressed by the scientific advances made during the past 100 years or so making our lives easier and more productive. I am actually a cheerleader for scientific and technological advances.
- Physics had been my passion since high school days, and that changed when I started learning Buddha Dhamma several years ago. I still love and work on topics of interest in physics (and science in general). Fortunately, I am finding that those two interests are not mutually exclusive, and there is significant overlap. In fact, this section is the result of my two overlapping interests.

3. Despite the advances in science and technology, there is much about the human mind that science does not understand, and has not even begun to understand. Western science is based on the five physical senses, leaving out the most important one, the mind.

- At the present time, in 2016, scientists have the wrong view that consciousness originates in the brain.
- All scientific theories relating to the mind are based on this wrong hypothesis. However, Buddha Dhamma says not only that the mind is a sense of its own, but it is the most powerful of all six senses.

4. I will first discuss some interesting phenomena that scientists have discovered recently and are currently grappling with many diverse areas of science. Then I will discuss the layout of the brain of humans and animals, and how that information can lead to satisfactory explanations of those phenomena by taking into account the Buddha's view of the mind as described in Abhidhamma.

- Instead of using Pāli words to describe Abhidhamma (which can be boring to those who are new to Abhidhamma), my hope is to explain Abhidhamma concepts in the context of such already observed phenomena.
- Posts on Abhidhamma at, "Abhidhamma."

Topics in this Section (I have moved a couple of posts from the Dhamma and Science section to here because they discuss possible future discoveries/present misinterpretations in science):

- Neuroscience says there is no Free Will? - That is a Misinterpretation!
- The Double Slit Experiment - Correlation between Mind and Matter?
- Vision (Cakkhu Viññanna) is Not Just Seeing

Here is another post from the Abhidhamma section that has a deeper analysis on the brain-mind connection:

[^7]
### 13.7 Why Do People Enjoy Immoral Deeds? - Ditṭhi Is Key

1. Most of us feel uncomfortable when we do something immoral or unethical. For example, I remember how my heart rate went up when I stole a cookie or a candy when I was little. We all know how the heart rate goes up and the whole body gets tense when we get angry. Those are definitely not enjoyable moments.

- Therefore, immoral deeds normally make one uncomfortable and even feel like one is "on fire" in extreme cases. This is called "tāpa" ("burning")in Pāli or Sinhala. In the Satipaṭthāna sutta, "atāpi sampajāno" means having a mindset to avoid such deeds; see, "Satipatthāna Sutta - Structure."
- When one stay away from bad deeds, the heart "cools down"; this is Nibbāna or "nivana" or "niveema" ("cooling down").

2. When a thought comes to our mind (mostly triggered by seeing, hearing something related), the decision to act on it may come automatically based our "gathi." If an "enemy" comes into our view when we are walking down the road, thoughts of anger may arise immediately leading to a "fire" in the heart, depending on how "bad" we perceive that person to be. Here the cetasika "dosa" dominates our thoughts. Such thoughts that come automatically to one's mind are due to one "gati" and are the strongest; sometimes they are labelled as "asankharika" citta.

- Other times, one may hesitate to do an immoral act, but after deliberation or due to encouragement by others may go ahead and do it; such thoughts are called "sasankharika" citta.
- When I was thinking about stealing cookies as a child, if I did it with a prompting by a sibling, or I myself did it after not been able to overcome the greed, that would have been a "sasankharika citta."
- In another example, the stronger version of "lobha" may be in our minds when we compete for something valuable. Here the desire is not only to acquire it, but we also do not want others to have it. Here the "fire" in the heart is more noticeable compared to the above case of desiring a cookie, which comes under "rāga" category.
- So, there are many shades of strength for both good and bad thoughts.
- Even if we do some of these "bad deeds" once in a while, we feel that it is wrong to do them. The stronger the bad deed, the stronger that we "feel" them.

3. However, some people seem to enjoy doing bad deeds. We have heard about people who got tens or hundreds or stab wounds when they died in knife attacks. The person who did the stabbing seem to have been enjoying it; killing of a person does not need that many stabbings. This is a rare event that we all agree is disgusting; we are horrified by the mere thought of it.

- But there are milder versions that seem "normal" to more of us.
- Some people get enjoyment watching other people suffer, say when engaged in a fight. We have seen pictures of people kicking the opponent while the opponent was down on the ground, even unconscious. This is of more common occurrence in torturing animals. Many people enjoy watching "cock fights".
- In the even more common occurrence of fishing, most people do not "see" the suffering of a fish as it is writhing in agony hanging by the hook, or convulsing while fighting for "water to breath". These are not immoral people, but their perception about animals has been cultivated to the point that they do not see animals as living beings.

4. Ditthi or "wrong vision" play a key role in generating feelings and desires. If we have been taught that killing animals is not an immoral thing to do, then we do not feel uncomfortable doing such an act. People enjoy fishing or hunting because they do not perceive killing fish or deer as an immoral thing to do.

- Instead of getting a "fire" in the heart, they feel a joy while fishing or hunting.
- And this is not restricted to any particular religion. I know many "Buddhists" who enjoy fishing and hunting. On the other hand, most "Buddhists" consider drinking to be immoral, even though "drinking"
per se is not one of the dasa akusala (of course excessive drinking can induce one to do immoral things). It just depends on what "ditt this" one has.
- In parts of India, some people believe that washing in a particular river will help "wash away" bad merits. But then the fish in that river should be completely devoid of any bad merits, since they live their whole lives in water. Even such "apparently harmless" wrong visions still cover the mind, and prevent the mind from seeing the reality.
- The problem is that most such ditthis propagate from generation to generation without people actually examining the sense of such beliefs.

5. Dittthi is one of the key immoral cetasika (mental factors), and the opposite samm $\bar{a}$ ditṭhi or paññ $\bar{a}$ (wisdom) is of course a "moral cetasika."

- A key point about cetasika is that moral and immoral cetasika DO NOT arise together in a citta. A thought is either moral OR immoral. A moral thought has one or more of "moral cetasika" such as alobha, adosa, compassion, etc. and an immoral thought has one or more of immoral cetasika such as lobha, dosa, shamelessness, fearlessness of wrong, etc.

6. The cetasika "pīti" (pronounced "peethi" or "preethi") which means "joy" is one that can be associated with either a kusala or akusala thought. The same thing is true for the cetasikas vimamisā (liking) and viriya (effort). These three cetasika are included in the six types of cetasika called "particulars" that can be in either type of thought, kusala or akusala; see, "Cetasika (Mental Factors)."

- Thus if one does not believe that killing fish or other animals is immoral and can lead to bad results in future lives, then a person with that ditthi can enjoy fishing/hunting ( $p \bar{i} t i$ ), can form a liking for it (chanda), and enthusiastically make preparations for fishing/hunting trips (viriya).
- On the other hand, someone with samma $\bar{a}$ diṭthi will definitely feel at least uncomfortable in doing such an act, will not like it, and will not strive to do such acts. He/she will gain joy by doing things with thoughts that have only moral cetasika, and also may have chanda and viriya associated with such activities.

7. Thus there are many types of "micchā dittthi" that tend to make people comfortable with immoral acts.

- It must be noted that the word "diṭthi" is used in Buddha Dhamma to specifically denote micchā ditṭhi or "wrong vision". The opposite is samma ditṭhi or pañña (wisdom).
- Some people do not have a problem with killing other human beings if those are presumed to be "nonbelievers". They have been taught all their lives that it is "good thing to do" and will pave the way to heaven.
- It is amazing how one's mind can be made to accept certain activities as "acceptable" by conditioning over time, especially if started at young age. This is also called "brain washing". This is why ditthis are very difficult to break. Yet, with a determined mindset, one can break ditthis.
- The key is to critically evaluate both sides of the particular issue at hand. Does it make sense to say one can go to heaven by killing people? Other than someone's promise, is there any truth to that statement? Is there a doctrine that EXPLAINS HOW "killing unbelievers can pave the way to heaven?".
- The key problem is that human mind likes to "take the easy way". It is easier to try to justify one's vision or position rather than trying to spend time looking deeper into the issue to make an informed decision. But one needs to think about the consequences that can last for unimaginably long times.

8. Some people just enjoy killing other people; serial killers are a good example. Such people have extreme version of the moha cetasika; they are totally and completely morally blind.

- While most of us cannot even fathom, "how can such a person go to sleep at night?" after killing another person for fun, they actually sleep well with a content (but perverse) mind.
- People like Pol Pot and Hitler planned systematic killing of millions of people for many years. In their "ditṭhi" that was the right thing to do, and many others started believing in that "dittthi" too.

9. This is why getting rid of "dittthi" and embracing sammā dittthi is the first step in the mundane Eightfold Path first and then in lokuttara Eightfold Path; see, "What is Unique in Buddha Dhamma?."

- Having wrong kinds of vision (ditthi) can be very dangerous, since one may not even realize that one is doing immoral things because of that dittthi. Such ditṭhis can only be removed via learning Dhamma. One becomes a Sotāpanna just by eliminating such wrong visions and perceptions. The three sayyojana (or samiyojana) that are removed at the Sotāpanna stage (sathkāya diṭthi, vicikicchā, sīlabbata parāmāsa) all arise due to micchā diṭthi.

10. When we analyze at the akusala citta we can see why. All immoral acts are done with just 12 types of akusala citta: eight based on lobha (greed), two based on patigha (dislike), and two based on moha (ignorance).

- All "ap $\bar{a} y a g \bar{a} m \vec{\imath}$ " deeds (those acts responsible for rebirth in the four lowest realms or $a p \bar{a} y \bar{a})$ are done with the first four lobha citta and the vicikicchā citta; see, "Akusala Citta and Akusala Vipāka Citta."
- Those first four akusala citta are "ditṭhi sampayutta" or "done with wrong views". The cetasika vicikicchā also arises due to not knowing the true nature of the world, i.e., anicca, dukkha, anatta. Thus all five akusala citta that are removed at the Sotāpanna stage arise due to micchā dittthi, wrong visions about the world.

11. If one believes one is not doing an immoral act while doing that immoral act, then he/she is likely to do it with pīti, chanda, and viriya., i.e., with joy, liking, and makes effort joyfully to get it done.

- Of course ignorance of law is not an excuse, as stated in the latin phrase, Ignorantia juris non excusat. It holds true for the natural laws stated in Buddha Dhamma as well.
- Even worse, according to Buddha Dhamma, immoral acts done with joy are the worst. That is why out of those first four lobha citta, those two done with joy are the absolutely worst: the "somanassa sahagata ditt!hi sampayutta citta" and the "somanassa sahagata ditṭhi sampayutta sasankharika citta."
- In English, these mean, "act done with joy and wrong vision due to gati" and "act done with joy and wrong vision prompted by other factors". The first is the worst since it comes automatically; the second citta arises after some deliberation, and thus has less potency, or javana.

12. Therefore, now we can see why some people do immoral acts with joy and make them even worse; they simply have wrong world views or dittthi. This is why learning Dhamma is so important.

- As the Buddha said, "My Dhamma has never been known to the world before". So, none of us will know precisely what is moral or immoral, without hearing or reading about them.
- However, as humans we have the innate sense of knowing roughly what is moral/immoral. These come from our previous lives. But depending on the environment that we grew up, we may have acquired certain "wrong visions" or "micchā ditṭhi" or "diṭ!hi."
- This is why teaching children to be moral and making sure they associate with only "good friends" is critical. Those habits learned at young age can last a lifetime unless changed via a determined effort.
- And since one person's diṭthi is different from another's, it is absolutely critical to spend time and verify which ditṭhis are the wrong to be adhered to in the long term. Many people do not believe in rebirth, but according to Buddha that is a micch $\bar{a}$ dittthi that can lead to the adverse outcomes in the future. One needs to examine the evidence and decide for oneself. In addition to looking at , "Evidence for Rebirth," one should also examine, "Complexity of Life and the Way to Seek "Good Rebirths".

13. Finally, the reverse is true too: Those moral acts that are done with joy and knowledge (wisdom) or "correct views" (sammā ditṭhi) will lead to vipāka or outcomes with highest merits.

- Getting rid of wrong views is acquiring correct views or cultivating sammā ditṭhi. The more one becomes knowledgeable in what is moral and what is not, one easily BECOMES joyful while doing
moral deeds; joy and wisdom feed on each other. Of course, chanda and viriya will grow simultaneously too.
- Thus the "somanassa sahagata ñāna sampayutta citta" or the "thought with joy and wisdom that comes out automatically" is the strongest moral citta (or sobhana citta). The next highest is the "somanassa sahagata ñāna sampayutta sasankharika citta" or the "thought with joy and wisdom prompted by other factors".
- Here, wisdom starts at the mundane sammā ditṭhi level, increases as one one embarks on the Sotāpanna magga, then Sotāpanna phala, and so on until becoming "fully enlightened" at the Arahant stage; see, "Buddha Dhamma - In a Chart."
- The power or javana of a kusala citta is enhanced with enhanced wisdom. Thus the power of a citta of an Arahant is much stronger compared to that of a Sotāpanna, and that of a Sotāpanna is much stronger compared to a normal person.
- Of course the javana of a citta with strong ignorance (moha) is strong too, and thus makes the deed even more potent and will bring about unbearably bad outcomes (vipāka).

14. Even though many people perceive Abhidhamma to be complex, if started with good basics, Abhidhamma helps clarify many complex issues very clearly. Learning about types of citta and how different cetasika play roles in one's habits ("gati") will help clarify many issues.

Next, "Javana of a Citta - The Root of Mental Power",

### 13.8 Key to Sotāpanna Stage - Diṭ̣hi and Vicikiccā

1. The attainment of the Sotāpanna stage accomplishes the first and foremost goal of a Bhauddhayā : to remove the possibility of rebirth in the lowest four realms, where suffering is unbearable.

- Even though I have analyzed different ways one can comprehend the "requirements" to be fulfilled to attain the Sotāpanna stage (they are all equivalent), one way to easily remember those requirements is to realize that a Sotāpanna has REMOVED two key immoral cetasika: diṭthi and vicikicchā.
- See, "Cetasika (Mental Factors)" and "Ditthi (Wrong Views), Sammā Ditthi (Good/Correct Views)" for introductions to the types of cetasika or "mental factors" that highlight one's "gathi" in one's thoughts.

2. Cetasika are inter-related. A good example is dosa (strong hate), which arises as a result of lobha (strong greed); actually lobha TURNS to dosa, they do not arise together. When someone kills another human, that is due to dosa; at the moment of the killing, only dosa was in that person's mind. But that dosa likely arose due to lobha, strong attachment to something at an earlier time.

- And lobha is strong when ditthi is strong. In the above example, one would not have formed such strong lobha if one did not have ditṭhi, and instead would have cultivated the moral cetasika, samm $\bar{a}$ ditṭhi, to some extent (i.e., if one knew the consequences of such a strong attachment that can lead to hate and then killing). Thus when ditthi is removed, lobha gets to weaker strength of räga (attachment to sense pleasures).
- Removal of dittthi also leads to the reduction of dosa (strong hate) to patigha (tendency to get angry or irritable).
- Vicikicch $\bar{a}$ is related to moha; when vicikicchā is removed, moha (morally blind) is reduced to avijiä (ignorance of anicca, dukkha, anatta) level. As discussed in another post, vicikiccha is the tendency to do unfruitful and harmful things because of a "covered mind", i.e., not knowing the true nature.
- Those two points are stated in another way by saying that the four "ditṭhi sahagatha lobha citta" and the "vicikicchā citta" are removed at the Sotāpanna stage (thus 5 of the 12 akusala citta are removed at the Sotāpanna stage). This was discussed in the post, "Why Do People Enjoy Immoral Deeds? Ditthi Is Key."

3. In other posts I have discussed how one's "gathi" are intimately linked to the kinds of cetasika that dominate in one's mind. The "apāyagāmī gathi" or those habits or tendencies of a person that makes the person eligible to born in the ap $\bar{a} y \bar{a}$ (the lowest four realms) are mainly in several key immoral cetasika: lobha, dosa, ditṭhi, moha, and vicikicchā.

- At the Sotāpanna stage, the cetasaika of ditṭhi and vicikicchā are REMOVED; then lobha is reduced to rāga (which can be separated out as kāma rāga, rūpa rāga, arūpa rāga); dosa is reduced to patigha, and moha reduced to avijj $\bar{a}$.
- At the Sakadāgāmī stage, from those remaining above, kāma rāga and patigha are REDUCED.
- Those two, kāma rāga and patigha, are REMOVED at the Anāgāmī stage.
- It is only at the Arahant stage that the remaining strength of those key immoral cetasika of lobha and moha (i.e., rūpa rāga, arūpa rāga, avijjā) together with all other immoral cetasika are removed.

4. As one sheds these immoral cetasika and thus "immoral gathi," one automatically cultivates "moral gathi" with moral cetasika. We saw above that when ditthi diminishes, samma ditṭhi (which is the same as the pañ̃̄̄̄ or wisdom cetasika) grows.

- In the same way, as vicikicchā is reduced, saddhā (faith) cetasika grows. This is why a Sotāpanna has "unbreakable" faith (saddhā) in Buddha, Dhamma, and Sañgha; vicikicchā has been removed. However, that saddh $\bar{a}$ comes through not via blind faith, but via understanding.
- Still, paying homage to Buddha, Dhamma, Sañgha, via Tiratana vanadana or listening to pirith helps build saddhā.; see, "Buddhist Chanting - Introduction." This is why it is said that one needs to cultivate saddhā and paññā together.
- Another thing to remember is that while alobha (non-greed) and adosa (non-hate) are moral cetasika opposing lobha and dosa, amoha is NOT actually a cetasika. Unlike alobha and adosa, amoha is not cultivated; amoha is merely the absence of moha.
- Instead, what is cultivated is paññ̄a (wisdom) or the samma diṭthi cetasika. And that requires understanding of anicca, dukkha, anatta. This is why pañña (wisdom) has nothing to do with "book knowledge", but is all about comprehending the "true nature of this world of 31 realms". I will have another post on this important point.

5. Another illuminating way to analyze is to look at the removal of the assavas at each stage. The four types of āsavas are: ditthasava (āsava for ditthi), kamasava (āsava for sense pleasures, almost the same as $k \bar{m} a$ rāga), bhavasava ( $\bar{a} s a v a$ for bhava or existence, which is almost the same as rūpa rāga plus arūpa rāga), and avijjasava (āsava for ignorance). Of course "āsavakkhaya" or removal of all āsavas is Nibbāna.

- As we can see (by comparing with \#3 above), ditthasava is removed at the Sotāpanna stage; kamasava is reduced at the Sakadāgāmī stage and removed at the Anāgāmī stage; bhavasava and avijjasava removed at the Arahant stage.
- Thus we can also see that it is the combination of ditthasava and kamasava that give rise to strong greed (lobha) and strong hate (dosa). When one loses ditthasava by comprehending the true nature of this world, lobha and dosa are reduced to kāma rāga and patigha (which constitute kamasava).
- While such different analyses will be helpful for someone who has been studying them, all these different terms could be confusing to those who are new to these terms. But one will get used to these terms with time, and it is important to understand what they mean (not just to memorize) in the long term. With usage, they WILL become familiar.
- In the days of the Buddha, Buddha Dhamma was called "vibhangavādi" or "doctrine that systematically analyzes by parts". Just like medical students learn about the human body by dissecting dead bodies, it is informative to look at the mind by analyzing it in different ways. And all types of analyses are interconsistent.

6. A Sotāpanna, by comprehending anicca, dukkha, anatta to a certain extent, REMOVES ditthi (ie., achieves ditṭhivisuddhi) and cultivates samma ditthhi to a certain level. And when that happens, the strength of the moha cetasika is reduced to just avijja level, and also the vicikicchā cetasika is REMOVED. Simultaneously, lobha is REDUCED to rāga, which then are removed in stages at higher stages of Nibbāna as stated in \#3 above.

- The above paragraph briefly summarizes what happens at the Sotāpanna stage. It may seem simple, but it requires lot of effort to discipline the mind to get to that stage, mostly via learning and contemplating Dhamma.
- One has reduced the strength of attachment to "worldly things" to the extent that one will NOT do certain immoral actions no matter how much wealth or sense pleasure is at stake. One WILL NOT act with vicikicchā: there is no hesitation in trying to decide, one KNOWS such an act will lead to the birth in the ap $\bar{a} y \bar{a}$. It is not something one has to think about at that moment; it comes out AUTOMATICALLY, because of such "apāyagāmī gathi" have been PERMANENTLY removed.
- Thus by getting to know some properties of key cetasika we can get an idea of how our minds work, and get an idea why different people respond to the same external influences in different ways. It is because their "gathi" or dominant cetasika are different.

7. Now let us take some examples. Ditthi is at the forefront because one's "views" determines what one has gotten used to or one is comfortable with.

- If we take the ditthi (or view) that says if one bathes in a certain river one could wash away one's sins. This does not appear to be a strong ditṭhi, but it is dangerous one: then one can do all sorts of immoral deeds all day along and then take a bath to "wash away" all those sins and thus get rid of any kamma vipāka. Yet, this ditṭhi is something that has been carried from generation to generation in parts of India.
- Many people say, "I don't do immoral things and even help out others, therefore, bad things will not happen to me". That is a ditt thi too, because that person does not realize that he/she most certainly has done innumerable bad things in previous lives. That ditṭhi therefore arises due to not believing in rebirth. The "cause and effect" is a valid argument, but that argument holds only within the broader world view, that this is not the only life we have had.

8. There are several key dittthis that are common in Buddhist countries.

- Many "Buddhists" believe that taking and obeying the eight precepts on Full Moon days is enough to attain Nibbāna. There are old ladies in Sri Lanka who do not miss a single Full Moon day and dutifully take those precepts. But their minds are filled with ignorance and some of them mostly get together and gossip all day.
- While taking those precepts and mindfully disciplining oneself and meditating for a whole day is an excellent way to practice, just nominally taking precepts is not going to do anything to cleanse one's mind.
- Then there is the perception that taking even a glass of wine (or some mild alcoholic beverage) is highly immoral. While it is best to avoid taking any kind of alcohol, drinking a glass of wine or beer is not a "akusala kamma." Of course if one gets addicted or intoxicated, then one could be led to do akusala kamma. Actually, when one gains wisdom via learning Dhamma, the tendency to crave for alcohol or anything else gradually diminishes.
- Rituals are prevalent in most Buddhist countries. People may do all sorts of immoral deeds (gossiping, slandering, using harsh words, fishing, hunting, are a few examples) during the day and at the end of the day, they light a lamp for the Buddha, say a few verses ("gatha"), and believe that is all they need to do.
- All these come under one of the three sanyojana, "silabbata paramasa" (ditthi that says following rituals or set guidelines can lead to Nibbāna), is removed at the Sotāpanna stage.
- But it must be emphasized that most of such procedures CAN BE very effective in calming the mind and building saddh $\bar{a}$ (both of which then help cultivate wisdom by being able to comprehend Dhamma), if done properly while making an effort to cleanse one's mind; see, "Buddhist Chanting - Introduction."

9. We can also see that vicikicch $\bar{a}$ (tendency to do inappropriate/immoral/dangerous deeds) also arises because one is not aware of how kamma/kamma vipāka operate and has not comprehended anicca, dukkha, anatta.

- It is easy for outside influences to change the mind of someone with strong vicikicch $\bar{a}$ to do bad things. Since children in general are unaware of what is right and what is wrong, it is easy to manipulate their minds. This is why making sure children grow up in environments that are conducive to moral behavior is very important.
- Even adults, who are not aware of the consequences of immoral behavior have high levels of vicikicch $\bar{a}$. They tend to only look at the immediate gratifications of an act rather than to have a long-term perspective.
- Learning Dhamma is the only guaranteed way to remove vicikicchā.

10. Some people tend to think that it is better not to even contemplate on bad consequences of bad actions, or to learn WHY bad actions are bound to lead to bad outcomes. The thinking is "as long as I don't think about such depressing things, I will feel fine".

- Just like not knowing that a certain action is unlawful is not a valid argument in a court of law, ignorance of the Nature's laws is not a valid excuse. Sometimes one can get away when a law is broken by telling
more lies and changing the decision of a jury. But in the Nature's court, it is one's mind that makes the decisions and one cannot fool one's own mind.
- This is why ditthhis can be broken only by cleansing one's mind. One cleanses one's mind by first learning about kamma and kamma vipāka first and THEN reading about anicca, dukkha, anatta, and THEN comprehending the true meanings of those words, i.e., by comprehending the true nature of this world; see, "Buddha Dhamma - In a Chart"" and "How to Cultivate the Anicca Saññã."
- One's own mind needs to realize futility of doing immoral deeds, not just because they are bound to bring thous and-fold bad outcomes, but also because there is "no point", "no real benefit" of doing bad things to fulfil one's sense desires or to "own valuable things"; such sense pleasures or valuable things do not last in the long term. But the consequences can linger on for long times.

11. As I pointed out in "Why do People Enjoy Immoral Deeds? - Ditthi is Key," we all have dittthis that have been cultivated in us by the environment that we grew up in, whether it is cultural, social, or religious. And Buddhists are no exception. We all need to critically evaluate such ditthis and sort out which ones are bad for oneself. Buddha has clearly stated which dittthis are bad: "Three Kinds of Ditthi, Eightfold Paths, and Samādhi."

### 13.9 The Origin of Matter - Suddhatṭhaka

November 27,2015; Revised December 17, 2017; May 17, 2019; August 21, 2019; February 24, 2020; December 24, 2020; re-written August 31, 2022

## Introduction

1. Suddhatthaka is not even mentioned in even many Theravāda Texts. It is discussed in "WebLink: PDFfile: Bhikkhu Bodhi-Comprehensive Manual of Abhidhamma," by Bhikkhu Bodhi (2000); see pp. 246, 253254. However, it does not have a deeper explanation given in this post. The explanation in \#8 and \#9 was given by Waharaka Thero and cannot be found directly even in the Tipitaka. However, it is possible to "make connections" and clarify such issues as long as it is consistent with the Tipitaka. That is discussed in "Interpretation of the Tipitaka - Gandhabba Example."

- Please don't read it, unless you have thought about the basic concepts of "san," gati (pronounces "gathi" as in "theme"), āsava, Paticca Samuppāda, etc. It may not make much sense, and thus it could discourage people from proceeding any further thinking, "this stuff does not make sense."
- On the other hand, for those who understand those concepts, this could help gain more insight.
- The picture will become increasingly apparent as I publish more posts on this issue. Buddha Dhamma's value will also become apparent, which is the best way to cultivate saddh $\bar{a}$ (faith based on understanding)
- This topic is discussed in detail in the "Nāma \& Rūpa to Nāmarūpa" subsection of the "Living Dhamma" section.

## Origin of Matter - Scientific Theory

2. If we accept that all matter has been created somehow, what is the origin of matter?

- Scientists have no clear explanation of this (November 2015). They say they can calculate the universe's evolution from a fraction of a second after the Big Bang, but physics cannot explain what happened before the Big Bang.
- Of course, the "Big Bang Theory" has not yet been fully confirmed, even though most scientists believe it.
- Still, some scientists do not believe everything "popped up" suddenly in the Big Bang. See, for example, "Endless Universe - Beyond the Big Bang," by P. J. Steinhardt and N. Turok (2007).
- By the way, English astronomer Fred Hoyle coined the term "Big Bang" to ridicule the concept. See "WebLink: en.wikipedia.org: Fred Hoyle - Rejection of the Big Bang."

## Buddha Dhamma - Universe Evolves

3. The Buddha discouraged people from investigating the universe in detail. However, he has taught that uncountable "planetary systems" like our Solar system exist in the universe. That model will have living beings in existence somewhere in the 31 realms. This has been discussed in detail in a few suttā, especially the Aggañña Sutta (DN 27). I have written an introductory post: "Buddhism and Evolution - Aggañña Sutta (DN 27)". The following are some key points.
(i) The universe has no traceable beginning, just like life.
(ii) The universe has "clusters or groups" of stars. Our Solar system is one of 10,000 "star systems" (cakkavāla or planetary systems; chakrawāta in Sinhala). There is an infinite number of such cakkavāla in the universe.
(iii) When a star in the vicinity of our Sun blows up in a few billion years, that blast will destroy 10,000 other star systems in the neighborhood. In modern science, such a "star explosion" has a particular name, a supernova.
(iv) Such a cluster of 10,000 world-systems blows up from time to time in the universe. Again, scientists observe such supernovae every year.
(v) Science does not know yet is that those destroyed star systems re-form over billions of years.
4. Whatever the model that science eventually clarifies WILL BE consistent with Buddha Dhamma.

- Thus, the universe did not start with a "Big Bang," as many scientists believe right now. Remember that only 100 or so years ago, scientists thought the universe was in a steady state. Scientific theories change to "fit the existing data."
- Just 400 years ago, "science" believed in the geocentric model of the universe. The Earth was in the middle of the universe, and the stars were embedded in a celestial sphere around it far above. See "WebLink: wikipedia.org: Geocentric model."
- But pure Buddha Dhamma has not changed since Buddha Gotama taught it 2500 years ago; see, "Historical Background."
- We will slowly go through the Aggañña sutta because that needs enough background material. I expect this topic will take us several years and many essays to complete.

## Suddhattthaka - The Smallest Unit of Matter

5. Here we will discuss only the origin of the smallest unit of matter, called a "suddhatthaka." (sometimes written as suddhāshtaka).

- This unit of matter is a billion times smaller than "an atom" in modern science. One time, not long ago, science believed that an atom was the smallest unit of matter. But they are composites of many "elementary particles." Even many of those "elementary particles" are shown to have more structure! There is no end to how smaller a "basic unit of matter" can get, i.e., there is no clear distinction between matter and energy.
- For example, a "Higgs boson" is just a packet of energy. The light was in the energy category; see "Photons Are Particles Not Waves."
- Matter and energy are essentially the same, related by the famous equation, E (energy) $=\mathrm{m}$ (mass) $\mathrm{x}^{2}$, where c is the light speed. Thus any small unit of matter is indistinguishable from a "packet of energy." For example, the light comes in "packets" called photons. Thus photon belongs to matter in this sense.
- Thus, in science, the distinction between "matter" and "energy" is blurred at this fundamental level.

6. However, the Buddha made a clear "demarcation boundary" between matter (rūpa) and kammic energy that "bears things" (dhammā.) Dhammā (or kamma bijalkamma bhava) arise via Paṭicca Samuppāda ("avijjā paccayā sañkhāra" leading to "upādāna paccayā bhavō.) See "What are Rūpa? Dhammā are Rūpa too!"‘

A suddhatthaka is a "packet of energy" and the basic unit of matter. It is much smaller in energy compared to a light photon. A single light photon would be made of a large number of suddhatthaka.

- A suddhaṭthaka, being a sañkhata, is created by the mind. The Buddha said, "Manōpubbangamā Dhammā..", i.e., "everything has a mind as the precursor...".
- However, almost all of the matter around us was created by this "mental process" long ago. That is the story in the Aggañña Sutta: "Buddhism and Evolution - Aggañña Sutta (DN 27)." At present, suddhatthaka are being created by us (via javana citta), but in very minute quantities.
- Anyone with higher abhiñ̃̃̄̄ powers can create significant matter, like a flower or larger entities. Matter (at the level of suddhatthaka) is created by javana citta. And someone with abhiñ̃̄̄ $\bar{a}$ powers can
maintain a citta vīthi with javana citta flowing continuously to generate "significant amounts of matter." See the end of the post, "Citta Vithi - Processing of Sense Inputs."

## What is a Suddhatṭhaka? Roles of Avijjā and Taṇhā

7. Suddhatthaka ("suddha" for "pure" or fundamental" + "attha" or "eight") means a unit of matter consisting of eight fundamental entities (usually translated as the "pure octad," for example, in Bhikkhu Bodhi's book per \#1 above).

- Four of these are the four "mahā bhūta": Pathavi, āpo, tejo, and vāyo. These are the fundamental units of matter, but they cannot be detected by themselves. It may be hard to believe for many at this stage, but those arise due to our "gati" that I have discussed in several posts; see the introductory post: "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsavā)." By the way, the removal of "āsava" and "gati" lead to Nibbāna: "The Way to Nibbāna - Removal of Āsavā." One needs to understand these concepts to grasp the material in this post.
- The mind first creates the four mahā bhūta with four basic "gati" of humans: "thada gatiya" or "ŋ̨ બฬฺக" (in Sinhala) means the "coarseness," corresponding to pathavi; a defiled mind is "hard" and "coarse" and correspond to "pathavi" nature.
- The word appo comes from the tendency to "attach or get attracted to worldly things" ("bandena gatiya"

 in mind in minute quantities that cannot be detected. However, yogis with abhiññ̄ powers can generate large amounts of matter like a flower.

8. Those most fundamental four units (satara mahā bhūta) are supposed to be created by the mind due to avijia or ignorance. We like to have possession of things made out of these units because we do not comprehend the "unfruitful nature" of such impermanent things.

- The craving for material things leads to four more gati due to tanh $\bar{a}$. Due to our tendency to think highly ("varnanā karanava" in Sinhala), another gati of "vanṇa" is created as different manifestations of the four mahā bhūta. Similarly, three more units of gandha, rasa, and oja are created due to tanh $\bar{a}$. Those correspond to our desire to be in touch with them and be "fooled" (gandha), keep them close (rassa), and re-generate them (oja). It will take too much space to explain these in detail, but I hope you get the basic idea.

## Suddhatṭhaka - Eight Components Do Not Arise Individually

9. Therefore, four basic units of pathavi, $\bar{a} p o$, tejo, and $v \bar{a} y o$ arise due to $a v i j j \bar{a}$, and the other four of vanña, gandha, rasa, and oja arise due to tanhā.

- These eight components never arise in isolation and thus are called "avinibbhoga rūpa." They always rise together and all eight are there in any suddhatthaka. Each component's relative "amounts" can vary; thus some entities may be dominated by one of the eight. For example, pathavī is dominant in a stone and $\bar{a} p o$ is dominant in water. Even then, all eight are present to some extent.
- This very fundamental level is called the "bhūta" stage. Bhūta is another name for "ghosts" because of their elusive nature. They can never be detected and only be "seen" by a Buddha. The Buddha explained this to Mahā Brahma, who thought he knew everything about the world: "WebLink: suttacentral: Brahmanimantanika Sutta (Majjhima Nikaya 49)." I have discussed that part of the sutta in \#12 of "Anidassana Viññ̄̄̄na - What It Really Means."
- And a suddhatthaka can never be divided; thus they are called "avinibbhöga rūpa kalapa."

## Critical Role of Gati

10. Thus, "gati" leads to "bhūta," the first phase of rūpa that can be seen (only by Buddha). That is the suddhatthaka stage. That is where mental energy is converted to matter at the fundamental stage. Just keep that in mind as we proceed.

- It may be hard to believe for many at this stage, but those arise due to our "gati" that I have discussed in many posts. See the introductory post: "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsavas)." By the way, the removal of "āsava" and "gati" lead to Nibbāna: "The Way to Nibbāna Removal of Āsavā." One needs to understand these concepts to grasp the material in this post.
- More details in "Gati (Habits/Character) Determine Births - Samsappanīya Sutta" and "Gati, Bhava, and Jāti."

## Stages of Matter - Bhūta, Mahā Bhūta, Dhātu

11. When enormous numbers of suddhatthaka fuse, they get to a more condensed state of "mahā bhūta." The subtle bodies of Brahmā and some gandhabbā are made of mahā bhūta. This level of "solidification" can be compared (in energy) to electromagnetic radiation at the long-wavelength range; thus, we cannot "see" those entities with our eyes.

- Only when vast amounts of mahā bhūta fuse and become even more condensed can we can see them. In this highly condensed state, the matter is called "dhātu." Bodies of devas are made of finer dhātu. That is why we cannot see devas, but Brahmā can see them.
- Thus our bodies are made of denser $d h a \bar{a} u$, which we can see. That is why solid objects are called "pathavi dhātu." Suddhatt thaka in such solid objects predominantly has pathavi. In liquids, things are bound together and flow together because they mostly have $\bar{a} p o d h a \bar{a} u$. Not only fire but also those objects that have an "energetic appearance," have more tejo. And not only the wind but also things prone to move, have more vāyo.
- For details: "Bhūta and Yathābhūta - What Do They Really Mean."

## Other Implications

12. Therefore, we can see that pathavi, āpo, tejo, and vāyo have much deeper meanings than the earth, water, fire, and wind. Why did the ancient Greeks also use the same terms? Hinduism also uses terms like karma (the Sanskrit word for kamma), Nirvana (the Sanskrit word for Nibbāna), ānāpāna, etc. The teachings of the previous Buddha, Buddha Kassapa, got distorted with time to become Vedic teachings. I need to write about that but see \#8 of "Arōgyā Paramā Lābhā.."

- There have been three Buddhas in this mahā kappa (i.e., during the existence of our Solar system) before the Buddha Gotama; that is how those terms came into usage before Buddha Gotama. The previous Buddha's concepts were transmitted down through successive generations, but the true meanings got lost.
- Human history is much longer than tens of thousands of years, as believed by many today. Whole continents can submerge, wiping out entire populations. That is not considered seriously yet, but there is some evidence: see, WebLink: wiki: Submerged continent.
- That is a topic to be discussed later when more evidence becomes available. It will be proven that one region that has not changed since the formation of the Earth is Asia encompassing Sri Lanka, India, and China. Archeologists should focus more on that region rather than in Africa. See, "Ancient teeth found in China challenge modern human migration theory."

## Three Buddhas Before Buddha Gotama in the Present Eon

13. As I mentioned above, there were three Buddhas before Buddha's Gotama. That is how key terms like pathavi, āpo, tejo, vāyo, kamma, and Nibbāna (nirvāna) have been used even before the Buddha Gotama. They had been transmitted through generations, but their true meanings had been lost.

- Losing the true meanings in the Tipitaka happened at least a few times, even during this Buddha Sāsana, within the past 2500 years. The best example is the misinterpretation of san, samisāra, anicca, and anatta during just the past hundreds of years; see, "What is "San"? Meaning of Sansāra (or Samisāra)" and "Anicca, Dukkha, Anatta - Wrong Interpretations."
- But the Buddha Gotama has said that his Buddha Sāsana will last for 5000 years. We are only halfway through. That is why it is making a comeback now. And this time it will have staying power due to the presence of the internet. That is one reason we should all be forever grateful to modern science, much more than all other technological wonders it has brought.

14. Buddha Dhamma is deep but once one gets some traction, it can be an exhilarating experience to "dig deeper."

- July 31, 2020: New series "Buddha Dhamma - A Scientific Approach."

### 13.10 <br> What are Dhamma? - A Deeper Analysis

April 15, 2016; revised November 5, 2017; February 9, 2018

1. This is an advanced topic (yet, hopefully, made easy even for those who are not into Abhidhamma). Please don't hesitate to comment if something is not clear. A simpler version is at: "What are rūpa? Dhamma are rūpa too!."

- In contrast to touching, smelling, and tasting, we do not directly "touch" the external world (matter) with our eyes, ears, or the mind.
- While we experience the "outside world" as it is (or objectively) with our five physical senses, what we interact with our minds are our own "perceptions, feelings, plans, and hopes" for that external world.
- We will get into more details on those two aspects in the future, but in this post, we will look at what "dhamm $\vec{a}$ " are in relation to the mind. That will help us address those other two issues in the future.
- It is to be noted that dhammā are rūpa below the suddhattthaka stage. On the other hand, dhamma as in Buddha Dhamma or Abhidhamma refers to Buddha's teachings.
- As I mentioned in the "Abhidhamma - Introduction," I very much want to make Abhidhamma easy to grasp for anyone. I also want to highlight the fact the Buddha Dhamma is well ahead of science (quantum mechanics) in understanding even our material world; science has not even begun to explore the mind.

2. Existence in this world of 31 realms is maintained via our attachments to "things" in this world. These "things" are rūpa.

- When a mind makes contact with an external rūpa, it may generate very brief sense enjoyments called assāda; see, "Assāda, Ādīnava, Nissarana." Since we perceive these sense contacts to be long-lasting and enjoyable (and ignore the sufferings that we go through to acquire them), we willingly desire such sense pleasures.
- However, any rūpa that arises is subjected to unexpected change (vipariṇāma) and eventual decay and destruction, which is the basis of anicca nature.

3. Another factor that we have not discussed much in detail is that rūpa have different levels of texture or solidity.

- The $r \bar{u} p a$ that we experience in the human realms (and those realms below us) are the densest form called dhātu. The deva realms above us have finer dhātu that we cannot see. In the rūpa lokas, rupi Brahmā have even finer rūpa called mahā bhūta. And in the arūpa loka, there are just traces of bhūta (just the hadaya vatthu) made of the smallest unit of matter called suddhatthaka, and of course much finer gati (or gathi).
- You may want to review the concepts discussed in the following posts: "What Are Rūpa? (Relation to Nibbāna)," "The Origin of Matter - Suddhatthaka."

4. It is conventional knowledge is that we experience the external world with our five physical senses: We see with our eyes, hear with the ears, smell with the nose, taste with the tongue, and touch things with our physical bodies.

- Is that all one experiences? Imagine being in a dark chamber totally isolated from the rest of the world. A good example is a punishment by the military called solitary confinement, especially in the old days. One is kept in a totally isolated dark cell for many hours at a time.
- Does such a person experience the outside world? Of course. $\mathrm{He} /$ she can think about all sorts of things: recall past events, think about the future, recall any place that he has been to, etc.
- In fact, we do this any given day, not only by recalling past experiences, but also by imagining desired future events.

5. Sense contacts other than the five physical senses are due to the sixth sense: the mind. One is totally unaware of the external world only when one is totally unconscious.

- So, what are the rūpa that we experience with our minds? These are dhamma! As stated in the phrase, "manañca pațicca dhamme ca uppajjati manoviññānaim," contacts of dhamma with the mana indriya leads to mano viññāna.

6. The arising of viññāna due to different types of sense inputs is described in abhidhamma (and also in "WebLink: suttacentral: Cha Chakka Sutta (MN 148)") as:
"cakkhuñca pațicca rūpe ca uppajjati cakkhuviññānàm,"
"sotañca paṭicca sadde ca uppajjati sotaviñ̃āṇamं,"
"ghānañca paṭicca gandhe ca uppajjati ghānaviñ̃̃̄ạaín,"
"jivhañca paṭicca rase ca uppajjati jivhāviññ̄ạnamं,"
"kāyañca paṭicca photṭhabbe ca uppajjati kāyaviñnān̄aí," and
"manañca paṭicca dhamme ca uppajjati manoviññannaì"

- Thus it is clear that mano viññāna arise when dhamma make contact with the mana indriya, just like cakkhu viññāna arise when (vaṇna) rūpa or light make contact with the cakkhu indriya (eyes) or sota viññāna arise when sadda rūpa (sound waves) make contact with the sota indriya (ears).
- Kaya viñ̃ñana result from contacts which are the most coarse (pottabba or touch due to dhātu), and mano viññāna result from the contacts that are extremely fine, dhamma.

7. Thus, we can categorize our six types of contacts with the external world according to the "coarseness" of the contacts.

- The body contacts (touch), taste, and smell are the coarse contacts; they involve direct touching (pottabba), and those involve solid particulates (taste and smell).
- Vision involves light particles (photons) interacting with the physical eye. The light was not even considered a particle until Einstein, Compton and others proved that in the early 1920's.
- In the language of physics, sound involves phonons having even less energy than light photons, i.e., they are "even softer".

8. We can also see that the sensor elements in the body also get less and less coarse in that order. It must be noted that the sensing elements in the ear are not the ear that we see, but a very sensitive area deep inside the ear.

- According to Buddha Dhamma (and confirmed by science), two things respond to each other and last longer when in heavy usage, if they have similar densities. For example, if a steel rod rubs against a wooden rod, the wooden rod will soon wear out. But two steel rods (or two wooden rods) can be rubbing against each for long times.
- Thus going from touch, smell, taste, sight, and hearing, both the external influences - touch, tasty things, smells, light (photons), sound (phonons) - and the sense elements (body, tongue, nose, eyes, ears) become finer in that order.

9. The finest sensing element is the "mana indriya" which is inside the brain. It is likely to be one of the following: thalamus, amygdala, or hippocampus. I have not had enough time to investigate the functions of these sensitive elements of the brain, but according to Buddha Dhamma, the "mana indriya" is inside the brain and is analogous to the eyes or the ears; more details will become clear as we discuss below.

- What come down in the legend as the "third eye" is this "mana indriya." It is supposed to be located behind the forehead.
- The rūpa that come into contact with the mana indriya are finer than a suddhatthaka, and are still in the "gati" stage, but they are on the way to become suddhatthaka. They are not coarse enough to be "seeing" even with abhiññā powers, and do not make contact with other five coarse senses. Thus they are, "anidassanaappattighaì dhammāyatanapariyāpannaï." See, the last verse of "WebLink: suttacentral: 2.2.2. Mātik $\bar{a} "$ in Dhammasañgaṇī of the Tipiṭaka.
- Here, "anidassana" means "cannot be seen" and "appatigha" means "cannot be touched or sensed with even the finest instrument". And, "dhammāyatana pariyāpanna rupan" means "belongs to dhammāyatana".

10. In the post, "The Origin of Matter - Suddhatthaka," we discussed how the smallest material element, a suddhatthaka, is created by the mind with origins in four basic "gati" of humans that arise due to avijjä: "thada gatiya" (in Sinhala) means the "coarseness", corresponding to pathavi; "bandena gatiya" means the "bind together" which leads to liquidity corresponding to $\bar{a} p o$; "thejas gatiya" means the "fiery or energetic", corresponding to tejo; and, "salena gatiya" means the "motion", corresponding to vāyo.

- craving for these material things lead to four more gati due to $\boldsymbol{t a n h} \overline{\boldsymbol{a}}$ : Due to our tendency to think highly ("varnanā karanava" in Sinhala), another gati of "varna" is created as different manifestations of the satara mahā bhūta. Similarly, three more units called gandha, rasa, and oja are created due to tanhh $\bar{a}$ corresponding to our desire to be in touch with them, keep them close (rassa), and to re-generate them. [rassa: [adj.] short; dwarfish; stunted]

11. Before these eight inseparable units solidify into what we call matter, there is the precursor stage of gati: cultivation of gati leads to bhūta, which are in the suddhatthaka stage. Further solidification of bhūta leads to mahā bhūta. The fine rūpa of Brahmā are composed of mahā bhūta.

- The gati stage of rupa - the origins of rūpa - are also called "mano rupa": these are really what we visualize in our minds. We can visualize scenes from the past, and those are mano rūpa. In the process of making gati, we constantly think about associated material things; those are mano rūpa.

12. Mahā bhūta, upon further condensation, become dhātu. The bodies of devas are made of finer dhātu, and our bodies - as well as all material things we see - are composed of denser dhātu.

- Therefore, the origins of all matter is gati! But our gati (of normal humans) actually do not lead to the formation of significant amounts of even suddhatthaka. So, we still have a long way to go before we can explain how these solid objects in our world were formed as described in the Aggañña Sutta.

13. Just like the eye is receiving visual information or the ear the sounds, the "mana indriya" is receiving "dhammā." And dhammā are much finer than light or sound rūpa. In fact, all five physical senses deal with signals transmitted via solidified particles made out of suddhatthaka, but dhamm $\bar{a}$ are just energy, below what we call "matter". Actually, even most physicists do not consider light as matter or "particles"; I will write a post on why light photons are indeed particles according to quantum mechanics.

- As we discussed in the post, "The Origin of Matter - Suddhatthaka," even a single light particle (photon) is made of a very large number of suddhatthaka.
- As we discussed there, a suddhatthaka is made by the mind. Dhammā can be considered the early stages of a suddhatthaka. They are in fact kammic energy packets made by the mind in javana citta, and arise due to our gati. This is really the link between mind and matter!

14. Therefore, all six senses allow our minds to interact with the material world. We actually interact with two worlds: the material world and the mental world or the mano thalaya.

- Different types of rūpa (varna, gandha, rasa, oja, phottthabba) in our physical world (rūpa loka) are built with suddhatthaka. Dhammā or kamma bīja (in the mano loka) are basically "energy packets" not yet solidified to the state of a suddhatt thaka.
- The pañcakkhandha of a living being has "components" from both worlds. The rūpakkhandha are our mental impression of the material world (as mental records); see, "Pañcakkhandha or Five Aggregates -

A Misinterpreted Concept." The other four khandha (vedanā, sañña, sañkhāra, viññāṇa) are our mental impression of the mind world.

- Each and every living being is associated with its own pañcakkhandha., because one makes one's own mental impression. The Buddha said that one cannot define a living being with less that five khandh $\bar{a}$.
- To repeat: One's pancakkhadha is not one's body as is commonly described. It is not even physical. It is all mental: "Pancupādānakkhandha - It is All Mental."

15. The creation of suddhatthaka by the mind in javana citta, starts first by enhancing one's gati. As we will discuss in a future post on the "Asevana Paccaya," the more one does activities related to a given gati, that gati grows. [Āsevana-paccayā: repetition, is one of the 24 conditional relations paccayā.]

- The growing of a gati is really the accumulation of a kamma bija (seed), and that is deposited in the kamma bhava in the mind plane. These are really dhamma that is in "manañca paticca dhamme ca uppajjati manoviññānaṁ."
- And they (dhamma or kamma bija) can come back to one's mind when the mind is in a receptive state for such a gati. Thus it is a self-feeding feedback loop.
- This is an important point to contemplate on. This is why a drunkard gets the urge to drink, or a gambler gets the urge to visit a casino. People who don't have such gati, do not get such urges because they do not have corresponding dhamma repeatedly coming back to impinge on the mana indriya.
- By the way, as discussed in the "Living Dhamma" section, any such "bad gati" can be reduced and eventually eliminated by a two-step method: (i) forcefully stop activities - and conscious thoughts about them - that contribute that gati when one becomes aware DURING such an act OR a conscious thought, (ii) keep learning Buddha Dhamma to comprehend how that process can actually work (as discussed starting with basic fundamentals of Buddha Dhamma in the "Living Dhamma" section); one key aspect here to contemplate on the bad consequences of such actions/thoughts.

16. To emphasize, dhamm $\bar{a}$ arise due to kamma that we commit. The more kamma we do, the corresponding dhamm $\bar{a}$ will grow, and become gati.

- Dhammā means 'to bear"; one bears what one likes and what one engages in.
- When one cultivates "dog gati" that is what one bears. And that is what comes back to one's mind at the cuti-patisandhi moment and can lead to the next bhava, and thus birth ( $j \bar{a} t i$ ) as a dog.

17. However, the creation of a suddhatthaka requires trillions of citta vithi running consecutively. Thus it does not happen significantly by a normal human being. It requires not only $j h \bar{a} n \bar{a}$, but being able to get into samāpatti. Those with abhiññ̄a powers have the ability to get into samāpatti very quickly.

- When in $j h \bar{a} n \bar{a}$, citt $\bar{a}$ can still switch back to five physical senses in between. When one is in a $j h \bar{a} n a$, one can hear external sounds, for example.
- However, when one is in a samāpatti, the jhānic cittā can flow unceasingly for long times. Thus, pañcadvāra citta vīthi cannot run in between, and thus, one is totally unaware of the external environment when in samāpatti.

18. Furthermore, when in samāpatti, jhānic citta flow unceasingly and make each new javana citta stronger than the predecessor with the "Āsevana Paccayā." We will discuss this in detail in the future.

- This is how those with abhiññā powers (i.e., who can easily get into samāpatti and have practiced it well) can even make physical objects: One can start off with a picture of a flower in one's mind and then by creating more and more suddhatt haka with each new javana citta, create an actual flower in a very short time!

19. Finally, dhamma in the nāma loka are the same as those viññāna established in the kamma bhava. This is a subtle point; see, "Viññāna Aggregate."

- Dhamma or viññanna are called anidassana, appatigha rūpa (rūpa that cannot be seen or made contact with) and they are just energies lying below the suddhatṭhaka stage; see, "Anidassana Viññāna What It Really Means."
- Kamma bhava is the same as the nāma loka; Dhamma in the nāma loka are the same as viññaṇ̄a that are established in the kamma bhava.; see, "Our Two Worlds: Material and Immaterial."

### 13.10.1 24 conditional relations Paccaya

From Dhamma Wiki

Paccaya: 'condition', is something on which something else, the so-called 'conditioned thing', is dependent, and without which the latter cannot be. Many are the ways in which one thing, or one occurrence, may be the condition for some other thing, or occurrence. In the Patthāna, the last book of the Abhidhamma Pitaka comprising 6 large vols. in the Siamese edition, these 24 modes of conditionality are enumerated and explained, and then applied to all conceivable mental and physical phenomena and occurrences, and thus their conditioned nature is demonstrated.

The first two volumes of the Paṭ̣hāna have been translated into English by the Venerable U Nārada mūla patthāna Sayadaw of Burma, under the title Conditional Relations Published by the Pāli Text Society, London 1969, 1981.

The 24 modes of conditionality are:

1. Root condition: hetu paccayā
2. Object: ārammana
3. Predominance: adhipati
4. Proximity: anantara
5. Contiguity: samanantara
6. Co-nascence: sahajāta
7. Mutuality: añ̃̃amañ̃̃a
8. Support: nissaya
9. Decisive Support: upanissaya
10. Pre-nascene: purejāta
11.Post-nascene: pacchājāta
11. Repitition: āsevana
13.Kamma: kamma
12. Kamma-result: vipāka
15.Nutriment: $\bar{a} h a ̄ r a$
16.Ability: indriya
17.Jhāna: jhān̄a
18.path: magga
13. Associaton: sampayutta
14. Dissociation: vippayutta
21.Presence: atthi
22.Absence: natthi
23.Disappearance: vigata
24.Non-disappearance: avigata

1: Root-condition hetu-paccayā is that condition that resembles the root of a tree. Just as a tree rests on its root, and remains alive only as long as its root is not destroyed, similarly all kammically advantageous and disadvantageous mental states are entirely dependent on the simultaneity and presence of their respective roots, i.e, of greed lobha, hate dosa confusion moha or greedlessness alobha hatelessness adosa unconfusedness amoha For the definition of these 6 roots, see: $\underline{m u} l a$.

The roots are a condition by way of root for the mental phenomena associated with a root, and for the material phenomena produced thereby e.g. for bodily expression; Patth.

2: Object-condition $\bar{a} r a m m a n a-p a c c a y \bar{a}$ is called something which, as object, forms the condition for consciousness and mental phenomena. Thus, the physical object of sight consisting in colour and light 'lightwave', is the necessary condition and the sine qua non for the arising of visual-consciousness cakkhuviññāna etc.; sound 'sound wave' for ear-consciousness sotā-viññāna etc.; further, any object arising in the mind is the condition for mind-consciousness mano-viññāna The mental-object may be anything whatever, material or mental, past, present or future, real or imaginary.

3: Predominance-condition (adhipati-paccaya) is the term for 4 things, on the preponderance and predominance of which are dependent the mental phenomena associated with them, namely: concentrated intention (chanda), energy (viriva), consciousness (citta) and investigation (vimamsā). In one and the same state of consciousness, however, only one of these 4 phenomena can be predominant at a time. "Whenever such phenomena as consciousness and mental concomitants are arising by giving preponderance to one of these 4 things, then this phenomenon is for the other phenomena a condition by way of predominance" (Patth.). Cf. iddhi-pāda.

4-5: Proximity and contiguity or immediacy-condition anantara and samanantara-paccayā - both being identical - refer to any state of consciousness and mental phenomena associated with them, which are the conditions for the immediately following stage in the process of consciousness. For example, in the visual process, visual-consciousness is for the immediately following mindelement - performing the function of receiving the visible object - a condition by way of contiguity; and so is this mind-element for the next following mind-consciousness element, performing the function of investigating the object, etc. Cf. viñ̃̄̄anakicca.

6: Co-nascence condjtion sahajāta-paccayā i.e. condition by way of simultaneous arising, is a phenomenon that for another one forms, a condition in such a way that, simultaneously with its arising, also the other thing must arise. Thus, for instance, in one and the same moment each of the 4 mental groups feeling, perception, mental constructions and consciousness is for the 3 other groups a condition by way of co-nascence or coarising; or again each of the 4 physical elements solid, liquid, heat, motion is such a condition for the other 3 elements. Only at the moment of conception in the mother's womb does materiality physical base of mind serve for the 4 mental groups as a condition by way of conascence.

7: Condition by way of mutuality añ̃̄̄āañña-paccayā All the just mentioned associated and co-nascent mental phenomena, as well as the 4 physical elements, are, of course, at the same time also conditioned by way of mutuality,;just like three sticks propped up one by another.; The 4 mental groups are one for another a condition by way of mutuality. So also are the 4 elements, and also mentality and materiality at the moment of conception.

8: Support-condition nissaya-paccayā This condition refers either to a pre-nascent see: 10 or co-nascent see: 6 phenomenon which is aiding other phenomena in the manner of a foundation or base, just as the trees have the earth as their foundation, or as the oil-painting rests on the canvas. In this way, the 5 sense-organs and the physical base of the mind are for the corresponding 6 kinds of consciousness a prenascent, i.e. previously
arisen, condition by way of support. Further all co-nascent see: 6 phenomena are mutually see: 7 conditioned by each other by way of support.

9: Decisive-support or inducement condition upanissaya-paccayā is threefold, namely a by way of object ārammanūpanissaya-paccayā $b$ by way of proximity anantarūpanissaya $c$ natural decisive support pakatupanissaya These conditions act as strong inducement or cogent reason.
a. Anything past, present or future, material or mental, real or imaginary, may, as object of our thinking, become a decisive support, or strong inducement, to moral, immoral or kammically neutral states of mind. Evil things, by wrong thinking about them, become an inducement to immoral life; by right thinking, an inducement to moral life. But good things may be an inducement not only to similarly good things, but also to bad things, such as self-conceit, vanity, envy, etc.
b. is identical with proximity condition No. 4.
c. Faith, virtue, etc., produced in one's own mind, or the influence of climate, food, etc., on one's body and mind, may act as natural and decisive support-conditions. Faith may be a direct and natural inducement to charity, virtue to mental training, etc.; greed to theft, hate to murder; unsuitable food and climate to ill-health; friends to spiritual progress or deterioration.

10: Pre-nascence-condition purejāta-paccayā refers to something previously arisen, which forms a base for something arising later on. For example, the 5 physical sense-organs and the physical base of mind, having already arisen at the time of birth, form the condition for the consciousness arising later, and for the mental phenomena associated therewith.

11: Post-nascence-condition pacchā-jāta-paccayā refers to consciousness and the phenomena therewith associated, because they are - just as is the feeling of hunger- a necessary condition for the preservation of this already arisen body.

12: Repetition-condition āsevana-paccayā refers to the kammical consciousness, in which each time the preceding impulse moments javana-citta are for all the succeeding ones a condition by way of repetition and frequency, just as in learning by heart, through constant repetition, the later recitation becomes gradually easier and easier.

13: Kamma-condition kamma-paccayā The pre-natal kamma i.e kamma-intentions, kamma-cetanā in a previous birth is the generating condition cause of the 5 sense-organs, the fivefold sense-consciousness, and the other kamma-produced mental and material phenomena in a later birth. - Kammical intention is also a condition by way of kamma for the co-nascent mental phenomena associated therewith, but these phenomena are in no way kamma-results.

14: Kamma-result-condition vipāka-paccayā The kamma-resultant 5 kinds of sense-consciousness are a condition by way of kamma-result for the co-nascent mental and material phenomena.

15: Nutriment-condition āhāra-paccayā For the 4 nutriments, see: $\underline{a} h \bar{a} r a . ~$
16: Ability-condition indriya-paccayā This condition applies to 20 abilities (indriya), leaving out No. 7 and 8 from the 22 abilities. Of these 20 abilities, the 5 physical sense-organs $1-5$, in their capacity as abilities, form a condition only for unmaterial phenomena visual-consciousness etc.; physical vitality 6 and all the remaining abilities, for the co-nascent mental and material phenomena.

17: Jhāna-condition jhāna-paccayā is a name for the 7 so-called jhāna-factors, as these form a condition to the co-nascent mental and material phenomena, to wit:

- (1) thought-conception (vitakka),
- (2) discursive thinking (vicāra),
- (3) interest (pīti),
- (4) joy (sukha),
- (5) sadness (domanassa),
- (6) indifference (upekkhā),
- (7) concentration (samādhi). (For definition s. Pāli terms)
$1,2,3,4,7$ are found in 4 classes of greedy consciousness see: Tab. I. 22-25; 1, 2, 5, 7 in hateful consciousness ib. 30,$31 ; 1,2,6,7$ in the classes of confused consciousness ib. 32,33 .

This condition does not only apply to jhāna alone, but also to the general intensifying 'absorbing' impact of these 7 factors.

18 path-condition magga-paccayā refers to the 12 path-factors, as these are for the kammically advantageous and disadvantageous mental phenomena associated with them, a way of escape from this or that mental constitution, namely: 1 knowledge paññā = sammāditṭhi right understanding, 2 right or wrong thought-conception vitakka 3 right speech sammā-vācā 4 right bodily action sammā-kammanta, 5 right livelihood sammā-ājīva 6 right or wrong energy viriya 7 right or wrong awareness or mindfulness sati 8 right or wrong concentration samādhi 9 wrong views micchādittthi 10 wrong speech micch $\bar{a}$-vāca 11 wrong bodily action micchā-kammanta 12 wrong livelihood micchā- $\bar{j} j \bar{i} v a$ Cf. magga

19: Association-condition sampayutta-paccay $\bar{a}$ refers to the co-nascent see: 6 and mutually see: 7 conditioned 4 mental groups khandha as they aid each other by their being associated, by having a common physical base, a common object, and by their arising and disappearing simultaneously; Patth. Com.

20: Dissociation-condition vippayutta-paccayā refers to such phenomena as aid other phenomena by not baving the same physical base eye, etc. and objects. Thus material phenomena are for mental phenomena, and conversely, a condition by way of dissociation, whether co-nascent or not.

21: Presence-condition atthi-paccayā refers to a phenomenon - being pre-nascent or co-nascent - which through its presence is a condition for other phenomena. This condition applies to the conditions Nos. 6, 7, $8,10,11$.

22: Absence-condition natthi-paccayā refers to consciousness, etc., which has just passed, and which thus forms the necessary condition for the immediately following stage of consciousness by giving it an opportunity to arise. Cf. No. 4.

23: Disappearance-condition vigata-paccayā is identical with No. 22.
24: Non-disappearance-condition avigata-paccayā is identical with No. 21.
These 24 conditions should be known thoroughly for a detailed understanding of that famous formula of the dependent origination (paticcasamuppāda).

Mahā Thera Nyanatiloka. Manual of Buddhist Terms and Doctrines, Buddhist Publication Society, first edition 1952.
See The Significance of Dependent Origination, by Nyanatiloka (WHEEL 140).

### 13.11 Pabhassara Citta, Radiant Mind, and Bhavanga

April 13, 2017; revised January 19, 2018; August 20, 2018; January 7, 2019; February 14, 2021
It is a good idea first to read the posts, "Amazingly Fast Time Evolution of a Thought (Citta)" and "Viññāna What It Really Means."

## A "Thought" Is the Result of Billions of Citta

1. Billions of citta flow in a second, and what we experience is the cumulative effect of billions of citta, which we call a "thought." Let us start at the base state of a citta (loosely translated as a thought, but it is really not). Every citta has 7 universal cetasika (mental factors). Universal cetasika are discussed in, "What is in a Thought? Why Gati are so Important?."

- Those 7 universal cetasika are: Phassa (contact), saññ̄ā (perception), vedanā (feeling), cetanā (intention), ekaggata (one-pointedness), jivitindriya (life faculty), and manasikāra (memory). This is the "baseline" state of a citta, which lasts only a billionth of a second.
- And during that brief time, many other cetasika (good or bad) can be incorporated into a citta. But let us consider the more straightforward case where no other cetasika are included.
- Even such a simple citta is still contaminated or defiled at the end of that brief time. This contamination is manifested in vedanā and sañ̃n̄ cetasika.

## Each Citta Goes Through Nine Stages!

2. Each INDIVIDUAL citta - during its existence for a billionth of a second - undergoes change in 9 stages! Such a fast process cannot be seen by any human other than a Buddha; see, "Citta, Mano, Viññāna - Stages of a Thought."

- At the end of the 9 stages, it has evolved and has become affected by the whole of the viñãānakkhandha (including past viññāṇa).
- The contamination of a citta is manifested in saññ̄a and vedanā; a contaminated citta is called viññạna.
- Vedanā at the base level is "discerning that an event took place" ("veema" + "danaveema" or "尺̊O \& $\mathbb{8}$ ") in Sinhala). Actual "feelings" about the event will be incorporated as the citta evolves in 9 stages, as we will discuss below.

## Even the First Citta Is Contaminated

3. The other critical universal cetasika that evolves in 9 stages is sañña $\bar{a}$. Even though it has become standard to write is as "sa $\tilde{n} \tilde{n} \bar{a}$, " that is not how it is pronounced "sangngă":

## WebLink: Play the word "sañ̃̃a"

- Some do indicate the correct pronunciation by writing as saññā. Even though it does not really matter how one writes it ("sanna" or saññā or "sangnga"), it is critically important to understand what is meant by it; see, "What is Sañ̃ña (Perception)?."
- Saññā provides one's perception about a given event that led to the arising of the citta. For example, if we see an object, the identification of that object proceeds via those 9 stages (and vedan $\bar{a}$ evolves accordingly).
- So, let us briefly go through the 9 stages of the evolution of a citta using sañ̃̃ $\bar{a}$ as the basis.

## Contamination of a Citta Is Due to Anusaya

4. Each citta gets contaminated in those 9 stages due to anusaya that comes to the surface as $\bar{a} s a v a$ (or $\bar{a} s a y a)$, which are also related to one's gathi. There are many posts at the site with details on those entities.

- Those nine stages of contamination during the lifetime of the citta itself (in a billionth of a second) are citta, mano, mānasaì, hadayaì, pandaraì, mano manāyatanaì, mana indriyaì (or
 mano manāyatanaì manindriyà̇ viññānà̇ viñ̃̃ānakkhandho...]
- This rapid contamination of a citta is explained in the "WebLink: suttacentral: Paticcasamuppāda Vibhanga," in Section 2.5.1. Akusalacitta : "Tattha katamaí sañkhāra paccayā viññ̄ạnaì? Yaim
 viññānakkhandho tajjāmanoviññ̄ṇadhātu—idaì vuccati "sañkhārapaccayā viññānà்".
- Those 9 stages are also listed in the original commentary, section 1.3.5.3. Tatiyacatukkaniddesa in WebLink: suttacentral: 1.3. Ānāpānassatikathā or Patisambhidamaggapakarana (or Part I, p. 360 of Buddha Jayanati Tipiṭaka): "..yaì cittaì mano mānasaì hadayà் pandaraìm manomanāyatanaì
 mano manāyatanaí manindriyamं viññānam் viññānakkhandho...] I trust only three commentaries and all three are in the Tipitaka: Patisambhidamagga, Petakopadesa, and Nettippakarana.
- All other commentaries that are in existence today were written much later and are not reliable; see, "Buddhaghosa and Visuddhimagga - Historical Background."
- What we actually experience is vinnanakkhandha. Even after going through the 9 stages it is still called a citta for convenience; see, "Citta, Mano, Viññ̄na - Stages of a Thought" and "Amazingly Fast Time Evolution of a Thought (Citta)."

## Simple Example Explaining the Nine Stages of a Citta

5. Let us consider the example of seeing one's mother. At the initial citta stage, the only perception is that a person is there. In the next step of "mano" (which stands for "calibrating with respect to other persons; "maneema" in Sinhala), it is realized that the person is woman.

- In the third stage of "mānasam̀," "san" comes to the picture and extra information (which is personal) is incorporated; see, "What is "San"? Meaning of Sansāra (or Samsāra)." Now, one identifies the person as one's mother.
- By the way, we cannot live in this world without at least reaching the "mānasam" stage of a citta. Otherwise, we will not be able to distinguish a given person in a crowd.
- Actual contamination of the citta starts at the next stage of "hadayam,", which means identifying whether that person is "close to one's heart" and then getting attracted or repulsed. In our example, one recognizes the person as "one's mother" and of course corresponding vedana of an attachment arises as well.

## An Arahant's Citta Does Not Contaminate Beyond the 'Mänasan' Stage

6. An Arahant's citta does not evolve beyond the 'mānasam' stage. So, the Buddha was able to identify different people, but he did not form any attachment/dislike based on that identification.

- This is what is stated in the Karaniyamatta Sutta: "..mānasamं bhāvaye aparimāṇamं..." One needs to cultivate "mānasaì" as much as possible ("aparimāna" or "appramāna" or without limit), but not let the citta contaminate beyond that.
- That can be done only via reducing and finally removing one's bad gathi, āsava, and anusaya, as we discuss below.

7. The next step after "hadayam" is "pandaramं," which means to "add more power," i.e., one's mind will look back at past events (yes, within a billionth of a second), recall how loving she was, and "attach more". It is done automatically by the manasikāra cetasika.

- So, the citta gets more and more contaminated as it advances to the viñ $\tilde{n} a n a$ stage. Thus viññạna is actually a citta that is very much contaminated due to one's anusaya, āsava, and gati.
- Finally, it becomes part of the viñ̃̄āṇakkhandha, which includes 11 types of viññāna: past, present, future, near, far, fine (sukuma), coarse (olārika), likes (paneeta), dislikes (appaneeta), internal (ajjatta), and external (bahidda).
- A viññānakkhandha has incorporated not only one's anusaya, āsava, and gathi, but also one's memories and future hopes, etc.

8. Now we can address the issue of a "pabhassara citta." First, what is meant by "pabhassara"?

- The word comes from three sounds at the root: "pa" means again and again, "bha" is related to" bhava"; and "sara" or "chara" means to "sarisareema" in Sinhala or "to participate". Thus a "pabhasara citta" with only one " s " in the word (NOT pabhassara) is a contaminated citta that will lead to sansāric journey or the rebirth process.
- The opposite of "pabha sara" is "pabha assara," where "assara" means "not take part in". It rhymes as "pabhassara."
- This is why I say that Pāli is phonetic language. Meanings come based on sounds. I have given many examples throughout the website.

## Pabhassara Citta Is There Only at the Beginning of Nine Stages

9. Therefore, a "pabhassara citta" is that base state, or the pure state of a citta, BEFORE it goes through the 9 stages of contamination. It has only the 7 universal cetasika.

- Each and every citta of a given person starts as a pabhassara citta but gets contaminated to varying degrees depending on one's personality or one's advancement along the Path.
- Even an Arahant‘s citta is not a pabhassara citta; it will contaminate to the level of "mānasamं," as we discussed above. However, Arahant phala citta, which lasts for only one citta, is a pabhassara citta.
- When an Arahant is in Arahant phala samāpatti, he/she knows that one is alive, but has no awareness of outside events. This is called animitta, appanihita, suññata samādhi. That is different from the nirodha samāpatti, where the flow of citta stops.
- In Buddha Dhamma, defilements are associated with "dark", and pure states are associated with "bright" or "radiant". So, we could call a pabhassara citta a "radiant citta," and a mind that generates AND maintains citta at that state a "radiant mind".
- The only time such radiant or pure citta flow occurs, is when an Arahant is in Arahant phala samāpatti, with the Arahant phala citta flowing continuously.

## Pabhassara Sutta (AN 1.51)

10. This process of contamination of a citta is what stated in the "WebLink: suttacentral: Pabhassara Sutta (AN 1.51)": "Pabhassaramidamं, bhikkhave, cittaì. Tañca kho āgantukehi upakkilesehi upakkilitthaì. Taï assutavā puthujjano yathābhūtain nappajānāti. Tasmā ‘assutavato puthujjanassa cittabhāvanā natthī’ti vadāmī ti."

- First, "Pabhassaramidaim" is "Pabhassara idami." As I keep saying, words are sometimes combined or even a bit changed to rhyme in suttā. So, the first sentence says, "Bhikkus, citta (the first stage) is pabhassara or does not contribute to rebirth process".
 "introduced." What is introduced is "upakilesa" or defilements (that are in one's gathi, anusaya, $\bar{a} s a v a)$. That leads to "upakilitta" or contamination. Again. "kiliti" in Pāli and Sinhala means "dirty".
- The next sentence says, "those puthujjano who do not understand this, cannot comprehend the reality (yathābhūta)". Here puthujjana means an average human who has not been exposed to Buddha Dhamma; i.e., one who does not comprehend Tilakkhaṇa. Thus the last sentence says, "therefore, I do not recommend citta bhāvanā to those who do not comprehend Tilakkhaṇa."

## Anidassana Viññāna Is Not a Pabhassara Citta

11. Another famous quote from the WebLink: suttacentral: Kevatta Sutta (DN 11) in the Digha Nikāya (DN 11), says, "Viññānaí anidassanai் anantaí sabbato pabhai̇..." This could be written as "Viññānamं anidassanam், anantamं, sabbato pabhamं.." in order to break into three components.

- Here, "anidassana" means "cannot be seen". Viññāna is more than a nāma dhammā and has "kammic energy". But it is below the "visible $r \bar{u} p a "$ "; see, "Kamma Viññ̄n̄na - Link Between Mind and Matter."
- And, "ananta" is infinite; viñ̃̃āna dhātu is infinite.
- "sabbato" means "in every way/for all".
- As we discussed above in \#8, "pabbha" means "repeated bhava" (pabhaim comes for that).
- Therefore, the above verse means, "viññāna is unseen, infinite, and leads to the rebirth process for all."
- To emphasize: viññāna is a defiled citta. We all experience viññāna, not pure citta. Even more accurately, we experience viññānakkhandha (viññāna aggregate). However, we loosely call "a thought" a citta.
- One stops the rebirth process by removing one's bad gati, āsava, and anusaya and not letting citta contaminate beyond the "mānasam" stage.

More details at this post: "Anidassana Viññāna - What It Really Means."

## Bhavañga Citta Is Not a Pabhassara Citta

12. Some commentaries say that bhavañga citta are pabhassara citta. That is absolutely incorrect. All living beings have bhavañga citta that depend on one's bhava; see "Bhava and Bhavañga - Simply Explained!."

- Bhavañga comes from "bhava" + "anga," where "anga" is "a part". So, bhavañga means "associated with a given bhava." Bhavañga is obviously different for different bhava.
- An animal also gets into the bhavañga state. Does that mean an animal has a "radiant mind" when it is in the bhavanga state?
- Furthermore, sometimes "anidassana viñ̃̄āna" is also incorrectly explained as the base level of viññāna. Per \#11 above, it is clear that anidassana viññāna just explains that viññāna cannot be "seen."

## 13. In fact, it is not correct to say bhavañga citta. Bhavañga is a "state of mind", no citta vīthi run during bhavañga.

- For example, a living being in the asañ̃na realm does not experience any thoughts. There are absolutely no citta vīthi running during the whole time there. However, the body is maintained by bhavañga that corresponds to that bhava.

No Pabhassara Citta Below Arahant Stage
14. So, the point here is that as long as one has bad gati (or anusaya, $\bar{a} s a v a$, etc., which are all inter-related and can be just called $a v i j j \bar{a}$ ), one's thoughts will be contaminated as they arise.

- Therefore, we cannot control our thoughts as they arise: a citta is contaminated to the viñnāna stage in a billionth of a second, which is unimaginably fast. This is why the Buddha said a citta is the fastest entity in the world (we loosely call "a thought" a citta, even though it is really viñ̃ānạakkhandha that we experience).
- All we can do is to REDUCE avijj $\bar{a}$ (and thus all those related entities of gathi, $\bar{a} s a v a$, anusaya) by learning Dhamma and then practicing Ānāpāna (not breath meditation) and Satipaṭthāna meditation.
- As one proceeds in the Path, one's had gati (and āsava and anusaya) will start decreasing, one's citta will tend to be more "cleaner and brighter."
- Once one gets to a certain level, one can start contemplating on those key concepts like anicca, dukkha, and anatta, i.e., vipassana meditation, and attain magga phala.

## Contamination of a Citta Depends on the Arammaṇa and Gati

15. Not all citta get contaminated at the same level. A citta arises when one of our six sense faculties makes a sense contact, and the level of contamination of the citta depends critically on what that sensory input is.

- Let us take some examples. When we taste delicious food or see an attractive object, greedy thoughts may arise. But we know that we all don't have the same cravings for a given item. Some foods that some people crave can be repulsive to some others. In another example, a given person may be liked by some but disliked by others (think about a famous politician).
- Furthermore, we don't generate defiled thoughts in many cases. Billions of citta flow through our minds as we look at scenery passing by while riding in a car; they are mostly neutral, but still are contaminated to a certain level.
- But the level of contamination will be stronger when one sees an eye-catching object.
- Details at, "Ārammana Plays a Critical Role in a Sensory Event."

## A Newborn Baby Does Not Have a Pabhassara Citta

16. I have seen some people say citta that arise in a baby are pabhassara citta. Anusaya ALWAYS remains with a lifestream regardless of whether it is a baby, animal, Brahma until that lifestream attains the Arahant stage.

- A baby's brain has not developed so it cannot experience the world as we do, and it also cannot express itself. But a baby's citta are also contaminated due to anusaya being there.
- Only when one attains magga phala that a part of one's anusaya (and āsava and samyojana) is removed permanently; see, "Conditions for the Four Stages of Nibbāna."

## How to Attain a Pabhassara Citta

17. As one starts at the Sotāpanna stage of Nibbāna, and advance through Sakadāgāmī, Anāgāmī stages to the Arahant stage, one's avijjā (and thus bad gathi, anusaya, āsava, etc.) decrease permanently.

- Thus a Sotāpanna's thoughts will not be defiled beyond a certain level of contamination. Indeed, a Sotāpanna will not generate strong akusala citta that are capable of leading to rebirth in the apāy $\bar{a}$.
- By the time one gets to the Anāgāmī stage, one has removed all kāmāsava (kāmā āsava), and thus will not be tempted by any sensual object in the kāma loka. Therefore he/she will not be reborn anywhere in the $k \bar{a} m \bar{a}$ loka (four ap $\bar{a} y \bar{a}$, human realm, and the six deva realms).
- When one gets to the Arahant stage, one has removed all avijjā (and all bad gathi, anusaya, āsava, etc.): One has attained Nibbāna, and thus one will not be reborn anywhere in the 31 realms at death.
- All the above have been discussed in detail in many posts at the site. One can use the site map "Pure Dhamma - Sitemap" or use the "Search" box on top right to look for posts for given keyword(s).

### 14.1 Historical Background - Introduction

## One of the earliest posts: Revised May 27, 2017

1. Today, we have three main "schools" of "Buddhism" that include the Theravāda Buddhism in Sri Lanka, Burma, Thailand, and few other South Asian countries, Mahāyāna Buddhism in the form Zen in Japan, China, and several other Asian countries, and Vajryāna Buddhism in Tïbet.

- All these are being practiced in other countries in varying degrees. How the original teachings of the Buddha got branched out over 2500 years is discussed in, "Historical Timeline of Edward Conze."

2. The vast literature in Theravāda Buddhism, which is contained in the Tipitaka (three baskets of Sutta, Vinaya, and Abhidhamma) are mostly self-consistent.

- Considering the vastness of the material in these documents, the consistency is amazing, and gives one confidence that any "contamination" would be small indeed.

3. However, even the Theravāda literature has been contaminated with incorrect interpretations of the Tipitaka.

- The root causes of misinterpretations of key terms are discussed at several posts below in this section, but specifically two major historical events can be pointed out: "Buddhaghosa's Visuddhimagga - A Focused Analysis" and "Misinterpretation of Anicca and Anatta by Early European Scholars."
- These inconsistencies were first pointed out by my teacher Thero who recently passed away, and my goal with this website is to point out those errors and illustrate that those correct interpretations provide a fully-consistent picture: "Parinibbāna of Waharaka Thero."

4. It is hard for me to fathom how a normal human being, regardless of how intelligent he is, could teach the doctrine in such different ways over forty five years, yet be so consistent in multiple ways (the discourses range from simple one-to-one question answer sessions with individuals to lengthy discourses delivered to audiences of thousands of people, not to mention the complex Abhidhamma material).

- Even with the help of a computer, it is hard for me to keep track of the intricacy of Abhidhamma. The complex workings of the mind has been analyzed in multiple ways, and they are all consistent within the Abhidhamma and also with the Suttā.

5. Teachings of the Buddha, as given in the Theravāda Tipitaka, are confirmed and solidified with each new scientific discovery (in contrast, the mythical aspects introduced in various forms of Mahāyāna Buddhism are facing problems in light of scientific progress).

Buddha Dhamma is like a diamond covered in the dirt of ignorance. The more we find about the world through scientific methods (thus removing more dirt from the diamond), the more of the diamond's luster become apparent. Not too far into the future, Buddha Dhamma will shine brightly and will greatly help the humanity all over the world.
6. It is ironic in a way how the "materialistic science" is helping to clarify and confirm the teachings of the "mind-based" Buddha Dhamma. Yet the humanity is still only enamored with the truly amazing materialistic advances based on scientific discoveries, and is for most part unaware of its primitive stage compared to ultimate knowledge contained in Buddha Dhamma.

- The real breakthrough may come when science will be forced to embrace the mind as yet another fundamental property of nature.
- The discovery of quantum mechanics has clearly laid the foundation for this next breakthrough. It has been more than hundred years since the advent of quantum mechanics, but it is only within the past two to three decades that real progress has been made in this direction. I discuss these developments in detail in the "Dhamma and Science" section.

Next, "Methods of Delivery of Dhamma by the Buddha", .......

### 14.2 Methods of Delivery of Dhamma by the Buddha

1. Buddha Dhamma is undoubtedly the most complex "theory" in the world. It is truly amazing that such a deep philosophical doctrine has survived over 2500 years.

- However, we can be confident that the pure Dhamma still survives, because the three baskets of sutta, vinaya, and abhidhamma were written down in 29 BCE when there were still numerous Arahants were present.
- After about 100-200 CE, people started translating the Tipitaka into Sanskrit and also the Mahāyāna sect started writing their own suttā in Sanskrit; see, "Historical Timeline of Edward Conze."

2. Another important point to remember is that there is no single discourse in which the Buddha has drawn together all the elements of his teaching and assigned them to their appropriate place within some comprehensive system; see, "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."

- Therefore, the same material was delivered in a variety of different ways over the 45 -year "ministry" of the Buddha. If some mistakes were made in the transmission of one of the sutt $\bar{a}$ or discourses, that would become apparent when compared with the numerous other discourses or the Abhidhamma.

3. The Buddha tailored his discourses to his audience at hand. Thus his teachings that have been transmitted encompass a broad spectrum, ranging from one-to-one conversations with people who had particular questions in mind to long discourses to audiences consisting of groups with wide-ranging mental capabilities.

- If the Buddha realized that it was not fruitful to explain a deep concept to an individual, he remained silent. One example cited is Buddha's silence when a certain wanderer named Vacchagotta asked him whether there was an Atman or äthma (permanent soul) or not. Even though Buddha had clearly explained in Paticca Samuppāda that the concept of a lifestream with changing "gathi," in this case, he remained in silence when Vacchagotta asked him the question twice. Vacchagotta then left.
- After Vacchagotta left, Buddha's personal attendant, Ven. Ānanda, asked him why Buddha did not explain the concept that it is not correct to say "there is no soul" or "there is a soul" to Vacchagotta. The Buddha told Ānanda that he did not think Vacchagotta was mentally capable at that time to understand the concept, and that he did not want to confuse him. See the post, "What Reincarnates? - Concept of a Lifestream" for the correct explanation.
- It turned out that Vacchagotta later became a disciple and even attained Nibbāna through his efforts.

4. Other times, he would enunciate invariable principles that stand at the heart of the teaching: for example, Abhidhamma is a complete description of the working of the mind. The Buddha delivered this Abhidhamma material in summary form to his chief disciple, Ven. Sariputta, and it was Ven. Sariputta and his followers who expanded that summary to the form that we have today in the Tipiṭaka; see, "Abhdhamma - Introduction."

- But in most cases, instead of trying to provide the most thorough and intellectually deep answers, he tried to find the best way to steer people to the truth according to their mental capabilities. Some recent books have misrepresented such isolated one-to-one correspondence as indications that some fundamental issues have not been addressed by the Buddha. They are probably unaware that such questions have been answered in other sutt $\bar{a}$. I will point such instances as they come up in other posts.

### 14.3 Misconceptions on the Topics the Buddha "Refused to Answer"

Revised January 25, 2019; March 26, 2021; re-written October 9, 2022

## The "Unanswered Questions"

1. Some say that the Buddha refused to answer a set of questions; see "WebLink: en.wikipedia.org: The unanswered questions." According to that article and others, the four questions that the Buddha did not answer are:
2. Is the world eternal?
3. Is the world finite?
4. Is the "self" identical to the body?
5. Does Tathāgata (Buddha/Arahant) exist after death?

- Buddha did provide answers to those questions. But the answers depend on what one understands by the words "loko" (the world) and "jīvaim" (life.)

## Buddha's Method of Answering Questions

2. Buddha's main concern at any given instance was to provide an answer that the audience at hand was able to comprehend.

- If the correct answer had befuddled the audience, he remained silent on that question. There are some sutt $\bar{a}$ with such accounts.

3. A good example is when a monk named Mālunkyaputta came to the Buddha and asked several questions regarding the universe and stated that he would leave the order if the Buddha refused to answer them; see "WebLink: suttacentral: The Shorter Discourse to Mālunikyaputta (MN 63)".

The Buddha told Māluñkyaputta, "Suppose Mālunkyaputta, a man is wounded by a poisoned arrow, and the friends and relatives bring him to a surgeon. Suppose the man should then say: "I will not let this arrow be taken out until I know who shot me; whether he is a Ksatriya or a Brahmana or a Vaisya or a Sudra (ie., which caste); what his name and family may be; whether he is tall, short, or of medium stature; whether his complexion is black, brown, or golden; from which village, town, or city he comes. I will not let this arrow be taken out until I know the kind of bow shot me; the kind of bowstring used; the type of arrow; what sort of feather was used on the arrow, and with what kind of material the arrow was". Mālunkyaputta, that man would die without knowing any of these things. Even so, Mālunkyaputta, if anyone says: "I will not follow the holy life under the Blessed One until he answers these questions such as whether the universe is eternal or not," he would die with these questions unanswered by the Blessed One."
4. However, other suttā provided the answers, or they are inherent in the doctrine itself.

- For example, the answer to the fourth question should be evident to anyone who has understood the primary goal of an authentic Buddhist: "to stop the rebirth process"; see "Four Noble Truths - Suffering and Its Elimination."

5. The Buddha seems to have followed four ways of treating questions:
i. Should answer some directly,
ii. others should be answered by way of analyzing them,
iii. counter-questions should answer some others, and
iv. put aside some since they serve no purpose.

- This is stated in the "WebLink: suttacentral: Pañhabyākarana Sutta (AN 4:42)."
- As mentioned in the above section, depending on the audience, he chose the method that he deemed appropriate.

## Answers According to Mundane Meanings

6. Nowadays, the words "loko" and "jivvaí" are taken as "the world out there/cosmos" and "self," as Wikipedia article of \#1 indicates. Here, the short answers are: Yes; No; It is not correct to say there is a "self" or "no-self"; No.

The answers to the first two questions are in several suttā, but mainly in the Aggañ̃̃a Sutta (DN 27). An introduction to that sutta is in "Buddhism and Evolution - Aggañña Sutta (DN 27)".

- As you can see in that post, the Buddha's version sharply contrasts the current scientific understanding. For example, Earth was exclusively populated by humans who had subtle, invisible bodies in the beginning. This is the reverse of the currently adopted "theory of evolution" in science.
- However, as pointed out in that post, Buddha's version had survived previous scientific theories. I have no doubts that further scientific discoveries will confirm Buddha's version; also see "Dhamma and Science - Introduction."

7. Think about the fact that starting with the Greek philosophers at the time of the Buddha (a coincidence), Western science took over 2500 years to reach the current level of understanding of the universe.

- Even two hundred years ago, the scientific understanding was limited to the Solar system and nothing beyond that. Now we know that there are billions of galaxies, each with billions of stars (most of which have planetary systems like our Solar system) and that all this started with the big bang.
- This slow transition took the genius and courage of people like Galileo, who sometimes sacrificed their lives to bring out the truth.
- But the Buddha knew all about the universe and how the mind worked 2500 years ago!

8. Buddha has explained that both theories of a "self" and "no-self" are wrong. That is discussed in detail in many suttā; see, for example, "What Reincarnates? - Concept of a Lifestream" and "Anattā - A Systematic Analysis."

The Buddha's following answer illustrates the urgency with which he asked the followers to "follow the path" diligently instead of wasting valuable time on metaphysical questions.
9. Buddha's perspectives on many issues ranging from the working of the mind to those on the universe, are apparent in his teachings on Abhidhamma (and also in some main sutt $\bar{a}$, such as the Aggañña sutta). Fundamental aspects of the universe (infinite in space and time) are inherent in the doctrine.

- For example, his teachings are based on cause and effect (principle of causality). There can be no effects without prior causes. This is the opposite of the "Creator model," which requires a Creator of the world. The causality principle NECESSARILY requires that there can be no beginning!
- Those principles are embedded in the teachings, but the Buddha avoided giving answers to specific questions, especially from individuals, because it would have confused those people.

## Answers According to "Buddhist Meanings"

10. In most cases, by "loko" (and also "sabba" or "all") the Buddha meant "one's world" and NOT the conventional meaning that scientists use for the "world out there" with innumerable stars and planets.

- One's world is the five aggregates. That is all each "person" has ever experienced. But there is no "person" that "travels the rebirth process." Each existence arises depending on causes and conditions (Paṭicca Samuppāda.)
- The Buddha has given clear answers based on the above in "WebLink: suttacentral: Sassataditthi Sutta (SN 24.9)" and "WebLink: suttacentral: Asassataditthi Sutta (SN 24.10)." The Buddha describes the five aggregates (rūpa, vedanā, sañña, sañkhārā, viññāna) as the "loka."
- The first position ("loka" is eternal) is sassata dittthi and the second position is uccheda diṭthi.
- Note: The translator (of the English versions in the links) incorrectly translated "loko" as "cosmos," the mundane meaning we discussed earlier. Also, he has truncated the five aggregates in the second sutta and the following suttas. The complete versions are there in the Buddha Jayanthi Tipitaka Edition.

11. The following two suttas address the issue of whether "loka" is infinite or not: "WebLink: suttacentral: Antavā Sutta (SN 24.11)" and "WebLink: suttacentral: Anantavā Sutta (SN 24.12)."

- The two suttas following that "WebLink: suttacentral: Taimjīvaintainsarīraim Sutta (SN 24.13)" and "WebLink: suttacentral: Aññamijīvainaññainsarīraim Sutta (SN 24.14)" state that it is not correct to say either life $(j \bar{i} v a)$ is the same as the body (sariva) or not.
- Here, those with uccheda ditthi believe that life ( $j \bar{\imath} v a$ ) is associated with the physical body (sarīra) in this life. When the body dies, that is the end of $j \bar{v} v a$.
- Those with sassata ditṭhi refer to $j \bar{\imath} v a$ as a "lifestream that continues without end" because it has a permanent entity (ātman) associated with it.

12. There are four more suttas, "WebLink: suttacentral: Hotitathāgato Sutta (SN 24.15)" through "WebLink: suttacentral: Nevahotinanahotitathāgato Sutta (SN 24.18)" stating that it is not correct to take those positions on the "status of a Buddha/Arahant" after Parinibbāna. That is because we cannot express anything about Nibbāna in the terminology of 'this world."

- Mahayanists believe that Buddha/Arahants still exist in this world of 31 realms. That is the wrong view of the first sutta in the four suttas.
- The other three wrong views arise because of not understanding the following fact. Once attaining Parinibbāna, the "status" of Buddha/Arahants cannot be expressed with the vocabulary of "this world of 31 realms." We can only say that Buddha/Arahants will not be reborn in this world.

### 14.4 Misinterpretations of Buddha Dhamma

## Revised October 5, 2016

1. It is said that the Buddha advised not to translate the Tipitaka material word-by-word into any other language. Instead, commentaries were written to explain the Pāli material in the Tipiṭaka in condensed form fit for listening, retention, recitation, memorization, and repetition - the five major elements in oral transmission.

- This is a very important point. For example, the Buddha orally delivered the main Suttā over many hours; the Dhamma Cakka Pavattana Sutta was delivered over several days to the five ascetics. For easy transmission, these discourses were SUMMARIZED in Magadhi (and that particular format of "lining up" was termed Pāli); see, "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."
- Each line, sometimes even a word in a Sutta needs a further explanation; see, "Satipatthāna Sutta Structure" and follow-up posts. Such "explanatory texts" or "commentaries" were originally written in Sinhala and were called "Sinhala Atthakata".
- Commentaries in Sinhala accumulated for centuries and in the fourth or fifth century CE, these commentaries were translated to Pāli (and edited with his own ideas incorporated) by Buddhaghosa. Subsequently, most of the original Sinhala commentaries were lost, and today we only have the edited summaries of Buddhaghos a where he incorporated his own ideas.
- Fortunately, three of the original commentaries ("Sinhala Atthakata") have been preserved in the Tipitaka; see, "Preservation of the Dhamma."

2. Among the commentaries to the Tipitaka, those on the Abhidhamma are dominated by the three commentaries of Buddhaghosa: (i) the atthasalini, "The Expositor", the commentary to the Dhammasangani, (ii) the Sammohavinodani, "The Dispeller of Delusion", the commentary to the Vibhanga, and (iii) the Pancappakarana Atthakatha, the combined commentary to the other five treatises.

- But it must be remembered that Buddhaghosa wrote those commentaries with his own ideas as a former Hindu Brahmin. The original Tipitaka remains unaltered, including those three original commentaries ("Sinhala Atthakata") mentioned above.

3. In addition to writing those commentaries on the Tipitaka while he was in Sri Lanka, Buddhghosa also wrote the Visuddhimagga (The Path of Purification) around 430 CE , which is considered to be an important treatise on Theravāda doctrine. This is wrongly considered to be a comprehensive manual condensing the theoretical and practical teaching of the Buddha, and some consider it to be the most important Theravāda text outside of the Tipitaka Canon of scriptures.

- I will point out many problems with Buddhaghosa's writings - including Visuddhimagga - at this site.
- The most common problems include: misinterpretation of $\bar{A} n \bar{a} p a ̄ n a s a t i ~ b h a ̄ v a n a \bar{a}$ as "breath meditation"; see, " 7 . What is Änapāna?" and "Mahā Satipatthāna Sutta."
- He also incorporated kasiṇa meditations, which are anāriya meditations and are not Ariya meditation techniques. In Ariya (or true Buddhist) meditations, the object of meditation is Nibbāna, not a mundane object like a kasina object.

4. This is critical issue since most current Theravāda institutions teach mainly the works of Buddhaghosa, since those works are supposed to be reliable summaries of the teachings in the Tipitaka. Therefore, it is good to have the works of Buddhaghosa reviewed extensively.

- I will point out the most important misrepresentations on this website, based on what I have learned from my teacher Thero in Sri Lanka. The Dhamma that I present here is, in my opinion, the correct interpretation of the Tipitaka. I hope you will come to that conclusion on careful examination of the material.
- More details can be found in "Incorrect Theravāda Interpretations - Historical Timeline" and other posts in the "Historical Background" section.

5. After Emperor Asoka's reign, no further steps were taken to hold back the inevitable Brahminic influence on Buddhism in India, and Buddhism went through a gradual decline in India (despite or even because of the resurgent philosophical activity led by Nagarjuna, Asanga, Vasubhanudhu, and others around the beginning of the first millennium) and virtually disappeared from India during the first millennium.
6. The Mahāyāna version of Buddhism started with the works of Nagarjuna, who, in all likelihood had best intentions for the promotion of Buddhism (even though he was naive enough to assume that Buddha Dhamma can be refined for the "new ages").

- These refinements became major revisions by the time D. T. Suzuki's books were written in the early 1900 's, and the original teachings were badly distorted. This is the reason why I am so obsessive about making sure that my essays are compatible with the original teachings of the Buddha.

7. All these distortions in both Mahāyāna and Theravāda versions have their origins in various philosophers (such as Nagarjuna and Buddhaghosa) trying to interpret Buddha Dhamma in terms of mundane concepts; see, "Buddha Dhamma: Non-Perceivability and Self-Consistency."

- However, as pointed out in that post, it is easy to point out the inconsistencies with such mundane interpretations by Nagarjuana, Buddhaghosa, and others, especially with the evidence gained by the scientific advances made during the past few hundred years.
- And such scientific evidence and the ones that are yet to be discovered will only confirm the pure Dhamma that stays intact in the Tipitaka to the day, as also pointed out in that post.

Next, "Preservation of Dhamma",

### 14.5 Preservation of the Buddha Dhamma

Revised October 28, 2017; November 11, 2017; January 9, 2019; re-written January 26, 2020; (revised June 19, 2021;) re-written June 25, 2021; revised August 29, 2022

## Tipiṭaka - The Pāli Canon

1. After the passing away of the Buddha, his teachings were handed down verbally from one generation to the next over three to four hundred years. Preservation in the written form took place 2000 years ago.

- Tipitaka was composed into a form suitable for easy verbal transmission, in many cases in SUMMARY form. See, "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa." That is why it survived almost entirely in content over this long period.
- It was written down in Matale, Sri Lanka, at the turn of the first century, 2000 years ago. See "Welcome to Aluvihāra Rock Cave Temple" for information about the location where the Tipiṭaka writing took place.
- The other earliest written Buddhist documents are from Gandhāra in modern northwestern Pakistan; see "The Buddhist Literature of Ancient Gandhāra" by Richard Salomon (2018.) However, those do not provide a complete version of the Tipitaka; see p. 83 of the book.
- All other documents in Chinese, Tỉbetan, etc., date later and are derived from the Pāli Tipiṭaka.

## Initial Oral Transmission

2. The discourses of the Buddha were said to have been delivered in the Māgadhi language. The written form was called Pāli. But Pāli does not have its script, so it was written down with Sinhala script.

- That provides a clear way of sorting out the Mahāyāna literature, written in Sanskrit and never written in Pāli. Mahāyānic philosophers wrote all the Sanskrit suttā in Sanskrit.
- Around the turn of the first millennium, translations of the Tipitaka to Chinese and Tibetan also took place. The original manuscripts in Pāli can be expected to contain most of the original discourses delivered by the Buddha.

3. Today, it is hard to fathom (especially for Westerners) that such accuracy would be possible in verbally transmitted material.

- However, we need to understand the background traditions and the monks' determination over thousands of years that helped preserve most of the original teachings.
- Even today, some people have memorized large sections of the Tipitaka, especially in Myanmar (formerly Burma). In Myanmar, there are special examinations to test memorizations See, "WebLink: myanmarnet.net: Tipitakadhara Sayadaws of Myanmar (Burma) in Five Decades." Also, see "WebLink: dhammadharo: Memorizing the Tipitaka."
- During oral transmission, groups of bhikkhus memorized (overlapping) sections of the Tipitaka. Then during a Sangāyan $\bar{a}$ (Buddhist Council), they all got together and compared each other versions to make sure they were all compatible.

## It Took Three Councils to Finalize the Tipitaka

4. A major reason for the assembly of the First Buddhist Council within three months of the Buddha's Parinibbāna - around 480 BCE - was to organize the vast material.

- Within the next two hundred years, two more Councils were held to recite and verify the teachings and to finalize the Tipiṭaka in three broad categories ("ti" + "piṭaka" or "three baskets"). The second was held about a century after the first one.
- The third was held in 250 BC at Pataliputra under the patronage of King Asoka. The "three baskets" were completed at this Council with the finalization of the Abhidhamma Piṭaka; see \#15 below.
- This completed Tipitaka was written down in 29 BCE at the Fourth Buddhist Council in Matale, Sri Lanka. This was the last Council attended ONLY by Arahants. Thus, we can be assured of its authenticity. Since Pāli does not have its own script, it was written in the Sinhala language.

## The authenticity of the Tipiṭaka

5. Another important point is hidden in the history of the Tipitaka. Even up to the 20th century, the whole Tipitaka was written on specially prepared ola (palm) leaves. They normally deteriorate over 100 years or so and need to be rewritten. Even though that was a very labor-intensive process (about 60 large volumes in the modern printed version of the Tipitaka), it served another important purpose.

- Sinhala language (both spoken and written) changed over the past 2000 years. The need to re-write it every 100 or so years made sure that they took account of the changes in the Sinhala script. Of course, the Pāli language has not changed.
- The following video gives an idea about the preparation process and the tools used to write:

WebLink: youtube: Ola Leaf manuscripts

## Most Suttā Are Condensed Versions of the Discourses

6. A critical point here is that a sutta is a CONDENSED version of discourse in many cases. For example, the Dhamma Cakka Pavattana sutta was delivered to the five ascetics overnight. Imagine how many written pages would be if written verbatim! Yet, it is summarized in a few pages. The same is true for all the important suttā. Otherwise, it would have been impossible to transmit all those thousands of sutt $\bar{a}$.

- The Buddha delivered most of his discourses in the Māghadhi (māghadhi = "maga" + "adhi" or Noble path) language. Tipitaka was written in Pāli with Sinhala script. Pāli is a version of Māghadhi suitable for writing down oral discourses in a summary form suitable for transmission.
- Each Pāli word is packed with a lot of information, and thus commentaries (called "Attha Kath $\vec{a}$ ") were written to expound on the meaning of important Pāli words and to explain the key phrases in the sutt $\bar{a}$.

## Importance of the Commentaries

7. Thus, the Tipiṭaka was meant to be used with the commentaries. Pāli suttā are not supposed to be translated word-by-word. See, "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."

- Someone burned down most of those Sinhala commentaries during the Anuradhapura era; see, "Incorrect Theravāda Interpretations - Historical Timeline."
- Fortunately, three original commentaries prepared by the main disciples of the Buddha (Ven. Sariputta, Ven. Kaccayana, etc.) during the Buddha's time were included in the Tipiṭaka (in the Khuddhaka Nikāya) and thus survived. The current revival of pure Dhamma by the Theros in Sri Lanka is partially due to their perusal of these three documents (Patisambhidāmagga, Petakopadesa, and Nettippakarana).

8. With the loss of most of the commentaries and the non-prominence of the surviving three commentaries mentioned above, people started translating the Tipitaka word by word. The problem was compounded by the increasing usage of the Sanskrit language beginning around the first century CE.

- For example, "anicca" was translated first to Sanskrit as "anitya," and then the same Sanskrit word "anitya" was ADOPTED as the Sinhala translation for anicca. Similarly, "anatta" was translated to Sanskrit as "anāthma" and again was adopted as the Sinhala word for "anatta." This has prevented millions of people from attaining Nibbāna all these years; see "Anicca, Dukkha, Anatta - Wrong Interpretations."
- Another good example is the translation of Pațicca Samuppāda to Sanskrit as Pratītyasamutpāda; see, "Paticca Samuppāda - "Pati+ichcha" + "Sama+uppāda"" and the Wikipedia article, "Pratityasamutpāda."
- It is NOT POSSIBLE to translate some key Pāli words to Sanskrit or English, or any other language without losing their true meaning. This is why I prefer to keep the original words in many cases (e.g., anicca, anatta, taṇh $\bar{a})$ and just explain what it is.

## Buddha Prohibited Translation of the Tipiṭaka to Sanskrit

9. The Buddha foresaw this and warned not to TRANSLATE the Tipiṭaka to Sanskrit. There were two Brahmins by the names of Yamela and Kekuṭa who were experts on the Vedic Texts; they became bhikkhus and asked the Buddha whether they should translate the Pāli suttā to Sanskrit.

- The Buddha admonished them that Sanskrit was a language with musical overtones developed by the high-minded Brahmins. Thus, it was impossible to convey the true meanings of Mäghadhi (Pāli) words in Sanskrit; see, WebLink: tipitaka.fandom.com/wiki: Chulavagga 5.33. He admonished them not to translate his teachings to Sanskrit.
- In the Sutta Central English translation, the Pāli word for Sanskrit (chandasa) is mistranslated as "metrical"; see, "WebLink: suttacentral: 15. Minor matters (Khuddaka)," The relevant Pāli text as, "Tena kho pana samayena yamelakekuṭā nāma...".

10. One grave problem today is that many people try to translate a given sutta word by word to other languages. Thus the Dhamma Cakka Pavattana sutta that we mentioned above is translated into a few pages.

- For a comprehensive translation of that sutta: "Dhammacakkappavattana Sutta."
- That is why most of the existing translations are inadequate at best and erroneous in most cases; see, "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."

## Buddhaghosa's Commentaries

11. Finally, just before the burning of the Sinhala commentaries, Buddhaghosa translated and edited those commentaries back to Pāli in his Visuddhimagga and other books.

- Even though he had made many errors (like including kasiña meditation and substituting the ānāpānasati bhāvanā with "breath meditation"), he had used the words anicca and anatta in the Pāli version of the Visuddhimagga; see, "Buddhaghosa and Visuddhimagga - Historical Background" and"Buddhaghosa's Visuddhimagga - A Focused Analysis."
- Thus the incorrect translations of the words "anicca" (as "impermanence") and "anatta" (as "no-self") may have happened more recently; see, "Misinterpretation of Anicca and Anatta by Early European Scholars."
- Now, let us systematically review the timeline of the Tipitaka.

## Timeline - First Buddhist Council

12. That first Buddhist council was held three months after the Parinibbāna at Rājagaha, the capital of Māgadha.

- Shortly after the Buddha passed away, Ven. Mahakassapa, the de facto head of the Sanggha, selected five hundred monks, all Arahants, to meet and compile an authoritative version of the teachings.

13. The Cullavagga, one of the books of the Pāli Vinaya Piṭaka, gives an account of how the authorized texts were compiled at the First Buddhist Council:

- Based on Venerable Upāli's recitation of Vinaya, the Vinaya Piṭaka, disciplinary matters were compiled.
- Venerable Ānanda then recited "the Dhamma" or the Sutta Pitaka, i.e., the discourses, and based on this recitation the Sutta Pitaka, the Compilation of Discourses, was compiled (Venerable Ānanda was supposed to have an amazing memory and had memorized all the Suttā preached by the Buddha).
- The Abhidhamma was rehearsed by all the Arahants present at the Council. Although they recited parts of the Abhidhamma at these earlier Buddhist Councils, it was not until the Third Council that it became finalized to its present form as the third and final Pitaka of the Canon.

## Finalization of Tipiṭaka at the Third Council

14. The Moggaliputta-Tissa Thero compiled the proceedings of the Third Council in the Kathavatthu, which became part of the Tipittaka (Three Baskets). During the Third Council, Arahants compiled the final version of the Tipitaka (as available today). It finalized the Abhidhamma Piṭaka and added several books on the Khuddhaka Nikāya, and the Kathavatthu.

The composition of the Tipitaka is as follows:

1. The Vinaya Pitaka is composed of five books: Major Offenses (Prajika Pāli), Minor Offenses (Pacittiya Pāli), Greater Section (Mahavagga Pāli), Smaller Section (Culavagga Pāli), and Epitome of the Vinaya (Parivara Pāli).
2. The Sutta Pitaka consists of five Nikāyas: Digha Nikāya (Collection of Long Discourses), Majjhima Nikāya (Collection of Middle-Length Courses), Samyutta Nikāya (Collection of Kindred Sayings), Añguttara Nikāya (Collection of Discourses arranged by a number), and Khuddaka Nikāya (Smaller Collection).
3. The Abhidhamma Pitaka consists of the following categories: Dhamma Sañghani (Classification of Dharmas), Vibhanga (The Book of Divisions), Kathavatthu (Points of Controversy), Puggala Paññatti (Description of Individuals), Dhātukatha (Discussion regarding Elements), Yamaka (The Book of the Pairs), and Patṭhāna (The Book of Relations). Venerable Moggaliputta Tissa COMPILED Kathavatthu at the Third Buddhist Council.

- That collection is the Tipiṭaka (Three Baskets) or the Pāli Canon that exists today.

## Abhidhamma Piṭaka Finalized at the Third Council

15. The work on the Abhidhamma Pitaka, started during the time of the Buddha by Ven. Sariputta was not finalized until the Third Council. The Buddha only taught the basic framework to Ven. Sariputta. It was completed over roughly 250 years by the lineage of bhikkhus started with Ven. Sariputta. Of course, Ven. Sariputta was one of the two chief disciples of the Buddha: While Ven. Moggallana excelled in supernatural powers, Ven. Sariputta excelled in Dhamma. He was only second to the Buddha in Dhamma knowledge.

- The minute details on the structure of a citta vīthi (a series of citta) of 17 thought moments, with each citta lasting sub-billionth of a second, can be seen only by a Buddha. The Buddha described only the underlying principles to Ven. Sāriputta. Then Ven. Sāriputta and his group of bhikkhus (and their subsequent lineage) completed the monumental task of making a complete description of Dhamma theory starting with the fundamental entities.
- Bhikkhu Bodhi describes the origins of Abhidhamma in his book, "Comprehensive Manual of Abhidhamma," (2000); see pp. 9-11.
- As I mentioned, compiling Abhidhamma Pitaka (after the Buddha described it in summary form to Ven. Sāriputta) was not a trivial task. That is why it took 250 years to finalize that work. Anyone with even a little knowledge of Abhidhamma would realize that it must be the work of a Buddha. See the "Abhidhamma" section at puredhamma.net.
- The Abhidhamma Pitaka is fully consistent with the Sutta Pitaka. I would be happy to discuss any perceived inconsistencies.
- However, it is not necessary to learn Abhidhamma to attain magga phala. It is an additional tool for those who like to get into details. It is truly a joyful experience to "see" how phenomena can be explained at a deeper level.

## Writing Down the Tipitaka at the Fourth Council

16. This enlarged Canon, completed at the Third Council, was committed to writing in Sri Lanka in the first century BCE (29 BCE) at the Aluvihara Monastery at the Fourth Buddhist Council. The material in Pāli was written down in the Sinhala language (Pāli does not have its script).

Bhikkhus wrote on palm leaves with styluses, a pointed steel dagger-like instrument, which scratched the letters into the soft leaves. Ink made from berries was rubbed over the whole page and gently removed so that only the indentations retained the color. It is said that Tipitaka was also written down on gold leaves as well. These could be entombed inside stupās; see, the Wikipedia article "Stupa"

## Translation of the Tipitaka to Other Languages

17. It is to be noted that Theravāda Buddhism was brought to Burma and Thailand from Sri Lanka in the first century CE. Over the next two centuries, it diffused into adjoining countries of Laos and Cambodia and survived in its purity in those countries as well to the present day. (In Cambodia, the Khmer Rouge regime in the 1970s massacred most monks, and the Buddha Dhamma is virtually extinct).

- However, the Chinese/Tibetan versions of the Tipitaka seem to have come from India. The Tibetan version seems to have undergone many revisions/additions and, in some cases, is far removed from the original teachings.
- While the Sañgha (with the aid of most of the kings) in Sri Lanka took pride and honor in keeping the teachings intact, Buddhism underwent many changes in India, China, Japan, and Tibet. It then finally disappeared altogether from India around 1200 CE .

### 14.6 Historical Timeline of Edward Conze

## Revised September 8, 2021

Edward Conze was a Mahāyāna scholar and translated the Mahāyāna Prajnaparamita or Perfection of Wisdom sutras from original Sanskrit to English. See, WebLink: WIKI: Edward Conze
(Note that any Sanskrit suttā are Mahāyāna sutrā (sutra is the Sankrit word for sutta ) that were composed by Mahāyāna philosophers like Nagarjuna (who were just intellectuals, and not Arahants) and are NOT original suttā delivered by the Buddha).

Conze was impressed with those Mahāyāna suttā, and in the book, "On Indian Mahāyāna Buddhism" (1968), he analyzed the works of the Mahāyāna/Zen scholar D. T. Suzuki. Even though his bias towards Mahāyāna suttā are clear, I selected his timeline, which clearly shows how Mahāyāna scholars wrote their own suttā and tried later to attribute those to the Buddha.

This historical timeline is discussed in detail by Edward Conze in his book, "A Short History of Buddhism" (1980). According to Conze, the history of Buddhism can be conveniently divided into four periods:

1. The old Buddhism, which largely coincided with what later came to be known as Theravāda
2. Rise of Mahāyāna,
3. Rise of the Tantra (Vajryāna) and Ch'an (Zen),
4. No further divisions.

The first period is roughly 500 years; the second and third periods roughly cover the first thousand years of the current era (CE); the last thousand years can be considered as the fourth period. During this whole period, the Theravāda Dhamma was kept mostly intact. In the following description, it is also clear some of the differences between the original teachings and the Mahāyāna ideology.

In the following I will present this story verbatim as told by Conze (starting at p. 45 of his book):
"......About 100 BCE (roughly 400 years after the Buddha's Parinibbāna) a number of Buddhists in India felt that the existing statements of the doctrine had become stale and useless. In the conviction that Dhamma required ever new re-formulations so as to meet the needs of new ages, new populations and new social circumstances, they set out to produce new literature which ultimately came to be known as Mahāyāna Buddhism. The creation of this literature is one of the most significant outbursts of creative energy known to human history and it was sustained for about four to five centuries. Repetition alone, they believed, cannot sustain a living religion. Unless counterbalanced by constant innovation, it will become fossilized and lose its life-giving qualities, they believed.

So far the Mahayanistic attitude seems quite logical. What is more difficult to understand is that they insisted in presenting the new writings, manifestly composed centuries after the Buddha's Parinibbāna, as the very words of the Buddha himself. They followed the Mahasanghikas in minimizing the importance of the historical Gautama Buddha, whom they replaced by the Buddha who is the embodiment of Dhamma (dharmakaya). In the "Lotus of the Good Law", we are told that the Buddha, far from having reached his enlightenment at Bodhgaya, abides for eons and eons, from eternity to eternity, and that He preaches the Law at all times in countless places and innumerable disguises.
........Not content with this, the Mahayanists tried to link their own writings with the historical Buddha by a number of mythological fictions. They asserted that they had been preached by the Buddha in the course of his life on Earth, that parallel to the (First Buddhist) Council at Rajagaha, which codified the Suttā of the Theravāda, the Mahāyāna suttā had been codified by an assembly of Bodhisattvas on the mythical mountain of Vimalasvabhava; that the texts had been miraculously preserved for five centuries and stored away in the subterranean palaces of the Nagas, or with the king of the Gandharvas, or the king of the Gods. Then, as

Nagarjuna puts it, "five hundred years after the Buddha's Nirvana, when the Good Law, after having gradually declined, was in great danger", these treasures from the past were unearthed, revealed and made known, so as to revivify the doctrine.

What then were the main doctrinal innovations of the Mahāyāna? They can be summarized under five headings:

1. As concerns the goal there is a shift from the Arhat-ideal to the Bodhisattva-ideal;
2. A new way of salvation is worked out, in which compassion ranks equal with wisdom, and which is marked by the gradual advance through six "perfections" (pāramitā);
3. Faith is given a new range by being provided with a new pantheon of deities, or rather of persons more than divine;
4. "Skill in means" (upayakausalya), an entirely new virtue, becomes essential to the saint, and is placed even above wisdom, the highest virtue so far;
5. A coherent ontological doctrine is worked out, dealing with such items as "Emptiness", "Suchness", etc".

We will now consider them one by one.

1. The goal of Arhantship is now relegated to second place. The Mahayanists strive to be a "Bodhisattva". A Bodhisattva is distinguished by three features: (a) In his essential being he is actuated by the desire to win the full enlightenment of a Buddha, (b) He is dominated by two forces, in equal proportion, i.e., by compassion and wisdom. From compassion, he selflessly postpones his entrance into the bliss of Nirvana so as to help suffering creatures, (c) Although intent on ultimate purity, a Bodhisattva remains in touch with ordinary people by having the same passions they have. His passions, however, do not either affect or pollute his mind.
2. A Bodhisattva's compassion is called "great" because it is boundless and makes no distinctions..... This enlightenment does not automatically entail the desire to assist others. Among the enlightened, they distinguish three types, two of them "selfish", one "unselfish". The "selfish" types are Arhants and Pratyekabuddhas, who are said to represent the idea of the Hinayana, of the "inferior vehicle". The "unselfish" ones are the Buddhas, and the pursuit of the unselfish quest for enlightenment on the part of a Bodhisattva is called the "Buddha-vehicle", of the "Great Vehicle" (mahā-yana).

A Bodhisattva must be a patient man. He wants to become a Buddha, but his distance from the transcendental perfection of a supreme Buddha, who both knows and is everything, will obviously be infinite. In one life it could not possibly be traversed. Countless lives would be needed and a Bodhisattva must be prepared to wait for eons and eons before he can reach his goal. Yet, he is separated from the Buddhahood only by one single obstacle, i.e., his belief in a personal self. To get rid of himself is the Bodhisattva's supreme task. By two kinds of measures he tries to remove himself - actively by self-sacrifice and selfless service, cognitively by insight into the objective non-existence of a self. The first is due to compassion, the second to wisdom.

The unity of compassion and wisdom is acted out by the six "perfections", or "pāramit $\vec{a}$ ", the six "methods by which we go to the Beyond". A person turns into a Bodhisattva when he first resolves to win full enlightenment for the benefit of all beings. The six are: the perfections of giving, morality, patience, vigor, meditation, and wisdom".

This ends the quotation from Edward Conze's book. (I have not added or edited anything other than to skip some text in order to make it concise).

## Criticism of Conze's Analysis

I agree with Conze's analysis except for the statement in the very first paragraph: "The creation of this literature is one of the most significant outbursts of creative energy known to human history and it was sustained for about four to five centuries." This literature, even though voluminous, only made a simple theory much more seemingly confusing, and contradictory. We will discuss this in a follow-up post. The only fortunate thing about is that it is written entirely in Sanskrit, and thus is easy to distinguish from the original teachings written in Pāli Tipitaka.

In addition to the "improvements" that were added in India, further material associated with national customs was added when Mahāyāna Buddhism spread to China, Japan, and Tibet (and came to known by different names such Zen, Vajrayāna, etc.).

So, the premise of the Mahāyāna re-formulation of the Buddha Dhamma was to "refine and improve" the Dhamma of the Buddha. This is in sharp contradiction with one of the most fundamental concepts in Dhamma that only a Buddha can discover these laws of nature and BY DEFINITION, it is not possible to improve upon them. They themselves admit that a Buddha appears in the world after a long time, and thus their attempt to change Buddha Dhamma is one of the basic contradictions in Mahāyāna.

- What we need to understand is the basic difference between Buddha Dhamma and any other human endeavor: All other human endeavors involve the cumulative effort of many, whether it is science, philosophy, engineering, etc.; see, "Dhamma and Science - Introduction."

And all those efforts are made within the system, using the knowledge acquired by the experience within the system; see, "Gödel's Incompleteness Theorem." A Buddha transcends the human realm, and discovers the "whole existence" of the 31 realms; see, "The Grand Unified Theory of Dhamma." The Mahayanists took Buddha's world view, (which is not accessible to normal human beings but only to a Buddha,) and then added their own theories that only complicate that "already seemingly esoteric" picture.

- This is why there are so many apparent contradictions in various versions of "Buddhism" today. Adding more "pluff", which is wrong anyway by definition, only distorts the correct picture.
- My goal here is to provide a consistent picture using the accepted scientific methods.

Next, "Background on the Current Revival of Buddha Dhamma",

### 14.7 Why is it Critical to Find the Pure Buddha Dhamma?

## Pre-2016 post; revised July 18, 2022

1. In 2014, I participated in an online discussion group on "Buddhism" for a few days. A couple of things that struck me were:

- There are a lot of people out there who see that there is something valuable in Buddha Dhamma. But there is a lot of confusion because so many conflicting ideas are brought up and discussed without a conclusion.
- Each person seems to have their version their own "theory" of what Buddha Dhamma is. In many forums, instead of having an honest discussion about what ideas are right and what is wrong, many people use the forums for "entertainment." It is their "coffee break" to sit around and show off their "knowledge" and "wisdom." (I must say that I regularly participated in a couple of other discussion groups in 2014 where people seemed to be genuinely interested in having an open exchange of ideas; due to lack of time, I don't participate in such discussions any more).

2. It is a good idea to first decide what the goal of such a forum is. I think the goal should be to find and confirm the core ideas that the Buddha taught 2500 years ago. Let us eliminate all these different labels, Mahāyāna, Theravāda, etc. Since it does not appear to happen any time soon, I have decided to just present what I have found. I call it Buddha Dhamma. And that is what it was called until the term "Buddhism" came into vogue in the 19th century.
3. I have two key points to make:

- We can remove many bad ideas that crept into Dhamma by looking at the historical "evolution" of "Buddhism"; The main problem with the "evolution" of Dhamma is that it is not a germ idea that needs to be nurtured and refined: Buddha Dhamma is the set of ultimate natural laws that a Buddha DISCOVERS. Now, one can be skeptical about that, which is perfectly fine. Confidence in that belief comes from critically examining the evidence, which may come later. But let us make that assumption because that is a key idea in Buddha Dhamma: It is a rare event that a human being can discover the ultimate laws of nature; see "Power of the Human Mind - introduction," and the follow-up posts.
- Modern science can be another useful tool in finding the truth or fallacy of some concepts involved; the "theories" of science are continually being tested and verified by thousand of independent scientists, so even though they are not infallible, they are better than many speculations by individuals. And there is a key difference between finding nature's laws via the scientific method and how a Buddha finds them; see "Dhamma and Science - Introduction."

I will use both these tools in presenting my case.
4. The goal (and the motivation) in finding true Dhamma (or any kind of true salvation for those who believe in any other religion or belief system) is different compared to a philosophical debate. One could "win an argument" in a philosophical debate, especially if "winning" means persuading more people in the audience. One could thus "win a debate," but deep inside, one knows the argument has flaws. It is like winning a court case and freeing a criminal. The criminal (and may be even the lawyer) knows that he/she committed the crime. Even though the consequences will not be paid in prison, they will be paid according to the Dhamma or nature's laws.
5. If we can recover those correct laws that the Buddha taught, we can gain the benefits of knowing them and following them. It is not about winning an argument. It is ALL about finding the truth for oneself. If what Buddha said is true, then this world is much more complex than most people think, and there is much more suffering if one does not use the remaining time in this life wisely.
6. Then there is this naive argument: "All religions work for the good of mankind. Do not criticize any religion or sect within Buddhism." But some of those people also say, "Our sect of Buddhism is the best version because we are so compassionate that we will not attain Enlightenment until EVERYONE is ready". As we
will see below, this oath is against one of the five precepts in Buddha Dhamma, promising not to lie. I will not talk about other religions, but I will point out the flaws in many existing versions of "Buddhism" today because that is the compassionate thing to do.
7. If one is truly compassionate, one should try to find the true Dhamma (because there is only one set of natural laws) and SHARE it with anyone interested. Dhamma is not something that anyone can GIVE to anyone else. Even the Buddha could only teach those who would listen to him. Some people even question the compassion of the Buddha when they hear this story from the Tipitaka:

- A butcher named Cundasukara lived right next door to the Jetavanaramaya, where the Buddha resided for a long time. Some may wonder why the Buddha did not try to "save" Cundasukara by teaching him the right path. Bhikkhus could hear the screams of the pigs being slaughtered and asked the Buddha why he would not try to teach Dhamma to Cundasukara. The Buddha told them that Cundasukara would accrue much more bad kamma if he tried to do that. Killing pigs leads to much bad kamma, but unimaginable bad kamma could be accumulated by having hateful thoughts towards a Buddha: see, "How to Evaluate Weights of Different Kamma." One could accumulate more bad kamma by hurting the feelings of a human being than by killing an animal, and hateful thoughts towards a Buddha can be infinitely worse than hurting a normal human being. Therefore, sometimes true compassion can be hidden.
- In my way of thinking, I would not be acting compassionately if I did not point out these flaws in both Mahāyāna and Theravāda because I have experienced the benefits of the true and pure Dhamma.
- My goal is not to try to "convert" anyone to anything. The Buddha did not try to convert anybody. It is up to each person to make their own decisions because one is responsible for one's future, and no one else is. Most of us are lucky to live in societies where we can make our own decisions.
- As I keep emphasizing, Buddha Dhamma describes the ultimate laws of nature. Anyone with any religious background, or an atheist, can follow Dhamma and should be able to see that it does describe the laws of nature. However, it is critical to find the true Dhamma. The only way to do that is to check for consistency at ALL TIMES and to weed out the bad versions.

8. In the following few posts we will examine the problems in many different versions of Mahāyāna and Theravāda. If you see any flaws in my arguments, please send me a comment. It is possible that I could make a mistake, and if so I will correct them. I hope all those who read these posts will keep an open mind because we all should have the same goal: finding the pure Dhamma that will benefit us all.

Problems with Mahāyāna and Theravāda are discussed in the section "Historical Background."

### 14.8 Key Problems with Mahāyāna Teachings

## Revised September 2, 2019; June 11, 2021; re-written September 28, 2022

## Main Contradictions

1. The following are just three major contradictions of "Mahāyāna Buddhism" with the teachings of the Buddha.
i. Mahāyānists say that each person needs to attain Buddhahood. By "Buddhahood," they mean a "Sammā Sambuddha" like Buddha Gotama. They say even Arahants like Ven. Sāriputta needs to attain the Buddhahood!
ii. "Bodhisatta vow" is even worse. Not only each person needs to become a Sammā Sambuddha, but they need to wait until "everyone" is ready to become a Samm $\bar{a}$ Sambuddha. They have no idea how hard it is to become a Samma $\bar{a}$ Sambuddha.
iii. Those who initiated the Mahāyāna version (a mere 500 years after the Parinibbāna of the Buddha Gotama) declared that the teachings had become "outdated" and needed to be "updated."
iv. Any sentient being can attain the state of a Sammā Sambuddha (all have the "Buddha nature.")

- I discussed (i) and (ii) above in the post "Saddharma Pundarika Sutra (Lotus Sutra) - A Focused Analysis."
- This post will discuss (iii) and (iv) below. But let me first emphasize the problems with (i) and (ii) above.

## Summary of the First Two Contradictions

2. The main problem with (i) and (ii) above is a conflict with a fundamental tenet of Buddha Dhamma. A Buddha comes to this world after a very long time and DISCOVERS the laws of nature; Mahāāanists agree that it takes eons (billions of years) to fulfill the "pāramitās" and to become a Buddha.

- Then they turn around and say that EVERYONE (meaning all sentient beings) must SIMULTANEOUSLY attain the Samm $\bar{a}$ Sambuddha status. Given that there are an uncountable number of sentient beings, that is utterly foolish.
- Furthermore, the Buddha has clearly described the uniqueness of a Sammā Sambuddha ("WebLink: suttacentral: Ekapuggalavagga (AN 1.170-187)") and the difference between a Sammā Sambuddha and an Arahant: "WebLink: suttacentral: Sammāsambuddha Sutta (SN 22.58)."
- Thus, the "gap" between a Sammā Sambuddha and an Arahant is enormous. Similarly, a huge difference exists between an Arahant and an average human (puthujjanika.) [puthujjanika : [adj.] [fr. puthujjana] common, ordinary J. I,360 (of iddhi).]

3. The first thing one is supposed to do in becoming a Mahāyāna Buddhist is to take the "Bodhisattva vow." They say each being should endeavor to become a Buddha, i.e., each person should be a Bodhisattva.

- Those who initiated this idea a long time ago probably did not know that there is an infinite number of sentient beings in this world. Each human body has a vast number of microscopic beings. See, "There are as many creatures on your body as there are people on Earth!!".
- There are 1000 trillion just ants on this Earth: "WebLink: gotreequotes.com: How Many Ants Are There in the World?." Or do they not count other living beings?
- In this eon (basically the lifetime of the Solar system of about 4.5 billion years), there have been four Buddhas. One more Buddha is to appear. That is truly an exception. Before this eon, 30 eons (trillion years!) did not have a single Buddha appearing. So, how long would one wait to become a Buddha, i.e., remain a Bodhisattva? And will all beings (or even the human population today) be able to become Buddhas in the same eon, let alone at the same time? Utterly foolish!

## Teachings of a Sammā Sambuddha Can Be Outdated?

4. Getting to the issue (iii), Mahāyānist forefathers stated Buddha Dhamma needed to be "refined" for the changing times. See "Background on the Current Revival of Buddha Dhamma." How can the ultimate laws of nature discovered by a Buddha be "refined" or "revised"? I hope someone can answer this fundamental question.

- Within 500 years of the passing away of the Buddha, the Indian Mahāyānists started not only refining but incorporating concepts that were alien to Buddha Dhamma.
- If it needed refining after 500 years, how come they have not kept up with the updating process? One would think they would be doing a significant revision these days with so many changes in science and technology.
- What has happened is the opposite: Science and technology are consistent with the original Dhamma. People will gradually realize that those alien concepts in Mahāyāna do not make sense.

## Treating Buddha's Teachings as Philosophy

5. Those who started this revision did not understand the central idea of Nibbāna. They never mention concepts like anicca, dukkha, or anatta. So, they defined those in their terms and then got into a slippery slope in explaining those terms by inventing more concepts. It snowballed, and in the words of Edward Conze, who translated many Mahāyāna texts to English:

- "......About 100 BCE (roughly 400 years after the Buddha's Parinibbāna), many Buddhists in India felt that the existing statements of the doctrine had become stale and useless. They were convinced that Dhamma required new reformulations to meet the needs of new ages, new populations, and new social circumstances. So they set out to produce new literature, which ultimately became known as Mahāyāna Buddhism. The creation of this literature was one of the most significant outbursts of creative energy known to human history and sustained for about four to five centuries. Repetition alone, they believed, cannot sustain a living religion. Unless counterbalanced by constant innovation, it will become fossilized and lose its life-giving qualities, they believed".
- (See "Historical Timeline of Edward Conze").
- For someone who is not familiar with the Buddha's original teachings, those philosophical arguments may look impressive, as they did for Edward Conze. We will examine those concepts in detail in upcoming posts. I have discussed the concept of "emptiness"; see the link below.

## Forefathers of Mahāyāna Were Philosophers, Not Ariyas

6. None of the Mahāyānist "philosophers" such as Nagarjuna, Vasubandhu, and Asanga are documented as Arahant or even a Sotāpanna. They were like the philosophers of today with their "theories about the world." They also had an aversion to the concept of an Arahant.

- The Mahāyāna sutras originated with Nagarjuna, who lived 150-250 CE in India. Thus, the Buddha's original teachings went underground somewhere before 200 CE , within about 700 years of the Buddha's Parinibbāna (passing away).
- Thus those Indian intellectuals like Nagarjuna were just like the philosophers from the time of Socrates. They make all kinds of speculations consistent with the "knowledge" about the "world" at any given time.
- The Buddha did warn of this outcome: He said: "there will be other versions that look like Dhamma and feel like Dhamma. Just like when there are imitations of gold coming to the market, the real gold goes underground" (WebLink: suttacentral: Saddhamma Patirupaka Sutta (SN 16.13). That has been the case for over 1800 years.
- But the truth comes out eventually. That time could well be now. The correct interpretations of anicca, dukkha, and anatta have been hidden for hundreds of years.

## The "Updates" Violate the Core Teachings of the Buddha

7. So, what are these revisions that the Mahāyāna forefathers made?

Edward Conze has listed five doctrinal "innovations" of the Mahāyānists; see "Historical Timeline of Edward Conze." They are:

- As concerns the goal, there is a shiff from the "Arahant-ideal" to the "Bodhisattva-ideal."
- A new way of salvation was worked out: compassion ranked equal with wisdom.
- Faith is given a new range by being provided with a new pantheon of deities.
- "Skill in means" (upāyakausalya), an entirely new virtue, becomes essential to the practitioner. That is placed even above wisdom, the highest virtue in Buddha Dhamma.
- A coherent ontological doctrine was worked out, dealing with such items as "Emptiness," "Suchness," etc.." But it is philosophy; see, "What is Sunyāta (Emptiness)?".

8. We will discuss the critical contradictions of these revisions with the Buddha's original teachings (see i-v below) and go into detail later.
i. The basic idea of Buddha Dhamma is that each human being has a unique mind. But greed, hate, and ignorance defile a mind. Because of that, each person commits immoral acts and subsequently "pays for those actions," suffering is the net result of the cycle of rebirths. One gets out of this cycle of rebirth by purifying one's mind; one who has accomplished this task is an Arahant. No person can purify another person's mind. Nibbāna is not an abstract concept. See the subsection "Nibbāna."
ii. One attains Nibbāna when one purifies the mind of ALL defilements. That is when one has ultimate wisdom or pañña. There is no way to equate compassion with pañña $\bar{a}$. One can be compassionate to the maximum, but that does not mean one has gotten rid of ignorance. Those beings in the Brahma world do not generate any hateful thoughts; they have perfected the four Brahmavihara: mettā, $k a r u n \bar{a}$, mudit $\bar{a}$, and upekkh $\bar{a}$. They don't have a trace of hateful thoughts. Yet, they have ignorance (of the Four Noble Truths) and will one day be reborn in the four lower realms. Therefore, this is also a significant contradiction. See, "Sotāpanna Stage of Nibbāna."
iii. Buddha said life in the human realm is better than any other (except for those reserved for the Anāgāmis.) That is because the easiest to attain Nibbāna is from the human realm. Some beings in higher realms can be helpful to us, and we should share our merits with them. However, a human is not supposed to worship any other being. One must only have faith in the Buddha, Dhamma, and Sangha. No other living being can help with our goal of attaining Nibbāna.
iv. "Skill in Means," or whatever other term anyone comes up with, runs into the same problem as compassion above in (ii). Such ideas run against the core teachings of the Buddha. Even if one gets rid of greed and hate but still has ignorance, one will get back the greed and hate DUE TO ignorance. One attains Nibbāna by cultivating wisdom.
v. Mahāyāna's descriptions of all these philosophical concepts like emptiness or sunyāta are just a lot of empty words. They have simpler explanations consistent with original teachings; see the links below. The Mahāyānists had to re-invent alternate descriptions for these terms. The original meanings conflicted with their "revisions" discussed in i-iv.

Now, to address the issue (iv) in \#1 above.

## Buddha Versus Sammā Sambuddha

9. Buddha means "to stop bhava" (bhava + uddha.) Only a Sammā Sambuddha can figure out how to stop grasping various types of bhava (kammic energies) that we have accumulated, thus stopping future suffering.

- In principle, it is possible to call an Arahant a Buddha since an Arahant has stopped grasping a new bhava. However, no Arahant could have gotten to the "bhava uddha" status without learning/comprehending the teachings of a Samm $\bar{a}$ Sambuddha.
- But it has become customary to reserve the term "Buddha" as a shortened version of "Samma $\bar{a}$ Sambuddha."
- The term "Buddha nature" is discussed without the above understanding. See "WebLink: en.wikipedia.org: Buddha-nature."

## Summary

10. Those who follow the Mahāyāna version do that for several reasons. (i) They are born into Mahāyāna tradition (just like I was born to Theravada.) (ii) They have had no exposure to other versions of Buddhism. The problems with Mahāyāna versions are not due to their making. But it is time to start changing those features that contradict Buddha's original teachings.

- Teachings of a Sammā Sambuddha like Buddha Gotama cannot be "updated." Buddha Dhamma is "timeless" (akāliko.) Of course, the teachings of a Sammā Sambuddha only last a relatively short time (in the Samssaric scale.) Those "timeless truths" about nature are re-discovered by the next Buddha. All Sammā Sambuddhas re-discover and teach the same Paṭicca Samuppāda.
- There needs to be an open discussion about weeding out the inconsistent material from all sects and recovering the pure Buddha Dhamma for all to benefit.

### 14.9 Saddharma Pundarika Sutra (Lotus Sutra) - A Focused Analysis

Revised August 13, 2019; July 26, 2020; December 3, 20121 (\#3); August 24, 2022; September 27, 2022

Saddharma Pundarika Sutra (Lotus Sutra) is a famous Mahāyāna sutra. It is full of contradictions with the genuine teachings of the Buddha.

## Difference Between a Sutra and Sutta

1. This sutrā, written by several Indian philosophers over hundreds of years, led to the gradual formation of Mahāyāna Buddhism over that period. Note that I am NOT referring to it as a sutta. Suttā are the original teachings of the Buddha delivered in the Mäghadhi language. They were subsequently written down in Pāli and are available in the Tipitaka.

- In contrast, all Mahāyāna sutrās were written after the Parinibbāna (passing away) of the Buddha. Furthermore, they all are in Sanskrit without exception.
- Thus at least we have a clear way of distinguishing the original discourses by the Buddha (sutta) and the Mahāyāna sutrās written by laypeople hundreds of years after the Buddha.
- Even in the Theravāda tradition, the question often arises regarding the interpretation of key concepts. As mentioned in the Tipitaka, this problem was there, even DURING the time of the Buddha.

## How to Verify the Authencity of Buddha Dhamma

2. Once, Mahā Prajapathi Gotami bhikkhuni, Prince Siddhartha's stepmother, approached the Buddha and pointed out that some bhikkhus were teaching incorrect interpretations of the Dhamma. She feared things would get out of hand after the Parinibbāna of the Buddha. "How can the future generations figure out the correct version of Dhamma?" she asked the Buddha.

- The Buddha agreed that it is inevitable that wrong interpretations will always be there but said there is a way to identify the correct version. He always said to look for consistency with the Four Noble Truths, as explained in the sutt $\bar{a}$. The Buddhist principle of Cause and effect is defined in the Paticca Samuppāda. How to live a moral life by getting rid of lobha/rāga (greed), dosa (anger/hate), and mohalavijj $\bar{a}$ (ignorance of the Four Noble Truths) is laid out in the Vinaya.
- These teachings lead to rāgakkhaya, dosakkhaya, and mohakkhaya (getting rid of rāga, dosa, and moha).
- If a version of Dhamma does not lead to rāgakkhaya (reduction of greed), dosakkhaya (reduction of hate), and mohakkhaya (reduction of ignorance), then that version should be discarded. Internal consistency must be there too.

## Three Ways to Attain Nibbāna

3. A bit of background material before we discuss this sutrā. According to the Buddha, there are three ways to attain Nibbāna:

- A Sammā Sambuddha (like Buddha Gotama) discovers the Noble Eightfold Path and achieves Nibbāna through his efforts, AND he can teach the doctrine to others.
- A second way to attain Nibbāna is to learn Dhamma from a Samma Sambuddha or a true disciple of his. That is how an Arahant reaches Nibbāna. An Arahant is also a Sāvaka Buddha. Note that a "Sāvaka Buddha" is different from a "Buddha Sāvaka" (or "Ariya Sāvaka") which identifies any Noble Person above the Sotāpanna Anugāmi stage.
- Then there are pacceka Buddhas who discover the Path by themselves but are not capable of explaining it to other people.
- The three types are in the "WebLink: suttacentral: Nidhikanda Sutta (KN Kp 8)" in the following verse: "Patisambhidā vimokkhā ca, yā ca sāvakapāram̄̄; Paccekabodhi buddhabhūmi, sabbametena labbhati."

## Only One Vehicle to Nibbāna (the "Great Vehicle" or Mahāyāna)?

4. Now, let us discuss how this sutrā paved the way for the Bodhisattva concept in Mahāyāna.

This sutrā starts with the Buddha saying that even though he had taught previously there were three paths to Nibbāna, he now admits that there is only one. When Ven. Ānanda asked why, he said he did not think people were "ready" for this higher doctrine. Instead of three vehicles (or paths) that one can take, there is only one. It is the great vehicle or the Mahāyāna ("mahä" is great, and "yāna" is a vehicle). And this is the path he took by striving for eons as a Bodhisattva to become a Buddha.

- Continuing with this sutrā, now he (the Buddha) was advising everyone to become a Bodhisattva and to attain Buddhahood!
- They have no idea how difficult it is to attain Buddhahood.
- Then he assures all those Arahants present there, including Ven. Sāriputta that they will become Buddhas. That is a complete lack of understanding of the concept of an Arahant. An Arahant will not be reborn; thus, there is no way for an Arahant to become a Buddha.
- Furthermore, the Buddha has clearly described the difference between a Sammā Sambuddha and an Arahant: "WebLink: suttacentral: Sammāsambuddha Sutta (SN 22.58)." The uniqueness of a Sammā Sambuddha is described in a series of short suttas: "WebLink: suttacentral: Ekapuggalavagga (AN 1.170-187)."

Now let us go through a few more "obvious inconsistencies" in the sutrā.

## The Sutrā Opens With a Lie (Musāvāda)

5. Astonishingly, the sutrā opens with, "Thus have I heard...", a big musāvāda (an untruth) Ven. Ānanda is providing the details of the sutr $\bar{a}$.

First, a brief background is in order. Venerable Ānanda, who knew all the suttā by heart, recited them at the First Buddhist Council. Thus any given sutta in the Tipitaka starts with clarification, "Thus have I heard..." to indicate that this was what Venerable Ānanda had heard himself. In trying to give the impression that this sutrā was also one delivered by the Buddha, the authors of the Lotus sutrā attempted to deceive the readers.

- Historians generally accept that the Lotus sutrā was written much later after the passing away (Parinibbāna) of the Buddha Gotama. That is true of all other sutrās written in Sanskrit.
- The oldest parts of the text (Chapters 1-9 and 17) were probably written between 100 BCE and 100 CE, and most of the text was complete by 200 CE . See, for example, WebLink: WIKI: Lotus Sutrā. Thus it was written by several authors over 100 years or more. A translation was made from Sanskrit to Chinese in 255 CE, the earliest historical documentation of its existence.

## Reads Like a Fairytale

6. The middle of the sutrā is devoted to describing the "universal accessibility" of the Buddhahood to anyone. Here it reads like a fairytale with astounding stories of accomplishments. For example, the daughter of the dragon king Sagara astonishes the assembly by performing various supernormal acts and says she can attain the Buddhahood "in an instant."

- However, those sutrā also stress the importance of faith and devotion to get to Enlightenment. There is less emphasis on the need for wisdom. That is blind faith!

## The Bodhisatta Vow

7. A critical problem is the Bodhisatta vow that a Mahāyāna Buddhist agrees in advance to take (see, WebLink: WIKI: Bodhisattva vow). The promise is to wait until "everyone is ready to attain the Buddhahood." It is not clear how or who can determine WHEN everyone is ready.

- Current scientific facts point to the existence of an innumerable number of living beings; see, "There are as many creatures on your body as there are people on Earth!." Therefore, it is a critical question how all these beings can attain Buddhahood simultaneously.
- Furthermore, it seems contradictory that Buddha Gotama and other previous Buddhas did not wait for anyone else.

## Is a Buddha Eternal?

8. The story gets even more fascinating in Chapter 16 (presumably as a different writer of the sutrā comes up with another idea). That is when Buddha Gotama reveals that he is an eternal being. He had attained the Buddhahood an incalculably distant time in the past. Even though he sometimes seems to pass away to nirvāna (Sanskrit word for Nibbāna), he periodically makes appearances in the world.

- This declaration makes the Buddha more like a Creator God who has always been there! And there is no discussion on the issue of whether there was a beginning to this world.
- It seems to me that the philosophers who wrote Mahāyāna sutrās had no idea of the concept of Nibbāna! By the very definition, the whole idea of attaining Nibbāna is to dissociate from this sufferingfilled material world: There are several posts on this website ranging from "Three Kinds of Happiness What is Nirāmisa Sukha?" to "What are Rūpa? - Relation to Nibbāna" on the concept of Nibbāna.
- Then there is the issue of other Buddhas being present at that assembly too. And they all seem to be "at the same level." Thus the question arises as to who was the first Buddha and why those other Buddhas "did not wait until everyone else was ready for the Buddhahood."

## Absence of Key Doctrinal Concepts

9. Most of the sections of the sutrā hyperbolize the value of the single, great vehicle (Mahāyāna) to attain Nibbāna. That is in contrast to the three vehicles of Sammā Sambuddha, Pacceka Buddha, and Arahant; see \#3 above. There is no discussion on the actual distinguishing doctrinal concepts of the single vehicle other than just saying that it has the advantage of "easy accessibility of the Buddhahood." What makes this "single-vehicle" approach different from the original "three-vehicle" approach in terms of details in Dhamma? For example, does it have a new way of describing the Noble Eightfold Path, Patticca Samuppāda, or the Four Noble Truths?

- The sutrā, like many other Sanskrit sutrās, only mentions those critical foundational concepts of Buddha Dhamma in passing. There is no discussion on them, let alone pointing out any difference from the original doctrine. I am amazed that no one even refers to this glaringly obvious point. What sets the "single-vehicle" approach apart from the original "three-vehicle" approach other than the name change?
- But the real problem is that in changing some key concepts. For example, getting rid of the Arahant concept and making the Buddha effectively a Creator God. This sutrā paved the way to distort the Buddha Dhamma for generations.
- In terms of the necessary conditions set forth by the Buddha, does this sutrā clarify how to reduce greed, hate, and ignorance? Can anyone point to such aspects? Besides grandiose descriptions, there is nothing substantial in terms of doctrine, let alone a revised doctrine. All it does is gravely distort foundational concepts like Nibbāna, Buddhahood, and Arahanthood with the concept of a "single-vehicle."

## Numerous Untruths, Inconsistencies, and Exaggerations

10. There are so many untruths, inconsistencies, and exaggerations in this sutrā that I only have space in this essay to point out the gross problems that are vividly displayed. That is why the post is a "focused analysis."

- Here is an English translation of the sutrā available online, so that anyone can peruse through and see the apparent difference between this sutrā and any Pāli sutta that is in the Tipitaka: WebLink: PURIFYMIND: Lotus Sutra
- One could compare this sutrā with the actual Pāli suttā that I started discussing; see "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa," and the posts on the Mahā Satipaṭthāna Sutta below that.
- I must emphasize that one needs to evaluate this sutrā in the context of the profound and self-consistent Buddha Dhamma. One can get a glimpse of this by examining the "Key Dhamma Concepts," "Paticca Samuppāda," and "Abhidhamma" sections on this website, where I have only begun to lay out the teachings, especially in the Abhidhamma section.

11. I would be happy to respond (and correct any legitimate errors in the analysis) if anyone can point out any problems with my analysis. Please send me a comment at lal@puredhamma.net.

- This analysis is consistent with the central theme of this website. To point out problems with both Mahāyāna and Theravāda versions as being practiced today. Several posts criticizing both Mahāyāna and the current versions of Theravāda at "Historical Background."
- It is for the benefit of everyone that we should remove (or at least be aware of) all inconsistencies and untruths. Then the current and future generations will have a version of Buddha Dhamma close to the original version.

### 14.10 What is Sunyata or Sunnata (Emptiness)?

## Revised (added \#6) December 28, 2015; November 26, 2017; December 16, 2017; July 1, 2022

1. In Mahāyāna Buddhism, there are books written about Suñyāta (actually it is Suññāta in Pāli) or emptiness. Mahāyāna Buddhism tries to make a big deal out of suñyāta because their forefathers (those who started the Mahāyāna tradition) could not understand the concept of Nibbāna. It is unfortunate that many people who are only introduced to Mahāyāna teachings (and are not aware of the original teachings of the Buddha) believe that Nibbāna is an abstract concept.

- However, Nibbāna is a very simple concept if one understands pure Buddha Dhamma; see, "Nibbāna Is it Difficult to Understand?."
- But it can be examined at deeper levels too: "Nibbāna "Exists", but Not in This World."
- See more at "Nibbāna."

2. What is emptiness?

- When entity A is devoid of entity B, then it can be said that entity A is devoid of B, or empty of B. That is the emptiness or suñyāta.
- For example, if we take a water bottle and pour the water out, we say we have an empty bottle. But in reality, there is air in the bottle, so the bottle is empty only with regard to water; it is not empty with regard to air.
- Emptiness is relative. One has to say what it is empty of. There is no absolute "emptiness". It is meaningless to say "this is emptiness", because there may be something there that we are not aware of.
- For example, up until recently, scientists thought deep space is "empty". But now they know that it is full energy. Still, one could say that "deep space is empty of tangible matter" to a good approximation.

3. The Buddha said when the mind becomes empty of greed (ragga), hate (dosa), and ignorance (moha) it becomes empty of those defilements: "ragakkhayo Nibbanan, dosakkhayao Nibbanan, mohakkhayo Nibbanan," and that mind has attained Nibbāna. That is emptiness, suñyāta with respect to defilements, and also with respect to anything material in this world of 31 realms; see below. VERY SIMPLE explanation, even though it is not easy to get there.

- When one attains the Arahant phala, one's mind becomes suñya of rāga, dosa, and moha. But one still has sañ̃̃̄ā (perception), vedan $\bar{a}$ (feelings), etc. and lives like a normal human being until death.
- But his/her mind is devoid of greed, hate, and ignorance so that he/she will not do any immoral act, under any circumstance.
- At the death of an Arahant, "this world of 31 realms" becomes devoid of any trace of that lifestream, except for the Arahant‘s nāma gotta (mano imprints or memory records, for previous lives; see, "Difference Between Dhamma and Sañkhāra (Sankata)"); there is no rebirth. So that is another suñyāta.

4. There is a sutta in Tipitaka that is about suñyatā (emptiness), and was delivered by the Buddha, called the Cula-Suññāta sutta. I actually wrote the original post before I knew about this sutta. When a friend of mine told me about the sutta, I was glad to see that the sutta described emptiness very similar to the way I described it above. This does show that the Dhamma is internally self-consistent.

- Please click the link below for its translation that I extracted from, WebLink: ACCESSTOINSIGHT: Cula-suññata Sutta: The Lesser Discourse on Emptiness. Normally, I come across many English translations that are bad and even erroneous, but fortunately, this translation is fairly good.

The highlighting in the link below is mine, and I have made some comments:
WebLink: Cula-Suññāta Sutta

There is no need to write books on emptiness that are full of meaningless words. The above sutta says it all.
5. In an online discussion forum in 2014, I saw a comment saying that emptiness describes Paticca Samuppāda. This was really a surprise because in Mahāyāna texts it is not explained what Paṭicca Samuppāda is.

- I have not seen the Paṭicca Samuppāda explained in even a remotely sensible way in a Mahāyāna text, Zen, Vajrayana, or any other form. If you know of such a book, please send me a comment giving the name of the book (or any other source), and I would appreciate it.

6. Anything in this world of 31 realms arise due to $a v i j j \bar{a}$ (ignorance of the real nature of that world): This is the step, "bhava paccayā $\bar{j} \bar{t} t i$ " in Pațicca Samuppāda. See the Paticca Samuppāda section for details.

- When $a v i j j \bar{a}$ is dispelled through the removal of greed, hate, and ignorance via comprehending Dhamma, NOTHING in this material world can arise, because it all starts with "avijjā paccayā sañkhāra," ie., via thinking, speaking, and doing things with avijj $\bar{a}$.
- At Arahanthood, even the slightest bondage to anything material in the 31 realms is discarded, and all causes for anything material (which is the cause of suffering at a deeper level) to arise. This is real emptiness or Nibbāna. Also see, "What Are Rūpa? (Relation to Nibbāna)."

7. "Yo paticcasamuppadam passati, so Dhammam passati" or, "One who understands Patticca Samuppāda, understands Dhamma"

- The Mahāyāna sects have moved so far away from the Buddha Dhamma, I cannot fathom why they still call it Buddha's Dhamma.
- It is very easy to get the idea behind Paṭicca Samuppāda because it is in the words; see, "Paticca Samuppāda - "Pati+ichcha"+"Sama+uppada"," and follow-up posts. Buddha Dhamma is all about cause and effects, and that is what is described in Paticca Samuppäda.

8. There is a deeper way to analyze Suñ̃ata. However, one needs to know the meanings of the Three Characteristics of Nature (Tilakkhaṇa or anicca, dukkha, anatta) first. It is not possible to attain Nibbāna without knowing Tilakkhaṇa or the real nature of this world; see, "Anicca, Dukkha, Anatta."

- One can get to Nibbāna (also called vimokkha) via contemplating on anicca, dukkha, or anatta (of course they are inter-related). Contemplation of anicca leads to animitta vimokkha. Contemplation of dukkha leads to appanihita vimokkha. Contemplation of anatta leads to suññata vimokkha. [vimokkha : (m.) liberation, deliverance; release; emancipation.] [The 3 liberations are: 1. the conditionless (or signless) liberation (animitta-vimokkha), 2. the desireless liberation (apanihitavimokkha), 3. the emptiness (or voidless) liberation (suññatā-vimokkha).]
- However, regardless of the path taken, the end result is the same: one gets to Nibbāna, release (or freedom) from this world.

9. Finally, at the very basic level, Nibbāna means getting rid of greed, hate, and ignorance. That REQUIRES comprehension of anicca, dukkha, anatta, or the real nature of this world.

- Put in a different way, greed, hate, and ignorance need to be removed via Ānāpāna and Satipatṭhāna meditations; see, "Satipatthāna Sutta - Structure." But those meditations need to be done with the comprehension of anicca, dukkha, and anatta.
- More details on the correct versions of those meditations can be found at: "Bhāvanā (Meditation)" and "Maha Satipatthāna Sutta."
Next, "Incorrect Theravāda Interpretations - Historical Timeline",

### 14.11 Incorrect Theravada Interpretations - Historical Timeline

April 29, 2017; revised December 8, 2021

1. Degradation of Theravāda Buddha Dhamma occurred gradually over the past 1500 years. Still, two drastic changes took place during that time: (i) Buddhaghosa's introduction of Hindu meditation techniques 1500 years ago, (ii) misinterpretation of anicca and anatta by the European scholars when they translated both Tipiṭaka and Visuddhimagga to English in the late 1800's.

- In several posts in this section, I will provide evidence for the above (see bullet \#7 below).
- I will discuss the historical timeline in this post, which is critical to the discussion. I have combined two previous posts, "Theravada: Problems with Current Interpretations of Key Concepts" and "Historical Timelines of Buddha Dhamma and Sri Lanka - End of Sinhala Commentaries" (and removed them) to come with this more concise post.
- As I explained in earlier posts in this section, much worse distortions to Buddha Dhamma were branching out of various sects based on Mahāyāna, Zen, and Tibetan (Vajrayāna). It started with the rise of Mahāyāna in India about 500 years after the Buddha. Here we are focusing only on Theravāda Buddha Dhamma.

2. Here we look at the timeline of Theravāda Buddha Dhamma from the beginning, and see whether we can discern when the pure Dhamma started going underground. There are a few historical facts that most people agree on.
( $\mathrm{BCE}=$ Before Current Era, $\mathrm{CE}=$ Current Era $=\mathrm{AD}$ ):

- 563 - 483 BCE: Buddha Gotama
- 377-307 BCE: The city of Anuradhapura, Sri Lanka, was established by King Pandukabhaya. But there is evidence that human colonization in Sri Lanka goes back to at least 30,000 years; see the detailed article on Sri Lanka on Wikipedia : WebLink: Wikipedia: History of Sri Lanka
- 247 BCE: Buddha Dhamma was introduced to the Sinhala Kingdom in Anuradhapura, Sri Lanka by Ven. Mahinda Thero.
- 161-137 BCE: For the first time in history, King Dutugemunu united all of Sri Lanka under one kingdom.
- 29 BCE: Tipitaka (the version recited at the Third Buddhist Council -Dhamma Sangayana around 247 BCE), was written down in Sri Lanka at the Fourth Sangayana, which was the last Sangayana attended by all Arahants. This is the Pāli Tipiṭaka that has survived to this date.
- 100-200 CE: Ven. Maliyadeva, the Last Arahant by some accounts, lived in Sri Lanka : WebLink: Wikipedia: Maliyadeva (However, it is likely that there have been "jāti Sotāpannas" who attained Arahanthood since then but may not be that many).
- 100 BCE: It is likely that Mahāyāna Buddhism originated when the earliest Mahāyāna sūtras to include the very first versions of the Prajñāpāramitā series, along with texts concerning Akșobhya Buddha, probably written in the 1st century BCE in the south of India : WebLink: Wikipedia: Mahāyāna
- 150-250 CE: Life of Nagarjuna; considered the founder of Mahāyāna Buddhism. Nagarjuna's central concept was the "emptiness" (shunyata) of all dhammas. The most influential work is Mulamadhyamakakarika (Fundamental verses on the middle way).

2. It is clear that the Pāli Tipitaka that we have today has the Buddha's original teachings since Arahants wrote it down. However, Buddha Dhamma started to decline within 100-200 after being written down.

- Still, there was no significant impact on Theravāda Buddhism up to the writing of Visuddhimagga by Buddhaghosa around 450 CE.
- The other major work that influenced Theravāda teachings to date was Abhidhammattha Sangaha by Acariya Anuruddha, who was there around the same time as Acariya Buddhaghosa. However, since not
many people are knowledgeable in Abhidhamma, it has not impacted Theravāda to the same extent as Visuddhimagga.
- By this time, a critical had already taken place. The Mahāyāna influence had successfully introduced two new words to the Sinhala language: 2336$)^{\circ} \omega($ aniyta ) and
 words Like sañkhāra and viññāna do not have separate Sinhala words, i.e., the exact words (ఙ هб and Oreeree m) appear in the Sinhala language.
- Another critical development took place much later, in the late 1800s, when early European scholars started translating the Tipitaka to English. That was when the key Pāli terms anicca and anatta were incorrectly translated as impermanence and "no-self." By that time, even in Theravada, anicca, and anatta had been established to be the same as Sanskrit words aniyta and anātma.

3. To first discuss the influence of Buddhaghosa, let us look at the timeline of events that led to his visit to Sri Lanka roughly 950 years after the Parinibbāna of the Buddha. Here is a timeline compiled by Bhikkhu Nyanamoli, taken from his introduction to Ref. 1 (see the references below).

## King Devanampiyatissa (307-276 BCE):

- The arrival of Ven. Mahinda in Anuradhapura and establishing Dhamma in the kingdom of King Devanampiyatissa.
- Mahāvihāra monastery founded by Ven. Mahinda.

## King Vattagamini (104-88 BCE):

- Abhayagiri monastery was founded by the King and became separate from the Mahāvihāra monastery.
- Sensing insecurity, Mahāvihāra monastery writes down Tipiṭaka (away from the royal capital).

## King Bhatikabhaya ( 20 BCE-9 CE):

- Public disputes started to break out between Abhayagiri and Mahāvihāra monasteries.

## King Vasabha ( $66-110$ CE):

- Sinhala commentaries on Tipiṭaka ended being recorded at any time after his reign.

## King Voharika-Tissa (215-237 CE):

- King supports both Mahāvihāra and Abhayagiri monasteries.
- Abhayagiri adopts Vetulya (Mahāyāna?) piṭaka.
- King suppresses Vetulya doctrines.

## King Gothabhaya (254-267 CE):

- King supports Mahāvihāra monastery.
- 60 bhikkkhus in Abhayagiri were banished by King for upholding Vetulya doctrines.
- Indian Bhikkhu Sangamitta supports Abhayagiri monastery.

## King Jettha-Tissa (267-277 CE):

- King favors Mahāvihāra monastery; Sangamitta flees to India.

King Mahasena (277-304 CE):

- King supports Sangamitta, who returns from India.
- Persecution of Mahāvihāra by King; its Bhikkhus are driven from the capital for 9 years.
- Mahāvihāra (with its libraries of seven stories) burnt to the ground.
- Sangamitta assasinated.
- Rebuilding of Mahāvihāra.

## King Sri Meghavanna (304-332 CE):

- King favors Mahāvihāra.
- Sinhala monastery was established at Buddha Gaya in India.

## King Jettha-Tissa II (332-334 CE):

- Dipavamsa composed.
- Some of Buddhadatta Thera's works.

## King Mahanama (412-434 CE):

- Buddhaghosa arrives in Sri Lanka and composes Visuddhimagga and other works.

4. I really recommend reading the Introduction to the English translation of Visuddhimagga by Ven. Nyanamoli (Ref. 1). To quote Ven. Nyanamoli (starting on p. xxvii of Ref. 1):
"...Now by about the end of first century B.C. E. (dates are very vague), with Sanskrit Buddhist literature just launching out upon its long era of magnificence, Sanskrit was on its way to becoming a language of international culture. In Ceylon the Great monastery (Mahāvihāra), already committed by tradition to orthodoxy based on Pāli, had been confirmed in that attitude by the schism of its rival, which now began publicly to study the new ideas from India. ......In the first century C.E., Sanskrit Buddhism ("Hinayana", and perhaps by then Mahāyāna) was growing rapidly and spreading abroad. The Abhayagiri monastery would naturally have been busy studying and advocating some of these weighty developments while the Mahāvihāra has nothing new to offer. .......King Vasabha's reign (66-110 CE) seems to be the last mentioned in the Commentaries as we have them now, from which it may lie dormant, nothing further being added. Perhaps the Mahāvihāra, now living only on its past, was itself getting infected with heresies. ......in King Mahasena's reign (277-304 CE) things came to a head. With the persecution of Mahāvihāra with royal assent and the expulsion of its bhikkhus from the capital, the Abhayagiri monastery enjoyed nine years of triumph. But the ancient institution rallied its supporters in the Southern provinces and the king repented. The bhikkhus returned and the king restored the buildings, which had been stripped to adorn the rival".
"Still, the Mahāvihāra must have foreseen, after this affair, that unless it could successfully compete with the "modern" Sanskrit in the field of international Buddhist culture by cultivating Pāli at home and aboard it could assure its position at home. It was a revolutionary project, involving the displacement of Sinhala by Pāli as the language for the study and discussion of Buddhist teachings, and the founding of a school of Pāli literary composition. .........It is not known what was the first original Pāli composition in this period; but the Dipavamsa (dealing with historical evidence) belongs here (for it ends with Mahasena's reign and is quoted in the Samantapasadika, and quite possibly the Vimuttimagga (dealing with practice), was another early attempt by the Mahāvihāra in this period (4th century) to reassert its supremacy through original Pāli literary composition".
5. Here is another account of the destruction of the original Mahāvihāra during the reign of King Mahasena (277-304 CE) from Ref. 2 (p. 46): "..the Mahā-Vihāra, the Brazen Palace, and all such religious edifices, built by generosity of devout kings and pious noblemen for the use of the orthodox Sangha, were razed to the ground. Some three hundred and sixty-four colleges and great temples were uprooted and destroyed, says an ancient chronicle (Nikāya-Sangraha, p.14), ..."
6. Thus it is clear that the historical tradition of compiling Sinhala commentaries (on Tipiṭaka) was abandoned somewhere in the 4th century or even before that, and many of the original Sinhala Atthakatha could have been burnt when the original Mahāvihāra was burned. A concerted effort was initiated by the Mahāvihāra to compile literature in the Pāli language to counter the onslaught by Sanskrit

Mahāyāna literature in India that was benefiting the Abhayagiri monastery. The appearance of Buddhaghosa on the scene in the early fifth century accelerated this effort to compile Pāli literature.

- More details can be found in the Mahavamsa, the Pāli historical account of the history of Sri Lanka compiled in the 5th century (Ref. 3).
- However, most accounts in the Mahāvamsa - especially regarding the history of Sri Lanka are not correct. I will write a post on this issue later.
- However, since Mahāvainsa was written around the time of Buddhaghosa, it is possible that accounts about Buddhaghosa may be correct.

7. In the next two posts, "Buddhaghosa and Visuddhimagga - Historical Background" and "Buddhaghosa's Visuddhimagga - A Focused Analysis," I will discuss the events leading to Buddhaghosa's writing of Visuddhimagga, and how it introduced the first major contamination of Buddha Dhamma by incorporating Hindu vedic meditations - breath meditation and kasiṇa meditation.

The second major contamination - which has been even more damaging - was the incorrect translation of anicca and anatta as impermanence and "no-self". This is discussed in the last two posts: "Background on the Current Revival of Buddha Dhamma" and "Misinterpretation of Anicca and Anatta by Early European Scholars."

### 14.12 Buddhaghosa and Visuddhimagga - Historical Background

April 8, 2017; Revised April 29, 2017; August 28, 2022

1. Ācariya Buddhaghosa has strongly influenced Theravāda Buddhism for the past 1500 years. Before examining his commentaries - especially the Visuddhimagga (Path of Purification) -, we will discuss some significant events before his time and why he came to Sri Lanka to compose those commentaries. [äcariya: [m.] teacher.]

- The historical time-lines up to the arrival of Buddhaghosa in Sri Lanka are given in the previous post in this section: "Incorrect Theravāda Interpretations - Historical Timeline."
- I have used material from the three references below to create this post.

2. First, we note that only Arahants participated in the first four Buddhist Councils (Sangāyanā), and the fourth one was held at the Aluvihāra Monastery (a rock temple) near present-day Mātale in the Central Province of Sri Lanka in 29 BCE; see, "Preservation of the Dhamma."

- The Tipitaka was written down fully (as it exists today) for the first time in this fourth Sangāyanā in Pāli with Sinhala script (Pāli does not have its alphabet).
- So, it is important to keep three things in mind: (i) Genuine Dhamma existed in 29 BCE with Arahants also completing the Abhidhamma Pitaka, (ii) What we have in the Tipitaka today is this version, and therefore we can have confidence that the true teachings of the Buddha are in the Tipitaka, (iii) Tipitaka was written down in Pāli with Sinhala alphabet.

3. Secondly, many parts of the Tipitaka are in a condensed form, as discussed in "Sutta Interpretation Uddesa, Niddesa, Patiniddesa." Today, there is a tendency to translate Tipiṭaka suttā word-by-word, which has led to significant confusion and many contradictions, as discussed in that post.

- Starting at the time of the Buddha, commentaries were composed to expand and explain the key concepts in a condensed form designed for easy oral transmission. We must remember that the Tipiṭaka was not written down for around 500 years after the Parinibbāna of the Buddha. During that whole time, it survived only because it was in a designed form for ease of remembering; thus, many details were omitted.
- For example, Buddha's first discourse, "WebLink: suttacentral: Dhammacakkappavattana Sutta (SN 56.11)," took many hours to deliver, but the sutta was condensed to just a few pages of verse. It is impossible to condense all that information in a sutta for mostly oral transmission that was available at the time. In those early days, Bhikkhus explained the details when they delivered desanā or discourses to the public.
- Therefore, in addition to the Tipitaka being orally transmitted through generations, the details were also orally transmitted. However, when Buddha Dhamma started declining around 100-200 CE, those details stopped being transmitted (there were not enough Ariya $\bar{a}$, or those who attained magga phala, to pass down correct explanations). Of course, the easy-to-memorize verses of the Tipitaka were faithfully transmitted.
- That last bullet explains a key problem that we have today. Even though the Tipitaka remains intact, there have not been many Ariy $\bar{a}$ within the past hundreds of years to explain the key concepts in the Tipiṭaka; but thanks to late Waharaka Thero, that has changed; see, "Parinibbāna of Waharaka Thero."

4. Even though a few commentaries were composed in the time of the Buddha in Pāli (we have three in the Tipitaka; see below), most of them were written later on in Sinhala (especially after the time of Ven. Mahinda) when written language became more common.

- Up to the time of Buddhaghosa (after about 700 years from the time of Ven. Mahinda), there would have accumulated a vast number of such commentaries called Sinhala Atthakathā, which means "accounts of
the truth" (attha $+k a t h \bar{a})$. However, most of those were likely destroyed when the Mahavihara was burned before Buddhaghosa arrived in Sri Lanka; see below.
- Buddhaghosa's task was to translate those from Sinhala to Pāli. Instead, he just made a few of his commentaries - especially the Visuddhimagga - where he incorporated his Vedic concepts in them; see below.

5. As given in the timeline in the post mentioned in \#1, an important event occurred before the arrival of Buddhaghosa in Sri Lanka, which led to the possible destruction of many original commentaries; this was the establishment of the Abhayagiri Vihara in Anuradhapura around 100 BCE. This led to the degrading of Buddha Dhamma in Sri Lanka, which was then accelerated by the writing of the Visuddhismagga, as we discuss below.

- Over several decades, Abhayagiri Vihara became a rival to the Mahavihara, which had been the center of religious activity since Ven. Mahinda (King Devanampiyatissa).
- The arrival of a body of monks from Pallarama in India, who belonged to the Vajjiputta Nikāya, apparently started this schism between the two Vihara (p. 29, Ref. 3). This sect descended from those who were expelled from the Theravāda by Ven. Moggaliputta Tissa Thero at the Third Sangāyanā.

6. Later, during the reign of King Voharaka Tissa (215-237CE), Abhayagiri Vihara adopted the Vaitulya Piṭaka. It is no coincidence that by this time, Mahāyāna had become dominant in India.

- When the Mahavihara raised objections to this new development, King Voharaka Tissa appointed minister Kapila to investigate and, on his recommendation, ordered all Vaitulya books to be burnt.
- A key point to remember is that "Literary activity in Ceylon (Sri Lanka) declined and, it seems, fell into virtual abeyance between 150 CE and 350 CE , as will appear below" (Ref. 1, p. xxiii).

7. During King Gothabhaya's reign (254-267 CE), the Vaitulyan heresy raised its head again, and the King took action. He not only burnt their books but branded 60 of their leaders and expelled them.

- Those expelled settled down at Kavira in South India. While they were there, a recruit by the name of Sangamitta joined them.
- One day, while bathing, Sangamitta saw the branding on the backs of the others and learned what had happened in Sri Lanka. He vowed to take revenge.

8. Sangamitta went to Sri Lanka and won the confidence of King Gothabhaya, who appointed Sangamitta to tutor his two sons.

- When King Gothabhaya died, his elder son Jettha Tissa became King, but he was not that attached to Sangamitta, so Sangamitta returned to India. When Jettha Tissa died 14 years later, the younger brother, Mahasena, became King.

9. Mahasena was very much attached to Sangamitta, and Sangamitta decided to return to Sri Lanka, realizing that his time to take revenge had come.

- On Sangamitta's advice, King Mahasena started a process of damaging the Mahavihara and the Buddha Dhamma in Sri Lanka. He prohibited providing alms to Mahavihara, and bhikkhus at Mahavihara migrated to other parts of the country over time.
- By this time, Buddhism in Sri Lanka was in decline due to other factors, including the rise of Mahāyāna in India. Arahants were scarce on the Island; if there were some, they would have been in remote regions.

10. For nine years, Sangamitta lived in glory, plundering the properties of Mahavihara and eventually burning down the seven story building with its libraries (p. 47 of Ref. 3). People became angry with what happened to Mahavihara, and a rebellion was started by a minister of the King named Meghavaranabhaya.

- However, before a battle took place, the minister was able to meet the King and explain why he needed to make amends to the Mahavihara to appease the populace. The King apologized and rebuilt the Mahavihara.
- However, people were quite angry at Sangamitta, who was killed on the orders of a queen of the King, probably without the knowledge of the King.

11. The damage had been done. It is also said that when the King rebuilt the Mahavihara, it was mostly those at the Abhayagiri who took residence at the restored Mahavihara. Therefore, when Buddhaghosa visited the Mahavihara, the bhikkhus there could have been those originally belonging to the Abhayagiri sect.

- Furthermore, It is possible that many of the original Sinhala Atthakath $\bar{a}$ were destroyed when the Mahavihara was burned to the ground. Even though copies of the Tipitaka were at many different locations scattered throughout the country, it is not known how many of the Atthakathā had copies.
- In any case, none of those original Sinhala commentaries exist today.
- Mahāyāna was taking root in India and possibly contributed to the degrading of Theravāda in Sri Lanka as well. Sanskrit became the "language of the pundits" (with many new Sanskrit sutras written by Nagarjuna, Vasudeva, etc), and Pāli was losing the battle; see, "Incorrect Theravāda Interpretations Historical Timeline."

12. By the time Buddhaghosa arrived in Sri Lanka (during the reign of King Mahanama between 412-434 CE), some of those Atthakath $\bar{a}$ might have still been there.

- Ven. Nyanamoli says (p. xviii of Ref. 1), "..There are references in these works (by Buddhaghosa) to "Ancients (Porana) or "Former Teachers (Pubbacariya)" as well as to several Sinhalese Commentaries additional to the three referred to in the quotation given earlier. The fact is that a complete body of commentary had been built up during the nine centuries or so that separate Bhandantacariya Buddhaghosa from the Buddha.." and "..This body of material - one may guess that its volume was enormous - Bhandantacariya Buddhaghosa set himself to edit and render into Pāli (the Tipiṭaka itself had been left in the original Pāli).."
- By the way, "Porāna" is a Sinhala word (now Purāna), meaning ancient.
- The detailed explanations in those Atthakath $\bar{a}$ were held in high esteem among the remaining Buddhists in India. As we see below, this is where Buddhaghosa came into the picture.
- So, it appears that even though some of the Sinhala Atthakathā were burned with the destruction of the Mahavihara, some had survived in other locations and brought back to the rebuilt Mahavihara.

13. Buddhaghosa was born into a vedic brahmin family who lived close to the Bodhi Tree in India. He mastered the three Vedas and was a well-known vedic scholar. He was converted to Buddhism by a Bhikkhu Revata who lived in that region in India.

- Law (p. 6 of Ref. 2) writes that Ven. Revata told Buddhaghosa, "..The Sinhalese Atthakatha are genuine. They were composed in the Sinhala language by the inspired and profoundly wise Mahinda, who had previously consulted the discourse of the Buddha, authenticated at the three convocations (Sangāyanā), and the dissertations and arguments of Sāriputto and others, and they are extant among the Sinhalese. Repairing thither, and studying the same, translate (them) according to the rules of the grammar of the Maghadhas (Pāli). It will be an act conducive to the welfare of the whole world". Malalasekara (p. 66 of Ref 3) gives a very similar account of that request.
- Ven. Nyanamoli also gives a detailed account of how Ven. Revata recruited Buddhaghosa for the project on pp. xxxiv-xxv (Introduction) of Ref. 1. Also see pp. 31-39 of Ref. 2 and pp. 64-69 of Ref. 3.

14. The important position assigned in the Theravāda tradition to the work of Buddhaghosa is evident from the following quote from Ref. 1 (p. xli):

- "..The doctrines (Dhamma) of the Theravāda Pāli tradition can be conveniently traced in three main layers. (1) The first of these contains the main books of the Pāli Sutta Pittaka. (2) The Abhidhamma Piṭaka, notably the closely related books, the Dhammasangayani, Vibhanga Paṭthāna. (3). The system the author of the Visuddhimagga completed, or found completed, and he set himself to edit and translate back into Pāli ..."
- Even today, many Theravādins use the Visuddhimagga and don't bother to consult the Tipiṭaka.

15. Sinhala tradition assigns the arrival of Buddhaghosa in Sri Lanka 965 years after the Parinibbāna of the Buddha, according to Malalasekara (p. 66). This is consistent with the above timeline.

- Upon arriving at the Mahavihara in Anuradhapura, Sri Lanka, Buddhaghosa requested those Atthakath $\bar{a}$ from the authorities. They were initially reluctant, but after verifying that he was a scholar, they gave him access to the books (Refs. 1-3).
- Law (p. 8 of Ref 2) says, "..Taking up his residence in the secluded Ganthakaro viharo at Anuradhapura, he translated, according to the rules of the Maghdhas, which is the root of all languages, the whole of the Sinhalese Atthakathā (into Pāli)".

16. This assertion that Buddhaghosa "translated Sinhalese Atthakathā into Pāli" is incorrect.

- He incorporated many of his vedic concepts (breath meditation, kasiṇa meditation, etc) and made his commentaries, as I will discuss in the next post.
- The obvious inconsistencies of the Visuddhimagga with the Tipitaka and the remaining three original Pāli commentaries (still in the Tipiṭaka) are discussed in "Buddhaghosa's Visuddhimagga - A Focused Analysis."

17. Law makes the following interesting statement (p. 38 of Ref. 2): "..Buddhaghosa’s task of translating was finished in three months. Having observed the Pavarana, he informed the congregation's chief of completing his task. The Samgharaja praised him much and set fire to all the works written by Mahinda in Sinhalese..." We can make two observations:

- If the work was completed in three months, as Law says, Buddhaghosa did not even have time to go through the whole of the Sinhalese Atthakathā, even if only a part of it was left.
- It is hard to believe that the chief Bhikkhu set fire to the original books. However, ALL those Sinhalese Atthakath $\bar{a}$ were indeed lost after the Buddhaghosa.

18. In the next post in this section, "Buddhaghosa's Visuddhimagga - A Focused Analysis," I discuss why Visuddhimagga does not represent Buddha Dhamma.

- However, as we discussed above, all of the Sinhala Atthakath $\bar{a}$ were lost soon after the publication of Visuddhimagga, and Visuddhimagga became the sole source for explaining Tipitaka material.
- It became customary just to use the Visuddhimagga and not even consult the Tipitaka until recent times, especially until the "discovery of Buddhism" by the Europeans who started translating the Tipitaka and Buddhaghosa's works. See the details in the "Historical Background" section.

19. Furthermore, When Europeans started translating the Tipitaka (starting with Rhys Davis and others), they translated suttia word-by-word to English, a practice that continues today.

- However, It is not a good idea to translate Pāli sutt $\bar{a}$ word-by-word, and those early commentaries were critically important to expand on the Tipitaka material. This is discussed in "Sutta Interpretation = Uddesa, Niddesa, Patiniddesa."
- In addition, those early European scholars made a huge mistake by incorrectly translating the Pāli words anicca and anatta as impermanent and "not-self"; see, "Misinterpretation of Anicca and Anatta by Early European Scholars."
- This is why the work of the late Waharaka Thero is so important. He was able to "re-discover" the meanings of the key Pāli words by perusing the remaining three original Pāli commentaries of Patisambhidamagga, Petakopadesa, and Nettippakarana; see "Preservation of the Dhamma."

### 14.13 Buddhaghosa's Visuddhimagga - A Focused Analysis

April 29, 2017; revised March 16, 2021; major revision September 3, 2021

## Two Major Distortions to Buddha Dhamma

1. The first distortion occurred about 1500 years ago with the introduction of "breath meditation" as the Buddhist Anāpānasati meditation by Buddhaghosa in his commentary Visuddhimagga.

- The second significant distortion took place more recently by European scholars by an honest mistake. They were unable to distinguish between Sanskrit-based Mahayana Buddhism and Pali-based Theravada Buddha Dhamma. That led to to the mistranslation of anicca as impermanence and anatta as "no-self."
- We will discuss the background to the first issue in this post.
- An introduction to the second issue is in the post, "Misinterpretation of Anicca and Anatta by Early European Scholars."

## Historical Background on Buddhaghosa

2. In the previous post in this series, "Buddhaghosa and Visuddhimagga - Historical Background," we discussed why Buddhaghosa traveled to Sri Lanka. Here is a summary of that post:

- Many parts of the Tipitaka are in condensed form. Starting from the Buddha's time, commentaries were written to expand and explain the key concepts in the Tipitaka.
- Most of those commentaries - at least from the time of Ven. Mahinda — was written in the Sinhala language by Ven. Mahinda himself and many Sinhalese Arahants for over 950 years up to the time of Buddhaghosa. These were called Sinhala Atthakathā (true accounts).
- A certain bhikkhu by the name of Ven. Revata in India recruited Bhuddhaghosa to travel to Sri Lanka and translate those Sinhala Atthakathā to Pāli (see Refs. 2-4 (Ref. 2, Ref. 3, and Ref. 4) below).
- In this post, I will point out that instead of translating those Sinhala Atthakathā, Buddhaghosa incorporated his own vedic ideas into his commentaries in Pāli, especially describing Ānāpānasati as breath meditation.

## Demise of Sinhala Atthakath $\bar{a}$ (Original Commentaries in Sinhala)

3. Those Sinhalese Atthakathā disappeared from existence not long after Buddhghosa completed his work (most of them were likely burnt with the Mahavihara well before Buddhaghosa's time). Regardless of what happened to those original Atthakathā, Theravāda tradition accepted Visuddhimagga to represent those original Atthakathā as well as the Tipitaka. To date Visuddhimagga is regarded in high esteem.

- When he edited those Sinhala Atthakathā and composed the Visuddhimagga, Buddhaghosa, a scholar in Vedic literature, incorporated Hindu Vedic concepts to the Visuddhimagga.
- In particular, he replaced real Buddhist $\bar{A} n \bar{a} p a \overline{n a}$ Bhāvanā with breath meditation and also introduced Hindu kasiña meditation.
- Buddhaghosa also disregarded the importance of the Tilakkhaṇa (anicca, dukkha, anatta), but I will show evidence that he never distorted their meanings. That happened only when the Europeans translated the Tipitaka and the Visuddhimagga to English; see, "Misinterpretation of Anicca and Anatta by Early European Scholars."
- He also reportedly wrote other commentaries on Tipitaka, but they are not widely used.
- I guess that Buddhaghosa did not consult the Sinhala Atthakathā even for the Visuddhimagga. Certainly, Visuddhimagga is not compatible with the remaining original three commentaries and the Tipiṭaka regarding meditation techniques.

## Final Buddhist Council Attended by Arahants

4. As I discussed in the post, "Buddhaghosa and Visuddhimagga - Historical Background," pure Dhamma existed until the fourth Buddhist Council (Sangāyanā) held in 29 BCE in Matale, Sri Lanka.

- By the time Buddhaghosa arrived in Sri Lanka roughly 450 years later, drastic changes had taken place (with the Buddhist center of Anuradhapura Mahā Vihara burnt down once) and a Mahayanist sect the landscape for a while; see the above post among other things.
- So, the degradation of Theravāda Buddha Dhamma occurred gradually over two thousand years. Still, two drastic changes took place during that time: (i) Buddhaghosa's introduction of Hindu meditation techniques in the fifth century, (ii) misinterpretation of anicca and anatta by the European scholars when they translated both Tipitaka and Visuddhimagga to English in the late 1800s.
- Even though there was a resurgence of Buddha Dhamma since the late 1800s due to those Europeans' efforts like Rhys Davids, Eugene Burnouf, and Thomas Huxley, unfortunately, it was this "distorted Dhamma" was what spread throughout the world in the past 200 years.

## Three Original Commentaries in Pāli

5. Even though those old Sinhala commentaries were lost, three commentaries composed in Pāli (Pațisambhidāmagga, Petakopadesa, and Nettippakarana) at the time of the Buddha remained intact with the Tipitaka; see, "Preservation of the Dhamma."

- After Buddhaghosa composed Visuddhimagga, Theravādins almost exclusively used Visuddhimagga instead of the Tipitaka, and those original Pāli commentaries were totally neglected.
- With the help of those three original Pāli commentaries, Waharaka Thero was able to "re-discover" the Buddha's original teachings over the past 25 years or so. Unfortunately, Wahraka Thero attained Parinibbāna recently; see, "Parinibbāna of Waharaka Thero."
- After the "re-discovery" of the Buddha's true teachings by Waharaka Thero over the past 25 years or so, it became clear that several key misinterpretations crept into Buddha Dhamma over the past two thousand years. But the actual timeline of contamination was not clear.
- For example, it was not clear whether Buddhaghosa himself was responsible for anicca and anatta's misinterpretations. In this post, I will show that Buddhaghosa was not responsible for that part. In the post, "Misinterpretation of Anicca and Anatta by Early European Scholars," I presented evidence that it was done by the European pioneers when they assumed that the Pāli words anicca and anatta were derived from anitya and anathma in Sanskrit.

## Buddhaghosa Not Responsible for Misinterpretation of Anicca and Anatta

6. First, I will show evidence that Buddhaghosa did not distort the meanings of the words anicca and anatta, even though he did not realize the importance of the Tilakkhana.

- We need to remember that Buddhaghosa was supposed to take material from Sinhala Atthakathä and compose his own commentary, Visuddhimagga, in Pāli. One can purchase that original Pāli version, Ref. 1 below, from Amazon.
- When comparing the Pāli and English texts below, I will be using Ref. 2.

7. On p. 271 of the Pāli Visuddhimagga (Ref. 1), for example, it says, "Catutthacatukke pana aniccānupassi ettha tava aniccata veditabbaì. Aniccata veditabba. Aniccānupassanā veditabba. Aniccānupassi veditabbo."

- This is translated in the book by Bhikkhu Nyanamoli (p. 282, vol. I) as, "But in the fourth tetrad, as to contemplating impermanence, here; firstly, the impermanent should be understood, and impermanence, and the contemplation of impermanence, and one contemplating impermanence."
- So, in this case, Buddhaghosa used the correct Pāli words, anicca. Still, Bhikkhu Nyanamoli incorrectly translated it as "impermanence" following the European pioneers' misinterpretation before him, as we discussed above.

8. Buddhaghosa's original Pāli version also states the relations among the three characteristics, as I discussed in the post, "Anicca, Dukkha, Anatta - Wrong Interpretations." On p. 617 of Ref. 1, "Yadaniccamं tam dukkham̉"ti (SN 3.15) vacanato pana tadeva khandhapancakaì dukkhai். Kasmā? Abhiṇhpatipīlana, abhinhapatipīlanā kāro dukkhalakkhaṇam.". AND
"Yaì dukkhaim tadanattā"ti (SN 3.15) vacanato pana tadeva khandhapancakaì anattā. Kasmā? Avasavattanato, avasavattanā kāro anattalakkhaṇam.".

- This really means, "dukkha arises (based on attachments to things of) anicca nature, therefore (such attachments are of) anatta nature," as I explained in my post too.

## Incorrect Translation by Bhikkhu Nynamoli

9. However, Bhikkhu Nynamoli, following the incorrect interpretation by the early European pioneers in the 1800's, translates those two verses as (p. 663 of Ref. 2): "Those same five aggregates are painful because of the words, 'What is impermanent is painful' (S. iii,22). Why? Because of continuous oppression. The mode of being continuously oppressed is the characteristic of pain.", AND
'Those same five aggregates are not-self because of the words, 'What is painful is not-self' (S. iii,22). Why? Because there is no exercising of power over them. The mode of insusceptibility to the exercise of power is the characteristic of not-self."
10. Thus, it is obvious that it was not the Buddhaghosa who interpreted anicca as impermanent and anatta as not-self, but those early Europeans in the late 1800s. As explained in those previous posts, subsequent scholars from Sri Lanka and other Asian countries propagated those two incorrect interpretations.

- For example, early Sinhala scholars like Malalasekara, Jayathilaka, and Kalupahana, learned Buddhism (and received Doctoral degrees in Buddhism!) from those European pioneers at universities in the United Kingdom.
- One needs to contemplate on how the authority of those early Europeans on Buddha Dhamma. As explained in those other posts, they merely translated the Tipitaka word-by-word (using perceived etymologies to Sanskrit).
- We must realize that translating Tipitaka is not the same as translating any other book from one language to another. One has to have a deep background in Buddha Dhamma to do that.
- The key mistake made by Rhys Davids, Bernouf, and others, was to assume that Pāli anicca and anatta are the same as Sanskrit anitya (which does mean impermanence) and anathma (which does mean no-self).

## Buddhaghosa Introduced Breath Meditation as Ānāpānasati

11. Now we turn to the issue of Biddhaghosa introducing Hindu Vedic meditation techniques to Buddha Dhamma in his Visuddhimagga.

Here is a key passage from Buddhaghosa's original Pāli Visuddhimagga (p. 254 [p. 274] of Ref. 1): "Tattha dīghaì vā assasantoti dīghaì vā assāsaì pavattayanto, assāsoti bahi nikkhamanavāto, passāsoti anto pavisanavātoti vinayaṭthakathāyaì vuttam. Suttantaṭ! hakathāsu pana uppatipātiyā āgataì. Tattha sabbesampi gabbhaseyyakānai் mātukucchito nikkhamanakāle pathamaì
abbhantara vāto bahinikkhamati, pacchā bāhiravāto sukhumarajaì gahetvā abbhantaraì pavisanto tālumं āhacca nibbāyati, evamं tāva assāsapassāsā veditabbā. "

Bhikkhu Nyanamoli CORRECTLY translates this passage to English as follows (p. 265 of Ref. 2): "Herein, breathing in long (assasanto) is producing a long in-breath. 'assāsa is the wind issuing out; pass $\bar{a} s a$ is the wind entering in' is said in the Vinaya Commentary. But in the Suttanta Commentaries, it is given in the opposite sense. Herein, when an infant comes out from the mother's womb, first the wind from within goes out, and subsequently, the wind from without enters in with fine dust strikes the palate and is extinguished [with the infant's sneezing]. This, firstly, is how assāsa and passāsa should be understood".

- So, above is concrete evidence that Buddhaghosa himself referred to $\bar{A} n \bar{a} p a \overline{n a s a t i}$ as breath meditation. He specifically talked about inhaling and exhaling air.
- However, actual Buddhist $\bar{A} n \bar{a} p a ̄ n a ~ B h a ̄ v a n a \bar{a}$ is not breath meditation; see, " 7 . What is Ānapāna?."

## Buddhist Meditations Do Not Use Kasiṇa Objects

12. The second problem that Buddhaghosa introduced in his Visuddhimagga was to present mundane kasiña meditation as a viable path to Nibbāna. He gives detailed explanations on making kasiṇa objects in chapters 4 and 5 in Ref. 1.

- For example, he goes to minute details describing how to make an "earth kasina" starting on. 118 [p 124] of Ref. 1: "..Nīlapītalohitodātasambhedavasena hi cattāro paṭhavikasinadosā, tasmā nīlādivaṇnaim mattikaí agahetvā gañgāvahe mattikāsadisāya aruṇavaṇnāya mattikāya kasiṇä் kātabbaí,...".
- Bhikkhu Nyanamoli translates (p. 123 of Ref. 2): "..Now the four fruits of the earth kasina are due to the intrusion of blue, yellow, red, or white. So instead of using clay of such colors, he should make the kasina of clay like that in the stream of Ganga, which is the color of the dawn..."
- In the same way, Buddhaghosa goes into great detail to describe how to make other types of kasiña objects.

13. The critical point is that true Buddhist kasiña meditation does not involve any physical kasiña objects. If anyone can find a reference in the Tipitaka where it is described how to make a physical kasina object, I would appreciate receiving that reference.

- The Buddha describe the true Buddhist kasiña meditation to Ven. Rahula in the WebLink: suttacentral: Mahā Rahulovada Sutta (MN 62) (Majjhima Nikāya, MN 62). It was explained to him as a part of $\bar{A} n \bar{a} p \bar{a} n a s a t i ~ B h a ̄ v a n a \bar{a}$, which can be done in many ways, but here by contemplating on internal body parts made of cattāro mahā bhūta and realizing that external objects are also made with the same cattāro mahā bhūta. Furthermore, that means nothing can be considered in one's body as. "me, myself, etc.."
"..Ekāmantaiं nisinno kho āyasmā rāhulo bhagavantam etadavoca: "kathaiं bhāvitā nu kho, bhante, ānāpānassati, kathaí bahulīkatā mahapphalā hoti mahānisamisā"ti? "Yaí kiñci, rāhula, ajjhattaì paccattaì kakkhalaì kharigataì upādinnaì, seyyathidai்-kesā lomā nakhā dantā taco
 antaì antaguṇaì udariyaì karīsam̀, yaì vā panaññampi kiñci ajjhattaì paccattaì kakkhalà̀ kharigataì upādinnai்- ayaì vuccati, rāhula, ajjhattikā pathavīdhātu. Ya ceva kho pana ajjhattikā pathavīdhātu yā ca bāhirā pathavīdhātu, pathavīdhāturevesā. Taim 'netaim mama, nesohamasmi, na meso attā'ti- evametaín yathābhūtaì sammappañ̃̄āya datthabbam். Evametaì yathābhūtaì sammappaññāya disvā pathavīdhātuyā nibbindati, pathavīdhātuyā cittaì virājeti.".
- The other three, $\bar{a} p o$, tejo, vāyo are discussed in the same way there. One does not need to make kasina objects for true Buddhist kasina meditation, and as I said there is nowhere in the Tipitaka that discusses preparing kasina objects.

## The Second Issue of Misinterpretation of Anicca and Anatta

14. In the next post, "Misinterpretation of Anicca and Anatta by Early European Scholars," we will wrap up this section on "Historical Background." With that post, I would have summarized the historical background from the Buddha's time to the present day. This is probably the only section that can be said to be "finished," even though I may edit the posts in this section as needed.

### 14.14 Background on the Current Revival of Buddhism (Buddha Dhamma)

Revised April 29, 2017; January 27, 2020

## Critical Role of the British Civil Servants

1. Ironically, the current revival of Buddhism (Buddha Dhamma) is also due to the same reason that led to the decline in Buddha Dhamma in most Buddhist countries for hundreds of years. That decline was in the latter part of the second Millennium, i.e., the colonization of Asia by the Western powers starting with the Portuguese and ending with the British.

- The civil servants of the British East India Company came across ancient Buddhist literature in various Asian countries in the 1800s. Some of them realized the importance of these documents and started deciphering the documents themselves (e.g. Thomas W. Rhys Davids, 1843-1922.) They became motivated and learned Pāli and Sanskrit languages.
- Others sent documents universities in Europe. There, mostly French and English philosophers (e.g., Eugene Burnouf, 1801-1852) studied them and translated them to French and English.
- A thorough account of the efforts by the British civil servants in India, Sri Lanka, and other Asian countries in uncovering the "lost knowledge" has been given by Charles Allen in his excellent book, "The Search for the Buddha" (2003). It also covers restoration of historical Buddhist sites in India.

## Early European Scholars

2. These Westerners realized that there was something profound in this ancient doctrine which exposed them for the first time to a religion that was not based on a Creator.

- Thomas Huxley captured the essence this new religion brilliantly as follows (Thomas H. Huxley, Evolution and Ethics and Other Essays, 1894, pp. 68-69): "A system which knows of no God in the Western sense; which denies a soul to man; which counts the belief in immortality a blunder and the hope of it a sin; which refuses any efficacy to prayer and sacrifice; which bids men look to nothing but their own efforts for salvation; which, in its original purity, knew nothing of vows and obedience, abhorred intolerance, and never sought the aid of the secular arm; yet spread over a considerable moiety of the Old World with marvelous rapidity, and is still, with whatever base admixture of foreign superstitions, the dominant creed of a large fraction of mankind".
- It is amazing that even at that early stage, when there must have been some confusion about the mythical aspects of especially the Tibetan and Zen Buddhist practices, Huxley was able to express the essence of Buddha Dhamma.

3. Based on their interest in the documents from Asia on Buddhism and Hinduism, Madame Helena Petrovna Blavatsky and Colonel Henry Steel Olcott founded the Theosophical Society in New York City in 1875. They subsequently traveled to India and Sri Lanka and became Buddhists.

- Olcott published "A Buddhist Catechism" in 1881. This book together with the "Light of Asia" by Edwin Arnold in 1871 (which went through 100 printings), led to much interest in Europe and America about Buddhism. Colonel Olcott opened several Buddhism-oriented schools in Sri Lanka in order to revive the religion. I was fortunate to be able to attend one of those schools.
- These efforts were subsequently augmented by a number of Sri Lankan intellectuals such as Anagarika Dharmapala, G. P. Malasekara, K. N. Jayatilleke, Narada Thera, Walpola Rahula Thera, David Kalupahana, and also by several more Westerners who were impressed by the Buddhist teachings to a point that they came to Sri Lanka, became monks, and wrote many excellent treatises on Theravāda Buddhism; these include Nyanatiloka Thera, Nyanyaponika Thera, and Bhikkhu Bodhi.

## A surge of Zen Buddhism

4. Even though those early publications by Rhys Davids, Arnold, and Olcott in the late 1800s were mainly on the Theravāda Buddhism, beginning in the early part of the 1900s, Zen Buddhism became an object of fascination in the West and continues to be a significant presence in the West.

- In contrast to the earlier introduction of(Theravāda) Buddhism to the West by Westerners, Zen made its way into the Western consciousness via the efforts of an elite group of Japanese intellectuals - most notably D. T. Suzuki. Suzuki, who came to America in 1897, wrote several books including "An Introduction to Zen Buddhism"; this book emphasized the transcendent and mystical nature of Zen.

5. Here is an excerpt from the above book by Suzuki, which clearly states the belief of the Mahāyāna thinkers that the original teachings of the Buddha are "primitive" and Mahāyāna provided the needed improvements (p. 1, footnote 1):

- ".to be accurate, the fundamental ideas of the Mahāyāna expounded in the Prajnaparamita group of Buddhist literature, the earliest of which must have it appeared at the latest within 300 years off the Buddha's death. The germs are no doubt in the writings belonging to the so-called primitive Buddhism. Only their development, that is, a conscious grasp of them as most essential in the teachings of the founder, could not be effected without his followers' actually living the teachings for some time through the variously changing conditions of life. Thus enriched in experience and matured in reflection, the Indian Buddhists came to have the Mahāyāna form of Buddhism as distinguished from its primitive or original form. In India two Mahāyāna schools are known the Madhyamika, of Nagarjuna and the Vijnaptimatra or Yogacara of Asanga and Vasubandhu. More schools developed in China: the Tendai, the Kegon, the Jodo, the Zen, etc. In Japan, we have besides these the Hokke, the Shingon, the Shin, the Ji, etc. All of these schools or sects belong to the Mahāyāna wing of Buddhism". (Highlighting is mine).

## Problems with Mahāyāna Teachings

6. This is in sharp contrast with the basic presumption in Buddha Dhamma that only a Buddha can discover the laws of nature and those teachings CANNOT be improved upon:

I have discussed key problems with Mahāyāna teachings in "Saddharma Pundarika Sutra (Lotus Sutra) - A Focused Analysis" and "What is Suñyāta or Suñ̃̃āta (Emptiness)?."

- There is only ONE set of natural laws and those were discovered by the Buddha. As one goes through the content in this website, I hope one would be able to see that statement is justified. Also see, "Dhamma and Science - Introduction"

## Role of Dalai Lāma

7. More recently, Tibetan Buddhism (Vajrayāna) has gained prominence in the West. This is no doubt the result of the publicity of the Chinese invasion of Tibet in 1953 and the incredible personal charisma of the Dalai Lāma.

- It is unfortunate that the Dalai Lāma has to state that, 'My confidence in venturing into science lies in my basic belief that as in science so in Buddhism, understanding the nature of reality is pursued by means of critical investigation: if scientific analysis were conclusively to demonstrate certain claims in Buddhism to be false, then we must accept the findings of science and abandon those claims."(highlighting mine) - cited from "The Universe in a Single Atom: The Convergence of Science and Spirituality" (2005).

8. Both the Mahāyāna and Vajrayāna sects are now realizing that some concepts in those forms of "Buddhism" have to change with the new findings of science. The fundamental teachings of the Buddha as stated in the Theravāda Dhamma, in contrast, remain unchallenged because no such "improvements" were incorporated to "keep up with the times and cultures".

- The Pāli Tipitaka has remained the same since it was written down 2000 years ago. The reality is that science is only now beginning to confirm many things that the Buddha stated 2500 years ago; see, "Dhamma and Science - Introduction" and the subsequent links.
- Regrettably, the translated and edited versions of the Tipitaka, especially those by Acariya Buddhaghosa, have many misinterpretations.

## Scientists' Role in Recent Years

9. Beginning at the end of the twentieth century, there is a renewed interest in "Buddhism" in the West, based on several books by Western scientists.

- It seems to have started with the publication of "The Tao of Physics" by physicist Fritjof Capra (1975). In the book he describes how, one day quietly sitting by the ocean, he realized that there may be a connection between the subtleties of quantum mechanics and Eastern "mysticism," in which he included "Hinduism, Buddhism, Chinese Thought, Taoism, and Zen." It appears that he was trying to make a connection between the world of matter described by quantum mechanics and the "mind" that is predominant in "Eastern mysticism." Even by the time of the 5th edition (2010), he had not realized that Zen was a branch of Buddhism, and had not been exposed to any Theravāda literature. However, the connection he was trying to establish apparently made an impact on the Western audience and this trend will hopefully continue and be directed in the right direction.
- There are others who have contributed to the recent interest in "Buddhism" in the West: "The Art of Happiness" and other books by Dalai Lāma, "The Embodies Mind" by Francisco Varela et al., "Confession of a Buddhist Atheist" and other books by Stephen Batchelor, are some examples.
- However, most these books have incorrect interpretations of Buddha Dhamma because they are heavily influenced by Mahāyāna Buddhism, which has totally veered away from the original teachings of the Buddha, as I have discussed in this section, "Historical Background."

## Sorting Out the True Teachings of the Buddha

10. The books that I mentioned at the beginning of the essay and several other books by Ven. Ledi Sayadaw, Ven. Bhikkhu Bodhi, Ven. Walpola Rahula, and others (see the References below), are providing the much needed material on Theravāda Buddhism to the Western audience, even though they themselves use some incorrect interpretations due to two main "contamination problems".

- One happened 1500 years ago when Buddhaghosa distorted $\bar{A} n \bar{a} p a ̄ n a ~ B h a ̄ v a n a ̄ ~ a s ~ " b r e a t h ~ m e d i t a t i o n " ~$ and also introduced Hindu kasina meditation to Buddha Dhamma in his commentary, Visuddhimagga.
- The other problem of misinterpreting anicca and anatta as impermanence and "no-self" was done by those early European scholars who translated Tipitaka to English; see, "Why is Correct Interpretation of Anicca, Dukkha, Anatta so Important?." These incorrect interpretations were adopted by the whole world since the late 1800s.
- Therefore, all Buddhist literature published in all languages since the late 1800s have both these problems. This is a critical point, see, "Misinterpretation of Anicca and Anatta by Early European Scholars."
- We need to resort to the Pāli Tipiṭaka that still contains the original teachings of the Buddha, and it is the goal of this website to systematically present those original teachings of the Buddha.

### 14.15 Misinterpretation of Anicca and Anatta by Early European Scholars

April 29, 2017;revised next day (\#12); revised August 14, 2018; February 3, 2020; critical revision on July 14, 2021; major revision September 6, 2021; major revision February 24, 2022

## Introduction

## 1. Degradation of Theravāda Buddha Dhamma occurred gradually over the past 1500 years, but two drastic distortions took place during that time:

i. Key Pāli words anicca and anatta had been mistranslated to give the meanings of the Sanskrit words "anitya" and "anātma" in the Asian Buddhist countries even before the Buddhaghosa's time of 1500 years ago. That happened due to Mahāyāna's influence on Theravāda Buddhism. Those changes have taken root with the influence of the early European scholars and the printing press in the late 1800s.
ii. Buddhaghosa's introduction of Hindu meditation techniques in his Commentary to the Tipitaka, Visuddhimagga, 1500 years ago.
2. To understand the current situation, one needs to understand the historical background in this section, "Historical Background," but at least the posts starting with "Incorrect Theravāda Interpretations - Historical Timeline. "

- As I explained in earlier posts in this section, worse distortions to Buddha Dhamma occurred via branching out of various sects based on Mahāyāna, Zen, and Tibetan (Vajrayāna). It started with the rise of Mahāyāna in India about 500 years after the Buddha, i.e., about 2000 years ago.
- Degradation of Theravāda Buddha Dhamma occurred gradually over the past 2000 years. Two drastic changes took place during that time: (i) misinterpretation of anicca and anatta as "anitya" and "anātma" due to Mahāyāna's influence, and (ii) Buddhaghosa's introduction of Hindu meditation techniques 1500 years ago.
- The subsequent adoption of that by the European scholars when they translated BOTH Tipitaka and Visuddhimagga to English in the late 1800s made those widespread.

## Background for This Discussion

3. To set up the context for the present discussion, we also need to know the following facts:

- Pāli is a "phonetic language" (sounds give meanings in most cases, especially for keywords). It comes from Mägadhi (Maga Adhi or Noble Path) language that the Buddha spoke. Attempts to develop Pāli grammar took place about 1000 years ago.
- Furthermore, Pāli does not have its alphabet. The original Tipiṭaka, written 2000 years ago, is in Sinhala script. Details at "Historical Background."

4. The root problem of writing a given Pāli word in English must have been a critical issue to address for those English, German, and French scholars who took on the daunting task of translating the Tipitaka in the late 1800 s.

- Now there are two separate key issues: First, the "Tipitaka English" convention was adopted in the 1800s to preserve the Pāli sounds and keep the text short. See, "Tipitaka English" Convention Adopted by Early European Scholars - Part 1" Thus the Pāli word ""ண९'ઝ"' is written as "atta" instead of "aththa" as one would write in "Standard English." This was a good step.
- The second issue is even more important: The translation of key Pāli words to English. In this particular case, they translated the word "atta" ("2mi'z,") as "self." That translation is incorrect, but it was also a logical step at that time as I briefly explained above.
- Now let us see why those early translators like Rhys Davids, Eugene Burnouf, and Edward Muller chose that meaning.

## Tipiṭaka Had Not Been Translated Until Recently

5. Going back to our main discussion. Tipitaka was not TRANSLATED to the Sinhala language until 2005. It had remained in the Pāli language (written with Sinhala script) since first written down in 29 BCE ( 2000 years ago). The practice of translating the suttas in the Tipitaka WORD-BY-WORD to other languages probably started with the Europeans, as we discuss below.

- Before being written down 2000 years ago, the Tipitaka was transmitted orally for over 500 years. It is composed in a special, condensed way to make it easier to recite and remember.
- It is not POSSIBLE to just translate the Tipiṭaka word-by-word. That is discussed in detail in "Sutta Interpretation - Uddēsa, Niddēsa, Patiniddēsa."
- Instead of translating the Tipiṭaka to Sinhala, Arahants in Sri Lanka (including Ven. Mahinda) wrote Sinhala commentaries (called Sinhala Atthakath $\bar{a}$ ) explaining the key concepts in the Tipitaka. During oral discourses, bhikkhus explained those concepts in detail.
- But all those Sinhala Atthakathā were lost, and we only have commentaries written after about 500 CE (including Visuddgimagga), and they have many errors. See, "Buddhaghosa and Visuddhimagga Historical Background." Note that Buddhaghosa wrote Visuddhimagga in Pāli. As I pointed out in the previous post, "Buddhaghosa's Visuddhimagga - A Focused Analysis,"

6. Buddhaghosa did use the words anicca and anatta in Visuddhimagga because the words "anitya" and "anātma" are NOT there in Pāli. But even those days, it is likely that the Sinhala texts used "anitya" ( $\& 838)^{\circ} c$ c)
 today, while the Pāli Tipiṭaka has the words anicca and anatta, the side-by-side Sinhala translation has

- Thus, when bhikkhu Nynamoli translated Visuddhimagga to English he also used the words

- In my earlier versions of this post, I had written that European scholars mistranslated anicca and anatta because they assumed that those were the same as Sanskrit's words anitya and anātma. But even Theraväda Buddhists had already made that transition by that time.

## Confusion With Pāli and Sanskrit Texts

7. Those Europeans first came across Sanskrit vedic texts in India. Later on, they found the Pāli texts in Sri Lanka, Burma, and other countries. That time sequence is very important to note.

- By the time of the arrival of English, Buddhism in India had totally vanished. There were no Pāli texts in India except those inscribed on the "WebLink: en.wikipedia.org: Pillars of Ashoka, "the stone columns made by Emperor Ashoka about 300 years after the Parinibbāna of the Buddha.
- Another important point is that Pāli was never a widely-used language in India. It appeared in India briefly while Buddhism flourished for a few centuries encompassing Emperor Ashoka's reign.

## The Book "The Search of the Buddha" by Charles Allen

8. To get an idea of how those European pioneers struggled to interpret the inscriptions on Ashoka pillars and later translate the Tipitaka itself, I highly recommend the book "The Search of the Buddha" by Charles Allen (2003). His family had been in India for generations serving in the British governments, and he was born in India.

- The book has a lot of information and pictures of many historical sites in India before their restoration. It is truly fascinating to read about the efforts of those who dedicated their lives to the effort of uncovering Buddha Dhamma. Even though not shown in that book, historical sites in Sri Lanka and other Buddhist countries were also dilapidated.
- The following video is in the Sinhala language. It provides an account of the restoration of Ruwanvalisāya, one of the largest stupās in Sri Lanka. That project took over 50 years and was completed with assistance from the British Governor in Sri Lanka at that time. You can see the status of Buddhist temples and stupās in the 1800s before their restoration:
WebLink: suttacentral: History of Ruwanwelisaya Naranvita Sumanasara Thero
- In all those Asian countries (Sri Lanka, India, Burma, Thailand, etc.) Buddhism itself was in much worse shape than today. Those European scholars were really responsible for the current revival of Buddhism.

9. Those European pioneers thought Sanskrit and Pāli were very much related. They are related, but not in a useful way. Sanskrit adapted many Pāli terms but made them "sound sophisticated." But the true meanings were not as apparent.

- For example, pabhassara in Pāli Pāli became prabhāsvara in Sanskrit. While a knowledgeable person can discern the meaning of pabhassara from its Pāli roots (see, "Pabhassara Citta, Radiant Mind, and Bhavanga'), that is not true for the Sanskrit word prabhāsvara.
- Another example is Pațicca Samuppāda (see, "Paticca Samuppāda - "Pati+ichcha"+"Sama+uppāda"), which was adapted to Sanskrit as "Pratittyasamutpāda," which does not convey any meaning.

## Status of Buddhism in the 1800s

10. To complete the historical background relevant to this discussion, let me emphasize Buddhism's 'time evolution" starting in the 1700s.

- The invasions by the Portuguese, Dutch, and finally the British spanned over 4 centuries starting in 1498; see "WebLink: en.wikipedia.org: Portuguese presence in Asia." This led to a drastic decline of Buddha Dhamma in all Asian countries. However, that trend finally changed with the insight of some British civil servants in the 1800s. This is why I recommend the book by Charles Allen in \#8 above.
- Due to the efforts of those civil servants and several scholars in European countries, a coordinated effort was undertaken to collect and interpret the vast historical documents found in the Asian countries. Those included not only Tipiṭaka documents but Mahāyāna and Vedic documents too. However, even Theravāda bhikkhus had already made the mistake of mistranslating anicca and anatta to be the same as Sanskrit anitya and anātma by that time.
- There were no true Buddhist scholars with deep insight at that time. We can get an idea about the status of Buddhism in Asian countries at that time by the status of Buddhist temples in the video of \#8 above.

## Academic Credentials Not Enough to Teach Buddha Dhamma

11. Those European scholars truly did their best to interpret the vast collection of historical documents. Those efforts are well-documented in Charles Allen's book. Professor Rhys Davids was among those scholars, and most current interpretations are based on his work.

- Following the original translations by Rhys Davids, Eugene Burnouf, and others, contemporary Sinhala scholars like Malalasekara (a doctoral student of Rhys Davids) "learned" Buddhism from the Europeans and thus started using wrong interpretations.
- Other Sinhala scholars like Kalupahana and Jayathilake also learned "Buddhism" at universities in the United Kingdom (received Doctoral degrees on Buddhism) and wrote books in English and Sinhala.
- Of course, scholars in other Buddhist countries did the same in their languages, and the incorrect interpretations spread throughout the world.
- So, I hope I have provided enough information to contemplate why the opinions of "scholars" are likely to be wrong due to reasons beyond their control. Again, I admire and appreciate what Rhys Davids, Burnouf, Muller, and others did those days, and it was not their intention to distort Buddha Dhamma. It is not the fault of current scholars either.
- Just to emphasize: Buddha Dhamma needs to be learned from a true disciple of the Buddlha who has attained at least the Sotāpanna stage. Academic credentials mean NOTHING as far as teaching Buddha Dhamma is concerned. With all due respect to those European scholars, they DID NOT understand the key message of the Buddha. That message is that the rebirth process is filled with suffering, and the goal of a true Buddhist is to stop the rebirth process and attain Nibbāna. See, "Basic Framework of Buddha Dhamma."

## Tipiṭaka was written on Ola Leaves

12. It is also important to note that mass printing was not available until recent years and became common only in the 1800 s ; see, "WebLink: newworldencyclopedia.org: Printing press. "

- In the early days, Tipitaka was written on specially prepared leaves and needed to be re-written by hand every 100-200 years before they degraded. So, we must be gratefil to the bhikkhus in Sri Lanka who did this dutifully over almost 2000 years. That served another important purpose. That process automatically took into account any changes to the Sinhala script over those two thousand years! See, "Preservation of the Buddha Dhamma."
- Thus mass production of books became possible only with the new rotary printing presses in the middle of the 1800 s . By the time those key concepts had been mistranslated, printing had become widespread.
- WebLink: en.wikipedia.org: The Pāli Text Society was founded in 1881 by Rhys Davids and started printing those translations. So, it was unfortunate that those "distorted English translations" spread throughout the world.
- Luckily, we still have the original Pāli Tipitaka and three original commentaries.
- With the help of those three original Pāli commentaries, Waharaka Thero was able to "re-discover" the Buddha's original teachings over the past 25 years or so. Unfortunately, Waharaka Thero attained Parinibbāna recently; see, "Parinibbāna of Waharaka Thero."

## The Buddha prohibited the translation of Tipiṭaka to Sanskrit

13. The Buddha had foreseen the problems of a direct translation of the Tipitaka. He warned not to TRANSLATE the Tipitaka to ANY LANGUAGE, and particularly to Sanskrit. There were two Brahmins by the names of Yamela and Kekuṭa who were experts on the Vedic Texts. They became bhikkhus and asked the Buddha whether they should translate the Pāli suttā to Sanskrit.

- The Buddha admonished them that Sanskrit was a language with musical overtones developed by the high-minded Brahmins. Thus, it was impossible to convey the true meanings of Maghadhi (Pāli) words in Sanskrit; see WebLink: tipitaka.fandom.com: Chulavagga 5.33.
- In the Sutta Central English translation, the Pāli word for Sanskrit (Chandasa) is mistranslated as "metrical"; see, "WebLink: suttacentral: 15. Minor matters (Khuddaka)," which is the translation of "WebLink: suttacentral: 1. Khuddakavatthu." The relevant Pāli text is located close to the end, and starts as, "Tena kho pana samayena yamelakekuṭā nāma...".

## Role of the Commentaries To Tipitaka

14. Therefore, the Tipitaka was not translated even to the Sinhala language for 2000 years in Sri Lanka. Instead, commentaries were written in Sinhala to expand and explain the Tipitaka.

- Unfortunately, ALL those have been lost except for three commentaries in Pāli included in the Tipitaka. See, "Buddhaghosa and Visuddhimagga - Historical Background."
- With the above explanation, we can understand why those standards established in the late 1800 s actually distorted Buddha Dhamma. Of course, it was not intentional.

## Pāli Is a Unique Language

15. I cannot emphasize enough that Pāli is unlike any other modern language. Some meanings even come from how one pronounces words. Again to emphasize:

- Pāli does not have its own alphabet. Tipiṭaka was written in Pāli with Sinhala script.
- As the Buddha himself admonished, Sanskrit words cannot convey the meaning of Pāli words. That is because many Pāli words have been "Sanskritized," and that leads to much confusion. For example, there is no corresponding word for anatta in Sanskrit. But the Sanskrit word "anātma" is regularly used as the translation of "anatta." Anatta does not mean "no-self," but "anātma" does have that meaning, as mentioned above.
- While a Pāli-English dictionary could be useful in some cases, there are cases where they give wrong interpretations (anicca, anatta, pabha, etc.); see, "Pāli Dictionaries - Are They Reliable?."

## "San" Is a Unique Word in Pāli

16. A key Päli word, the meaning of which has been hidden for thousands of years, is "san" (pronounced like son). See the section on "What is "San"? Meaning of Sansāra (or Samsāra)."
17. In the Dhammapada verse,
"Aneka jāti sansāraì Aneka-jāti-samisāraì sandhāvissaì anibbisam்
sandā vissan anibbisan
gahakaram gavesan to
dukkhā jāti punappunam"
Gaha-kāraì gavesanto dukkhā jāti punappunaì
Gaha-kāraka dittho 'si puna geham na kāhasi
Sabbā te phāsukā bhaggā gaha-kūṭam visañkhataṃ
Visañkhāra-gataṃ cittaṃ taṇhānaṃ khayam-ajjhagā
For many lifetimes in the round of birth, Wandering on endlessly,
For the builder of this house I searched - How painful is repeated birth.
House-builder you've been seen, Another home you will not build, All your rafters have been snapped, Dismantled is your ridge-pole;
The non-constructing mind Has come to craving's end.

- There are four places above where "san" comes in. This verse captures the intense joy felt by the Buddha at the moment of attainment of Buddhahood.
- The word "san" appears very frequently in the Tipitaka. But it is often masked by the fact that in many places, it rhymes as "samं" in many word combinations as in "samisāra, "sampādeta, "Samma"; see, "What is "San"? Meaning of Sansara (or Samsara)."

## Critical Role of the Printing Press in Widespread Circulation of the Incorrect Interpretations

18. The printing press became widely available only after the rotary press was invented in 1843: "WebLink: newworldencyclopedia.org: Printing press. " As pointed out above, Rhys Davids started publishing the English translations of the Tipitaka in 1881. That led to the widespread circulation of the incorrect interpretations of those Early European scholars!

- Up to that time, the printed version of the Pāli Tipitaka was on specially prepared ola (palm) leaves; see, "Preservation of the Dhamma." This was a laborious process, as detailed in that post. Fortunately,
bhikkhus kept re-writing the Tipitaka material roughly every hundred years when the "old version" started degrading.
- The key point is that there were only versions of the original Tipitaka. It was not in wide circulation until the printing press was invented, just in time for the incorrect interpretations to be widely circulated. Rhys Davids started publishing the English translations of the Tipitaka in 1881.
- This is why there is no record of the correct interpretations of keywords like anicca and anatta in Sinhala. Those interpretations were in the original Sinhala commentaries (Sinhala Atthakath $\bar{a}$.) It is safe to assume that the same holds in other Asian countries.
- The invention of the printing press was a key factor in spreading the incorrect interpretations that early European scholars came up with (unintentionally)!

Also see, "Tipitaka Commentaries - Helpful or Misleading?".

### 14.16 Tipitaka Commentaries - Helpful or Misleading?

## December 6, 2017

1. I recently came across the following essay on Tipitaka commentaries: "WebLink: accesstoinsight.org: Beyond the Tipitaka : A Field Guide to Post-canonical Pāli Literature". It describes the importance of such commentaries in clarifying key concepts in the Tipitaka. I will present evidence to the contrary. In fact, such commentaries have introduced contradictory explanations.

- Over the years, I have also seen heated discussions on key concepts of Buddha Dhamma like anicca, anatta, and anidassana viññāṇa, on internet discussion boards.
- I often wonder about the immense amounts of time people waste on discussing the meaning of key Pāli words in Tipiṭaka suttā. They go back and forth between different interpretations without reaching a conclusion. I hardly see any issue resolved fully in such discussions. Same topic is discussed year after year without much progress.
- One key factor contributing to this confusion is those commentaries themselves; they are not consistent with Buddha's original teachings in the Tipitaka. The other key factor is the incorrect translation of key Pāli words. Both these issues are discussed below.

2. I hope this post would be helpful in thinking about a new approach to finding the "correct teachings of the Buddha". By discarding sources of incorrect interpretations once and for all, one could save a lot of time and really focus on making progress.

- When I seriously started studying different versions of Buddhism several years ago, this was the strategy that I used to eliminate "corrupt" or "contaminated" versions. I eliminated Mahāyāna, Vajrayana (Tibetan), and Zen versions first. After I came across desanās of Waharaka Thero, I was able to eliminate Visuddhimagga and other relatively recent commentaries. These steps are discussed in detail below.
- Then I was left out with just the Tipitaka and its three ancient, original commentaries, which were composed during the time of the Buddha; see below. A consistent picture that is crystal clear has emerged for me.
- I hope others can follow the same procedure. If everything can be understood within that framework, what is the need for more sources? As the principle of philosophy "WebLink: wiki: Occam's razor" (or Ockham's razor) says, simplest explanation without any inconsistencies is the best explanation.

3. My key assertion is that the Tipitaka, together with the three original commentaries of Patisambhidamagga, Petakopadesa, and Nettippakarana are sufficient to clarify the original teachings of the Buddha.

- This was made possible by my Noble teacher Waharaka Thero, who was able to discern the true meanings of key Pāli words with the help of those three original commentaries; see, "Parinibbāna of Waharaka Thero."
- At this website I present this self-consistent picture that came out of the efforts of Waharaka Thero.
- Note that I am not asking anyone to take what I present at this website as the correct version. It is up to each person to look at the evidence and decide. As far as I can see, everything at this site is consistent with the Tipitaka and is also self-consistent. I encourage all to point out any inconsistencies, because my goal is $100 \%$ consistency.
- Self-consistency, i.e., making sure that there are no contradictions is the scientific procedure used also by modern scientists to evaluate the validity of a scientific theory.

4. There is no need to consult any commentary other than the three original ones mentioned above. In fact, I have explained at length why the other key commentaries used today provide inaccurate and inconsistent explanations; see, "Historical Background."

The above mentioned essay (in \#1) is a good example of some misconceptions on the importance and validity of Tipitaka commentaries. When I say "commentaries" from now on below, they do not include the original three commentaries included with the Tipiṭaka.

- In the following, the statements within quotation marks and highlighted in red are from the above essay, and are accompanied by my comments pointing out the flaws in those statements.

5. "The Tipitaka (Pāli canon) assumed its final form at the Third Buddhist Council (ca. 250 BCE) and was first committed to writing sometime in the $1^{\text {st }}$ c. BCE. Shortly thereafter Buddhist scholar-monks in Sri Lanka and southern India began to amass a body of secondary literature: commentaries on the Tipitaka itself..."

- Not true. The original three commentaries mentioned in \#3 above (Patisambhidamagga, Petakopadesa, and Nettippakarana) were compiled during the time of the Buddha, and those still are in the Tipitaka itself:
- Those three original commentaries are in Pāli, but there were many others written in Sinhala language, and all of those have been lost, as discussed below.

6. 'Most of these texts were written in Sinhala, the language of Sri Lanka, but because Pāli — not Sinhala was the lingua franca of Theravāda, few Buddhist scholars outside Sri Lanka could study them. It wasn't until the $5^{\text {th }} \mathrm{c}$. CE, when the Indian monk Buddhaghosa began the laborious task of collating the ancient Sinhala commentaries and translating them into Pāli, that these books first became accessible to non-Sinhala speakers around the Buddhist world".

- This statement refers to those early Sinhala commentaries that have since been lost.
- It is correct that Buddhaghosa's Visuddhimagga - as well as other commentaries such as Vimuttimagga - were written in Pāli by Indian scholars.
- It is also important to note that incorrect translations of those Pāli words led to more problems when those were translated to English; see \#7 below.

7. "These commentaries (Atthakatha) offer meticulously detailed explanations and analyses - phrase-byphrase and word-by-word - of the corresponding passages in the Tipitaka."

- First of all, Atthakatha (a Sinhala word meaning "true accounts") were the ancient commentaries on Tipitaka written in Sinhala. They ALL have been lost; see, "Preservation of the Dhamma."
- So, it is misleading to refer to those as the commentaries in question. In contrast, the commentaries in circulation today are NOT those ancient Atthakatha, but more recent ones like Visuddhimagga.
- Buddhaghosa's mission was to translate the material in Sinhala Atthakatha to Pāli so that those bhikkhus in India could read them. Unfortunately, he incorporated many Vedic concepts; see, "Buddhaghosa's Visuddhimagga - A Focused Analysis."
- Further problems were introduced when Visuddhimagga was translated to English in recent times. Today, both the original Pāli version of Visuddhimagga and its recent English translation are available on Amazon; see Refs. 1 and 2 below.

8. "Almost everything we know today about the early years of Buddhism comes to us from these postcanonical books".

- This is completely false. In fact, those post canonical commentaries (such as Visuddhimagga) have "muddied the waters" than help.; see, "Buddhaghosa and Visuddhimagga - Historical Background" and "Buddhaghosa's Visuddhimagga - A Focused Analysis."
- What I am saying is to examine the evidence presented in those posts. If one agrees, then one can just remove Visuddhimagga as a reliable source. That itself will solve half the problem.
- The second problem is the incorrect translation of key Pali words in those commentaries as well as in Tipitaka suttā; see, "Misinterpretation of Anicca and Anatta by Early European Scholars."
- As I have presented evidence throughout this website, the Tipiṭaka and the three original commentaries are enough to guide us.

9. 'First, the chronicles and commentaries provide a vital thread of temporal continuity that links us, via the persons and historical events of the intervening centuries, to the Tipitaka's world of ancient India. A Tipitaka without this accompanying historical thread would forever be an isolated anachronism to us, its message lost in clouds of myth and fable, its pages left to gather dust in museum display cases alongside ancient Egyptian mummies..."

- There are no myths or fables in the Tipitaka. I would challenge anyone to show any evidence from the Tipitaka. This is an irresponsible and egregious statement.

10. "Second, almost everything we know today about the early years of Buddhism comes to us from these post-canonical books.."

- There is nothing in these commentaries that provide any significant information about the time of the Buddha. They may provide information about the time at which they were written. For example, Visuddhimagga was written about 800 years after the Buddha.

11. "One might reasonably wonder: how can a collection of texts written a thousand years after the Buddha's death possibly represent his teachings reliably? How can we be sure they aren't simply derivative works, colored by a host of irrelevant cultural accretions? First of all, although many of these texts were indeed first written in Pāli a thousand years after the Buddha, most Sinhala versions upon which they were based were written much earlier, having themselves been passed down via an ancient and reliable oral tradition..."

- This is the point I am making. We do know that, for example, Buddhaghosa distorted Buddhist meditation techniques, Ānäpāna meditation was misinterpreted as breath meditation and Hindu kasiña meditations were also incorporated,
- For details, see, "Buddhaghosa's Visuddhimagga - A Focused Analysis" and "Is Ānāpānasati Breath Meditation?."

12. "But what of the credentials of the commentators themselves: can their words be trusted? In addition to living a monastic life immersed in Dhamma, the compilers of the commentaries possessed unimpeachable literary credentials: intimate acquaintance with the Tipitaka, mastery of the Pāli and Sinhala languages, and expert skill in the art of careful scholarship. We have no reason to doubt either their abilities or the sincerity of their intentions".

- This is also a critical issue. As I discussed in those posts mentioned above, Buddhaghosa was a Vedic Brahmin and he distorted Ānāpāna to breath meditation and incorporated kasiṇa meditations into Visuddhimagga; no such kasina meditations are to be found anywhere in the Tipiṭaka.
- Like so many late commentators, Buddhaghosa was just another philosopher like Nagarjuna. By the way, Nagarjuna was also a commentator, and his work led to the rising of Mahāyāna version of Buddhism.
- I have discussed the drawbacks in Mahāyāna; see, for example, "Key Problems with Mahāyāna Teachings" and "Saddharma Pundarika Sutra (Lotus Sutra) - A Focused Analysis."
- Same kind of arguments can be applied to Tibetan Buddhism (Vajrayāna) and Chinese Zen Buddhism; all these are off-shoots of the original teachings in the Tipitaka; see, "Historical Background." In fact, it is well-worth the time to read this section before coming to any conclusions.

13. "And what of their first-hand understanding of Dhamma: if the commentators were scholars first and foremost, would they have had sufficient meditative experience to write with authority on the subject of meditation? This is more problematic".

- This is the only statement that I agree with. They were just "scholars" and philosophers, who had not made any progress in actual practice.
- This is true today as well. Many "scholars" have written books on Buddha Dhamma without having any significant progress in following the Noble Path. In fact, many are not even nominally Buddhists; some are "secular Buddhists" who do not believe in rebirth or Nibbāna; see, "Buddhism without Rebirth and Nibbāna?."
- I am not trying to put them down. They do serve a meritorious purpose in teaching how to live a moral life. However, those books/journal papers/websites cannot be used to clarify deeper teachings in the Tipitaka.

14. A key point missing in the current discussion is that it is not possible to comprehend the key concepts like anicca and anatta without at least attaining the Sotāpanna stage of Nibbäna. However, these days, people tend to gauge the qualifications by checking only whether a given person is an "academic scholar".

- Just like only a practicing physician can truly understand and diagnose a patient, not one who has just studied medical text books.
- Only an Ariya (a Noble person) - who has practiced the true teachings and at least attained the Sotāpanna stage of Nibbāna - can comprehend deep concepts like anicca, anatta, viññāna, and saññā. One cannot fully understand such deep concepts by just studying or reading about them. For example, see, "What is Saññā (Perception)?""

15. The most referred to commentaries (these days) are Buddhaghosa's WebLink: wiki: Visuddhimagga and Upatissa's WebLink: wiki: Vimuttimagga (to a much less extent). The original Päli text for the latter was long believed to have been lost; for centuries, discussions about the text therefore relied on a $5^{\text {th }} \mathrm{c}$. Chinese edition.

- As we have established, those later commentaries - including Visuddhimagga and Vimuttimagga were written in Pāli.

16. Therefore, those late commentaries lead to confusion in two ways:

- One is the erroneous interpretations by the commentators themselves, as discussed above.
- The other is incorrect translations - initially done by early European scholars - in translating key Pāli terms incorrectly; see, for example, "Misinterpretation of Anicca and Anatta by Early European Scholars." This has made the situation even worse.

These are two critical points to consider by those who are tempted to refer to those late commentaries. I cannot emphasize the importance of those two points enough.
17. Then there are those who quote from Chinese $\overline{A g a m a}$. Even though those original Chinese documents COULD BE authentic, my point is that they were also derived from the Tipitaka and thus serve no purpose as additional resources.

- They could be valuable for those who are proficient in Chinese but cannot read Pāli, Sinhala, or English.

18. Finally, to re-emphasize my main point: The Tipitaka - together with the three original commentaries included in it - are sufficient to clarify the original teachings of the Buddha. The goal of this website is to have such a consistent clarification of Buddha's teachings in English at one place.

- Using just the Tipitaka, I have also pointed out some current misinterpretations in Theravāda Buddhism, mainly due to the influence of Buddhaghosa's Visuddhimagga; see, "Incorrect Theravāda Interpretations - Historical Timeline" and posts referred there.
- There still could be some minor inconsistencies at the website, and I am appreciative of those readers who have pointed out some of them that have led to improvements. But I have high confidence in the correctness of key concepts.
- Please do not hesitate to comment on any inconsistency with the Tipitaka or within the website. However, for the reasons that I have detailed, please do not quote from any other sources.

o "The Five Precepts - Panca Sila"
o "Sutta Chanting (with Pāli Text)"
o "Sadhu - Symbolizes Purified Hadaya Vatthu (Mind)"

### 15.1 Buddhist Chanting - Introduction

## Revised February 11, 2021

1. This section on Chanting helps cultivates saddh $\bar{a}$ (faith) in the Buddha, Dhamma, and Sañgha. Which also helps calm the mind and grasp more profound concepts. For those who believe that there is no value in these "ritual-like" procedures, it may be a good idea to read the post, "Panca Indriya and Panca Bala- Five Faculties and Five Powers."

- If done with understanding, these are not rituals as in "silabbata paramasa".
- Therefore, as I keep adding items to this section, I will try to provide the deep meanings behind these "seemingly ritualistic" chantings.
- In addition to the deeper meanings, there are subtle benefits in listening to chantings, especially those by Ariyā or Noble Persons. This is why I decided to add the sound recordings by the Venerable Thero.

2. The Buddha said that the mind takes precedence over everything else. Our thoughts control our speech and bodily actions. And these thoughts get their moral power from wisdom (paññ̄ $\bar{a}$ ) and the joyful state ( $p \bar{i} t i$ or "preethi") of the mind.

- One can make a given meritorious deed much more powerful by doing it with joy and understanding. The most potent kusala citta is done with "joy and understanding" (a somanassa-sahagata, ñānasampayutta citta); see, "Javana of a Citta - Root of Mental Power."
- Recent scientific studies are beginning to illustrate the power of the focused mind. See, for example, "The Biology of Belief' by Bruce H. Lipton (2008) and "Biocentrism" by Robert Lanza (2009).
- Thus chanting done with understanding can have benefits, especially for those who have a dominant "saddhā indriya" or have a high degree of faith in the Buddha or Buddha Dhamma.

3. However, one should not force anything on the mind. If chanting is not something that appeals to someone, then it should not be forced. Different people start off with different tendencies (i.e., they have a dominant faculty or power, see, "Panca Indriya and Panca Bala- Five Faculties and Five Powers"). Out of sati, saddh $\bar{a}$, viriya, samādhi, and pañña , the dominant one should be the focus. As one cultivates the Path, the other four will also grow.

- This is also related to the concept of how one's character (gathi) and habits change as one follows the Path. Then one's tendencies, associations, etc., will also gradually change; see, "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsavas)."
- Thus one may want to concentrate just on the topics on the site that are appealing to oneself. Once in a while, one can take a look at other sections and see whether their opinions on those sections have changed or not.
- The main thing is to stay on the path of least resistance and the topics that can be easily comprehended.

3. A useful resource is "WebLink: buddhistelibrary.org: Vandanā: The Album of Pāli Devotional Chanting \& Hymns. "

Next, "Namaskaraya - Homage to the Buddha",

### 15.2 Namaskaraya - Homage to the Buddha

1. In the Theravāda tradition, it is customary to pay homage to the Buddha (Namaskāraya; pronounced "namaskāraya), recite the Three Refuges (Tisarana, where "ti" is three and "sarana" means refuge or protection; pronounced "Thisarana") and undertake to observe the five precepts (Panca Silla; pronounced "pancha seela") on visiting a place of worship or before starting a meditation session.

- Some people just do the Namaskāraya if they do not have time to recite the Tisarana (Refuge in Buddha, Dhamma, Sañgha) or the Panca Sila (five precepts; sometimes eight or ten precepts).

2. One can recite the following stanza three times by oneself or at more formal occasions (e.g., visiting a temple) a Buddhist monk administers them.
"Namo tassa bhagavato arahato sammā sambuddhassa"

- A brief translation is, "I pay homage to the fully Enlightened One who found the truth about the existence and became free of all defilements".
- Another conventional translation is, "I pay homage to the Blessed One, the Exalted One, the fully Enlightened One".
- The deeper meaning is discussed below.

3. Both interpretations are important. For someone starting out, without much knowledge of Dhamma (but still sees the value in Dhamma) and thus wishes to pay respects to the Buddha, the conventional meaning itself is the dominant.

- But the Buddha himself said that the best way to pay homage to him is to learn Dhamma and to follow the Path. That is the more deeper meaning of the Namaskäraya. But they also have the reverence for the Buddha himself. As the knowledge in Dhamma grows, the second interpretation becomes clear, while not losing the first.

4. Here is a recital of the Namaskāraya by a Venerable Thero (volume adjustment on the right). It is normally recited three times:

WebLink: Listen to verse of: Namaskāraya

You can download the file below by clicking "DOWNLOAD". You can play it there or right-click on the screen and choose "save as.." to save to your computer.
Download
More audio files are at: "Sutta Chanting (with Pali Text)."

## Namaskāraya - What Does it Really Mean?

"Namo tassa bhagavato arahato sammā sambuddhassa"

1. Most Pāli verses have two (or more) meanings: one is the conventional ("padaparama") meaning, and the other is the deeper meaning that helps understand the deeper idea behind the verse. Unfortunately, most times it is the conventional idea that that is brought out when translating even whole sutt $\bar{a}$.

- In the case of suttā, a sutta that was delivered over an hour (sometimes many hours, like the Dhamma chakka pavattana sutta) is normally translated word-to-word in a few pages; see, "Sutta Interpretations."
- As I explained in the post, "Preservation of the Dhamma", most existing sutta translations are incomplete at best, and erroneous most of the time.
- Even the conventional meaning can be useful in some cases, like in namaskāraya, Tisarana, and the five precepts. For those who do not have a deeper understanding, the deeper meanings may not serve the
purpose of bringing "joy to the heart" or "citta pasāda" (pronounced "citta pasāda"); for a deeper discussion on citta pasāda, see, "Javana of a Citta - The Root of Mental Power."
- Thus for those who are new to the deeper meanings in Dhamma, the conventional interpretations may be a good start. As knowledge in Dhamma grows, the second interpretation becomes clear without losing the first, i.e., reverence to the person himself can also only grow as one learns how valuable his Dhamma is.

2. What we have here is a short phrase that can be correctly translated in a short essay. Let us see what is really meant by this verse.

- "Namo" means incline as in accepting something with this reverence because of its value; "tassa" means "to this" or "because of this". This is why we bend our heads to signify this.
- "bhaga" is to separate and "vata" is the usually translated as body, but it has more wider meaning to anything in this world. The Buddha, in trying to show that uselessness of clinging to one's body, advised to separate the body into 32 parts and see that there is nothing substantial in any of the parts. Even though we highly value our bodies, it will decay with old age, and will eventually give us only sicknesses and ailments. And it will last only about 100 years.
- In the wider sense, anything in this world can be divided into parts and be shown that there is nothing substantial in them.
- Once we see that it is unfruitful to cling our bodies (and anythings in general), we lose the craving ("raha" in Pāli or Sinhala) and become "arahant"(from "a" + "raha"). The word Arahant also comes from this meaning, i.e., someone who has given up craving for worldly things, by comprehending the true nature.
- As we saw in the post, "What is "San?" - the Meaning of Samisāra", "san" means accumulating worldly things. " $m a$ " means become free of doing that. Thus "samm $\vec{a}$ " (san+ma) means "stop accumulating worldly stuff that will only cause suffering in the end".
- The accumulation of worldly things lead to preparation of future births or "bhava".Sambuddhassa (san $+b h u+u d d a s s a$ ) means "remove from the root the causes for preparing bhava via accumulating san", i.e., become free of the rebirth process or to work towards Nibbāna.

3. Now we can see the whole verse:
"By analyzing my body and other worldly things with wisdom, I have come to understand the unfruitfulness of clinging to such things, and I incline to rout out the rebirth process (i.e., existence in the 31 realms) and attain Nibbāna".

- Here incline means one keeps "bent on attaining that goal". With deeper understanding of Dhamma one's resolve will be strengthened. As with most things in Buddha Dhamma, it is always about one's mind.
- The resolve has to come through understanding. There is no one watching, and no one else monitoring the progress; it is one's own mind that is doing all that.

4. Finally, the word namaskāraya (nama+as+kāraya, where "nama" is one's name, "as" pronounced like "us" means remove, and "kāraya" means doing) conveys the idea that one is making a resolve to get rid of the attachment one has for one's worldly things. It is a condensed version of the verse.

- Of course the conventional meaning of "namaskāraya" is "paying homage".

### 15.3 Supreme Qualities of Buddha, Dhamma, Sangha

May 28, 2016 ; revised October 1, 2018; April 26,2020; August 27, 2022

## Introduction

1. It is traditional to start a meditation session with an homage to the Buddha (Namaskāraya):

- Namo tassa bhagavato arahato sammāsambuddhassa
- Namo tassa bhagavato arahato sammāsambuddhassa
- Namo tassa bhagavato arahato sammāsambuddhassa
and then recite the supreme qualities of the Buddha, Dhamma, and Sañgha.
Here is a recital of the Namaskāraya by the Venerable Thero (you need to adjust the volume control on your computer). It is normally recited three times: WebLink: mp3 audio: Namaskāraya - Homage to the Buddha
- The meaning of the above phrase is described in "Namāskaraya - Homage to the Buddha."

## The 24 Supreme Qualities

2. There are nine, six, and nine supreme qualities attributed to the Buddha, Dhamma, and Sangha respectively.

- These are listed and discussed in several suttā in the Dīgha Nikāya of the Tipitaka.
- For example, see "10. Dhammādāsadhammapariyāya" section of the "Mahā Parinibbāna Sutta (DN 16)."
- The Buddha tells Ven. Ananda that when one becomes a Sotāpanna, one would begin to understand these qualities and will have "unbreakable faith" in the Buddha, Dhamma, Sangha (Tiratana, or Three Jewels.)

3. The 24 supreme qualities are called "suvisi guṇa," where suvisi means 24 and guṇa are the qualities. There are two main ways to interpret and utilize these 24 qualities.

- Chanting of these qualities can provide a calming effect on the mind and is normally done before a formal meditation session; see "Tisarana Vandanā and Its Effects on One's Gati."
- The meaning of the word "vandana"" is "va" + "andha" + "na", where "va" is for "vaya" or destroy, "andha" is for blind, and "n $\bar{a} "$ is for "ny $\bar{a} y a "$ or the procedure for getting rid of moral blindness and attaining Nibbāna. The path to attaining Nibbāna is encoded in the Tiratana vandanā. We will discuss this in detail in a future post.
- Also, this chanting is alternatively called Tiratana vandan $\bar{a}$ (where Tiratana means the Three Jewels) OR Tisarana vandanā (where Tisarana means "guidance from the Three Jewels"). It is imperative to recite them correctly.
Here is a recording of the Tiratana Vandanā by the Venerable Thero (You need to control the volume level on your computer):

```
WebLink:Listen to the verses of Tiratana Vandana
```

- The recital should break at places where there is a coma to state each quality separately and should not break in the middle (e.g., no breaks in anuttaro purisadamma sārathi); see below.

4. These qualities can only be partially understood and never fully grasped. If a person with a mathematics Ph.D. teaches addition/subtraction to a first-grade student, that student cannot fully appreciate the capabilities
or qualifications of the teacher. When the same student grows up and learns higher mathematics later from the same teacher at a university, he can appreciate the teacher's capabilities more.

- In the same way, the qualities of the Three Jewels can be appreciated only with more learning of Dhamma. When I first wrote the original post on this subject more than a year ago, my understanding was much less than now. In the meantime, I have understood more and also experienced the power of the recital of these qualities.

## Supreme Qualities of the Buddha

5. Correct Recital: itipi so bhagavā arahain sammāsambuddho vijjācaraṇasampanno sugato lokavidū anuttaro purisadammasārathi satthā devamanussānaì buddho bhagavā'ti.

- It is imperative to break the phrase "itipi so" into two words; "so" means "him."
- Most people recite it as a single word "itipiso" and that gives not only an incorrect but a derogatory meaning: "piso" is for "pisācha" or a "lowly being like a preta."
- "itipi so Bhagava" means "because of (the following qualities) he (Buddha) is."

6. There are nine qualities of the Buddha stated in the above verse. Each quality is impossible for a human being to describe fully.

- As one learns more and more Dhamma, one truly begins to understand the value of a Buddha. It is said that an Anāgāmī can better understand the qualities of a Buddha than a Sotāpanna, and an Arahant even better.

7. Here is the list of the nine qualities:

- Arahaím - " $A$ " + "rahaí" or not a trace of defilement (attachment for sense pleasures) left.
- Sammāsambuddho - - "San" + "mā" + "sambhava" + "uddha", or who discovered the way to dissociate from this suffering-filled world by removing "san"; see, "What is "San"? Meaning of Sansāra (or Samsāra)."
- Vijjacharanasampanno - "Vijja" (science or knowledge) + "carana" + "san" + "panno" or perfectly knowledgeable about how the world arises (out of "san").
- Sugato - Ultimate in "su" + "gati" or "good qualities."
- Lokavidü - "Loka" + "vidu," or having the ability to examine and explain any of the three worlds that encompass everything: world of mental formations (Sankharaloka), the world of beings (Sattaloka), the world of things (Okasaloka).
- Anuttaro purisadammasārathi - "Purisa" here is not a gender: purisa dhamma is the highest qualities; "anuttara" means unmatched. [purisadammasārathi : the modesty of the man. damma :[adj.] tamed or trained. sārathi :[m.] a charioteer; a coachman; a driver.]
- Satthā devamanussanan - Teacher of celestial and human beings.
- Buddho - Perfectly Enlightened, uprooted all "bhava" (bhava uddha).
- Bhagavā or Bhagavath - "Bha" + "ga" + "vatha" - Able to examine a living being's origin in many different ways. Here "Bha" is bhava or existence, and "ga" means connection or relationship, and "vatha" is the form of any being.

8. The above is, of course, not the only meaning. Since each word describes the infinite qualities of the Buddha, there are other meanings. Thus it is best not to get hang-up on the translations above.

- It is best to get an idea of these qualities and ALWAYS recite them in Pāli. As one's understanding grows, one will realize the meanings better.
- Pāli is a phonetic language. Meanings come via sounds. Thus what is imperative is to be able to recite the Pāli phrase above to the best of one's ability. I provided the recordings at the end of the post, where my teacher Thero recites them as they should be.

## Supreme Qualities of the Dhamma

9. There are six supreme qualities of Dhamma:
"Svākkhāto bhagavatā dhammo sandiṭthiko akāliko ehipassiko opaneyyiko paccattaim veditabbo viññūhīti"

First, Bhagavathā Dhammo is the Dhamma taught by the Buddha.

- Svākkātho - leads to the removal of sansāric suffering via getting out of the 31 realms. Here "svakkata" ("sva" for "self" and "akkata" or "akrutha" or "akriya" means putting out of action) means getting rid of the concept of a "me" (asmai māna). It is not about whether a "self" exists; it is rather to realize that nothing in this world is worth being considered "mine."
- Sandiṭthika - It allows one to comprehend "san" ("san" + "dițthi"), the key reason for the existence in this world; see, "What is "San"? Meaning of Sansāra (or Samsāra)."
- Akaliko - This Dhamma does not change over time; it is the same Dhamma that is delivered by all Buddhas (" $a$ " + " $k \bar{a} l i k a$ "). Another meaning is that it leads to the removal of darkness (due to $a v i j j \bar{a}$ ); here, "kalu" means "black" or "darkness." [kālika :[adj.] temporal = relating to time.]
- Ehipassiko - "Ehi" + "passika" or defilements can be removed ("passika") when each $\bar{a} r a m m a n a$ comes to the mind ("Ehi"). One does not wait to remove defilements in a formal meditation session. Rather, one takes care of that at each instant when an immoral thought comes to the mind (with Ānāpāna or Satipaṭthāna). See "Is Ānāpānasati Breath Meditation?." [ehi :[imper. of eti] come, come here.]
- Opanayiko - "Opa" + "naiko," where "Opa" means "upata" or "origins" and "nyāya" means the principle or nature. Thus, one can comprehend how each existence (bhava and $j \bar{a} t i$ ) arises.
- Paccattam vedittabbo vinnuhi- "paccaya" can be understood by looking at the origins (veda or vedic): vedittabbo. "Vinnu" means the hidden can be seen (like something hidden in a vessel by piercing it). Anything in this world arises due to Paṭicca Samuppāda. Thus, Dhamma allows one to "see-through" how this whole world, together with all the suffering, arises.

## Supreme Qualities of the Sangha

10. Here it must be noted that Sañgha is not bhikkhus. Sañgha means the Nobles or Ariyā, those who have attained one of the magga phala. (Sañgha means one who has removed "san," i.e., "san" + "gha").
"Suppațipanno bhagavato sāvakasañgho, ujuppaṭipanno bhagavato sāvakasañgho, ñāyappațipanno bhagavato sāvakasañgho, sāmīcippaṭipanno bhagavato sāvakasañgho yadidaỉ cattāri purisayugāni aṭtha purisapuggalā, esa bhagavato sāvakasañgho āhuneyyo pāhuneyyo dakkhiṇeyyo añjalikaran̄̄yo anuttarain puñ̃̃akkhettain lokassā'ti.
11. Bhagavato savakasangho means Noble disciples of the Buddha. The first four phrases describe four Noble qualities: Suppatipanno, ujuppațipanno, ñāyappatipanno, and sāmīcippatipanno.

- Pațipanno means "having such quality": "Su" means goodness and morality; "uju" means straightforward and not crooked in character; "nāya" means $\tilde{n} \bar{a} n a$ or wise; "sāmici" means pleasant to associate. Thus, it is easy to understand what those phrases mean. But as with all these qualities, it is not possible to describe them fully in words.

12. "Yadidamं cattāri purisayugāni atṭha purisapuggalä" means thus described eight types of persons (atṭha purisapuggalā) of four Noble (purisa) lineages. Eight types come when each stage is divided into two: e.g., Arahant magga and Arahant phala.
13. Then, starting with "esa bhagavato sāvakasañgho" (i.e., those Noble disciples of the Buddha), five more qualities are stated: āhuneyyo pāhuneyyo dakkhineyyo añjalikaraṇī̀o anuttaraì puññakkhettaì lokassa.

- In those words, "neyyo" means niyama dhamma or core principle of nature; also called "nyāma." Then "āhu" means "grasped," "pāhu" means "inseparable" or "fused together", "dakkhi" means "see." Thus those disciples have seen the core principles of nature (paticcca samuppāda), have grasped them, and will not be separated from them ever.
- Because of that, they can dissolve and remove the causes (food) that fuel the sansāric journey: anjalikaraneeyo. Here "an" means "āhāra" or causes, "jali" is water (dissolve), and karan̄īyo means "do." Another meaning of "an" is "horn" with sharp tips (as in a bull), which can hurt others; here, añjalikaraṇìyo means dissolving them (by cultivating Metta) so that they cannot hurt others.
- Anuttaram puñnakkhettaim: anuttara is unmatched, puñna is meritorious, and khetta is for a field. Thus, these disciples are like fertile fields, that can provide unlimited resources to others (just like a wellcultivated field can provide food for many).

Here is a recital of the Namaskaraya by the Venerable Thero (you need to adjust volume control on your computer). It is normally recited three times:

## 15.4 <br> The Five Precepts - Pañca Sila

## Revised February 12, 2020

1. The five precepts (pañca sīla; pronounced "pancha seela") are normally recited after paying homage to the Buddha (Namaskāraya), and then taking the refuge (Tisarana), i.e., one says nine times that one takes the refuge in the Buddha, Dhamma, and the Sangha. In the following they are combined, as customary; see the previous post for pronunciations and details.

- Even for a Buddhist, it is not necessary to recite the precepts.
- It is important to keep in mind that JUST BY RECITING PRECEPTS does not do anything to purify the mind. The Buddha said, "Yaim samādānaí taiं vataí, Sai்varatṭena sīlaí," or "reciting precepts is a ritual ("vata"), moral behavior is attained by seeing and controlling 'san'."
- However, it is good to recite Namaskāraya, Tisarana, and the precepts, to attain citta pasāda or calmness and joy of mind, especially before a formal meditation session. If one does it WITH UNDERSTANDING and RESOLVE, it can bring benefits.
- Furthermore, reciting precepts and suttā is preferred by those with developed saddhā (faith) indriya; see, "Pañca Indriya and Pañca Bala - Five Faculties and Five Powers." For those who lack saddhā indriya, this may be something they want to consider doing.

2. It is important to realize that the five precepts have deep meanings, and thus should not be taken lightly; see, "The Five Precepts - What the Buddha Meant by Them." The true meaning of the five precepts are discussed there.

- Only an Arahant is capable of strictly keeping those precepts (abstaining from all ten defilements or dasa akusala); thus one needs to recite with the intention of doing one's best to keep the precepts. Otherwise, we will be lying from the outset.

Here a Venerable Thero is reciting the Namaskāraya, Tisarana, and the five precepts with the audience repeating them (volume adjustment on the right):

## WebLink: Listen to verse of: Pansil

Here is a pdf file with the text and translation:

## WebLink: PDF File: Pañca Sila (click to open)

3. To emphasize, these English translations are the conventional ("padaparama") or mundane ones and the real meanings are discussed in "The Five Precepts - What the Buddha Meant by Them." Also, while reciting, one needs to keep in mind that one is promising to do one's best to keep the precepts.

### 15.5 Sutta Chanting (with Pali Text)

Revised August 14, 2016: Added more suttā at the end.
Following are recordings of three popular suttā by a Venerable Thero and the corresponding Pāli texts. At some point, I will make English translations. Most existing translations provide only the mundane ("padaparama") meanings.

Please note that a few sutt $\bar{a}$ are translated and discussed in the section "Sutta Interpretations."

## 1. Karaniya Metta Sutta (volume adjustment on the right):

### 15.6 Sādhu - Symbolizes Purified Hadaya Vatthu (Mind)

## Revised February 21, 2019

1. It is customary to say "Sādhu! Sādhu! Sādhu!" before and after reciting precepts, a meditation session, chanting sutta, or a meritorious act (by oneself or another). Since anything is done for a purpose in Buddha Dhamma, it is good to understand why it is done.

- Sādhu comes from "sa" and "hadaya" or a purified heart (not the physical heart, but the hadaya vatthu where thoughts arise).

2. It is important to realize that our minds are associated with the hadaya vatthu, which is in the manomaya $k \overline{a y a}$ and is aligned close to the physical heart; see, "Ghost in the Machine - Synonym for the Manomaya Kāya?" This is why in a traumatic or joyful event we feel it in the heart, and not in the brain. Brain is like a computer, and when it is overworked, it causes headaches. But our feelings of love, hate etc. are felt close to the physical heart, in the hadaya vatthu.

## How is one's heart (and mind) purified?

- "Kāyena sanvaro sādhu, sādhu vācaya sanvaro; manasā sanvaro sādhu, sādhu sabbatta sanvaro"
- "The heart is purified via moral discipline; one needs to act, speak, and think morally"

Thus when a meritorious deed is done by oneself or another, it is customary to say, "sādhu". It reinforces the "goodness" of the deed and one makes a determination to do more; the lightness of the heart can be felt if one does it with understanding.
3. Our hearts are darkened with greed, hate, and ignorance of Tilakkhana. As we purify the mind, the darkness fades away and the "white light emerges"; it is like lighting a lamp gets rid of the darkness. Heart becomes joyful.

We get rid of greed, hate, and ignorance via staying away from the ten defilements:

- When we abstain from killing, stealing, and inappropriate conduct (including but not limited to sexual conduct), we are cultivating moral discipline through bodily acts.
- Abstinence from lying, vain talk, gossiping, and hateful speech leads to moral discipline through speech.
- When we forcefully control our bodily acts and speech, the mind will gradually calm down because we thus reduce abhijjā [abhijjhā] (strong greed) and vyāpāda (strong hate). Then we can cultivate samm $\bar{a}$ ditṭhi via comprehending the Tilakkhaṇa; this leads to reduction of micch $\bar{a}$ dittthi too (abhijja $\bar{a}$ [abhijjh $\bar{a}$ ], vy $\bar{a} p \bar{a} d a$, and micchā diṭthi are the three akusala kamma done with the mind). This is the step-by-step procedure that is discussed in the Bhāvanā (meditation) section.

4. Thus we can see that by saying "sādhu" mindfully, what we are doing is to make a firm determination to get rid of the ten defilements (dasa akusala) and thus to purify the mind and heart. Or, we are agreeing with a good deed done by someone else, and share the merits of that deed.
5. Now, what is the significance of putting the open hands together when saying "Sadhu!"?

- The gesture that we make by opening the hands fully, putting them together, and bringing them close to the heart or top of head also signify this determination. "With all my heart I make a commitment", or "this commitment stands above everything else", or "I agree wholeheartedly".

The strengthening of the fingers versus making a fist embody two basic characteristics of human nature.

- One makes a fist when hitting someone in anger. Also, someone caught doing a misdeed has clenched hands in addition to a bent posture (you have seen pictures of criminals being hauled off to jail in such timid postures).
- In contrast, open hands indicate "I have not aggressive intentions" as when putting up hands indicating one has no desire to fight. Furthermore, as you may have noticed, people when say "Sādhu!" normally have their backs straight too, especially if they are doing with a joyful mind.

6. As mentioned above, one can make a given meritorious deed much more powerful by doing it with joy and knowledge; such thoughts should be there during that act and also when saying "Sādhu!" at the beginning and end. The most potent kusala citta are done with "joy and understanding" ("a somanassasahagata, ñāṇa-sampayutta citta"; see, "Javana of a Citta - Root of Mental Power".

## xvi Dhammapada

- "Manopubbangamā Dhammā.."
o "Sabba Pāpassa Akaranan...."
o "Appamado Amata Padam...."
- "Najajja Vasalo Hoti......"
- "Arogya Parama Labha.."
- "Anicca vata Sankhara...."
- "Attā Hi Attano Nātho"

### 16.1 Manopubbangamā Dhammā..

May 5, 2018; revised August 22, 2019; November 17, 2019; September 15, 2020; August 29, 2022 (added \#6)
Mano pubbañgammā dhammā, mano setṭhā manomayā; manasā ce paduṭthena, bhāsati vā karoti vā; tato naì dukkhamanveti, cakkaì va vahato padaì.

Mano pubbañgammā dhammā, mano setṭhā manomayā; manasā ce pasannena, bhāsati vā karoti vā; tato nà̀ sukhamanveti, chāy $\bar{a} v a$ anapāyinī.

## (Dhammapada verses 1 and 2)

1. These two verses encompass the critical idea in Buddha Dhamma: That mind is at the forefront. This whole world is made of the mind and has the mind as the basis for everything.

- Mano is, of course, the mind. Dhammā (plural, not Buddha Dhamma) are the energies the mind generates (via javana power.) Dhammā means "to bear," meaning "everything arises due to Dhammā."
- Those dhammā then give rise to everything (all phenomena) in this world - whether living or inert.
- Pubbañgama (pubba + añga) means what comes first. The first line (in both verses) says the mind creates all dhamm $\bar{a}$ that give rise to everything in this world. The second line says, everything is prepared (sett $\bar{a}$ ) and manifests in mind (manomay $\bar{a}$ ).
- The mind creates those Dhammā with thoughts (sañkhāra.) That requires a lengthy explanation that can go to profound levels: "Buddha Dhamma - A Scientific Approach" and "Worldview of the Buddha."

2. Depending on whether one speaks (bhāsati) and acts (karoti) with a defiled (padutta) or a pleasant (pasanna) mind, those dhamm $\bar{a}$ that are generated by the mind lead to (tato nam) suffering (dukkhamanveti), or happiness (sukhamanveti).

- In the case of a defiled mind (acting with lobha, dosa, moha), suffering will follow just as a wheel of a cart follows the footsteps of the ox pulling it (cakkamva vahato padam).
- In the case of a pleasant, moral mind (acting with alobha, adosa, amoha), happiness will follow one just as one's shadow follows oneself (chāyāva anapāyani).

3. These two verses can be interpreted mundanely, as outlined in \#2 above. Any given task with an undefiled mind will always lead to a pleasant and joyous state of mind.

- There is a more in-depth interpretation. Thoughts, speech, and actions done with a defiled mind (lobha, dosa, moha) can lead to births in the $a p \bar{a} y \bar{a}$ and, thus, to a high degree of suffering. Those done with a pleasant mind (alobha, adosa, amoha) will lead to births in the "good realms," and will eventually lead to Nibbāna, the end of all suffering.
- The first several subsections of the "Origin of Life," discuss viewpoints about the origin of life. That extensively discusses religious and scientific viewpoints and the Buddha's worldview.

4. Now we can loosely translate the two verses as follows:

- All phenomena have the mind as their forerunner; they all are mind-made. If one speaks or acts with an evil mind (i.e., engages in dasa akusala), then suffering (dukha) will follow just as the wheels of a cart follow the footsteps of the ox pulling the cart.
- All phenomena have the mind as their forerunner; they all are mind-made. If one speaks or acts with a purified mind (i.e., engages in dasa kusala and puñ̃a kamma), happiness (sukha) follows one like one's own shadow. That is the source of "nirāmisa sukha," which eventually leads to Nibbāna.

5. I found a youtube video with the Pāli recital; it may take a minute to download. The two verses start respectively at 0.30 and 2.18 minutes:

WebLink: Youtube: Dhammapada - Yamaka Vaggo - Part 01

### 16.2 Sabba Pāpassa Akaraṇaṃ....

## Revised June 6, 2020; October 28, 2020

"Sabba pāpassa akaraṇaim, kusalassa upasampadā; Sacitta pariyo dapanam், età் Buddhānasāsanà்"
(Dhammapada verse 183)
Let us see what is meant by the verse:

- $S a b b a=$ all; $p \bar{a} p a s s a=$ immoral deeds/speech/thoughts; akarana $=(a+$ karana $)=$ do not engaged in
- kusalassa $=$ moral deeds/speech/thoughts; upasampad $\bar{a}=u p a+$ san + pad $\bar{a}=$ sort out "san" and embrace kusala; see, "What is "San?"
- sacitta $=$ sa + citta $=$ one's own thoughts; pariyo dapanam $=$ pari $+y o+$ dapanam $=$ control at the onset (where "dapana" means control and "yo" means origin and "pari" means around)
- Buddha āna = All Buddhas' niyama or principle. Another meaning is Buddha + anusāsana $=$ Buddha's advice or his "doctrine."

Note: The process of "cleansing the mind" is what this website is about. See, "Sila, Samādhi, Pannā to Pannā, Silla, Samādhi" and "Living Dhamma."

Therefore, we can summarize as follows:
"Discard all that is immoral, what should not be done
Take in what is moral by sorting out "san."
Do this by controlling one's own thoughts (mind)
This is the doctrine of the Buddhas."
Here is a recording of the verse recited by a Venerable Thero; it keeps repeating several times:

Next, "Appamado Amata Padam....", .........

### 16.3 Appamādo Amata Padam....

Appamādo amata padam
pamādo maccuno padam
appamattā na meeyanthi
ye pamattā yathā matā.
(Dhammapada verse Verse 21, Samavati Vatthu)

- Appamāda is "doing without delay" and pamāda is being delayed.
- Mata (pronounced "matha") is death, and amata is deathless, another word for Nibbāna. Maccuno (pronounced "machchuno") is also death, so is meeyanthi.
- Pada means "word" (most of these words are also Sinhala words).
- Appamatt $\bar{a}$ is one who is not delayed, pamatta is one who is delayed.
- Yathā is "true status".

## Now we can extract the MEANING of the verse as:

Hastening is a "deathless word"<br>Delay is a "death sentence"<br>One who makes haste attains the deathless status<br>One who negligent is like already dead

1. Thus someone who is delayed in seeking Nibbāna (either due to not knowing Buddha Dhamma or just procrastinates in following the Path) is like a dead person even while living. He/she will be facing innumerable deaths in the future.

- But someone who strives and attains Nibbāna has already reached the "deathless state". Because after attaining Nibbāna, all future deaths are stopped: No more future rebirths and thus no more deaths.
- One actually attains the "deathless state" when one becomes one of the 8 Noble Persons (attha purisa puggala). This is because once one becomes an Ariya (Nobel Person), one will never lose it, and will never be born in an apāya. Thus one can be said to "born" as an Ariya, when one becomes a Sotāpanna Anugāmi; see,"Sotāpanna Anugāmi - No More Births in the Apāyā."

2. There are two reasons for the urgency:
a. The time of death is unpredictable. Even a young, healthy person may die via an accident or other unforeseeable cause.
b. As we get old, our brains start to degrade and thus our minds will not be able to grasp the Dhamma.
3. Many Buddhists that I know say they want to "enjoy life while young" and then start focusing on Nibbāna at old age long after retirement. But one may not reach the old age, and even if did, the mind may not be able to grasp the deep message of the Buddha.

- Most people come to the conclusion of postponing practice, because they think attaining Nibbāna (or the Sotāpanna stage) is a mere act of following some rituals that can be done at any time. This would be a big mistake. The Sotāpanna stage is reached via comprehending the true nature of this world, anicca, dukkha, anatta, and that needs a sharp mind and a lot of contemplation.

4. The Buddha was once traveling with some bhikkhus and they saw an old beggar couple. The Buddha told the bhikkhus that the man's name was Mahādana (meaning rich), and he was indeed a very rich person, and the woman was his wife; they both were of "tihetuka birth", i.e., they were born due to a very potent good kamma (done with all three good roots of non-greed, non-hate, and wisdom) from a previous life.

- Thus, the Buddha said, if they started on the Path when they were very young, the man could have become an Arahant and the woman an Anāgām $\overline{\text {; }}$; if they started when they were young (20's), they could have become Anāgāmī/Sakadāgāmī, and if they started on the Path in the middle age they could have attained Sakadāgāmī/Sotāpanna stages. Instead, they lived a very lavish life, wasted their wealth, and became beggars. Now they were too old to comprehend anything.
- It is unfortunate to see many people today postponing the practice to their "old age". It is a good idea to start early and at least keep a slow pace.
- There are four factors that contribute to the capability of attaining Nibbāna: $\overline{A y} u$ (age), vanṇa (lively), sukha (comfort), bala (ability.) These are due to past puñña kamma. See \#13 of "Kanha (Dark) and Sukka (Bright) Kamma and Kammakkhaya."
- Some people may have sufficient vaṇna and bala even at a very old age. Thus a normal person cannot look at a given old person and say, "this person seems too old to attain Nibbāna". Only a Buddha can determine whether a person is too old to grasp the Dhamma. Yet, in general, as one becomes older the brain gets weaker.

5. Here is a recording of the verse recited by a Venerable Thero:

Next, "Najajja Vasalo Hoti..", .......

### 16.4 Na Jacca Vasalo Hoti......

## Revised May 2, 2020

"Na jaccā vasalo hoti, na jaccā hoti brāhmano<br>Kammanā vasalo hoti, kammanā hoti brāhmano" (Vasala Sutta, Sutta Nipāta 1.7)

When I started writing this post, I erroneously assumed that the above verse is from Dhammapada. But it turned out that it is actually from the Vasala sutta. (It is the last verse of the Sutta.) However, I decided to put the post in the Dhammapada section. It is a succinct verse providing insight into the core message of the Buddha.

Let us look at the meaning of different key terms:

- "Ja" means birth and "jacca" means "by birth" or "related to birth".
- "Vasala" (or "vasalaya" in Sinhala)is a derogatory term identifying someone as an "unworthy" person. Not merely "useless" but "someone not to be associated with", as if the person has a communicable disease. Even today, there are such "untouchables" in India even though their conditions have improved since 1995: WebLink: WIKI: Dalit.
- In those days, a Brahmin was supposed to be the opposite of a vasalaya, having the highest social rank. Of the 31 realms of existence, Brahma $\bar{a}$ live the highest 20 realms. They have the highest level of mental states (greedy or hateful thoughts normally do not arise in them.) Thus a Brahmin (who lives like a Brahma) is supposed to be of the highest moral values.
- Kamma is of course action, and kammunā means according to one's actions.

## So, the meaning of the verse is clear:

'It is not the birth that makes a noble person or an ignoble person, but it is one's actions (the way one lives one's life) that determines whether one is a noble person or an ignoble person".

- Here one could substitute a Noble Person with a Brahmin and ignoble person with an untouchable, AND that does not come about by birth but by one's moral values.

## We can make the following deductions using Buddha Dhamma:

- One is determined to be a Noble Person not by birth but by one's character.
- One change from being an ignoble person to a noble person and even a Noble Person (Ariya) by changing one's character (gathi). There are several posts on how to change habits; use the "Search" box on right to find the posts (just search for "habit" or "gathi"). This search box is a good resource to find relevant posts using a keyword.
- Sometimes a noble person can change to an ignoble person too, but a Noble Person (Ariya) never (even in future lives) changes to an ignoble person.
- Some people are very high-minded because of their birth, wealth, beauty, fame, among many other possibilities. But we need to be always aware of the fact that we have been born much worse than even the poorest human. We all have been born animals and worse. There is no reason to be high-minded for a span of 100 years in a rebirth process that has no beginning!
- Contemplating on the "bigger world view" with the 31 realms (with four realms of much suffering) can make one humble, and be compassionate; see, "Implications of the Rebirth Process in Daily Life and Society." During the hard-to-comprehend time scale of saimsāra, we have been born in almost all of the 31 realms, good and bad.
- Also, we need to remember that even a lowly worm may have a potent kamma seed that could make it in its next life a king. (Even though chances are extremely low.) See, "How to Evaluate Weights of

Different Kamma‘), and if we do not act with wisdom we could have a rebirth worse than a worm. Actually, high-mindedness (uddhacca; pronounced uddachcha) can make one be born in a lower realm. Next, "Arogya Parama Labha", .......

## Ārogya Paramā Lābhā..

Revised September 27, 2017; revised January 30, 2019; April 18, 2020; June 28, 2020; June 14, 2022

$\bar{A} r o g y a ~ p a r a m a ̄ ~ l a ̄ b h a ̄ ~$<br>Santutthiparamaì dhanaì vissāsa paramā ñāti<br>Nibbānaì paramaì sukhaì

(Dhammapada verse 204)
Here is a recital by the Venerable Thero:
WebLink: Listen to Venerable Thero recital

1. As with many Dhammapada verses (and sutta interpretations), the conventional (or "padaparama") interpretation is the one that is widely known, which goes as: "Health is the ultimate profit, happiness is the ultimate wealth, a trusted friend is the best relative, Nibbāna is the ultimate bliss".

- The deeper meaning remains hidden for many. In some hospitals in Sri Lanka, the verse, "Ārogya Param $\bar{a} L \bar{a} b h \bar{a} "$ is displayed in big letters to emphasize the benefits of being healthy.
- While it is good to abide by those conventional meanings while we live this life, we should also try to grasp the deeper meanings to embark on the Noble Eightfold Path; see, "Buddha Dhamma in Chart"" and "What is Unique in Buddha Dhamma."

2. First "parama" means "ultimate" or "prominent". By the way, the word "padaparama" above means the interpretation that makes the "conventional meaning of a word prominent"; "pada" is "word". Now let us look at the other words in the verse.
3. "Roga" means "disease", so ārogya means not subject to disease. The bodies of all beings below the Deva lok $\bar{a}$ (human and below) are subject to disease. We cannot remove the possibility of disease until we remove causes for us to be reborn in the human realm or the lowest four realms, i.e., attain the Sakadāgām $\bar{\imath}$ stage of Nibbāna. [ārogya : [nt.] health.]

- "Lābha" is "profit". The ultimate profit (better than any amount of wealth) of "disease-free" status is attained at the Sakadāgāmī stage of Nibbāna.

4. "Santutṭhi" comes from "san" + "tuṭthi." Here "tuțthi" is "joy" and santuṭthi is the joy achieved by removing "san." Santutthi and the more common Sinhala word "santhosa" means happy. When one removes "san," one gains the nirāmisa sukha of Nibbāna or "cooling down".

- "Dhanaím" means "wealth"; the Sinhala word is "dhanaya." Thus ultimate wealth is achieved by getting rid of "san" or defilements of greed, hate, and ignorance; see, "What is "San"?".

5. "Vissāsa" comes from "vis" + "āsā", where "āsā" means "āsava" or cravings. Thus it means getting rid of cravings that make one bound to the sainsāra (round of rebirths).

- "Ñāti" means "relative." Thus ultimate relative or refuge is reached via giving up the cravings for worldly things.

6. The last one, Nibbanaim paramaim sukham, or "Nibbāna is the ultimate bliss" is the only one that has the same meaning as the conventional or "padaparama" version in \#1 above.

- Therefore, when one embarks on the Sotāpanna magga, one should be able to understand the correct version.

7. Buddha dhamma has no language, cultural, or social barriers. But the Buddha advised never to translate Tipiṭaka to any language, particularly to Sanskrit, because the meanings of certain words can get distorted; see, "Preservation of the Dhamma."

- It is ironic that this is exactly what has happened during the past 1500 years or so, at least since Buddhaghosa wrote Visuddhimagga, probably even earlier. The most damaging is the replacement of the Pāli words anicca and anatta with the Sanskrit words anitya and anātma. The latter is likely to have happened more recently. See, "Misinterpretation of Anicca and Anatta by Early European Scholars."
- On the other hand, the Buddha also advised that what really matters is to get the "meaning of a given word or phrase across". He said to use the words and phrases (and examples) appropriate for a given locale to convey the MEANINGS of these key Pāli words. While we should keep the Tipiṭaka intact in Pāli, we should interpret its content in a way that is most conducive to getting the ideas across depending on the audience.
- The correct way to interpret the Tipitaka material is outlined in "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."

8. It is interesting to note that this verse was a popular one among the Vedic Brahmins of the day of the Buddha. In the WebLink: suttacentral: Māgandhiya sutta (MN 75), it is described how Māgandhiya brahmin tells the Buddha that his teacher also taught him the same verse. When the Buddha asked him to explain the meaning that his teacher taught him, Māgandhiya gave the same interpretation that was given in \#1 above.

- The Buddha told Māgandhiya that this gāthā (verse) came to the Vedic literature from the previous Buddha (Buddha Kassapa,) whose Buddha Sāsana had since disappeared: "Pubbakehesā, māgandiya, arahantehi sammāsambuddhehi gāthā bhāsitā."
- It is important to note that there had been three Buddhas before Buddha Gotama in this mahā kappa, and there will be another, Maithree Buddha, in the future after the present Buddha Sāsana disappears in about 2500 years.
- This is why only "conventional meanings" of pure Dhamma survive when Ariyā (Noble Persons) who can correctly interpret the deep meanings in the sutt $\bar{a}$ and verses like this are absent for a long time in this world. Either a Noble Person or a Buddha has to be born to bring back the true meanings.
- This is exactly what has happened during the past hundreds of years, where true meanings of many keywords like anicca, dukkha, anatta, Paṭicca Samuppāda, and Ānāpānasati Bhāvanā, have been not known. See, "Anicca, Dukkha, Anatta - Wrong Interpretations."

9. For those who like to dig deeper into Tipitaka, the "WebLink: suttacentral: Santuttha Sutta (SN 16.1)" clearly illustrates that "santuttha" is with one who lives a simple life, with minimal cravings, as Ven. Kassapa did: "..Santuṭthāyaì, bhikkhave, kassapo itarītarena cīvarena, itarītaracīvarasantutthiyā ca vannnavādī; na ca cīvarahetu anesanamं appatirūpaì āpajjati; aladdhā ca cīvaraì na paritassati; laddhā ca cīvaraí agadhito amucchito anajjhāpanno ādīnavadassāvī nissaraṇapañño paribhuñjati.."

- The WebLink: suttacentral: English and WebLink: suttacentral: Sinhala translations at the Sutta Central site are correct, for this sutta.

### 16.6 Anicca vata Sañkhārā...

Revised August 16, 2019; February 25, 2020; June 8, 2020; December 21, 2020

Aniccā vata sañkhārā<br>Uppāda vaya dhammino<br>Uuppajjitvā nirujjhanti<br>Tesam̀ vūpa samo sukho<br>(Mahā Parinibbāna Sutta)

This verse is not in the Dhammapada, but it is a very common verse. In Sri Lanka (and possibly in other Buddhist countries), it is displayed at funerals to emphasize the "fleeting nature" of life. It has a deep meaning and explains why we face sorrow inevitably (because death is inevitable). We generate our future rebirths via our own (abhi)sañkhāra! We need to stop creating abhisañkhāra (with lobha, dosa, moha) to attain the Nibbānic bliss.

- This verse was uttered by Sakka, the King of the Devas, just after the Parinibbāna (passing away) of the Buddha. It is in the Mahā Parinibbāna Sutta (DN 16) and also in a short sutta: "WebLink: suttacentral: Parinibbāna Sutta (SN 6.15)."

A common and incorrect translation is:

- All things are impermanent
- They arise and pass away
- Having arisen they come to an end
- Their coming to peace is bliss

## Let us examine the correct interpretation of the verse.

1. Anicca is, of course "cannot be maintained to our satisfaction." It is NOT just impermanence, because even permanent things (relative to our lifetime) cannot be maintained to our satisfaction; see, "Anicca, Dukkha, Anatta - Wrong Interpretations."

Vata (pronounced as "vatha") here means "surely" or "indeed."
(There are other meaning for "vata": In the verse, "yaim samādānaí taí vataí. Sanvaratṭena sīlamं," or "reciting precepts is a ritual, moral behavior, or sila, is attained by controlling "san." Thus, there "vata" means ritual. Another meaning is "action." One needs to pick the right meaning for the given situation).

We think, speak, and take actions based on our mano, vacī, and kāya sañkhāra. They are all thoughts (we cannot even lift a finger without an associated thinking). Those sañkhāra lead to viññāna via "sañkhāra paccayā viññāna" in Pațicca Samuppāda. Strong viññāna produced via "abhisañkhāra" (or strong sañkhāra) lead to future rebirths. But all births end up in death. See, "Sañkhāra - What It Really Means" and "Sañkhāra, Kamma, Kamma Bīja, Kamma Vipāka."

- Thus the first line implies that any rebirth (which inevitably arises due to our abhisañkhāra cannot be maintained to our satisfaction. Any birth ends up in death and suffering.

2. Uppāda means to arise, and vaya means that arising can be stopped.

- But we can stop those things that lead to suffering to come into existence by stopping sañkhāra from arising. That is vaya. That is the ultimate message embedded in Buddha Dhamma. Dhammino (or dhammathā) means the 'Nature's way."
- Thus the second line says, "those sañkhāra are types of dhammā that can be stopped from arising," i.e., they are "vaya dhammā." That is also stated in another famous verse, "vaya dhamma $\operatorname{san} k \mathrm{n} h \bar{a} r \bar{a}$."
- The Buddha attained Parinibbāna (i.e., end of rebirth) because he was able to figure out how to stop sañkhāra from arising (via removal of avijjā.)

3. Uppajjitvā means that which comes to existence (due to sañkhāra.) Those things that come to existence in this world lead to suffering.

- Nirujja means those things will thus not arise anymore (by stopping sañkhāra from arising.)

4. Te means "those," and thus "tesam" ("te" + "san") means those (three) "san" or lobha, dosa, moha; see, "What is "San"?."
$v \bar{u} p a$ sama means "remove and get to samādhi." In the Pațisambhida Magga Pakaraṇa (Jhāna Vibhañga section) on p. 55, it explains that, "vitakkavicārānaiं vūpasamä" means "getting rid of vitakka and vicāra and attaining savitakka, savicāra." See, "Vitakka, Vicāra, Savitakka, Savicāra, and Avitakka, Avicāra." Sukha is happiness.

- Thus the fourth line says, "by removing lobha, dosa, moha (three bad "san"s) from our minds; we can reach (the ultimate) happiness or Nibbāna."

Here is a recording of the verse by the Venerable Thero (repeated three times; note the volume control on the right):

## WebLink: Listen to verse of: Anichchavatha sankara

- This verse is a very good kammaṭthāna (meditation subject) for cultivating the "anicca sañ̃̄ā." One could recite the verse and contemplate its meaning. Think about all those loved ones who passed away and led to much suffering. And one's death is also inevitable.
- We have been through this process in perpetuity, being distressed as loved ones are lost and also thinking about one's own demise, at every birth.
- But there is a way to stop this suffering, by following the Path and stopping sañkhāra from arising.
- Thus, instead of getting depressed about the inevitability of death, one WILL start feeling better if one can really cultivate the "anicca sañña"; see, "How to Cultivate the Anicca Saññā."
- This kammaṭthāna will also cultivate the "udayavaya ñāna" or "the knowledge about arising and stopping the arising of a sañkhata." See, "Udayavaya Ñāna."

### 16.7 Attā Hi Attano Nātho

March 4, 2017; revised November 13, 2018; October 25, 2019; February 15, 2021; July 14, 2022

"Attā hi attano nātho<br>ko hi nātho paro siyā<br>attanā hi sudantena<br>nāthaì labhati dullabhaì"

(Dhammapada verse 160)

1. This is an important verse where the word "atta/atta" (pronounced "aththa"/"aththā") is used with two very different meanings in two places within the same verse.

- In the conventional sense, "att $\vec{a} "$ means "a person".
- The other meaning of "att $\overrightarrow{\boldsymbol{a}}$ " is "one's soul." The Buddha denied the existence of a soul.
- Depending on the context, one needs to pick the correct meaning. There is no negation for "att $\overrightarrow{\boldsymbol{a}}$ " with those two meanings.
- On the other hand, "atta" (without the long "a") means "fruitful." The opposite of that is "anatta" or "unfruitful."

2. When one attains the true "atta" state (Nibbāna), one has become "nātha" or "sanātha" or "found refuge or salvation". As long as one remains in the 31 realms (this world), one is "anātha" (which is the opposite of "sanātha") or "helpless". See, "WebLink: suttacentral: Pathama Nātha Sutta (AN 10.17)."

- "Attano nātho" means "the refuge is within oneself." Thus, "Attā hi attano nātho" means "one's refuge is within oneself."
- "paro siyā" means "outside oneself." Thus "ko hi nātho paro siyā" means "how can one find refuge outside oneself"?
- "Sudda" means "clean." Thus, "attanā hi sudantena" means (by cleansing one's own (mind)"
- Labhati means get, dullabhaim means rare, and as we saw above "nātha" is attaining Nibbāna. So, nāthanmं labhati dullabhaì means "it is not easy to get to salvation (Nibbāna)".

Therefore, we can translate the verse as follows:
"One is one's own refuge
how can another be a refuge to one?
(one reaches salvation) by purifying one's own mind
getting to the refuge (Nibbāna) is rare"
Here is a recording of the verse recited by me (I could not find a recording by Venerable Waharaka Thero):

## WebLink: Play Dhammapada verse 160

A detailed discussion on "atta/att $\bar{a} "$ " is given in the posts, "Pāli Dictionaries - Are They Reliable?" and "Anatta - the Opposite of Which Atta?"

October 25, 2019: Att $\bar{a}$ is used as "a person" in many of the verses in the "WebLink: suttacentral: Attavagga" of the Dhammapada.

## 17. 1 Sutta Interpretation - Uddesa, Niddesa, Paṭiniddesa

Revised April 10, 2017; August 28, 2018; January 7, 2019; December 8, 2020; revised April 15, 2021, with the new title. revised March 1, 2022
[Old Title: Sutta Interpretation - Uddesa, Niddesa, Paṭiniddesa; New Title: Sutta Interpretation Uddesa, Niddesa, Paṭiniddes a]

## Dhamma Concepts Explained at Three Levels

1. Explanation of dhamma concepts in the Tipitaka comes under three categories: "uddesa, niddesa, patiiniddesa." A fundamental concept is first stated ("uddesa" or "utterance"). "Niddesa" is a "brief explanation". Finally, "patiniddesa" is explaining in detail with examples to clarify complex or "knotty" points.
[uddesa: [ff. uddisati] -- 1. pointing out, setting forth, proposition, exposition, indication, programme M. III, 223 (u. uddiṭtha), 239; S. IV, 299; SnA 422. -- 2. explanation S. V, 110 sq. ; sa-uddesa (adj.) with (the necessary) expln., point by point, in detail, D. I, 13, 81; III, 111; A. III, 418; It. 99; Nd2 6171. -3. samaṇuddesa one marked as a Samaṇa, a novice (cp. sāmaṇera) D. I, 151; M. III, 128; A. IV, 343 ; uddesa-bhatta special or specified food Vin. I, $58=96$, cp. II. 175, propounding, recitation, repetition.
niddesa: : m ] description; analytic explanation.]

- For example, "ye dhammā hetuppabbavā.Tesaṃ hetuṃ tathāgato āha;

Tesañca yo nirodho, Evaṃvādì mahāsamaṇo" is the uddesa version.

- In English, the uddesa version is:
"Of those phenomena which arise from causes. Those causes have been taught by the Tathāgata (Buddha),
And their cessation too - thus proclaims the Great Ascetic."
- The fundamental characteristics of "this world" just stated that everything arises due to causes. But that explanation is not enough to understand the embedded deep concepts. Assaji (who later became Ven. Sāriputta) attained the Sotāpanna stage by hearing that uddesa version.

2. However, that word-for-word translation is NOT enough to convey the teachings of the Buddha to an average person.

- The next level of explanation is the "niddesa" version. A teacher needs to explain that "dhamma"" here refers to the kammic energies created by the three root causes (hetu): lobha, dosa, moha. Cessation of avijj $\bar{a}$ (ignorance of the Four Nobel Truths) leads to eliminating those root causes and thus to Nibbāna.
- Clarification of each term in Paṭicca Samuppāda (avijjā, sañkhāra, viññāna, nāmarupa, " leading to "upādāna, bhava, jāti, and suffering), requires long explanations with examples. That is the patiniddesa explanation.

3. Some sections of the Tipitaka have explicit uddesa and niddesa versions. However, that is mainly in the Original commentaries that explain certain concepts in SOME detail.

- See, for example, "WebLink: suttacentral.net: Vimokkhakathā"

## Direct Translation of the Niddesa Version can be Dangerous!

4. Word-for-word translation of some suttas (in the niddesa form) can lead to utter confusion.

- I have explained that problem in "Distortion of Pāli Keywords in Paticca Samuppāda."
- As pointed out there, the translation of "avijjā nirodhā.. viññāña nirodho" as "when ignorance ceases,. . consciousness ceases" is insane. Did the Buddha lose consciousness upon attaining Enlightenment? Would an Arahant lose consciousness upon attaining Arahanthood? That is the danger of direct word-for-word translations! That is just one example.
- This problem is so serious that I have started new series of posts to explain in detail this problem: "Word-for-Word Translation of the Tipitaka."

## Many Suttā Are in Uddesa or Niddesa Versions

5. Most sutt $\bar{a}$ are in $u d d e s a$ or niddesa versions (Dīgha Nik $\bar{a} y a$ is an exception, even though some verses do have deeper meanings). They require detailed explanations. Translating word-by-word is not appropriate in many instances.

- For example, "anicca, dukkha, anatta" are only in the niddesa version in Dhamma Cakka Pavattana Sutta and Anatta Lakkhana Sutta. [SN 56.11 Rolling Forth the Wheel of Dhamma Dhammacakkappavattanasutta, SN 22.59 The Characteristic of Anatta - Anattalakkhanasutta]
- However, each sutta took many hours to deliver. It was impossible to condense all that information in a sutta for mostly oral transmission that was available at the time. Each sutta is condensed (most likely by the Buddha himself; see below).
- Thus the material in each sutta as written in the Tipitaka is in CONDENSED form in most cases. They are in the "uddesa/niddesa" version. They are version. They are in a format suitable for oral transmission.

## Paṭiniddesa (Detailed Explanation) in Commentaries

6. During the Buddha's time, other bhikkhus explained each sutta in detail to audiences when they delivered discourses. That is the "patiniddesa" version. Especially after the Buddha's Parinibbāna, many Arahants started writing "Attakath $\vec{a}$ " or commentaries on essential sutt $\bar{a}$. But a few were composed during the time of the Buddha. Of course, these were also composed in a way suitable for oral transmission and thus, do not have lengthy explanations.

- Three original early commentaries remain preserved in the Tipiṭaka: Pațisambidhā Magga Prakarana, Nettipparakana, and Petakopadesa. Of these, the Patisambidhā Magga Prakarana consists of the analyses by Ven. Säriputta, one of the chief disciples of the Buddha, and the Nettipparakana by Ven. Maha Kaccāyana. Thus we are lucky to have these three original commentaries still with us.
- These three books contain "niddesa/paținiddesa" versions of many of many essential suttā, which describe the keywords/phrases in a given sutta. All other such excellent commentaries are lost; see "Incorrect Theravāda Interpretations - Historical Timeline" and "Buddhaghosa and Visuddhimagga Historical Background."

## Most People Today Need Paṭiniddesa (Detailed Explanation)

7. During the time of the Buddha, some could comprehend just the uddesa version. For example, Upatissa and Kolita (who became Ven. Sariputta and Ven. Moggalana later) became Sotāpannas upon hearing the verse, "ye Dhamma hetupabbhavā.....". They had done much in their past lives and needed "just a little push" to understand. They are called ugghațitañ̃na or "persons with high wisdom."

- And many could understand the niddesa version. Those were vipañcitañña and needed a bit more explanation to grasp the concepts. WebLink: suttacentral: Ugghatitaññ̄u Sutta (AN 4.133) discusses the four categories of persons - ugghatitañña, vipañcitañña, neyya, and padaparama.
- However, most people today are in the lower category of neyya and padaparama. They need detailed explanations (i.e., patiniddesa) to grasp a concept. They also belong to two groups. Those with tihetuka patisandhi (optimum births) can attain magga phala in this life. But those with dvihetuka
patisandhi (inferior births) cannot achieve magga phala, but they can accrue merits to attain magga phala in future lives. Of course, there is no way for anyone to figure out (except for a Buddha) whether one has a tihetuka or dvihetuka pațisandhi.
- It is essential to realize that those who are either ugghatitañña or vipañcitañña had been neyya persons with dvihetuka patisandhi in previous lives. They had strived to gain more wisdom and now are benefitting in this life. Thus there is no point worrying about whether one is a tihetuka or dvihetuka.

## Erroneous Commentaries Are Harmful

8. There are many erroneous commentaries today. The best example is the Visuddhimagga of Buddhaghosa. It was written around 400 CE (where CE is "Current Era" or AD) when the "pure Dhamma" was already lost, and the conventional meanings were commonplace, just as now.

- The "pure Dhamma" has been lost for an extended period from about 200 CE up to now. See "Incorrect Theravāda Interpretations - Historical Timeline." But the original suttā survived because people at least used and preserved them even if they used the "conventional" or "mundane" ("padaparama" in Pāli) meanings.
- Thus we can see why people have been translating suttā "word for word" and just getting the conventional meanings. Profound verses in suttā need detailed explanations.

## Special Role of Jāti Sotāpannas With Paṭisambhidā Nāana

9. From time to time, jāti Sotāpannas are born. They had attained the Sotāpanna stage in a previous life, possibly when Buddha was alive. They likely have had births in the deva loka for long times and are reborn humans now. Some of them have the unique capability to interpret the keywords/phrases in the sutt $\bar{a}$. This specialized knowledge is "Patisambhida $\tilde{N} \tilde{\text { anna." }}$

- At least one time previously, a Thero brought out the real meanings with the Paṭisambhidā Ñāṇa. But this is not the time to discuss that.
- Waharaka Thero brought out these deeper meanings in recent years. See, "Parinibbāna of Waharaka Thero."

## Tipiṭaka Was Compiled for Faithful Oral Transmission

10. The Buddha knew that Buddha Dhamma would be going through periods of decline where bhikkhus capable of interpreting deep suttā would not be present. Thus sutta were composed so that only the "conventional" meaning is apparent. That was necessary to preserve the suttā, especially before writing became commonplace.

- It is important to remember that Ven. Ānanda had memorized all the suttā that he then recited at the First Buddhist Council, just three months after Buddha's Parinibbāna.
- Ven. Ānanda was Buddha's personal assistant over the last few decades of the Buddha's life. I believe that the Buddha condensed each sutta and Ven. Ānanda memorized each of them. The Buddha synthesized each sutta in a "double meaning" way for them to survive the "dark periods."
- Then, at the first Buddhist Council, all the suttā were recited and were sorted into various categories (Nikāy $\bar{a} s$ ). That is my theory, and I believe it will be proven to be accurate in the future.

## Deeper Meanings May Stay Hidden for Long Times

11. There are times when jāti Sotāpannas with the Patisambhidā Ñāna are not born for long times. During such times, people use conventional interpretations. And that served the purpose of keeping the sutta intact, especially before written texts became common.

- A perfect example is the $\bar{A} n \bar{a} p \bar{a} n a s a t i ~ S u t t a ~(s o m e ~ o f ~ w h i c h ~ a r e ~ a l s o ~ p a r t ~ o f ~ t h e ~ S a t i p a t ̦ t h a ̄ n a ~ S u t t a) . ~$ As we discussed in "7. What is Ānāpāna?" the conventional meaning is to tie up "āna" with breath inhaling and "āpāna" with breath exhaling.
- That was consistent with the breath meditation that has been there in the world at any time. Many yogis practiced it at the time of the Buddha. He learned those methods from such yogis before attaining the Buddhahood.

12. The following are the key points from the above discussion that I wish to emphasize:

- The suttā seem to convey "conventional" meanings while keeping the "deep meanings" embedded in them.
- Those "deep meanings" bring out the uniqueness of Buddha Dhamma.
- Word-to-word translation of suttā does not convey the message of the Buddha. Examples are critical Pāli words like anicca and anatta.
- The surviving three original commentaries in the Tipitaka can verify the deep meanings of the keywords/phrases.

## Misinterpretation of Dhamma Concepts Is an Offense

13. It is an offense to misinterpret sutt $\bar{a}$ (and dhamma concepts in general.) That is in several sutta $\bar{a}$ in the WebLink: suttacentral: Bālavagga of Añguttara Nikāya 2.

- For example, WebLink: suttacentral.net: AN 2.25 is a short sutta that says: "Dveme, bhikkhave, tathāgataì nābbhācikkhanti. Katame dve? Yo ca neyyatthaì suttantaì neyyattho suttantoti dīpeti, yo ca nītatthaì suttantaì nītattho suttantoti dīpeti. Ime kho, bhikkhave, dve tathāgataim nābbhācikkhantī" $t i$.
- Translation (to provide the idea): "Monks, these two people slander the Tathāgata. Which two? One who briefly a deep discourse when it needs a detailed explanation. The other explains a discourse in detail whose meaning is already clear. These are two who slander the Tathāgata." ["WebLink: suttacentral: A Meaning to be Inferred (AN 2.25)'] [Tathägata : the 'Perfect One', lit. the one who has 'thus gone', or 'thus come', is an epithet of the Buddha used by him when speaking of himself.]
- Two perfect examples of the first type of slander say that the words anicca and anatta are fully explained by "impermanence" and "no-self." Those two concepts require detailed explanations.

## Checking for Inter-Consistency Among the Three Piṭakas Is the Key

14. The Buddha advised to resolve any issues by consulting the three Piṭaka: Sutta, Vinaya, and Abhidhamma.

- For example, a concept in the Sutta Pitaka, for instance, must be consistent with other places in the Sutta Pittaka. It must also be compatible with explanations in the Abhidhamma Pitaka and the Vinaya Pitaka.
- But in the end, I will show how the lines in the sutta tally with this description. As the Buddha emphasized, what matters is to get the IDEA across and not to memorize the Pāli suttā. (Memorization is needed only for transmission purposes).

## Good Resource for Pāli Tipiṭaka

15. A helpful resource for finding Pāli Tipiṭaka (and translations in several languages) is suttacentral.net.

- Once you open a sutta, click on the left-most drop-down to choose one of several languages. That is a valuable resource; consider donating if you find it useful. Note: I am not associated with them in any way.
- However, those translations are frequently incorrect for critical Pāli words, as is the case on many websites. But at least one can see the correct Pāli version.

Next, "Pāli Dictionaries - Are They Reliable?"

### 17.2 Pāli Dictionaries - Are They Reliable?

March 4, 2017; Revised March 5, 2017; Revision March 7, 2017; May 17, 2018; October 27, 2018; August 20, 2019; June, 2020

I have received several emails pointing out that my interpretations of certain words are not compatible with those in Pāli dictionaries. I hope I can explain why one must be careful in using a Pāli dictionary if one's goal is to grasp the true teachings of the Buddha. Of course, I learned this from my Noble teacher, late Waharaka Thero.

1. In Pāli a word can have different meanings depending on the context. Furthermore, sometimes, grammar rules are bypassed.

- Many of the problems with an incorrect interpretation of the Tipitaka arise mainly because of those two misconceptions.
- Pāli does not have its alphabet. It was a spoken language. The Pāli Canon (Tipiṭaka) was first written using the Sinhala alphabet around 5 BCE (two thousand years ago); see, "Historical Background."

2. Even in English language, words can have different meanings depending on the context. Following are some examples for three words:

- Right: You were right./Make a right turn at the light.
- Rose: My favorite flower is a rose./He quickly rose from his seat.
- Type: He can type over 100 words per minute. /That dress is not her type.

## (Read more at "WebLink: grammar.yourdictionary.com: Words with Multiple Meanings").

- In Pāli language, there are many keywords with different meanings. In many cases, there is a conventional meaning and a deeper meaning, as mentioned above: "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."

3. Pāli is a phonetic language. The Tipiṭaka was transmitted for many hundreds of years faithfully, because verses were formulated for easy memorization. Grammar rules bypassed in some cases. That is clear in the verses, "Buddhaì Saranaì gacchāmi," "Dhammaì Saranaì gacchāmi," etc. [In Pāli, if the verb is "gacchāmi" with the ending "..mi" it is for the $\mathbf{1}^{\text {st }}$ person singular "I", and if the word is "gacchāma" with the ending "..ma" it is for the $1^{\text {st }}$ person plural "We" and similarly for $2^{\text {nd }}$ person ( $\boldsymbol{s i}$, tha $\boldsymbol{-}$ you, you all), and $3^{\text {rd }}$ person ( $\boldsymbol{t i}, \boldsymbol{n t i} \boldsymbol{- h e}$, they).]

- There is no subject in the above verse. The first of course means, "I take the refuge in the Buddha," but "I" is missing in "Buddham Saranam gacchāmi." It is just understood.
- If you look at sutt $\bar{a}$, there is no clear grammatical structure. It is the sound that gives the meaning, and most verses have "double meanings": There is a simple meaning, but deeper meanings may be hidden. I have discussed this to some extent in the post, "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."
- Some key Pāli words discussed in the post: "Introduction to Citta, Vedanā, Saññā, Sañkhāra, and Viññāna."

4. Let us start with the word "atta" (pronounced "aththa" or "aththā" depending on where used). This word can have many meanings depending on the context.

- In the conventional sense, "att $\overline{\boldsymbol{a}}$ " means "a person." It is used with this meaning in some contexts; see below.
- The deeper meaning of "atta" is "in full control" or "the essence" or "the truth that is timeless." Just like the word "anicca," it is not possible to translate to English. One has to get the idea by learning how it is used in various situations. The opposite of "atta" is anatta. That means "helpless" in case of a living being. or "useless" in case of an inert thing.
- At least, in this case, one could see the difference in meaning by the way they are pronounced: att $\overline{\boldsymbol{a}}$ versus atta.
- Both these meanings appear in the Dhammapada verse (gāthā), "Attā Hi Attano Nātho" that I am posting concurrently.

5. We can take more examples to illustrate the application of "atta" with those two very different meanings.

- In "atta kilamatānu yoga" atta is used in the conventional sense, to describe "procedures that cause suffering in a person."
- The word sutta comes from "su" and "atta": a sutta can make someone moral and ethical. So, here also atta is used in the conventional sense.
- The phrase "anattan asārakattena" means "(anything in this world) is anatta because it is devoid of any good or any usefulness." Something is atta only if it is the ultimate truth or has timeless value. Here, of course, the deeper meaning is used. [asāraka :(adj.) $[\boldsymbol{a}+\boldsymbol{s} \boldsymbol{a} r a k a]$ unessential, worthless, sapless, rotten.]

6. Paramattha comes from "parama" + "attha," where "parama" means "at the highest level" and "attha" means "the truth that is timeless", the deeper meaning.

- This word has been translated to Sinhala as "artha" to indicate "meaning" in Sinhala. So, the Pāli word paramattha has been translated to Sinhala as "paramārtha" or "ultimate meaning."
- Therefore, the four types of $\tilde{n} a ̄ n a$ (pronounced "gnāna") involved in the Patisambidha Ñāna are, "attha, dhamma, nirutti, patibhāna." These days, they appear in Sinhala as, "artha, dharma, nirukthi, patibhāna."
- I will write a separate post to discuss those four terms in the Pațisambidhā $\tilde{N} a ̄ n a$. A person qualified to explain Buddha Dhamma to others is supposed to have the Pattisambidhā Ñāna. Otherwise, one could mislead others by providing incorrect explanations. Of course, no one but a Buddha can provide entirely error-free answers. It does not make much sense to learn Dhamma from someone who is not at least a Sotāpanna (i.e., an Ariya).

7. Of course the most problematic misuse of "atta" as "a person" or "a self" is in Tilakkhanna, the Three Characteristics of Nature. There, anatta is commonly translated just as "no-self." One correct expression is "no-unchanging self".

- We need to realize that "atta" is always "truth" and "att $\vec{a}$ " could be "person" in the conventional sense. So, the opposite of "atta" is ALWAYS "anatta" (pronounced "anatththa"), which is NEVER pronounced "|anattā|," i.e., "anaththa."
- That — together with translating anicca as "impermanence" - had kept Nibbāna hidden for a thousand years: see, "Anicca, Dukkha, Anatta."

8. That is why a dictionary can't provide fixed meaning for the word "atta," as well as for anatta, nicca, anicca, and many other words.

- Many words are supposed to have both conventional and deeper meanings. Only someone who has the pațisambhidā $\tilde{n} \bar{a} n a$ can correctly explain the meaning of a verse in the Tipiṭaka regardless of where the word appears.
- Therefore, in most current English literature on Buddha Dhamma, some explanations are correct, but many are not. That is because of the tendency to use a fixed meaning for a keywords without paying attention to contex.

9. Another such key word is "pati," which is pronounced also as "pati", not as "pathi". I have received emails saying that Pāli dictionaries say "paṭi" means "against".

- Paṭi is also a Sinhala word that is being used to this day. It means "bonds" or "ties," just as in Pāli.
- If "pați" means "against," how would that be compatible with many other words with "pați"? For example, "pattisamved $\vec{\imath}$ " or "pațisanvedi" ("pați+ "san" + "vedi") means vedanā due to bonds with "san" becoming apparent. Paṭinissagga means "getting rid of bonds". Paṭiniddesa means "detailed instructions on sorting out knotty or difficult points," etc. The latter is explained in detail at "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."

10. One could get a better idea of a keyword by looking at its application in various situations. The word pațisambhidā in pațisambhida $\tilde{n} \bar{a} n a$ is a good example.

- Pațisambhidā comes from paṭi + san + bidhā. "San" is, of course, a keyword; see, "What is "San"? Meaning of Sansāra (or Samsāra)," and bidhā means to separate or to break apart; "bindeema" is the Sinhala word.
- So, pattisambhidā $\tilde{n} \bar{a} n a$ is the knowledge to be able to sort out the meaning of a word by breaking it down to locate "san," i.e., connection to defilement.
- And that interpretation must be consistent with "attha, dhamma, nirutti, patibhāna" as will discuss in a future post. By the way, patibhāna means the ability to describe in detail with examples. Nirutti means finding the origins of keywords, i.e., how compound words are put together using critical words like pati and atta or attha.

11. Other examples come in the gathā to pay tribute to the Sangha: "supaṭipanno bhagavatho savaka sangho, Ujupatipanno...."

- Here the "bonding" is to "good things." Supatipanno means "bound to moral things," Ujupatipanno means "bound to be straightforward," Näyapatipanno means "bound with wisdom," and Sämichipatipanno means "good to associate with."
- Another is "patisandhi," which comes from "pati" + "sandhi," where sandhi (which is also a Sinhala word) means "to join." At the cuti-patisandhi moment, one's mental body (gandhabba) dies (cuti, pronounced "chuthi") and one grasps a new existence. So, this joining of two adjacent lives is called patisandhi.
- Note that cuti pronounced as "chuthi." See, ""Tipitaka English" Convention Adopted by Early European Scholars - Part 1" and ""Tipitaka English" Convention Adopted by Early European Scholars - Part 2."
- Of course, the most important is "pati" in Paticca Samuppāda; see, "Paticca Samuppāda "Pati+ichcha"+"Sama+uppāda."

12. Here is a table showing the conventional and deeper meanings of some key Pāli words. Some meanings given in dictionaries are wrong, and they are in bold. Whether to use the correct conventional meaning or the deeper meaning depends on the context (where the word is used); a good example is, "Attā Hi Attano Nātho."

|  | Conventional | Deeper Meaning |
| :--- | :--- | :--- |
| Atta | Person, self | In control, has essence or ultimate truth |
| Anatta | no-self (incorrect) | helpless, no essence and devoid of value |
| Ānāpāna | in and out breathing | take in moral, discard immoral (in the mind) |
| Majjima | middle | majji + ma (avoid intoxication of mind) |
| Icca | like | like |
| Nicca | permanent (incorrect) | can be maintained to liking |
| Anicca | impermanent (incorrect) | cannot be maintained to liking |
| Pati | against (incorrect) | bind |

|  | Conventional | Deeper Meaning |
| :--- | :---: | :---: |
| Sammā | (i) good <br> (ii) friend (incorrect) | san + mā; removal of "san" |

13. Also see, "Why is it Necessary to Learn Key Pāli Words?."

- Mostly the deeper meanings of Pāli words can be found at: "Pāli Glossary - (A-K)" and "Pāli Glossary -(L-Z)."
- Again, one must pay attention to make sure that the meaning found in a dictionary is compatible with the context.

### 17.3 Nikāya in the Sutta Pitaka

## January 7, 2016

1. The Tipiṭaka or the Pāli Canon of Buddha Dhamma (Buddhism) consists of three major sections or "baskets" called "piṭaka" (Tipiṭaka is three piṭaka). They are Sutta piṭaka, Vinaya piṭaka, and the Abhidhamma pitaka.

- The Sutta pitaka consists of five sections called "nikāya." The Wikipedia is wrong to say that nikāya means "volume" in Pāli (and also what is meant by the five types of nikāya); see, WebLink: Wiki: Nikāya
- Nikāya comes from "ni" + "kāya" where kāya means our volitions and actions initiated via the six sense inputs, like in "k $\bar{a} y \bar{a} n u p a s s a n \bar{a} "$ where one is mindful of how to respond to those sense inputs. Here, "ni" means to cease (nikmeema in Sinhala means to be freed) and thus nikāya means "path to Nibbāna". At Nibbāna, one has stopped all kāya.

2. All suttā (note that plural of sutta is suttā) are in those five nikāyas (Dīgha, Majjhima, Sainyutta, Anguttara, and Kuddaka), based on the five types of people. All humans are in five general types based on their sansäric habits and capabilities. They are also called "indriya types": saddha, viriya, sati, samādhi, pañ̃̄̄̄. (Note that "indriya" here is different from the sense types such as cakkhu indriya, etc., as discussed in \#6 and \#7 below).

- Dīgha Nikāya is mainly for those with predominant saddha indriya who need detailed explanations. These are long (dı̄gha, pronounced "dheega," which means long in Pāli and Sinhala). For example, the Mahā Satipatṭhāna Sutta in the Dīgha Nikāya provides detailed instructions on how to be mindful and practice $\bar{a} n \bar{a} p \bar{n} n a$.
- Suttā in the Kuddaka Nikāya ("ku" + "uddaka" where "ku" is keles or defilements and "udda" means to remove) are short and concise. They provide brief instructions for those with high wisdom (pañ̃̄̄̄an indriya).
- Majjhima Nikāya has "middle length" suttā that provide instructions at a level in between those in the Dīgha Nikāya and the Kuddaka Nikāya. It is more suitable for those with dominant viriya indriya. Note here that Majjhima means "middle," but Majjhimā - as in Majjhimā patipadā - has a deeper meaning of "abstaining from getting intoxicated"; see, "Majjhima Patipada - Way to Relinquish Attachments to this World."

3. The suttā in the Saminutta Nikāya are focused on explaining "san", which is a critical word in the foundation of Buddha Dhamma; see, "What is "San"? Meaning of Sansāra (or Samsāra)."

- Here Samyutta comes from "san" + "yutta" where yutta (pronounced "yuththa") menas "consists of." It natural to pronounce as "Samyutta" than "sanyutta." This is true of many combined words with "san" (like sainsāra, Samm $\bar{a}=$ "san" + " $m \vec{a}$ ").
- Suttā in the Samyutta Nikāya are said to be more suitable for those with dominant sati indriya.

4. Suttā in the Ańguttara Nikāya are said to be more suitable for those with dominant samādhi indriya.

- Ang guttara comes from "anga" + "uttara" where "anga" means parts or components and "uttara" means "predominant or principle." Therefore, the suttā in the Anguttara Nikāya are focused on fundamental principles and are also relatively short. These sutt $\bar{a}$ are more suitable for people who can quickly get to $s a m a \bar{d} h i$.
- These categories help explain why Dīgha and Majjhima Nikāya suttā are the ones that are mostly in use today. Most people today fall into the categories of those with the saddha and viriya indriya dominant.

5. It is also important to point out a different usage of the term "nikāya." Among the Theravāda nations of Southeast Asia and Sri Lanka, bhikkhus (and the temples they reside in) belong to several different groups or nikāya.

- For example, in Sri Lanka different temples belong to three types of nikāyas: Siam, Ramanya, and Amarapura.
- They are all Theravāda and there is no real difference among them as far as the doctrine is concerned. When one visits a temple, it is not possible to say to which nikāya it belongs.

6. The word indriya comes in two contexts. "Indriya" means "dominant" in some contexts. Here, the six types of dominant sense faculties are indriya: cakkhu, sota, jivhā, ghāna, kāya, and mano.

- Modern science deals with only five physical senses of eyes, ears, tongue, nose, and body.
- Scientists believe that our brains randomly produces our thought. That will be proven to be incorrect in the future.
- Mana indriya - located in the brain - is the sixth and most important one according to Buddha Dhamma. It detects dhammā from the "nāma loka"; see, "Our Two Worlds: Material and Immaterial" and "What are Dhamma? - A Deeper Analysis."
- Rūpa are eleven types, but are split into two main categories (olārika or dense and sukhuma or fine). Those above the suddhatthaka level belong to the material world or "bhauthika loka." Those below the suddhatthaka level (dhammā) belong to the mental world or "nāma loka." The five physical senses detect those rūpa above the suddhaṭthaka level. The mana indriya detects those below the suddhatthaka level (dhammā). see, "Our Two Worlds: Material and Immaterial."

7. The other use of indriya is with categorizing people by their dominant characteristics and capabilities (gati). For some people, it is easy to grasp Dhamma concepts. That is because they have cultivated the Path in their previous lives, and thus have higher wisdom (pañ̃̄̄ $\bar{a}$ ).

- Some others have also cultivated the Path mainly via just following precepts, but have high confidence in Buddha Dhamma. They are said to have their saddha indriya dominant.
- Some have the sati indriya dominant; they can focus on a given concept better than others.
- We all are familiar with some people who have the viriya indriya dominant; they are the "never give up" type, who seem to have inexhaustible energy levels.
- Some others have meditated and possibly got into $j h \bar{a} n \bar{a}$ in previous lives and have the samādhi indriya dominant.

8. Finally, there is an excellent website that has the full and complete Sutta Pitaka with all Pāli suttā:WebLink: Sutta Central

- That site also has the complete Vinaya and Abhidhamma Piṭaka as well (in Pāli).
- Sutta Central also has Sanskrit sutras, which are, of course, Mahāyāna.
- The Chinese Agama suttā are also at this site (in Chinese). As I understand, they are very close to Theravāda suttā. Those translations to Chinese from Theravāda happened before the appearance of Mahāyāna sutras. I would appreciate feedback from persons who are proficient in both Chinese and English, as to whether my understanding is correct.

Next, "Sutta Learning Sequence for the Present Day",..

### 17.4 Mahā Satipaṭṭhāna Sutta

"Satipatthāna Sutta - Structure"
"Satipatthāna - Introduction"
"Kāyānupassanā - Section on Postures (Iriyapathapabba)"
"Kāyānupassanā - The Section on Habits (Sampajanapabba)"
"Prerequisites for the Satipatthāna Bhāvanā"
"What is "Kaya" in Kāyānupassanā?"

### 17.4.1 Satipatṭhāna Sutta - Structure

Revised September 1, 2016; October 29, 2017; February 16, 2020; April 21, 2022; June 7, 2022

## Introduction

This post is the most important post on the Mahā Satipatthana Sutta. It sets the foundation. This is where $99 \%$ of people should get started.

1. Several websites provide the Pāli version of the sutta and its English translation. I believe that they all are incorrect translations, and as I proceed, I will explain why.

- Here is a website that provides Pāli and English translations of the sutta side-by-side: WebLink: tipitaka.org: Mahāsatipatthāna Sutta (Pāli-English)
- It is not the fault of those who took their time with good intentions to write those posts. That is how this sutta and others have been interpreted for more than a thousand years.
- I will not follow the sutta sequentially, but you will be able to follow the relevant sections. Eventually, I hope to cover most of the sutta.

## Three Levels of Explanations

2. As I explained in "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa," there are three ways of presenting Dhamma: uddesa, niddesa, and patiniddesa.

- Mahā Satipatṭhāna Sutta is in the niddesa version (i.e., provides an outline,) but has the uddesa (very brief) version at the very beginning. See the above link in \#1 which provides the complete sutta in Pāli and English.
- In the main body of the sutta, the concepts are outlined. Those key concepts are supposed to be described in detail, with examples, in verbal discourses (i.e., a desan $\bar{a}$.) That is what I will be doing in these series of posts, i.e., describe the concepts in detail.
- Note that some suttas are in the uddesa version and require explanation in the niddesa and patiniddesa versions. Word-by-word translations of such suttas can lead to much confusion. See, "Distortion of Pāli Keywords in Paticca Samuppāda."

## Uddesa Version - Brief Summary

3. The uddesa (or uddeso) starts with, "Ekāyano ayaín, bhikkhave, maggo sattānaì visuddhiyā, sokaparidevanaì samatikkamāya, dukkhadomanassanai் atthangamāya, nāyassa adhigamāya, nibbānassa sacchikiriyāya, yadidaì cattāro satipat!thānā"

- Translation: "This is a guaranteed way, for the purification of beings, for the overcoming of sorrow and lamentation, for the extinguishing of suffering and grief, the Noble way for gaining wisdom, for the realization of nibbāna. That is to say, the fourfold establishing of moral mindset".
- It is a "guaranteed way" to Nibbāna because it comes first in the " 37 Factors of Enlightenment" required to get to Nibbāna.

## Two Key Points

4. The main difference from the translation (conventional interpretation) given in the link in \#1 above are the two phrases highlighted above:

- The translation of "nāyassa adhigamāya" and "satipathāna": "Nāya" (Sanskrit "nyāya") means "underlying principle." It is grasped with "ñāna" or wisdom, and "adhigama" is "adhi"+"gama" or "higher way". Translating Satipatt!hāna as "moral mindset" is not too bad, but I will discuss "satipatṭhāna" in the next post.
- So, the essence of that verse is that the method described in the Satipatthāna sutta provides a guaranteed way to attain Nibbāna, via purification of the being, i.e., via cleansing one's mind.

## "Four Stations" of Mindfulness

5. The next phrase is, "Katame cattāro? Idha, bhikkhave, bhikkhu kāye kāyānupassi viharati ātāp $\bar{\imath}$ sampajāno, satimā vineyya loke abhijjhā domanassam். Vedanāsu vedanānupassi viharati àtāpi sampajāno, satimā vineyya loke abhijjhā domanassam். Citte cittānupassī viharati ātāpi sampajāno, satimā vineyya loke abhijjhā domanassam̀. Dhammesu dhammānupassī viharati ātāpi sampajāno, satima vineyya loke abhijjhā domanassaì" "

- Of course, "Katame cattāro?" is, "Which four? (cattaro pronounced, "chaththaro"). Pāli words are NOT spelled according to "Standard English." See, ""Tipitaka English" Convention Adopted by Early European Scholars - Part 1" and "Tipitaka English" Convention Adopted by Early European Scholars Part 2."
- And then it lists the four: kayanupassana, vedananupassana, cittanupassana, and dhammanupassana. Notice that the phrase, "ātāpi sampajāno, satima vineyya loke abhijjhā domanassaì" appears after each of the four.
- This indicates the critical importance of this phrase. This is the beginning of the purification process, by laying out the foundation; see, "Satipatthāna Sutta - Relevance to Suffering in This Life." One HAS TO go through this process to reach the Sotāpanna stage.

## A Key Phrase Relevant to All Four

6. The "WebLink: suttacentral: Lakkhanahāravibhañga (Ne 8)" of the Tipitaka Commentary Nettipakarana explains the meaning of the verse, "kāye kāyānupassī viharāhi ātāpī sampajāno satima
 Pāli/Sinhala languages.)

To quote: "Tasmātiha tvaì bhikkhu kāye kāyānupassī viharāhi ātāp̄̄ sampajāno satimā vineyya loke abhijjhādomanassaì". "Ātāp̄̄"ti vīriyindriyaì, "sampajāno"ti pañ̃̃indriyain, "satimā"ti satindriyam, "vineyya loke abhijjhādomanassan"ti samādhindriyami,."

Translated: " $\bar{A} t \bar{a} p \bar{\imath}$, sampajāno, satimā, and vineyya loke abhijjhādomanassan" are, respectively, "Viriya indriya, pañ̃̃ā indriya, sati indriya, and samādhi indriya."

- Note that those are four of the five indriya that are required for the cultivation of the Noble Eightfold Path.
- One would already have the "unshakeable faith" (saddhā indriya) when one gets on the Noble Path.

7. That all-important common phrase, "ātāp̄̄ sampajānō, satima $\operatorname{vineyya~lōke~abhijjhā~dōmanassam,~"~is~}$ common to all four "stations of mindfulness."

- Sampajana comes from "san" + "pajana" or sorting out "san" the things that make a mind stressful; see, "What is "San"?." The worst forms of "san" are the ones that we instinctively know to be immoral. They include killing, stealing, sexual misconduct, lying, and getting intoxicated. [pajānana $\overline{\boldsymbol{a}}$ : [f.] knowledge; understanding; discernment.]
- Sampajana is closely related to "sampādeta" as in the Buddha's last words: "..appamadena sampadeta" or "..make haste and sort out san." Here sampadeta is "san"+"padeta" or again sort out "san".
- When one has done "sampādeta" one becomes "sampajanno": One knows what is right and what is wrong automatically; it has become a habit.
- This critical verse is discussed in the following desanā from the post, "WebLink: Audio Desana: Episode 3 - Satipatthāna Sutta - Relevance to Suffering in This Life" (you may need to control the volume at your computer):
Episode 3 - Maha Satipatthāna Sutta - Relevance to Suffering in This Life

## Ātāpī Sampajāno

8. Therefore, "ātāp̄̄ sampajāno" means "make effort to acting with paññ̄ă." That involves getting rid of 'san' or "immoral tendencies". They also go by the names "kilesa" and "asobhana cetasika"; see, "What Are Kilesa (Mental Impurities)? - Connection to Cetasika."

- When one starts making progress, one could start to avoid tendencies for extreme sense pleasures as well.
- Note that "tāpa" (pronounced "thāpa") means heat; when we get really stressed we feel a "fire" in the heart. When it gets really bad, people say, "I could feel my heartburn" when a piece of especially poignant news comes through. Thus, "āt $\bar{a} p i$ " is to remove that "fire" from the heart and the stress from the mind and calm the mind. This is the "cooling down", "niveema", "nivana" or early stages of Nibbāna. When one makes the effort (viriya) the result is that "cooling down."

## Satimā Vineyya Loke Abhijjhā Domanassain

9. Then we have, "satima vineyya loke abhijjhā domanassam." This is a highly condensed statement about how to remove $a b h i j j h \bar{a}$ and domanassa by being mindful of one's actions at ALL TIME.

- The root cause of all suffering is extreme greed or "abhijjā [abhijjhā]" (which comes from "abhi" + "icch $\vec{a}$ " or strong craving or attachment). When one does not get what one desires, one gets depressed. That is domanassa. It is important to see that one acts with hate with a domanassa mindset because one is upset, deflated, and angry.
- Thus "sati mā vineyya loke abhijjhā domanassaì" means establishing a moral mindset and moral conduct in order to be free from the debt-ridden world and to be relieved from abhijj $\bar{a}$ [abhijjh $\bar{a}$ ] and domanassa. This is the key to "cooling down"; see, "Living Dhamma" for details.
- Both Satipaț̣hāna and $\bar{A} n a \overline{p a} n a s a t i ~ B h a ̄ v a n a \bar{a}$ describe how to achieve that. The "WebLink: suttacentral: Indrivabhāvanā Sutta (MN 152)" also describes the basic idea of the maintenance of one's sense faculties by being mindful of one's actions at ALL TIMES.

## A Key Idea Behind the Sutta

10. Thus the verse, "ātāpi sampajāno, satimā vineyya loke abhijjhā domanassamं," means "making effort to act with wisdom by being mindful (sati); that will lead to gradual reduction of kilesa or defilements and by removing extreme greed (abhijj $\bar{a}$ [abhijjhā]) that leads to a depressed mind (domanassa) through discipline (vineyya)".

- In the first stage, one needs to focus on abstaining from immoral activities or dasa akusala.
- Therefore, the phrase, "ātāpi sampajāno, satima vineyya loke abhijjhā domanassam"" is the key to both Satipaṭthāna and $\bar{A} n \bar{a} p a ̄ n a ~ B h a ̄ v a n a \bar{a}$.
- The rest of the Satipatthāna sutta is on the details of how to go about achieving these goals.

## The "Cooling Down"

11. This "cooling down" happens in four ways. They are kāyānupassanā, vedanānupassanā, cittānupassanā, and dhammānupassanā.

- These are somewhat sequential, in the sense that one needs to start with taking care of major sources of abhijjā [abhijjhā] and domanassa with kāyānupassanā. This is basically the same as sila or moral conduct. One needs to be aware that one's actions and speech need to be moral, i.e., to abstain from dasa akusala as much as possible.
- Once one achieves that to a certain extent, moral conduct will follow. One will "feel" when one is about to do something wrong. That means one will become "sensitized." But initially, it takes an effort to pause and think of the consequences.
- With the mind clear of the worst hindrances, then it will be easier to learn Dhamma with dhammānupassanā, be easier not to REACT to feelings (vedanānupassanā) but to take time and evaluate consequences, and automatically be aware of immoral thoughts that come to the mind (cittānupassanā).
- Thus it is a gradual process. Each advance helps with gaining confidence in one's actions, helps not to just react to feelings, and helps to think with a clear head, which in turn helps with the understanding process.

## Comprehension of Tilakkhaṇa Will Accelerate Progress

12. The process of comprehension of Tilakkhana (anicca, dukkha, anatta) starts with kāyānupassana but all four can be cultivated simultaneously. The Buddha stated that if one makes an all-out effort, Arahanthood can be attained in seven days. If one makes less commitment, either Arahant or at least the Anāgāmi stage is attained within seven years according to the Buddha.

- Getting started on this process is described in detail in the section, "Living Dhamma."
- Another deeper approach is discussed in, "Origin of Life."

## Connection to Dasa Akusala

13. Finally, kāyānupassanā basically tackles dasa akusala done with actions and speech (moving body parts), as we will see in the next section. The harder part comes with those done directly by the mind, especially micchā ditṭhi or wrong views.

- There are two levels of micchā ditṭhi. First, the 10 types of micch $\bar{a}$ ditṭhi removed via the mundane Path. Removal of the deeper wrong views comes with the grasping of anicca, dukkha, and anatta.
- Thus we can see the critical role of the pañ̃̃ā indriya (wisdom). One can start on all four types of anupassana . However, when one becomes good in k $\bar{a} y \bar{a} n u p a s s a n \bar{a}$, the other three types of anupassanā cultivate to some extent too.
- The key is to get started with kāyānupassanā and make the effort (viriya). Then wisdom (pañ̃̄̄̄) will grow together with mindfulness (sati), and one will automatically get into the other three anupassan $\bar{a}$ with increasing levels of samādhi.

Next, "Satipatthāna - Introduction", $\qquad$

### 17.4.2 Satipatṭhāna - Introduction

## Revised January 26, 2019; June 6, 2022

You may want to read the post: "Satipatthāna Sutta - Structure," which explains the basic layout of this long sutta. You can read it before or after reading this post.

1. First we need to figure out what "sati" means. Bear with me as I use some key Pāli words because it is important to understand them correctly. Things will become clear as we proceed below. Again, first, try to read the post through without clicking on links, and then come back and read any relevant other posts as needed.

- Sati is a "good" mental factor (sobhana cetasika). Therefore, "sati" arises only in moral thoughts (kusala citta), and DOES NOT arise in akusala citta. As discussed in "Cetasika (Mental Factors)", "good cetasika" do not arise in akusala citta (similarly, "bad cetasika" do not arise in kusala citta).
- There is no "asati" cetasika. Therefore, the word "asati" is NEVER used as the opposite of this "sati", which is a "good cetasika."

2. However, there is another "mundane" meaning for "sati", which is "attention" or "mindfulness". Therefore, one must be able to figure out which meaning is to be used in a given context (depending on the subject matter).

- If one is not paying attention to the task at hand, then one is acting with "asati", without being mindful of what one is doing or contemplating.
- That way one can clearly see the two different meanings of "sati".
- Of course, in Satipaṭthāna, one is being mindful, but one MUST also know the deeper meaning too, in order to figure out what to be mindful about.

3. We can clarify the mundane meaning with the following examples: A suicide bomber has to pay close attention to wiring up the bomb; otherwise, he can detonate it accidentally. A professional thief making plans for a grand robbery in minute detail needs to pay total attention to it too, in order to make sure he does not get caught.

- The deeper meaning of "sati" is NOT involved in either case. The suicide bomber or the thief would not have that "sati", the good mental factor.
- More details on this "sati" can be found in the post: "Imasmim Sati Idam Hoti - What Does It Really Mean?".

4. When a person stops and contemplates whether an action one is about to take has moral or immoral consequences, and carries out only those actions that have moral consequences, then that person is acting with "sati", the "good mental factor".

- That is the "sati" in the MINDSET of a person engaged in Satipatthāna. Of course, he will be paying attention to catch any immoral thoughts that may arise in his mind.
- Therefore, a person engaged in Satipaṭthāna will be using both types of "sati".
- Now let us see what is meant by patthāna in Satipaṭthāna.

5. Patthāna can mean establishment, preparation, or "to mold". Therefore, "satipatṭhāna" means the establishment of "sati", or training the mind to act with "sati" as described above.

- This training process comes in four steps, and that is why it is also called "Catāro Satipatṭhāna" where 'Catāro" means four. Even though the four steps are interrelated, there is a sequence. The four steps are kāyānupassanā, vedanānupassanāa, cittānupassanā, and dhammānupassanā.
- The meaning of "anupassana"" is described in point \#4 of " $\underline{\text {. What do all these Different Meditation }}$ Techniques Mean?" in the Meditation section.

6. Buddha Dhamma is all about cleansing the mind; that is the key to real and lasting tranquility of the mind. A defiled mind generates defiled thoughts (citta). Defiled thoughts lead to defiled speech (with a time lag) and defiled actions (with an even longer time lag).

- The sequence of cleansing the mind is backward: First control bodily actions, then (or simultaneously) to control speech, and controlling thoughts (as they arise) is harder. This is important to understand, so let us look into the reasons.

7. As discussed in the Abhidhamma section, thoughts (citta) arise very fast; there are well over billions of cittā per second but of course we "experience" only "bundles of citta" accumulating for at least about 0.05 seconds. Even then it is not possible to control thoughts by sheer will power.

- But our thoughts are dictated by our character and habits ("gati"). And, these character qualities (gati) can be changed with a concerted effort by controlling one's speech and actions. We have discussed "gati" in many posts spread over different sections.

8. This is why kāyānupassanā comes first in Satipatṭhāna. We first discipline ourselves by making sure we speak only moral words and do only moral actions. Both speech and actions arise from thoughts, but they come with a "time lag". We first think that "this person has done something bad to me", and then we start saying something bad to the person. But there is enough of a 'time lag' to stop saying it.

- We tend to take "bodily actions" with even longer delay than for speech. So, unless one is in a rage, there is enough time to catch oneself and stop any bad actions. Actually, when we get good at it and control both speech and actions, such instances of acting with rage will diminish with time and will go away. This is because the more we act with "sati", the more that we give up bad "gati" and cultivate good "gati".

9. Thus Kāyānupassanā basically means "catching ourselves before we say or do something wrong".

- To put it in another way, what we need to accomplish with kāyānupassanā is to be aware of our speech and actions AT ALL TIMES. By now it must be clear why satipatṭhāna cannot be restricted to a "formal sitting down meditation session".
- We say or do things in response to what we see, hear, smell, taste, touch, or think. The speech or actions have time delays from the time we get the "input" from outside or even if generated by the mind itself. Even if we start saying something bad, we can catch ourselves and stop (and apologize if we hurt someone's feelings). Even if get up to hit someone, we can realize the bad consequences of such an action and immediately stop. That is how one starts.

10. With practice, one's gati will change, and such awkward instances will occur less and less. There are many posts on "gati" at the site, and there are some in the meditation section under, " 9 . Key to Ānāpānasati - How to Change Habits and Character (Gati)". Satipatṭhāna is basically a methodical way of doing $\bar{A} n \bar{a} p \bar{a} n a s a t i$. A scientific view is discussed in, "How Habits are Formed and Broken - A Scientific View".
11. Therefore, it is easy to see that k $\bar{a} y \bar{a} n u p a s s a n \bar{a}$ is the first and most important part of the Catāro Satipaṭthāna.

- When $k \bar{a} y \bar{a} n u p a s s a n a ̄$ is practiced, one's "gati" will gradually change and one will start to calm down. And one will not REACT to feelings on an impulsive basis, and thus it will be easier to practice the next stage of "vedanānupassana", i.e., "think about how to respond when certain feelings arise".
- When both those are practiced, "gati" will change to an extent that even initial thoughts will have "less venom", and thus it will be easier to practice "cittānupassanä" or "think morally" automatically.
- Finally, it will be easier to get into samādhi and to contemplate anicca, dukkha, anatta (or any other Dhamma concept), which is "dhammānupassana $\bar{a}$ ".

12. Thus one starts with k $\bar{a} y \bar{a} n u p a s s a n \bar{a}$ first and then moves on to other three "anupassan $\bar{a}$ ". When one completes all four one completes the process and will have "samm $\bar{a}$ sati" in full, which leads to "samm $\bar{a}$ samādhi" in full, i.e., Arahanthood.

- Of course, that is normally accomplished in four stages, the first of which is the Sotāpanna stage.
- Just like it is not possible to attend middle school without attending primary school, or to take college courses without passing high school, one needs to go through the four steps methodically. One needs to control one's actions and speech first. That is what "kāyānupassana"" is about. We will discuss that in detail in the next post.
- This does not mean that one should not do the other three while doing kāyānupassanā; it just means there is "not much benefit" in doing the other three unless one is actively engaged in stopping the "BIG EIGHT" done with speech and body; see, " 2 . The Basics in Meditation."
- And one does not stop doing kāyānupassanā, ever. It is not something to be done forcefully, it will become a habit. When one sees the benefits, one would want to advance. One just keeps incorporating the other three gradually and soon enough will be doing all four. But k $\bar{a} y \bar{a} n u p a s s a n \bar{a}$ is the FOUNDATION.

## Next, "Kāyānupassanā - The Section on Postures (Iriyapathapabba)",

### 17.4.3 Kāyānupassanā - Section on Postures (Iriyāpathapabba)

1. Let us first clarify what kāyānupassanā means. There are two interchangeably used meanings for "k $\bar{a} y a$ ": one is the body, the other is whatever is involved in "kriya" or "actions". In kāyānupassanā the latter is more general. This section on postures is based on body postures, but is still concerned with all "actions" done via all six senses. This will become clear as we proceed below.

- It is normally written as "kāyānupassana"", and is ALWAYS pronounced as "kāyanupassana".
- In interacting with the world, we see visuals ( $r \bar{u} p a$ ) with eyes, hear sounds with ears, smell odors with nose, taste with the tongue, touch (pottabba) with body, and think about concepts (dhamma) with the mind.
- Thus there are six internal "kāya", and six external "k $\bar{a} y a "$ involved in experiencing the world. Thus we are concerned with both the internal sense faculties (ajjhatta, pronounced "ajjhaththa") and the six external entities (bahiddha), while we are in any of the four main postures of sitting, standing, walking, or lying down.

2. When one starts on the Path, one does not need to believe in anything that the Buddha (or anybody else) said about the true nature of the world. One can start with a simple goal of "getting some peace of mind" or "get some relief from the day-to-day stresses of this world", i.e., get to the "ātāpi" stage.

- One can keep an open mind on whether there is rebirth or not, whether the concept of kamma is correct or not (of course one should not rule out those either; that would be "niyata micchā dittthi" and one WILL NOT be able to make any progress); see, "How do we Decide which View is Wrong View (Ditthi)?."

3. The Buddha said that the mind is burdened by greed, hate, and ignorance. It is not easy to see "the truth" (i.e., to remove ignorance) because the mind is normally "covered" by strong versions of greed and hate called "kāmachanda" (one becomes blind by greed) and "vyāpāda" (one keeps going downward with intense hate); you can do keyword searches to find related posts.

- And these two, kāmachanda and vyāpāda are the main culprits for making a mind stressful, and for causing "inside fires". Thus by forcibly removing any thoughts of extreme greed and hate as they come to the mind, one can get relief in real time. One does not have to wait for "effects of kamma to materialize". Such benefits will be there too, but one WILL be able to experience more immediate benefits.
- This is the beginning of "cooling down" or experiencing nirāmisa sukha, as explained in the post, "Three Kinds of Happiness".

4. As explained in the previous post, "Satipatthāna - Introduction", we start by disciplining our actions through speech and bodily actions, because they have a "time lag" and there is enough time to stop them willfully.

- We can start with the conventional five precepts. Without that basic discipline, one CANNOT get any kind of long-lasting peace of mind, no matter how much time one spends in meditation.
- If one is engaged in any of these five (intentional killing of living beings, stealing, sexual misconduct, lying, and using alcohol excessively or using drugs), and can abstain from them one should be able to experience the benefits of that in the near term.

5. After that one can tackle the BIG EIGHT (killing, stealing, sexual misconduct, lying, gossiping, slandering, harsh speech, and getting "drunk" with not only drugs or alcohol, but also with wealth, fame, power, etc); see, " 2 . The Basics in Meditation".
6. The $k \bar{a} y \bar{a} n u p a s s a n a \bar{a}$ of the satipatthāna consists of six sections or "pabba":

Anapānāpabba (section on "ānāpāna"),
Iriyāpathapabba (section on postures),
Sampajānapabba (section on habits),
Patikulamanasikārapabba (section on contemplation of body parts),
Dhatumanasikāra (section on contemplation of elements), and
Navasivathikapabba (section on contemplation of the decay of a body).

- We have already discussed ānāpāna in several posts, starting with "7. What is Ānāpāna?."

## 7. The "Iriyāpathapabba" section of the Kāyānupassanā in the Satipatṭhāna sutta is all about how to abstain from committing an immoral act AT ANY TIME.

- We have four postures or"iriya": sitting, standing, walking, and in the sleeping position (laying flat).
- In any posture, we need to be vigilant on what we are about to do or speak. This is the beginning of "satipatṭhāna", being "morally mindful" at all times.
- When a thought comes to mind to say something or to do something (whether sitting, standing, walking, or lying down), we need to get into the habit of contemplating their consequences.

8. For example, we may be walking on the street and see someone, whom we do not like, coming our way. If we get the tendency to say something bad, we have enough time to contemplate the bad consequences and stop saying those words.

- We may be lying in bed and getting bored, and may decide to go and see a friend to do some "gossiping" for fun. We have time to think about it and see whether we can use that time more productively.
- Sometimes we get "nasty e-mails"; someone pointing out an allegedly bad deed that we have done. We get that immediate "tāpa" or "heating up" in our heart because we get so perturbed by that false accusation. We tend to fire up an equally nasty e-mail back to that person. But we need to take time and
contemplate a better action. Give that person the benefit of the doubt; may be he/she did not do it to aggravate us, or truly was misled. Of course, there are people who do such things purposely to aggravate, but even then it is better to ignore it, rather than letting it develop into a worse situation. Learning to keep away from such troublemakers is a habit that we learn to develop. By responding in kind, it will not help quenching the "fires".

9. We need to constantly ask ourselves "why am I going to do this? Why am I going to say this?". If the outcome of that action could hurt us or someone else, we need to think about a different way, or totally abandon it.

- It is sad to see that many people waste their time "walking mindfully" one step at a time, just concentrating on taking each step, or "lifting their arm mindfully" This is the "iriyāpathapabba" that is being practiced in most places. How can that procedure lead to a long-lasting peace of mind? Of course, just like doing breath meditation, it can make a person calm for the time being; that is the ONLY benefit.
- And it is not enough to do this in a formal session. This needs to become a habit (a keyword search can be done to find more on habits; developing habits is the key to change those all important "gati"). Buddha Dhamma is all about purifying the mind.

10. If one can do this for a week or so, one should be able to see a change in oneself; a sense of tranquility, a "peace of mind". Of course some of you may be there already. We will discuss how to take the next step in the next post.

- When one is at this stage, it will be easier to get into samādhi, even if one is just doing the "breath meditation". A moral mind is easy to be calmed. Many people do horrible acts on the spur-of-themoment because they do not have this mindset or habit. Also see, "Possible Outcomes of Meditation Samādhi, Jhāna, Magga Phala."
Next, "Kāyānupassanā - The Section on Habits (Sampajānapabba)", .........

### 17.4.4 Kāyānupassanā - The Section on Habits (Sampajānapabba)

## Revised February 8, 2019

This is really an extension of the section on postures (Iriyāpathapabba) discussed in the previous post ("Kāyānupassanā - Section on Postures (Iriyāpathapabba)", going into finer postures and activities. The key point is ultimately to become "sensitized" to each and every action that we take thus leading to the formation of "good habits", i.e., to become a "sampajānno".

1. One cannot start on this section until one has acquired discipline with the "bigger activities". For example, if one is killing animals for fun, then there is no point in worrying about kicking a dog.

- As one gets some practice with abstaining from major offenses, one will become "sensitized", i.e., one will start seeing minor offenses that one is about to make.

2. The relevant paragraph on the Sampajānapabba in the WebLink: suttacentral: Mahā Satipatthāna Sutta (DN 22) reads::
"Puna ca param, bhikkhave, bhikkhu abhikkante patikkante sampajānakāri hoti, ālokite vilokite sampajānakāri hoti, saminjite pasārite sampajānakāri hoti, sanghātipattacivaradhārane sampajānakāri hoti, asite pite khāyite sāyite sampajānakāri hoti, uccārapassāvakamme sampajānakāri hoti, gate thite nisinne sutte jāgarite bhāsite tunhibhāve sampajānakāri hoti".

Here is the mundane translation ("WebLink: tipitaka.org: The Great Discourse on the Establishing of Awareness"), which is word by word:

- "Again, monks, a monk, while going forward or backward, he does so with constant thorough understanding of impermanence; whether he is looking straight ahead or looking sideways, he does so
with constant thorough understanding of impermanence; while he is bending or stretching, he does so with constant thorough understanding of impermanence; whether wearing his robes or carrying his bowl, he does so with constant thorough understanding of impermanence; whether he is eating, drinking, chewing or savoring, he does so with constant thorough understanding of impermanence; while attending to the calls of nature, he does so with constant thorough understanding of impermanence; whether he is walking, standing, sitting, sleeping or waking, speaking or in silence, he does so with constant thorough understanding of impermanence".

3. Thus many possible "finer posture and actions" can be seen in the above direct translation, which are correct. The point is to be "morally mindful" in each and every such action, and not just to do those acts like a robot just in a formal setting as most people do.

- I am not sure where "impermanence" came from, apparently as the translation of the word, "sampajānkāri". But as was explained in the post, "Satipatthāna Sutta - Structure", sampajāno means knowing right from wrong ("san") via enhanced wisdom.
- Thus sampajānkāri means doing something the right way, and sampajānkāri hoti means developing a habit to do that.

4. When one goes into finer details on "being morally mindful" of one's actions, one is not just concerned with killing, stealing, etc. One is also concerned about general welfare, that one should act with civility and be courteous to others: one should be wearing proper clothes appropriate for the occasion, when eating one should not be making inappropriate noises, while walking in a crowded street one should be mindful of the others and not throw one's refuse on the roadside, etc.

- As I pointed out in the post, "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa", a sutta gives instructions in the "niddesa" or as a brief description. It needs to be EXPLAINED rather than doing a direct translation. Any sutta was originally delivered over a number of hours, and then summarized in a special way to make it brief and suitable for oral transmission.

5. A case in point is the direct translation of "..uccārapassāvakamme sampajānakārī hoti", as "while attending to the calls of nature (going to the bathroom), he does so with constant thorough understanding of impermanence!" (from the conventional translation in \#2 above).

- What is meant there is to act with decency and not to relieve oneself in an inappropriate place. In all those cases, sampajānakārī hoti means acting with diligence and prudence.

6. There are many other aspects too. For example, if one is about to take a nap in the middle of the day, one should be asking oneself why one needs to take nap. Unless one had engaged in some strenuous activity and really needs to get some rest, it is not a good habit to take unnecessary naps. Then it could become a habit, a bad one.

- We should also develop good habits. While walking on the street, it is good to help out those who need help, and to be courteous to others. A small thing like not spitting in a public place or just dropping trash anywhere one pleases can cause discomfort (and health problems) for others.
- Of course with each minor act we should also make sure it does not pan out to immoral activities. A good example is drinking too much. Drinking alcohol is not an akusala kamma per se (and there is nothing wrong with taking a drink in a social setting), but there is danger in getting intoxicated.
- An intoxicated mind can be very dangerous; one could lose any sense of decency, and may get into situations that are immoral and offensive. Both drinking and smoking can be harmful to oneself and also to others.

7. As one develops good habits and gets rid of bad ones, one becomes more and more "sensitized" and catch even minor mistakes. This is what is meant by "patisamvedi" ("pati" + "san" "vedi"), i.e., becoming aware of "getting attached to a wrong mindset".

- At the same time, one will start seeing a big improvement in one's "inside fires", but one also becomes less prone to be aggravated or offended, and one becomes more forgiving to others.
- There are many posts at the site on habits, and how they can lead to sansāric habits and āsavas; developing good habits and getting rid of bad habits is key to "cooling down" in the short term as well as in the long term.
- Parents, teachers, and friends play key roles in a child's life, because a child's mind can be influenced by others in a good or bad ways, and can lead to lifelong habits. If the foundation is set right, then it will be easier for one to become a "sampajānno", one who is capable of "keeping fires under control".

8. This is what was meant by being a "sampajānno", and being able to "quench fires", i.e., "ātāpi sampajāno", which was a key phrase in the uddesa (brief description) of the Satipatthāna sutta; see, "Satipatthāna Sutta - Structure."

Next, "Prerequisites for the Satipatthāna Bhāvanā", .........

### 17.4.5 Prerequisites for the Satipatthāna Bhāvanā

As you may have noticed, I am not going to follow the sutta in the formal order. I would like to present it in a way that is conducive to the present day. However, at the end it will become clear that everything in the sutta has been discussed.

1. From the previous two posts it is clear that this meditation is not just to be practiced in a formal session, even though formal sessions can and should be done. In particular, Dhammānupassana needs to be done in formal sessions, which we will discuss shortly. With that in mind let us look at how the sutta begins (after the uddesa or the "brief description" section, to which we will get back later):
"Kathaì ca pana, bhikkhave, bhikkhu kāye kāyanupassi viharati?

- Here and many other other places, " $c a$ " is pronounced "cha".
- Here "viharati" means 'to live". Thus what it says is, "Bhikkhus, what is meant by living with kayanupassana of the body (kaye kayanupassana)?".
- This should make it very clear that the bhāvanā is not just to be practised in a formal session; one has to "live it".

2. Now let us look at the next phrase that describes how to prepare for the $b h \bar{a} v a n \bar{a}$ :
"Idha, bhikkhave, bhikkhu arañña gato vā rukkhamūla gato vā suññāāara gato vā nisidati pallankaì ābhujitvā, ujum kāyaì panidhāya, parimukhaì satim upaṭthapetvā".

- The conventional translation is something like, "Here a monk, having gone into the forest, or to the foot of a tree, or to an empty room, sits down cross-legged, keeps his body upright and fixes his awareness in the area around the mouth".
- Of course, this is a good thing to do if one is going to do a formal session, except that one should focus the awareness not "around the mouth" but on the object of contemplation as we will discuss later.

3. I pointed out in the introduction how the sutta (like most other suttā) was apparently designed to convey the above "conventional" meaning while keeping the deeper meaning hidden; see, "Sutta Interpretation Uddesa, Niddesa, Patiniddesa". This is a good example of how this was accomplished. Let us describe the above sentence in detail. However, I may not be able to go into such details for the rest of the sutta, because it will take up too much space.

Continuing with the interpretation of the phrase in \#2, "gato va" means "get in to" or in the deeper sense, "get into the mindset".

- Arañña is a forest (or forest monastery). But the hidden meaning comes from "rana" which means "battle" and thus "arañña" means staying away from battles. Thus, "arañña gato v $\vec{a}$ " means "get into a calm mindset leaving behind the everyday battles". In the conventional interpretation is says, "having gone into the forest".
- "rukkha" is "tree" and " $m \bar{u} l a$ " is the "root"; even though the top of a tree sways back and forth with the wind, the tree trunk close to the root is very stable. Thus "rukkhamūla gato va" means getting to a stable mindset. In the conventional interpretation is says, "having gone to the foot of a tree".

4. Next, "suññāgāra" is an empty building or room. The deeper meaning is that the mind should be empty of greed, hate, and ignorance. One should dispel any such thoughts that comes to the mind.

- Now comes, "nisidati pallañkaì ābhujitvā", which is translated as, "sits down cross-legged". The key word here is, "anka" or literally "number"; in Pāli or Sinhala, "reduce the number" or "palla+anka" means not giving importance. Thus "nisidati pallankaì ābhujitva" means, "being modest" and getting rid of any sense of "superiority".
- And, "ujuím kāyaím paṇidhāya" is translated, "keeps his body upright". In the deeper meaning, it is about being "straightforward" or forthright and honest.
- The post, "Kāyānupassanā - Section on Postures (Iriyāpathapabba)," describes how one needs to conduct satipattāna in all four postures (sitting, standing, walking, lying down), AND in numerous subpostures; Therefore, the idea of "keeping the physical body upright" during satipatthāna is a falsehood.

5. Finally, "parimukham satim upatthapetv $\bar{a}$ " is the KEY to Satipatṭhāna: It is translated literally as "fixes his awareness in the area around the mouth". What is actually meant is to keep the mind on the main object (called "mukkha nimitt $\vec{a} "$ ), i.e., "Nibbāna" or "cooling down". "Pari" here means "complete" or "full".

- Therefore, "parimukhai் satim upaṭthapetvā" means maintaining one's focus on the main goal or Nibbāna.
- Thus what is described in that sentence is the required mindset for the meditator, whether he/she is going to be "meditating" in any one of the four postures described in the previous post, not just in a sitting down formal meditation session.

6. Thus the "preparation instructions" in that opening phrase can now be stated something like, "get into a calm and stable mindset that is devoid of greed, hate, and ignorance; keep a modest attitude without any sense of superiority; be forthright and honest, and keep the mind on the main object of cooling down".

- Such a state of mind needs to be cultivated for all times. That is the key to cooling down on a long-term basis.
- Of course the conventional interpretation can also be used for sitting down, formal, sessions without "fixing awareness in the area around the mouth". One ALWAYS focuses on cooling down, and becoming an "ātāpi sampajanno"; see, "Satipatthh̄̄na Sutta - Structure," and "Kāyānupassanā - The Section on Habits (Sampajānapabba)."
- Thus the idea is for one to become a "firefighter" ("ātāp̄̄ sampajāno"), who is always on the lookout not for actual fires, but for those mental events that CAN LEAD TO mental fires in the future. These are basically any immoral acts, speech, or thoughts.

7. There are five sections or "pabba" in the k $\bar{a} y \bar{a} n u p a s s a n \bar{a}$. The reason that I described the Iriyāpathapabba ("section on postures") and the Sampajānapabba ("section on habits") in the previous posts was to emphasize the point that this bhāvanā cannot be restricted to a formal session. One could say, "How can I be meditating the whole day?". This question arises only because of the misconceptions we have on what meditation or "bh $\bar{a} v a n \bar{a}$ " is.

- The Buddha said, "bhavanaya bahuleekathaya", or "bhāvanā is what one does all the time". It is about getting into the habit of developing good habits and getting rid of bad habits. [bahulīkata: [pp. of bahulikaroti] took up seriously; increased. (adj.), practised frequently.]
- One can just make it a "formal session" in order to get into deeper levels of samādhi or jhānā.

8. Buddha Dhamma is not a religion in the sense of providing "salvation" by following certain rules or procedures. The Buddha said the only way to achieve long-lasting happiness is to purify the mind. It starts with avoiding the worst immoral acts of killing, stealing, etc. When one sees the benefits of that one can go a step further and include gossiping, slandering, etc. and so on.

- The more one purifies one's mind, the true nature of this world will become increasingly clear. One cannot read about it in one essay or even many essays. One has to put it into action. Even though it is good to read about anicca, dukkha, anatta, it is not possible to "get it" until one purifies one's mind to a certain extent AND experiences the "cooling down" that results from a purified mind; this will be discussed in the Dhammānupassana.

9. Satipatṭhāna sutta describes a very methodical way of following the Path prescribed by the Buddha. Initially, one does not even have to worry about whether rebirth is valid or whether there are 31 realms of existence. One just focuses on realizing that there are "internal fires" (ātāpi) that we are not even aware of, see "Satipatthāna Sutta - Structure."

- As one purifies the mind, one can clearly see and FEEL these fires and how they start. When one clears up the "big fires" one is able to see and feel smaller ones; one becomes more "sensitized". And then one tackles those smaller fires. It is a gradual, step-by-step process. That is why it is called the Path. The higher one climbs on the Path, the more one can "see" and get rid of, and more happier one becomes.

Next, "What is "Kāya" in Kāyānupassanā?",

### 17.4.6 What is "Kāya" in Kāyānupassanā?

## Revised May 20, 2018; February 17, 2019

1. There are two meanings to "k $\bar{a} y a$ ": one is "kāya" for the body, and the other "k $\bar{a} y a$ " means "collections" or "aggregates" of anything: rūpa, vedanā, saññā, sañkhāra, or viññ̄̄na.

- "Sabba" means all. Therefore, "sabba kāya" is the same as "pañcakkhandha" ; see, "Five Aggregates - Introduction," and follow-up posts.
- In the Satipațthāna Sutta, one contemplates on the five aggregates via four categories (kāyānupassanā, vedanānupassanā, cittānupassanā, and dhammānupassanā).
- Kāyānupassanā deals mostly with bodily actions (i.e., regarding kāya). But "kāya" + "anupassanä" rhymes as "kāyānupassanā"; see, "Satipatthāna - Introduction."

2. We experience pictures, sounds, smells, tastes, touch (which are all different types of $r \bar{u} p a$ ), and dhamm $\bar{a}$ (things which we think about).

- Note that dhammā are different from dhamma (without the long "a" at the end) in Buddha Dhamma; the latter dhamma refers to "teachings of the Buddha".
- Even though "rupa" is commonly used to describe "material objects" (which are really "vanna rūpa" or "rūpa rūpa"), rūpa includes sounds (sadda rūpa), smells (gandha rūpa), tastes (rasa rūpa), and touch (photthabba rūpa).
- I will just use the term "rūpa" to include sounds, smells, tastes, and touch as well as pictures for the rest of the post.
- Dhammā are a type of rūpa too; but they are below the suddhatthaka stage and "cannot be seen or touched" : "anidassanai், appatighaì, dhammāyatana pariyāpanna rupaï"; see, "What are rūpa? - Dhammā are rūpa too!."

3. Something is a picture or a visual object only when one is seeing it. A moment later it is only a memory, and it is now a "memory of an old picture". If we visualize a house that we are building, that is also a picture in the memory plane, an "envisioned future picture".

- In the WebLink: suttacentral: Anatta Lakkha Sutta (SN 22.59), "all rūpa" are described as 11 categories: "Tasmātiha, bhikkhave, yaì kiñci rūpaì atītānāgatapaccuppannaì ajjhattaì vā
 rūpaì..". They are past, present, future, near, far, likable, distasteful, fine (not strong), coarse (strong), internal, and external; see also, "Five Aggregates - Introduction."
- For example, feelings (vedana $\bar{a}$ khandha can be any in the 11 categories. Here, near and far means recent or way back in the past. Internal is one's own and external is feelings of the others; one needs to be aware of other's feelings in the sense that "if I do this, it could cause a feeling of grief to so and so", as an example.

4. It is good to contemplate on these concepts and have a good idea of how different representations mean the same things: Pañcakkhandha is the same as "sabba kāya", both include "everything in this world". Please send me a comment if this is not clear. Many people think "k $\bar{a} y \bar{a} n u p a s s a n \bar{a} "$ is just about one's body, and that is not correct.

- But we don't think about the "whole world" out there either. We think about a tiny fraction of that "world out there". AND we get attached to ( $\tanh \bar{a})$ even a smaller fraction.
- Thus even though pañcakkhandha (five aggregates)is unimaginably large, the fraction of pañcakkhandha that we interact with or think about is very small. And we form attachments (via greed or hate) to even smaller fraction, and this is the pañcupādānakkhandha, the aggregates that we attach to with greed and hate (and ignorance). Upādāna means "drawn to", and that is what one grasps willingly because one thinks there is happiness in them.

5. For example, we all know about the zillions of stars out there, or about the other planets in our Solar system; but do not generate any greed or hate about them. We only attach to some of the pictures, sounds, smells, tastes, and touch that we interact with daily, which is indeed a tiny, tiny fraction of the "world out there". The biggest component of our "pañcupādānakkhandha" is the dhamma aggregate, the things we think about. Let us discuss this a bit more.

- Thus here we are concerned with only a tiny fraction of "sabba kāya": Only those that lead to greed, hate, or ignorance. This is the same as pañcaupädānakkhandha, which is a tiny fraction of pañcakkhandha.

6. When we contemplate on this a bit more, we realize that most of the pictures, sounds, smells, tastes, and touch we think about belonging to the dhammä category; see \#2 above..

- A long series of thoughts may start with an "old picture" that is in our memory (say an old friend), and then we start generating more thoughts about that person, and then we get into something altogether different: We may think about the nice neighborhood that person is living in and then start thinking about building a house there. Thus we may end up thinking (generating sañkhāra) about something totally different. Thus it now belongs to the dhammā category.
- Later, we need to focus on such thoughts and dhamma in the "cittānupassana $\vec{a}$ " and "dhammānupassanā". What we need to do in "kāyānupassanā" is to mainly control our speech and actions first. This way we will be able to slowly change our habits (gathi) and start controlling our "automatic actions" that we used to do almost on impulse.

7. We already discussed how we need to be "morally mindful" while we are in any of the four main postures (Iriyapathapabba), and also in any of "sub-postures" or basically any movement (sampajānapabba).

- For example, we see a likable picture (a person or an item) we need to immediately think about whether it is appropriate to take the action that automatically comes to our mind with our old habits. We may be waiting at the airport for the next flight and see a bar; instead of going there and have a drink, it may be more productive to get on to the internet and read something useful. It is more productive to take a nap if one is really tired.
- In another example, someone may come to you and accuse you of doing something wrong. Instead of just retaliating, it may be a good idea to calm down and listen to that person first to see whether you have indeed done something unknowingly to aggravate that person.

8. As we discussed in the post, "4. What do all these Different Meditation Techniques Mean?," Anupassan $\bar{a}$ means "discard according to the principles learned" ("anu" means according to and "passana" means to get rid of). We need to logically think of what would happen if a certain action is taken. If that seems to lead to a "bad ending" we need to discard it.

- Thus "kāyānupassanä" in the iriyāpatapabba and the sampajānapabba means to contemplate on the moral consequences of an act one is about to do and abstain from doing it if it seems to have bad consequences.

9. Now, there are three sections in the $k \bar{a} y \bar{a} n u p a s s a n \bar{a}$ where one specifically contemplates on the physical body. These are patikulamanasikara pabba, dhatumanasikāra pabba, and navasivathika pabba. These sections involve just contemplating on the nature of our physical bodies.

- In the patikulamanasikara pabba the 32 parts of the body are discussed. Those body parts are not very appealing when separated from each other. It is amazing how our bad perception of hair in the dinner plate is so different from the admiration we have for the hair that is attached to our head. The hair in the plate could be one of our own, but still, we do not like it.
- The nail on the finger is something we admire, take care and sometimes paint too. But as soon as it is cut, it becomes something not appealing.

10. What we form a liking for is the "whole complete package" with all 32 parts that are in "good condition". We get distraught when hair starts greying, or the skin starts sagging. A beautiful person may become ugly in an instant if the face becomes disfigured due to some mishap.

The reality is that all the above IS GOING TO HAPPEN to us in the future. As long as there is birth, there is decay and death.
11. The section $(p a b b a)$ on dhatumanasikāra pabba is to contemplate on the fact that all our bodies are composed of just four entities. They are pathavi (solidness), āpo (liquid-ness/tendency to bind together), tejo (heat or warmth), vāyo (wind). Out of the six dhātu, ākāsa (space) is there too, but viññāna (consciousness) does not belong to the physical body.

- Those four things make all bodies - whether beautiful or ugly. There is nothing special.

12. The third section (pabba) of the physical body, navasivathika pabba, is to contemplate on what happens to a dead body over the course of many months if left out on the ground to decay. (That was commonly done at the time of the Buddha).

- Again, whether it is a body of a homeless person or an emperor, the same decay process will take place. Eventually, all body parts will be absorbed to the ground or released to the air.

13. All three of those sections are to help us lose attachments to our physical bodies. The purpose is NOT to get distraught but to develop the wisdom to realize that it is common to us all and will happen.

- A major component of our suffering arises when we eventually realize that we cannot maintain things to our satisfaction. Most people do not like to think about this inevitability. They just want to "whatever it takes" to maintain a beautiful body. The more one does that, the more one will be depressed later.
- Instead what we should do is try to maintain a healthy body by eating well and sticking to a good exercise program. It is not "eye catching aspect" that matters more. One should be more concerned with the health of the body.
- Eating healthy foods and exercising regularly (see, ""Spark" by John Ratey") will keep the body and the mind in good condition, so that we will have enough time to at least get to the Sotāpanna stage of Nỉbā̄a.

14. It is important to remember that in all these "anupassanā," we need to contemplate on the Three Characteristics of nature (anicca, dukkha, anatta) when we contemplate on the unfruitfulness in attaching to "things and concepts".

- Also, it is important to examine the potentially "bad outcomes" of immoral and unwise actions. We should also think about the wisdom of our stressful attempts to try to maintain our body appearances. (Especially using artificial techniques like botox). The sooner we realize this, the less stressful it will be.

15. Finally, in those three sections on the body, patikulamanasikara pabba, dhatumanasikāra pabba, and navasivathika pabba, we need to contemplate on not only our own body (this is what ajjhatta means in these three sections), but also on the bodies of others (this is what bahiddh $\bar{a}$ means in these three sections).

- We can not only contemplate on other humans (famous, poor, rich, young, old, etc), but also on animals. It does not matter who or what it is, we all will eventually become dust. But, for many, this realization comes only after going through much effort in vain to keep the body "beautiful" via artificial means; then it could be too late.
- Therefore, ajjhatta and bahiddh $\bar{a}$ means somewhat different things in these three sections compared to other sections.

### 17.5 Mahā Cattārīsaka Sutta (Discourse on the Great Forty)

Revised April 3, 2016; Re-revised May 6, 2017; November 27,2017; December 17, 2017;
February 26, 2018; October 23, 2021; December 21, 2021; August 20, 2022
The WebLink: suttacentral: Mahācattārīsaka Sutta (MN 117) discusses two eightfold paths: A mundane path that leads to rebirth in the "good realms" (at or above the human realm) and the Noble Eightfold Path that leads to Nibbāna.

1. All sutt $\bar{a}$, in one way or another describe the Path to Nibbāna; there are many ways to analyze the Path.

- In this sutta, the emphasis is on the twenty "good factors," ten leading to "good rebirths' and ten leading to Nibbāna (Cooling Down of the mind). The negative twenty factors direct one away from Nibbāna (trapped in the four lowest realms or $a p \bar{a} y \bar{a}$ ).

2. The Path to Nibbāna is sīla (virtue), samādhi (moral concentration), and pañña (wisdom).

- Without some wisdom one will not even start thinking about the Path. No matter how much they listen to or read about the Buddha's message, some people cannot see any benefit from it. Such people have no samisāric habit ("gati") built up from past lives, and their minds are covered; this is the strong form of avijjā called moha.
- Therefore, without some level of wisdom (or pañña, not "book knowledge"), it is not possible to "see the Path." When we talk about "seeing the Path," it is not "seeing with the eyes"; it is "seeing with wisdom."
- The correct order is to start with Sīla, Samādhi, and Pañ̃̃̄̄ in the mundane Eightfold Path. That helps one understand the Tilakkhaṇa (anicca, dukkha, and anatta.)
- Then with that higher level of pañ̃ñ̄ one can start on the Noble or Lokuttara Eightfold Path. Thus, now the order is Pañ̃̃̄̄, Sīla, Samādhi. That leads to Sammā Nān̄a and Sammā Vimutti (Arahantship). These are the ten factors for Nibbāna. This is discussed in "Sila, Samādhi, Paññā to Paññā, Sila, Samādhi."

3. There are four kinds of "seeing" that are progressively attained in the following order: strong micchā ditthi and engaging in pāpa kamma (people like serial killers), moral people with some types of micchā ditthi (most people today belong to this category), after getting rid of 10 types of micch $\bar{a}$ ditṭhi, and transcendental Sammā Diṭ̣hi (comprehending anicca, dukkha, anatta or vision for attaining Nibbāna).

When the mind is covered with defilements (when one has moha), one is likely to believe in all or some of the ten types of micchā ditṭhi:

1. no benefits in giving. [natthi dinnamं]
2. no benefits in fulfilling one's responsibilities. [natthi yitt haì]
3. respecting and making offerings to those with higher virtues has no merits. [natthi hutaì]
4. kamma or deeds do not have good and bad vipāka. [natthi sukatadukkaṭānaỉ kammānaì phalaì vipāko]
5. this world does not exist. [natthi ayam loko]
6. para loka or the world of gandhabba does not exist. [natthi paro loko]
7. mother is not a special person. [natthi māt $\bar{a}$ ]
8. father is not a special person. [natthi pit $\bar{a}$ ]
9. no instantaneous (opapātik $\bar{a}$ ) births in other realms. [natthi sattā opapātik $\bar{a}$ ]
10. there are no samana brahmana (basically Ariy $\bar{a}$ or yogis) who have cultivated their minds to be free of defilements and thus can can see other realms and previous births. [natthi loke
samaṇabrāhmaṇā sammaggatā sammāpaṭipannā ye imañca lokaì parañca lokamं sayaì abhiññā sacchikatvā pavedentī]
[WebLink: suttacentral: AN 3.117. Vipattisampadāsutta - Distress and Attainment Sutta '(1) natthi dinnaì, (2) natthi yiṭthamं, (3) natthi hutaì, (4) natthi sukatadukkaṭānaì, kammānaì phalaì vipāko, (5) natthi ayam loko, (6) natthi paro loko, (7) natthi mātā, (8) natthi pitā, (9) natthi sattā opapātikā, (10) natthi loke samaṇabrāhmaṇā sammaggatā sammāpaṭipannā ye imañca lokaì parañca lokam̀ sayaì abhiññā sacchikatvā pavedent $\vec{\imath}$ ]

See "Micchā Ditthi, Gandhabba, and Sotāpanna Stage," and "Hidden World of the Gandhabba: Netherworld (Paraloka)" for a discussion on para loka.
4. The ten wrong actions contributing to one's downfall (akusala kamma) RESULT FROM the above ten wrong views.

- One is not likely to see the consequences of immoral thoughts and intentions (micchā sañkappa) in 3 categories: sensual lust ( $k \bar{a} m a c c h a n d a$ ), ill-will (vyāpāda), violence (himsā).
- Thus one will utter four types of micchā vācā or wrong speech: lying (musāvāda), slandering (pisuṇāvāc $\bar{a}$ ), harsh speech (pharusāvācā), and empty speech (samphappalāpa).
- And one will engage in 3 types of immoral bodily actions (micchā kammanta): killing living beings (pānātipāt $\bar{a}$ ), taking the not-given (adinnādānā), sexual misconduct, and other extreme sensual activities (kāmesu micchācārā).

5. The more one does those ten defiled actions by the mind, speech, and body, the stronger one's conviction of the ten types of micchā ditṭhi will become. Thus one will be trapped in a downward Path.

- Thus one will be engaged in immoral livelihoods (micch $\bar{a} \bar{a} j \bar{v} v a$ ), make an effort in such activities (micchā vāyāma), build-up that mindset (micchā sati), and solidify that kind of mindset (micch $\bar{a}$ samādhi).
- Those in turn will strengthen micchā dițthi, micchā sañkappa, micchā vācā, micchā kammanta.
- And so it continues, pushing one in a downward spiral.

6. Therefore, those two sets of ten factors will lead one in the wrong way towards unimaginable suffering in future lives, and it will be tough to break away from them.

- Sometimes acts of occasional kindness or charity could open one's mind to the truth. That is probably the reason for the order: sīla, samādhi, pañ̃̃̄ . Even an occasional act of virtue (sïla) can get one oriented in the right direction.

7. As one removes more and more types of micchā diṭthi, one will start gaining Sammā Ditṭhi, which means not having those ten types of micchā ditt thi.

- With the ten types of micchā ditthi removed, one starts comprehending the correct interpretations of anicca, dukkha, and anatta. Of course, it will not help if anicca is interpreted as just "impermanence" and anatta as "no-self."
- It is just like taking medicine to cure a disease. If one is taking the wrong medication, no matter how long one takes it, that will not help.

8. So, the sutta explains that there are two types of Sammā Diṭthi: mundane (lokiya) and deeper insight (lokuttara).

Initially, one sees the perils of micchā ditthi (and associated immoral acts), and starts turning to mundane Sammā Dițthi: One sees that things happen for a reason, and one could get into bad situations and bad births by doing immoral acts. One is motivated to do moral deeds and to seek good rebirths. Now one does not have moha but just avijj $\bar{a}$.

- Thus one starts thinking moral thoughts (Sammā Sañkappa) and abstains from immoral speech and deeds (Sammā Vācā and Sammā Kammanta).
- Thus one will be engaged in moral livelihoods (Sammā $\bar{A} j \bar{\imath} v a$ ), make an effort in such activities (Samm $\bar{a}$ $V \bar{a} y \bar{a} m a$ ), build up that mindset (sammā sati), and solidify that kind of mindset (Sammā Samādhi).
- These eight factors constitute the mundane Eightfold Path. One will be making progress towards "good rebirths."

9. It is essential to realize that one on the mundane Eightfold Path will willfully abstain from the strong versions of dasa akusala. That would become automatic with comprehension of Tilakkhaṇa in the Noble Eightfold Path.

- See the "WebLink: suttacentral: Mahā Cattārīsaka Sutta (MN 117)."
- Even though the English translation there is not that good, this fact is apparent in the English translation in the above link.

10. Then, some of those on the mundane Eightfold Path will start seeing the unique message of the Buddha, which says that one can NEVER find permanent happiness in this world (lokiya). [lokiya : [adj.] worldly; mundane.]

- Even if one makes sure to avoid the four lower realms (apāyā) in the next birth by following the mundane Eightfold Path, one will not be assured of anything in the births after that. Because we have no idea under what circumstances we will be born in the next life, even if it is human.
- Of course, one needs to know the correct version of Tilakkhana.

11. As long as one has not attained the Sotāpanna stage of Nibbāna, it is inevitable that one is likely to be born in the ap $\bar{a} y \bar{a}$ in the future.

- Thus, as long as we are born anywhere in these 31 realms, it will eventually lead to $d u k k h a$ (suffering).
- Thus it is unfruitful to strive for such mundane happiness as a human, deva, or Brahma. In the long run, none of those births will provide permanent happiness. We cannot maintain anything to our satisfaction in the long run anywhere. That is the concept of anicca.
- The concept of anatta is that there is no place in the whole wider world of 31 realms where one could find refuge.

12. The realization of these three characteristics (anicca, dukkha, and anatta) of this world (loka) is the point at which one grasps the lokuttara Sammā Diṭthi.

- Then one starts thinking moral thoughts (Sammā Sänkappa) on how to remove suffering FOREVER. One is not interested in merely seeking "good rebirths" because one realizes the futility of such efforts in the long term. This is lokuttara sammā sañkappa.
- One stops uttering immoral speech (and gets to Sammā Vācā) and abstains from immoral deeds (to Sammā Kammanta) because one realizes that there is NO POINT in doing those things, not just because they lead to bad births. They are now lokuttara Sammā Vācā and lokuttara Sammā Kammanta.
 Sammā Samādhi.
- These eight factors constitute the lokuttara Noble Eightfold Path that will take one progressively to stages of "higher cooling down" or Nibbāna starting with the Sotāpanna stage and ending in the Arahant stage.
- Avijjā is gradually dispelled starting at the Sotāpanna stage and completely removed at the Arahant stage; simultaneously, wisdom (pañña) grows and becomes complete at the Arahant stage.

13. The uniqueness of Buddha Dhamma lies in the lokuttara Noble Eightfold Path. Other religions focus on "how to live a moral life," which is more like the mundane Eightfold Path.

- Buddha Dhamma says living a moral life is not enough to attain permanent happiness (because life in the heavens or Deva loka is not endless according to Buddha Dhamma). Ultimately, it requires relinquishing all desires for worldly things.
- But the mindset to seek Nibbāna via "relinquishing all desires for worldly things" is not even possible until one makes progress on the mundane Noble Eightfold Path. The mind needs to be purified to some extent to comprehend Tilakkhana.
- Throughout most of the recent past, the genuine lokuttara Noble Eightfold Path had been hidden together with the world's true nature as described by the real meanings of anicca, dukkha, and anatta; most people have been practicing the mundane Eightfold Path. It is easy for most people to connect with the mundane Eightfold Path simply because it is mundane, i.e., an average human is already comfortable with such concepts.
- But as the Buddha said, his Dhamma "had never been heard before...", as he emphasized in the Dhammacakkappavattana sutta: "pubbe ananussutesu dhammesu ...."

14. In summary, the forty factors exist because there are four pathways, each with ten outcomes. (i) Two types of wrong paths (one with ten types of micchā ditthi and another with strong micchā ditthi with immoral behavior,) (ii) Two types of "good paths" (one after getting rid of ten types of micchā ditṭhi and the next with starting to comprehend anicca, dukkha, anatta).

- The ten outcomes in the Noble Path are: Sammā Ditṭhi, Sammā Sañkappa, Sammā Vācā, Sammā Kammanta, Sammā Ājīva, Sammā Vāyāma, Sammā Sati, Sammā Samādhi, Sammā Ñāna, and Sammā Vimutti (Arahantship).
- Towards the end of the Buddha says, "Iti kho, bhikkhave, atthañgasamannāgato sekkho, dasañgasamannāgato arahā hoti.." Translated: "Thus, bhikkhus, the path of the disciple in higher training (Sotāpanna, Sakadāgāmi, Anāgāmi) possesses eight factors, and the Arahant possesses ten factors, and the Arahant possesses ten factors."
- The other three paths have corresponding ten outcomes, leading to good or bad results, but provide no permanent solution (of course, the bad ones lead to unimaginable suffering).

15. The Pāli version of the sutta - as well as translations in several languages - is available at: WebLink: suttacentral: Mahā Cattārīsaka Sutta.

- However, those translations are not complete, as mentioned above. In particular, they do not discuss the distinction between the two types of Sammā Ditṭhi, etc., and the two types of eightfold paths there. That is because the translators don't understand the importance of the correct interpretation of Tilakkhaṇa.

16. Finally, another way to analyze this step-by-step process is at: "Micchā Ditthi, Gandhabba, and

Sotāpanna Stage."

### 17.5.1 Mahācattārīsaka Sutta

## Majjhima Nikāya 117

## Mahācattārīsakasutta

Evamं me sutamं - ekam̉ samayam̉ bhagavā sāvatthiyamं viharati jetavane anāthapiṇ̣ikassa ārāme. Tatra kho bhagavā bhikkhū āmantesi: "bhikkhavo"ti. "Bhadante"ti te bhikkhū bhagavato paccassosum. Bhagavā etadavoca: "ariyam̀ vo, bhikkhave, sammāsamādhim desessāmi saupanisamं saparikkhāram. Tam̀ suṇātha, sādhukam manasi karotha, bhāsissāmı̈’ti. "Evam, bhante"ti kho te bhikkhū bhagavato paccassosum. Bhagavā etadavoca:
"Katamo ca, bhikkhave, ariyo sammāsamādhi saupaniso saparikkhāro? Seyyathidamं- sammādiṭ̣hi, sammāsañkappo, sammāvācā, sammākammanto, sammāājīvo, sammāvāyāmo, sammāsati; yā kho, bhikkhave, imehi sattahañgehi cittassa ekaggatā parikkhatā-ayam vuccati, bhikkhave, ariyo sammāsamādhi saupaniso itipi, saparikkhāro itipi. Tatra, bhikkhave, sammādiṭ̣̣hi pubbañgamā hoti. Kathañca, bhikkhave,
 -sāssa hoti sammādiṭthi.

Katamā ca, bhikkhave, micchāditṭhi? 'Natthi dinnam, natthi yiṭ̣ham̉, natthi hutamं, natthi sukatadukkaṭānam kammānaṁ phalamं vipāko, natthi ayamं loko, natthi paro loko, natthi mātā, natthi pitā, natthi sattā opapātikā, natthi loke samaṇabrāhmaṇā sammaggatā sammāpaṭipannā ye imañca lokam̉ parañca lokam sayam abhiññ̄ sacchikatvā pavedentū̀ti-ayam, bhikkhave, micchāditṭhi.

Mahācattārīsakasuttam niṭ̣hitam̀ sattamam.

## Majjhima Nikāya 117

## The Great Forty

Thus have I heard. On one occasion the Blessed One was living at Sāvatthī in Jeta's Grove, Anāthapiṇ̣ika's Park. There he addressed the bhikkhus thus: "Bhikkhus."-"Venerable sir," they replied. The Blessed One said this:
"Bhikkhus, I shall teach you noble right concentration with its supports and its requisites. Listen and attend closely to what I shall say."-"Yes, venerable sir," the bhikkhus replied. The Blessed One said this:
"What, bhikkhus, is noble right concentration with its supports and its requisites, that is, right view, right intention, right speech, right action, right livelihood, right effort, and right mindfulness? Unification of mind equipped with these seven factors is called noble right concentration with its supports and its requisites.

## View

'Therein, bhikkhus, right view comes first. And how does right view come first? One understands wrong view as wrong view and right view as right view: this is one's right view.
"And what, bhikkhus, is wrong view? 'There is nothing given, nothing offered, nothing sacrificed; no fruit or result of good and bad actions; no this world, no other world; no mother, no father; no beings who are reborn spontaneously; no good and virtuous recluses and brahmins in the world who have realised for themselves by direct knowledge and declare this world and the other world.' This is wrong view.
"And what, bhikkhus, is right view? Right view, I say, is twofold: there is right view that is affected by taints, partaking of merit, ripening in the acquisitions; and there is right view that is noble, taintless, supramundane, a factor of the path.
"And what, bhikkhus, is right view that is affected by the taints, partaking of merit, ripening in the acquisitions? 'There is what is given and what is offered and what is sacrificed; there is fruit and result of good and bad actions; there is this world and the other world; there is mother and father; there are beings who are reborn spontaneously; there are in the world good and virtuous recluses and brahmins who have realised for themselves by direct knowledge and declare this world and the other world.' This is right view affected by taints, partaking of merit, ripening in the acquisitions.
"And what, bhikkhus, is right view that is noble, taintless, supramundane, a factor of the path? The wisdom, the faculty of wisdom, the power of wisdom, the investigation-of-states enlightenment factor, the path factor of right view in one whose mind is noble, whose mind is taintless, who possesses the noble path and is developing the noble path: this is right view that is noble, taintless, supramundane, a factor of the path.
"One makes an effort to abandon wrong view and to enter upon right view: this is one's right effort. Mindfully one abandons wrong view, mindfully one enters upon and abides in right view: this is one's right mindfulness. Thus these three states run and circle around right view, that is, right view, right effort, and right mindfulness.

## Intention

'Therein, bhikkhus, right view comes first. And how does right view come first? One understands wrong intention as wrong intention and right intention as right intention: this is one's right view.
"And what, bhikkhus, is wrong intention? The intention of sensual desire, the intention of ill will, and the intention of cruelty: this is wrong intention.
"And what, bhikkhus, is right intention? Right intention, I say, is twofold: there is right intention that is affected by taints, partaking of merit, ripening in the acquisitions, and there is right intention that is noble, taintless, supramundane, a factor of the path.
"And what, bhikkhus, is right intention that is affected by taints, partaking of merit, ripening in the acquisitions? The intention of renunciation, the intention of non-ill will, and the intention of non-cruelty: this is right intention that is affected by taints...ripening in the acquisitions.
"And what, bhikkhus, is right intention that is noble, taintless, supramundane, a factor of the path? The thinking, thought, intention, mental absorption, mental fixity, directing of mind, verbal formation in one whose mind is noble, whose mind is taintless, who possesses the noble path and is developing the noble path: this is right intention that is noble...a factor of the path.
"One makes an effort to abandon wrong intention and to enter upon right intention: this is one's right effort. Mindfully one abandons wrong intention, mindfully one enters upon and abides in right intention: this is one's right mindfuilness. Thus these three states run and circle around right intention, that is, right view, right effort, and right mindfulness.

## Speech

'Therein, bhikkhus, right view comes first. And how does right view come first? One understands wrong speech as wrong speech and right speech as right speech: this is one's right view.
"And what, bhikkhus, is wrong speech? False speech, malicious speech, harsh speech, and gossip: this is wrong speech.
"And what, bhikkhus, is right speech? Right speech, I say, is twofold: there is right speech that is affected by taints, partaking of merit, ripening in the acquisitions; and there is right speech that is noble, taintless, supramundane, a factor of the path.
"And what, bhikkhus, is right speech that is affected by taints, partaking of merit, ripening in the acquisitions? Abstinence from false speech, abstinence from malicious speech, abstinence from harsh speech, abstinence from gossip: this is right speech that is affected by taints...ripening in the acquisitions.
"And what, bhikkhus, is right speech that is noble, taintless, supramundane, a factor of the path? The desisting from the four kinds of verbal misconduct, the abstaining, refraining, abstinence from them in one whose mind is noble, whose mind is taintless, who possesses the noble path and is developing the noble path: this is right speech that is noble...a factor of the path.
"One makes an effort to abandon wrong speech and to enter upon right speech: this is one's right effort. Mindfully one abandons wrong speech, mindfully one enters upon and abides in right speech: this is one's right mindfulness. Thus these three states run and circle around right speech, that is, right view, right effort, and right mindfulness.

## Action

'Therein, bhikkhus, right view comes first. And how does right view come first? One understands wrong action as wrong action and right action as right action: this is one's right view.
"And what, bhikkhus, is wrong action? Killing living beings, taking what is not given, and misconduct in sensual pleasures: this is wrong action.
"And what, bhikkhus, is right action? Right action, I say, is twofold: there is right action that is affected by taints, partaking of merit, ripening in the acquisitions; and there is right action that is noble, taintless, supramundane, a factor of the path.
"And what, bhikkhus, is right action that is affected by taints, partaking of merit, ripening in the acquisitions? Abstinence from killing living beings, abstinence from taking what is not given, abstinence from misconduct in sensual pleasures: this is right action that is affected by taints. . .ripening in the acquisitions.
"And what, bhikkhus, is right action that is noble, taintless, supramundane, a factor of the path? The desisting from the three kinds of bodily misconduct, the abstaining, refraining, abstinence from them in one whose mind is noble, whose mind is taintless, who possesses the noble path and is developing the noble path: this is right action that is noble...a factor of the path.
"One makes an effort to abandon wrong action and to enter upon right action: this is one's right effort. Mindfully one abandons wrong action, mindfully one enters upon and dwells in right action: this is one's right mindfulness. Thus these three states run and circle around right action, that is, right view, right effort, and right mindfulness.

## Livelihood

"Therein, bhikkhus, right view comes first. And how does right view come first? One understands wrong livelihood as wrong livelihood and right livelihood as right livelihood: this is one's right view.
"And what, bhikkhus, is wrong livelihood? Scheming, talking, hinting, belittling, pursuing gain with gain: this is wrong livelihood.
"And what, bhikkhus, is right livelihood? Right livelihood, I say, is twofold: there is right livelihood that is affected by taints, partaking of merit, ripening in the acquisitions; and there is right livelihood that is noble, taintless, supramundane, a factor of the path.
"And what, bhikkhus, is right livelihood that is affected by taints, partaking of merit, ripening in the acquisitions? Here, bhikkhus, a noble disciple abandons wrong livelihood and gains his living by right livelihood: this is right livelihood that is affected by taints...ripening in the acquisitions.
"And what, bhikkhus, is right livelihood that is noble, taintless, supramundane, a factor of the path? The desisting from wrong livelihood, the abstaining, refraining, abstinence from it in one whose mind is noble, whose mind is taintless, who possesses the noble path and is developing the noble path: this is right livelihood that is noble...a factor of the path.
"One makes an effort to abandon wrong livelihood and to enter upon right livelihood: this is one's right effort. Mindfully one abandons wrong livelihood, mindfully one enters upon and dwells in right livelihood: this is one's right mindfuiness. Thus these three states run and circle around right livelihood, that is, right view, right effort, and right mindfulness.

## The Great Forty

'Therein, bhikkhus, right view comes first. And how does right view come first? In one of right view, right intention comes into being; in one of right intention, right speech comes into being; in one of right speech, right action comes into being; in one of right action, right livelihood comes into being; in one of right livelihood, right effort comes into being; in one of right effort, right mindfulness comes into being; in one of right mindfulness, right concentration comes into being; in one of right concentration, right knowledge comes into being; in one of right knowledge, right deliverance comes into being. Thus, bhikkhus, the path of the disciple in higher training possesses eight factors, the arahant possesses ten factors.
'Therein, bhikkhus, right view comes first. And how does right view come first? In one of right view, wrong view is abolished, and the many evil unwholesome states that originate with wrong view as condition are also abolished, and the many wholesome states that originate with right view as condition come to fulfilment by development.
"In one of right intention, wrong intention is abolished, and the many evil unwholesome states that originate with wrong intention as condition are also abolished, and the many wholesome states that originate with right intention as condition come to fulfilment by development.
"In one of right speech, wrong speech is abolished...In one of right action, wrong action is abolished...In one of right livelihood, wrong livelihood is abolished ...In one of right effort, wrong effort is abolished...In one of right mindfulness, wrong mindfulness is abolished...In one of right concentration, wrong concentration is abolished...In one of right knowledge, wrong knowledge is abolished...In one of right deliverance, wrong deliverance is abolished, and the many evil unwholesome states that originate with wrong deliverance as condition are also abolished, and the many wholesome states that originate with right deliverance as condition come to fulfilment by development.
'Thus, bhikkhus, there are twenty factors on the side of the wholesome, and twenty factors on the side of the unwholesome. This Dhamma discourse on the Great Forty has been set rolling and cannot be stopped by any recluse or brahmin or god or Māra or Brahmā or anyone in the world.
'Bhikkhus, if any recluse or brahmin thinks that this Dhamma discourse on the Great Forty should be censured and rejected, then there are ten legitimate deductions from his assertions that would provide grounds for censuring him here and now. If that worthy one censures right view, then he would honour and praise those recluses and brahmins who are of wrong view. If that worthy one censures right intention, then he would honour and praise those recluses and brahmins who are of wrong intention. If that worthy one censures right speech... right action...right livelihood...right effort...right mindfulness...right concentration...right
knowledge...right deliverance, then he would honour and praise those recluses and brahmins who are of wrong deliverance. If any recluse or brahmin thinks that this Dhamma discourse on the Great Forty should be censured and rejected, then these are ten legitimate deductions from his assertions that would provide grounds for censuring him here and now.
'Bhikkhus, even those teachers from Okkala, Vassa and Bhañña, who held the doctrine of non-causality, the doctrine of non-doing, and the doctrine of nihilism, would not think that this Dhamma discourse on the Great Forty should be censured and rejected. Why is that? For fear of blame, attack, and confutation."

That is what the Blessed One said. The bhikkhus were satisfied and delighted in the Blessed One's words.

### 17.6 Sutta Learning Sequence for the Present Day

November 30, 2016; revised October 29, 2019

## Introduction

1. In this critical post, I point out that it is better to study sutta $\bar{a}$ in the order that is the reverse of the time sequence of sutta delivery by the Buddha.

- As I discussed in the post, "Animisa Locana Bodhi Poojā - A Prelude to Acts of Gratitude," the Buddha spent the first few years of his ministry "paying back" those those who had helped him attain the Buddhahood through numerous previous lives.
- Those ranged from the five ascetics (to whom the Buddha delivered the first desanā) to King Suddhodana (his father, he went to see in the fifth year after attaining the Buddhahood). They and others in between had fulfilled most of the requirements to achieve the Arahanthood in previous lives. They were "ready" to attain the Arahantship and were able to comprehend the Tilakkhaṇa (anicca, dukkha, anatta) reasonably quickly.

## Comprehending Tilakkhaṇa Is Not Easy

2. Grasping the Tilakkhana is not easy for a normal human being. It takes many, many lives. In a given Buddha Säsana (ministry), those who have fulfilled most of the requirements in previous lives attain Arahanthood first, without much effort. For example, the two chief disciples, Ven. Sariputta and Ven. Moggallana reached the Sotāpanna stage just by listening to a single verse and then attained the Arahanthood within two weeks.

- Therefore, those discourses delivered in the first several years were "deep." They could only be comprehended by those who had made progress on the path in previous lives.
- The first desanā, Dhammacappavattana Sutta, was a summary of the "Buddhist doctrine" to put in terms of modern terminology. The second desanā was on the anatta nature of the world, Anatta Lakkhana Sutta. The "fire sermon" (Adittapariyaya Sutta) was on the "burning nature" of this world of 31 realms. The word "burning" inplies to "tāpa" or "heat in the mind." This word "tāpa" was discussed later in the Mahā Satipatṭhāna Sutta; see, "Satipatthāna Sutta - Relevance to Suffering in This Life."
- A large number of people (who were ready) attained magga phala within the first few years of the Buddha Sāsana. In the latter years it took longer and longer for people to attain magga phala. In the latter years, the Buddha delivered more and more discourses that were "less deep" and easier to grasp for those who were "less prepared".
- For example, Mahā Cattarisika Sutta and Mahā Satipatthāna Sutta (which were delivered later) provide detailed accounts of the process, starting with basic concepts. However, those basic concepts have not discussed adequately. In some cases, translations are incorrect.
- Many suttā clarify even more fundamental aspects.

3. All those "deep desanās" delivered early by the Buddha require detailed explanations. Just word-byword translations cannot explain the deeper meanings. That is why the meanings of the Tilakkhaṇa remain hidden.

- Furthermore, understanding Tilakkhaña requires some fundamental - and essential - material covered in later sutt $\bar{a}$ by the Buddha.
- I plan to discuss more of the "less deep" sutt $\bar{a}$ in this section in the future. I realized this point only recently while writing posts in the new "Living Dhamma" section.

Four Categories of People, Based on Their Capabilities
4. As pointed out by Buddha, there are three types of people who can comprehend Tilakkhana, categorized according to their "inherent capabilities". That has nothing to do with "book knowledge", but has everything to do with one's ingrained capabilities accumulated over many, many lives.

- The first category is ugghatitañ̃na or "persons with high wisdom"; they could grasp concepts very easily. Then some belong to the vipañcitañ̃̃a category, and they needed a bit more explanation to understand the concepts. The third category is neyya; they need detailed explanations (i.e., patiniddesa) to grasp a concept. People in the last group of "padaparama" are unable to comprehend Dhamma.
[ugghaṭitañ̃u : "one who already during a given explanation comes to penetrate the truth" (Pug.). This is one of four types of persons classified according to their ability of acquiring insight, mentioned in A. IV, 133. Cf. also vipañcitañnu, neyya, pada-parama. See The Requisites of Enlightenment, by Ledi Sayadaw (WHEEL 171/174). vipañcitañnu : "one who realizes the truth after explanation." Thus is called one who realizes the truth only after detailed explanation of that which already had been said to him in a concise form. Cf. ugghatitañ̃̃u. neyya : "requiring guidance," is said of a person "who through advice and questioning, through wise consideration, and through frequenting noble-minded friends, having intercourse with them, associating with them, gradually comes to penetrate the truth" (Pug. 162). Cf. ugghatitañ̃̄̄̄. pada-parama : "one for whom the words are the utmost attainment." "Whoever, though having learned much, speaking much, knowing many things by heart, and discoursing much, has not penetrated the truth, such a man is called by that name" (Pug. 163).]
- These categories are listed in the WebLink: suttacentral: Ugghatitañ̃ñ̄ Sutta (AN 4.133) and discussed in, "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."
- These days - 2600 years into the Buddha Sāsana of the Gotama Buddha - most people are in the third category of neyya. Therefore, it makes more sense for most people today to start at a more fundamental level and proceed to higher levels.
- Trying to comprehend those "deep" sutt $\bar{a}$ - without first grasping the material in the sutt $\bar{a}$ that were delivered later in his life by the Buddha - is like trying to pass the university entrance examination without having a good primary and high school education.

## "Living Dhamma" Section

5. The "Living Dhamma" section was started to provide a systematic way to proceed to higher levels starting at a fundamental level. I highly recommend to everyone to start there.

- If one is confident of the material in early posts in that section, they can proceed quickly to higher levels (later posts). Furthermore, if someone runs into difficulty at a recent post, one needs to go back to earlier posts and clarify those points.
- The Buddha had a unique ability to "see" the capability of each person. Therefore, he was able to deliver a discourse tailored to each individual. No one today has that capability, despite false claims by some. Thus, each person needs to realize one's abilities and deficiencies and strive accordingly.

## Need to Discuss Simper $S u t t \bar{a}$ in the Tipitaka

6. There are hundreds of sutt $\bar{a}$ in the Tipitaka that discuss key concepts at a basic level. It is quite unfortunate that even the Theravadins have set aside the Tipitaka and are using the Visuddhimagga of the Buddhaghosa as the "base."

- With the current revival of pure Dhamma in Sri Lanka - initiated by Venerable Waharaka Abhayaratanalankara Thero - the value of the Tipitaka is becoming clear.

7. In the "Sutta Interpretations" section, I plan to discuss some of those long-forgotten suttā to explain key Pāli terms. I will briefly mention some of those suttā below.

- The Nibbāna Sutta in the Samiyutta Nikāya clearly describes Nibbāna as, ".ragakkhayo, dosakkhayo, mohakkhayo, idam vuccathi Nibbananti."
- One does not need to examine deep concepts like sunyata initially. However, even though those deeper meanings become clear upon grasping the basic ideas. See, "What is Sunyata or Sunnata (Emptiness)?"
- That is why I emphasized this at the beginning of the Meditation section: "1. Introduction to Buddhist Meditation." One can actually experience the "cooling down" as one gets rid of greed, hate, and ignorance (of the true nature of the world) from one's mind.

## More Key Pāli Words

8. Another keyword is anicca, incorrectly translated as "impermanence". It is very easy to see from the WebLink: suttacentral: Icca Sutta (SN 1.96) (in the Samyutta Nikāya), that icchā or the opposite of anicca has nothing do with "permanence". The Sutta states,
"..Icchāya bajjhati loko, icchā vinayāya muccati

## Icchāya vippahānena, sabbaì chindati bandhanan" ti."

- That means the following, "The world is bound by icch $\bar{a}$ (cravings), and one needs to get rid of icch $\bar{a}$ to become disentangled; one becomes free of all entanglements by realizing anicca nature." Of course, one removes cravings by comprehending anicca nature, i.e., that it is not possible to maintain things to one's liking.
- Icch $\bar{a}$ (pronounced ichchā) is a perception in one's mind.

9. The Dasakammapatha Sutta, clearly states how people with similar gati tend to associate with each other and thus make those gati stronger.

- That is why one needs to dissociated from those who have bad gati and try to make associations with people with "good gati"; see, "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsavas)" and, at a deeper level in " 9 . Key to Ānāpānasati - How to Change Habits and Character (Gati)."

10. In the Ginjakavasatha sutta (Saimyutta Nikāya), Buddha tells Ven. Ānanda that one can determine for oneself whether one has attained the Sotāpanna stage. Furthermore, one can declare that if one so desires.

- The deeper meaning of the five precepts discussed in the Sikkapada vibhanaga in the Vibhangapakaranaya-2. The deeper meaning of the fifth precept, "surameraya majjapama dattana veramani..." is described as discussed in the post, "The Five Precepts - What the Buddha Meant by Them."

## Many Key Words Are Based on "San"

11. The Cūlahatthipadopama Sutta (in the Majjima Nikāya) explains many words associated with "san". Some of these "san" words are discussed in the section on "San." More words in the post, "What is "San"? Meaning of Sansāra (or Samisāra)."

- Ven. Mahinda Thero explained that sutta to King Denampiyathissa when they first met.
- Cūla is for "small". Hatthi is an elephant. Padopama comes from "pada" + "upamā," or "from an example or simile". The simile is about a person who came to the wrong conclusion about the size of an elephant, based on the size of the footprint on the ground left by that elephant.
- That sutta explains how people come to wrong conclusions about a given keyword by just taking in the "conventional" interpretation (for example, taking anicca to mean "impermanence," whereas the actual meaning of anicca much more in-depth).
- I hope to discuss those and other "long-forgotten" and misinterpreted suttā that help us understand basic concepts first. Then it would be easier to tackle those deeper suttā that were delivered very early.

### 17.7 Dhammacakkappavattana Sutta

Dhammacakkappavattana Sutta Interpretation - Uddesa, Niddesa, Patiniddesa
Essence of Buddhism - In the First Sutta
Majjima Patipada - Way to Relinquish Attachments to this World
Tiparivattaya and Twelve Types of Ñāna (Knowledge)
Relinquishing Defilements via Three Rounds and Four Stages

### 17.7.1 Dhammacakkappavattana Sutta - Introduction

January 16, 2016; revised February 20, 2020

## Introduction

Please download and print the pdf of the sutta (or open in another window) for reference. You may need to click the link on the new page again:

## Dhammacakkappavattana Sutta Text

1. I have divided the sutta to 13 sections, and I will go through some parts in this essay. There are more posts on other section of the sutta. As explained in the "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa" post, a sutta gives only a short summary of the original desana $\bar{a}$. It needs detailed explainations.

- It may be helpful to listen to the chanting of the sutta by the venerable Thero, as it gives the correct pronunciations, and also how to chant it without "too much dragging" as done commonly (which will diminish its effects).
- I could not get my normal audio player to work, so the new player below just has a play button. There is no volume control, so you need to adjust volume on your end.
WebLink: Listen to the Dhammacakkappavattana Sutta

2. Sutta chanting can be much more effective if one recites it the right way AND also understand the meaning at least to some extent.

- It is possible that even a single sutta can provide Dhamma knowledge that one needs to attain magga phala. However, it must be analyzed correctly in detail (patineddesa version); see, "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa." Dhammacakkappavattana Sutta is especially important since it lays out the "blueprint" of Buddha Dhamma.

## The Framework of Buddha Dhamma

3. Of course, this was the first sutta delivered by the Buddha, to the five ascetics Koṇ̣añña, Bhaddiya, Vappa, Mahānāma, and Assaji. Thus, it has the framework or the foundation of Buddha Dhamma.

- The name of the sutta comes from the combination of three terms: Dhamma, Cakka, and Pavattana. Dhamma here means the Buddha Dhamma or the true nature of existence. Cakka means "seeing" or "to see". Pavattana means to "set in motion" AND to "maintain".
- Therefore, the sutta describes the way to "see" the true nature of existence with wisdom, not with the physical eye. Only a Buddha can discover the true nature, but an average human can comprehend it, once explained.
- As in many Pāli terms, the word "dhammacakkappavattana" comes from the combination of three above words, with an additional "p" just before pavattana. As we discussed before, pañcakkhandha is the combination of pañca with khandha with an additional " k " in tying up the two words.
- Sometimes the sutta is also called the Dhamma Cakka Pavattana Sutta.

## Opening the "Dhamma Eye" to the World

4. Let us address a common mistranslation of the name of the sutta. The most common is "Setting the Wheel of Dhamma in Motion". Here cakka (pronounced "chakka"), is translated as "wheel". But the name of the sutta becomes quite apparent when one looks at section 9 .

- In section 9 (see the text), dhammacakkhun udapādi means "eye to see the Dhamma was born" for the ascetic Kondanna (āyasmato Kondaññassa). There is no way to associate a "wheel" here.
- Note that the main summary of the sutta ends with section 8 . The following sections provide the following information. One is that the ascetic Konḍañña attained the Sotäpanna stage. The second is a description of various types of dev $\bar{a}$ and $\operatorname{brahm} \bar{a}$ who attended the delivery of the sutta; see \#6 below. A large number of them attained various stages of Nibbāna.

## Four Stages of Nibbāna

5. This sutta lays out the basic structure of Buddha Dhamma. Then it explains how one attains release from this world of 31 realms via successively attaining four stages of Nibbāna. That happens by getting through "three rounds" of bondages (tiparivaṭa) to this world: "ti" means "three", "vatta" means "vataya" in Sinhala or "circle" in English.

- In section 8, it says, "..imesu catūsu ariyasaccesu evaí tiparivattam dvādasākāraí yathābhutaím $\tilde{n} a ̈ n a d a s s a n a \dot{m} . . . "$ Here "catusu" means "four" and "ariyasaccesu" of course, means the "Noble Truths." By comprehending the Four Noble Truths, one can overcome the three rounds of bondage and fulfill the 12 factors ("dvādasākāramं.") Those 12 factors will be discussed in "Tiparivattaya and Twelve Types of Ñāna (Knowledge)."

## Three "Rounds" or "circular Walls" to Overcome

6. "Tiparivatṭ" means the three rounds of bondage. The first is to be released from the apāy $\bar{a}$ (four lowest realms), via the Sotāpanna stage, by removing the wrong views about existence in the 31 realms.

- In the second round, one overcomes the kāma loka (realms 5 through 11, which include the human realm and 6 Deva realms). That happens via two stages. A Sakadāgāmī will not be reborn with bodies subjected to diseases. Thus, there will be no more rebirths for a Sakadāgāmī in the five lowest realms (apāyā and the human realms). Then, at the Anāgāmī stage, k $\bar{a} m a$ rāga and patigha go away and one is released from births anywhere in the kāma loka.
- In the third round, any linkage to anywhere in the 31 realms is removed. The mind becomes free of attachment to any trace of matter, and the Arahant stage is attained. See, "What Are Rūpa? (Relation to Nibbāna)."

## The 31 Realms of Existence

6. Section 11 is long and takes a significant part of the sutta. That section names the 6 deva realms and 15 out of 16 rupi Brahma realms. Most of this section has been truncated in many published versions of the sutta. However, this section is important for a couple of reasons.

- First, it clearly shows that the Buddha indeed described a "wider world" than experienced by us, consisting of 31 realms; see, "The Grand Unified Theory of Dhamma" and " 31 Realms of Existence."
- Second, it says that beings from many those realms were present when the Buddha delivered the desana $\bar{a}$ overnight (over many hours) to the five ascetics. Starting from the 6 deva realms, it lists 15 rupi brahma realms (except the asañña realms, where beings have only a physical body and thus cannot even listen to a desana $\bar{a}$. It is said that numerous $\operatorname{Dev} \bar{a}$ and Brahmā attained various stages of Nibbāna.
- Section 11 starts with "Bhummānaì devānai் saddaim sutvā Cātummahārājikā devā sadda manussāvesumं..." Here "bhummanaì devanaì" means "bhummatta Deva." They are part of the Catummaharajika Deva realm, but are located at the Earth's surface with humans (even though we cannot see them). They first became aware of the desana $\bar{a}$ and notified their higher-lying main realm. Section 11 lists how the news progressively propagated to higher-lying realms and eventually Deva from all those 21 realms came to listen to the desana."
- As you can see those realms match the names listed in the following post on the web (note that all of them are referred to as devas in the sutta, regardless of whether they belong to the 6 Deva realms or the rūpi Brahma realms): "31 Realms of Existence."
- Of course, only 5 humans (the five ascetics) were present. Any being in the lowest four realms cannot comprehend Dhamma. Also, the Brahmā in the 4 arūpi realms do not have ears to listen to. Thus section 11 lists 21 realms. Not listed are the four lowest realms, the asañña realm, and the four arūpi Brahma realms. They appear in many other sutta $\bar{a}$.

## The Sutta Provides Only a Summary

7. As I mentioned above, the sutta gives only a brief outline of the desana $\bar{a}$. It was delivered over many hours, and the sutta is just an outline of that delivery.

- The sutta starts off with the customary "Evaim me sutam" (thus I heard) uttered by Ven. Ānanda at the Dhamma Sangayana where these sutt $\bar{a}$ were categorized into sections in the Tipiṭaka.
- Section 1 is about the two extremes to be avoided: kāmasukhallikānuyogo (excess sense pleasures) and attakilamathānuyogo (engage in useless activities that make one go through hardships).
- Note that both extremes are labeled "anattasanhito." This means anyone who follows those two extremes are unaware of the "anatta" nature. Thus they have sañ̃̄̄̄, or perceptions, that will LEAD TO "anatta" or being helpless in the rebirth process.
- And they both are "dukkho" and "anariyo": they will be subjected to suffering and thus they are not Ariyā or Noble Ones.
- In addition, the extreme of kāmasukhallikānuyogo is also labeled hino, gammo, pothujjaniko. Here, "hino" means lowly; gammo means "uneducated" or "crass". "Pothu" means bark or the outer shell of a tree trunk (which is of no value,) and "janika" means to produce. Thus a "pothujjaniko" means a person who is engaged in useless and unproductive activities. The Buddha often used the term pothujjaniko (or pothujjano) to described a person who value and crave sense pleasures.

## The Middle Path

8. Most people are in the kāmasukhallikānuyogo mode, even if not in extreme. In fact, one gets closer to "middle" as one progressively become a Sotāpanna anugāmi, Sotāpanna, Sakadāgāmī, Anāgāmī. Then the "true middle" found only at Arahanthood.

- Thus majjhimā patipadā has a deeper meaning than just "middle path". One has to realize the dangers of "getting drunk" ("majji" or intoxicated with sense pleasures). Here, "m $\vec{a}$ " there means "getting release from", just like in "sammä" means "san" + "ma""; see, "What is 'San?' Meaning of Sansāra (or Samisāra)."
- This is why the kämasukhallikānuyogo mode has the additional "labels" of hino, gammo, pothujjaniko. Anyone "intoxicated" with sensory pleasures is a hino, gammo, pothujjaniko. Thats mindset can be changed only by comprehending the "..Dhamma that has never been known to the
world.." or "..pubbe ananussutesu dhammesu..." That phrase is repeated many times in sections 4 through 7 for a reason.
- This is the reason why one cannot comprehend this Dhamma in a conventional way. One has to realize the true nature of the world: anicca, dukkha, anatta; see, "Buddha Dhamma - In a Chart."
More posts on the sutta at, "Dhammacakkappavattana Sutta."

### 17.7.1. Dhammacakkappavattana Sutta Text

Evamim me sutam:
Ekamं samayam் Bhagavā Bārāṇasiyam viharati Isipatane Migadāye. Tatra kho Bhagavā pancavaggiye bhikkhū āmantesi-

1. Dve me', bhikkhave, antā pabbajitena na sevitabbā :

Katame dve:
i. Yo cāyam̀ kāmesu kāmasukhallikānuyogo —hīno, gammo, pothujjaniko, anariyo. anatthas anhito
ii. Yo cāyam̉ attakilamathānuyogo -dukkho, anariyo anatthas anhito ,
ete te, bhikkhave, ubho ante anupagamma majjhimā paṭipadā Tathāgatena abhisambuddhā cakkhukaraṇī, ñāṇakaraṇī, upasamāya, abhiññāya, sambodhāya, nibbānāya sanvaṭati.
2. Katama ca sā, bhikkhave, majjhimā paṭipadā Tathāgatena
abhisambuddhā-cakkhukaraṇī n̄ānakaraṇ̄̄, upasamāya, abhiññāya, sambodhāya, nibbānāya sanvaṭ̣ati?

Ayam'eva ariyo atṭhañgiko maggo -seyyathidan:- Sammā diṭ̣hi, sammā sañkappo, sammā vācā, sammā kammanto, sammā àjīvo, sammā vāyāmo, sammā sati, sammā samādhi.

Ayan kho sā, bhikkhave, majjhimā paṭipadā Tathāgatena
abhisambuddhā-cakkhukaraṇī, ñāṇakaraṇī, upasamāya, abhiññāya, sambodhāya, nibbānāya sanvaṭati.
3. Idan kho pana, bhikkhave, dukkhan ariya saccan: - Jāti'pi dukkhā, jarā’pi dukkhā, vyādhi'pi dukkho, maraṇam'pi dukkhan, appiyehi sampayogo dukkho, piyehi vippayogo dukkho, yamp'icchan na labhati tam'pi dukkhan, sañkhittena pañcupadānakkhandhā dukkhā.

Idan kho pana, bhikkhave, dukkhasamudayan ariya saccan: Yāyan taṇhā ponobhavikā nandirāgasahagatā tatratatrābhinandin̄̄-seyyathidan:- kāmataṇhā, bhavataṇhā, vibhavataṇhā.

Idan kho pana, bhikkhave, dukkhanirodhan ariya saccan: Yo tassā yeva taṇhāya asesavirāganirodho, chāgo, paṭinissaggo, mutti, anālayo.

Idan kho pana, bhikkhave, dukkhanirodhagāmin̄̄ paṭipadā ariya saccan: - Ayameva ariyo atṭhañgiko maggo-seyyathidan:-sammā diṭthi, sammā sañkappo, sammā vācā, sammā kammanto, sammā ājīivo, sammā vāyāmo, sammā sati, sammā samādhi.
4. (i) Idan dukkhan ariyas accan'ti me, bhikkhave, pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññ̄ā udapādi, vijjā udapādi, āloko udapādi. (ii) Tan kho pan'idan dukkhan ariyasaccan pariññe yyan'ti me, bhikkhave, pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññā, udapādi, vijjā udapādi, āloko udapādi.

### 17.7.2 Essence of Buddhism - In the First Sutta

October 23, 2018; revised May 4, 2020; November 14, 2020; March 11, 2021; May 27, 2021; April 12, 2022; major revision July 28, 2022

The essence of Buddhism (Buddha Dhamma) is in the first sutta of the Buddha, Dhammacakkappavattana Sutta (SN 56.11).

## Introduction

1. In the very first discourse that he delivered, "WebLink: suttacentral: Dhammacakkappavattana Sutta (SN 56.11)," the Buddha laid out the "foundational aspects" or the essence of Buddha Dhamma.

- These days, there are many discussions about what is meant by Nibbāna. In particular, "secular Buddhists" who do not believe in rebirth try to provide their interpretations. But as we will discuss below, Buddha's position is crystal clear from this sutta.
- Some people doubt the existence of beings in realms other than the human and animal realms and whether life exists outside the Solar system, i.e., the Earth. This sutta clarifies both, as we will see below.

## A Sutta Is a Highly Condensed Summary

2. Some people think the Buddha recited each sutta (as it appears in the Tipitaka). That could be why sutt $\bar{a}$ are translated word-by-word by most people today. But that is far from the truth.

- For example, the Buddha delivered Dhammacakkappavattana Sutta to the five ascetics over several days. See ""The Life of the Buddha" by Bhikkhu Nānamoli." " A direct account from the Tipitaka at "WebLink: suttacentral: The Long Chapter (Mahākhandhaka);" see "Section 6. The account of the group of five."
- Only Ven. Koṇạañña attained the Sotāpanna stage on the first night. Then the Buddha explained the material over several days. The other four ascetics reached the Sotāpanna stage over several days.
- The above book contains many passages from the Vinaya Pitaka of the Tipiṭaka, which provide many details not available in the sutt $\bar{a}$. It also provides the timeline of critical sutta and significant events.

3. Therefore, the Buddha did not recite the sutta as it appears in the Tipitaka. If so, it would have been recited within 15 minutes!

- It will take many people a lifetime to fully understand this sutta.
- It appears that the Buddha himself summarized the material in each sutta in a short, concise way to a limited number of verses that were suitable for oral transmission (easy to remember); see "Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."
- We must remember that all the sutt $\bar{a}$ in the Tipitaka were transmitted orally by many generations. Tipitaka was written down about 500 years after the Parinibbāna of the Buddha. See "Preservation of the Dhamma."

## A Sutta Needs to be Explained in Detail

4. Only a summary of a sutta is in the Tipitaka. Many of the suttā are highly condensed and need detailed explanations. It is not reasonable to assume that one could understand a sutta by reading a word-byword translation of a few pages of the sutta.

- However, that is what happens these days. Suttā are translated word-by-word into English. That is a terrible practice. It is no different from just reciting a sutta!
- Some of these deep suttā need detailed explanations.

## First Noble Truth in Just a Single Verse!

5. Now, let us examine how the Buddha summarized the First Noble Truth about suffering in that sutta.

Idä̀ kho pana, bhikkhave, dukkhaì ariya saccaì:
jātipi dukkhā, jarāpi dukkhā, byādhipi dukkho, maranampi dukkhā̀ं, appiyehi sampayogo dukkho, piyehi vippayogo dukkho, yampicchaì na labhati tampi dukkhā̀ं-samikhittena pañcupādānakkhandh $\bar{a}$ dukkhā. [khitta :[pp. of khipati] thrown; overthrown; casted away; upset.] [sañkhittena means being overthrown by defilement]

Translated: Bhikkhus, What is the Noble Truth of Suffering?
"[@1]Birth is suffering, getting old is suffering, getting sick is suffering, dying is suffering. [@2] Having to associate with things one dislikes is suffering and separation from those one likes. [@3]If one does not get what one wants, that is suffering - [@4] - in brief, the origin of suffering is the craving for the five aggregates of rūpa, vedanā, sañ̃̄̄̄, sañkhāra, viñ̃̄̄̄ṇa (pañcupādānakkhandha). Pañcupādānakkhandha (upādāna or craving/desire for pañcakkhandha) represents all we crave in this world.

- (Here, I have translated upādāna as craving. However, the word upādāna cannot be translated by just one word. It is a good idea to grasp the meaning. See "Concepts of Upādāna and Upādānakkhandha.")
- There are four sections in that verse. I have highlighted alternating sections to explain each of the four below.

6. Many think that dukkha Sacca (the First Noble Truth, pronounced "dukkha sachcha") says everything is suffering. That is not true; there is a lot of apparent happiness, which makes people unaware of the hidden suffering until it is too late.

- The first seven parts of the verse in \#5 that summarizes the First Noble Truth explain that there is "hidden suffering" in the world that an average person would not see. For example, people celebrate birthdays, but every birth ends up in old age and death. Another is that we pursue worldly things with high expectations but EVENTUALLY end up suffering because of such expectations. These ideas are explained in detail in Paṭicca Samuppāda and Tilakkhaṇa.
- The last part of the verse is the key part of the First Noble Truth. It is not a type of suffering but the root cause of (future) suffering. We become subjected to suffering because we attach to certain $r \bar{u} p a$ in this world and our vedanā, sañña, sañkhāra, and viññāna that arise from interactions with such rūpa. That is pañcupādānakkhandh $\bar{a}$ (pañca upādāna khandhā), loosely meaning "attachment to the pañcakkhandhā."
- Also, see "Does the First Noble Truth Describe only Suffering?"

## The Key Aspects of Suffering

7. The first part [@1] in bold indicates what we consider forms of suffering: Birth, getting old, getting sick, and dying.

- Every birth ends up in death. That is why birth is suffering. All births - without exception - end up in death.
- We also DO NOT LIKE to get old, get sick, and do not like to die. If we experience any of those, that is suffering.
- We WOULD LIKE it to stay young, not get old, not get sick, and not die ever. If we can have those conditions fulfilled, we will be forever happy.
- Therefore, it is clear that the Buddha focused on the suffering associated with the rebirth process in his first discourse.

## Root Cause of Suffering - Not Getting What One Desires

8. Anyone can see that not getting what one desires is suffering.

- The second part [@2] of the verse in \#5 (in red) says: Having to associate with things that one does not like is suffering, and having to separate from those things one wants is suffering.

9. That part in \#7 is stated in one concise statement in the third part [@3] of the verse in \#5 (in bold): "yampicchamं na labhati tampi dukkham்."
"Yampicchaì na labhati tampi dukkhamं" is a shortened version of the verse (that rhymes).
The full sentence is "Yaim pi iccham na labhati tam pi dukkham."

- "Yaín pi icchamं" means "whatever is liked or craved for." "Na labhati" means "not getting." "tamं pi dukkhaì" means "that leads to suffering."
- Therefore, that verse says: "If one does not get what one craves or likes, that leads to suffering."
- That is a more general statement and applies in any situation. We can see that in our daily lives. We like to hang out with people we like, and it is stressful to be with people we do not like.
- Furthermore, the more one craves something, the more suffering one will endure in the end. But this requires a lot of discussions.
- Note that "iccha" (and "icca") is pronounced "ichcha." See "Tipitaka English" Convention Adopted by Early European Scholars - Part 1" and Part 2 there.

## Yampicchain na labhati tampi dukkhaì

10. "Yampiccaì nalabhati tampi dukkhaì" ("Yaim pi icchaì na labhati taì pi dukkhaì") verse gets us closer to the deeper meaning of the First Noble Truth on suffering.
 word "iccha" with the emphasis on the last syllable indicates "strong icca" or "strong attachment."

- The word "icca" (liking) is closely related to "taṇh $\vec{a}$ " (getting attached). Taṇh $\bar{a}$ happens automatically because of icca.
- Not getting what one desires or craves is the opposite of "icca" or "na icca" or "anicca." That is the same way that "na āgami" becomes "Anāgāmi" ("na āgami" means "not coming back"; but in the context of Anāgāmi, it means "not coming back to kāma loka or the lowest 11 realms. Both these are examples of Pāli sandhi rules (connecting two words).
- The intrinsic nature of this world is "anicca," i.e., we will never get what we crave for, and thus in the end (at least at death,) we will leave all this behind and suffer; that is dukkha.
- There is another (and related) way to explain anicca as the opposite of "nicca"; see "Three Marks of Existence - English Discourses."
- To get the deeper meaning of what we have discussed so far, we need to realize that the suffering in \#5 above is the FUTURE suffering in future births. That is stated clearly also in the sutta.

## Rebirth Process Is Irrefutable in Buddha Dhamma

11. After explaining the four Noble Truths (we briefly discussed just the First Noble Truth), the Buddha says in the middle of the sutta: "Ñānañca pana me dassanaì udapādi: 'akupp $\bar{a}$ me vimutti, ayamantima $\bar{a}$ $j a \bar{t} t i, n a t t h i ~ d a ̄ n i ~ p u n a b b h a v o ' t i . " ~$

Translated: "The knowledge and vision arose in me: 'unshakable is the liberation of my mind. This is my last birth. There is no more renewed existence.' "

- That statement states the outcome of that knowledge, i.e., the solution to future suffering. It is the ending of the rebirth process. It will stop those four leading causes of suffering discussed in \#5 and \#6.
- So, my point is that this statement confirms the following facts. (i) The Buddha was focused on stopping suffering in future lives. (Some of which in lower realms could be unimaginably harsh.) (ii) There is no "safe" rebirth anywhere in this world, whether it is a human, Deva, or a Brahma realm.

## The Need for Detailed Explanations

12. As you can see, one single verse takes a lot of explaining. The above explanation addresses only the four major types of suffering in the rebirth process.

- For example, many humans may not experience much suffering while young. Suffering during a human life may be much less than animal life.
- Suffering in the other three lower realms would be much higher than in the animal realm.
- There is no realm among the 31 realms where suffering is absent.
- The need for detailed explanations is clarified in "Satipatthāna Sutta - Structure."

## "Sainkhittena Pañcupādānakkhandhā Dukkhā"

13. The last part [@4] of the verse in \#5 (not in bold), "saíkhittena pañcupādānakkhandhā dukkhā," will take much more explaining. One needs to understand the five khandhas (rūpa, vedan $\bar{a}$, sañ $\tilde{n} \bar{a}$, sañkhāra, viññ̄ạa) first, even to begin to understand this part. See "Does the First Noble Truth Describe only Suffering?" (especially \#15-\#17.) [sañkhittena means being overthrown by defilement]

- Note that upādāna is related closely to craving or icca. Upādāna means "pulling closer in one's mind due to craving (iccā)."
- The more one does upādāna with vacī sañkhāra - or vitakka/vicāra - (because of one's iccā), one's tanhhā grows. Those three words have slightly different meanings but are closely related.
- Until one sees this anicca, dukkha, anatta nature of this world, one will be trapped in the suffering-filled rebirth process.
- A detailed discussion at "Tipitaka - A Systematic Approach."

## Word-by-Word Translations Can be Dangerous

14. The other key point: Translating some key verses word-by-word can lead to dire unintended consequences. Many key Pāli words CANNOT be translated as single English words. For example, the word rūpakkhandha should not be translated as "form aggregate." See "Difference Between Physical Rūpa and Rūpakkhandha."

- The five ascetics attained the Sotāpanna stage by understanding the detailed description of the material embedded in this sutta. That holds today too. One MUST realize the suffering "hidden in sensory experiences."
By the way, nothing in this sutta says impermanence leads to suffering. The keywords are icca and anicca.
- Anicca is not the same as Sanskrit "anitya" (which does mean impermanence), which in Pāli is "aniyata" or "addhuvam." None of those three words appear in this sutta. I don't think the word "anicca" appears directly in this sutta either; of course, it appears in many other sutt $\bar{a}$ in the same context. But the word "anitya" does not appear in a single sutta in the Tipitaka; "aniyata" and "addhuvaí"" appear in a few suttā to indicate impermanence in other contexts. For example, "jīvitaim aniyataim, maranain niyata $\dot{m} "$ or "life is impermanent, death is certain."
- As I explained above, the root cause of suffering is "icca" (or craving), according to this sutta.

15. Therefore, a lot of information is in this sutta. Further analysis of the sutta in this subsection: "Dhammacakkappavattana Sutta."

- Also, see "Paticca Samuppāda - Essential Concepts."

### 17.7.3 Majjhimā Paṭipadā - Way to Relinquish Attachments to this World

January 22, 2016; Revised January 23, 2016; July 19, 2020
Please read the first post on the Dhammacakkappavattana Sutta (also called Dhamma Cakka Pavattana Sutta) before reading this second post: "Dhammacakkappavatta Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."

1. In almost all English translations, majjhimā patipadā is termed the "middle way of the Buddha". This gives the impression that all one needs to do is to avoid extreme sense pleasures and extreme hardships for the body. In general, that is true but the Buddha meant something deeper. One should live such a simple and comfortable life but should start seeing the dangers of craving for sense pleasures.

- Many Pāli words have two meanings: conventional (mundane) and transcendental (lokuttara). We saw that the Noble Eightfold Path can be interpreted either way: "Buddha Dhamma - In a Chart" or "Mahā Cattārīsaka Sutta (Discourse on the Great Forty)." As I explained in "Sutta -Introduction," I believe this was a strategy by the Buddha to facilitate at least the conventional transmission of the Tipitaka during times when Ariyā (Noble Persons) are few in number to explain the lokuttara meanings of key Pāli words.
- Thus majjhima patipad $\bar{a}$ is the "middle path" in the conventional sense, and it is a good first step. But the lokuttara meaning is much deeper, and this sutta lays out the basic structure of how to explain the deeper meaning. Throughout his 45 years of his ministry, Buddha explained the details in various ways.
- One lokuttara (or deeper/transcendental) meaning of majjhimā pațipadā is to "avoid being intoxicated by sense pleasures." See, "Need to Experience Suffering in Order to Understand it?." Here we will examine It in detail to show that it is a gradual process. High levels of intoxication are removed via removing micch $\bar{a}$ ditṭhi when attaining the Sotāpanna stage. After that, lower and lower intoxication levels removed as one gains more wisdom in steps.
- We will follow the text of the sutta in this pdf: Dhammacakkappavattana Sutta-3

2. First, I want to emphasize what is meant by "relinquish" in the title. It means "voluntarily giving up" and NOT to give up attachments to this world by sheer will or force. This is something most people do not comprehend either. The mind will not give up things that it considers pleasurable unless there is a good reason.

- Those reasons are what Buddha Dhamma is all about. One becomes a Sotāpanna by truly comprehending why it is not only unfruitful, but also DANGEROUS to attach to things that one perceives to be pleasurable. But even a Sotāpanna only has "seen" the truth of the "anicca nature" of this world of 31 realms.
- The actual "giving up" comes next, when one slowly start "giving up" voluntarily and progress through the next two stages of Sakad $\bar{a} g \bar{a} m \bar{\imath}$ and $\operatorname{An} \bar{a} g \bar{a} m \bar{u}$, and eventually gives up all attachments at the Arahant stage.
- Thus one does not need to worry about giving up ANYTHING until reaching the Sotāpanna stage. Giving up happens automatically when one realizes the true nature of this world.

3. In the first verse of section 2 of the above pdf, it says, "Bhikkhus, what is the majjhima paṭipad $\bar{a}$ declared by the Tathāgatha (Buddha) that leads to the vision, wisdom, calming down, special knowledge (abhiñ̃̃̄̄), comprehend "san" (sambodhi), and to Nibbāna?"

- 'It is the Noble Eightfold Path wit Sammā ditṭhi, sammā sañkappa, sammā vaca, sammā kammanta, sammā ājīva, sammā vāyāma, sammā sati, sammā samādhi."
- In the third verse, he affirms that it is indeed the Path or the majjhima patipad $\bar{a}$.

4. In section 3, the Four Noble Truths are briefly stated (uddesa; see, "Sutta -Introduction"), and each can be described in detail filling thousands of books, depending on the level of detail.

- First, suffering is: "Jāti'pi dukkhā, jarā'pi dukkhā,.....". This verse we have already analyzed in "Does the First Noble Truth Describe only Suffering?," among others.
- The next verse succinctly states the causes for suffering (dukkha samudhaya): "the root cause is taṇh $\bar{a}$. The tendency to attach to various things (yayam tanhā), make bhava (ponobbhavikā) through valuing such things (nandirāga) and giving priority to them (abhinandini). These things are: craving for sense pleasures (kāma tanh $\bar{a}$ ), bhava taṇh $\bar{a}$, and vibhava taṇhā." The three types of taṇh $\bar{a}$ are discussed at: "Kāma Tanhā, Bhava Tanhā, Vibhava Tanhā."
- The third verse is the truth about how to eliminate those causes: "By removing tanhh $\bar{a}$ without a trace (yeva taṇhāya asesa-virāga-nirodho), by giving without expecting anything back (cāgo), by cutting off all bonds (patinissaggo), by becoming un-entangled (mutti), by removing all attachments (anālayo)".
- And the fourth is the way to do that, i.e., via the Noble Eightfold Path that was stated in \#3 above.
- There are other posts that further describe the above four Noble Truths in more detail. You can use the "Search" box on top right or scan the "Pure Dhamma - Sitemap" to locate relevant posts. There are so many ways to present the material.

5. Sections 4 through 7 describe how the Buddha attained the Buddhahood via comprehending tiparivatta (three walls of bondage) that keep one trapped in the rebirth process. That process of generating new rebirths is described by Paticca Samuppāda. That has never been known to the world (except during the times of previous Buddhas): "..pubbe ananussutesu dhammesu...".

- We discussed the term tiparivattta or the "three rounds of bondage" briefly in the previous post. We will discuss it in more detail in the next post.
- I would like to first discuss the term, "..pubbe ananussutesu dhammesu cakkhum udapādi, ñānaìm udapādi, paññā udapādi, vijjā udapādi, āloko udapādi...".

6. When the Buddha attained the Buddhahood via comprehending this Dhamma that has never been known to the world, five types of special knowledge arose in him.

Those are cakkhu, ñāna, paññ̄a, vijja, and āloka.

- Here "cakkhu" is the "Dhamma eye", the ability to "see" the true nature of this world. We can loosely translate ñāna and pañ̃̃ā as "knowledge" and "wisdom".
- The next one is "vijjā" (the Sanskrit word is "vidy $\bar{a}$ "). This is the "ultimate science" about the world, what I called the "Grand Unified Theory of Dhamma." A Buddha Is the greatest scientist that comes to the world very infrequently.
- Simultaneously with the comprehension of vijjā, one is totally removed from "this material world" or "āloka" ("ā" + "loka"). The word "ăloka" has other meanings, including "light", which we will discuss later.

7. Those five factors arise simultaneously in a Buddha upon attaining the Buddhahood, but all others attain them in stages. For a normal human being:

- "Cakkhuì udapādi" or "arising of the Dhamma eye" occurs upon attaining the Sotāpanna stage, i.e., sammā ditṭhi.
- "Nanaì udapādi" takes place upon attaining the Sakadāgāmī stage.
- "Paññā udapādi" takes place upon attaining the Anāgāmī stage.
- "Vijjā udapādi" takes place upon attaining the Arahant stage, where "aloko udapadi" takes place simultaneously.

8. In section 9, it is stated, "..āyasmato Koṇ̣aññassa virajam vitamalam dhammacakkhum udapādi- yaim kiñci samudayadhammaì sabbaì taì nirodhadhamman'ti".

- Upon hearing this first desanā, the ascetic Koṇ̣anna became a Sotāpanna and , "dhamma cakkhum udapādi" or "Dhamma eye arose in him".
- The next part of the verse, "Ya.m kiñci samudayadhamma.m sabba.m ta.m nirodhadhamman'ti" states what that Dhamma eye grasped: "any Dhamma that gives rise to this world (samudaya dhamma), is a Dhamma that can be eliminated (i.e., it is a nirodha dhamma)".
- Thus at the Sotāpanna stage, one can "see" how this "nirodha" is done. Actually doing it leads to the next stages Nibbāna, and eventually to the Arahanthood.
- One gets to the Sotāpanna stage (overcoming the first round of the tiparivatta) by comprehending the wider world view, and by seeing the fruitlessness of "high levels of intoxication" just through that understanding.

9. When a Sotāpanna acquires the second knowledge ("Ñānaim udapādi"), that is when he/she really "STARTS to see the anicca nature a bit more by cutting through apparent pleasures of the world with the Dhamma eye". This process continues through the next phase "Pañ̃̃̄ $u d a p a \bar{d} i$ " when one is able to really see the adverse effects and the dangers of any sense pleasures and attains the Anāgāmi stage.

- Thus, as you can see, the actual "giving up" happens in a gradual and natural way. One does not need to, and one should not try to, give up sense pleasures by sheer will power (except of course those acts that are called "pāpa kamma" i.e., that lead to the suffering of other beings).
- For example, one does not need to feel guilty about eating a nice meal, having a nice house to live in, etc. Those are the results of previous good kamma vipāka. But what one needs to do is to reduce the CRAVING for such things by comprehending the anicca nature of this world, i.e., by learning Dhamma and by contemplating. One would realize that cravings/desires for worldly things are fruitless.

10. I can give a simple example from my experience. A few years ago, my wife and I noticed that we had not watched television for many weeks. We decided it was pointless to keep paying for the cable service and canceled the service (We still read the news on the internet). Thus we had not deliberately stopped watching television. We had gradually stopped watching even without us noticing it for several weeks. Of course, there have been more changes like that since then. I just wanted to mention this to emphasize that Buddha Dhamma is not just a theory. It can be experienced: "..sandiṭthiko, akāliko, ehipassiko...".

- Many of you may wonder why is it a good thing to stop watching TV ("that is something I enjoy after a hard day at work'). But that is a perception we all get used to. I remember being very agitated at night watching TV coverage of the 2008 US presidential election season. It is more enjoyable to listen to or read Dhamma.
- Please note that I am not saying that one needs to stop watching TV to attain magga phala or that one who has attained the Sotāpanna stage would necessarily not watch TV. There was a Sotāpanna (named Sarakāni) during the time of the Buddha who could not give up his drinking habit as I mentioned in another post. Only at the Anāgāmī stage that one gives up kāma rāga (sense pleasures) as mentioned above. But each person could reduce or even give up some sense pleasures upon attaining the Sotāpanna stage, depending on one's personality (gati).

11. I also would like to point out that one should not restrict one's time just to learn Dhamma. One should also engage in meritorious deeds and make an homage to the Buddha, Dhamma, Sañgha as well. Those activities help get the mind to a state suitable to receive and comprehend Dhamma.

- This is a subtle aspect that was discussed in the "Anantara and Samanantara Paccaya," and a few other posts. Just like a seed needs suitable conditions (soil, water, sunlight, etc) to germinate and grow, one needs to make necessary conditions for the mind to be receptive to deep and subtle concepts by doing meritorious deeds that make one's mind joyful and calm. Engaging in giving (dāna) and living a moral life (sīla) help enormously with Bhāvanā (contemplation and comprehension).

### 17.7.4 Tiparivatṭa and Twelve Types of Ñāṇa (Knowledge)

January 29, 2016; revised January 7, 2019; February 22, 2020

## Introduction

1. We discussed the tiparivatt!a (three rounds of bondage) briefly in the post "Dhammacakkappavattana Sutta Interpretation - Uddesa, Niddesa, Patiniddesa." Here we will discuss it in a bit more depth.

- We remind ourselves that the Buddha delivered this sutta to the five ascetics right after attaining the Buddhahood. The five ascetics first refused to believe that the ascetic Siddhartha had attained the Buddhahood. This and other details of Buddha's life described in the Vinaya Pitaka, "WebLink: suttacentral: Going forth (Pabbajjā)." This particular account is in the sub-section, "ON THE GROUP OF FIVE."
- According to that account, the five ascetics first refused to believe that ascetic Gotama had attained the Buddhahood. They did not believe Buddha's words!
- Some people ask me whether there is a way to know some other person has attained the Sotāpanna stage. Those five ascetics, who were with the ascetic Siddhartha for five years, could not even believe Buddha's own words. How can any of us figure out whether another person has attained magga phala? Unless that person declares it, there is no way to know. Even then, there is no way to verify it. Now let us get back to the sutta.

## Four Noble Truths Comprehended in Three Rounds (Tiparivatta)

2. At each round of the three rounds (tiparivatta, three pieces of knowledge about the Four Noble Truths arose in the Buddha. Those 12 pieces of knowledge stated in section 4 through 7 of the sutta.

- We will follow the text of the sutta (you may want to print it out so that you can refer to each section): Dhammacakkappavattana Sutta Text.
- Of course the Buddha attained all 12 types of knowledges together upon attaining the Buddhahood, but we (normal humans) achieve them in four stages of Sotāpanna, Sakadāgāmi, Anāgāmi, and Arahant.

## The Three Rounds or Barriers

3. There are three rounds or barriers $(t i+$ parivatta) to overcome: (1) The $a p \bar{a} y \bar{a}$ or the four lowest realms,
(2) kāma loka (human realm and the six deva realms), (3) rūpa loka (16 rūpi brahma realms) and arūpa loka (4 arūpi brahma realms).

- At each round, one comprehends the Four Noble Truths to a certain extent.
- For example, when one becomes a Sotāpanna and overcomes the first round (barrier), he/she understands all Four Noble truths to some extent. When one becomes an Anägāmi by overcoming the second round, he/she has understood all Four Noble truths to a higher level, and it is complete at the Arahant stage.
- The Four Noble Truths are discussed at, "Four Noble Truths - Suffering and Its Elimination."

## First Noble Truth in Three Rounds

4. First is the knowledge about the suffering in the wider world of 31 realms, as stated in verse 4(i) (Idan dukkhan ariyasaccan'ti me). This Dhamma had never been known to the world. That is what a average human comprehends when he/she attains the Sotäpanna stage, and overcomes the first round of bondage in the three rounds (tiparivatta), i.e., becomes free of rebirths in the ap $\bar{a} y \bar{a}$.

- Then that knowledge becomes even more evident when one starts to lose attachments to this world; verse 4(ii). That is the second round of tiparivatt!a overcome at the $A n \bar{a} g \bar{a} m \bar{\imath}$ stage. The keyword is "pariñneyyan'ti," which means "seeing with less attachment to sense cravings" or "pirisindha" ("piri" or liking + "sindha" or removed in Sinhala). Thus an Anāgāmī will never be reborn in the kāma loka (i.e., overcome the second round of tiparivatta). [pariññeyya: [nt.] what should be known accurately]
- The last round is when "seeing" is done with all cravings removed, as stated by "pariññātan'ti." This happens to a human when attaining the Arahant stage. But here it is stated, "pariñnātan'ti me," as stated by the Buddha, where " $m e$ " means " I " in verse $4(\overline{\mathrm{i}})$. That will become more clear in section 8 . [pariññāta: [pp. of parijānāti] known for certain; comprehended; known accurately.]
- These three types of knowledge are about the First Noble Truth, dukkha sacca.

## Second Noble Truth in Three Rounds

5. Section 5 describes three pieces of knowledge for Second Noble Truth, the causes for suffering (dukkha samudaya). The Four Noble Truths are succinctly stated in Section 3.

- At the second round of the tiparivațta the root cause for suffering identified as "tanhh $\bar{a}$ "; verse $5(\mathrm{i})$ : Idan dukkhasamudayan ariyasaccan'ti me. This is the knowledge a Sotāpanna acquires simultaneously with round 1 for dukkha sacca. See, "Tanhā - How We Attach Via Greed, Hate, and Ignorance" for a discussion on tanhh $\bar{a}$.
- In the second round, one realizes that cause for suffering is attachments to all sensory pleasures (kāma rāga): "pahātabban'ti," where "pahä" means 'to remove". For an average human, this knowledge comes in two stages of Sakad $\bar{a} g \bar{a} m \bar{\imath}$ and $A n \bar{a} g \bar{a} m \bar{\eta}$; verse 5(ii). [pahātabba : which must be discarded, to be eliminated.]
- In the third round, at the Arahant stage, one realizes without any doubt that any tanhh $\bar{a}$ is a cause for suffering: "pahīnan'ti"; verse 5(iii). [pahīna : [pp. of pajahati] eliminated; abandoned; destroyed.]
- These three types of knowledge are about the Second Noble Truth, dukkha samudaya sacca.

## Third Noble Truth in Three Rounds

6. Section 6 describes the three pieces of knowledge for Third Noble Truth, stopping causes for suffering (dukkha nirodhaya).

- At the first round of the tiparivatṭa one realizes that tanhā must be removed to end the suffering; Idaim dukkhanirodhan ariyasaccan'ti me. As stated in section 3: "..Yo tassā yeva taṇhāya asesa-virāganirodho, chāgo, paṭinissaggo, mutti, anālayo..." This was discussed in the previous post, "Majiima Patipada - Way to Relinquish Attachments to this World." That realization sets in at preliminary level in the first round (i.e., Sotāpanna stage.) verse 6(i).
- In the second round, the need to lose all attachments to sensory pleasures (kāma rāga) is realized: "sacchikātabban'ti." For a normal human, this knowledge comes in two stages of Sakadāgāmī and Anāgāmi, when one actually starts seeing the perils of kama rāga; verse 6(ii). [sacchikātabba: [pt. p. of sacchikaroti] realising.]
- In the third round, one realizes without any doubt that any type of tanhh $\bar{a}$ (including bhava tanhh $\bar{a}$ and vibhava taṇhā) must be removed: "sacchikatan'ti"; verse 6(iii). [sacchikata: [pp. of sacchikaroti] realised; experienced for oneself.]

## Fourth Noble Truth in Three Rounds

7. The way to accomplish this nirodhaya comes in three rounds, as stated in section 7.

- The Noble Eightfold Path as the way to liberation is first grasped in the first round. For a normal human, this knowledge is gained when attaining the Sotāpanna stage: Idaỉ dukkha nirodhagāmini paṭipad $\bar{a}$
ariyasaccan'ti me. One "sees" the Path through the "Dhamma eye": verse 7(i). An enormous amount of defilements disappear just with this "clear vision". [dukkha nirodhagāmini paṭipadā = magga] [nirodha: [m.] extinction; cessation; the final truth.] [paṭipad $\bar{a}$, (f.) [ff. paṭi+pad] means of reaching a goal or destination, path, way, means, method, mode of progress.]
- Then in the second round, it is realized that one must cultivate the Noble Eightfold Path (bhāvanā) to remove the root causes (verse 7(ii)): bhāvetabban'ti [bhāvetabba: [pt. p. of bhāveti] should be cultivated.]
- In the third round, it is realized that one has completed that task, and there is nothing else to be done (verse 7(iii)): bhāvitan'ti [bhāvita: [pp. of bhāveti] increased; cultivated; developed.]
- However, as I mentioned above, all 12 types of knowledge arose in the Buddha simultaneously, upon attaining the Buddhahood.

## Declaring the Attainment of the Buddhahood

8. In section 8, the Buddha says: "I had NOT previously declared the Buddhahood since I had not attained all 12 types of knowledge..." Here, "na suvisuddhaì ahosi" means "had not accomplished it completely".

- In the next phrase, the Buddha declares that he has now done that (suvisuddham ahosi), and that he is declaring to the ".. world of humans, Devā, Brahmā,.." that he has attained the Buddhahood.
- In the next verse (Section 9,) he declares: "the vision arose in me (dassanaim udapādi), unmovable calm mindset arose in me (akuppā me vimutti), this is my last birth (ayaimantima $\overline{\boldsymbol{j}} \overline{\boldsymbol{a} t} \boldsymbol{i}$ ), and there will be no more bhava for me (natthi' dāni punabbhavo)."
- Lastly: "Idamavoca Bhagava": "Thus declared the Buddha."

## The Last Long Section

9. Section 10 stats that one of the five ascetics, Kondañ̃na, attained the Sotāpanna stage at the conclusion of the desanā. This section was discussed in the previous post, "Majjima Patipada - Way to Relinquish Attachments to this World."

- Then those Devā and Brahmā who attended the desanā identified in a repetitive manner; see, "Dhammacakkappavattana Sutta Interpretation - Uddesa, Niddesa, Patiniddesa."
- Note that this sutta mentions many of the 31 realms. Large numbers of Devā and Brahma from most of those realms were present to hear the first discourse. I have marked in blue those different realms.

## Path to Be Followed Sequentially

10. The important thing to understand is that one needs to go through these stages sequentially (only a Buddha goes through them at once). Some people try to get rid of "the perception of a self" even before the Sotāpanna stage. A "self" is going to be there until any kind of "gati" are still there. With the "apāya gati" removed at the Sotāpanna stage, one overcomes the first stage. "Kāma gati" reduce at the Sakadāgāmī stage, and eliminated at the An $\bar{a} g \bar{a} m \bar{\imath}$ stage, thus overcoming the second round of bondage.

- The two samyojanā of māna and uddhacca go away only at the Arahant stage together with the other three sanimyojanā of rūpa rāga, arūpa rāga, and avijjā. Māna is the perception, "I need to be treated well because I am superior in some way." The tendency to get at least irritated when not respected is uddhacca.
- However, the levels of māna, uddhacca, avijjā that an Anāgāmī has, are at much reduced level. They are gradually decrease through various stages of Nibbāna and disappear at the Arahant stage.
- Thus the critical step is to understand the nature of the wider world of 31 realms and get through the first round of bondage. That releases one from rebirths in the $a p \bar{a} y \bar{a}$ where the dangers are the highest. The
only way to do that is to learn and contemplate the true and pure Dhamma. Relinquishing sense pleasures comes naturally after that. trying to give up sense pleasures forcefully before the Sotāpanna stage will only lead to frustration.

11. A normal human, no matter how intelligent, cannot grasp the dangers of existence in the wider world of 31 realms because of various forms of wrong views or micchā dittthi. A Buddha discovers the existence of those realms and the unbearable suffering encountered (especially in the apa $\bar{a} \bar{a})$.

- Until one gets rid of the those wrong views and attain the Sotāpanna stage, it is impossible to "clearly see" the dangers of sense cravings.

## Suttā Should Not Be Translated Word-by-Word

12. That is why a sutta cannot be translated word by word. A sutta, states the key ideas or steps. The key ideas need detailed explanations. This sutta, even though delivered overnight, is summarized in a few pages.

- The Buddha must have described what we discussed here plus much more during the several hours of delivery of the sutta. In the next post, we will try to discuss some details making the connection to concepts that we have already discussed in other sections.
- As we have seen, the same holds for other suttā and for Paticca Samuppāda. Just listing the eleven steps in Pațicca Samuppāda will have no benefit. The steps in Paṭicca Samuppāda vary according to each individual Paṭicca Samuppāda cycle of relevance (akusala-mūla, kusala-mūla, etc.) Yet, the steps are same.

## Relinquishing Defilement via Three Rounds and Four Stages

February 4, 2016; revised September 12, 2019

## Tiparivattaya - Three Rounds of Bondage to This World

1. Here we will link the concepts like tiparivattaya in the sutta to other basic ideas that we have discussed in other sections throughout the site.

- I want to emphasize that "relinquish" means "giving up voluntarily, through acquired wisdom."
- When one acquires wisdom, one realizes that defilement arise due to cravings for sense pleasures.
- The real danger is when cravings for sense pleasures lead to bad kamma (such as killing) that makes one eligible for the $a p \bar{a} y \bar{a}$.

2. The Buddha gained all 12 types of knowledge at once in attaining the Buddhahood. However, an average human being will go through the tiparivattaya (or the three rounds of bondage) via four stages of Nibbāna. We can compare this to building a new complex structure.

- A Sotapanna overcomes the first round by gaining the basic knowledge on the Four Noble Truths. Those are: what suffering is, the causes for suffering, stopping the causes from taking place, and the way to stop causes. It is seeing the plan to construct a building. All the details are in that blueprint.
- Let us continue with the analogy of constructing a building. The Sakadāgāmī stage is starting to build the building. With the basic structure finished, one is at the Anāgāmi stage. That overcomes the second round.
- When the building is all finished with the finer details, that is like attaining the Arahant stage. One has overcome the third round. There is nothing more to be done.

## Sotāpanna Anugāmi

3. Even though the above analogy gives the basic idea, we need to examine it in more detail. It is the Sotāpanna Anugāmi (one who is striving to become a Sotāpanna) who does the bulk of the work. $\mathrm{He} /$ she needs to learn the necessary background on "how to design and build the building."

- He/she cannot do that without learning the critical fundamentals from a Noble Person who has gone through at least one of the three rounds (or one of the four stages).
- Thus to become a Sotāpanna Anugāmi, one must learn the true nature of the world from an Ariya (at least a Sotāpanna). There are several posts on this issue. One can find by doing a keyword search or by looking through the posts under "Sotāpanna stage of Nibbāna."

4. To become a Sotāpanna Anugāmi, one first needs to get rid of the ten types of micchā diṭthi; see, "Micchā Ditthi, Gandhabba, and Sotāpanna Stage."

- First, the mind needs to grasp that it has to be devoid of the extreme levels of greed (lobha), hate (dosa). That leads to a gradual reduction of total ignorance (moha) via learning the right message of the Buddha, i.e., one needs to see the dangers in acting with lobha, dosa, moha.
- One cannot grasp the dangers of the rebirth process if one does not believe that the four lowest realms with unimaginable suffering exist. Those who are striving to become Sotāpanna need to carefully read about what constitutes micchā ditṭhi, for example, "Key to Sotāpanna Stage - Ditthi and Vicikicca."

5. A subtle (but stronger) level of micchā ditthi remains until one starts comprehending Tilakkhaṇa (anicca, dukkha, anatta). That means one needs to begin understanding that it is not possible to achieve AND maintain ANYTHING to one's satisfaction.

- Just by having learned the true nature of this world (anicca, dukkha, anatta), a Sotāpanna Anugāmi gradually removes a bulk of defilement and attains the Sotāpanna stage. Now he/she can see the Path to the Arahanthood.
- It is important to note that he/she did not have to remove any attachments BY FORCE. All he/she did was to comprehend Dhamma to the level to see not only the unfruitfulness but the dangers of the rebirth process. See, "Is It Necessary for a Buddhist to Eliminate Sensual Desires?."

## Sotāpanna stage - First Round of Bondage Overcome

6. When one attains the Sotāpanna stage, one significantly reduces lobha (extreme greed), dosa (intense hate), and moha (sheer ignorance). They cut to the levels of rāga (attachment to worldly pleasures), patigha (tendency to become irritated when one does not get one wants), and avijja (not fully knowing the true nature of the world). These terms discussed in "Lobha, Dosa, Moha versus Raga, Patigha, Avijjā."

- By going through this first round of the tiparivattaya, a Sotāpanna removes the bulk of defilement. See, "Why a Sotāpanna is Better off than any King, Emperor, or a Billionaire." That illustrates how one is capable of doing immoral acts that makes one to be eligible for the apay $\overline{\boldsymbol{a}}$, just because one has micchā diṭthi.
- It is essential to realize that there are many people with micch $\bar{a}$ ditṭthi who go through their lives without doing any such horrible acts. However, the possibility to do such an act remains with one through future lives until one attains the Sotāpanna stage. That is what is meant by anusaya, the hidden defilement. They can be removed only via learning and comprehending Dhamma.

7. What is the reason that a Sotāpanna WILL NOT do any highly immoral act that makes him/her eligible to be born in the $a p \bar{a} y \bar{a}$ ? It is not something he/she does consciously. Such decisions come automatically. That is the result of comprehending anicca (unfruitful) nature of this world.

It sinks into one's mind that no matter what one can gain by doing such an act, it is going to far more dire consequences in the future. Not only that, but "what is the point of harming another being for anything in this world that one will have to eventually give up anyway?".

- It sinks to one's mind that no matter what one can gain by doing such immoral actions, it will lead to far more dire consequences in the future. Not only that but "what is the point of harming another being for anything in this world?." One will have to give up that eventually, when one dies!
- For example, one may kill someone and get a million dollars without getting caught, and may live a luxurious life. But he/she will pay for it by being born in the apāyā for millions of years to come.
- When one comprehends the anicca nature, one realizes deep down the foolishness (and the dangers) of such acts. Anusaya (craving) for such action will be removed when one attains the Sotāpanna stage. One would have shed such "gati" or character without a trace left. Again, there are many posts on these concepts.

## The Second Round of the tiparivattaya

8. The second round of the tiparivattaya is tackled in by a Sotāpanna in two steps. First, to become a Sakadāgāmī and then to become an Anāgāmī. An Anāgāmī has gone through the second round.

- Remember that a Sotāpanna has reduced lobha, dosa, moha to the levels of rāga, patigha, and avijjā; see \#4 above. Rāga means the attachments for things in this world, which are three basic types: (i) Kāma rāga means attachment to sense pleasures, i.e., those available in kāma loka. (ii) Rūpa rāga means attachment to jhānic pleasures in rūpa loka, and (iii) Arūpa rāga means attachment to jhānic pleasures in arūpa loka.
- Kāma rāga is actually of two "strengths": "klesha kāma" [klesha is in Sinhala (kilesā is in Pāli)] means attachment to sense pleasures, and "vatthu kāma" ("vatthu" means "property") is stronger because one also wants to own such sense objects.
- When a Sotappanna sees the perils of sense pleasures and the tendency to angry (patigha), both kāma rāga and paṭigha are first reduced to the levels of a Sakadāgāmi. Here, one actually loses the "vatthu $k \bar{a} m a "$ completely. Thus, a Sakadāgāmī is said to be "healthy forever" because he will never be born with a body that is subject to diseases. That means he will never be born at or below the human realm.
- As one sees the perils of $k \bar{a} m a$ assāda (sensory pleasures) starting at the Sotāpanna stage, one begins to see the world more clearly; see, "Assāda, Ādīnava, Nissarana - Introduction."

9. A Sakadāgām̄ makes more progress via contemplating the drawbacks or perils (ādīnava) of sense pleasures and overcomes the second round of bondage to become an Anāgāmī. Thus at this stage one eliminates the "klesha kāma" [klesha is in Sinhala (kilesā is in Pāli)] component of the kāma rāga, AND remainder of patigha.

- Thus an Anāgāmī has given up all attachments to the kāma loka (those including the human and deva realms), and hence will not be born anywhere in kāma loka.

## The Third Round

10. Now we can see that an $A n \bar{a} g \bar{a} m \bar{\imath}$ has only the rūpa rāga and arūpa rāga remaining with him/her (which are low levels of greed). Furthermore, there is no trace of hate (dosa) or friction (patigha) left. Thus only rebirths in the brahma realms are possible for an Anāgāmī. Of course, there is still some of avijjā leftover too.

- When an Anāgāmī overcomes those remaining defilement from his/her mind, the mind becomes purified. Then one attains the Arahant stage of Nibbāna by overcoming the third round of the tiparivattaya.

11. We are bound to the perpetual cycle of rebirths via ten fetters called "sanyojana = "san+yojana"; see, "What is "San"? Meaning of Sansāra (or Samsāra)"; yojana means bond. Sanyojana is sometimes called samyojana.

- Those ten sanyojana (or samyojana) are also gradually removed as one goes through the three rounds or tiparivattaya in four stages.
- At the Sotāpanna stage, one removes the two sanyojana of sakkāya dittthi and silabbata paramasa by removing micch $\bar{a}$ ditṭhi. One also removes the vicikicch $\bar{a}$ sanyojana that is associated with moha, and thus reduces moha to avijj $\bar{a}$.

12. At the Sakadāgāmī stage, one reduces the two sanyojana of kāma rāga and patigha. Those two entirely removed by attaining the $A n \bar{a} g \bar{a} m \bar{l}$ stage.

- In terms of sanyojana, an Anāgāmī has five left to remove: rūpa rāga, arūpa rāga, māna, uddhacca, and $a v i j j \bar{a}$. With the removal of those, one attains the Arahanthood.

## Summary

13. Thus we can see that there are many types of analyses one can do. They all mean the same thing at the end. One needs to first comprehend the three characteristics of this world (anicca, dukkha, anatta) to some extent to reach the Sotāpanna stage. That is the first round of tiparivattaya. Then going through the second and third rounds of bondage via the next three stages of Nibbāna leads to the complete comprehension of anicca, dukkha, anatta. That leads to stopping the sansāric (or samsāric) journey filled with so much suffering.
14. Therefore, the whole journey is a truth-seeking mission about this world of 31 realms. That suffering can be intense in some realms. But one's comprehension of suffering is minimal at the beginning. The more one understands the true nature; one's mind AUTOMATICALLY gives up attachments to this world VOLUNTARILY.

- This is why majjhima pațipadā is not just "middle path" as discussed in a previous post in this series: "Majjhimā Patipadā - Way to Relinquish Attachments to this World."

15. Thus, the Dhammacakkappavattana sutta (or Dhamma Cakka Pavattana sutta) gives the blueprint of what Buddha Dhamma is all about. What the Buddha did in the following 45 years was to describe this blueprint in detail in various ways.

- More details on the material in this post at "Tiparivattaya and Twelve Types of Ñāna (Knowledge)."

### 17.8 Anguttara Nikāya - Suttā on Key Concepts

June 20, 2018
Anguttara Nikāya has many short suttā (note that plural of sutta is suttā) with key information; see, "Nikāya in the Sutta Pitaka." In this subsection, we will discuss many such suttā at various levels.
"Dasa Akusala/Dasa Kusala - Basis of Buddha Dhamma"
"Dasa Akusala/Dasa Kusala - Basis of Buddha Dhamma - 2"

## 17.s. 1 Dasa Akusala/Dasa Kusala - Basis of Buddha Dhamma

June 20, 2018; revised February 17, 2021

## Moral Basis of Buddha Dhamma

1. Dasa kusala and dasa akusala are the moral foundations of Buddha Dhamma. Nature's laws are based on them.

- A wide variety of synonyms are given for dasa kusala and dasa akusala in a number of short suttā in Añguttara Nikāya; see, "Annguttara Nikāya - Suttā on Key Concepts."
- Any one of Dasa akusala corrupts a mind, and and they lead to samisāric suffering.
- Any one of Dasa kusala purifies a mind, and and they lead to permanent happiness (Nibbāna).

## Two Types of Micchā Ditṭhi - Removed Sequentially

2. We can easily see connections to a number of key Pāli words and concepts with this information.

- The most potent of the dasa akusala is micchā dittthi, which basically corrupts the mind and leads to other nine types of akusala. As we have discussed, micch $\bar{a}$ ditṭhi is of two types: 10 types of micch $\bar{a}$ ditṭhi and being unaware of Tilakkhana.
- As one first starts getting rid of the 10 types of micchā dittthi, one's tendency to do the other nine types of akusala will decrease. This is the same as saying that one will be cultivating samma diṭthi and the tendency to do other nine types of kusala will also increase.
- One is fully on the mundane path when one gets rid of the 10 types of micchā ditthi. One switches to the Noble Path when one starts comprehending Tilakkhaṇa.

## Deeper Level of Micchā Diṭthi Is Not Comprehending Four Noble Truths/Paṭicca Samuppāda/Tilakkhaṇa

3. This is why dasa kusala and dasa akusala are really the moral foundation of Buddha Dhamma. All deeper concepts like anatta are embedded in these as the deeper level of micchā ditthi; see, "Sakkāya Ditthi and Paticca Samuppāda."

- I had used two other sutt $\bar{a}$ (note that plural of sutta is suttā) not listed below to point out the connection to anatta in that post.
- The other concepts listed below: Dhamma/Adhamma, Ariya dhamma/Anariya dhamma, Saddhamma (beneficial dhamma)/Assaddhamma, Sappurisa (moral) dhamma /Asappurisa dhamma, Sādhu (praiseworthy)/Asādhu, Tapaniya (lead to a stressful mind) /Atapaniya, Acayagāmi (lead to rebirth)/Apacayagāmi, Dukkudrayo (lead to suffering) dhamma /Sukkudrayo dhamma, Ariyo maggalAnariya magga.
- Several other concepts become clear from other suttā, showing connections to other concepts. I may add more suttā, as I find them.

## Pali

## English

## Kusala Sutta (AN 10.180)

"Kusalañca vo, bhikkhave, desessāmi akusalañca. Taì suñātha ... pe ... katamañca, bhikkhave, akusalaì? Pāṇātipāto ... pe ... micchādiṭthi-idam vuccati, bhikkhave, akusalaì.

Katamañca, bhikkhave, kusalain? Pāṇātipāt $\bar{a}$ veramaṇi ... pe ... sammādiṭthi-idaín vuccati, bhikkhave, kusalan"ti.

## Akusala Sutta (AN 10.136)

"Akusalañca vo, bhikkhave, desessāmi kusalañca. Taï suṇātha ... pe ... katamañca, bhikkhave, akusalaì? Micchādiṭthi ... pe ... micchāvimutti-idain vuccati, bhikkhave, akusalaì. Katamañca, bhikkhave, kusalaï? Sammādiṭthi ... pe ... sammāvimutti-idaì vuccati, bhikkhave, kusalan"ti.

Akusala: Wrong views, wrong thoughts, wrong speech, wrong actions, wrong livelihood, wrong effort, wrong mindset, wrong samadhi, wrong understanding, wrong vimutti (defined in terms of micch $\bar{a}$ path).
Kusala: Opposites in the Noble Eightfold Path.

We see that Kusala/Akusala can be defined in two ways (dasa akusala/dasa kusala or micchā path/Noble Path), as shown by the above two sutt $\bar{a}$. The same is true for all other terms discussed below. However, in order to save space, I will just provide the name of the sutta on the right that gives the definition in terms of micch $\bar{a}$ path/Noble Path.

## Dhamma Sutta (AN 10.182) and Dhamma Sutta (An 10.138)

'"Dhammañca vo, bhikkhave, desessāmi adhammañca. Taì suṇātha ... pe ... katamo ca, bhikkhave, adhammo? Pāṇātipāto ... pe ... micchādiṭthi-ayaí vuccati, bhikkhave, adhammo.

Katamo ca, bhikkhave, dhammo? Pāṇātipātā veramaṇī ... pe ... sammādiṭthi-ayaí vuccati, bhikkhave, dhammo"ti.

Adhammo: taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.
Dhammo: Opposites: see, "KilesaRelationship To Akusala, Kusala, And Puñña Kamma"

## Ariyadhamma Sutta (AN 10.179) and Ariyadhamma Sutta (AN 10.135)

"Ariyadhammañca vo, bhikkhave, desessāmi anariyadhammañca. Taỉ suṇātha ... pe ... katamo ca, bhikkhave, anariyo dhammo? Pāṇātipāto ... pe ... micchādiṭ!hi-ayaí vuccati, bhikkhave, anariyo dhammo.

Katamo ca, bhikkhave, ariyo dhammo? Pāṇātipātā veramaṇ̄ ... pe ... sammādiṭthi- ayaín vuccati, bhikkhave, ariyo dhammo"ti.

Anariyadhammo: taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, illwill, wrong views.

Ariyadhammo: Opposites: see, "Kilesa Relationship To Akusala, Kusala, And Puñña Kamma"

## Saddhamma Sutta (AN 10.191) and Saddhamma Sutta (AN 10.147)

'Saddhammañca vo, bhikkhave, desessāmi
Asaddhammo (Asath/Bad dhamma): taking

Second part: "Dasa Akusala/Dasa Kusala - Basis of Buddha Dhamma -2."

## Dasa Akusala/Dasa Kusala - Basis of Buddha Dhamma - 2

June 27, 2018
This is the second post in a series. The first post: "Dasa Akusala/Dasa Kusala - Basis of Buddha Dhamma."

1. Dasa kusala and dasa akusala are the foundations of Buddha Dhamma. Nature's laws are based on them.

- A wide variety of synonyms are given for dasa kusala and dasa akusala in a number of short suttā in Añguttara Nikāya; see, "Annguttara Nikāya - Suttā on Key Concepts."
- Dasa akusala corrupt a mind and they lead to sansāric suffering.
- Dasa kusala purify a mind and they lead to permanent happiness (Nibbāna).

2. We can easily see connections to a number of key Pāli words and concepts with this information.

- The most potent of the dasa akusala is micchā ditthi, which basically corrupts the mind and lead to other nine types of akusala. As we have discussed, micch $\bar{a}$ dittthi is of two types: 10 types of micch $\bar{a}$ diṭthi and being unaware of the deeper laws of Nature including Tilakkhaṇa (sometimes asubha nature is also included, in addition to the anicca, dukkha, anatta nature).
- As one first starts getting rid of the 10 types of micch $\bar{a}$ diṭthi, one's tendency to do other nine types of akusala will decrease. This is the same as saying that one will be cultivating samma diṭthi and the tendency to do other nine types of kusala will also increase.
- One is fully on the mundane path when one gets rid of the 10 types of micch $\bar{a}$ dittthi. One switches to the Noble Path when one starts comprehending Tilakkhaṇa.

3. This is why dasa kusala and dasa kusala are really the foundation of Buddha Dhamma. All deeper concepts like anatta are embedded in these; see, "Dasa Akusala and Anatta - The Critical Link."

- I had used the first two sutta (note that plural of sutta is sutt $\bar{a}$ ) listed below to point out the connection to anatta in that post.
- The other suttā listed below involve several more of deeper concepts: Attho(Atto), Āsava, Sāvajja (Blamesworthy), Uppādetabba (should arise in a mind), Āsevitabba (to be associated with), $B h \bar{a} v e t a b b a$ (to be used), Bahulikatabba (to be used frequently), Anussaritabba (to be thought about or contemplated).
- In the previous post I discussed suttā involving the following basic concepts: Dhamma/Adhamma, Ariya dhamma/Anariya dhamma, Saddhamma (beneficial dhamma)/Assaddhamma, Sappurisa (moral) dhamma /Asappurisa dhamma, Sādhu (praiseworthy)/Asādhu, Tapaniya (lead to a stressful mind) /Atapaniya, Acayagāmi (lead to rebirth)/Apacayagāmi, Dukkudrayo (lead to suffering) dhamma /Sukkudrayo dhamma, Ariyo magga/Anariya magga;
see, "Dasa Akusala/Dasa Kusala - Basis of Buddha Dhamma."
- In future posts I will discuss other suttā, showing connections to other concepts.

## Pali

## English

## Attha Sutta (AN 10.181)

"Atthañca vo, bhikkhave, desessāmi anatthañca.
Tam̀ suṇātha, sādhukamं manasi karotha,

Anattho (One without refuge/protection): taking a life, stealing, abusing sense pleasures, speaking

## Pali

bhāsissāmi"ti. "Evaín, bhante"ti kho te bhikkhū bhagavato paccassosum. Bhagavā etadavoca: "katamo ca, bhikkhave, anattho? Pānātipāto, adinnādānaì, kāmesumicchācāro, musāvādo, pisuñā vācā, pharusā vācā, samphappalāpo, abhijjhā, byāpādo, micchādiṭthi-ayamं vuccati, bhikkhave, anattho.

Katamo ca, bhikkhave, attho? Pānātipāta veramaṇī, adinnādānā veramaṇī, kāmesumicchācārā veramaṇī, musāvādā veramaṇī, pisuṇàya vācāya veramaṇī, pharusāya vācāya veramaṇī, samphappalāpā veramaṇ̄̄, anabhijjhā, abyāpādo, sammādiṭthi-ayam vuccati, bhikkhave, attho"ti.

## Attha Sutta (AN 10.137)

"Atthañca vo, bhikkhave, desessāmi anatthañca. Taì suṇātha, sādhukaì manasi karotha, bhāsissāmı"ti. "Evaï, bhante"ti kho te bhikkhū bhagavato paccassosumi. Bhagavā etadavoca: "katamo ca, bhikkhave, anattho? Micchādiṭthi, micchāsañkappo, micchāvācā, micchākammanto, micchāājīvo, micchāvāyāmo, micchāsati, micchāsamādhi, micchāñāṇam, micchāvimuttiayaì vuccati, bhikkhave, anattho.

## English

untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views (defined in terms of dasa akusala).

Attho (One with refuge/protection): Opposites: see, "Dasa Akusala and Anatta - The Critical Link"

Anattho (One w/o refuge or protection):: Wrong views, wrong thoughts, wrong speech, wrong actions, wrong livelihood, wrong effort, wrong mindset, wrong samadhi, wrong understanding, wrong vimutti (defined in terms of micchā path).

## Attho (One with refuge/protection): Opposites in the Noble Eightfold Path.

Katamo ca, bhikkhave, attho? Sammāditṭhi, sammāsañkappo, sammāvācā sammākammanto, sammāājīvo, sammāvāyāmo, sammāsati, sammāsamādhi, sammāñāṇam, sammāvimuttiayaì vuccati, bhikkhave, attho"ti.

We see that attho/anattho can be defined in two ways (dasa akusala/dasa kusala or micchā path/Noble Path), as shown by the above two sutt $\bar{a}$. The same is true for all other terms discussed below. However, in order to save space, I will just provide the name of the sutta on the right that gives the definition in terms of micchā path/Noble Path.

## Āsava Sutta (AN 10.183) and Sāsava Sutta (AN 10.139)

"Sāsavañca vo, bhikkhave, dhammaì desessāmi anāsavañca. Tamं suṇātha ... pe ... katamo ca, bhikkhave, sāsavo dhammo? Pānātipāto ... pe ... micchādiṭ! hi-ayaì vuccati, bhikkhave, sāsavo dhammo.

Katamo ca, bhikkhave, anāsavo dhammo? Pānātipātā veramaṇi ... pe ... sammādiṭthiayà̇ vuccati, bhikkhave, anāsavo dhammo"ti.

Sāsava Dhamma (that help cultivate āsava): Wrong views, wrong thoughts, wrong speech, wrong actions, wrong livelihood, wrong effort, wrong mindset, wrong samadhi, wrong understanding, wrong vimutti (defined in terms of micch $\bar{a}$ path).
Anāsava Dhamma (that remove āsava):
Opposites in the Noble Eightfold Path.

## Sāvajja Sutta (AN 10.184) AND Sāvajja Sutta (AN 10.140)

"Sāvajjañca vo, bhikkhave, dhammaì desessāmi Sāvajja Dhammo (blamesworthy): taking a life, anavajjañca. Tam suṇātha ... pe ... katamo ca, bhikkhave, sāvajjo dhammo? Pānātipāto ... pe .. micchāditṭhi-ayà̀ vuccati, bhikkhave, sāvajjo dhammo.

Katamo ca, bhikkhave, anavajjo dhammo? Pāṇātipātā veramaṇī ... pe ... sammāditṭhiayam vuccati, bhikkhave, anavajjo dhammo"ti. stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.
Anavajijo dhammo (praiseworthy): Opposites: see, "Kilesa - Relationship To Akusala, Kusala, And Puñña Kamma"

## Uppādetabbadhamma Sutta (AN 10.193) AND Uppādetabba Sutta (AN 10.149)

"Uppādetabbañca vo, bhikkhave, dhammaì desessāmi na uppādetabbañca. Tam் suṇātha ... pe ... katamo ca, bhikkhave, na uppādetabbo dhammo? Pān̄ātipāto ... pe ... micchādiṭṭhiayaì vuccati, bhikkhave, na uppādetabbo dhammo.

Katamo ca, bhikkhave, uppādetabbo dhammo? Pānāātipātā veramaṇī ... pe ... sammādițthi-ayain vuccati, bhikkhave, uppādetabbo dhammo"ti.
na Uppādetabbo Dhammo (dhamma that should not arise): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.
Uppādetabba Dhammo (dhamma that should arise): Opposites: see, "Kilesa - Relationship To Akusala, Kusala, And Puñ̃̃a Kamma"

## Āsevitabbadhamma Sutta (AN 10.194) and Āsevitabba Sutta (AN 10.150)

"Āsevitabbañca vo, bhikkhave, dhammain desessāmi nāsevitabbañca. Taỉ suṇātha ... pe ... katamo ca, bhikkhave, nāsevitabbo dhammo? Pānātipāto ... pe ... micchādiṭthi- ayamं vuccati, bhikkhave, nāsevitabbo dhammo.

Katamo ca, bhikkhave, āsevitabbo dhammo? Pānāātipātà veramaṇī ... pe ... sammādițthi-ayain vuccati, bhikkhave, āsevitabbo dhammo"ti.

Nāsevitabba dhammo (dhamma that one should not be associated with): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.
$\bar{A} s e v i t a b b a d h a ~ d h a m m o ~(d h a m m a ~ t h a t ~ o n e ~$ should be associated with): Opposites: see, "Kilesa - Relationship To Akusala, Kusala, And Puñña Kamma"

## Bhāvetabbadhamma Sutta (AN 10.195) AND Bhāvetabba Sutta (AN 10.151)

"Bhāvetabbañca vo, bhikkhave, dhammaì desessāmi na bhāvetabbañca. Taì suñātha ... pe ... katamo ca, bhikkhave, na bhāvetabbo dhammo? Pānāātipāto ... pe ... micchādiṭṭhiayaì vuccati, bhikkhave, na bhāvetabbo dhammo.

Katamo ca, bhikkhave, bhāvetabbo dhammo? Pānātipātā veramaṇī ... pe ... sammādiṭthi-ayamं vuccati, bhikkhave, bhāvetabbo dhammo"ti.

Dhamma thould not be used (na bhāvetabbo dhammo): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views. Dhamma that should be used (bhāvetabbo dhammo): Opposites: see, "Kilesa - Relationship To Akusala, Kusala, And Puñña Kamma"

## Pali

## English

## Bahulīkātabba Sutta (AN 10.196) AND Bahulīkattabba Sutta (AN 10.152)

"Bahulīkātabbañca vo, bhikkhave, dhammaí desessāmi na bahulīkātabbañca. Tà̀ suṇātha ... pe ... katamo ca, bhikkhave, na bahulīkātabbo dhammo? Pānāātipāto ... pe ... micchādiṭthiayaì vuccati, bhikkhave, na bahulīkātabbo dhammo.

Katamo ca, bhikkhave, bahulīkātabbo dhammo? Pānāātipātā veramaṇī ... pe ... sammādițthi-ayami vuccati, bhikkhave, bahulīkātabbo dhammo"ti.

Dhamma that should not be frequently associated with (na bahulīkātabbo dhammo): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.
Dhamma that should be frequently associated with (bahulīkātabbo dhammo): Opposites: see, "Kilesa - Relationship To Akusala, Kusala, And Puñña Kamma"

Dhamma that should not be experienced (na sacchikātabbo dhammo Dhammo): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.
(Dhamma that should be experienced (sacchikātabbo dhammo): Opposites: see, "Kilesa - Relationship To Akusala, Kusala, And Puñña Kamma"

Sacchikātabba Sutta (AN 10.198) AND
Sacchikātabba Sutta (AN 10.154)
"Sacchikātabbañca vo, bhikkhave, dhammaì desessāmi na sacchikātabbañca. Tà̇ suṇātha pe ... katamo ca, bhikkhave, na sacchikātabbo dhammo? Pānātipāto ... pe ... micchādiṭthiayamं vuccati, bhikkhave, na sacchikātabbo dhamтo.

Katamo ca, bhikkhave, sacchikātabbo dhammo? Pāṇātipātā veramaṇī ... pe ... sammāditṭhi-ayaì vuccati, bhikkhave, sacchikātabbo dhammo"ti.

## Anussaritabbadhamma Sutta (AN 10.197) AND Anussaritabba Sutta (AN 10.153)

"Anussaritabbañca vo, bhikkhave, dhammaì desessāmi nānussaritabbañca. Tamं suṇātha ... pe ... katamo ca, bhikkhave, nānussaritabbo dhammo? Pān̄ātipāto ... pe ... micchādiṭṭhiayàं vuccati, bhikkhave, nānussaritabbo dhamто.

Katamo ca, bhikkhave, anussaritabbo dhammo? Pān̄ātipātā veramaṇī ... pe ... sammādițthi-ayam̀ vuccati, bhikkhave, anussaritabbo dhammo"ti.

Dhamma that should not be thought about (na anussaritabbo dhammo): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

Dhamma that should be thought about (anussaritabbo dhammo): Opposites: see, "Kilesa - Relationship To Akusala, Kusala, And Puñña Kamma"

### 17.9 Na Cetanākaraṇīya Sutta

## May 21, 2018; revised May 23, 2018; November 19, 2021; July 23, 2022

1. "Na Cetanākarañiya Sutta" is the correct name of the sutta, NOT "Cetanākarañ̄ya Sutta," as it is entitled on several websites, including the Sutta Central website: "WebLink: suttacentral: Cetanākaranīyasutta (AN 11.2)." The English translation there is entitled accordingly and erroneously: "Making a Wish."

- Cetanā is what one intends or wishes; karaniya means "what one should do," and "na" means "not." The sutta is the teaching: "Just by wishing such and such, one will not get to Nibbāna."
- The correct title appears in the Pāli/Sinhala Buddha Jayanthi Tipitaka Series XXIII, A $\dot{n} g u t t a r a ~ N i k a \bar{a} a$ (Part 6, p.586).
- Therefore, the English title of the sutta should be something like "Making a Wish Will Not Work."

2. It is a fairly short sutta. So, I decided to translate the full sutta and put it side-by-side with the Pāli version so that one can see how it is translated.

- As mentioned above, there is no point in just chanting or repeating to oneself, "May I be free of this, May I be that," etc.
- One must map out what must be done to stop future suffering and follow that path. There are no easy solutions like sitting down in a quiet place and just chanting or meditating, even though that should be a part of the whole process.
- This step-by-step process is summarized clearly in the sutta.
- I have put in bold every other verse, so it would be easier to match the English and Pāli verses.
"For a person engaged in moral conduct (sīla), and "Sillavato, bhikkhave, silasampannassa na is thus moral and virtuous, there is no need to wish cetanāya karañ̄̄yain: 'avippatisāro me (cetanā): "May I be able to act with a calm mind." uppajjat $\bar{u} t t$. Dhammatā esā, bhikkhave, yaim Agitation of the mind does not arise in a person sīlavato sīlasampannassa avippatisāro uppajjati. engaged in silla and is virtuous.
"For a person free from an agitated mind, there Avippatisārissa, bhikkhave, na cetanāya is no need to wish (cetanā): "May happiness karan̄̄yain: 'pāmojjam me uppajjatū'ti. arises in me." Happiness (tranquility) arises Dhammatā esā, bhikkhave, yam avippaṭisārissa naturally in a person free from agitation of the pāmojjaì uppajjati.
mind.
"For a person with happiness (tranquility of mind), Pamuditassa, bhikkhave, na cetanāya there is no need to wish (cetanā): "May joy arises in Karañìyain: 'pīti me uppajjatū'ti. Dhammatā esā, me."Joy arises in a person with a peaceful mind. bhikkhave, yam pamuditassa pīti uppajjati.
"For a joyful person, there is no need to wish Pītimanassa, bhikkhave, na cetanāya (cetanā): "May I feel lightness in the body." A karañ̄yain: 'kāyo me passambhatū'ti. joyful person attains bodily lightness Dhammatā esā,bhikkhave, yaí pītimanassa (passaddhi). kāyo passambhati.
'For a person with bodily lightness, there is no need Passaddhakāyassa, bhikkhave, na cetanāya to wish (cetanā): "May I experience sukha." A karañ̄yam: 'sukhaim vediyām $\vec{\imath} t$. Dhammatā esā, person with bodily lightness experiences sukha. bhikkhave, yam passaddhakāyo sukhaì vediyati.
"For a person experiencing sukha, there is no Sukhino, bhikkhave, na cetanāya karañ̄yain: need to wish (cetan $\bar{a})$ : "May my mind get to 'cittaì me samādhiyat $\bar{u}$ 'ti. Dhammat $\bar{a}$ esā, samādhi." Naturally, the mind of a person bhikkhave, yam sukhino cittaí samādhiyati. experiencing sukha gets to samädhi.
'For a person who gets to samādhi, there is no need Samāhitassa, bhikkhave, na cetanāya karañ̄̄yam: to wish (cetanā): "May I know and see the true 'yathābhūtaì jānāmi passām $\vec{\imath} t i$. Dhammat $\bar{a}$ es $\bar{a}$,
nature of things in this world (yathābhūta ñāna or bhikkhave, yaim samāhito yathābhūtaì jānāti comprehension of Tilakkhana)." A person who gets passati.
to samādhi will see the true nature of this world.
(Here, it is assumed that one has learned
Tilakkhana from an Ariya; see \#3 and \#4
below).
"For a person with yathābhūta ñāna, there is no Yathābhūtaí, bhikkhave, jānato passato na need to wish (cetanā): "May I not be attracted cetanāya karañ̄̄yam: 'nibbindām $\vec{\imath} \boldsymbol{t} \boldsymbol{t}$. to temptations in this world (virāga)." A person Dhammatā esā, bhikkhave, yaì yathābhūtaì who knows and sees things as they are naturally jānaì passaim nibbindati. dispassionate towards things in this world.
"For a person who thus naturally dispassionate, there Nibbinnassa, bhikkhave, na cetanāya karañ̄yain: is no need to wish (cetanā): 'May I be free of 'virajjām $\vec{\imath} t i$. Dhammatā es $\bar{a}$, bhikkhave, yaì cravings for things in this world." A person who is nibbinno virajjati.
dispassionate through understanding the real nature
of things will be free of cravings.
"For a person who is free of cravings, there is Virattassa, bhikkhave, na cetanāya karan̄̄yain: no need to wish (cetanä): "May I realize the 'vimuttiñānadassanamं sacchikarom’’ti. knowledge of the final release from all suffering Dhammatā esā, bhikkhave, yam viratto vimutti(vimuttiñānadassana)." A person who is free of $\tilde{n} a ̄ n a d a s s a n a \dot{m}$ sacchikaroti. cravings will attain the final release from all suffering.
'In this way, bhikkhus, freedom from cravings Iti kho, bhikkhave, virāgo vimuttiñ̄ānadassanat(dispassion) has released from all suffering as its tho vimuttiñānadassanānisaimso, nibbidā reward, Disenchantment has dispassion as its virāgatthā virāgānisamisā, yathābhūtañạ̄adasreward, yathābhūta ñāna has, disenchantment as sanaì nibbidatthaì nibbidānisamisaì, samādhi its reward, samādhi has yathābhūta ñāna as its yathābhūtañānadassanattho yathābhūtañānadasreward, sukha has samādhi as its reward, bodily sanānisamiso, sukhai் samādhatthaim samādhālightness (passaddhi) has sukha as its reward, joy nisamisaì, passaddhi sukhatthā sukhānisamisa, has bodily lightness as its reward. A calm mind has pīti passaddhatthā passaddhānisaimsā, pāmojjaìm joy as its reward, freedom from an agitated mind has pìtatthai் pītānisaìsaì, avippaṭisāro a calm mind as its reward, and moral conduct has pāmojjattho pāmojjānisaìso, kusalāni sìlāni freedom from an agitated mind as its reward. avippaṭisāratthāni avippatisārānisaimsāni. Iti 'In this way, dhamma qualities cultivated and fulfilled kho, bhikkhave, dhammā dhamme abhisandenti, will lead to more dhamma qualities in the Noble Path dhamma dhamme paripūrenti apārā pāraì in getting from this shore to the Far shore gamanāyä"ti.
(Nibbāna)."

3. The path to Nibbāna is not a straight step-by-step process in a linear fashion. Rather, a given person cycles through the steps repeatedly until the Arahant phala moment is attained.

- One starts with mundane sīla and can get to the early stages of samādhi without hearing about Tilakkhaṇa. One cannot proceed beyond that with just sïla, which is on shaky grounds, until one comprehends Tilakkhana.
- Once one starts comprehending Tilakkhaṇa (and becomes a Sotāpanna/Sotāpanna Anugāmi), one's sīla (moral conduct) will become unbreakable: It is called Ariyakānta sīla.
- That is when one gets into the Noble Eightfold Path.

4. In other words, there are two paths: One starts on the mundane path, and with the comprehension of Tilakkhana, one switches to the Noble Path; see, "Buddha Dhamma - In a Chart."
－Only a Sammasambuddha or a pacceka Buddha can figure out（or comprehend）Tilakkhaṇa by themselves；all others have to learn Tilakkhaṇa from an Ariya．

5．Another key thing to note is that there is no mention of the need to attain $j h \bar{a} n \bar{a}$ ．
Jhān $\bar{a}$ are a special kind of samādhi．It is good to cultivate $j h \bar{a} n \bar{a}$ ，but they are not necessary to attain magga phala．

And there are innumerable types of samādhi；one gets to Ariya samādhi（conducive to attaining Nibbāna） with the comprehension of Tilakkhaṇa．

6．Key words：
－Avippaṭisāra（రోతిల్రెజర வอ（vigilance）in Sinhala［vipilisara bava in Sinhala］）：One＇s mind is normally agitated．It tends to go everywhere．This is why it is hard for most people to comprehend Dhamma．When one focuses on maintaining moral conduct（sila）and stays away from dasa akusala， this agitation of the mind will gradually diminish，and one will be able to concentrate on a given concept for longer．［Avippaṭisāra ；［a＋vippațisāra］absence of regret or remorse］
 or tranquility of mind is the closest English translation．This is below the＂joyful state of mind＂or pīti （з 8 \％is in Sinhala［priti in Sinhala］）．
－passambhati／passaddha：calming down（lightness）of the physical body（2x x w 飞ొ cep［kāya sæhælluva］（physically light））．
－nibbindati：get weary of，unsatisfied with（毋ைய゚ర゚○［kalakirima］（disappointment））．
－virajjati（related to virāga）：absence of cravings．［virajjati ：$[v i+r a d+y a]$ detaches oneself，shows lack of interest in．］
－vimutti：becomes free of suffering，final release（ூ2）మibs［vimukti］（iberation））．

### 17.10 <br> Paṭhama Mettā Sutta (AN 4.125)

## June 7, 2018; revised June 8, 2018; September 13, 2018; August 30, 2020

1. WebLink: suttacentral: Pathama Mettā Sutta (AN 4.125) clearly states the difference between $j h \bar{a} n \bar{a}$ cultivated by Noble Persons (Ariy $\bar{a}$ ) and those who are merely on the mundane path (assutav $\bar{a}$ puthujjano). Here assutava puthujjano means one who has not comprehended Tilakkhaṇa; one MUST have removed the ten types of micchā diṭthi even to cultivate anāriya jhāna.

- Since $j h a \overline{n i c}$ states represent the same $r \bar{u} p \bar{a} v a c a r a$ realms, the $j h a \overline{n i c}$ experience could be the same for both Ariya and anāriya jhāna (I am not sure).
- However, the critical difference is that Noble Persons (who have cultivated jhāna) NEVER come back to kāma loka and attain Parinibbāna, while the anāriyās come back to kāma loka, and could be born in the apāyā too.
- That is because the Ariyā have REMOVED kāma rāga (ucceda pahāna), while anāriyās have only SUPPRESSED them (vikkhambhana pahāna).
[pahāna : 'overcoming', abandoning. There are 5 kinds of overcoming:
(1) overcoming by repression (vikkhambhana-pahāna), i.e. the temporary suspension of the 5 hindrances (nīvarana, q.v.) during the absorptions,
(2) overcoming by the opposite (tadanga-pahāna),
(3) overcoming by destruction (samuccheda-pahāna),
(4) overcoming by tranquillization (patipassaddhi-pahāna),
(5) overcoming by escape (nissarana-pahāna).
[nissarana : [nt. ] 1. going out; departure; 2. escape. ]
(1) "Among these, 'overcoming by repression' is the pushing back of adverse things, such as the 5 mental hindrances (nīvarana q.v), etc., through this or that mental concentration (samādhi, q.v.), just as a pot thrown into moss-clad water pushes the moss aside....
(2)" 'Overcoming by the opposite' is the overcoming by opposing this or that thing that is to be overcome, by this or that factor of knowledge belonging to insight (vipassana $\mathrm{q} . \mathrm{v}$.), just as a lighted lamp dispels the darkness of the night. In this way, the personality-belief (sakkāyaditthi, s. ditthi) is overcome by determining the mental and corporeal phenomena ... the view of uncausedness of existence by investigation into the conditions... the idea of eternity by contemplation of impermanency ... the idea of happiness by contemplation of misery....
(3)"If through the knowledge of the noble path (s. ariyapuggala) the fetters and other evil things cannot continue any longer, just like a tree destroyed by lightning, then such an overcoming is called 'overcoming by destruction' "(Vis.M. XXII, 110f.).
(4) When, after the disappearing of the fetters at the entrance into the paths, the fetters, from the moment of fruition (phala) onwards, are forever extinct and stilled, such overcoming is called the 'overcoming by tranquillization'.
(5) "The 'overcoming by escape' is identical with the extinction and Nibbāna" (Pts.M. I. 27). (App.).]

2. The Brahma Vihāra in Buddha Dhamma are four types: mettā (loving-kindness), karuṇā (compassion, the opposite of karuṇā is anger), muditā (empathetic joy), and upekkhā (equanimity towards all beings).

- The four realms correspond to the four highest-intensity rūpāvacara jhāna levels (in sutta categorization of $j h a ̄ n a)$.
- We can clearly see the concept of gati; most translators do not even know what that word means.
- Instead of translating the sutta word-by-word, I have just provided the meaning of each verse.

|  | Pāli | English |
| :---: | :---: | :---: |
| 1 | Cattārome, bhikkhave, puggalā santo samivijijamānā lokasmimi. Katame cattāro? | Bhikkhus, there are four types of "cooled down" individuals (santo). Which four? |
| 2 |  | Bhikkhus, There is an individual who cultivates mettă bhavana in four directions. Thus he keeps pervading above, below, and all around the universe with compassion. |
| 3 | Tattha thito tadadhimutto tabbahulavihārī aparihīno kālai் kurumāno brahmakāyikānai் devānaì sahabyataì upapajjati. Brahmakāyikānam், bhikkhave, devānaì kappo āyuppamāṇain. Tattha puthujjano yāvat $\bar{a} y u k a \dot{m}$ thatv $\bar{a}$ yāvatakaì tesaì devānaì āyuppamāṇaì taín sabbai் khepetv $\bar{a}$ nirayampi gacchati tiracchānayonimpi gacchati pettivisayampi gacchati. | When he dies, he is reborn in the realm Brahmakayika realm. Those devas have a lifespan of a eon (kappa). An anāriya person having stayed there, having used up all the lifespan of those devas, can be reborn in hell, animal womb, or the state of the hungry ghosts. |
| 4 | Bhagavato pana sāvako tattha yāvatāyukaì thatv $\bar{a}$ yāvatakaì tesaì devānaì āyuppamānaì taì sabbaì khepetvā tasmimyeva bhave parinibbāyati. Ayaì kho, bhikkhave, viseso ayaì adhippayāso idamं nānākaraṇaì sutavato ariyasāvakassa assutavatā puthujjanena, yadidaì gatiya upapattiyā sati. | But a disciple of the Blessed One (an Ariya), having used up all the life-span of those devas, attains Parinibbāna there. The difference is in the gati between a Noble Person and an anāriya (assutavatā puthujjanena). |
| 5 | Puna caparam, bhikkhave, idhekacco puggalo karunāsahagatena cetasā ekaì disaì pharitv $\bar{a}$ viharati,..(rest of the verse same as that of 2 above). | Again, Bhikkhus, There is an individual who cultivates karuna bhāvanā in four directions (rest same as in 2 above). |
| 6 | Tattha thito tadadhimutto tabbahulavihārī aparihīno kālaì kurumāno ābhassarānaì devānaì sahabyataì upapajjati. $\bar{A} b h a s s a r a ̄ n a \dot{m}, \quad b h i k k h a v e, ~ d e v a ̄ n a \dot{m}$ dve kappā āyuppamānàm. Tattha puthujjano yāvatāyukaì thatvā yāvatakaì tesaì devānaì āyuppamānaì taì sabbaì khepetvā nirayampi gacchati tiracchānayonimpi gacchati pettivisayampi gacchati. | When he dies, he is reborn in the Abhassara realm. Those devas have a life-span of 8 eons (Maha Kappa). An anāriya person having stayed there, having used up all the life-span of those devas, can be reborn in hell, animal womb, or the state of the hungry ghosts. |
| 7 | Bhagavato pana sāvako tattha yāvatāyukaiं thatvā yāvatakaì tesaì devānaì àyuppamānaì taì sabbaì khepetvā tasmimyeva bhave parinibbāyati. Ayam kho, bhikkhave, viseso ayamं adhippayāso idamं nānākaraṇàm sutavato ariyasāvakassa assutavat $\bar{a}$ puthujjanena, yadidaì gatiy $\overline{\boldsymbol{a}}$ upapattiyā sati. | But a disciple of the Blessed One (an Ariya), having used up all the life-span of those devas, attains Parinibbāna there. The difference is in the gati between an the noble ones and an anāriya (assutavatā puthujjanena). |

Puna caparaì, bhikkhave, idhekacco puggalo Again, Bhikkhus, There is an individual who
pharitv $\bar{a}$ viharati,..(rest of the verse same as that of 2 above).
Tattha ṭhito tadadhimutto tabbahulavihār̄̄ When he dies, he is reborn in the Subhakinha aparihīno kālaì kurumāno Subhakinha devānaì sahabyataì upapajjati. Subhakinha, bhikkhave, devānaì cattāro kappā having used up all the life-span of those devas,
9 āyuppamānaim. Tattha puthujjano can be reborn in hell, animal womb, or the state of yāvatāyukaì thatvā yāvatakaì tesaì the hungry ghosts.
devānaì āyuppamānaì tà̀ sabbaì khepetv $\bar{a}$ nirayampi gacchati tiracchānayonimpi gacchati pettivisayampi gacchati.
Bhagavato pana sāvako tattha yāvatāyukaì But a disciple of the Blessed One (an Ariya), thatv $\bar{a}$ yāvatakaì tesaì devānaì having used up all the life-span of those devas, $\bar{a} y u p p a m a ̄ n a \dot{m}$ taì sabbaì khepetvā attains Parinibbāna there. The difference is in tasmimyeva bhave parinibbāyati. Ayaim kho, the gati between an the noble ones and an bhikkhave, viseso ayai் adhippayāso idamं anāriya (assutavatā puthujjanena).
nānākaraṇam sutavato ariyasāvakassa
assutavatā puthujjanena, yadidaì gatiyā upapattiyā sati.

Puna caparam, bhikkhave, idhekacco puggalo upekkhāsahagatena cetasā ekaì disaì cultivates upekkha bhāvanā in four directions. pharitv $\bar{a}$ viharati,..(rest of the verse same as that of 2 above)
Tattha thito tadadhimutto tabbahulavihār $\bar{\imath}$ When he dies, he is reborn in the Vehapphala aparihīno kālaì kurumāno vehapphalānai̇ realm. Those devas have a life-span of 500 eons devānaì sahabyataì upapajjati. (kappa). An anāriya person having stayed there, Vehapphalānaì, bhikkhave, devānaì pañca having used up all the life-span of those devas, kappasatāni āyuppamānam. Tattha can be reborn in hell, animal womb, or the state of puthujjano yāvatāyukaì thatvā yāvatakaì the hungry ghosts.
tesaì devānaì āyuppamānaì tà̀ sabbaì
khepetv $\bar{a}$ nirayampi gacchati
tiracchānayonimpi gacchati pettivisayampi gacchati.
Bhagavato pana sāvako tattha yāvatāyukaì thatv $\bar{a}$ yāvatakaì tesaì devānaì having used up all the life-span of those devas, $\bar{a} y u p p a m a ̄ n a \dot{m}$ taìm sabbaim khepetvā attains Parinibbāna there. Ayaí kho, bhikkhave, viseso ayam Bhikkhus, this is the difference in outcomes due to adhippayāso idamं nānākaraṇam sutavato difference in gati between a Noble Person and ariyasāvakassa assutavatā puthuijanena, an anāriya (assutavatā puthujjanena). yadidaì gatiy $\bar{a}$ upapattiy $\bar{a}$ sati. Ime kho, bhikkhave, cattāro puggalā santo samivijjamānā lokasmin"ti.

## Notes:

1. The four jhānic states attained by an Ariya discussed in this sutta are from anāriya jhāna. Therefore, they are jhānic states attained specifically by a Sotāpanna, by SUPPRESSING kāma rāga. If a Sotāpanna attained even the first Ariya jhāna, then he/she would be born not in those four realms, but in the realms
 Existence."
2. Note that by cultivating mettā, karuṇa $\bar{a}, m u d i t \bar{a}$, and upekkh $\bar{a} b h \bar{a} v a n \bar{a}$, one is born in Brahmak $\bar{a} y i k a$, Abhassara, Subhakinha, and Vehappala Brahma realms with lifetimes of 20000, 40000, 60000, and 84000 kappā.
3. For more information on jhānā, see "Samādhi, Jhāna (Dhyāna), Magga Phala" and "Power of the Human Mind."
4. Information on 31 realms comes from suttā like this one. I have corrected the lifetimes of these four rūpāvacara realms in the post, " 31 Realms of Existence."

### 17.11 Kukkuravatika Sutta (Majjhima Nikāya 57) - Kammakkhaya

June 11, 2018; revised April 12, 2020; December 29, 2020; January 7, 2021; January 22, 2021 (\#11)

## What Is Meant by Kammakkhaya?

1. Kammakkhaya is a bit difficult concept to understand. WebLink: suttacentral: Kukkuravatika Sutta (Majjhima Nikaya 57) explains it briefly and also clarifies how pāpa (kaṇha) kamma and puñña (sukka) kamma lead to bad and good kamma vipāka in various realms. Kusala kamma (also called khammakkhayāya kamma in this sutta) leads to kammakkhaya or "effectively nullifying" kamma vipāka.

- Kanhha means "dark or black" (Sinhala word is "kalla"), and sukka is "white or bright" (Sinhala "sudu"). The King of Gods is named "Sakka" because he is engaged in sukka (puñña) kamma.
- Please read the post, "Kanha (Dark) and Sukka (Bright) Kamma and Kammakkhaya" before reading this one, because all these are discussed in detail there. You will not be able to understand this post without reading that.
- Before discussing kammakkhaya, the Buddha also explains how one's gati (habits/character) can lead to corresponding future rebirths.

## Kukkuravatika Sutta (MN 57) - Introduction

2. The first half of the sutta describes the background, which led the Buddha to analyze various types of kamma. We will first go through the essence of the first half, just stating the essence.

- Suttā become boring only because the translators basically translate the whole sutta word-by-word. There are many repetitive statements in a sutta (done for various reasons, the effective oral transmission being one), and it is unnecessary to translate word-by-word.
- Furthermore, it is better to provide the essence of a verse rather than translating word-by-word, which can lead to wrong interpretations in some cases.

3. "Evaì me sutaì - ekaì samayaì bhagavā koliyesu viharati haliddavasanaì nāma koliyānaì nigamo. Atha kho punno ca koliyaputto govatiko acelo ca seniyo kukkuravatiko yena bhagavā tenupasañkamimisu; upasañkamitvā puṇno koliyaputto govatiko bhagavantaì abhivādetv $\bar{a}$ ekamantaì nisīdi. Acelo pana seniyo kukkuravatiko bhagavatā saddhim sammodi. Sammodanīyaì kathaí sāran̄̄̀yam vītisāretvā kukkurova palikujjitvāekamantaì nisīdi. Ekamantaim nisinno kho punno koliyaputto govatiko bhagavantaì etadavoca: "ayamं, bhante, acelo seniyo kukkuravatiko dukkarakārako chamānikkhittaì bhojanaì bhuñjati. Tassa taì kukkuravataì dīgharattaì samattaì samādinnaì. Tassa kā gati, ko abhisamparāyo"ti? "Alaì, puṇna, tiṭthatetaì; mā maì etaì pucchī"ti. Dutiyampi kho puṇno koliyaputto govatiko ... pe ... tatiyampi kho puṇno koliyaputto govatiko bhagavantaì etadavoca: "ayam், bhante, acelo seniyo kukkuravatiko dukkarakārako chamānikkhittaì bhojanamं bhuñjati. Tassa taì kukkuravataì dīgharattaì samattaì samādinnaì. Tassa kā gati, ko abhisamparāyo"ti?"

- Translated: "Thus have I heard. On one occasion, the Buddha lived in the Koliyan country where there was a Koliyans' town named Haliddavasana. Then Puṇna, an ascetic who lived like an ox (govatiko). This was a cult based on the belief that one can attain Nibbāna by subjecting the body to harsh living like an ox). He went with Seniya, an ascetic who lived like a dog (kukkuravatiko). Puṇ̣a, the ox-mimicking ascetic, said to the Buddha: "Venerable sir, this Seniya is a naked dog-ascetic who does what is hard to do: he eats his food when it is thrown to the ground; he does everything like a dog. He has been practicing that for a long time. What will be his rebirth? What will be his future gati?
- "Enough, Puṇna, let that be. Do not ask me that." But Puṇna asked the question three times.

## "Dog Gati" Leads to "Dog Births"

4. "Addhā kho te ahaì, punṇa, na labhāmi. Alaín, puṇna, titṭhatetaín; mā maí etaín pucchīti; api ca tyāhaỉ byākarissāmi. Idha, puṇna, ekacco kukkuravataì bhāveti paripuṇ̣à் abbokiṇnam், kukkurasīlamं bhāveti paripuṇnamं abbokiṇnam், kukkuracittamं bhāveti paripuṇnamं abbokiṇnam், kukkurākappai் bhāveti paripuṇnaì abbokiṇ̣am். So kukkuravataì bhāvetvā paripuṇnam̀ abbokiṇnaì, kukkurasīlaì bhāvetvā paripuṇnam abbokiṇ̣aì, kukkuracittaì bhāvetvā paripuṇnamं abbokiṇnaì, kukkurākappaì bhāvetvā paripuṇ̣aì abbokiṇnaì kāyassa bhedā paraì maraṇā kukkurānaì sahabyataì upapajjati. Sace kho panassa evai்diṭthi hoti: 'imināhaì sīlena vā vatena va tapena vā brahmacariyena va devo va bhavissāmi devaññataro vāti, sāssa hoti micchādiṭthi. Micchādiṭthissa kho ahaì, puṇ̂na, dvinnai் gatīnai் aññataramं gatim vadāminirayaì vā tiracchānayonim vā. Iti kho, puṇna, sampajjamānaì kukkuravatai் kukkurānaì sahabyataí upaneti, vipajjamānaì nirayan"ti.

Evaì vutte, acelo seniyo kukkuravatiko parodi, assūni pavattesi."

- Translated: Finally, the Buddha answered. "Here, Puṇna, if someone lives like a dog, he develops the dog-behavior or dog-habits fully. He develops the dog-mindset fully. If so, at his death, he will be reborn as a dog. But if he also has a view as this: 'By this observance of "holy life," I shall be born a god,' then he will have a wrong view too. Now there are two destinations for one with a wrong view: hell or the animal realm. So, Puṇna, if his dog-mimicking succeeds, it will lead to birth as a dog. if it fails, it will lead him to birth in hell (niraya) due to wrong views."
- When this was said, Seniya, the naked dog-duty ascetic, cried out and burst into tears.

5. "Atha kho bhagavā punṇam koliyaputtaì govatikam etadavoca: "etaim kho te ahaí, puṇna, nālatthaím. Alaí, puṇna, tiṭthatetaì; mā maï etaín pucchī"ti. "Nāhaím, bhante, etaím rodāmi yaí maì bhagavā evamāha; api ca me idaì, bhante, kukkuravataì dīgharattaì samattaì samādinnaì. Ayaì, bhante, puṇno koliyaputto govatiko. Tassa taiं govatamं dīgharattaì samattaì samādinnaì. Tassa kā gati, ko abhisamparāyo"ti? "Alaì, seniya, titṭhatetaì; mā maím etaì pucchī"ti. Dutiyampi kho acelo seniyo ... pe ... tatiyampi kho acelo seniyo kukkuravatiko bhagavantaim etadavoca: "ayamं, bhante, puṇno koliyaputto govatiko. Tassa taì govataì dīgharattaì samattà̀ samādinnaì. Tassa kā gati, ko abhisamparāyo"ti?"

- Translated: Then the Blessed One told Puṇna: "Puṇna, I could not persuade you when I said: 'Enough, Punna, let that be. Do not ask me that.'" Then Seniya the naked-dog ascetic said: "Venerable sir, I am not crying because the Blessed One has said this about me, but because I have wasted my time practicing this foolish method. Venerable sir, this Puṇna is an ox-ascetic. He has long taken up and practiced living like an ox. What will be his birth? What will be his future gati?" "Enough, Seniya, let that be. Do not ask me that." A second time and a third-time Seniya asked the same question.

## Gati of an Ox Leads to Birth of an $\mathbf{O x}$

6. "Addhā kho te ahamं, seniya, na labhāmi. Alamं, seniya, tiṭthatetaí; mā maí etaí pucchīti; api ca tyāhai் byākarissāmi. Idha, seniya, ekacco govatai் bhāveti paripuṇnam abbokinṇaim, gosīlaì bhāveti paripuṇnamं abbokinṇà், gocittaì bhāveti paripunṇaì abbokiṇnaì, gavākappaì bhāveti paripuṇnam abbokiṇnam. So govataì bhāvetvā paripuṇnaì abbokiṇnam், gosīlaì bhāvetvā paripuṇnam abbokiṇnam, gocittaì bhāvetvā paripuṇnam abbokiṇnaím, gavākappaì bhāvetvā paripunnamं abbokinnaim kāyassa bhedā param் maraṇā gunnaì sahabyatamं upapajjati. Sace kho panassa evam்dittthi hoti: 'imināhamं silena vā vatena vā tapena va brahmacariyena vā devo v $\bar{a}$ bhavissāmi devaññataro vāti, sāssa hoti micchādiṭ̣thi. Micchādiṭthissa kho ahaí, seniya, dvinnamं gatīnaì aññataraì gatim vadāmi-nirayaì vā tiracchānayonimं vā. Iti kho, seniya, sampajjamānaì govataiं gunnai் sahabyataì upaneti, vipajjamānai் nirayan"ti. Evaì vutte, puṇno koliyaputto govatiko parodi, assūni pavattesi."

- Translated: Finally, the Buddha answered. "Here, Seniya, someone develops the ox-behavior or oxhabits fully. He develops the mindset of an ox. If so, at his death, he will be reborn as an ox. But if he also has a view as this: 'By this observance of "holy life," I shall be born a god,' then he will have a wrong view too. Now there are two destinations for one with wrong views: hell or the animal realm. So, Seniya, if his ox-mimicking succeeds, it will lead to birth as an ox. If it fails, it will lead him to birth in hell (niraya) due to wrong views."
- When this was said, Puṇna, the ox-duty ascetic, cried out and burst into tears.

7. "Atha kho bhagavā acelaì seniyam kukkuravatikamं etadavoca: "etaím kho te ahaí, seniya, nālatthaín. Alaín, seniya, tiṭthatetaì; mā maiं etaì pucchī"ti. "Nāhaín, Bhante, etaín rodāmi yaì maì bhagavā evamāha; api ca me idam், Bhante, govataì dīgharattaí samattaí samādinnai். Evaì pasanno ahaì, Bhante, Bhagavati; pahoti bhagavā tathā dhammaì desetuì yath $\bar{a}$ ahaì cevimaì govataì pajaheyyamं, ayañceva acelo seniyo kukkuravatiko taì kukkuravataì pajaheyyā"ti. "Tena hi, puṇna, suṇāhi, sādhukam manasi karohi, bhāsissāmī"ti. "Evaì, Bhante" $t i$ kho punṇo koliyaputto govatiko bhagavato paccassosi. Bhagavā etadavoca: "

- Translated: "Then the Blessed One told Seniya the naked dog-duty ascetic: "Seniya, I could not persuade you when I said: ‘Enough, Seniya, let that be. Do not ask me that.'"
- Then Puṇna said, "Venerable sir, I am not crying because the Blessed One has said this about me, but because I have wasted my time practicing this foolish sila. Venerable sir, I have confidence in the Blessed One; thus, 'The Blessed One is capable of teaching us the Dhamma the right way.'
- "Then, Punṇa, listen and attend closely to what I shall say."-"Yes, venerable sir," he replied. The Blessed One said this:

## Four Types of Kamma

8. "Cattārimāni, puṇna, kammāni mayā sayamं abhiññā sacchikatvā paveditāni. Katamāni cattāri? Atthi, puṇna, kammaì kaṇhaì kaṇhavipākaì; atthi, puṇna, kammaì sukkaì sukkavipākaì; atthi, puṇna, kammaì kaṇhasukkamं kaṇhasukkavipākamं; atthi, puṇna, kammai் akaṇhai் asukkaì akaṇhaasukkavipākam̀, kammakkhayāya sam்vattati."

- Translated: "Puṇ̣a, there are four kinds of actions (kamma) proclaimed by me after realizing them for myself. What are the four? There is dark action (kanha or pāpa kamma) with a dark result. A bright action (sukka or puñña kamma) brings a bright result. A dark-and-bright action (kaṇhasukkaì) brings a dark-and-bright result (kanhhasukkavipākaim.) Then there is an action that is neither dark nor bright with the neither-dark-nor-bright result, an action that leads to the destruction of defilements (kammakkhayāya or kusala kamma)."

## "Dark" Kamma With "Dark" Results

9. "Katamañca, puṇna, kammaì kaṇhaì kaṇhavipākaì? Idha, punṇa, ekacco sabyābajjhaì kāyasañkhārai் abhisañkharoti, sabyābajjhaì vacīsañkhāraì abhisañkharoti, sabyābajjhaì manosañkhāraì abhisañkharoti. So sabyābajjhaì kāyasañkhāraì abhisañkharitvā, sabyābajjhaì vacīsañkhāraì abhisañkharitvā, sabyābajjhaì manosañkhāraì abhisañkharitvā, sabyābajjhaì lokai் upapajjati. Tamenaì sabyābajjhamं lokai் upapannaì samānaì sabyābajjhā phassā phusanti. So sabyābajjhehi phassehi phuṭtho samāno sabyābajjhaì vedanaì vedeti ekantadukkham், seyyathāpi sattā nerayikā. Iti kho, punṇa, bhūtā bhūtassa upapatti hoti; yamं karoti tena upapajjati, upapannamenam் phassā phusanti. Evampāhaì, puṇna, 'kammadāyādā sattā’ti vadāmi. Idà் vuccati, puṇna, kammaì kaṇham̀ kaṇhavipākaì. (1)"

- Translated: "And what, Puṇna, is dark action with dark result? Here someone generates a suffering (sabyābajjham or destined to or bound by dukha) kāyasañkhāra, a dukkhita vacīsañkhāra, a dukkhita manosañkhāra. Having generated such dukkhita abhisañkhara, he is reborn in an apāya. When he is reborn in an apāya, he contacts appropriate dukkhita (painful) sensory contacts. Being
touched by such painful contacts, he feels painful feelings, exclusively painful, as in the case of the beings in hell (niraya). Thus a being's rebirth is due to a being's own actions. One's rebirth is through the actions one has performed. Thus I say beings are the heirs of their actions. This is called dark action with dark result."

## "Bright" Kamma With "Bright" Results

10. "Katamañca, puṇna, kammaì sukkaì sukkavipākaì? Idha, puṇna, ekacco abyābajjhaì kāyasañkhāraiं abhisañkharoti, abyābajjhaì vacīsañkhāraì abhisañkharoti, abyābajjhaì manosañkhāraì abhisañkharoti. So abyābajjhaì kāyasañkhāraì abhisañkharitvā, abyābajjhaì vacīsañkhāraì abhisañkharitvā, abyābajjhaì manosañkhāraì abhisañkharitva abyābajjhaì lokai் upapajjati. Tamenai் abyābajjhaiं lokaì upapannaì samānai் abyābajjhā phassā phusanti. So abyābajjhehi phassehi phuṭtho samāno abyābajjhamं vedanamं vedeti ekantasukham், seyyathāpi devā subhakiṇhā. Iti kho, puṇṇa, bhūtā bhūtassa upapatti hoti; yam karoti tena upapajjati, upapannamenaì phassā phusanti. Evampāhaì, puṇna, 'kammadāyādā sattā'ti vadāmi. Idà̀ vuccati, puṇṇa, kammaì sukkaì sukkavipākaì. (2)"

- Translated: "And what, Puṇna, is bright action with bright result? Here someone generates a pleasant life (abyābajjhaín or destined to or bound by sukha) kāyasañkhāra, a sukkhita vacīsañkhāra, a sukkhita manosañkhāra. Having generated such sukkhita abhisañkhara, he is reborn in a realm with happiness (sukkhita). When he is reborn in such a realm, he contacts appropriate sukkhita sense contacts. Being touched by such sukkhita contacts, he feels sukha feelings, as in the case of subhakinha deva realm. Thus a being's rebirth is due to a being's own actions. One gets a rebirth through the actions one has performed. Thus, I say beings are the heirs of their actions. This is called bright action with bright result"

## "Dark and Bright" Kamma With "Dark and Bright" Results

11. "Katamañca, punṇa, kammaì kaṇhasukkaì kaṇhasukkavipākaì? Idha, punṇa, ekacco sabyābajjhampi abyābajjhampi kāyasañkhārai் abhisañkharoti, sabyābajjhampi abyābajjhampi vacīsañkhāraì abhisañkharoti, sabyābajjhampi abyābajjhampi manosañkhāraì abhisañkharoti. So sabyābajjhampi abyābajjhampi kāyasañkhāram abhisañkharitvā, sabyābajjhampi abyābajjhampi vacīsañkhāraì abhisañkharitvā, sabyābajjhampi abyābajjhampi manosañkhāraì abhisañkharitvā sabyābajjhampi abyābajjhampi lokaì upapajjati. Tamenaì sabyābajjhampi abyābajjhampi lokam upapannaì samānaì sabyābajjhāpi abyābajjhāpi phassā phusanti. So sabyābajjhehipi abyābajjhehipi phassehi phuṭtho samāno sabyābajjhampi abyābajjhampi vedanam vedeti vokiṇnasukhadukkhamं, seyyathāpi manussā ekacce ca devā ekacce ca vinipātikā. Iti kho, puṇna, bhūtā bhūtassa upapatti hoti; yaì karoti tena upapajjati. Upapannamenam̀ phassā phusanti. Evampāhaì, puṇna, 'kammadāyādā sattā'ti vadāmi. Idaì vuccati, puṇ̣a, kammaì kaṇhasukkaì kaṇhasukkavipākam. (3)".

- Translated: "And what, Puṇna, is dark-and-bright action with a dark-and-bright result? Here someone generates abhisañkhara of both types. Then he is reborn in a realm with both happiness (sukkhita) and suffering (dukkhita). When he is reborn in such a realm, he contacts appropriate sukkhita and dukkhita sensory contacts. Being touched by such contacts, he feels sukha and dukha feelings interchangeably, as in human, deva, and vinipātika (apāya) realms. Thus a being's rebirth is due to a being's own actions. One gets a rebirth through the actions one has performed. Thus I say beings are the heirs of their actions. This is called dark-and-bright action with a dark-and-bright result". [vinipätika : (adj.) [fr. vinipāta] destined to suffer in purgatory, liable to punishment after death.]

## Neither Dark nor Bright Kamma

12. "Katamañca, puṇna, kammai் akaṇhai் asukkai் akaṇhaasukkavipākaí, kammakkhayāya saìvattati? Tatra, punṇa, yamidaì kammaì kaṇhaì kaṇhavipākaì tassa pahānāya yā cetanā,
yamidaï kammaí sukkai் sukkavipākai் tassa pahānāya yā cetanā, yamidaíkammaí kaṇhasukkaì kaṇhasukkavipākaì tassa pahānāya yā cetanā-idaì vuccati, puṇ̣na, kammaì akaṇhamं asukkamं akaṇhaasukkavipākaì, kammakkhayāya saimvattatīti. Imāni kho, puṇna, cattāri kammāni mayā sayaim abhiññā sacchikatvā paveditānū"ti. (4)".

- Translated: "And what, Puṇna, is an action that is neither dark nor bright with the neither-dark-norbright result, action that leads to the destruction of defilements (and āsavalanusaya)? Such volitions (cetana) abandon actions that are dark or bright with dark-or-bright results. Such an action (kamma) is neither dark nor bright with a neither-dark-nor-bright result. Therefore, such actions lead to the destruction of defilements (and asava/anusaya). They do not lead to rebirth in any realm.)
- These are the four kinds of kamma proclaimed by me after realizing them for myself with direct knowledge."

13. It is important to realize that such cetana AUTOMATICALLY arises in those who have realized the "unsatisfactory and dangerous nature" of this world of 31 realms, i.e., Tilakkhana.

- In that context, it is also important to understand that cetana is NOT conventional "intention," but is how good and bad mental factors (cetasika) AUTOMATICALLY arise in one's thoughts based on one's gati.
- The above two points are the most important teachings from the sutta. This is explained in detail in the post, "Kanha (Dark) and Sukka (Bright) Kamma and Kammakkhaya."
- One also needs to understand that cetana is just a single mental factor. The "intention" comes from the incorporation of good or bad cetasika. The cetana cetasika just incorporates relevant cetasika based on one's gati. See \#9 of "Kamma, Sañkhāra, and Abhisañkhāra - What Is "Intention"?"

## Puṇṇa and Seniya Understood

14. "Evaì vutte, puṇ̣o koliyaputto govatiko bhagavantaì etadavoca: "abhikkantam், bhante, abhikkantaì, bhante. Seyyathāpi, bhante ... pe ... upāsakaì maì bhagavā dhāretu ajjatagge pānupetaì saranaì gatan"ti. Acelo pana seniyo kukkuravatiko bhagavantaì etadavoca: "abhikkantamं, bhante, abhikkantaì, bhante. Seyyathāpi, bhante ... pe ... pakāsito. Esāham், bhante, bhagavantaì saraṇam gacchāmi dhammañca bhikkhusañghañca. Labheyyāhamं, bhante, bhagavato santike pabbajjaì, labheyyamं upasampadan"ti. "Yo kho, seniya, añnatitthiyapubbo imasmimi dhammavinaye ākañkhati pabbajjaì, ākañkhati upasampadaì so cattāro māse parivasati. Catunnaì māsānaì accayena āraddhacittā bhikkhū pabbājenti, upasampādenti bhikkhubhāvāya. Api ca mettha puggalavemattatā viditā" $t i$."

- Translated: When this was said, Puṇna said to the Blessed One. 'Magnificent, venerable sir! The Blessed One has made the Dhamma clear in many ways...From today let the Blessed One accept me as a lay follower who has gone to him for refuge for life."
- Seniya said to the Blessed One. "Magnificent, venerable sir! The Blessed One has made the Dhamma clear in many ways, as though an upside-down vessel was turned to the upside, revealing what was hidden, or showing the way to one who was lost or holding up a lamp in the dark for those with eyesight to see. I take refuge in the Blessed One, the Dhamma, and the Sangha. May I receive the going forth under the Blessed One?".
- "Seniya, one who formerly belonged to another sect and desired the going forth and the full admission in this Buddha Sasana lives on probation for four months. At the end of four months, if the bhikkhus are satisfied with him, they give him the going forth and the full admission to the bhikkhus' state. But I recognize individual differences in this matter."

Seniya became an Arahant
15. "Sace, bhante, añnatitthiyapubbā imasmim dhammavinaye $\bar{a} k a \dot{n} k h a n t \bar{a} ~ p a b b a j j a \dot{m} \bar{a} k a \dot{n} k h a n t \bar{a}$ upasampadaì te cattāro māse parivasanti catunnaì māsānaì accayena āraddhacittō bhikkhū pabbājenti upasampādenti bhikkhubhāvāya, ahaì cattāri vassāni parivasissāmi catunnaì vassānaì accayena āraddhacittà bhikkhū pabbājentu, upasampādentu bhikkhubhāvāyā"ti.

Alattha kho acelo seniyo kukkuravatiko bhagavato santike pabbajjai், alattha upasampadai். Acirūpasampanno kho panāyasmā seniyo eko vūpakatṭho appamatto ātāp̄̄ pahitatto viharanto nacirasseva-yassatthāya kulaputtā sammadeva agārasmā anagāriyà் pabbajanti, Tadanuttaraìmbrahmacariyapariyosānaì diṭtheva dhamme sayai் abhiññā sacchikatvā upasampajja vihāsi.
"Khīn̄ā jāti, vusitaì brahmacariyaim, kataì karan̄īyam, nāparaì itthattāyā"ti abbhaññāsi. Añnataro kho panāyasmā seniyo arahatam ahosīti. "

- Translated: "Venerable sir, if those who formerly belonged to another sect and desire the going forth and the full admission in this Dhamma and Discipline live on probation for four months, and if at the end of the four months the bhikkhus being satisfied with them to give them the going forth and the full admission to the bhikkhus' state, then I will INSTEAD live on probation for four years. At the end of the four years, if the bhikkhus are satisfied with me, let them give me the going forth and the full admission to the bhikkhus' state."
- (Clarification of the terms: Probation means what is called Sämanera; the bhikkhu would wear the robes but has not yet been given full admission or Upasampadā. Seniya was saying he was willing to spend four years in probation.)
- Then Seniya, the naked dog-ascetic, received the going forth under the Blessed One, and he received the full admission. And soon, not long after his full admission, dwelling alone, withdrawn, diligent, ardent, and resolute, the venerable Seniya became an Arahant.

16. The post, "Kanha (Dark) and Sukka (Bright) Kamma and Kammakkhaya," provides a simpler explanation of the key terms.

- Discussion of both posts at: "WebLink: Kusala/Akusala and Puñña/Pāpa Kamma."

### 17.12 Buddhism and Evolution - Aggañña Sutta (DN 27)

January 24, 2019; revised January 30, 2019; July 30, 2019; February 16, 2020; August 24, 2020
(\#5 - \#7); May 12, 2021; July 22, 2022

## Introduction

1. Aggañ̃na Sutta is one of several complex suttā that requires a lengthy explanation. One must have a broad background in Buddha Dhamma to understand the sutta. I have been very reluctant to write even this post because it could lead to many questions in many people who do not yet have that background.

- "Agga" means "highest," and thus, the word "Aggañña" means "highest knowledge," in this case, about our world.
- The Buddha delivered the Aggañ̃̃a sutta to two brahmins (Vāsetṭha and Bhāradvāja), to explain the 'human origins." That not only Vedic Brahmins - but ALL LIVING BEINGS - on this Earth came from Brahma realms at the beginning of the Earth. In other words, each living being on this Earth was a Brahma at the beginning of the present Earth).
- I must forewarn that some features contradict existing "scientific theories." Please do not bring them up. I am aware of them. That is why I have been reluctant to write this post.
- However, at least for those who have faith in Dhamma, there are some benefits in seeing how selfconsistent Buddha Dhamma is.

## Summary of Sutta

2. Following is a summary:
(i). The universe has no traceable beginning, just like for life; see "Origin of Life."
(ii). The universe has "clusters or groups" of stars. Our Solar system is one of 10,000 "star systems" (cakkavāla or planetary systems; chakrawāta in Sinhala). There is an infinite number of such cakkavāla in the universe.
(iii). When a star in the vicinity of our Sun blows up in a few billion years, that blast will destroy 10,000 other star systems in the neighborhood. In modern science, such a "star explosion" has a particular name, a supernova.
(iv). Such a cluster of 10,000 world systems blows up from time to time in the universe. Again, scientists observe such supernovae every year.
(v). Science does not know yet that those destroyed star systems re-form over billions of years.
(vi). Not all 31 realms get destroyed when our Solar system blows up at the end of a mahā kappa. Higher lying Brahma worlds (where there is very little "destructible matter") survive. That is where all living beings on this Earth end up before the destruction of the Earth.
(vii). How all living beings end up in the Brahma realms is a long story.
(viii). Then when the Earth re-forms, those Brahm $\bar{a}$ - at the end of their lifetimes in those worlds - are reborn as humans with very light, Brahma-like bodies at first.
(ix). Then the life on Earth evolves to other lifeforms too. That is a "reverse evolution" compared to the "theory of evolution" currently accepted by science. After billions of years, the realms below the
 cycle will keep repeating.
(x). So, that is the life cycle. It happens all over the universe at any given time. Scientists observe several supernovae in our galaxy yearly (billions of cakkavāla).

## Model of the Universe

3. Therefore, life exists in an infinite number of "star systems" where a star provides the energy to sustain life. In our "Solar system," life exists in 31 realms centered on Earth, located inside, on the surface, and extending out into space. Of course, the Sun is our star.

- In the post " 31 Realms of Existence," these 31 realms are listed. The information there comes from several suttā. In particular, the "Dhammacakkappavattana Sutta" names many of those spheres. Most versions of the sutta skip that section. The following pdf file contains the sutta's full text: WebLink: PDF Download: Dhammacakkappavattana Sutta-3.

4. A Buddha appears only in one cakkavāla out of that cluster of 10,000 such cakkavāla in that group; that is our Earth. Brahmā and devas from those 10,000 systems (dasa sahassi lokadhātu) can come and listen to Dhamma on the Earth.

- Of course, humans from those worlds do not have access to Buddha Dhamma.
- So, we can see how rare it is for humans to "have access" to Buddha Dhamma. Sometimes there can be many consecutive mahā kappā without a single Buddha appearing!

## Model of the Solar System (Cakkavāla)

5. The Buddha stated that the length of one kappa or kalpa in Sinhala) unimaginably long. He gave the following comparison. In that time, a man could wear away a mountain of solid granite one yojanā (about 7 miles) around and one yojan $\bar{a}$ high by stroking it once every hundred years with a silk cloth.

- The WebLink: suttacentral: Pabbata Sutta (SN 15.5) has the above analogy; "Samsāric Time Scale, Buddhist Cosmology, and the Big Bang Theory."

6. A mahā kappa consists of 4 "antakkappa," as explained in the WebLink: suttacentral: Kappa Sutta (AN 4.156):
"Cattārimāni, bhikkhave, kappāsa asañkhyeyyāni. Katamāni cattāri? Yadā, bhikkhave, kappo saìvaṭtati,..kappo samंvaṭto tiṭthati,..kappo vivaṭati,..kappo vivaṭto tiṭthati, .."

- "There are four incalculable kappā. Destruction takes place for a kappa, remains in that state (void) for a kappa, re-formation takes place over a kappa, and then it exists in that state for a kappa."
- That last stage is where the Earth is now.
- Each incalculable kappa has 20 kappā.

7. The Solar system will last another 5 billion or so. Thus the total time in the existence of the current Sun (and Earth) is about 10 billion years, according to modern science. That is the existence phase lasting 20 kapp $\bar{a}$, assuming that the current scientific estimate is correct.

- The other three kappa take 10 billion years each, which is how the time for a complete cycle takes 40 billion years.
- The Earth (and the whole Solar system) continues through this cyclic process that takes roughly 40 billion years per cycle, i.e., for a mahā kappa (with the above assumption.)
- This cycle will keep repeating. There was no "Big Bang" beginning.

## Migration of Living Beings at Destruction/Re-Formation of Earth

8. When the Sun dies in the future, it will start expanding and expand to reach the Earth. Long before that, all life on Earth would have been destroyed (except those in higher Brahma realms.)

- So, what happens to all the living beings on Earth? We remember that while humans and animals live on the Earth, those belonging to the other three lower realms live on or underneath the Earth's surface. All those will perish.
- It is a long story, but all those beings move to higher realms as the Earth gets hot.

9. We remember that the deva and Brahma realms lie above the Earth. But the "density" in those realms is well below the "density" of things at the surface. As we know, deva bodies are much less dense than human bodies, and Brahma "bodies" are even more subtle.

- One critical thing we learn from science is that "more dense stuff" burns first. For example, in an incinerator, we can burn anything dense. But of course, gases are not burned (i.e., not decomposed.)
- There is nothing much of what we call "material" in those realms. Whatever is there will gradually decay and be replaced by other "fine matter." Of course, all beings in those realms will also have long but finite lifetimes.
- The deduction is that all those realms above the Ābhassara Brahma realm will not destroy in the destruction phase. That is why the lifetimes of some Brahmā are many mahā kapp $\bar{a}$.
 that time, all the living beings would have "migrated" up to that realm.
- How do all these living beings, including those in the $a p \bar{a} y \bar{a}$, migrate to higher realms?
- That is related to the fact that when the Earth starts getting "hot," those "mind pleasing sense objects" will be destroyed over time. Living beings will have fewer "sense attractions," and thus, their minds will be temporarily freed from "upādāna."
- That needs a detailed explanation, but those who understand Patticca Samuppāda may be able to at least a glimpse of how it happens.

11. When the Earth is re-formed about 20 billion years after its destruction (10 billion years remaining in the destructed state and 10 billion years for the re-formation,) those Brahmā will start coming down to those newly-formed lower realms.

- That also will take some explaining. But the critical point is that with time, old "gati" (which have been lying dormant as anusaya) start to re-surface, and the activation of Paticca Samuppāda cycles will ensure those "downward paths."

## Conflicts with Current Scientific Theories

12. Now, we immediately run into difficulties with the current scientific knowledge of Earth's history. According to current understanding, the first humans appeared only about 2 million years ago. Note that a billion years is 1000 million years!

- Therefore, what we described above is a "reverse evolution" compared to the "theory of evolution" currently accepted by science.
- We need to go back only 500 years to see how a prevailing world view changed and became compatible with Buddha Dhamma. See \#13 below.
- I have discussed how Buddha Dhamma has so far withstood past such "contradictions"; see "Dhamma and Science - Introduction." I hope the next revision in science will happen during my lifetime.

13. For example, only 500 years ago, the accepted "world view" was that Earth was at the center of the universe with all the stars embedded in "WebLink: wikipedia.org: celestial spheres."

- If someone had tried to explain that the Earth was rotating around the Sun, he would have had a hard time. Galileo spent the rest of his life in solitary confinement after proving that the Earth was rotating around the Sun.
- Of course, no one will be prosecuted for proposing any theory these days. Still, they will not be taken seriously by the scientific community.
- As new experiments/observations provide further evidence, an accepted scientific view changes to accommodate the new evidence. For example, the above change in the world view occured after Galileo invented the telescope.
- Of course, adopting scientific method for mundane purposes is only rational. That is the only way science can make progress.
- However, when one comprehends Buddha's Dhamma, one can better understand our world.

## The Rarity of Buddha Dhamma in the World

14. There have been four Buddhas in this mahā kappa, and one more Buddha will appear before the destruction of this Earth and the Solar system.

- Then after 30 billion more years, the Earth will come to exist again in this cyclic process (not the same Earth).

15. In the WebLink: suttacentral: Vepullapabbatta Sutta (SN 15.20), the Buddha provides the names of the three Buddhas on this Earth (in this mahā kappa) before him: Kakusandha, Konāgama, and Kassapa. He describes how a particular mountain had three different names and heights during those Buddha's times.

- The point here is that those Buddhas had been on this Earth at times far apart from each other. Considering that the age of the Earth is about 4.5 billion years, it is reasonable to assume that they were about a billion years apart.
- One piece of evidence in the Tipitaka for material from previous Buddhas transmitted via Vedic teachings (with superficial meanings) is given in the post, "Arogyā Paramā Lābhā.." (see \#8 there).

16. By the way, the existence of Buddha Kassapa before the Buddha Gotama helps explain many questions about the connection between Vedic terms and Buddhist terms. Some examples are kamma (karma), Bhikkhu (Bhikshu), paññ̄ā (pragnā), jhāna (dhyāna), Nibbāna (Nirvāna), and so on.

- After the end of the Kassapa Buddha Sāsana, his teachings were transmitted as Vedic teachings without deeper meanings. I will need to write some posts just on this issue.
- A good example is the $\bar{A} n \bar{a} p a ̄ n a ~ b h a ̄ v a n a \bar{a}$, which got transmitted as "breath meditation."
- After re-gaining Buddha Kassapa's interpretation during our Buddha's time, the Vedic description has been retaken hold by the current time. The correct version will be fully restored in the coming years. But, of course, it will again disappear to be rediscovered by the Maitreya Buddha in the future.

17. Furthermore, there have been only 7 Buddhas within the past 91 mahā kappā; see, "WebLink: suttacentral: Mahāpadāna Sutta (DN 14)."

- There have been 30 mahā kapp $\bar{a}$ without a single Buddha before the current mahā kappa. That is 1200 billion years or over a trillion years!
- Even in this mahā kappa, the Gotama Buddha Sāsana would last only 5000 years, a negligible time compared to a mahā kappa. That is why we should not waste this rare opportunity.

## Origins of the World - Limits of Inquiry

18. The human mind is naturally curious. We want to know everything, especially regarding this wondrous place called the universe. It is mind-boggling but exciting at the same time., Growing up, I spent a lot of time reading science fiction and speculations about the origins of the universe, etc.

- One time, Ven. Moggallāna, who was only second to the Buddha in psychic (abhiññā) powers, wanted to explore the universe and see for himself how far he could go. He got lost! Buddha had to come to his rescue.
- Then there is the account about a yogi, Rohitassa, who developed abhiññ̄a powers. He wanted to see the end of the world and took off looking for it, got lost, and died. He was reborn as a deva, came to see the Buddha, and told the Buddha about his quest. See, "WebLink: accesstoinsight.org: Rohitassa Sutta: To Rohitassa."

19. Cosmology is one of the things that the Buddha declared "unthinkable (acinteyya)" for an average human; see, "WebLink: suttacentral: Acinterya Sutta (AN 4.77)":
"There are these four things that one should not conjecture about and would bring anxiety and madness to anyone who speculates. Which four? (i) capabilities of a Buddha, (ii) subject of jhānā, (iii) detailed knowledge of kammalkamma vipāka, and (iv) origins of the world.

- One can spend a lifetime looking into the details of those subjects, and getting no where.
- However, we can gain some insights by having a rough idea about those subjects as we saw above. One gets into trouble when one tries to get into details.
- We will explore some more aspects in the future that are beneficial for progressing on the Path.

20. Please keep that in mind when you comment on the discussion forum. We can learn a few things from the sutta, but it is useless to get into arguments about how it contradicts current scientific findings.

- I have opened a new topic, "Post on "WebLink: puredhamma.net/forums: Buddhism and Evolution Aggañña Sutta (DN 27)" for comments and questions at the discussion forum.
- Also, please read the post carefully before commenting or asking a question. There is a lot of material there.

July 12, 2019: I have started a new subsection, "Origin of Life," to discuss the necessary background material for future posts on the Aggañña Sutta.

### 17.13 Tapussa Sutta (AN 9.41) - Akuppā Cetovimutti

## February 28, 2019; \#21 added March 1, 2019; July 19, 2022

1. Most suttā have been translated word by word without paying attention to the context or the underlying teachings. I hope this sutta translation will convey what I mean by that statement.

- This sutta explains why it is necessary to reduce cravings for sense pleasures and to stay away from dasa akusala - and eventually to get rid of them - if one wants to cultivate Ariya jhāna.
- Just suppressing sense cravings (kāma rāga) induces jhāna too; see "Jhānic Experience in Detail Sāmaññaphala Sutta (DN 2)."
- However, to attain Nibbāna (akuppā cetovimutti), one needs to remove those cravings at each jhānic state; see, "Ascendance to Nibbāna via Jhāna (Dhyāna)." In this post, we discuss the step-by-step process.
- Still, getting rid of sense cravings (kāma rāga) is not an easy task. It needs to be done by contemplating the drawbacks (and dangers) of them - called ādinava (pronounced "aadeenava") and also the benefits (ānisamsa) of giving up such cravings (renunciation); see "Mundane versus Supramundane Thāna."

2. One could follow the Pāli version while reading: "WebLink: suttacentral: Tapussa Sutta (AN 9.41)" a "WebLink: suttacentral: English Translation," and "WebLink: suttacentral: Sinhala Translation" at that same website. It is a useful website, but translations are not correct for some key Pāli words, and suttā are translated word-by-word without paying attention to the embedded teachings. That is the case for basically all current English translations.

- Suttā are designed to be extremely repetitive, enabling faithful oral transmission over the first 500 years. But, in the written form, it is unnecessary to translate the whole sutta word-by-word to understand its message. That could be very boring reading.
- So, I will start with a lengthy translation and cut it short as I proceed to the end to make it readable yet (hopefully) provide the key ideas.
- We also need to remember that before becoming the Buddha, the Bodhisatta had learned how to get to all the $j h \bar{a} n \bar{a}$ from other yogis. One can attain cetovimutti (highest $j h a \bar{a} a$ ) by such anāriya techniques as breath meditation, but those $j h \bar{a} n \bar{a}$ are not stable. As described below, the Buddha figured out to cultivate unbreakable (stable) jhāna and attained the Buddhahood with akuppā cetovimutti.
- That is the process described in this sutta, which we discuss now.

3. Thus, I have heard. On one occasion, the Blessed One was staying in Malla near a Mallan town named Uruvelakappa. Then early in the morning, the Blessed One, having put on his robes and carrying his bowl and outer robe, went to Uruvelakappa for alms. Having gone into Uruvelakappa for alms, after his meal, on his return from his alms round, he said to Ven. Ānanda, "Stay here, Ānanda, while I go to the forest to rest."

- "As you say, lord," Ven. Ānanda replied.
- Then the Blessed One went to the forest and sat down at the root of a tree to rest.

4. Then Tapussa, the householder went to Ven. Ānanda and, having bowed down to him, sat to one side on arrival. As he was sitting there, he said to Ven. Ānanda: "Venerable Ānanda, we are householders who indulge in sensuality, delight in sensual pleasures, enjoy sensual pleasures, rejoice in sensual pleasures. For us, staying away from sensual pleasures - or renunciation - seems like jumping off a cliff (it is hard to contemplate). Yet I've heard that in this Buddha Säsana, there are young bhikkhus (monks) who have given up sense pleasures and have attained peace of mind and ultimate release from suffering. How are those bhikkhus different from most people like us?"

- "This is true, householder. Let's ask the Blessed One to explain this".

5. Then Ven. Ānanda, with Tapussa, went to the Blessed One and, on arrival, having bowed down to him, sat to one side. Then Ven. Ānanda said to the Blessed One: "Bhante, Tapussa the householder, here, has said to me, 'we are householders who indulge in sensuality, delight in sensual pleasures, enjoy sensual pleasures, rejoice in sensual pleasures. For us, staying away from sensual pleasures - or renunciation seems as unappealing as jumping off of a cliff. Yet I've heard that in this Buddha Sāsana, there are young monks who have given up sense pleasures and have attained peace of mind and ultimate release from suffering. How are these monks different from most people like us?"
6. 'So it is, Ānanda. So it is. Even before attaining the Buddhahood, when I was still an unawakened Bodhisatta, I thought: 'abstaining from sensual pleasures (nekkhamma) is good, peace of mind (viveka) is good'. But such thoughts free of sense cravings (nekkhamme cittam) would not sink in (na pakkhandati), would not purify (na pasidati), would not calm down (na santitthati) my mind, and it would not become liberated (na vimuccati)".

- Then a thought occurred to me: "What is the reason that such thoughts free of sense cravings (nekkhamme cittam) would not sink in (na pakkhandati), would not purify (na pasidati), calm down, would not calm down (na santitthati) my mind so that it would not become liberated (na vimuccati)?".
- Then this thought occurred to me: "I have not seen the dangers/drawbacks (ādinava) of sensual pleasures; I have not contemplated the dangers/drawbacks of sensual pleasures at depth (abahulikato). I have not understood the rewards of renunciation (nekkhamme ānisamsa). I have not contemplated at depth (anāsevita) the rewards of renunciation. That's why my mind would not become liberated (na vimuccati)."
- Then this thought occurred to me: "If I see the dangers of sensual pleasures and the benefits of renunciation of sense pleasures, such thoughts free of sense cravings (nekkhamme cittam) will sink in (pakkhandati), will purify (pasidati), will calm down (santitthati) my mind so that it will become liberated (vimuccati)".

My comment: One needs to pay attention to the Buddha describing to Tapussa how he had thought about the above thought process. But, he figured out exactly how to do that only on the night of attaining the Buddhahood:
7. "At a later time - aparena samyena - (the night of attaining the Buddhahood), having seen the drawback of sensual pleasures, I pursued that theme; I contemplated on the drawbacks of sense pleasures, and understood the rewards of renunciation, and understood the solution of getting rid of cravings ( $\bar{a} s \bar{a} v \bar{a} s)$. Then my mind firmly held such a mindset, calmed down, and was released from such sensual thoughts.

- The above paragraph describes what happened on the night of the Enlightenment when he finally realized $\bar{a} s a v a k k h a y a ~ n ̃ a ̄ n a$, how to remove $\bar{a} s \bar{v} v a \bar{s}$ by contemplating on Tilakkhaṇa; see, "The Way to Nibbāna - Removal of Asavas."
- As we know, he went through six years of various types of suffering to discover āsavakkhaya ñāna.
- Now we get back to the difficulties faced by the Bodhisatta in the intervening six years in trying to make the first jhāna unbreakable or stable.

8. "Withdrawn from sensuality (vivicca kāmehi), withdrawn from immoral (vivicca akusala dhammehi), I entered and remained in the vicinity of the first jhāna with rapture and pleasure born from that restfulness (vivekajam), accompanied by savitakka/savicara (nekkhamma/avihimsa thoughts)."

- "However, I was still beset with recurring perceptions of sensuality (kāmasahagatā saññāmanasikārā samudācaranti). That was a suffering for me. Just as pain arises as an affliction for a healthy person, even so, those recurring sensual thoughts were an affliction for me".
(Note that the Bodhisatta experienced this problem early when he learned how to get to jhānāan from his early anāriya teachers: Alara Kalama and Uddaka Ramaputta. He developed the

## pathway during those intervening six years but successfully implemented it only on the night of Enlightenment via āsavakkhaya ñäna).

9. "At a later time (the night of attaining the Buddhahood), having seen the drawback of vitakka, I pursued that theme; I contemplated on the drawbacks of vitakka and understood the rewards of avitakka when I understood the benefits of getting rid of cravings ( $\bar{a} s \bar{a} v \bar{a} s$ ). Then my mind firmly held such a mindset, calmed down, and was released from such sensual thoughts.

- Now we get back to the difficulties faced by the Bodhisatta with the second jhāna before the night of the Enlightenment.

10. "Then I thought: 'I should get to the samādhi-generated (samādhijam) the second jhāna that is free of these thoughts burdened with (vitakka/vicāra)'". Here it is important to realize that vitakka means to have the mind set on defiled thought object and vicāra means to keep it there.

- "However, in the second jhāna, such thoughts free of vitakka (i.e., avitakka) would not sink in, would not purify, calm down, would not calm down my mind so that it would not become liberated (avitakke cittaì na pakkhandati nappasīdati na santitṭhati na vimuccati)".
- Then this thought occurred to me: "I have not seen the dangers/drawbacks (ãdinava) of vitakka; I have not contemplated the dangers/drawbacks of vitakka at depth (abahulikato). I have not understood the rewards of avitakka (avitakke ānisamsa). I have not contemplated in depth (anāsevita) the rewards of avitakka. That's why my mind would not become liberated (na vimuccati)".
- "At a later time (the night of attaining the Buddhahood), I was able to enter and stay in the vicinity of the second jhāna that was devoid of such defiled thoughts (vitakka) and with pīti and sukha.

11. This is a recurring theme for the rest of the sutta. The difficulty encountered at each jhāna level starting from the next verse, and the solution found on the night of Enlightenment.

- I will skip a few repeating steps here, for the third and fourth jhāna.

12. I could enter and stay in the vicinity of the third jhāna devoid of $\overline{\boldsymbol{u}} \bar{t} i$ but with sukha.

- However, even then the perception of piti kept arising in me (pitisahagata sannamanasikara samudacaranti). That was an affliction for me. Just as pain arises as an affliction for a healthy person, even so, those recurring pitti was an affliction for me.
- "At a later time (the night of attaining the Buddhahood), verse is skipped here.

13. I could enter and stay in the vicinity of the fourth jhāna devoid of sukha but with upekkhā.

- However, even then the perception of upekkhā sukha kept arising in me (upekkhasukhasahagata sannamanasikara samudacaranti). That was an affliction for me. Just as pain arises as an affliction for a healthy person, even so, those recurring upekkhā sukha was an affliction for me.
- "At a later time (the night of attaining the Buddhahood), the verse is skipped here.
- Now we get to the arūpāvacarajhāna, and the steps are the same.
 transcending of perceptions of rūpa, with the disappearance of perceptions of patigha, and not heeding various ārammaṇa ('yannūnāhaì sabbaso rūpasaññānaì samatikkamā patighasañn̄ānaì atthañgamā nānattasañ̃̄ānaì amanasikārā ").
 was an affliction for me (..iminā vihārena viharato rūpasahagatā saññāmanasikārā samudācaranti. Svassa me hoti äbādho).

15. "At a later time (the night of attaining the Buddhahood), having seen the drawback of forms ( $r \bar{u} p a$ ), I pursued that theme; I contemplated the drawbacks of $r \bar{u} p a$, and understood the rewards of
$\bar{a} k \bar{a} s a ̄ n a n ̃ c \bar{a} y a t a n a$, when I understood the benefits of getting rid of cravings ( $\overline{\boldsymbol{a}} \bar{s} \bar{a} \boldsymbol{v} \bar{a} s$ ). Then my mind firmly held such a mindset, calmed down, and was released from such sensual thoughts.
16. I was able to enter what I thought was viññanañncāyatana, the infinitude of consciousness.

- "As I remained there, I was beset with attention to perceptions dealing with the dimension of the infinitude of space (ākāsānañcāyatanasahagatā saññāmanasikārā samudācaranti). That was an affliction for me. Just as pain arises as an affliction for a healthy person, even so the attention to perceptions dealing with the dimension of the infinitude of space that beset me was an affliction for me.

17. So at a later time, having seen the drawback of the dimension of the infinitude of space (ākāsānañcāyatana), I pursued that theme; having understood the reward of the dimension of the infinitude of consciousness (viññānañcāyatana), I familiarized myself with it. My heart leaped up at the dimension of the infinitude of consciousness and grew confident, steadfast, and firm, seeing it as peace. With the complete transcending of the dimension of the infinitude of space, [perceiving,] 'Infinite consciousness,' I entered and remained in the dimension of the infinitude of consciousness.

- The sutta goes through the rest of the arūpāvacara jhāna. At each stage, the Buddha on the night of Enlightenment, REMOVE each jhāna factor, not just bypass it as in anāriya jhāna.
- This was done by contemplating the anicca, dukkha, and anatta nature of each jhānic state.

18. "So at a later time, having seen the drawback of the dimension of neither perception nor nonperception (nevasaññānāsaññāyatana), I pursued that theme; ... With the complete transcending of the dimension of neither perception nor non-perception, I entered and remained in the cessation of perception and feeling (saññ̄̄vedayitanirodha). And as I saw with discernment, the mental fermentations ( $\bar{a} s a v \bar{a}$ ) were totally eliminated.

- It is important to note that sañ̃n̄̄vedayita nirodha cannot be attained via anāriya jhāna. This is Nibbāna experienced by a living Arahant.

19. "Ānanda, as long as I had not attained and emerged from these nine step-by-step dwelling-attainments in forward and backward order in this way, I did not claim to have attained the Buddhahood that is supreme in the cosmos with its Devās, Mārās, and Brahmā, with its contemplatives and brāhmans, with its royalty and common people.

- But as soon as I had attained and emerged from these nine step-by-step dwelling-attainments in forward and backward order in this way, then I did claim to have directly awakened to the right self-awakening supreme state in the cosmos with its Devās, Mārās, and Brahmā, with its contemplatives and brāhmans, its royalty and common people. Knowledge and vision arose in me: 'My release is unshakable (akuppā me cetovimutti), This is the last birth and no more rebirths (ayamantima $\bar{a}$ jāti, natthi dāni punabbhavo’"ti).

20. That is the step-by-step process of getting to the "total detachment" from the 31 realms of this world via successive Ariya jhānic states. That ultimate release of the mind attained this way is called akupp $\bar{a}$ cetovimutti.

- Of course, one can get to the same ultimate state (Arahanthood) without going through jhāna, and that is called pañ̃̃ $\bar{a} v i m u t t i$; see, "Pannāvimutti - Arahanthood without Jhāna."
- It is also clear that a paññāvimutti Arahant cannot get to the sañ̃̃āvedayita nirodha state during his/her lifetime.

21. The efforts by the Bodhisatta to figure out how to remove $\bar{a} s a v \bar{a}$ (including kāma rāga) - mainly by inflicting many bodily sufferings - for six years, are described in detail in the following two suttā: "WebLink: suttacentral: Bodhirājakumāra Sutta (MN 85)" and "WebLink: suttacentral: Mahāsaccaka Sutta (MN 36)."

# 17.14 Yamaka Sutta (SN 22.85) - Arahanthood Is Not Annihilation but End of Suffering 

May 23, 2019; revised March 20, 2020; August 29, 2022

## Introduction

The Pāli version of the Yamaka Sutta can be found at: "WebLink: suttacentral: Yamaka Sutta (SN 22.85)." This is an important sutta that clearly explains what Nibbāna is and what the Buddha's description of a living being is. It makes it clear that a "living being" exists "in this world" only as long as its craving for the five aggregates exists (which is inevitably accompanied by a lot of suffering). There is no "real person" that exists to be annihilated.

- On one occasion the Venerable Sāriputta was dwelling at Sāvatthi in Jetavanārāma built by Anathapiṇdika. At that time the following wrong view had arisen in a bhikkhu named Yamaka. "As I understand, a bhikkhu who attains the Arahanthood would not exist after death and thus would be annihilated."
- Several bhikkhus heard that such a wrong view had arisen in bhikkhu Yamaka. They approached the Venerable Yamaka and exchanged greetings with him, after which they sat down to one side and said to him: "Is it true, friend Yamaka, that such a view as this has arisen in you: 'As I understand the Dhamma taught by the Blessed One, a bhikkhu whose $\bar{a} s a v \bar{a}$ are destroyed would not exist after death and thus would be annihilated'?"
- "Exactly so, friends. As I understand the Dhamma taught by the Blessed One, a bhikkhu whose $\bar{a} s a v \bar{a}$ are destroyed would not exist after death and thus would be annihilated."
- "Friend Yamaka, do not speak thus. Do not misrepresent the Blessed One. It is not good to misrepresent the Blessed One. The Blessed One would not speak thus: 'A bhikkhu whose $\bar{a} s a v \bar{a}$ are destroyed would not exist after death and thus would be annihilated.'"

2. Although other bhikkhus admonished him this way, Bhikkhu Yamaka still held on to that wrong view and declared: "As I understand the Dhamma taught by the Blessed One, a bhikkhu whose $\bar{a} s a v \bar{a}$ are destroyed is annihilated and does not exist after death."

- Since those bhikkhus could not detach the Venerable Yamaka from that wrong view, they approached Venerable Sāriputta. They told him all that occurred, adding: "It would be good if the Venerable Sāriputta would approach bhikkhu Yamaka and explain to him out of compassion for him." Venerable Sāriputta consented by silence.

## Analysis by Ven. Sāriputta -1

3. Then, in the evening, the Venerable Sāriputta emerged from seclusion. He approached the Venerable Yamaka and exchanged greetings with him, after which he sat down to one side and said to him: "Is it true, friend Yamaka, that such a wrong view as this has arisen in you: 'As I understand the Dhamma taught by the Blessed One, a bhikkhu whose $\bar{a} s a v \bar{a}$ are destroyed is annihilated and does not exist after death'?"
"Exactly so, friend."

- 'What do you think, friend Yamaka, is a form (rūpa) nicca or anicca (can or cannot be maintained as one likes)?"-"anicca, friend."..."If something is anicca does it lead to sukha or dukha?'—"It leads to dukha, friend."
"If something is of anicca, viparināma nature, it cannot be maintained as one likes and is subjected to unexpected changes. Would it be appropriate to take that to be me, to be mine, or my att $\bar{a}$ ("self" is the translation used in English)?" - "That is not appropriate, friend".
- "What do you think, friend Yamaka, is vedanā, saññā, sañkhāra, viññāna - are they nicca or anicca?"-"anicca, friend."...'If something is anicca does it lead to sukha or dukha?'- "dukha, friend".
"If something is of anicca, viparināma nature, is it appropriate to take that to be me, to be mine, or my attā?" - 'No, friend".
(My comment: Thus, it is clear that it does not make sense to take any or all five ENTITIES of rūpa, vedanā, saññā, sañkhāra, viññ̄ạna as me, as mine, or my attā.)

## Analysis by Ven. Sāriputta -2

4. Now Ven. Sāriputta goes one step further.

- "Whatever kind of form there is, Yamaka, whether past, future, or present, internal or external, gross or subtle, inferior or superior, far or near. This is the form aggregate ( $r \bar{u} p a k k h a n d h a$ ). It is inappropriate to take any of those as "me, to be mine, or my attā." The same is true for the other four aggregates".
- "When one comprehends this Yamaka, one will not take any of those five aggregates as "me, to be mine, or my att $\bar{a}$." Then one will be liberated".
- "What do you think, friend Yamaka, do you regard the body (part of rūpakkhandha) as a living being?"-"No, friend."-"Do you regard vedanā, sañ̃̃̄̄, sañkhāra, or viñ̃̃āña as a living being?"-'No, friend."
(My comment: Thus, it is clear that it does not make sense to take any or all five AGGREGATES of $r \bar{u} p a$, vedanā, sañ̃n̄a, sañkhāra, viññāna as me, as mine, or my attā.)

## Analysis by Ven. Sāriputta -3

5. Now Ven. Sāriputta goes one step further.

- "What do you think, friend Yamaka, do you regard a living being as in its body?"-"No, friend."-"Do you regard a living being as apart from its body?"-'No, friend."-"Do you regard a living being as in its vedanā? As apart from its vedanā? In saññā? As apart from saññā? In its sañkhāra? As apart from sañkhāra? In its viññāṇa? As apart from its viññāṇa?"-'No, friend."
- "What do you think, friend Yamaka, do you regard rūpa, vedanā, sañña, sañkhāra, and viññāna, taken together, as a living being?"-"No, friend."
- "What do you think, friend Yamaka, do you regard a living being as one who is without rupa, without vedanā, without saññā, without sañkhāra, without viññāna?"-'No, friend."
- "But, friend, when a living being is not understood by you to be real and actual here in this very life, is it appropriate for you to declare: 'As I understand the Dhamma taught by the Blessed One, a bhikkhu whose āsavās are destroyed is annihilated and does not exist after death'?"
- "Formerly, friend Sāriputta, when I was ignorant, I did hold that wrong view, but now that I have heard this Dhamma teaching of the Venerable Sāriputta I have abandoned that wrong view and have made the breakthrough to the Dhamma."

## My Comments

6. The following are My comments:
7. This is the main point of the whole sutta. It is impossible to talk about the destruction or annihilation of a "person" or a "living being" that does not truly exist.
8. We conventionally talk about a person, but in reality, there is no such "person", just a collection of five aggregates that keeps CHANGING at every moment according to Paṭicca Samuppāda; see, "Paticca Samuppāda - Overview").
9. This incessant continuation of the five aggregates hopping from one realm to another among the 31 realms can be called a "lifestream". The Buddha said he could not see a beginning of such a lifestream. We all have existed from a beginning that cannot be traced back. We have suffered so much in the four lower realms during most of that time. We could say that the death of an Arahant is the end of that "lifestream" (and end of suffering!); see, "What Reincarnates? - Concept of a Lifestream").

## Analysis by Ven. Sariputta -4

7. Now, Ven. Sariputta wants to make sure that Ven. Yamaka has fully understood.

- "Suppose, friend Yamaka, they were to ask you the following: 'Friend Yamaka, when a bhikkhu is an Arahant, one whose $\bar{a} s a v \bar{a} s$ are destroyed, what happens to him with the breakup of the body, after death?'-being asked thus, what would you answer?"
- "If they were to ask me this, friend, I would answer thus: 'Friends, the form is of anicca nature; anything of anicca nature leads to suffering and passing away. In the same way, vedana $\bar{a}$, sañña $\bar{a}$, sañkhāra, and viññāna are all of anicca nature; anything of anicca nature leads to suffering and passing away. I would answer that way".
- "Sādhu Sādhu, friend Yamaka!"

## Summary

8. There is more in the sutta. But the main point is in the above section.

This is why the Buddha rejected both extremes of the existence of an existing "self" or denial of existence.

- At every moment there is an existence, complete with vedanā (suffering/pleasures); those vedanā arise momentarily and pass away. But there is no $a t t \bar{a}$ or a "self" that is unchanging.
- But the problem is that those vedanā are real, and for the most part are dukha vedan $\bar{a}$, not sukha $v e d a n \bar{a}$, in the long run in the rebirth process.
- To stop any dukha vedanā from arising, one MUST terminate the continuation of the arising of the five aggregates, i.e., the rebirth process. It is not possible to have sukha vedana AND to be free of dukha vedana $\bar{a}$ anywhere in the 31 realms.
- Arising of the five aggregates is inevitable as long as $a v i j j \bar{a}$ is present. As long as $a v i j j \bar{a}$ is there, the Pațicca Samuppāda process continues (and leads to suffering.) Removal of avijjā happens at the Arahant stage with optimization of pañ̃̄̄̄a (wisdom.)
- For an Arahant with that optimized pañña $\bar{a}$, this vision becomes crystal clear. Thus he/she would not grasp (upādāna) a new bhava at the cuti-patisandhi moment. That is how this incessant continuation of a lifestream comes to an end. It is not an annihilation of a "person"; it is the end of suffering!

9. The moment-to-moment change of the five aggregates happens automatically (based on one's gati), via "Paticca Samuppāda During a Lifetime" process.

- This is why it is important to learn Buddha Dhamma, get rid of "bad gati," and cultivate "good gati": "ㅇ. Key to Ānāpānasati - How to Change Habits and Character (Gati)." Then one's five aggregates will automatically evolve in the direction of Nibbāna.
- That is the same as following the Eightfold Path: Sammā Ditṭhi, Sammā Sañkappa, ...Sammā Samādhi.

### 17.15 Three Types of "Bodies" - Poṭ̣hapāda Sutta (DN 9)

July 16, 2022
Living beings in the 31 realms generally possess one of "three types of bodies" (kāya), as the Buddha pointed out in the Potṭhapāda Sutta (DN 9.)

## Atta versus Attapaṭilābha

1. During the time of the Buddha, many believed in a "soul-like entity" (ātma/ātman in Hinduism) associated with any person. Once a Brahmin named Potṭhapāda had a lengthy conversation with the Buddha about different kinds of living beings in this world.

- The Buddha explained to him that, in general, there are three types of living beings categorized as having different "attapatiläbha." Still, none would have anything like a permanent "atta"" or "an essence" that is indestructible. That discussion is in the "WebLink: suttacentral: Potthapāda Sutta (DN 9)."
- Buddha's explanation is in section 2.2. Tayoattapatilābha. We will only focus on that in this post.
- Note that the English translation in the link of "Tayoattapatiläbha" is "Three Kinds of Reincarnation." The word "reincarnation" may indicate "something like an attā that keeps coming back." Thus, a better translation is "Three Kinds of Rebirth."

## Three Kinds of Rebirth - Tayoattapaṭilābha

2. Section 2.2. Tayoattapațilābha starts with the Buddha saying: "Tayo kho me, poṭthapāda, attapațiläbhā-olāriko attapaṭilābho, manomayo attapaṭilābho, arūpo attapațilābho." Tayo means "three."

Then the Buddha briefly explained each category.
(i) oḷārika attapaṭilābha: Rūpī cātumahābhūtiko kabaḹ̄kārāhārabhakkho.
(ii) manomaya attapaṭilābha: Rūpī manomayo sabbañgapaccañgī ahīnindriyo.
(iii) arūpa attapatiliābha: Arūp̄̄ saññāmayo.
3. The three types of "attapatilābha" are the possible rebirths with a solid body, a mind-made subtle body, and an "arūpa body."

- A solid, heavy physical body like those of ours or animals belongs to the first category. Such a physical body arises due to the food we eat (kabaḷīkāra āhāra.) Such food, when broken down, is made of the four great elements (mahā bhūta or pathavi, āpo, tejo, and vāyo.) Most living beings in the kāma loka have such dense bodies. Devā in the six Deva realms also have this body type but are less dense than ours.
- A mindl-madle subtle body has only the essential, kammically (i.e., mind-generated or manomayo) subtle rūpa, i.e., hadaya vatthu and a set of pasāda rūpa. Since this "collection" can take the shape of a figure, it is Rūpi. All rūpāvacara Brahmas (in the 16 rūpāvacara Brahma realms) have this body type.
- An arūpa body has only one suddhāṭthaka, the smallest element in Buddha Dhamma (much smaller than an atom in modern science.) Thus it cannot take the "shape of a figure" and, therefore, "arūpa." It shouldn't even be called a "body" in the sense of a "collection." But, of course, it is the "seat of the mind" and thus can generate sañ̃̃̄ $\bar{a}$, vedanā, etc., i.e., citta. Hence the description, "Arūp $\bar{\imath}$ saññ̄amayo." All arupāvacara Brahmas in the four arupāvacara Brahma realms have such "bodies."

## Mind-Made Subtle Body Inside the First Category

4. The solid, heavy bodies of the first kind cannot arise without mind-made subtle bodies as the "seeds." Furthermore, sensing the external world takes place in the "subtle bodies" made of the hadaya vatthu and a set of pasāda rupa.

- As we have discussed, human/animal existences (i.e., attapatilābha) start with a rūpi manomaya kāya at the patisandhi moment. That is the birth of a (human or animal) gandhabba. That gandhabba is pulled into a womb to merge with a zygote that will grow into a heavy physical body. See "Buddhist Explanations of Conception, Abortion, and Contraception."
- A human/animal can experience taste, smell, and touch only when born with such a physical body. Still, those "sensors" or "hadaya vatthu/pasāda rūpa" are in the gandhabba.
- Thus within a human or animal existence, transitions between manomaya attapatilāabha and olārika attapaṭiläbha take place many times. That ends with the ending of the manomaya attapaṭiläbha with the demise of the gandhabba.

## NDE - Temporary Transition to the Gandhabba State

5. Near-Death Experiences (NDE) provide concrete evidence for the process discussed in \#4 above.

- There have been many accounts of NDE in recent years. Physicians have also started keeping records of such cases. A collection of such studies is in the book "Consciousness Beyond Life" by Pim van Lommel (2010.)
- The manomaya kāya of the gandhabba overlaps the dense physical body and "energizes it." The six critical elements of hadaya vatthu and five pasāda rūpa of a gandhabba overlap the physical heart. That is why the gandhabba comes out of the physical body during some heart operations.
- That can also happen in critically-injured people who almost die. The gandhabba comes out of the physical body, as in the case of the death of the physical body. However, even after being declared dead, the gandhabba may "go back in," and the patient recovers "miraculously."
- We have discussed such cases in "Out-of-Body Experience (OBE) and Manomaya Kāya."

## Descriptions of the "Gandhabba World" as "Heaven"

6. Thus, most NDE accounts are by those who had "close encounters with death." They were either terminally ill or undergoing heart surgeries.

- It is an indescribable relief to come out of a physical body filled with such suffering. Any physical pain one may have been experiencing would be gone instantly. No wonder many think they just visited a heavenly world! But they temporarily visited the "para loka" of gandhabbā.
- The same human temporarily visited the "para loka" of gandhabb $\bar{a}$. It is not a transition to a Deva realm or any other realm!
- Some people report meeting previously-died close relatives or friends during NDE experiences. That is a possibility. Those deceased relatives may be still waiting for a suitable womb to be pulled into (of course, they would not know that.)
- Therefore, SUBJECTIVE experiences described by many NDE subjects need to be "taken with a grain of salt" or skepticism. However, some OBJECTIVE experiences are undeniable.

## Concrete Facts from NDE Accounts

7. In almost all cases, it is clear that the person's physical body was unresponsive and even declared dead by the physicians.

- Yet, many provide solid evidence that they "saw" the heart operation or the emergency procedures taken by the physicians and nurses. They could see with their mind-made subtle body, i.e., gandhabba kāya.

Thus, the first objective fact verified is the following. The physical body with a brain is NOT where vision takes place. "Seeing" takes place in hadaya vatthu, with the aid of the cakkhu pasāda rūpa.

- The second point is that they could travel at incredible speeds while in their gandhabba kāya. They could go through walls, ceilings, etc. As mentioned in \#3 above, hadaya vatthu and pasāda rūpa are much smaller than an atom in modern science. Going through solid objects is not a problem!
- The following NDE experience provides those two critical pieces of evidence WITHOUT being contaminated by subjective experiences.

## Woman Born-Blind Sees for the First Time

8. Sometimes, people are born with the cakkhu pasāda rūpa, but the optic nerve (or the physical eye itself) may be damaged. Thus, images of the external world do not reach the brain. As we know, the brain must process those visuals and transmit them to the gandhabba inside the physical body for it to be able to see.

- Therefore, those people are blind only because their cakkhu pasāda rūpa is not getting a signal from the brain. But if the gandhabba can come out of the body, it can see directly. (Note that some others may be born without the cakkhu pasäda rūpa; they will never be able to see.)
- The following videos illustrate this situation and verify the discussion in \#7.

WebLink: youtube: Near Death Experience - Blind woman 'sees' while out of body
WebLink: youtube: What has happened to blind people who have a near-death experience?

## Miscellaneous

9. All five sensory faculties of a human are in the gandhabba or the manomaya kāya. During the time when a gandhabba "resides" in a physical body, the brain first processes those signals, and then those signals arrive at the corresponding pasāda rūpa. Each pasāda rūpa transfers the signal to the hadaya vatthu, and it is the hadaya vatthu that really "sees," "hears," etc. See, for example, "How Do We See? - Role of the Gandhabba."

- Not all who die will end up in the "para loka" of gandhabbā. Those who have depleted the kammic energy sustaining the human bhava will be reborn in another realm.
- Anyone ignorant enough to still call gandhabba an "anatarābhava state" should read "Antarābhava Discussion in Kathāvatthu - Not Relevant to Gandhabba."

## Xvii Myths or Realities? <br> <br> I

 <br> <br> I}April 29, 2016; revised August 28, 2022

1. In this section, I plan to address some concepts and practices in Buddha Dhamma that appear to be myths and/or contradictions to many. Some are indeed myths, but some are not. And sometimes, it depends on the interpretation. There are two aspects to some of these practices.

- It is hard for people from various religions to understand why Buddhists respect Bodhi trees or pagodas (chetiya) which look like pyramids with different shapes.
- On the other hand, even many Buddhists who worship them do not know why they are doing it.
- Some practices are outright myths, like the belief that one can attain Nibbāna by doing breath meditation. There is no basis for that. How can one remove defilements (greed, hate, ignorance) by concentrating on the breath?
- However, some of them can be shown to be verifiable and inter-consistent fundamentals of nature: realities or verities.

2. Then there are other concepts like a Bodhisattava getting "niyata vivarana," or confirmation from another Buddha that he WILL become a Buddha at such a time. How does that tally with the concept that one can change one's future drastically by even a single act and that kamma is not deterministic?
3. The value and strength of Buddha Dhamma come from its unshakable foundational concepts (axioms) and inter-consistency. Nothing is inconsistent in the practices or concepts in true and pure Buddha Dhamma.

- But it requires some background material to be able to discuss some of these issues. Buddha Dhamma cannot be assessed with conventional thinking. One needs to comprehend the basics of Buddha Dhamma first.
- The more one understands the basic premises, the easier it will become for one to sort out myths from realities.
- After two years of posting essays on key concepts, we are at a stage to start discussing some of these issues. With time, we will have enough background to cover more of these issues.

### 18.1 Animisa Locana Bodhi Poojā - A Prelude to Acts of Gratitude

April 29, 2016; December 1, 2017

1. The conventional interpretation of Animisa Locana Bodhi Poojā (here "locana" is pronounced "lochana") is that Buddha paid his gratitude to the sacred Bodhi tree that gave him shade when he attained Enlightenment (Buddhahood). In current literature, it is described as the Buddha spending the second week after attaining Enlightenment - looking at that Bodhi tree even without blinking - as an act of gratitude for sheltering him during that Noble effort.

- It is true that the Bodhi tree was (and still is) a special tree, and has many unique properties which we will discuss in a future post.
- But there is no basis to the interpretation that he was looking at the Bodhi tree without even blinking. There the word "animisa" is incorrectly translated as "unblinking". What he did during that week was related to his acts of gratitude that were to follow.

2. Nimisa or nimesa is a moment, and animisa is "without pausing for even a moment". "Lo" is for the "lokaya" or "world", "ca" is for the citta (thoughts), and thus "locana" is basically contemplation, in this case about his long path to the Buddhhood (bodhi is the "path to Enlightenment", thus the name 37 Bodhipakshika Dhamma, where "pākshika" means "relevant to" or "associated with". The current English translation is 37 Factors of Enlightenment, which is not too far off).

- What the Buddha did during that Animisa Locana Bodhi Poojā (for 7 days) was to trace back to the time that he started fulfiling the requirement for the Buddhahood (pāramitā), i.e., scanned the memory records (nama gotta) of his previous lives to see who helped him during that whole time.
- Records of our past remain intact basically forever; see, "Namagotta, Bhava, Kamma Bīa, and Mano Thalaya (Mind Plane)" and "Recent Evidence for Unbroken Memory Records (HSAM)."
- After leaving the site of the Bodhi tree, he spent the first several years (and even at later times) locating those who helped him during that whole time and helped them attain Nibbāna. We will discuss some cases below.

3. It is said that it took the Buddha (or rather the Bodhisattva) a "sāra asenkkheyya kappa lakhayak" to fulfilled the requirements (pāramit $\bar{a}$ ) to attain the Buddhahood. See, "Difference between a Wish and a Determination (Paramita)" for a simple explanation of paramita.

There are four asenkkheyya kappas in a mahā kappa, and "lakhayak" is 100,000. But human beings live in kāma loka only during one asenkkheyya kalpa and during the other three asenkkheyya kappas the kāma lokas (and some of the lower lying rūpa lokas) are destroyed and re-formed. We will discuss this in detail later.

- Thus in calculating the pāramitā time, "asenkkheyya kappa lakhayak" actually takes the time of a mahā kalpa. I have not yet been able to find out what "sāra" means to my satisfaction even though I have come across some estimates. Thus, the time taken to fulfill the pāramita $\bar{a}$ was some number ("sāra") of hundred thousand mahā kappas.
- However, there are other data points that give us an idea how long that is. According to the Tipitaka, there have been 512,000 Buddhas that appeared in our world during the time Buddha Gotama to fulfill his pāramitā.
- There have been only 7 Buddhas during the past 31 mahā kappas, and with the Maithreya Buddha that is expected to appear before the end of this mahā kappa, there would be 8 Buddhas in those 31 maha kappas. Thus if we assume there is roughly a Buddha appearing for every four mahā kappas, then the time taken for our Bodhisattva to complete the pāramitā would be roughly two million mahā kappas. If we take a mahā kappa to be about 30 billion years (see, "Sansāric Time Scale"), then this time would be around 60 trillion years!
- Regardless of the actual time taken, it can be assumed to be truly mind-boggling. Working nonstop (that is what "animisa" means), it took the Buddha fully seven days to cover this time span (recall the nama gotta).
- Of course many of the key people had been with him in repeated lives; this is why it took so long (seven days) for the Buddha to go through those records.

4. When the Buddha left the site of the Bodhi tree seven weeks after attaining the Buddhahood, he immediately started "paying back debts" to them.

- This highlights the importance in paying back debts and showing gratitude for those who come to help; see, "Kamma, Debt, and Meditation."
- One of the ten wrong views is the belief that there is no merit in paying back debts or showing gratitude; see, "Three Kinds of Ditthi, Eightfold Paths, and Samādhi"" and "Wrong Views (Micchā Ditthi) - A Simpler Analysis."
- Buddha's own actions were to highlight the importance of getting rid of that wrong view.

5. It is said that he first wanted to pay back his most recent "teachers": Alara Kalama and Uddaka Ramaputta. Unfortunately, both had died recently and both had been born in the arüpa loka (they had both cultivated anāriya arūpa jhānā). In arūpa loka, beings do not have eyes or ears, and thus are unable to learn Dhamma. Thus the Buddha was not able to help them.

- Next, he thought about the five ascetics (Kondanna, Bhaddiya, Vappa, Mahānāma, and Assaji) who had attended to him while he was practicing austerities for six years. It is those five ascetics that the Buddha delivered the first and second discourses at the Deer Park at Isipathana: Dhammacakkappavattana Sutta and the Anatta Lakkhana Sutta (Anatta is the third of the Tilakkhana: anicca, dukkha, anatta). They all became Arahants after the two discourses.
- Then the Buddha sought out and preached Dhamma to Yasā, a son of a wealthy brahmin, who lived nearby. Yasā and 54 friends of his became Bhikkhus and soon attained the Arahantship.

6. It is also important to note that most of those who helped the Bodhisattva in in his efforts, had also filled versions of pāramitā to be major disciples of the Buddha. They themselves had worked towards liberation (Nibbāna) in previous lives.

- This is why most of them were able to attain the Arahanthood or various stages of Nibbāna in short times.
- Even these days, it is easier for some than others because of their past efforts. Thus no one should be discouraged in their efforts. The efforts will pay off in time, possibly even later in this life or in future lives.

7. By the time the Buddha left Isipathana, there were thus 60 Arahants in his Säsana. After sending them in different directions to propagate his message of liberation, the Buddha himself left towards Uruvela, to meet the three Kassapa brothers and their followers who had been with him in numerous lives in the long past.

- On the way there, he intercepted 30 young wealthy men who were looking for a woman who had robbed them of their valuables. That was not an accidental meeting either. All 30 of them had encounters with the Buddha in previous lives and were ready to comprehend the Dhamma. They all attained Arahanthood shortly.

8. Upon arriving in Urevala, the Buddha had to spend a considerable time and effort to convince the Kassapa brothers that were not Arahants. They were yogis who were under the impression that they had already attained liberation, and were very reluctant to embrace the Buddha Dhamma. Finally, they became disciples of the Buddha and all 1000 of them attained the Arahanthood upon hearing the Aditta Pariyaya Sutta.

- Then the Buddha traveled with those 1000 Arahants to Rajagaha, the capital of the Kingdom of Magadha. King Bimbisara became a Sotāpanna and offered the Buddha his first monastery, the Bamboo Grove in Rajagaha.

9. While the Buddha was residing in the Bamboo Grove two brahmins, Upatissa and Kolita, met Assaji Thero (who was one of the five ascetics), and became Sotāpannas upon hearing a single verse from the Asssaji Thero. Then they came to see the Buddha and requested to become bhikkhus, and attained the Arahanthood within two weeks.

- Of course they became the two chief disciples of the Buddha: Ven. Sariputta and Ven. Moggallana.

10. Then the Buddha, accompanied by the bhikkhus, made the way to Kapilavatthu, his father's Kingdom. Here, he was able to help numerous people who had been together with him many, many lives in the past.

- By the way, it is those who have mutual debts to each other who are born into the same family and share common relatives and friends. Thus one's obligations are mostly in that order. Of course one is most indebted to one's parents.
- Just so this will not convey the wrong message, this is not to condone the common practice of "giving perks" to family and friends by misusing government resources, done by many politicians today. One should give only things of one's own.

11. Thus the first several years of Buddha's life was dedicated to helping those who had been with him and helped him in many ways through multiple rebirths in his endeavor to become a Buddha. Of course, neither a Bodhisattva (until becoming a Buddha) nor his helpers "knew" that was the case beforehand. That is how nature works. The next post in this series discusses this issue.

- It is easy to see that people with same interests always tend to stay together, because they have similar gathi. This is a very deep concept that we have encountered many times. A simple explanation is given in the post, "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsavas)."

12. King Suddhodana, Prince Siddhartha's father, attained the Arahanthood just before passing away about five years after the Enlightenment of the Buddha.

- The Buddha, as a mark of gratitude to his mother who was born as a deva in Tavatimsa deva realm, preached the Abhidhamma to his mother together with other devas continuously for three months. The principal topics of Abhidhamma were then repeated by the Buddha to Venerable Sariputta, who subsequently worked with his clan of 500 bhikkhus to compile the Abhidhamma Pitaka that we have today.
- Of course, both Princess Yasodhara and Prince Rahula entered the monastic order and attained Arahanthood too.
- Numerous other relatives entered the monastic order and attained various stages of Nibbāna.
- A fairly good book that goes through this timeline is "The Life of the Buddha" by Bhikkhu Nanamoli. It is important to note that the Tipitaka itself does not show the actual timeline of events; it is categorized according to other criteria.

13. Sometimes, it is not only those who help each other, but also arch enemies that follow each other through the cycle of rebirths (sainsāra). While almost all other relatives of the Buddha (Prince Siddhartha) were able to attain Nibbāna, there were a few who could not overcome their deeply-embedded hatred towards the Buddha.

- The best examples were Devadatta and King Suppabuddha, who were the brother and father, respectively, of Princess Yasodhara. They both eventually ended up in the niraya (hell) for committing violent acts towards the Buddha.

### 18.2 Pāramitā and Niyata Vivarana - Myths or Realities?

April 29, 2016; revised November 22, 2018; September 10, 2022

1. Pāli is a "phonetic language": some meanings come from how words are pronounced, and sometimes grammar rules are bypassed (or Pāli has its own rules, particularly when combining words). This is why people sometimes get into trouble applying grammar rules to Pāli.

- Luckily, most Pāli words have related Sinhala words, so one with good Sinhala knowledge and the basics of Buddha Dhamma can understand many Pāli terms. This is called "pada nirutti" or clarifying via using some key phrases and sounds. (But it takes a special knowledge or "patisambidhā ñạna" of a jāti Sotäpanna to glean the meanings of keywords like anicca, dukkha, and anatta, without anyone's help).
- The word "pāramitā" comes from "pireema", or to fulfill. Certain conditions must be met while purifying one's mind to become a Buddha. Buddha's 80 great disciples (mahā sāvaka) must also fulfill less stringent conditions.
- Attaining magga phala - including Arahantship — does not have such specific requirements (at least, I have not seen them). Yet, those also require cleansing one's mind over multiple lives. No goals can be achieved without effort. Even when one wins a lottery, there is a reason (a good kamma vipāka from previous lives).
- See "Difference between a Wish and a Determination (Paramita)" for a simple explanation of pāramitā .

2. The above paragraphs may give the impression that one "knows" that one is fulfiling pāramitā to be a Buddha or a great disciple. They do not know that they are gradually fulfilling such requirements. It is only when a Bodhisatta reaches a certain stage of progress that he gets told by Buddhas at those times:

- First, he gets "aniyata vivarana" meaning a Buddha tells him that he is likely to become a Buddha in the future because he has acquired "Buddha gati" through his moral gati and his drive to find truth in past lives.
- Then when more "Buddha gati" are acquired and firmly established with time, a later Buddha may give "niyata vivarana," i.e., that he will definitely become a Buddha.
- We discussed this in detail in the post, "Animisa Locana Bodhi Poojā - A Prelude to Acts of Gratitude."

3. At first, this "niyata vivarana" seems to say that the future can be deterministic. But in most cases, the future is not deterministic. One can change one's future drastically by one's determined efforts; see, "What is Kamma? - Is Everything Determined by Kamma?."

- The key lies in one's gati (āsava and anusaya are related). It is comparatively easy to remove/change those gathi that one has recently acquired, but the longer one acts according to those gatī, the more deeply embedded they become. One gets "niyata vivarana" when one's Buddha gati is unshakable.
- This is closely related to the fact that when one attains any stage of a magga phala, that is never removed in future rebirths.

4. To give a very simple example, a child who has just memorized, but not grasped the concept of adding, may be able to give the correct answer if that particular addition has been memorized. But a child who has grasped the concept of addition can add any two numbers, and that "knowledge base" cannot be removed from him.

- This is the same thing that happens when one attains the Sotāpanna stage of Nibbāna, for example. When one grasps that nothing in these 31 realms can be maintained to one's satisfaction for a long time, That "base level of comprehension of the nature of this world" is not going to change ever, even though future lives.
- With that level of understanding, one does not have to consciously think to avoid the drastic immoral actions that make one eligible to be born in the $a p \bar{a} y \bar{a}$; thoughts of such actions never come to a Sotāpanna's mind.

5. In another example from the Tipitaka, once there was going to be a war between two factions. Bhikkhus asked Ven. Sariputta which side was going to win, and Ven. Sariputta named the winning side.

- But when the war was fought months later, the other side won. The bhikkhus were perplexed; how can a prediction of Ven. Sariputta be wrong? They went and asked the Buddha. The Buddha said that Ven. Sariputta's prediction was correct based on the conditions at that time. But as unforeseeable factors came into play, the outcome changed.

6. The world is extremely complex, and it is impossible to make predictions most of the time. This is related to the anicca nature: any sañkhata can undergo unexpected change, called vipariṇāma.

- But some gati and kamma can become so strong that it becomes virtually impossible to change the outcome. For example, if one kills one's parent, it is impossible to avoid birth in an ap $\bar{a} y \bar{a}$ in the next birth.
- In the same way, when one's views about this world become clear to some level, and one can truly "see" the dangers of births in the $a p \bar{a} y \bar{a}$, or the unfruitfilness of such actions, one's mind becomes permanently averse to such actions. That is when one becomes a Sotāpanna.
- Through the next two stages (Sakadāgāmī and Anāgāmı ), one's mind becomes purified to the extent that one will cease to enjoy sense pleasures automatically, and then one will never be born in kāma loka. At the Arahant stage, one sees the dangers of rebirth anywhere in the 31 realms.

7. But all those stages can be attained only if one is taught the correct path by a Noble Person, who has attained one of the four stages of Nibbāna. The special aspect of a Buddha is the ability to figure out that without anybody's instructions. And the mind of a Buddha is much purer than an Arahant's.

- Even when one attains Arahanthood, some samisāric habits remain. Those are not defilements but just habits in the sense of doing something in a particular way, for example. Many such cases are mentioned in the Tipitaka. One Arahant could not remove the habit of addressing others inappropriately, even though no malice was involved. Another Arahant had the habit of jumping over puddles on the road.
- But the mind of a Buddha was perfect. Not even a minor behavioral problem could be detected in a Buddha.

8. This can be compared to removing dirt from a glass of water. One could filter the water and get rid of the big pieces of contaminants first. Then one could use better filters to remove even smaller particles. Now there may not be any visible contamination. But for all practical purposes, the water is clean and that can be compared to an Arahant.

- But there may still be some contaminant molecules that can be uncovered only with a chemical analysis. Perfectly pure water without even a single molecule of a contaminant can be compared to the purity level of a Buddha.
- Another meaning of "pāramit $\bar{a} "$ is "pereema" or "to filter". As one keeps filtering out contaminants (defilements) from one's mind, it becomes purer. Filtering to the ultimate level is fulfilling "pāramitā."

9. A person who eventually becomes a Buddha starts as a scientist or a philosopher in today's terminology. It is started via two paths, and both need to be fulfilled: "kim sacca gavesi, kim kusala gavesi": investigations of truth and morality.

- Sacca (pronounced "sachcha") means the truth; "kusala" is, of course morals, and "gavesi" is one who investigates. One starts with the intention of finding out how nature works, what morals are, and the origins of morals.
- Even today, we can assign such labels to many scientists and philosophers. Of course, only a minute fraction of them will eventually become a Buddha or a great disciple, but that is how one starts.

10. That habit (gati) of looking into the truth and morals grows through successive lives. Most of them drop due to off external influences and unexpected circumstances. But those few who get to cultivate those gati keep cultivating them. As I said before, one may not have even heard of a Buddha for many eons while cultivating such gati. It is just that when one is on the right (or even wrong) path, nature starts guiding one:
"Dhammo ha ve rakkathi dhammacari."

- By the way, one could start as a man or a woman, but only a man attains Buddhahood . This and several other things "that would not happen" are discussed in the "WebLink: suttacentral: Bahudhātuka Sutta (MN 115)."
- In our rebirth process, one could change sex. Sex change can happen even during a lifetime (these days, such transgenders are common).
- In the rebirth process, we have been born a man and a woman innumerable times. If I remember correctly, the Bodhisatva was a woman when she started cultivating pāramitā to become Buddha. But at some point (probably after getting niyata vivarana), he had been a male.
- There is a slight difference between males and females. That may not be politically correct to say these days, but that is the reality. One is a man or a woman because one has cultivated the corresponding gati. No matter how many laws are passed, the military will always be dominated by men, for example.

11. In the Tipitaka, it says the usual progression of one's character (gati) buildup is dāna (giving), sīla (moral conduct), bhāvanā (mostly loving kindness towards others), and culminating in paññ̄a (wisdom).

- While these main ones are being cultivated, others simultaneously cultivate, and the set of ten is called dasa pāramitā. The others are: sacca (truth), viriya (effort), khanti (patience), adhitthāna (determination), mettta (loving-kindness), nekkhamma (renunciation), and upekkhā (equanimity).
- The process has been analyzed in great detail. For example, each of those ten grows into higher stages: upa pāramitā (middle) and aramatta pāramitā (ultimate). As one keeps making progress through successive lives, such gati get amplified, and one makes advances to those higher stages.
- As we saw in the previous post, "Animisa Locana Bodhi Poojā - A Prelude to Acts of Gratitude," it takes an unimaginably long time to purify the mind and get to the perfect mind of a Buddha.

12. As an example, let us consider the dāna pāramitā. Here one starts with mundane giving (dāna), i.e., giving to the needy, animals, elders, yogis, etc.

- Then one advances to the abhaya dāna. Here one comprehends that every being values its life the most and thus does everything possible to save all lives. It also has an even deeper meaning: Abhaya means remove "bhaya" or fright. Thus the metta pāramitā grows simultaneously too. Most categories are interrelated and grow together.
- The highest is dhamma dāna. Of course, it starts with teaching others morals while living an exemplary life. When one becomes a Buddha, one starts teaching the Buddha Dhamma (the way to "eliminate bhava" or "bhava uddha" and attain Nibbāna).

13. As I said before, such instructions about dasa pāramitā are unknown to the world even through eons. There are many mahā kapp $\bar{a}$ where not a single Buddha is born. Thus it is not like following a set of instructions. Those qualities grow as one's samisāric gati without even realizing that one is fulfilling such requirements.

- Even today, many people engage in such activities regardless of their religions or cultures. Many of today's scientists, teachers, physicians, philanthropists, etc., could be in such early stages.
- Thus, we should always respect and honor those who live exemplary lives regardless of their religions, cultures or any other categorization. One is considered "suitable for paying respects" only based on one's actions.

14. It is informative to see why there are special categories of five Buddhas, seven Buddhas, 24 Buddhas, and 28 Buddhas in Buddhist literature. All these Buddhas are named and discussed in the following Wikipedia article:

## WebLink: WIKI: List of the named Buddhas

- After striving for a long time as discussed in \#3 above, our Bodhisattā first obtained "niyata vivarana" that he will definitely become a Buddha in the future, from Buddha Dīpañkara, who was the 24th Buddha preceding Buddha Gotama. A Bodhisatta customarily obtains "niyata vivarana" from 24 Buddhas before attaining the Buddhahood. The last Buddha our Bodhisattā obtained "niyata vivarana from" was Buddha Kassapa.
- Before obtaining "niyata vivarana," our Bodhisattā obtained "aniyata vivarana" or "not confirmed, but very likely" from three Buddhas named Tannankara, Medhankara, and Saranankara. As the Bodhisattā kept fulfilling the requirements, they were first fulfilled during the time of Buddha Dīpañkara, as mentioned above.
- The special aspect of the seven Buddhas is that those were the most recent Buddhas. There have been four Buddhas (Kakusanda, Konagama, Kassapa, Gotama) in this mahā kappa, and there were 30 mahā kappā before that which did not have even a single Buddha. In the mahā kappa before that, there were 2 Buddhas (Siki and Vessabhu); Before that, there was only a single Buddha going back to 91 mah $\bar{a}$ kapp $\bar{a}$. So, there have been only 7 Buddhas within the past 91 mah $\bar{a} k a p p \bar{a}$, and the timeline is discussed in the "WebLink: Suttacentral: Mahapadana Sutta (DN 14)."
- The present mahā kappa is a very special one, having the maximum number (five) of Buddhas in a given mahā kappa. We have had four Buddhas so far, and there will be one more, Buddha Maitreya, before this mahā kappa ends.

15. Finally, pāramit $\bar{a}$ are also associated with one striving to become one of the 80 disciples of a future Buddha.

- Furthermore, one striving to attain the Arahanthood (or Nibbāna) is also fulfilling pāramitā.

### 18.3 Tisarana Vandana and Its Effects on One's Gati

May 28, 2016

1. Many people consider the recital of namaskaraya followed by the 24 supreme qualities of the Buddha, Dhamma, Sañgha (Tiratana vandana or Tisarana vandan $\bar{a}$ ) in three possible ways: (i) recite them mechanically (and erroneously), (ii) disregard them as unimportant, or (iii) even consider the practice as "mythical" per benefits of their recital.

- These qualities are called "suvisi guna," where suvisi means 24 and guna are the qualities.
- These qualities (and the meanings of the words Tisarana Vandana) are discussed briefly in "Supreme Qualities of Buddha, Dhamma, Sangha"; correct way to recite them are also discussed there.

2. As I have discussed in many posts, there are many things in this world that we do not really understand. Many of the Buddhist practices have become "mystical" simply because their true interpretations as well as their correct usage have been lost. This current topic is a good example. One can reap many benefits by understanding the true meanings of these phrases AND by reciting them correctly. I have experienced these benefits.

- Now, this does not mean one can attain Nibbāna (or the Sotāpanna stage) by reciting them day and night. This is simply one of the many tools available to calm the mind and to slowly but surely change one's character (gathi) over time.
- As everything else with Buddha Dhamma, it is all in one's mind. If one has the motivation and the drive to learn and apply these tools, they can bring many benefits not only in this life but in future lives. But it is not like taking a pill for a headache; one cannot expect results quickly. We have developed "bad gathi" over beginning-less rebirths and it is not easy to change them quickly.

3. First of all, we all have seen how it is possible to convey a given message by just changing the tone. The words, "come here" can give different meanings based on the way how the words are uttered. When a parent says, "come here" to a child with love and affection, the child would be delighted to oblige. The same parent can get angry at the same child and yell, "COME HERE!", the child is likely to cringe and back out afraid of a possible spanking.

- The "gathi sound" ("gathi handa" in Sinhala) in the two cases were totally different even though the words were the same; see below. The way the same phrase was uttered made a difference to the child's mind.

4. Many Pāli words have a different kind of power too; certain words can influence the mind strongly.As we will discuss in future posts, the early humans had a single language called Magadhi from which Pāli words originated. It was a universal language with the effects conveyed by the way the words were pronounced.

- This is why I mentioned in other posts also that Pāli is a phonetic language. Grammar rules are secondary.
- Just by listening to a recital of a pirith desanā (i.e., recital of sutt $\bar{a}$ ) can make a change in one's mindset, which may be even visible to others. There is a subliminal message (sañ̃̃̄ $\bar{a}$ ) in the suttā that the mind can grasp, even if the person may not understand what is being said.
- The words themselves, how they are uttered, and even who utters them, are "embedded" in "gathi sounds".

5. There are several such examples mentioned in the Tipitaka. A famous example is about a frog who was attentively listening to a discourse of the Buddha. Of course a frog could not understand what the Buddha was saying. But the "gathi sound" ("gathi handa" in Sinhala) that came from the Buddha combined with sansäric gathi of the frog led the frog to attentively listen to the pleasing sound from the Buddha and to have a pleasant mindset.

- While listening to the discourse, the frog was accidentally killed by the walking stick of a person there, and the frog was born in a deva loka instantaneously. His name was Manduka deva and he immediately realized how he was born there. He came back to listen to the same discourse and attained a magga phala.
- Then there were a bunch of bats who resided in a cave that was used by Bhikkhus who used to recite pirith every night. Those bats were all said to have born as children in the same village and to have attained Arahantship later. There are few other accounts as well.

6. These may sound like myths, but when one learns Abhidhamma and understands the power of a "somanassa sahagata citta", (or a "thought with joy"), one could make the connection. We all, including animals who had been humans at some point in the past, have accumulated good kamma seeds as well as bad ones from the past.

- One of the factors that comes into play at the dying moment is the state of the mind. If the mind is highly perturbed or is "covered with" panca nivarana (see, "Key to Calming the Mind - The Five Hindrances"), then it allows conditions for a bad kamma seed to come into play. But while listening to Dhamma or pirith, those panca nivarana are temporarily suspended and that allows for a good kamma seed to come into play; see, "Patisandhi Citta - How the Next Life is Determined According to Gati."
- One's gathi are not fixed. Even a person with many immoral gathi has some moral ones as well. What kind of gathi operates at a given moment depends on one's state of mind.

7. Now we can come back to the issue of "gathi sound" that we mentioned in \#5 above. Tisarana vandanā especially has the power to change one's mindset, if recited correctly.

- Entities with same gathi always naturally tend to be close to other entities with same gathi. This can be clearly seen anywhere. People who like sports get together. People like to party all the time, hang out with others who like to do the same. This is discussed in a simple but illustrative post: "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsavas)."
- This is why in Asian Buddhist countries it is customary to turn on pirith (recital of sutt $\bar{a}$ ) on the radio in the mornings and/or at night. This is supposed to keep undesired beings away and attract benevolent beings to the houses. It is actually effective if done properly. Those pretas with immoral gathi do not like to hang around when such chanting are being played. On the other hand, devas of the lowest realm (Bhummataka devas) like to stay close to such sounds/environments.

8. Another related property is "gathi ruva" or "gathi picture". The obvious example is a picture of a Buddha, not the distorted laughing Buddha, but the serene Buddhas like shown below.

- This is why most meditators keep a Buddha statue in the meditation room. It is just another factor that helps in getting to the right mindset.
- Then there is "gathi suvanda" or "gathi smell". Burning incense gives an odor that is also compatible with a meditation environment. A perfume on the other hand, is a distraction. A good perfume is compatible when going out on a date; that sets a compatible environment for sense pleasures.
- All these subtle things add up to make a difference. And how much of a difference depends on the person too. Some people do not need any of such "incentives" to get onto even j$j \bar{a} n \bar{a}$. But for some others they could make a difference.

9. In order to establish this point we can think about a "party atmosphere" compared to a "meditation atmosphere". When someone organizes a party or a dance, one decorates the room with bright colors, eye catching pictures, sensual fragrances, loud music, etc. That is the environment with "matching gathi" for such an event. That would be a disastrous setting for a meditation session; one would not be able to concentrate at all.

- On the other hand, a meditation atmosphere is not compatible for a dance. One cannot dance to pirith or to Tisarana vandana $\overline{\text {. It }}$ provides a setting that is calm and peaceful, and conducive for contemplation.
- Another aspect is that people when attracted to Dhamma will start skipping parties as I have. I would rather stay home and learn Dhamma rather than going to a noisy environment let alone a party.
- One will start associating with different people too, if one seriously gets into Dhamma. It is not done by sheer will power; rather it just happens because one's gathi change. It is just natural for "likes to get together with likes", the Law of Attraction: "The Law of Attraction, Habits, Character (Gati), and Cravings ( Āsavas)."

10. This concept actually works at a deeper level too. We emit electromagnetic radiation (cittaja rūpa) according out gathi and mindset at a given moment. Whatever the types of Dhamma that are attracted at
any given time are compatible with that state of the mind. A deeper discussion is at "What are Dhamma? - A Deeper Analysis."

- For example, when we are angry we never receive more good thoughts. If we are arguing with someone, what always comes to mind are just bad thoughts, bad memories about that person.
- On the other hand, when we are calm and in a joyful mood, we mostly think about good memories.
- When one is at a funeral, one's thoughts and complexion becomes attuned to that environment: one sees and hears people crying, and one gets sad and one's face shows that as well; one does not feel like laughing. On the other hand, when one is at a party it is totally opposite atmosphere, and one feels like laughing and dancing.
- Other people can also be affected by our mindset. It is quite pleasant to look at a Buddhist monk. They just have that calm demeanor which is part of their cultivated gathi. In fact, our bodies also change over time according our gathi. There are other people whom we can instantly recognize as "rough characters".
- This is a deep subject with many complexities and even exceptions. But I hope I have been able to convey the basic idea.

11. When one is reciting Tisarana vandana $\bar{a}$ correctly in a suitable environment, one's gathi will change at least during that short time for the better. One will be able to grasp deeper concepts during meditation following the recitation. When one does this over a long time, one's salient gathi will gradually change too.

- I know mine have changed over the past several years, and in particular within the past several months. It is a process that needs a bit of time to get traction, and then the results becomes clear one day. When I first wrote the original post (which I just revised), my enthusiasm for reciting Tisarana vandanā was not that high.
- However, I do not want to over emphasize this aspect. It can be considered a tool that could make a difference for some people.

12. For those who may be trying to cultivate the anicca sañña (i.e., comprehend what is meant by anicca, dukkha, anatta), reciting Namasakaraya followed by Tisarana vandanā could be helpful. I am providing the recordings below.

- The Buddha has also stated that when one is in a dangerous situation or gets frightened by something, reciting Budu Guna (Ithipi so Bhagavā.....) can help getting rid of the fear. One could recite this just before going to bed and it might help with falling asleep; again, it depends on one's own gathi, how faithfully one does it, whether it is done with $s a d d h \bar{a}$, etc.

Here is a recital of the Namaskaraya by the Venerable Thero (you need to adjust volume control on your computer). It is normally recited three times:

## WebLink: Listen to the verses of Namaskaraya recital

Here is a recording of the Tisarana vandana by the Venerable Thero (You need to control the volume level on your computer):

### 18.4 Does the Hell (Niraya) Exist?

## December 18, 2015; revised August 29, 2019

## Introduction

1. The Buddha described a "much wider" world of 31 realms, compared to the just two realms (human and animal) that we experience. See, "The Grand Unified Theory of Dhamma."

- The Buddhist worldview is not a theory or speculation. The Buddha could "see" each of the 31 realms of this world. He could "see" how a lifestream moves from one realm to another based on kamma vipāka and prevailing conditions, i.e., Paticca Samuppāda.
- Many suttā describe Buddha's and his disciples' visits to brahma and deva planes. Others describe visits of brahma $\bar{a}$ and devas to the human world (mainly to listen to the discourses of the Buddha and to ask questions from the Buddha). In the latter category, there are 81 sutt $\bar{a}$ in the "WebLink: suttacentral: Devatā Sam̈yutta (SN 1.1 ~ 1.81 )" and 111 suttā in the "WebLink: suttacentral: Devaputta Samimutta (SN 2.1 ~ 2.30)" in the Samimutta Nikāya.

2. Even though devas and brahma do not have to face much suffering during their lifetimes, those lives have finite lifetimes. When they die, they are mostly born in the lower realms.

- The importance of those realms is that living beings spend most of their time in the rebirth process in those apāyā. See, "Rebirth - Connection to Suffering in the First Noble Truth."
- Several suttā discuss the unbearable suffering in hell and other lower realms; see below. Also, see my post on August 28, 2019, at the discussion forum on, "WebLink: Pure Dhamma Forums: Questions on Posts in the "Origin of Life" Subsection." It discusses "life in hell".
- The following book provides vivid details of life in hell, compatible with the description in the sutt $\bar{a}$ : "A Guided Tour of Hell - A Graphic Memoir" by Samuel Bercholz (2016). He first describes an "out-ofbody experience" that is similar to many given by others (seeing his body from above), but the second experience is a "trip to the hell".

3. Here we will discuss more indirect evidence from our experiences for the existence of hell (niraya). This post also provides a bit more information on the way to clarifying the role (and importance) of the human brain.

- Beings in most realms do not have the capacity to change their destiny; they just pay off their past kamma, whether good kamma in deva or brahma realms or bad kamma in the human and lower realms (apāyā).
- Among living beings, it is mostly humans who can mold their future; they are the ones who can cultivate citta with high javana power. They are ones who do (abhi)sañkhāra that lead to both good and bad rebirths (via improving the character or "gati"). They either enjoy the fruits of those in good realms or pay for them in the apāy $\bar{a}$, and eventually - after long times - come back to the human realm. That is what all of us have been doing from an untraceable beginning.

## Genuine Hell Sounds or Not?

4. Here is a well-circulated youtube video that claims to playback the "sounds of hell" recorded in a deep underground mine in Siberia. I must warn that these sounds are horrific, even though the recording is likely to be a fake; see below.

## WebLink: youtube: Siberia Hell sounds

There is a post describing the background of this video: WebLink: skeptoid.com: The Siberian Hell Sounds and refers to the following youtube video proving that the above video is a hoax:

- If it is a fake (as it appears to be), it does not make sense to try to fool people by making videos such as above. One should realize that truth always comes out at the end.
- Still, debunking the "hell sounds" video does not prove that the hell does not exist either.

## Do We Need Firsthand Experience on the Existence of Hell?

5. We should ask the following question. Is it necessary for us to directly observe something with our five physical senses to believe its existence?

- When many people hear about the apāy $\bar{a}$ — other than the animal realm that we can see - or heavenly worlds of devas, they refuse even to consider their existence. That is because "they cannot see those realms." (By the way, there are four apāy $\bar{a}$ (niraya, preta, asura, or animal).
- But science disproves that contention. Science was not aware of the existence of billions of galaxies and an uncountable number of planetary systems like our solar system until the 20th century. Then better instruments became available; see, "Wrong Views (Miccha Ditthi) - A Simpler Analysis." There are many such examples given in the "Dhamma and Science" section.
- However, the Buddha was able to see those realities 2500 years ago by purifying his mind. We can also "see' the existence of some of these realms if we can cultivate abhiñña powers.
- It is not a good idea to refuse to consider anything that cannot be confirmed with one's direct experiences. That is discussed in detail in several posts, including "Wrong Views (Miccha Ditthi) - A Simpler Analysis."

## Description of Life in Hell in the Sutta

6. I am going to summarize what we can glean from the sutt $\bar{a}$ (plural of sutta is sutt $\bar{a}$ ) in the Tipitaka of the four $a p \bar{a} y \bar{a}$ and other realms including the niraya (or the hell). The general layout of the 31 domains was summarized in the post, "The Grand Unified Theory of Dhamma."

- The niraya is in the deep interior of the Earth. The "hell beings" have solid bodies that can withstand various forms of torture. A "hell being" is born via opapatika birth, with a full physical body capable of experiencing the suffering.
- The hell-wardens who impart those sufferings to the hell beings are also living beings. They are born in the niraya because of their "gati" (character qualities) due to the "sañkhāra" that they developed in previous lives. Their bodies are tolerant of the harsh conditions in the niraya. They do not suffer like hellbeings.
- There are many posts in the website on "gati." For an introduction, see, "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsavas)."
- "WebLink: suttacentral: Devadūta Sutta (MN 130)" describes "hells" or "niraya." A translation at: "WebLink: accesstoinsight.org: Devaduta Sutta: The Deva Messengers." A similar sutta about some realms located close to Earth is the "WebLink: suttacentral: Ātānātiya Sutta (DN 23)." A translation at, "WebLink: suttacentral: The Ātānātiya Discourse (DN 23)."

7. Devadüta Sutta explains in vivid detail how the hell-wardens torture a hell being. There is a king Yama (or probably many kings) in each niraya (there are several). He interrogates some of the newly arrived hellbeings "who were at the borderline" and just barely made it to the hell. He reminds him/her of the opportunities that he/she had to understand the bad consequences of their actions.

- It is important to note that the king Yama interrogates only those new arrivals that are from the human realm. There is an uncountable number of beings born in the niraya from other apāy $\bar{a}$. They move from one apāya to another until a rare opportunity comes to get out of the apāya
- Such a Yama king is born there also according to the "gati" they had cultivated in previous lives; see below. Like all other living beings, those hell wardens and king Yama have finite lifetimes.

## Based on Experience - Not Speculation

8. It is significant to note the ending of the sutta, where the Buddha says, 'I tell you this, monks, not from having heard it from another contemplative or brahman. On the contrary, I tell you this just as I have known for myself, seen for myself, understood for myself." That is what I mean when I say all that the Buddha had experienced what he taught. He could "see" all of 31 realms.

- Of course, we have to have faith in the Buddha to believe that. However, we can see that all he had taught is self-consistent. There are no contradictions; see, "Buddha Dhamma: Non-Perceivability and Self-Consistency."

9. There are close comparisons in the world that we experience. A good example is the comparison of policemen to the hell-wardens. They both like to punish those who have done immoral acts. Being a policeman is not easy; they are under stress, and it is not easy to deal with rough criminals. Not everyone can be a policeman (or policewoman).

- They have cultivated "gati" or habits that do not tolerate "bad behavior." They always think about ways to find and bring to justice those who do immoral deeds.
- King Yama is like a criminal judge; he also has similar gati comparable to hell-wardens but does not engage in personally punishing the culprits.

## Body Types in Different Realms

10. A discussion on the body types can illustrate the point that the specific kamma vipāka prepares the physical body. Each body type can experience vipāka in according to gati of that being.

- The hell-being is born in a niraya to experience the kamma vipāka corresponding to kamma done with hate, like killing or torturing others. But that kamma was done after cultivating "hate sañkhāra" for long times.
- A preta's body is in such a way to experience hunger, many have huge bodies with tiny mouths so that they can never satisfy hunger. One is born a preta because one has cultivated "preta sañkhāra." One will always be thinking about sense pleasures and also crave for what others have. That applies not just to the poor. One can be wealthy, but still may not be satisfied with what one has. On the other hand, there may be a poor person who is satisfied with what he/she has and does not cultivate "preta sañkhāra."
- The "asuras" are those who have cultivated "asura sañkhāra," i.e., those who like to get "free rides." They depend on others for their needs and are too lazy to work and make a living. Those who steal or embezzle money from others also have similar gati.
- Animals (called "thirisan" because they have all three "san" of lobha, dosa, moha) have a mixture of those gati; see, "What is 'San'?."
- One cultivates particular sañkhāra because one has a specific character or gati. And the more sañkhāra one does (thinking, speaking, and doing certain things), the more established gati become, which in turn leads to corresponding $j \bar{a} t i$ (births); see, "Gati to Bhava to Jāti - Ours to Control."

## Comparison with Modern Science

11. In the post "The Grand Unified Theory of Dhamma," the 31 realms were represented by spherical shells with a sphere in the middle and the bodies of the beings in lower realms were higher in general than the bodies of the living beings in the higher realms. Each "inhabited" planetary system has all 31 realms. But most planetary systems are not "inhabited."

- Scientists say that the nearest planetary system to the solar system is Alpha Centauri, which is located 4.37 light-years away; see, WebLink: wikipedia: Alpha Centauri. A light-year is a distance traveled by light in a YEAR at the speed of $299792458 \mathrm{~m} / \mathrm{s}(186,000$ miles/second $)$.
- That is a humongous distance that cannot be traveled with current technology or any technology in the foreseeable future. It would take 100 years to reach that star system; see WebLink: wikipedia: Project Longshot. Thus it is doubtful that we will verify the existence of life in other planetary systems during our lives.
- However, there are other living beings in the solar system itself that science has not found. That is in agreement with scientists' admission that only $4 \%$ of the mass of the universe is explainable by science.

12. The niraya or hell is located deep inside the Earth, and those beings have very dense bodies.

- The other three $a p \bar{a} y \bar{a}$ are located at and close to the surface of the Earth. Of course, the animals live among humans, and asuras are said to live mostly in the oceans. The petas also live on the surface of the Earth just like us, but normally we cannot see them. They all have body densities comparable to humans, except for petas. Some petas have "fine bodies" suffer not via bodily punishments, but mentally: they can recall the past lives and bad deeds that led to the preta bhava.
- There are three other human realms close to the Earth that we cannot see. Most deva realms lie wellabove the surface of the Earth. The brahma realms are even further out. Of course, devas have much less dense bodies than humans, and brahmas' bodies are finer at higher realms. At the highest brahma realm, an arupa brahma has only one suddhatthaka, the hadaya vatthu; see, "The Origin of Matter Suddhatthaka."
- The body types in the 31 realms have been discussed in the previous post: Body Types in 31 Realms Importance of Manomaya Kaya.

## Births Correspond to Gati (Character Qualities)

13. Roughly speaking, we can say beings with more immoral "gati" are born with denser bodies inside or on the surface of the Earth. Their thick bodies are used to impart kamma vipāka either via torture or via bodily ailments and diseases.

- The beings in the deva and brahma realms, who have less and less dense bodies do not suffer bodily ailments. At the end of their kammic energy, they disappear and are born at the next realm appropriate for the most potent kamma seed they have. It could be in a lower sphere, including the niraya (unless they had attained at least the Sotāpanna stage).
- Thus beings with better and better "gati," i.e., "deva gati" and "brahma gati" are located further and further away from the surface of the Earth, and those hell-beings with the "worst gati" are located below the surface of the Earth.

14. Therefore, each living being can be said to "carry his/her dhamma"; here, dhamma means "to bear." More precisely, each bhava carries its dhamma, and when the bhava changes, the types of dhamma one carries changes.

- A hell being is carrying a heavy load and has the most significant burden. Devas carry very light loads, they have negligible suffering during that lifetime, and brahma $\bar{a}$ even lower.
- But the load carried by a being cannot always be determined by the body density. Some petas have light bodies and their kamma vipāka are imparted by the mind, not physically via the body.

## Our Own Experiences

15. We all have seen some children when they don't get their way and become mad, fall on the floor and cry. It is as if they want to go towards the niraya (sometimes they bang their heads on the floor). That is a reflection of their "gati" AT THAT MOMENT.

- In the same way, they (and even adults) jump up with joy. It is as if they are trying to go up towards the higher realms. Again it is a reflection of their "joyous gati" at that moment.
- Another example is the behavior of criminals. We all have seen pictures of criminals when they come to the court of law: their heads are lower. They feel a heavy burden.
- On the other hand, when we have done something exemplary, we feel good and keep our heads high. Our bodies feel lighter too.
- These may not be Earth-shattering observations, but they are consistent with the Buddha's world view.

16. Thus each of us can momentarily live in the $a p \bar{a} y \bar{a}$ or higher $\operatorname{dev} a$ and brahma realms.

- I am sure anyone can recall such moments. When we get outraged, we burn inside, our bodies even get heated, faces get reddish, and we sweat. It is not a pretty sight to see a furious person or even a child.
- On the other hand, when we are calm and relaxed, especially after doing a moral deed, we feel good, and our body language reflects that. We are confident; we feel lighter, and also are "cooled down" inside. It is always a pleasure to look at Buddhist monks.

17. Thus even though we may not see the beings in the other realms, many indicators are consistent with the "bigger world picture" of the Buddha. We have reasons from our experiences to believe the existence of such realms. That may be a small part of the whole story, but indirect pieces of evidence like this are always consistent with Buddha Dhamma; we will discuss more in the future. These are things that one can contemplate during insight meditation and verify for oneself.

### 18.5 Can Buddhist Meditation be Dangerous?

June 17, 2016; revised July 22, 2021

1. A friend of mine alerted me to a recent article (in 2016) on the possible dangers of mindful meditation:

## Weblink: BBCRadio: Is Mindfulness Meditation Dangerous?

- It seems that there are possible dangers in not only "mindful meditation" but other types of meditation too. I did a Google search and found many articles, videos, and podcasts on the subject. You can do the same to get an idea (try "dangers of meditation" and "dangers of meditation youtube").
- A recent book, "The Buddha Pill" by Miguel Farias (2015), which downplays benefits of meditation and also points to some reported bad outcomes.
- There is a vast amount of misinformation out there. So, I thought of writing down my own thoughts based on the Buddha Dhamma that I understand and practice. In genuine Buddhist meditation, too, one may encounter some discomforts, as I will discuss below. But those are temporary and definitely not dangerous.

2. First of all, $99 \%$ of "Buddhist meditation programs" that are being taught and practiced today are not compatible with Buddha Dhamma, the Buddha's original teachings. Let us first discuss this point.

- The goal of the Buddha was NOT to teach practices and methods by which to attain temporary relief from the daily stresses of life. Such procedures had been practiced even when the Buddha (Prince Siddhartha) was born 2500 years ago.
- For example, breath meditation used by even Theravāda Buddhists today was a practice that the Buddha rejected; see, "Bhāvanā (Meditation)" section and in particular, " 6 . Ānāpānasati Bhāvanā (Introduction)," which discusses breath meditation.

3. I do not dispute or agree with the findings reported in the above articles or the above book. I do not know those specific cases, and it does not matter either because those meditation techniques are not "Buddhist meditations".

- So-called "Buddhist meditators" use many meditation techniques; most are a waste of time and some are definitely bad. For example, one of the dangerous techniques is to try remove all thoughts that come to one's mind. One could lose memory (and perception) if this is done for a long time.
- The Buddha said to stop IMMORAL thoughts, not ALL thoughts. There is a big difference between the two. Furthermore, he encouraged cultivating moral thoughts (Ānāpāna is "āna" AND "pāna"; see, " $\underline{\text {. }}$ Ānāpānasati Bhāvanā (Introduction)."

4. The Buddha really focused on the sansäric suffering, i.e., unimaginable suffering in some realms of this world; see "The Grand Unified Theory of Dhamma" or other posts on suffering.

- For a normal human, It is not possible to avoid births in the future in the four lowest realms (apāyā) filled with suffering without attaining at least the Sotāpanna stage of Nibbāna. Not only are bad actions done in this life, but bad actions in previous lives can contribute. We have been lucky to get this human life due to a past good action (kamma), but all of us have done both good and bad actions in our deep past.
- Future births in the $a p \bar{a} y \bar{a}$ are stopped not by "erasing" past bad kamma but mainly by a subtle mechanism that involves understanding the Buddha's world view.
- This website is all about explaining that complex process, but I can state what the result is: the solution is to remove greed and hate from our minds which happens to a large extent when one comprehends the "bigger world picture" of the Buddha (which is called getting rid of ignorance of the correct worldview or attaining sammā diṭthi).

5. Thus one could take one of three approaches:

- One could learn pure Buddha Dhamma, the original teachings of the Buddha, and understand his world view. When one learns and comprehends this wider world view, one can clearly see the possibility of much suffering in future lives.
- The other approach is to believe in the above stated conclusion, i.e., that getting rid of greed and hate from one's mind will remove future suffering, and to start working on it.
- But there is a third approach, which is to do both in parallel.

6. The third approach above is the best since it accelerates the process of cleansing. Furthermore, one can experience relief from not only future suffering but also in this life.

- However, we must understand that it is impossible to remove all types of suffering in this life by meditation. What we experience in this life are a result of what we have done in the past. It is possible to avoid some bad outcomes but not all; see, "What is Kamma? - Is Everything Determined by Kamma?."
- The best way to convey the information is to describe my own experience (at least parts of it). Even though each person's experience will be different, there are some common themes.

7. First of all, one does not even need to understand what Nibbāna is to get started. Even though it is possible to describe what Nibbāna is (there are many posts at the site), it is not easy to truly comprehend what is meant by stopping rebirth process, especially at early stages.

- For example, a child in primary school may say she wants to be a scientist. That is her goal because she has heard it is a good occupation. But she has no idea what a scientist does.
- In the same way, most Buddhists know that Nibbāna is a coveted and worthy goal but have no idea what it is. Most have not even thought much about it. They know that it involves stopping the rebirth process, but If pressed some may even say they do not "really want to attain Nibbāna yet; I want to enjoy life a bit more." That is because it is not easy to comprehend the dangers of such "enjoyments."
- However, the above child knows that she has to work hard and get good grades to become a scientist in the future. As she progresses through primary, secondary, and high school, she will gradually get a better idea of what becoming a scientist means and involves.
- Most Buddhists can be compared to that child stuck in primary or secondary school. They refrain from immoral actions to some extent but have not proceeded any further due to several reasons: lack of time, lack of understanding the urgency to do something before one gets old and the brain starts slowing down, etc.

8. On the other hand, most beginners to Buddhist meditation may not have any idea what Nibbāna is or may not believe in the rebirth process. And one does not need to.

- As I have tried to explain in many posts, Nibbāna has many levels starting from just a relaxed state of mind all the way to stopping the rebirth process. One needs to proceed gradually, experiencing the increasing level of relief on the way.
- Any reasonably moral person can see the benefits of living a moral life. Most religions teach how to live a moral life, at least to some degree.
- The first thing to do is to try extending this way of moral living by incorporating factors that other religions may not teach. For example, killing animals is not considered immoral in many of the major religions.
- Killing other people for any perceived benefit is an inconceivably bad idea. We have to stop calling such ideas "religious" regardless of the "religious label" attached. One would be bound for the worst sufferings imaginable for billions of years.

9. I think we live in a world today that is too "politically correct." We are afraid to give our honest points of view due to fear of being labeled "insensitive to other religions or cultures." We should be free to point out and condemn immoral and harmful actions.

- For me, there are no religious or cultural boundaries; we live this life for about 100 years and may be reborn in a different culture that may follow a different religion; see "Implications of the Rebirth Process in Daily Life and in Society." However, it is not good to impose sudden cultural changes. That could lead to major disruptions in societies.
- I intent to make as much progress as possible in this short time left and to help others who may be interested.
- I also think it is a disservice not to share something that one has experienced to be of value. It is, of course, up to others even to bother reading about it.

10. Going back to our discussion, one should avoid things that we know deep inside to be bad: engaging in dishonest and harmful behavior. This of course has many facets and levels. So, one should start stopping actions such as: taking advantage of others in any way, engaging in sexual misconduct, avoiding drugs and cutting down on alcohol, etc.

- This gradual process is described in detail in the first several posts in the "Bhāvanā (Meditation)" section. What I like to do here is to point out some key points that I think could be useful.

11. It is obvious that meditation, at least in the beginning, does not require one even to sit down. Before one gets to that stage, one needs to remove some cobwebs from the mind that have accumulated over time.

- Some people cannot sit down and concentrate anyway; the mind likes to wander around. This "agitation" is due to greed and hate, even though it may not be obvious. What breath meditation does is force the mind to concentrate on breathing. That helps stop this wandering.
- And it does work for some people. But any calming effect is temporary. One may feel good during a meditation retreat, but the mind goes back to the agitated state after returning to "real life."
- Thus if one does the standard "breath meditation" (without doing crazy things like trying to stop all thoughts) it is unlikely that they will experience any bad psychological effects. Still it is bad in the sense of being an utter waste of time in the long run.
- Many people I know to be meditators are stuck in this stage for tens of years, enjoying the temporary relaxation and refusing to get out of that "comfort zone." By their own accounts, they have not made significant progress. But for some reason, they are still "being hopeful."

12. Genuine Buddhist meditation is focused on long-term effects. As the book's title in \#1 above implies, many people believe that going to a meditation session is like taking a pill for a headache; one is after a quick, temporary solution.

- Buddhist meditation starts with stopping immoral activities that one can clearly see, such as those mentioned in \# 8 and \#10 above.
- If one can persevere for a few weeks or months (depending on how many "cobwebs" are there), one should start experiencing a better state of mind. One will be able to concentrate on a given task (even a mundane task) better. In a few months, one can look back and see that one has changed in some ways.
- Then one can incorporate more "good habits" and discard more bad habits. One will start seeing the futility of lyin
- By the way, one will be able to absorb more from the posts at this site with time too.

13. As time goes, one can try "sitting down" meditation sessions. Just sit in a quiet room away from disturbances, and think about a Dhamma concept. One could even read a post and contemplate it while reading.

- Actually, this is what I did in my early days. I would be sitting at my desk and reading a book or listening to a discourse on the internet from my teacher Thero. As I contemplated and started comprehending some concepts, I felt joyful in my mind, and I could start feeling a lightness in the body with time.

14. This is the beginning of a process that the Buddha described as, "pītimanassa kāyo passambhati, passaddhakāyo sukhaiं vediyati, sukhino citaì samādhiyati." That means, "joy in the mind (from absorbing Dhamma) leads to a lightness in the body, lightness in the body leads to happiness (nirāmisa sukha), and that leads to samādhi (enhanced concentration and a relaxed mind)."

- Once one starts feeling joy in the mind and lightness in the body, there is no stopping. Because, now, one can clearly see the benefits.
- Then it becomes easier to grasp deeper concepts, which in turn leads to more joy, etc., and the whole process repeats and accelerates.
- However, how much progress one makes depends on many factors. Some have practiced meditation in previous lives and they progress relatively fast. Regardless of the actual time taken, most should be able to make at least some progress. If it appears that one has not cultivated meditation in previous lives, it is time to start now.

15. When I was making more progress (especially when grasping anicca, dukkha, anatta), I felt some physical sensations. When I started feeling those, luckily, I had heard about them from my teacher Thero's discourses (by the way, I have not met Thero or talked to him personally; both times I went to Sri Lanka, he was not available).

- Different people feel this kind of discomfort in different body parts above the waist. I am not talking about leg pains due to sitting cross-legged, etc. If a given posture becomes uncomfortable, one needs to change the posture. Some people can sit cross-legged for longer times simply because they are more flexible or have had more practice.
- Mine started in the head, throat, and hands. They were not painful at all. They are more like pressure waves. But if one did not know that it could happen, one could be concerned because it happens only during formal sit-down meditation sessions.
- Other possible "symptoms of progress" are sweating and becoming thirsty (if this is the case, keep a glass of water close by). Yes. All these are good symptoms; they indicate that the body is beginning to respond.
- This was my first personal confirmation that it is not the body that gives rise to consciousness. It is ALWAYS the mind that controls the body. My mind decides when I want to do a meditation session. Furthermore, I can change my body sensations with my thoughts!
- I have not yet heard anyone else experience it, but my body freezes when I get into $j h \bar{a} n \bar{a}$ (up to the third). It really freezes like a statue. If someone comes and tries to pull my hands apart, it is difficult for them to do. But when I decide to stop the session, the body unfreezes within seconds. This is undeniable evidence that the mind can control the body.
- The explanation for these (and other types of) experiences involves the concept of the gandhabba that I have been discussing for some time now. These are discussed in, "Possible Effects in Meditation Kundalini Awakening."

### 18.6 Boy Who Remembered Pāli Suttas for 1500 Years

November 21, 2018; April 25, 2020

## Introduction

1. This is a true story about a boy (Dhammaruwan) who recited complex and lengthy Pāli suttā at five years of age, which sounded very different from current chantings. Furthermore, he remembers accounts of his previous life 1500 years ago, when he accompanied the famous Buddhaghosa on his trip to Sri Lanka.

- Dhammaruwan was born on November 18, 1968, in Matale, Sri Lanka. At the age of about two years he would sit in meditation and then start chanting. At times he would speak in a language not understood by his mother, who tried to hush him up.
- His step-father encouraged the boy to continue and regularly made recordings of the chants.
- These accounts come from the book, "WebLink: wisdompubs.org: Rebirth in Early Buddhism and Current Research" by Bhikkhu Anālayo (2018), and WebLink: discourse.suttacentral: Skype interview with Ven. Bhikkhu Bodhi, 16th September 2014. Both Bhikkhus have had long-term interactions with Dhammaruwan.

## Previous Life in India - 1500 Years Ago

2. According to Dhammaruwan's memories, he learned the Pāli chants in a former lifetime in India, where he had been born as the son of a Brāhmin and trained in memorization of the Vedas. He had gone forth as a Buddhist monk and become a student of the eminent monk Buddhaghosa at Nālandā, India. For a historical time line, see, "Buddhaghosa and Visuddhimagga - Historical Background."

- My comment: This means Dhammaruwan was born a human over 1500 years ago: That is another piece of evidence that a human bhava can last thousands of years during which one may be reborn with a human body many times. In between those rebirths, one would be in the gandhabba state, just with the mental body; see, "Bhava and Jāti - States of Existence and Births Therein" and "Gandhabba (Manomaya Kāya)- Introduction." Further more, both Dhammaruwan in that previous life and Buddhaghosa were Vedic Brāhmins before converting to Buddhism. That is how those breath and kasiṇa meditations got into Buddhism. See, "Is Ānāpānasati Breath Meditation?."

3. After being trained as a bhānaka (a reciter), he was chosen to accompany Buddhaghosa from India to Sri Lanka. Having come to Sri Lanka, he stayed with Buddhaghosa at the Mahāvihāra in Anurādhapura, of which he remembers various details.

- These recordings of Dhammaruwan are strong evidence for rebirth. How could a child of age 3-5 even remember such complex Pāli words?
- The way he recites the sutt $\bar{a}$ - the way he pronounces Pāli words - is better than most bhikkhus today. But the recitals sound different from those that we hear these days; instead of monotonic chants of today, keywords stand out in this recital style.
- One can clearly see that Dhammaruwan, as an adult, chants just like any other adult today; see \#6 below.

## Recitals From 1500 Years Ago

4. Here is a youtube video of a few of his recitals:

## WebLink: youtube: Dhammaruwan - Maha Mangala, Karaniya Metta and Ratana Sutta

Here are recordings of several suttā, with downloadable links:

## Dhammacakkappavattana Sutta:

# Mahā Mangala, Ratana, and Karaniya Metta Suttā: 

WebLink: Mahā Mangala, Ratana, and Karaniya Metta Suttā Download

## Bojjhanga Sutta:

## WebLink: Bojjhanga Sutta Download

## Information From Bhikkhu Bodhi Interview

5. The following is an excerpt from the interview mentioned above with Bhikkhu Bodhi in 2104, which had a discussion on Dhammaruwan about a quarter of the way into the interview:
"There is almost no other rational explanation [apart from real past life memories] for how he could know these sutt $\overline{\text { a }}$. The sceptic might say he must have listened to monks chanting them over the radio. We might accept that explanation if he had recited the Metta Sutta (Sn 1.8), the Mangala Sutta (Sn 2.4), or the Ratana Sutta (Sn 2.1), or maybe even the Dhammacakkappavattana Sutta. But even that would be somewhat stretching the bounds of credulity: that a 3 or 5 year old boy should be reciting the whole Dhammacakka Sutta (SN 56.11) just by listening to it on the radio, without any text in front of him. But as a 7 or 8 year old he also chanted the entire Girimannanda Sutta (AN 10.60), and that is just so rarely chanted by monks on the radio. And then there is a recording of him reciting passages from the Pattthāna, the book of conditional relations in the Abhidhamma. I didn't compare his recitation with the text, because he doesn't say which portion he's reciting ... the Patṭhāna consists of six or seven volumes of very repetitive text with just minor variations.

Then his intonation is very different from the contemporary Sri Lankan style of chanting. Just by listening, you can tell it's coming from another era. It's not the modern style of Sri Lankan chanting. And then there's something very interesting. I don't think anything has been published or spread around about this. Years ago I was listening to his recitation of the Mahānidāna Sutta (DN 15) with the PTS Pāli edition in front of me, where they have footnotes with variant readings. I found that in a number of places where there were differences between the Sinhala and the Burmese script editions he was reciting in accordance with the Burmese script edition. But not always: there were a few places where there were differences, and he was following the Sinhala edition. But in maybe $65 \%$ of the cases where there was a difference, he was following the Burmese script edition".

## "Old Recital Ability" Lost at Age Twelve

6. Dhammaruwan lost this ability to recite in this particular fashion after about 12 years of age. These days, when he chants the same sutta, he recites them like current bhikkhus recite them.

- Even in those early years, he was not able to recite in that "special way" at any time. According to Bhikkhu Bodhi: "You know, you'd ask him, "Ruwan recite such and such a text," and he was not able to do it. But occasionally he would say to his adopted father, Bertie: "Uncle, uncle, I'm starting to remember. I'm starting to remember!" Then Bertie would get the tape recorder and set it up and record his recitation."
- Therefore, the ability to recite that way was not there all the time, even in those early years.
- Now, of course he has lost those memories and recites those suttā just like anyone else recites them these days.

Here is a recording of the Karaniya Metta Sutta as an adult (chanting starts @2 minutes):
WebLink: Karaniya Metta Sutta as an adult Sutta Download

## Related Information

7. Bhikkhu Anālayo's book has complete transcripts of all the recorded suttā that Dhammaruwan recited; see, pp. 167-237.

- Other rebirth stories and evidence for rebirth are discussed in, "Evidence for Rebirth."

In the following video, a child describes her life as a deva during the time of the Buddha (in Sinhala.) She says the Buddha was different than depicted in the current statues @21 minutes).

### 18.7 Do Buddhists Pray and Engage in Idol Worshipping?

## May 5, 2019

These are issue that are a bit hard to understand for those who do not have a deeper understanding of Buddha Dhamma.

1. First of all, paying respects to the Buddha (and symbols representing him) cannot be equated with "prayer" in many other religions. Praying is associated with making a request from a higher being (a God, a Brahma, etc), and those requests are for making one's life better, to solve a mundane problem one has, or asking for a material gain.

- The prayers are requests to the gods for mundane things and protection. The gods are asked to bestow health, wealth, material things, and to provide for various needs; they are also asked to forgive one's transgressions.
- In some cases, offerings are made to the higher being(s) first, and then one prays for whatever one desires, as in Hinduism (nowadays, this is practiced even in some Buddhist temples).
- Buddhists do not pray. They engage in meditation, contemplating the true nature of this suffering-filled world. There is nothing in this world that is worth craving (and thus praying for).

2. On the other hand, the primary goal of a Buddhist is to stop the rebirth process and attain Nibbāna; see, "A Buddhist or a Bhauddhaya?."

This itself is hard for many to understand, especially for those who do not believe in the rebirth process. But the Buddha taught that one's existence does not end at the death of physical body; one will be reborn endlessly in one of 31 realms "in this world"; see, "Buddhism without Rebirth and Nibbāna?."

- Rebirth process continues as long as one thinks that existence in this world is fruitfiul and, some day, will lead to true happiness. The Buddha explained that acting with greed, hate, and ignorance causes this wrong perception.
- One part of ignorance is not believing in rebirth.
- Suffering is present at any of those 31 realms and thus suffering exists even in the highest brahma realms; see, " 31 Realms Associated with the Earth."
- Therefore, the goal of a true Buddhist is to stop the rebirth process all together. This is done by cleansing one's mind. Learning the world view of the Buddha and following his Noble Eightfold Path, which includes contemplation (meditation) and living moral life (sila), will lead to cleansing of the mind; see, "Living Dhamma."

3. Therefore, there is nothing to ask from the Buddha; the Buddha no longer lives in this world. It is actually quite the opposite. Understanding Buddha's teachings (Buddha Dhamma) leads to the realization that there is nothing in this world that is worth craving or desiring for. In fact, it is those cravings traps one in the rebirth process.

- The only way to stop future suffering is to learn the true nature of this world and see not only the futility (unfruitfulness), but also the dangers in craving for worldly things.
- A Buddhist never asks favors from the Buddha nor requests forgiveness for any immoral deeds committed. A true Buddhist tries to abstain from immoral deeds, speech, and thoughts by controlling one's mind, i.e., by being mindful; see, "Mahā Satipatthāna Sutta."
- So, why do Buddhists pay respects to symbols representing the Buddha?

4. A big part of a life of a Buddhist is to "pay back debts" and also pay respects to those with higher wisdom. One of the first acts of the Buddha after his attaining Enlightenment was to look back at previous lives and to recall who helped him (in past lives) in his efforts to attain the Buddhahood; see, "Animisa Locana Bodhi Poojā - A Prelude to Acts of Gratitude."

- Then he spent a significant part of his early years after Enlightenment to seek and teach Dhamma to those people, as explained in the above post.
- True comprehension of Buddha Dhamma leads to the realization that the greatest gift one could have is to receive the true and pure Buddha Dhamma: the way to stop even a trace of suffering from arising.
- The worship of the Buddha (using symbols that represent him) means paying homage, veneration and devotion to him and what he represents, and not to a stone statue, a picture, etc.

5. There is a second - and equally important - aspect of paying respects to the Buddha. This is more to be experienced. When I was child in Sri Lanka, our family used to go to the temple regularly, especially on Full Moon days when bhikkhu would deliver a discourse (desanā).

- We would go to the temple ahead the scheduled delivery of the desanā, and would offer flowers to the Buddha, light some oil lamps and incense, and recite several gāthās while make those "offerings". Then we would sit and listen to an hour-long desana $\bar{a}$ by a bhikkhu.
- That really helps calm the mind and get in to a mindset where one is able to forget about the day-to-day stresses and comprehend the desan $\bar{a}$.
- The calm and serene image of the Buddha is conducive to calming one's mind, and the offerings of pretty flowers symbolize one's intention of not being attached (and not to crave for) worldly things.

6. Some people say that Buddhists worship statues, in the sense of believing that those statues have some inherent magical power.

- But such ideas are quite incorrect. Buddhists do not 'worship' Buddha statues any more than Christians worship the cross or Muslims the Kaaba.
- Like the cross and the Kaaba, a Buddha statue, a Bodhi tree, or a stūpa is a symbol that can be seen as helpful in showing devotion, uplifting and calming the mind, and thus enables one to meditate with a calm mind.

7. Now let us discuss the significance/purpose of making offerings.

- There are many kinds of offerings: meals to the bhikkhus are the most meritorious among the "giving" (dāna) category.
- Making offerings to the Buddha is also done traditionally; small portions of the food that is prepared for the Bhikkhus is first offered in the name of the Buddha, before the food is offered to the bhikkhus.
- Giving to poor or anyone in need and even feeding hungry animals are all meritorious deeds.

8. Making offerings to devas is just another category. The mechanism of how that works is hard to imagine for most people.

- I remember listening to a desanā by Waharaka Thero, where he mentioned that those food offerings can be used by higher devas to feed their underlings (there are different levels, just like in the human world). He mentioned that when people offer nice-smelling fruits etc, just after the offering, the aroma would be gone (if it is done right). That means the "essence" ( $o j \bar{a}$ ) of the food has been extracted.
- However, one does not need to offer large quantities. The higher devas can make the offering to "multiply" to feed many.
- I don't want to get into that issue right now, since this is not a critical issue, and could bring out more questions than answers. There are many things about other realms (as well as about our own realm) that we do not fully understand.

9. Offering flowers, incense, etc do not belong to that "dāna" category discussed in \#7 and \#8 above.

- In Buddhist temples, such "offerings" are made to the Buddha.
- In reality, these "offerings of the second kind" setup the necessary background for the mind to grasp the Buddha Dhamma, and thus to lead to "bhava uddha" (stopping existences in any of the 31 realms), which is the real meaning of "Buddha"; see, "A Buddhist or a Bhauddhaya?."
- For example, those flowers symbolize the anicca nature. They are pretty when they offered, but in a couple of days they become wrinkled and eventually wither away. One is supposed not to admire the beauty of the flowers, but to contemplate on the anicca nature clearly displayed by the decay of those flowers; see, "Anicca, Dukkha, Anatta."
- The incense offered emit an odor that conducive to meditation. Even though it is a pleasing odor, it is very different from those fragrances that one wears to a party, which has the tendency to encourage "seeking sense pleasures".
- In other words, those fragrances worn to a party lead to sensual thoughts, whereas the smell of incenses is conducive to meditation, since it helps calm the mind.

10. Lighting of candles or oil lamps also provide a suitable background for meditation and contemplation. Light symbolizes wisdom.

- Comprehending Buddha Dhamma leads to the opening of the "Dhamma eye", and enables one to "see the true nature of the world of 31 realms", i.e., existence in any of those realms is NOT devoid of suffering.
- Furthermore, an oil lamp symbolizes the how the rebirth process is maintained by cravings. Just as oil keeps an oil lamp burning, cravings (tanh $\bar{a}$ ) fuel the rebirth process.

11. Finally, the practice of paying respects to the Buddha using symbols representing him was started at the time of the Buddha. There are at least two accounts in the Tipitaka where the Buddha himself recommended this practice.

- First, in the Mahāparinibbāna Sutta, when it was getting close to the Parinibbāna (death) of the Buddha, Ven. Ananda asked him how people can pay respects to the Buddha after his Parinibbāna.
- The Buddha advised: "..stūpās should be made for the Buddha at the crossroads. People can offer flowers, incense, etc and pay respects, and that will be for their benefit and happiness".
- Here is the relevant section: WebLink: suttacentral: DN 16 Mahāparinibbāna Sutta (29. Ānandapucchākathā), where it is stated: "..Cātumahāpathe tathāgatassa thūpo kātabbo. Tattha ye mālaì vā gandham vā cunnakam vā āropessanti va abhivādessanti vā cittam vā pasādessanti tesaì taì bhavissati dīgharattaì hitāya sukhāya."

12. There is another sutta which describes how planting of Bodhi trees was recommended by the Buddha himself too: When the Buddha was absent from Jetavanarāma, devotees naturally missed him, so Ven. Ananda, Buddha's attendant, asked the Buddha what in his absence might be used to pay homage to him.

- The Buddha answered that bodily relics, things reminiscent of him and things that he had used, in particular the great Bodhi tree under which he had attained Enlightenment.
- Ven. Ananda then had a seed of the Bodhi Tree brought to Jetavanārāma and planted so that it would be, as the Buddha himself said, as if the Buddha were constantly present at Jetavanāräma.
- This account is in the WebLink: suttacentral: Kālingabodhijātaka; see the English translation: "WebLink: suttacentral: Kalinga-Bodhi Jātaka."

The bottom line is that just like giving (dāna) or living a moral life, paying respects to the Buddha via any of those different ways cannot directly lead to Nibbāna (magga phala). But all of them can help set the background for one to get to the mindset that makes it easier to comprehend the deep Dhamma of the Buddha.

## XIX About Author

Revised March 9, 2017; April 14, 2018; November 10, 2018; August 13, 2019

My name is Lal Ariyaratna Pinnaduwage. I loved physics from the school days and became a physicist, and became a Senior Scientist at the Oak Ridge National Laboratory and a Research Professor at the University of Tennessee, Knoxville. I was elected a Fellow of the American Physical Society in 2004. Since retiring in 2009 at age 55 , I have been on a quest to uncover the pure Dhamma of the Buddha.

Even though I am a Buddhist by birth, I did not really "practice" until I retired. Initially, it was to find out what "Buddhism" really was, and how it compared with other world religions.

- I provided the above description in keeping with my intention to be fully open. Also, I intend to make the website "as experienced" by myself. I will specifically mention what I have not experienced as such. I will record my progress in these web pages as much as advisable. (Not everybody will have the same kind of experiences related to samādhi, jhāna, or magga phala).
- What I have found is that Buddha Dhamma is different from not only other religions but also many forms of "Buddhism" that we have today. Other religious and cultural influences have contaminated even the Theravāda version.

In July 2013, I accidentally came to know about new interpretations of anicca, dukkha, anatta (true Nature of existence). It was "the main missing piece" for me. I will never forget the ecstatic feeling while listening to that fateful desanā from one Thero on July 30, 2013, on the internet. I made a trip to Sri Lanka and was able to get more information, even though I was not able to meet Venerable Waharaka Abhayaratanalankara Thero, who had uncovered the actual teachings. What I present here is this complete picture, with my input from my science background.

- Waharaka Thero passed away on February 9, 2017; see, "Parinibbāna of Waharaka Thero." A large number of his desanās available at "waharaka.com" (explore the top menu!). Unfortunately, those desanās are available only in the Sinhala language.
- As in science, here, I am going to treat Buddha Dhamma as a theory and explore whether it provides a consistent picture of our world. Buddha Dhamma is a complete worldview and its principles are the laws of Nature. Scientists have uncovered only a fraction of these laws, and only those about inert matter. But mind precedes matter.

I hope is that I can give you a taste of the exhilarating experience that I have enjoyed over the past several years in uncovering the pure Dhamma. Buddha Dhamma is indeed for those who seek to broaden their horizons. You will truly gain benefit from this site if you leave behind any preconceived ideas about "Buddhism."

- Above all, I wanted to convey the truth of the fact that one CAN experience the "cooling down" or "Nivana" or "Nibbāna" at various levels as one LEARNS AND LIVES the pure Dhamma. That is not something to be attained in future lives but is something that one CAN experience in this very life by cleansing one's mind. What I describe here is what I have experienced, to a large extend.
- Most people do not like to talk about their "spiritual experiences," and that is understandable. But I think it could be beneficial to others if I describe my progress to get an idea of what to expect. A brief description of my progress is given in, "10. Attaining the Sotāpanna Stage via Removing Ditthasava" and the posts mentioned there. This will also provide a context for the material presented at this website. Please be aware that each person's experience is different.
- Please ask your questions at the discussion forum; see below. If you have a questions of personal Nature, you can send it to me at: lal@puredhamma.net.
- Buddha Dhamma is a self-consistent description of the Nature's laws, and if there are any inconsistencies in these pages, they are due to my own mistakes and I should be able to correct them. I do revise these posts on a continuously as my own understanding improves.

The Buddha said, "Sabba dānaì Dhamma dānaim jināti", or "Gift of Dhamma excels all other giffs." Please inform others about this site if you benefit from it.

December of 2017: Discussion forum initiated: "Forum."
Updates and new posts at " 2 - General Information and Updates."
March 2018: A new section on "Quantum Mechanics and Dhamma."
November 10, 2018: There are over 500 posts at the site as of today. There are two ways to find relevant posts on a given concept/ topic.

- All posts are under sections and subsections; see "Pure Dhamma - Sitemap." One could scan through it to locate relevant posts.
- The "Search" button at the top right is also good at extracting relevant posts for a given keyword or keywords.

July 2019: New sub-section on "Origin of Life."
April 2020: Re-writing of the section on "The Five Aggregates (Pañcakkhandha)."

## xx Quantum Mechanics and Dhamma

March 13, 2018
This section will discuss two issues:

1. A new interpretation of quantum mechanics (QM) based on non-locality is presented based on Feynman's ideas. Concepts like wave-particle duality, observer effect, are not needed. Furthermore, complex interpretations like the "Many-Worlds interpretation" are avoided. All existing experimental data will be shown to be consistent with this interpretation.
2. A deeper understanding of how kamma automatically lead to corresponding kamma vipāka in Buddhism (Buddha Dhamma), becomes clear with this interpretation.

- Quantum Mechanics and Dhamma - Introduction
- Quantum Mechanics and Consciousness
- Will Quantum Mechanics Be Able to Explain Consciousness?
- The Observer Effect in Quantum Mechanics
- Quantum Mechanics - A New Interpretation
- What Is a Wave and What Is a Particle?
- Photons Are Particles Not Waves
- Basis of the Proposed Interpretation - Feynman's Technique in QED
- Feynman's Glass Plate Experiment
- Feynman's Method of "A Particle Exploring All Possible Paths"
- "Exploring All Possible Paths" Leads to Fermat's Principle of Least Time
20.1 Quantum Mechanics and Dhamma - Introduction

March 13, 2018; revised January 9, 2019; November 15, 2019; June 5, 2021; August 10,2022

## Introduction

1. This section will discuss two issues:
a. A new interpretation of quantum mechanics (QM) based on non-locality is presented, where wave-particle duality is an incorrect and unnecessary assumption. All existing experimental data are shown to be inter-consistent with this interpretation.
b. This interpretation can lead to deeper insights into the relationship between kamma and kamma vipāka in Buddhism (Buddha Dhamma.)

## Relevant Work of Richard Feynman

2. I started working on this project to provide a new interpretation of quantum mechanics based on some new and exciting experimental observations within the past 20 years. I aim to provide a simple explanation with only a few mathematical equations. This work is an extension of the work of the late physicist Richard Feynman.

- To understand this material, one must have a high-school level physics background. Only those who have some background QM can follow the content here.
- I would NOT recommend anyone to start learning QM to follow this section. It is better to spend that time learning Buddha Dhamma. But of course, anyone may be able to get a general idea. Just read the first several posts and see.
- At the end of this project, I believe that a deep connection to Buddha Dhamma can be made, especially regarding how kamma vipāka materializes naturally due to one's kamma.

## Going "Against the Grain" of Scientific Consensus

3. When I started working on this project over two years ago, I had conversations with Professor Gayanath Fernando. We tried to get a paper published on the proposed interpretation of QM. However, we were unable to convince the reviewers, and the article did not get published. I am attaching the pdf of the last version here: "WebLink: PDF file download: A Self Consistent Interpretation of Quantum Mechanics Based on Nonlocality."

- But it got rejected from several journals because physicists refuse to believe that the "light speed barrier" can be broken: Einstein's relativity theory says nothing can propagate faster than light.
- Our point is that nothing actually "travels" between the two "connected electrons." They are intrinsically connected.
- However, it is ironic that the nonlocality of Nature was firmly established in 2015, as we discussed in the above paper.

## Fundamental Ideas

4. Let me try to give the gist of the mechanism: There are techniques to create two electrons simultaneously with two opposing spins (say A with spin up and B with spin down). Then they can be sent even to opposite ends across the universe and remain "entangled."

- What does it mean that A and B remain "entangled" even when separated by great distances? That means if the A's spin flips, then B's will flip AT THE SAME TIME. It is as if they can instantly interact across the universe.
- The basic idea is that the two electrons will stay "connected" no matter how far apart. This idea is called "non-locality." An external website provides a good introduction: "WebLink: physicsoftheuniverse.com: Nonlocality and Entanglement."
- More information on the basic idea at: "Quantum Entanglement - We Are All Connected."

## Kammic Influences Have No Space Limitations

5. II want to develop this idea to show that kammic energy has instantaneous influence across the universe. If particles have this "connectedness" in Nature, extending it to the mental realm is natural.

- The bridge is the kammic energy (also called viññāna). We create these energies in our minds with javana citta. That is a subject matter in Abhidhamma; see, "Nāma \& Rūpa to Nāmarūpa."

6. In this section, I will discuss the implications of this new interpretation of QM for Buddha Dhamma and try to provide some key ideas. A key issue that keeps coming up in the discussion forum is what intention in kamma is and how Nature "knows" the connection of the person committing the kamma to the person affected by that kamma.

- For example, consider person X, who was adopted and brought up by foster parents soon after birth and is unaware he is adopted. Suppose X kills his biological father later on, of course, without knowing that it was his father. It is still an anantariya kamma. Since Nature automatically manages kammalkamma vipāka, how would Nature know the connection between those two people?

## Confirmation From Recent Experiments In QM

7. That is the crucial question we may get some clues from QM. Nonlocality is a key feature of the proposed interpretation of QM. I will explain what is meant by nonlocality in future posts (see also, "Quantum Entanglement - We Are All Connected"). Nonlocality of Nature automatically enforces kamma/kamma vipāka.

- Of course, the Buddha had not mentioned this mechanism because, at that time, it was impossible to explain concepts like quantum entanglement.
- Furthermore, it is not necessary to know such details. But since we are at a point in making this connection, it is better to do so. That could help build confidence in Buddha Dhamma.

8. I plan to write several posts in this section laying out the basic ideas and welcome comments from knowledgeable readers familiar with quantum mechanics concepts. I have opened a new forum entitled "Quantum Mechanics - A New Interpretation" at the discussion forum to discuss each published post.

- Anyone will be able to read these posts and also the posts in the discussion forum. However, one needs to register at the discussion forum to ask questions or make comments. Forum registration instructions at "WebLink: General Information and Updates."
- Now, let us discuss the key idea briefly behind the proposed connection of kamma vipāka to QM.

## The Intention in Kamma - Connection to Quantum Mechanics

1. Two key steps are relevant in evaluating how to assess a kamma vipāka:
i. Which of the dasa akusala is the intention? For example, it could be taking a life, stealing, harsh speech, etc. Who is affected is not involved in this step. The "cetana" in "cetana ham bhikkhave kammaín vadami," is just which dasa akusala (and associated cetasika) are in one's mind when one is committing that kamma. That is all.
ii. Then the strength of the kammā vipāka is based on the "level of consciousness" or "moral qualities" of the living beings affected by that kamm $\bar{a}$. For example, killing a human will bring stronger kamma vipāka than killing an animal. In the same way, giving to an Arahant will be much more worthy than giving to an average human.

That is the best way to analyze any given situation.
2. In another example, in the recent discourse on Tilakkhaṇa, I discussed the case of a person killing a bunch of people with a bomb; see Discourse 2 in "Three Marks of Existence - English Discourses."

- His intention (cetanā) was to kill. Thus the dasa akusala involved is "pānatipāta," that of taking a life.
- Now to the second step. That person may not even know who was killed. By some coincidence, if the bomb killed one of the killer's parents, he would have done a $\bar{a} n a n t a r i y a ~ p \bar{a} p a ~ k a m m \bar{a}$. If an Arahant was killed, the same. If a Sotāpanna were killed, it would not be a ānantariya kammā, but still equivalent to killing thousands of normal humans.
- So, it is important to understand that "cetana"" is which of dasa akusala are in one's mind when a kamma is committed. It could be more than one. In the case of the bomber, there is miccha dittthi, and likely greed also, in addition to "pānātipātā."
- One can analyze various situations with the above two steps.

3. We know that there are five annantariya kammā. Those are so grave that one will be subjected to their vipäkain the very next life in the niraya (lowest realm.) They are, killing one's mother, killing one's father, killing an Arahant, injuring a Buddha, and causing a schism in the Sañgha (which really means trying to propagate a wrong version of the Buddha Dhamma).

- Since killing an average human is not a annantariya kamm $\bar{a}$, it is clear that the "strength of the kamm $\vec{a}$ " depends on who got killed.
- Kamma vipāka for committing any other offense is similar. Hurting an Arahant would be a million-fold stronger kamma than hurting an average human. Thus, logically, beating an Anāgāmi, a Sakadāgāmi, or a Sotāpanna would have corresponding levels of consequences.
- The "value of a life" depends on the "mental status" of that life-form. Any life is not the same. It is impossible to compare the value of an animal's life with that of a human. There are huge variations among animals, and we can easily see that a gorilla or a dog is "more sentient" than a worm.
- However, we must remember that we all were born lowly-worm. So even though we need to keep in mind that there is a variation, we should never take the life of ANY sentient being intentionally (unnecessarily).

4. Regarding the issue of "how would one know" the status of the living person affected by one's actions, that does not matter. "Nature" would know.

- This point of "we are all inter-connected" is now proven by quantum mechanics: "Quantum Entanglement - We Are All Connected."
- That is a key factor in understanding kammā/vipāka. The proposed interpretation of QM can show this at an even deeper level.

5. The above discussion is a part of the post, "Details of Kamma - Intention, Who Is Affected, Kamma Patha." You may want to read that to get more information.

- Another relevant post is, "What is Kamma? - Is Everything Determined by Kamma?."

6. We will start a discussion on QM with the next post. These days there is so much confusion about whether a photon is a particle or a wave, i.e., "wave-particle duality" in QM. I will address the issue of wave-particle duality in the next few posts.

- We will define what is meant by a wave and what is meant by a particle. Furthermore, many people confuse a "wave function" with a "wave." A wave function is a mathematical concept that can REPRESENT the motion of a particle; it is not a wave.
- We will show that a photon is a particle, not a wave. It does not have dual Nature (particle and wave Nature), even though a wave function can represent it.

As I always say, one needs to know (or define) such fundamental entities before tackling more in-depth issues. Otherwise, we will get bogged down in redefining what a particular word means in the middle of a discussion.

### 20.2 Quantum Mechanics and Consciousness

March 20, 2018
Will Quantum Mechanics Be Able to Explain Consciousness?
The Observer Effect in Quantum Mechanics

### 20.2.1 Will Quantum Mechanics Be Able to Explain Consciousness?

March 20, 2018; revised March 12, 2021; April 18, 2022

## Quantum Mechanics and Consciousness Are Both "Mysterious"

1. Quantum mechanics $(\mathrm{QM})$ has some features (quantum entanglement, Heisenberg uncertainty principle, etc.) that make it appear "mysterious" compared to classical physics, where the predictions are intuitive and transparently deterministic.

- The "hard problem in consciousness" (discussed in philosophy) is also mysterious, just like quantum phenomena: the question of how consciousness can arise in a brain made of inert matter.
- When quantum mechanics emerged in the early 1900s, many people started tying the two together and speculating that the newfound quantum theory would explain how consciousness arises in the brain.

## Attempts to "Explain" the Origin of Consciousness With Quantum Mechanics

2. There have been several such QM -based theories proposed to explain consciousness.

- Several popular books recently published emphasize the possible role of QM in generating human consciousness (Walker, 2000; Penrose et al., 2011; Rosenblum and Kuttner, 2011; Stapp, H., 2011).
- A recent review paper: "WebLink: PDF File: Neural correlates of consciousness- Koch et al.- 2016."
- Another proposed approach, for example, is based on consciousness originating in microtubules in neurons: "WebLink: PDF File: Consciousness in the universe - Hameroff, and Penrose-2014."
- However, those are just unverified "theories." They will NEVER be proven to be correct. The Buddha explained that the mind is the precursor to everything in this world. Nothing in the brain can give rise to consciousness. See, "Origin of Life."

## Philosophers Are Starting to Realize

3. Other than such activities in science, a hot topic in current philosophy is "how consciousness arises in a material brain." Most philosophers are physicalists and believe that a physical (matter) basis can explain all phenomena. For a collection of discussions with several philosophers, see (Blackmore, 2005).

- As David Chalmers pointed out in 1994 at the first Tucson conference on consciousness: "The hard problem...is the question of how physical processes in the brain give rise to subjective experience" (Chalmers, 1995).
- The problem in philosophy (and in science) then is to figure out how the "subjective" consciousness arises from "objective" matter. That is an impossiblility.

4. This critical bottleneck was also emphasized by Thomas Nagel (Nagel, 1974) even earlier in his famous essay, "WebLink: PDF File: What Is It Like to Be a Bat- Nagel- 1974". As he pointed out at the end of the paper, "...it seems unlikely that any physical theory of mind can be contemplated until more thought has been given to the general problem of subjective and objective. Otherwise, we cannot even pose the mind-body problem without sidestepping it".

- The difference between "subjective" and "objective" is becoming clear with the neuroscience research done, especially in the past decade. We will discuss those new developments below. Subjectivity plays a vital role in cognition (consciousness), and the question is how that can arise from an "objective" material base.

## Subjective versus Objective: Difference between Mind and Matter

5. To clearly state the issue we intend to address, we need to clarify the distinction between "objective" and "subjective."

- Objective means one's personal opinions and biases do not come into play. It is easy to be objective about the physical properties of matter: We all agree what the length, weight, density, color, etc., of a given object, is. We have developed standard procedures for measuring them. Therefore, no matter who makes the measurement, the same answer will result.
- Thus we all agree (unless one is color blind) that a particular rose is red; that is also objective.

## What Is Subjective?

## 6. Then, what is subjective? Those are personal opinions that can vary from person to person.

- For example, if you ask the opinion about politician X, some will love him, some will hate him, and others will be somewhere in between.
- The same is true about politics, religions, foods, smells, books, movies, etc. All those are subjective.
- In Buddha Dhamma, those subjective opinions arise because different people have different "gati"; see, "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsavas)."

## Science Is Based on Objective Assessments

7. We have a thriving science and technology field because we deal objectively (and thus rationally) with the inert matter in such cases. Therefore, we can lay out an experiment in detail and then carry it out anywhere by any team of competent scientists who design and carry out experiments objectively. They will get the same result (within experimental uncertainties).

- Science and technology would not flourish if such experiments did not produce consistent and repeatable results.

8. Science is focused on "material phenomena" involving inert matter. Scientists can send a rocket to the Moon. That only involves the motion of objects that strictly follow the laws of motion. Therefore, it is clear that objective assessments are much more straightforward than subjective assessments.

- By definition, we all cannot agree on something subjective. We place different values on things and have different opinions based on our value systems.
- One would think that it should be easy for science to figure out how objective assessments may take place in our brains. But even that is more complex than we would think.

## The Mystery of Consciousness

9. For example, neuroscience cannot explain how our brains even discern a rose as "red," i.e., how inert neurons can give rise to an "experience" even if it is objective. Explaining subjective experiences is much more challenging.

- This root problem, even in handling such essential aspects of "qualia," has been pointed out by several philosophers and scientists over the years; see, for example, Noe and Thompson (2004), Bitbol (2008), Miller (2014), Aru and Bachmann (2015), and references therein.
- As these authors point out, currently, efforts are focused on investigating just neural correlations of consciousness. But finding a neural constitution of consciousness (how consciousness arises) appears impossible (and it is!).
- It is impossible because consciousness is not in the physical body. It is in the mental body (gandhabba); see, "Ghost in the Machine - Synonym for the Manomaya Kāya?."

## How Does Consciousness Arise?

10. Can an inert brain identify a color? How can a brain feel pain? Those are critical problems.

- Furthermore, "the actual problem of consciousness" is much more complex because the feeling that arises upon seeing a red-color object can be different for different people; some like red clothes to wear, for example, and some don't.
- Thus, those feelings and perceptions arise due to a sensory experience that is truly subjective. Material phenomena are, by definition, objective.
- Until recently, neuroscience had not been able to recognize the existence of mental attributes such as emotions, feelings, and perceptions. The availability of precision neuro-imaging methods has enabled an explosion of activity in those areas basically within the past decade; see, for example (Lindquist and Barrett, 2012; Bird and Viding, 2014; Klasen et al., 2014; Lamm and Majdandzic, 2015). However, these studies can point out only neural correlates (not neural constitution) of these mental qualities.

## Subjective Experiences Are Impossible to Explain With Modern Science

11. Therefore, even if we solve the "hard problem" associated with discerning fundamental aspects of "qualia" (such as experiencing "redness of a rose"), that will still not solve the problem of the "subjective experience." The neurons in each person's brain must have their own set of unique "characteristics" to provide the "subjective experience." Yet, neurons are neurons. How can person X's neurons be different from those of person Y ?

- Thus the difference between mind and matter is much deeper than just "qualia" (redness of a rose). Emotions that arise in the mind (happiness, sadness, greediness, hatefulness, jealousy, etc.) are complex and personal. The mind is complex.
- The problem in trying to explain the mind phenomena with inert neurons in the brain has its root in trying to explain complex "subjective mental phenomena" with an ontologically different "objective" material base (neurons).
- The Buddha has explained that those feelings arise not in the physical body but the mental body (gandhabba).; see "Mental Body - Gandhabba."

12. In any case, we are focusing on even a narrower aspect in this paper, i.e., the role of quantum mechanics.

- There is no evidence for a correlation between the mind and quantum phenomena, let alone a causal connection.
- Results of QM experiments do not depend on the "subjectivity" of the person conducting those experiments simply because truly subjective decisions are not involved in such experiments.

13. Subjective decisions are very personalized, like voting liberal versus conservative, buying versus selling a given stock, OR liking versus disliking a given food-zillions of such choices that are truly subjective.

- Quantum mechanical experiments do not involve such subjective decisions, and the outcome is the same regardless of the experimenter. In science, the reproducibility of experimental results is the final arbiter. Quantum mechanical measurements are reproducible.
- That is the key to realizing that quantum phenomena have nothing to do with the mind. Quantum phenomena may be different than "classical phenomena," but they are reproducible.

## Both Classical and Quantum Phenomena Are Objective and Deterministic

14. Transparently, "deterministic" classical physics (Newtonian mechanics) did not come even close to explaining the "subjective" consciousness. But the emergence of QM with its "unusual aspects" immediately led many to infer that it may be able to explain the equally "mysterious" consciousness.

- Since the 1920s, attempts have been made to rationalize the "unusual" nature of QM and ideas emerged from the physics community itself that conscious observations could affect the outcomes of an experiment (e.g., the "observer effect"); see "The 'Observer Effect' in Quantum Mechanics." Recently, such ideas have been adopted to explain the origin of consciousness itself.
- We will summarize the existing experimental results in future posts to show that there is no evidence to suggest that quantum mechanical phenomena are even related to consciousness, let alone explain consciousness.

15. Quantum phenomena have characteristics that are very different from classical phenomena (described by Newtonian mechanics). Still, both quantum and classical phenomena are objective. There is no evidence of quantum phenomena having anything to do with subjective consciousness.

- The phrase "non-deterministic" (or "indeterminacy") for quantum phenomena is a misleading one. It gives the impression that the results of QM experiments cannot be pre-determined. That is false.
- Even though many "classical experiments" have just one outcome, that is not true in all cases. For example, in chaos theory, one can calculate only probabilities.
- Similarly, in QM experiments, one can calculate only probabilities, but those predictions are ALWAYS consistent with experimental measurements. Therefore, it is misleading to label QM phenomena as "non-deterministic."

## All QM Experiments Are Objective

16. All QM experiments conducted have been objective. Subjective consciousness does not play any role in those experiments. A given QM experiment may yield different results based on the experimental conditions.

- There is no "intrinsic subjectivity" in those experiments other than the possibility of a range of outcomes (with known probability) due to the Heisenberg uncertainty principle.
- An experiment conducted under the same conditions will yield the same result is obtained regardless of the experimenter-no connection to the observer's consciousness. Many try to use the famous double-slit experiment to show such a connection, but that is incorrect. See, "The Double Slit Experiment Correlation between Mind and Matter?"
- We will continue this discussion in the next post, "The Observer Effect in Quantum Mechanics."

We can discuss any questions on these posts on QM at the discussion forum: "Quantum Mechanics - A New Interpretation."

### 20.2.2 The Observer Effect in Quantum Mechanics

March 20, 2018; revised April 20, 2022

1. The "observer effect" - sometimes called the "measurement problem"- in quantum mechanics is the problem of how (or whether) wave function collapse occurs. But the whole point is that there is no need for a "wave function collapse," as we explain in this post.

- Let us start with what is meant by "wave function collapse." It is always good to start with the basics.
- Please read the previous post, "Will Quantum Mechanics Be Able to Explain Consciousness?", including the section there on "Subjective versus Objective: Difference between Mind and Matter."

2. The wave function in quantum mechanics evolves deterministically according to the Schrōdinger equation as a linear superposition of different states. But actual measurements always find the physical system in a definite, well-defined, state. Therefore, it seems that at the time of the measurement all those multiple states should collapse to just one (the observed).

- This is known as the "observer effect" since an observer is needed to make a measurement (and thus "cause a collapse").

3. Even if such an "observer effect" exists, just the mere decision to make a measurement does not make such a measurement "subjective" in terms that we defined the term subjective in the post, "Will Quantum Mechanics Be Able to Explain Consciousness?".

- There is no "measurement problem" because the "personal" mental state of an observer does not play a role.
- In these quantum systems one can calculate only the probability of a given outcomes. If one carries out a large number of measurements, that outcome will be consistent with that prediction.
- That is quite similar to throwing a dice. We can only say that it will land on " 5 " about 1 out of six throws since the dice has six faces.
- Anyone can initiate such measurements and will get the same result. Furthermore, a given experiment can be run by a computer program, and a conscious observer is not needed.

4. This controversy over an "observer effect" arises in the first place because of the assumption that the wave function is "ontic", i.e., it has all the correct information about the particle in it.

- But this assumption has been rejected by Einstein and many others including Bell: "..Either the wavefunction, as given by the Schrodinger equation is not everything, or it is not right." (Bell, 1987, p. 201).

5. Furthermore, this requirement to "collapse the wave function" or the involvement of an "observer" is absent in Bohmian mechanics, a version of quantum theory discovered by Louis de Broglie in 1927 and rediscovered by David Bohm in 1952 (Bohm, 1952).

- In Bohmian mechanics a system of particles is described in part by its wave function, evolving, as usual, according to Schrōdinger's equation. But a complete description is provided by specifying actual positions of particles by a "pilot wave" or a "guiding wave." Bohmian mechanics tracks the trajectory of a particle in real-time and there is no need for a "wave function collapse."

6. A key experiment that led to the concept of an "observer effect" is the famous "double-slit experiment."

- However, in recent double-slit experiments (Kocsis et al., 2011; Schleich et al., 2013b) monitored individual trajectories of particles, and any possibility of a "mind effect" or "observer effect" was ruled out.
- Their results were consistent with the trajectories of individual particles calculated with Bohmian mechanics.

7. Bohmian mechanics naturally describes all possible paths. Each one can be assigned a probability, and experimental outcomes are in agreement with those probabilities.

- So, the measurements are deterministic om the following way. The outcome is compatible with the predictions in a series of measurements. Those measurements are objective.
- A detailed description of Bohmian mechanics is in (Durr, Goldstein, and Zanghi, 1992).

8. Physicists have been slow to use Bohmian mechanics because it involves more work (solving the pilot wave equation), but there has been a renewed interest in recent years.

- We have done a literature survey on the Science Citation Index and found that interest in Bohmian mechanics seems to have accelerated starting around the turn of the century. The total number of publications from 1992 to 1999 was 52. From 2000-2005, 2006-2011, and 2012-2017 had 134, 174, and 200 papers published. Thus, even though it took time to gain traction, Bohmian mechanics now seems to be attracting attention.

9. Furthermore, a series of recent papers have illustrated the beautiful connection between classical mechanics and quantum mechanics; see, for example, (Field, 2011; Taylor, 2003, Hanc et al., 2003), which was initially pointed out by Feynman (Feynman, 1948).

- These and other papers show how the "sum over all possible paths" by Feynman in quantum mechanics (Feynman, 1948) converges to the "path of least action" in classical mechanics at the limit h (Planck's constant) approaching zero. Thus classical mechanics is just a limiting case of quantum mechanics.

10. Other have described how the Schrōdinger's equation comes out naturally from classical mechanics (de Gosson and Hiley, 2011; Field, 2011; Schleich et al., 2013a).

- The so-called "quantum weirdness" arises due to the effects of the Heisenberg uncertainty principle, which becomes non-negligible when " h " in the equation is non-negligible in the microscopic realm.

11. Therefore, there is no connection to human consciousness in QM experiments. Quantum mechanical experiments always provide consistent results that are not subject to or even related to the "conscious state" of the observer.

- The need for a "personal" or subjective conscious mind is not even needed. A computer program may randomly decide when to initiate/terminate a measurement and get the same result.

## Quantum Phenomena May Be "Weird" but Nothing to Do with Mind

Quantum phenomena, just like some phenomena in relativity, seem "unusual" to us since they were uncovered only since 1900, and are not of common occurrence. But they all involve the behavior of inert matter at a small scale (quantum phenomena), and speeds approaching the speed of light (relativity). This unusual behavior has nothing to do with the human consciousness; that is how Nature works in the microscopic realm.

1. Two issues need to be separated:
(i). Do quantum phenomena display characteristics that are very different from phenomena displayed by classical (Newtonian) systems?
(ii). Do quantum phenomena provide any evidence that they are related to mental phenomena (i.e., are they affected by the particular state of mind of the experimenter?).
2. The answer to (i) above is unequivocal "yes". The experiments discussed below have characteristics that are alien to the phenomena displayed by Newtonian or classical systems.

- However, QM is not alone in that respect. The two theories of relativity also apply to phenomena that are not compatible with classical phenomena: time dilation and length contraction are prominent examples.

3. In both relativity and QM, observer's mental state does not play a role.

- For example, relativity predicts that if a person takes off in a rocket, travels at speeds close to speed of light for an extended time, and return, he will find that those on Earth have aged much more than him. That is called time dilation.
- However, if two people travel at similar speeds for a specific time and come back, the time dilation experienced by both will be the same.
- In the same way, if two different people conduct any of those "weird" QM experiments, they will get the same result.

4. In both cases of QM and relativity, the results may be "weird" by classical standards. However, there is no involvement of the "consciousness of the observer." The apparent "weirdness" in QM goes away smoothly as the Plank's constant (h) becomes negligibly tiny (and in relativity when the speed low).

- There is no "mind effect" or "observer effect" in the sense that the observer's subjectivity affects the results of either type of experiment,. There are no subjective decisions to be made during an experiment.
- By definition, result of an experiment is not reproducible unless an experimenter is truly objective.

5. In other words, all quantum phenomena and those explained by relativity are objective, just like classical phenomena.

- On the other hand, mind phenomena CAN BE subjective. As discussed earlier, when describing physical properties of matter, two people can be objective, i.e., they report the same length, weight, etc., for the object. But their PERCEPTION of a given person X, or a given food or music, etc., could be very different. Those are subjective.
- For example, consider two people with opposing political views (A and B). Each runs into a politician C who has views compatible with those of A. Person A will be happy to meet C and may go up to C , shake his hands and talk to him enthusiastically. On the other hand, Person B will automatically have irritable thoughts about C and is likely to avoid C .
- What properties of neurons in A and B could lead to such a huge difference in feelings and intentions (consciousness) upon seeing the same person?
- Such subjective mental states do not play a role in carrying out experiments, whether quantum or classical. But they do play critical roles in making decisions in everyday life.

6. Therefore, those two issues need to be handled separately. Quantum phenomena have characteristics that are very different from classical phenomena, but both quantum and classical phenomena are objective. There is no evidence of quantum phenomena having anything to do with the subjective consciousness.

- The crucial distinction that we need to realize here is that the phrase "non-deterministic" as applied to such QM experiments is incorrect. For example, some measurements may not provide the exact location of a particle. There could be many possible locations for that particle, but they can all be accurately predicted with associated probabilities.
- Those experiments have no "intrinsic subjectivity" in those experiments, other than the indeterminacy depicted by the Heisenberg uncertainty principle. The same investigation conducted under the same conditions will yield the same result. It does not matter who experiments, i.e., consciousness of the experimtnter does not play a role.

Any questions on these QM posts can be discussed at the discussion forum: "Quantum Mechanics - A New Interpretation."

### 20.3 Quantum Mechanics - A New Interpretation

March 13, 2018; revised December 8, 2020

1. A new interpretation of quantum mechanics ( QM ) based on nonlocality and realism is presented, where wave-particle duality is shown to be an incorrect and unnecessary assumption.

- In our proposed interpretation, appropriate wave functions are established instantaneously across space per nonlocality.
- Nonlocality of Nature is hard for many to accept, but it is valid in three key experiments conducted in 2015.
- All existing experimental data, including those, are shown to be inter-consistent with this interpretation.

2. I will systematically expand the arguments given in the above paper (in \#3 below) in a series of posts on the website. The following are the posts published so far. It would be helpfil to read these posts first since they provide key ideas.

## What Is a Wave and What Is a Particle?

## Photons Are Particles, Not Waves

## Basis of the Proposed Interpretation - Feynman's Technique in QED

- Feynman's Method of "A Particle Exploring All Possible Paths"
- "Exploring All Possible Paths" Leads to Fermat's Principle of Least Time

It may be a good idea to read the following posts as well:

- Will Quantum Mechanics Be Able to Explain Consciousness?
- The Observer Effect in Quantum Mechanics

3. When I started working on this project over two years ago, I had conversations with Professor Gayanath Fernando. We tried to get a paper published on the proposed interpretation of QM.

- However, we were unable to convince the reviewers, and the paper did not get published. The pdf of a recent version can be downloaded here: "WebLink: PDF File: A Self Consistent Interpretation of Quantum Mechanics Based on Nonlocality."
- The reviewers' main objection of the reviewers seemed to be the nonlocality argument, and some were reluctant to reject the "wave-particle duality." I will be discussing those and other issues in detail in this section.
- However, it is ironic that the non-locality of Nature was firmly established in 2015, as we discussed in the above paper.

4. I plan to write a series of posts in this section and welcome comments from knowledgeable readers who are familiar with concepts in quantum mechanics. I have opened a new forum entitled, "Quantum Mechanics - A New Interpretation" at the discussion forum in order to discuss each post that is published.

- Anyone will be able to read these posts and also the posts at the discussion forum. However, one needs to register at the forum to ask questions or make comments. Forum registration instructions can be found at, "WebLink: General Information and Updates."
- Now, let us discuss briefly the key idea briefly behind the proposed connection of kamma vipāka to QM.
- Feynman's Glass Plate Experiment
- Feynman's Method of "A Particle Exploring All Possible Paths"
- "Exploring All Possible Paths" Leads to Fermat's Principle of Least Time

### 20.3.1 <br> What Is a Wave and What Is a Particle?

## March 13, 2018; revised April 18, 2020 (added video in \#7); August 28, 2022

1. Waves involve the transport of energy without the transport of matter. When you drop a pebble onto a water reservoir, you can see the ripples move out. There is no water displacement from one place to another, but the disturbance moves out.

- Therefore, a wave can be described as a disturbance that travels through a medium, transporting energy from one location (its source) to another without transporting matter.
- On the other hand, a particle can move and transfer matter. The most important characteristic of a particle is that its position is localized at any given time and is detected as a single detection event or a "single click" on the detector. That means a "whole particle" arrived at the detector.
- Those are the ways waves and particles were expected to behave before the advent of quantum mechanics. But starting around 1900 , our ideas about waves and particles became somewhat confusing due to many drastic changes that took place over many years.

2. The fundamental concepts in quantum mechanics (QM) were worked out roughly from 1900 to 1930. Andrew Whitaker gives a good description of the evolution of QM within this period and beyond in his book "Einstein, Bohr and the Quantum Dilemma" (second edition, 2006).

- That book describes how the keywords like waves, particles, and wave functions related to QM evolved. Some of the old - and unnecessary - concepts like "wave-particle duality" linger because of the impressions made at that time.
- Experiments carried out within the past 20-30 years (some key experiments within the past few years), show that such lingering ideas on "wave-particle duality" are an obstruction to grasping the reality revealed by QM.

3. For a long time, the light was thought to be a wave, specifically an electromagnetic wave. That idea still lingers on.

- Light consists of particles (photons.) That was firmly established only in 1986. See "Photons Are Particles Not Waves."
- The most distinguishing characteristic of a particle is that its detection is recorded as a single event ("a click") at the detector.

4. However, the motion of a particle - including a photon - can be represented by a wave function, which is a mathematical function, not a wave. A wave function is extremely useful for calculating experimental results but does not have a physical reality. Rather it represents the physical reality.

- It is easier to see the differences among the terms waves, particles, and wave functions by looking at what happens when waves and particles go through two adjoining slits.

5. When normal particles that we are familiar with go through two slits and fall on a screen to make their imprints, we will see two "line images," as shown on the left in the figure below. On the other hand, a wave (like a water wave) will give rise to "fringes," as shown on the right.

- In normal life, we will see particles (say marbles) going through two large slits leading to those marbles hitting the screen, as shown on the left
- With a water wave going through two slits, we will see ripples giving rise to water wave crests as shown on the right.

Those are the scenarios with normal particles and normal waves.
6. If quantum particles (like electrons or photons) are going through two slits where slit openings are LARGE (say a cm or more), then we will again see the "normal particle pattern" shown on the LEFT.

- However, if quantum particles (like electrons or photons) are going through two slits where slit openings are SMALL (say less than an mm ), then we will see the "wave pattern" shown on the RIGHT. If the aperture dimensions are of the order of $\mathrm{h} / \mathrm{p}$ (where $\mathrm{h}=$ Planck's constant and p is the particle's momentum), then such diffuse wave patterns can be expected.
- Those experimental results can be CALCULATED in such cases by using wave functions to represent the motion of such particles.
- However, a particle is never spread out. A given particle will always be detected at a certain point within that diffraction pattern. To get that diffraction pattern, one must repeat the experiment with a single particle many times.

7. April 18, 2020: Here is a youtube video that simply explains the above: WebLink: youtube: Electrons aren't actual waves

We will discuss the above and the following related issues in detail in this section: "Quantum Mechanics and Dhamma."

## Light is a Wave or a Particle?

8. Newton's concept of light consisting of particles prevailed for a long time in the early days. But Newton's corpuscular theory of light was abandoned around 1850 because it could not explain interference and diffraction phenomena Young and Fresnel showed that the wave picture could explain those experimental results.

- However, a wave needs a medium to support it. A "water wave" propagates in water, and a sound wave can propagate in a solid or a liquid and needs at least air to propagate. Still, light can travel in a vacuum, and therefore the existence of a yet unknown "aether" was proposed as the all-pervading medium through which light could propagate.
- The "ether theory" itself ran into several objections, and was finally abandoned after the famous Michelson-Morley experiment performed in 1887 conclusively proved the absence of an aether.

9. Now we know that light doesn't need a medium through which to travel. Furthermore, the speed of light is constant. It is independent of the movement of the source or detector or the direction in which it travels, as shown by Einstein's theory of relativity (discovered in 1905).

- Therefore, light is not a wave. This was confirmed by an experiment conducted with single photons in 1986, which we will discuss in the next post. I just wanted to present the background in this post.

## Matter as Waves?

10. While the debate was going on about whether light is a wave or a particle between the 1850 s to early 1900s, and even up to 1986 to some extent, another related development came with the early studies in quantum mechanics beginning around 1900.

- The issue was whether solid particles could be treated as waves.

11. After Planck, Einstein, Compton, and others established that light behaved as particles (photons), in 1913, Bohr came up with an idea to quantize the energy levels of a hydrogen atom. He was able to explain why discrete lines in the spectra of hydrogen.

- Yet another groundbreaking hypothesis by de Broglie in 1924 clarified why Bohr's idea worked. He proposed that just like photons can be represented by a wave (specifically with electromagnetic wave equations of Maxwell), a "wave can represent the motion of electrons." At that time, it was not clear what this "wave" would be. Now, we know that it is a wave function.

12. Light has been considered a wave for a long time, as discussed above. But the idea that waves could represent electrons with no-zero rest mass was unanticipated.

- Then in 1927, Davisson and Germer produced clear diffraction patterns for electron scattering from a nickel lattice, just like a diffraction pattern due to light. This led to the speculation that maybe particles sometimes behave as waves.
- That is how the idea of "wave-particle duality" evolved in the confusing period of 1900 to about 1930. Even though an accepted "quantum theory" was established around 1930, the idea of "wave-particle duality" lingers to the present.
- Nowadays, those diffraction patterns seen with electrons can be explained via the wave functions representing electrons' motion. However, a given electron can be found only at one location at a given time.

## Heisenberg Uncertainty Principle

13. To make things even more complicated, in 1927 Heisenberg came up with his famous uncertainty principle. This principle says that the uncertainty of the position of a particle ( $\sigma_{\mathrm{x}}$ ) multiplied by the uncertainty of the particle's momentum $\left(\sigma_{\mathrm{p}}\right)$ must be larger than what is known as Planck's constant, $\hbar$ :
$\sigma_{\mathrm{x}} \cdot \sigma_{\mathrm{p}} \geq \hbar$

- Planck's constant is extremely small; it has a value of about $10^{-34} \mathrm{Js}$.
- For any particle that we can see with our eyes, any uncertainty in the particle's position will be much smaller than the size of the particle. Therefore, we don't notice this in our normal lives.

14. However, when it comes to microscopic particles like electrons, the uncertainty in position is normally very large. If you have seen a pictorial representation of the orbit of an electron in a hydrogen atom, it is shown as an area; the electron could be anywhere within that area.

The following picture shows some examples of such electron orbitals. An electron could be anywhere within a given orbital at a given time.

- Therefore, the key point to remember is that the uncertainty in a particle's position and the momentum (or velocity) becomes significant only for small particles like electrons and photons.

15. We can make the following statements about the location of such a "quantum particle" at a given time.

- The significance of this uncertainty is that we cannot say precisely where such a small particle is to be found. We can only say that it should be located within a certain region. We can calculate the probability of finding it at a given point within that region.
- But that does not mean "the particle is spread out in that volume." At any given time, the particle is located at only one point. It is just that we cannot say precisely at which point due to the uncertainty principle.

16. I hope you can see the difference. Some people make the grave mistake of saying a quantum particle is "spread over space" like a wave. That is a grave mistake and a key reason people have difficulty understanding quantum mechanics.

Any questions on these QM posts can be discussed at the discussion forum: "Quantum Mechanics - A New Interpretation."

### 20.3.2 Photons Are Particles Not Waves

March 13, 2018; revised August 29, 2022
Summary: Photons are ALWAYS particles. They travel as particles and are detected as particles. But the position of a photon during travel cannot be pinned down to a point (due to the Heisenberg uncertainty principle; see, "What Is a Wave and What Is a Particle?"). Only POSSIBLE LOCATIONS of the photon at any time (and the probability of detection at each location) are provided by the wave function that represents the photon. The difference between a wave and a wave function was discussed in the previous post.

1. I must warn you that this post could be too advanced for many people. However, this is the sort of "deepest level" that we will go to in this section, and if one can at least comprehend the basic idea, then one should be able the follow the future posts. The basic idea that I am trying to express is that light consists of particles, called photons.

- What is meant by a "wave" in wave-particle duality is vague, and people interpret the term differently. Therefore, resolving what is meant by a "wave" in "wave-particle" duality is helpful. Is it a "real wave" like a water wave or is it a mathematical function?
- As shown below, it has been confirmed that photons are particles, and the word "wave" SHOULD NOT be used to describe light. But, the motion of a photon can be REPRESENTED by a wave function; it is a mathematical representation.

2. For example, a statement that is made frequently is, "..the position of a single particle is spread out over space..." This is a misleading statement, and should never be used. A particle always occupies a localized position; what is spread out is the wave function, indicating possible positions for the particle to be at a given time. See the summary statement above.

- A particle, whether an electron or a photon, is detected at a detector as a single detection event. When light - reduced to low intensity - is detected at a detector, those photons are registered as "single clicks".
- Therefore, we should give up the notion of light as a "wave". Light consists of photons; each photon may be represented by a wave function, which is a mathematical concept. This lingering and false idea of a "wave" is the main obstacle to having a unified theory of QM.

3. Newton believed that light consisted of particles. Newton's corpuscular theory of light prevailed until around 1850 when it was abandoned because it could not explain light's interference and diffraction effects. Since then, light has been regarded as a wave for a while.

- But starting around 1900 that wave picture could not account for many new experimental observations including the photoelectric effect, black-body radiation, and Compton scattering. Einstein proposed that light is quantized to explain the photoelectric effect (Einstein, 1905) - for which he received the Nobel Prize in physics in 1921 - and those quanta were given the name photon; they are the original "quanta" of quantum mechanics.
- Compton (Compton 1923) confirmed that a photon is a particle with momentum, for which he received the Nobel Prize in 1927.
- The photon concept has led to momentous advances in experimental and theoretical physics such as lasers, Bose-Einstein condensation, and quantum field theory.

4. Then, in 1948 Feynman illustrated that it is not necessary to consider photons as waves at all in quantum electrodynamics (Feynman, 1948; Feynman, 1949; Feynman, 1985).

- While the first two references above are technical papers, the third one is a book written in very simple terms. I would recommend those who are interested to read the book. I am only going to summarize what is in the book.
- That book was based on a series of 4 lectures. These are simple lectures delivered to non-physicists, and could be useful especially if one does not have access to the book:

## WebLink: YOUTUBE: QED: Photons - Corpuscles of Light - Richard Feynman (1/4)

5. However, there was a persistent view up to 1986 that light could not be particles, and that many effects such as the photoelectric effect can be explained without the concept of a photon (Lamb and Scully, 1968; Crisp and Jaynes, 1969; Mandel, 1976).

- The final confirmation of a photon as a particle had to wait until single photon sources were developed. In 1986 Granger, Roger, and Aspect confirmed in their anticorrelation experiments that photons are indeed particles. We discuss this experiment below.

## Proof That Photons Are Particles

The figure below shows the experimental configuration used by Granger, Roger, and Aspect to verify that photons are indeed particles (Granger, Roger, and Aspect, 1986).

1. Single photons generated at $S$ are sent through a beam splitter, and a signal via each leg is detected at $D_{1}$ and $\mathrm{D}_{2}$. In this experiment, one photon at a time is incident on the beam splitter A .

- If a photon is a particle, then it can be either reflected at A and go towards mirror M1, which will then be detected at detector D1, OR, it could go through A, reflected by mirror M2, and detected at detector D2. Then a detection would register only at D1 or D2.
- However, if the photon is a wave, it could partially propagate through each arm and be detected at both $\mathrm{D}_{1}$ and $\mathrm{D}_{2}$ simultaneously. That would count as a "coincidence count $\left(\mathrm{N}_{\mathrm{C}}\right)$ ".
- If a photon sometimes acts like a wave, there should be some coincidence counts.

2. The experiments confirmed that a given photon always takes one path at a time (Granger, Roger, and Aspect, 1986).

- This experiment conclusively proved that a photon travels either via path $A M_{1} D_{1}$ or path $A M_{2} D_{2}$.
- If photons had the "wave nature", there would have been at least some coincidence counts.

3. With this experimental confirmation, a photon is now categorized as an elementary particle. A photon at any wavelength is detected as a particle.

- In Feynman's Quantum Electrodynamics (QED), a photon is successfully treated as a particle that takes into account "all possible paths" via path integrals.
- In our proposed theory, a photon is a particle, and its motion is governed by a mathematical wave function set up instantaneously across space taking into account the details of the experimental arrangement; this wave function explains interference and diffraction effects.

4. Newton's corpuscular theory of light was abandoned around 1850 because it could not explain interference and diffraction phenomena.

- However, when Feynman introduced his new approach to quantum mechanics in 1948, he proposed that, "..The probability that a particle will be found to have a path $x(t)$ lying somewhere within a region of space time is the square of a sum of contributions, one from each path in the region. The contribution from a single path is postulated to be an exponential whose (imaginary) phase is the classical action (in units of $\hbar$ ) for the path in question.." (Feynman, 1948, p. 367).
- Then he applied that concept to describe the propagation of photons and electrons in his formulation of quantum electrodynamics (QED); see (Feynman, 1949). The basic idea of photon propagation using "all possible paths available" has been explained by Feynman in his introductory book (Feynman, 1985) on QED.

5. Feynman explained his theory of QED with simple diagrams without equations in his book (Feynman, 1985). See "Basis of the Proposed Interpretation - Feynman's Technique in QED."

- However, his technique was completely ad hoc; there was no rationale behind it. As he explained (p. 10 of Feynman, 1985): "..what I am telling you is, while I am describing how Nature works, you won’t understand why Nature works that way. But you see, nobody understands that. I can't explain why Nature behaves in this particular way".
- With new experimental results published since then, we can now understand the rationale behind his technique. That is what we will be discussing in the first series of posts, and is also in the unpublished paper: "WebLink: Docx File: A Self-Consistent Interpretation of Quantum Mechanics Based on Nonlocality."

6. Of course, many phenomena involving light can be explained with light treated as an electromagnetic (EM) wave, just like the motion of large particles can be treated with Newtonian mechanics.

- But when analyzing quantum phenomena, the EM theory does not work for light and the Newtonian mechanics does not work for microscopic particles. This is quite apparent in QED, which deals with the interactions of light with electrons.

Any questions on these QM posts can be discussed at the discussion forum: "Quantum Mechanics - A New Interpretation."

20.3.3 Basis of the Proposed Interpretation - Feynman's Technique in QED

March 29, 2018
Feynman's Glass Plate Experiment

Feynman's Method of "A Particle Exploring All Possible Paths"

## "Exploring All Possible Paths" Leads to Fermat's Principle of Least Time

Any questions on these QM posts can be discussed at the discussion forum: "Quantum Mechanics - A New Interpretation."

### 20.3.3. Feynman's Glass Plate Experiment

March 16, 2018; revised March 25, 2018

1. Feynman's glass plate experiment that he discussed in pages $17-35$ in his book (see the References below) is discussed in order to lay the foundation for our new interpretation of quantum mechanics ( QM ).

This is a key post that lays the foundation for the "nonlocality" argument. Even before I explain in detail what "nonlocality" is, I want to illustrate the simple fundamental idea behind it.

- This idea is: Even before a particle takes off, Nature evaluates all possible paths that particle could take, and come up "with a plan" for its motion. This happens AUTOMATICALLY and some "unconventional paths" could result only in the case of microscopic particles like electrons and photons.
- This is why quantum mechanics appear to reveal "strange phenomena". But when particles increase in size, this "unusual behavior" goes away naturally.
- This simple idea that the physicist Richard Feynman came up is best illustrated with a simple experiment that is discussed in his book (see the References below). That experimental setup and the key result is shown in the figure below.

Experiments show signal at $D_{R}$ to vary from 0\% to $16 \%$ as the thickness of glass plate varied.

## One would expect constant reflection at about $8 \%$.

2. There are two "special features" in this experiment (it could be easier to print the post and read):
i. The two surfaces of the glass slab are well-polished and are parallel to each other with high accuracy.
ii. The light is monochromatic, which means it has a well-defined wavelength.
3. Light from the source $(\mathrm{S})$ is incident on a glass plate. Part of the light is reflected as indicated by the arrow labelled \#1, and the rest is transmitted through the glass and incident on the second surface where a part of it
is reflected and goes back up as indicated by the arrow \#2. Rest of light emerges from the other side of the glass plate indicated by the dotted arrow. Two more things to be noted:

- What is plotted on the right side of the figure is the light signal in the reflected beams \#1 and \#2.
- Variable on the $\mathbf{X}$-axis of that figure is the thickness of the glass plate ( L ).

4. The first thing one would expect is to have a fraction of light (about 8\%) to be reflected via path \#1. In fact, that is what one WILL observe with normal light (with all wavelengths in the visible region).

- However, as we can see in the experimental data to the right in the figure, that reflected signal varies from $0 \%$ to $16 \%$ as the thickness of the glass plate in increased for light with a well-defined wavelength (like from a laser).
- It is interesting to see that the reflected signal is zero (very low) at some thicknesses of the glass plate. This is a KEY feature that cannot be explained without our interpretation of QM. If anyone can, please post at the discussion forum. Feynman explicitly said that he could not, on p. 10 of his book.

5. Normally, one would expect the light reflected from the front surface (\#1) to be at a constant level since photons are particles, i.e., a photon hitting the first surface would have no idea whether another interface existed below or not. Again, this is the key to the puzzle.

- For an analogy, we can consider the following case. Imagine a wire fence with holes a bit larger than a ball that we throw at it. Some balls (those that align with the holes) will go through those holes and others will bounce back. Would it make any difference to the number of balls that bounce back if we install another fence a little bit beyond the first fence? Would it matter how far apart the fences are? Of course not.
- That is a reasonable analogy that shows how amazing the above observations - seen with the glass plate and the particles of light (photons) - are.
- But such effects are seen only in the microscopic realm, as we will discuss later.

6. The following is how Feynman devised a "rule" that turned out to be able to account for those observations in the figure above.

- For a photon to get to the detector $\mathrm{D}_{\mathrm{R}}$, there are two paths available via the glass plate (\#1 and \#2), as shown in the figure. Feynman's key assumption was that wave functions are established instantaneously via both those paths, and the vector sum of them would determine the possible path for a photon. These are not real waves, but just mathematical functions.
- In quantum electrodynamics (QED), this procedure of "summing up all possible paths" is given the fancy name, "path integrals".
- When the path difference between those two paths is equal to the wavelength of the light, those two contributions are cancelled out (there is a phase shift of $180^{\circ}$ for the two paths in addition). That is why one sees zero intensity at plate thicknesses that are multiples of even number of half the wavelength.
- On the other hand, when the path difference between those two paths is equal to the half of the wavelength of the light, those two contributions add together. That is why one sees large intensity at plate thicknesses that are odd multiples of half the wavelength.
- Those are just technical details. Don't worry about them if you are "non-technical".

7. As long as one uses monochromatic light (and glass with no defects), one could in principle make the width of the plate arbitrarily large and those oscillations in the signal in the above figure persist. Thus as long as those two possible paths are available (without any defects in the glass plate), the resultant wave function will enforce "no reflection" at the front surface regardless of how thick the glass plate is.

- On p. 21 of his book (Feynman, 1985), Feynman says, "..Today, with lasers (which produce a very pure, monochromatic light), we can see this cycle still going strong after more than $100,000,000$ repetitions - which corresponds to glass that is more than 50 meters thick.." This is an amazing observation!

8. Therefore, QM wave functions - which take into account the phases and amplitudes of all possible paths - are established instantaneously. This is a consequence of the nonlocality of nature that we will discuss in detail in upcoming posts.

- In the case of the above figure, there are two possible paths for a given photon - indicated by the arrows \#1 and \#2 - leading to $\mathrm{D}_{\mathrm{R}}$ as shown in the figure. It is important to note that the path of a given photon leaving the source $(\mathrm{S})$ is predetermined from the start.
- Thus the question does not arise as to how the photon coming to the first surface "knows" that there is a second surface below it. There is no causality problem here, since the QM wave function is established at the very beginning because of the nonlocality of nature; if any changes are made to the experimental setup, the wave function will adjust instantaneously. Nonlocality means exactly that: physical proximity is not needed for this mechanism to work.

9. Now we will discuss a critical implication of Feynman's "a particle exploring all possible paths" or "path integral" approach, that even Feynman did not realize.

- What happens when we increase the thickness of the (defect-free) glass plate to a value that is greater than the distance from the glass plate to the detector $D_{R}$ ?
- Now, a photon reflecting off of the front surface would have had time to reach the detector before another photon going through the glass plate even reaches the lower glass-air surface, and start coming back to the detector $\mathrm{D}_{\mathrm{R}}$ via \#2 path.
- You need to take time and think about this. That is why it could be better to print the post and read. I don't think the reviewers of our paper even realized this key point; see, bullet \#3 of "Quantum Mechanics and Dhamma - Introduction."

10. Therefore, in the absence of wave functions establishing instantaneously across both possible paths (and thus undergoing destructive interference), there CANNOT be a zero signal at the detector DR, for ANY thickness of the glass plate if that thickness $(\mathrm{L})$ is greater than the distance from the glass plate to the detector DR.

- This is the second aspect of the key observation that cannot be explained without our proposed interpretation of QM .
- Again, please make comments at the discussion forum, if anyone can explain this observation in another way.

11. With the above observation, this experiment also confirms that photons are not waves, which we established in the post, "Photons Are Particles Not Waves." In principle, two waves coming off of the front and back surfaces of the glass plate COULD destructively interfere to yield the zero intensities at those plate thicknesses.

- However, in this particular case (thickness of the glass plate larger than the distance from the glass plate to the detector $\mathrm{D}_{\mathrm{R}}$ ), the "light wave" from the front surface would have arrived at the detector and be gone, by the time "light wave" from the back surface of the glass surface arrives at the detector.
- Therefore, destructive interference at the detector cannot take place in the case of real waves propagating at the speed of light. What undergoes destructive interference are the mathematical wave functions representing a photon.
- This is why it is important to distinguish between waves and wave functions; see, "What Is a Wave and What Is a Particle?."

12. Therefore, the zero intensity observed at some plate thicknesses is not due to the destructive interference of waves. Instead it is due to the combined contributions from those two paths (two wave functions).

- If the two wave functions destructively interfere, then not even a single photon will be directed via either of those paths, and all incident photons will go through the glass slab.
- If the two wave functions interfere constructively, then maximum possible number of photons will be directed via those paths, and maximum possible signal ( $16 \%$ ) will be observed at $D_{R}$; rest of the photons will go through the glass slab.

13. Therefore, it is very important to understand the difference between waves and wave functions. Light cannot be really called electromagnetic waves, even though the term is used even today. We have established that in the post, "Photons Are Particles Not Waves." I am proceeding slowly to establish a solid foundation, so that questions like this do not arise later on.

- Feynman's method says that even before a particle starts moving, wave functions for "all possible paths" for that particle are established instantaneously. The particle will then move along a path that results from the "summation over all those paths".
- These wave functions are vectors (i.e., they have a magnitude and a direction). Therefore, vector addition must be used in "summing up all possible paths". For those who are "non-technical" such details can be skipped; just get the idea.
- This vector addition using a simple method with arrows is described by Professor Feynman in his book and also in a series of four public lectures (see the References below).

14. To summarize the above discussion in another way, let me quote from Feynman's book (p.36):

- "This strange phenomenon of partial reflection by two surfaces can be explained for intense light by a theory of waves, but the wave theory cannot explain how the detector makes equally loud clicks as the light gets dimmer. Quantum electrodynamics "resolves" this wave-particle duality by saying that light is made of particles, but the price of this great advancement of science is retreat by physics to the position of being able to calculate only the probability that a photon will hit a detector, without offering a good model of how it actually happens."
- Our proposed theory shows exactly how it happens.

15. As we will discuss in the upcoming posts, we point out that Feynman's idea of a photon exploring all possible paths is none other than the enforcement of nonlocality; Feynman's QED implicitly assumed nonlocality.

- A wave function is instantaneously set up over all space taking into account the phases for all possible paths; there is no spatial limitation. This is why two particles across the universe could be still entangled; see, "Quantum Entanglement - We Are All Connected."
- In the next post we will show that in the above case, a photon will actually "explore ALL possible paths", an infinite number of them! However, only those two paths actually came into play in the above discussion, because all others cancel out at ALL TIMES.

Any questions on these QM posts can be discussed at the discussion forum: "Quantum Mechanics - A New Interpretation."

### 20.3.3. Feynman's Method of "A Particle Exploring All Possible Paths"

March 29, 2018

1. In the previous post we discussed Professor Feynman's illustration of how two wave functions (not waves) corresponding to two possible paths for a photon interfere (constructively and destructively) to produce an oscillating signal; see, "Feynman's Glass Plate Experiment."

- It was pointed out that this experimental result is not explainable if light is treated as an electromagnetic wave.
- More importantly, it showed that a path for a photon is mapped out instantaneously by Nature, as soon as the photon takes off.
- In this post, we will discuss his argument that the Nature actually takes into account ALL possible paths, an infinite number of them! This is our key idea behind "nonlocality", so we will proceed step-by-step to make our case crystal clear.

2. This discussion is also based on the following figure from Feynman's book (p 43); see the reference below. Light received at point $P$ due to source $S$ is considered; direct path from $S$ to $P$ is blocked by a screen placed in between them.

- Everyone is familiar with the "law of light reflection" where the light from from A goes to a Point B in a path that is defined by the angle incident being equal to the angle of reflection.

- Of course, the time for a photon to get from $S$ to $D$ is minimum close to the center of the mirror.
- However, Feynman showed that a better picture with more explanatory power is available with the concept of "a photon exploring all paths". He showed that most possible paths are cancelled out and only those paths that lie close to the expected path stated by the Law of Reflection contribute to the final detection probability.

3. In order to illustrate the concept of a photon "exploring all possible paths", the mirror is divided into sections A through M , and reflection from each section of the mirror is indicated (see the above figure).

- Due to different distances of travel, the time taken for each path varies as shown in the middle figure, and correspondingly the phase varies as shown below that. The final amplitude is given by adding those arrows, and is indicated at the bottom of the figure.

4. Just like in adding the contributions from two "waves", adding the contributions from "wave functions" requires one to take into account the difference in phase angle. Feynman has described this in simple terms, how to add contributions due to many wave functions using vector addition (see pp. 24-35).

- It is evident that the major contribution to the final arrow's length is made by arrows E through I (from the central part of the mirror), whose directions are nearly the same because the timing of their paths is nearly the same. This also happens to be where the total time is the least indicated by the heavy arrow, which is the expected path from the law of reflection.
- The law of reflection, that we learn at high school, is a simple rule that works. But actually reflections from each point in the mirror contribute to the signal at P . It is just that most of those contributions cancel out (as shown by the bottom part of the above figure).

5. To prove that even the edge of the mirror does contribute to the signal at $\mathbf{P}$, we chop off most of the mirror, leaving only the sections A, B, C on the left. From the above figure, if we add the three arrows due to those those three sections, they nearly cancel out. This is why we do not see significant contributions from parts of the away from the center.

- If we now divide that section (of $\mathrm{A}, \mathrm{B}, \mathrm{C}$ in the above figure) into four equal sections, they of course again cancel out as shown in the top section of the figure below.

- But if we now carefully scrape two alternating sections of those four sections (as shown in the bottom figure), then the signals due to the two reflecting sections add up to give an intense signal; see the bottom part of the above figure.

6. This conclusively proves that during normal reflection, parts of the mirror away from the center also contribute to the signal. It is just that most of that signal is cancelled out. Thus, for all practical purposes, it is sufficient to just take the reflection from the center part of the mirror (i.e., to use the law of reflection in geometrical optics).

- However, If only the arrows in a particular direction are kept, while the others in opposite direction are removed (by etching the mirror in those places), then a substantial amount of light reflects from a piece of mirror located away from the center, as shown in $\# 5$ above.
- That modified section of the mirror is of course now a diffraction grating.

7. Feynman discusses several examples in his book, but let us discuss just one more example to illustrate the point that this method is consistent with the Principle of Causation.

- Here we consider the case of refraction, which had led to causal issues with the "photon as a particle" idea of Newton and Fermat.
- Those who are really interested can read in detail the historical evolution of ideas from Newton through Fermat to Feynman, in the book by Ivar Ekeland (see References below).

8. Figure below shows the refraction of light from a source ( $S$ ) in the air to a detector (D) placed in water. As in the case of the mirror, we consider all possible paths from $S$ to $D$, and map out the time taken for a photon to reach point D via "different sections" of the water surface.

- The observation of light taking the "time of least time" to reach a detector in the water by changing its path (called "refraction") was explained by Fermat back in 1657, by taking into the account that light travels slower in water than in air; we will discuss this in the next post, "'Exploring All Possible Paths" Leads to Fermat's Principle of Least Time".
- However, until Feynman came up with his method of "a particle exploring all possible paths", this phenomenon could not be explained within the "particle picture".

D

- Once again, most paths away from the optimum path are CANCELLED OUT. The major contributions come from those paths close to the expected arrow indicated by the heavy arrow, and the Fermat's Principle of Least Time is recovered with this "particle representation".

9. What bothered everyone (including Feynman) about Fermat's idea is that it seemed to require agency. How could light choose a path? How could it possibly know which path was the fastest?

Here's how Feynman puts it (Feynman Lectures, Vol. 1, Chapter 26):
"The principle of least time is a completely different philosophical principle about the way nature works. Instead of saying it is a causal thing, that when we do one thing, something else happens, and so on, it says this: we set up the situation, and light decides which is the shortest time, or the extreme
one, and chooses that path. But what does it do, how does it find out? Does it smell the nearby paths, and check them against each other? The answer is, yes, it does, in a way. "

- The explanation is that Feynman method works because the Nature is nonlocal. We will discuss this in detail in future posts.
- A link to Feynman Lectures is given in the References.

## An Electron Will Also Explore All Possible Paths

As Feynman pointed out, everything we have discussed so far can be applied to the propagation and detection of electrons: Electrons also "explore all possible paths", and these paths are determined by the experimental configuration.

- If the experimental configuration changes, those paths reconfigure instantaneously. Of course, quantum electrodynamics (QED) incorporates the possible trajectories of both electrons and photons.
- It is amazing to realize that physicists used Feynman's version of QED for 70 years without realizing that the same needs to be applied to quantum phenomena like the "double-slit experiment".

## Conclusion

The key philosophical problem that existed for Newton to Fermat to Feynman with their "particle representation of light" was to explain how a photon would know in advance how to determine the path of least time.

- But that problem goes away when we realize that a photon (or any particle) takes into account "all possible paths" dictated by the nonlocality of Nature.
- We will discuss the nonlocality in detail in upcoming posts. I just wanted to provide the experimental evidence from the work of Professor Feynman first.

Any questions on these QM posts can be discussed at the discussion forum: "Quantum Mechanics - A New Interpretation."

### 20.3.3. "Exploring All Possible Paths" Leads to Fermat's Principle of Least 3 Time

April 1, 2018; revised June 22, 2021
Why Does Light Bend When Entering Water?

1. In 1657, the French lawyer and mathematician Pierre De Fermat (behind Fermat's Last Theorem) worked out that when light travels from one place to another, it always takes the path of least time. The path of a ray of light going from air to water shown below.

## Source

- There's a formula called Snell's law (shown in the figure) that correctly predicts the exact angle by which the light bends, depending on the materials it's traveling through and the angle at which it hits the surface.
- Fermat explained this observation of light taking the "time of least time" to reach a detector in the water by changing its path (called "refraction") by taking into account that light travels slower in water than in air.
- But the question of WHY it does that has not been answered up to now. Furthermore, how would a photon know there is an interface coming up ahead? As we saw in the post, "Feynman's Method of "A Particle Exploring All Possible Paths," the wave theory of light cannot explain it.
- As we also saw in that post, Feynman came up with a technique called "a photon exploring all possible paths" but admitted that he did not know WHY it worked. In future posts, we will show that it is due to the nonlocality of Nature and the instantaneous establishment of quantum fields for "all possible paths" for the photon.

## A Swimmer Does the Same as Light!

2. That is precisely the same procedure followed by a lifeguard (instinctively) in reaching a drowning swimmer in the water. The figure below illustrates the situation.

## Lifeguard

## How to Find the Path of Least Time?

3. When we look at the above figure, at first glance, one may wonder whether a straight line (path A) is the fastest path. That is indeed the shortest one, but it isn't the quickest because one can run faster along the beach, and cover more distance on land than in water.

- However, if one runs on path B , making the distance in water minimum, that is also not the quickest. That route is too long, and it slows you down.
- The quickest path is C , a particular path that lies somewhere between A and B , where the lifeguard jumps in at a distance x before the shortest path in the water.
- Of course, a lifeguard would not even think about all this. Instead he/she would instinctively choose a path that turns out to be close to this optimum path $C$.

## An Experiment on a Dog

4. I have not come across anyone experimenting on lifeguards and seeing how close they get to the "optimum path." But I came across a paper by a math professor who studied his dog fetching a ball thrown into Lake Michigan.

- He found out that his dog's path (over many measurements) came close to the "optimum path" predicted by Snell's law: "WebLink: PDF File: Do Dogs Know Calculus- Pennings-2003."

5. After collecting 35 data points (the x and y values in the figure above, in meters), Professor Pennings plotted them. Along with these data points, he also drew the optimal trajectory predicted by Snell's law, shown by the straight line below (figure from the above paper).

- Therefore, just like a photon "would know" how to take the "path of least time," a dog would too!

## Ants Take the Path of Least Time Too!

6. Even more interestingly, even ants seem to find the "optimum path" that takes the least time to get to their food.

- A group of researchers used a glass surface and a rough green felt surface - analogous to air and water or sand and water in the above cases - to separate a colony of ants. They placed ant-food some distance into the rough green felt surface.
- They found that the ant trails were far closer to the quickest path than to the direct route. Like light and lifeguards, these ants seemed to minimize time and not distance. The following figure showing the trail of the ants is from their paper: "WebLink: PDF File: Fermat's Principle of Least Time Predicts Refraction of Ant Trails at Substrate Borders."

## Conclusion

The critical philosophical problem that existed for Newton to Fermat to Feynman with their "particle representation of light" was to explain "how a photon would know" in advance how to determine the path of least time; see the book by Ivar Ekeland in the References.

- But that problem goes away when we realize that a photon (or any particle) takes into account "all possible paths" instantaneously due to the nonlocality of Nature. That is the basis of our new interpretation of quantum mechanics. We will discuss this in detail in upcoming posts.
- Interestingly, the observations that humans, dogs, and ants all taking the "path of least time" instinctively illustrate that this is how Nature works. Even living beings are guided by this "nonlocality of Nature." This example illustrates that there is so much that we DO NOT KNOW about how Nature works.
- That is closely related to how Nature AUTOMATICALLY executes kamma vipāka. That will become more clear as we proceed. Also see, "Quantum Entanglement - We Are All Connected."
We can discuss any questions on these QM posts at the discussion forum: "Quantum Mechanics - A New Interpretation."

### 21.1 Parinibbāna of Waharaka Thero

March 9, 2017; Pictures of $d h a ̄ t h u$ added June 10, 2017; Revised September 7, 2017; February 6, 2018; desanā on jhāna/magga phala added April 28, 2018; revised \#4, \#5 on July 18, 2020; new \#7 on December 12, 2020; February 16, 2021; latest update on September 6, 2021

1. It is with great sadness that I report the Parinibbāna of my Noble teacher, Waharaka Abhyaratanalankara Thero a month ago, on February 9, 2017.

- Even though he had not confirmed attaining the Arahanthood, several years ago he had declared that he would not be reborn again. That means he would at least reach the Antara Parinibbāna state; see the video below.
- The Antara Parinibbāna state is reached when someone dies with three samiyojana of kāma rāga, rūpa rāga, and arūpa rāga removed. (But without the removal of māna, uddhacca, and avijjā samyojana. Then one cannot grasp a new bhava in any of the 31 realms).
- The gandhabba would still survive the death of the body and come out and stay alive until the kammic energy for the human bhava is exhausted. At that time, since a new bhava cannot be grasped, the actual anupadisesa Nibbāna will take place. That is explained at the discussion forum topic "Antara Parinibbana" and also in the post, "Gandhabba State - Evidence from Tipitaka."
- From the accounts below, it appears that he did attain Parinibbāna (i.e., bypassed the Antara Parinibbāna state) at the dying moment.

2. When the news came out first, it was not clear whether the Thero had passed away or whether he was in Nirodha Samāpatti. Breathing stops while one is in Nirodha Samāpatti, but the body does not get cold. The body was warm for six days, but then it started to get cold. Therefore, his death was not declared for six days.

- Even though I made trips to Sri Lanka in 2014 and 2015, both times, I did not get an opportunity to meet him because he was not well.

3. He was the first person to extract the true meanings of the critical Pāli words in the Tipitaka in recent times- after hundreds of years.

- It appears that his Patisambhidhā Ñāna (the knowledge to extract the meanings of words) was at the same level as many of renowned Arahants at the time of the Buddha.

4. As I discussed in the post, "Four Conditions for Attaining Sotāpanna Magga/Phala," one has to learn the correct Dhamma from a Buddha or a true disciple of the Buddha. He was able to bridge a gap that will
hopefully last until the end of the Buddha Sāsana (Ministry) of Buddha Gotama, i.e., for 2400 years from now for a total of 5000 years.

- I am grateful to his followers in Sri Lanka (Ven. Attidiye Sudheethadheera and others) who made recordings of thousands of hours of his desanās over the years. They have organized those recordings here: "WebLink: waharaka.com: Waharaka Sadaham Desana" (updated September 11, 2017).
- Unfortunately, those are available only in the Sinhala language. I will do my best to convey these actual teachings in English on this website.
- I was able to meet Ven. Walasmulle Abhaya and Ven. Attidiye Sudheethadheera (both of whom were laypeople at that time) on a trip to Sri Lanka in early 2014 and also in 2015. They provided me with many desana recordings before they became available on the internet. I am also grateful to Dr. Neranga Abeysinghe, with whom I had many discussions. He also updated me on recent events of Waharaka Thero's last days.
- Ven. Walasmulle Abhaya conducts regular desanās and meditation sessions. Recordings of those at: "WebLink: Nirapekshathwayemaga."
- September 7, 2017: Just yesterday, I came to know about Ven. Rathupasketiye Vimukthirathana in Sri Lanka. His desanas (in Sinhala) at: "WebLink: youtube: Ariya Asankathaya."
- August 15, 2019: I have forgotten to add a link to a good set of English desanas: "WebLink: youtube: Dharmayai Obai Sermons - English (From 2017-07-30)." I have not met this Venerable, but these desanas are based on Waharaka interpretations.
- July 18, 2020: Cultivating jhāna is a good way to make progress on the Path. However, initially, those jhānā are anariya in nature. As one makes progress, they will be converted to Ariya jhāna. Some people may be under the false impression that getting into jhāna necessarily means magga phala. Furthermore, even the first Ariya jhāna requires the REMOVAL of kāma rāga. See, "Samādhi, Jhāna (Dhyāna), Magga Phala."

5. April 28, 2018: Here is a desana $\bar{a}$ by Waharaka Thero where he present clear evidence that jhāna is not necessary to attain magga phala (it is in the Sinhala language):

WebLink: Download "Are Jhāna Required for Magga-Phala"

- However, cultivating jhāna is a good way to make progress on the Path, even after (or especially after) getting to the Sotāpanna stage.
- The main point Thero makes is that we know that there are jāti Sotāpannas born in the human realm. But if a jhāna were REQUIRED to attain the Sotāpanna stage, then that person WOULD NOT be born in the human realm, but in a Brahma realm corresponding to that jhāna.
- Furthermore, just listening to the correct Buddha Dhamma and/or attaining jhāna does not make one become a Sotāpanna. The Thero points out that Devadatta ended up in an apāya, even though he had not only cultivated jhāna but had supernormal powers (iddhi) too. Devadatta obviously listened to many discourses from the Buddha but was not able to attain the Sotāpanna stage of Nibbāna.
- The critical point is that without comprehending Tilakkhaṇa, just getting being able to get to jhāna is of no use. But one can use jhāna effectively to comprehend Tilakkhana. The best way to verify that one has attained Ariya jhāna is to check whether one has lost any desire for all sense pleasures (including sex.)

6. Last but not least, I must also express my gratitude to Ven. Meevanapalane Dhammalankara, who had been in close association with the Waharaka Thero. I first came across these correct interpretations when I came across one of his desanās on the internet on July 30, 2013.

- Ven. Meevanapalane Dhammalankara's desanās at "WebLink: Sirisaddharmaya"

7. December 12, 2020: Over the past couple of weeks, I have been following a series of desanas from Susila Thero. He is in Sri Lanka and these discourses are in Sinhala. These are excellent and provide deep insights.

- Those who understand the Sinhala language can follow these discourses at "Lowthuru Arana eøอ?20

- I will, of course, incorporate those new insights in my posts.
- December 15, 2020: The contents in the above long discourses have been separated into topics at the

8. February 16, 2021: I recently came across another set of excellent discourses at, "WebLink: youtube: Bopitiye Sadaham Pasala."

- Note that there are some discourses in English and Italian languages.
- These sessions are conducted by Bopitiye Sumangala Thero.

9. September 6, 2021: I have been following a series of desanas by a 16-year old Sri Lankan over the past few months. He recently became a bhikkhu by the name Ven. Botale Siri Ariya Vimutti.

- It is apparent to me that to teach Buddha Dhamma with such insight at such a young age, he is likely to be a Jāti Sotāpanna.
- Those who understand the Sinhala language can follow these discourses at:

##  Interview ll Part 01

10. June 6, 2017: I received some pictures of "dhātu" collected after the cremation of Waharaka Thero's body. Some of an Arahant's bones becomes crystallized. These are called "dhātu," and they cannot be destroyed by fire or anything else. I selected the following two pictures out of many sent by Ven. Attidiye Sudheethadheera Thero and Dr. Neranga Abeysinghe.

11．By the way，here is a historical picture of the＂Tooth relic＂of the Buddha kept at the＂Dalad $\bar{a}$ Maligāwa＂in Kandy，Sri Lanka：

－Such Dhāthu of the Buddha or an Arahant are considered to be indestructible up to the end of the current＂Buddha Sāsana，＂which will last roughly another 2500 years．

12．Here are two youtube videos of the funeral of the most venerable Thero（the speech by Mr．Chandana Siriwardhana－where he stated the possibility of Antarā Parinibbāna of the Thero－is in Sinhala language）：

### 21.2 Pure Dhamma - Sinhala Translation

## January 24, 2017; more sections added December 2, 2017

1. Professor J. M. R. Sarath Bandara, who is a retired professor at the University of Peradeniya, Sri Lanka, has kindly taken upon the task to translate the Pure Dhamma site to Sinhala language.

- With his mastering of both Sinhala and English languages, this translation is very much superior to the word-by-word translation provided by the Google Translator plugin for WordPress.
- Therefore, I will remove Sinhala as an option in the Google Translator.

2. The pdf files for different sections at the website are given below. Only some of the sections have been translated so far, and there could be gaps in those sections as well.

- As he translates more posts and sections, the updated files will be uploaded here.

3. We have left the English titles for each section below as they appear at the website. That will make it easier to refer back to the original English posts.

- The links in the Sinhala translation to various websites - and especially videos - may not work. One can access those in the original English posts.

Much merits to Professor Sarath Bandara and his family for this meritorious deed!

### 21.3 Pure Dhamma - German Website

October 21, 2017

1. Puredhamma.net, which discusses Buddha's teachings per Tipitaka, is now available in German, thanks to Mr. Tobias Große in Heilbad Heiligenstadt, Germany. Here is the link:

## https://puredhamma/de

- Mr. Große has spent a lot of time studying Buddha Dhamma, and he tells me that he has read almost all posts at the puredhamma.net site and many posts more than once. From the questions that I have been getting from him over the past year, I feel that he has grasped the key concepts and is quite capable of expressing those concepts in German.
- As of today, he has translated three main sections, and will continue to add more sections until the two sites are "in sync".
- He is also willing to answer questions; there is a "Comment" bar at the bottom of each page.

2. Even though the "Google Translator" at the top right of the puredhamma.net site is a useful resource that can be used to translate the site material to many languages, it is done by a mechanical process, which basically translates word for word.

- Such a word for word translation sometimes gives incorrect interpretations, especially since key Pāli words with deep meanings are involved. Therefore, the "Google Translator" is not very reliable. I will remove German as an option for the "Google Translator" in a couple of months after enough sections are available at https://puredhamma/de.

3. Finally, it has been a pleasure to interact with Mr. Große and his family over the past year or so. His wife and children are also fully engaged and it is heartwarming to see how much they have advanced, and their enthusiasm for this meritorious project. Much merits to the whole family for their efforts!

### 21.4 New / Revised Posts

There are three useful tools to find relevant posts: One is the "Search" box on the top right.
Second is User's Guide to Pure Dhamma Website. The third is Pure Dhamma - Sitemap.

### 21.4.1 Google Translations to Other Languages

October 2, 2016

1. Couple of days ago, I installed the capability to translate the whole site into different languages. A different language can be selected in the "Google Translate" button right above this post.

- I received input from a couple of people. Based on those, it seems that translation is $60 \%-80 \%$ good for Chinese translation.

2. The main problem is that with "word-to-word" translations, meanings can get lost. So, please use the translations only if necessary. For example, it may able to provide translation of some words that are not familiar.

- Therefore, it is a good idea to use the English version as much as possible. I really worry about meanings getting lost in the translation.

3. There are other languages that can be added. I did not want to add too many at this early stage, especially until I get some feedback on the usefulness. I would appreciate feedback on the accuracy/usefulness of these translations, in the comments box below.

- If you like other languages to be added, also please comment below. Just type the language(s) you like. I think you need to add your email address too, in order to avoid spam. Comments are not published. I normally respond only if a question is asked.

### 21.4.2 Pure Dhamma Discussion Forum Guidelines

December 12, 2017; revised December 17, 2017; January 23, 2018; January 7, 2019
A link to the Forum is provided at the lower right in the main menu.

1. In order to post questions or answers (i.e., to participate in discussions), one will need to register first. But anyone can read existing posts without registering.

## To Register:

Click on the "Forum" at the very end of the main menu or FORUM to enter the Forum.

1. Click on the "Register" button (in red) at the LOGIN box and enter a username and an email address and submit.
2. It will say that it will send you a link and then display a "WORDPRESS" screen. CLOSE that screen. Do not do anything with that screen.
3. You will get an email to that address within minutes. Open your email browser and click on the link that was sent to you.The link in that email WILL EXPIRE within a certain time, so you need to use it before it expires. (If you don't see an email within minutes, check you "Junk" folder).
4. If you don't get an email within 5 minutes, send me an email and I can setup a temporary password for you. It is easy to do and you can then reset to anew password. This is the easiest way.
5. It will ask to enter the username that you selected earlier and you also need to choose a password. Once you hit enter, you may get another "WORDPRESS" screen. CLOSE that screen. Do not do anything with that screen.
6. Enter the Forum and login with that username/password at the "Forum Login" box.

When first registered, one will receive an email with a link to setup your own password. One needs to use that link within 15 minutes or so (I am guessing, I don't know exactly how much time is allowed), because that link expires. Check you Junk folder if you do not see an email within minutes.

- If it does not work within a few tries, DO NOT keep trying. After 5 tries or so, the system will lock you out and then it becomes more difficult. Please send me an email at la@puredhamma.net, and I can help you.

2. If one forgets the password at a later time, a new password can be generated by clicking on the red "Lost Password" link at the Login box.

- Even an unregistered person would be able to read the posts by others on any topic. One needs to register to ask a question or to post a reply to another's question.
- Please respect the viewpoints of others. No one knows everything (except for a Buddha), and we should help each other in uncovering the truth.

3. Mr. Seng Kiat Ng from Singapore has kindly agreed to act as a moderator. He will be able to move topics to "better matching" forums and also to open up new forums as necessary. He is doing this in addition to maintaining and updating the eBook; much merits to him and his family!

- Within a forum, anyone who is registered can open a new topic. Please find the forum that seems to match; we can add more forums if needed.
- Any question even remotely connected to Buddha Dhamma (Buddhism) is welcome. There are people of very different levels of exposure to Buddhism.
- If you feel uncomfortable posting here initially, please send it to me at lal@puredhamma.net.
- But I encourage everyone to participate because there will be people who can benefit from information at different levels. Also, it is critical to comprehend basic concepts; otherwise it will be difficult to make progress.

4. I can set the time one has to come back and edit a given post, and it is currently set at one hour. This allows one to think about one's comment and change it, if needed. Please think carefully before making comments. It is not a good idea to write too many posts on the same issue. I try to write my response in a Word document and post it when I feel comfortable. Even then I may have to come back and revise.

- This is in no way to restrict discussions. We just need to try to make our points without repeating. I have seen online forums where people just go back and forth "trying to push their views" without making any progress for themselves or helping others learn.

5. Replying to a question: If one hits the reply button, one can directly respond to a comment by that specific person (i.e., one's comment will appear below that comment or that thread). Then a reader will need to scan to find the new comment (especially if there are newer threads at the bottom).

- If one just types in the default window, then the comment will appear at the very end of the discussion, as a new thread. Anyone will be able to see that as the latest comment, but then one needs to refer to the comment that he/she is responding to.
- You can figure this out by looking at the posts already there.

6. A discussion forum for the Pure Dhamma website is beneficial in several aspects:

- I receive many good questions via email. When I reply to that email, only that person will get the information, and in many cases it could be of interest to so many others.
- There could be "gaps" in a given section. A given section at the website starts at a base level with initial posts and move to deeper stages with subsequent posts. If one has a question about a certain post, one could open a new topic with the post name.
- I also plan to have some information access threads on topics like "Päli Resources". I will post some key tools available at this site as well as at other sites, and users can add more information to it.
- This forum will also give an opportunity for others with different opinions to express their viewpoints (i.e., how they interpret a given Sutta or a verse in the Dhammapada, etc). In most cases, there can be more than one explanation.
- Sometimes, each individual may have their own interpretation even if it looks incorrect to others. No one should expect others to come to agreement with one's viewpoint. It is up to each person to decide for him/herself.
- Thoughtfil, logical, and respectful discussions can be an important part of the learning process.

7. Following the Path is not merely following some set precepts or blindly following a "guru." One needs to engage in stimulating discussions with oneself first (contemplation), and also with others. It is an intellectual process.

- I hope this forum will be a "virtual community center" which will help people with different levels of exposure to Buddha Dhamma to come together and grow together.
- In my own experience, I know that when trying to answer a question posed by another person - who is looking at the issue from a totally different point of view - forces me to look at the issue from a different angle. I have learned many things over the past few years that way.

8. The Buddha was the greatest scientist to be born, and we are trying to recover those deep teachings that have been buried over many centuries. Thanks to my late Noble teacher, Waharaka Thero ("Parinibbāna of Waharaka Thero"), true meanings of key concepts (eg., anicca, anatta, viññāna) have been uncovered.

- We need to maintain this momentum and make it easier for the future generations to access the pure and original teachings of the Buddha.

9. Finally, I keep the right to delete any posts that are not appropriate for the forum. I make such decisions based on the goal of this website (to teach Buddha's original teachings per Tipitaka), and it will be for the benefit of the general audience.

### 21.4.3 How to Post/Reply to a Forum Question

## Revised August 12, 2022

## Formatting a Post

1. The formatting buttons " $b$ " for bold, " i " for italics, etc. can be used to make the text more legible.
2. In particular, it is good to use the "link" button to provide a link to another post on this website or an external web page. To describe the procedure, let us assume that you want to provide a link to the "Abhidhamma - Introduction" post on the website.

- Open that post in a separate window by clicking the following link: "Abhidhamma - Introduction."
- Copy the post's title ("Abhidhamma - Introduction") and paste it into your text window.
- Select that text with the title ("Abhidhamma - Introduction") and click the "link" button. It will open a new window to put in the web address.
- Go to that other open window with the "Abhidhamma - Introduction" post and copy the web address from that web page (which in this case is "https://puredhamma.net/abhidhamma/abhidhammaintroduction/").
- Come back and paste that to provide the link at the URL input. Note: Don't forget to check the little box "Open link in a new tab" so that when someone clicks on the link, it will be opened in a new window.
- That is it!

Follow the same procedure to provide an external link.
3. You can edit your comment within an hour. If you try to edit after an hour, it may delete that comment.

## To Post a New Question/Comment

4. Select a suitable forum from the list of forums ("Abhidhamma" forum, "Dhamma and Science" forum, etc.) and click on it.

- That will open that particular forum with a list of already existing topics.
- Go to the end of that list and start typing a suitable topic for your question in the box, "Topic Title (Maximum Length: 80):"
- Then type the question in the box below and hit the "submit" button. If you need to post a link to the question, please follow the steps in \#3 below.
- You can edit your question/comment within an hour. If you try to edit after an hour, it may delete the question.

## To Reply to an Existing Post

5. If one just types in the default window, the comment will appear at the end of the discussion as a new thread. Anyone can see that as the latest comment. but then one needs to refer to the comment that he/she is responding to.

- It is NOT a good idea to hit the reply button. If you do that, your comment will appear directly below that comment. Then a reader will need to scan to find the new comment (especially if there are newer threads at the bottom).
- Therefore, it is better to type your comment in the default window at the very bottom. If you need to, you can refer to an earlier comment by the poster's name and date or copy and paste the part of that post you need to comment on.

### 21.4.4 April - July 2017

The Infinity Problem in Buddhism - 7/15/17 (in the "Dhamma and Philosophy" section).
List of "San" Words and Other Pāli Roots $-6 / 29 / 17$ (in the "Tables and Summaries" section).
Pure Dhamma Discussion Forum Guidelines - 6/22/17
Sañkhāra and Kammā, Viññāna and Kamma Bīja - 6/16/17 (in the "San" section).
User's Guide to Pure Dhamma Website - 6/8/17 (in "Buddha Dhamma" section).
Is Ānāpānasati Breath Meditation? - 6/2/17 (in "Bhāvanā (Meditation)" section).
Viññāna - What It Really Means - 5/26/17 (in "Living Dhamma" section).
Working of Kammā - Critical Role of Conditions - 5/21/17 (in "Living Dhamma" section).
What are rūpa? - Dhamma are rūpa too! - 5/13/17 (in "Living Dhamma" section).
Micchā Ditthi, Gandhabbayā, and Sotāpanna Stage - 5/6/17 (in "Living Dhamma" section).
Buddhaghosa's Visuddhimagga - A Focused Analysis - 4/29/17 - 4/29/17 (in the "Historical Background" section).

Misinterpretation of Anicca and Anatta by Early European Scholars - 4/29/17 (This replaces a recent post, "Answers to Criticism of Pure Dhamma Interpretations".

I have also combined two previous posts, "Theravada - Problems with Current Interpretations of Key Concepts" and "Historical Timelines of Buddha Dhamma and Sri Lanka - End of Sinhala Commentaries" to make a new post, "Incorrect Theravāda Interpretations - Historical Timeline" -4/29/17.

Are There Procedures for Attaining Magga Phala, Jhāna and Abhiñ̃̃ā? - 4/23/17 (in the "Power of the Human Mind" section)

Answers to Criticism of Pure Dhamma Interpretations - 4/16/17 (in the "Historical Background" section).
Pabhassara Citta, Radiant Mind, and Bhavanga - 4/13/17 (in the "Abhidhamma" section).
Buddhaghosa and Visuddhimagga - Historical Background - 4/8/17 (in the "Historical Background" section)
Dasa Akusala and Anatta - The Critical Link - 4/2/17 (in the "Anicca, Dukkha, Anatta" section)

### 21.4.5 January - March 2017

Difference Between Jhāna and Stages of Nibbāna - 3/24/17 (in the "Power of the Human Mind" section)
Anatta - the Opposite of Which Atta? - 3/17/17 (in the "Anicca, Dukkha, Anatta" section)
Sakkāya Ditthi is Personality (Me) View? - 3/10/17 (in the "Sotāpanna Stage of Nibbāna" section)
Parinibbāna of Waharaka Thero - 3/9/17
Pāli Dictionaries - Are They Reliable? - 3/4/17 (in the "Sutta Interpretations" section)- Revised 3/7/17.
Attā Hi Attano Nātho - 3/4/17 (in the "Dhammapada" section).
Sañkhāra - What It Really Means - 2/25/17 (in the new "Four Aggregates" subsection in the "Living Dhamma" section).

Vedanā - What It Really Means - 2/18/17 (in the new "What is Vedanā (Feelings)?" subsection in the "Living Dhamma" section).

Cattāro Āhāra for Mental Body or Gandhabbayā - 2/11/17 (in the new 'Mental Body - Gandhabbaya" subsection in the "Living Dhamma" section).

Mental Body (Gandhabbayā) - Personal Accounts - 2/5/17 (in the "What is Saññā (Perception)?" subsection in the "Living Dhamma" section).

Vipallāsa (Ditthi, Saññā, Citta) Affect Sañkhāra - 1/28/17 (in the "What is Saññā (Perception)?" subsection in the "Living Dhamma" section).

Also, a really good Sinhala translation of many sections of the website by Professor Sarath Bandara is now available: "Pure Dhamma - Sinhala Translation."

Future Suffering - Why It Arises - 01/22/17 (in the "What is Saññ̃a (Perception)?" subsection in the "Living Dhamma" section)

Sexual Orientation - Effects of Kamma and Gati (Sañkhāra) - 1/14/17 (in the "Living Dhamma Fundamentals" subsection in the "Living Dhamma" section)
Nikāya in the Sutta Pitaka - 1/7/17 (in the "Sutta Interpretations" section)
Pure Dhamma - Reflections on 2016 - 01/01/17

### 21.4.6 Essays - 2019

Dhammā, Kamma, Sañkhāra, Mind - Critical Connections - 12/28/19 (in the subsection "Views on Life")

Icchā (Cravings) Lead to Upādāna and to Eventual Suffering - 12/21/19 (in the subsection "Views on Life") Moha/Avijiā and Vipāka Viññāna/Kamma Viññāna - 12/14/19 (in the subsection "Views on Life") Tanhā Paccayā Upādāna - Critical Step in Paticca Samuppāda - 12/07/19 (in the subsection "Views on Life")

Vacī Sañkhāra - Sañkappa (Conscious Thoughts) and Vācā (Speech) - 11/30/19 (in the subsection "Views on Life")

Kamma, Sañkhāra, and Abhisañkhāra - 11/23/19 (in the subsection "Views on Life")
Paticca Samuppāda - A "Self" Exists Due to Avijijā - 11/16/19 (in the subsection "Views on Life")
Tanhā - The Origin of Suffering - 11/10/19 (in the subsection "Views on Life")
Paticca Samuppāda - Not "Self" or "No-Self" - 11/10/19 (in the subsection "Views on Life")
An Apparent "Self" Is Involved in Kamma Generation - 11/2/19 (in the subsection "Views on Life")
Sakkāya Ditthi in Terms of Attā or "Self" or "Ātma" - 10/26/19 (in the subsection "Views on Life")
Chachakka Sutta - Six Types of Vipāka Viññāna 10/19/19 (in the subsection "Views on Life")
Kāma Guna - Origin of Attachment (Tanhā) - 10/6/19 (in the subsection "Views on Life")
Vipāka Vedanā and "Samphassa jā Vedanā" in a Sensory Event - 9/29/19 (in the subsection "Views on Life").

Is There a "Self"? - 9/22/19 (in the subsection "Views on Life").
Citta - Basis of Our Experience and Actions - 9/22/19 (in the subsection "Views on Life").
Indriya Make Phassa and Āyatana Make Samphassa - 9/15/19 (in the subsection "Views on Life").
How Do Sense Faculties Become Internal Āyatana? - 9/08/19 (in the subsection "Views on Life").
Contact Between Āyatana Leads to Vipāka Viññ̄n̄a - 9/02/19 (in the subsection "Views on Life").
Buddhist Worldview - Introduction - 8/26/19 (in the subsection "Views on Life").
Wrong View of Creationism (and Eternal Future Life) - Part $2-8 / 19 / 19$ (in the subsection "Views on Life").

Wrong View of Creationism (and Eternal Future Life) - Part 1 - 8/12/19 (in the subsection "Views on Life").

Views on Life - Wrong View of Materialism - 8/04/19 (in the subsection "Views on Life").
Views on Life - 7/28/19 (in the subsection "Origin of Life").
Mystical Phenomena in Buddhism? - 8/04/19 (in the subsection "Origin of Life").
Living Cell - How Did the First Cell Come to Existence? - 7/24/19 (in the subsection "Origin of Life").
Clarification of "Mental Body" and "Physical Body" - Different Types of "Kāya" - 7/19/19 (in the subsection "Origin of Life").

Human Life - A Mental Base (Gandhabba) and a Material Base (Cell) - 7/15/19 (in the subsection "Origin of Life"').

Origin of Life - There is No Traceable Origin - 7/10/19 (in a new subsection "Origin of Life").

Upapatti Paticca Samuppāda (How We Create Our Own Rebirths) - 7/6/19 (in the "Paticca Samuppāda" section).

Associations (Sevana)- A Root Cause of Wrong Views - 6/29/19 (in the "Sotāpanna Stage and Tilakkhana" section).

Sakkāya Ditthi - Getting Rid of Deeper Wrong Views - 6/22/19 (in the "Sotāpanna Stage and Tilakkhana" subsection).

Sotāpanna Stage and Tilakkhana - 6/22/19 (in the "Anicca, Dukkha, Anatta" section).
Sakkāya Ditthi and Tilakkhana - 6/14/19 (in the "Sotāpanna Stage and Tilakkhana" subsection).
Anatta - No Refuge in This World - 6/7/19 (in the "Anattā - A Systematic Analysis" section).
Anattā in Anattalakkahana Sutta - No Soul or an Ātma - 5/31/19 (in the "Anicca, Dukkha, Anatta" subsection).

Anicca - Inability to Keep What We Like - 5/26/19 (in the "Anicca, Dukkha, Anatta" subsection).
Yamaka Sutta (SN 22.85) - Arahanthood Is Not Annihilation but End of Suffering - 5/23/19 (in the "Sutta Interpretations" subsection).

Idappaccayatā Paticca Samuppāda -5/18/19 (in the "Paticca Samuppāda"section).
Kamma are Done with Sañkhāra - Types of Sañkhāra -5/13/19 (in the "San" subsection).
Do Buddhists Pray and Engage in Idol Worshipping? -5/5/19 (in the "Myths or Realities?" subsection).
Complexity of the Mind - Viññāna and Sañkhāra - 4/28/19 (in the "Dhamma with Less Pāli" subsection).
Anuloma Patiloma Paticca Samuppāda - Key to Sotāpanna Stage - 3/15/19 (in the "Sotāpanna Stage of Nibbāna" subsection).

Vitakka, Vicāra, Savitakka, Savicāra, and Avitakka, Avicāra - 3/7/19 (in the "Samādhi, Jhāna (Dhyāna), Magga Phala" subsection).

Attha Purisa Puggalā - Eight Noble Persons - 3/4/19 (in the "Seeking Nibbana" subsection).
Jhānic Experience in Detail - Sāmaññaphala Sutta (DN 2) - 3/2/19 (in the "Samādhi, Jhāna (Dhyāna), Magga Phala" subsection).

Tapussa Sutta (AN 9.41) - Akuppā Cetovimutti - 2/28/19 (in the "Sutta Interpretations" subsection).
Viññāna and Sañkhāra - Connection to Paticca Samuppāda - 2/25/19 (in the "Essential Buddhism" subsection).

Account of Angulimāla - Many Insights to Buddha Dhamma - 2/17/19 (in the "Dhamma Concepts" subsection).

Sotāpanna Anugāmi - No More Births in the Apāyā - 2/11/19 (in the "Sotāpanna Stage of Nibbāna" subsection).

Sati in Ānāpānasati/Satipatthāna - Two Meanings of Sati - 2/4/19 (in the "Essential Buddhism" subsection).
Ānāpāna and Satipatthāna - Fundamentals - 1/30/19 (in the "Essential Buddhism" subsection).
Buddhism and Evolution - Aggañña Sutta (DN 27) - 1/24/19 (in the "Sutta Interpretations" subsection).
Ānāpānasati Eliminates Mental Stress Permanently - 1/21/19 (in the "Essential Buddhism" subsection).

Breath Meditation Is Addictive and Harmful in the Long Run - 1/15/19 (in the "Essential Buddhism" subsection).

Connection Between Sañkhāra and Viññāna - 1/11/19 (in the "Essential Buddhism" subsection).
Four Noble Truths - Suffering and Its Elimination - 1/6/19 (in the "Essential Buddhism" subsection).
Viñ̃̃āna - Consciousness Together With Future $-1 / 1 / 19$ (in the "Essential Buddhism" subsection).
Pure Dhamma - Reflections on 2018 - 1/1/19

### 21.4.7 Essays - 2018

Introduction to Citta, Vedanā, Sañ̃̄̄a, Sañkhāra, and Viññāna (OLD==Pāli to English - Serious Problems With Current Translations) - 12/25/18 (in the "Essential Buddhism" subsection).

Essential Buddhism - 12/25/18 (in the "Living Dhamma" section).
Finest Manomaya Kāya of an Arūpāvacara Brahma - 12/19/18 (in the "Anattā - A Systematic Analysis" subsection).

Types of Bodies in 31 Realms - Connection to Jhāna - 12/12/18 (in the "Anattā - A Systematic Analysis" subsection).

Anattā - A Systematic Analysis - 12/12/18 (in the "Anicca, Dukkha, Anatta" subsection).
Anattā (Mundane Interpretation) - There is no "Unchanging Self" - 12/5/18 (in the "Anicca, Dukkha, Anatta" subsection).

Kāmacchanda and Icca - Being Blinded by Cravings - 11/29/18 (in the "Sorting out Some Key Pali Terms (Tanha, Lobha, Dosa, Moha, etc)" subsection).

Boy Who Remembered Pāli Suttā for 1500 Years - 11/21/18 (in the "Myths or Realities?" section).
Pāpa Kamma Versus Akusala Kamma - 11/14/18 (in the "Gati, Bhava, and Jāti" subsection).
List of "San" Words and Other Pāli Roots - 11/10/18 (in the "Tables and Summaries" section).
Vedanā and Samphassa Jā Vedanā - More Than Just Feelings (new title)- 11/10/18 (in the "Mental Aggregates" section).

Free Will in Buddhism - Connection to Sañkhāra - 11/3/18 (in the "Dhamma and Philosophy" section).
Difference Between Tanhā and Upādāna - 10/25/18 (in the "Gati, Bhava, and Jāti"' subsection).
Essence of Buddhism - In the First Sutta - 10/23/18 (in the "Dhammacakkappavattana Sutta" section).
Difference Between Physical Rūpa and Rūpakkhandha - 10/20/18 (in the "The Five Aggregates (Pañcakkhandha)" section).
"The Life of the Buddha" by Bhikkhu Nānamoli - 10/13/18 (in the "Book Reviews" section).
Karaniya Metta Sutta - Metta Bhavana - 10/7/18 (in the "Bhāvanā (Meditation)" section).
Is It Necessary for a Buddhist to Eliminate Sensual Desires? - 9/28/18 (in the "Living Dhamma" section).
Essential Abhidhamma - The Basics - 9/23/18 New subsection in the "Abhidhamma" section.
State of Mind in the Absence of Citta Vithi - Bhavaniga - 9/23/18 (in the "Essential Abhidhamma - The Basics" subsection).

Paññāvimutti - Arahanthood without Jhāna - 9/12/18 (in the "Samādhi, Jhāna (Dhyāna), Magga Phala" subsection).

I have re-written an old post on a key subject: "Viññāna (Consciousness)" - 9/10/18 (in the "The Five Aggregates (Pañcakkhandha)" subsection).

The Amazing Mind - Critical Role of Nāmagotta (Memories) - 9/1/18 (in the "Dhamma Concepts" subsection).

Do I Have "A Mind" That Is Fixed and "Mine"? - 8/30/18 (in the "Sakkāya Ditṭhi" subsection).
Amazingly Fast Time Evolution of a Thought (Citta) - 8/23/18 (in the "Dhamma Concepts" section).
Ye Dhammā Hetuppabhavā.. and yam kińci samudaya dhammam. - 8/16/18 (in the "Living Dhamma" section).

Imasmim Sati Idam Hoti - What Does It Really Mean? - 8/5/18 (in the "Paticca Samuppada" section).
Dhamma, Sañkhāra, Sankata, Rūpa, Viññ̄̄na, Gati, Āsava, Anusaya - 7/22/18 (in the "Dhamma with Less Pālil" section).

Six Root Causes - Loka Samudaya (Arising of Suffering) and Loka Nirodhaya (Nibbāna) - - 7/19/18 (in the "Living Dhamma" section).

Sotāpatti Anga - The Four Qualities of a Sotāpanna - 7/8/18 (in the "Sotāpanna Stage of Nibbāna" section).
Dasa Akusala/Dasa Kusala - Basis of Buddha Dhamma - 2 - 6/27/18 (in the "Sutta Interpretations" section).
Añguttara Nikāya - Suttā on Key Concepts - 6/20/18 (in the "Sutta Interpretations" section).
Dasa Akusala/Dasa Kusala - Basis of Buddha Dhamma - 6/20/18 (in the "Sutta Interpretations" section).
Kanha (Dark) and Sukka (Bright) Kamma and Kammakkhaya - 6/11/18 (in the "Seeking Nibbāna" section).

Kukkuravatika Sutta (Majihima Nikāya 57) - Kammakkhaya - 6/11/18 (in the "Sutta Interpretations" section).

Pathama Mettā Sutta - 6/7/18 (in the "Sutta Interpretations" section).
Ānantariya Kamma - Connection to Gandhabba - 6/2/18 (in the "Living Dhamma" section and Mental Body - Gandhabba subsection).

Na Cetanākaranīya Sutta - 5/21/18 (in the "Sutta Interpretations" section).
Sammā Ditthi - Realization, Not Memorization - 5/13/18 (in the "Sotāpanna Stage of Nibbāna" subsection).
Manopubbangamā dhammā.. $-5 / 5 / 18$ (in the "Dhammapada" subsection).
Kilesa - Relationship To Akusala, Kusala, And Puñña Kamma - 4/27/18 (in the "Dhamma Concepts" subsection).

Anussati and Anupassanā - Being Mindful and Removing Defilements - 4/16/18 (in the "Bhāvanā (Meditation)" subsection).

Buddha Dhamma for an Inquiring Mind - Part I - 4/12/18 (in the "Dhamma with Less Pāli"" subsection).
"Exploring All Possible Paths" Leads to Fermat's Principle of Least Time $-4 / 1 / 18$ (in the "Quantum Mechanics and Dhamma" section).

Feynman's Method of "A Particle Exploring All Possible Paths" - 3/29/18 (in the "Quantum Mechanics and Dhamma" section).

Will Quantum Mechanics Be Able to Explain Consciousness? - 3/20/18 (in the "Quantum Mechanics and Dhamma" section).

The Observer Effect in Quantum Mechanics - 3/20/18 (in the "Quantum Mechanics and Dhamma" section).
Feynman's Glass Plate Experiment - 3/16/18 (in the new "Quantum Mechanics - A New Interpretation" subsection).

Quantum Mechanics and Dhamma - Introduction - 3/13/18 (in the new "Quantum Mechanics and Dhamma" section).

What Is a Wave and What Is a Particle? - 3/13/18 (in the new "Quantum Mechanics - A New Interpretation" subsection).

Photons Are Particles Not Waves - 3/13/18 (in the new "Quantum Mechanics - A New Interpretation" subsection).

Cloning and Gandhabba - 3/5/2018 (in the "Dhamma and Science" section).
"Discourse 5 - Tilakkhaṇa and Micchā Ditṭhi" added to Three Marks of Existence - English Discourses - 3/2/2018 (in the "Anicca, Dukkha, Anatta" section). This is the last one in this series.
"Discourse 4 - Sakkāya Ditṭhi - What is "a Person"?" added to Three Marks of Existence English Discourses - 2/27/2018 (in the "Anicca, Dukkha, Anatta" section).
"Discourse 3 - Distorted Perceptions or Saññā Vipallāsa" added to Three Marks of Existence English Discourses - 2/19/2018 (in the "Anicca, Dukkha, Anatta" section).

Nirodha Samāpatti, Phala Samāpatti, Jhāna, and Jhāna Samāpatti - 2/13/2018 (in the "Living Dhamma" section).
"Discourse 2 - Icca, Nicca, Anicca" added to Three Marks of Existence - English Discourses 2/10/2018 (in the "Anicca, Dukkha, Anatta" section).
"Discourse 1 - Nicca, Sukjha, Atta" in the Three Marks of Existence - English Discourses 2/3/2018 (in the "Anicca, Dukkha, Anatta" section).

Three Marks of Existence - English Discourses - 2/3/2018 (in the "Anicca, Dukkha, Anatta" section).
Citta, Mano, Viññāna - Stages of a Thought - 1/24/2018 (in the "Living Dhamma" section).
Bhava and Bhavañga - Simply Explained! 1/19/2018 (in the "Living Dhamma" section).
Does Bodily Pain Arise Only Due to Kamma Vipāka? 1/12/2018 (in the "Living Dhamma" section).
Anidassana Viññāna - What It Really Means - 1/6/2018 (in the "Living Dhamma" section).
Pure Dhamma - Reflections on 2017 - 1/1/2018

### 21.4.8 Essays - 2017

Bhūta and Yathābhūta - What Do They Really Mean - 12/28/2017 (in the "Rūpa Aggregate" subsection of "Living Dhamma" section).

12/17/2017: Puredhamma Discussion Forum is now open: "Pure Dhamma Discussion Forum Guidelines."
Kamma Viñ̃̄āña and Nāmarūpa Paricceda Ñān̄a - 12/12/2017 (in the "Nāmarūpa Formation" subsection of "Living Dhamma" section).

Tipitaka Commentaries - Helpful or Misleading? - 12/6/2017 (in the "Historical Background" section).
Pure Dhamma - Sinhala Translation - 12/2/2017 (More sections added by Prof. Sarath Bandara).
Kamma Viññāna - Link Between Mind and Matter - 11/30/2017 (in the "Nāma \& Rūpa to Nāmarūpa" subsection of "Living Dhamma" section).
Root of All Suffering - Ten Immoral Actions - 11/14/2017 (in the new "Dhamma with Less Pāli" subsection of "Living Dhamma" section).
Kāma Guna, Kāma, Kāma Rāga, Kāmacchanda - 11/9/2017 (in the "Assāda, Ādīnava, Nissarana" subsection of "Sotāpanna Stage of Nibbāna").

Difference Between Dhammā and Sañkhāra - 11/5/2017 (This is an old post in the section "Key Dhamma Concepts." I basically re-wrote the post. This is a much better version).

Assāda, Ādīnava, Nissarana - Introduction - 11/1/2017 (in the NEW "Assāda, Ādīnava, Nissarana" subsection of "Sotāpanna Stage of Nibbāna").

Pure Dhamma - German Website - 10/21/2017
Avyākata Paticca Samuppāda for Vipāka Viññāna - 10/17/2017 (in the "Paticca Samuppāda Cycles" subsection).
Samādhi, Jhāna, Magga Phala - Introduction - 10/12/17 (in the new subsection "Samādhi, Jhāna (Dhyāna), Magga Phala" of the "Living Dhamma" section).

Mundane versus Supramundane Jhāna - 10/12/17 (in the new subsection "Samādhi, Jhāna (Dhyāna), Magga Phala" of the "Living Dhamma" section).

Ascendance to Nibbāna via Jhāna (dhyāna) - 10/4/17 (in the "Transition to Noble Eightfold Path" subsection of the "Living Dhamma" section).

Abnormal Births Due to Gandhabba Transformations - 9/30/17 (in the "Mental Body - Gandhabba" subsection of the "Living Dhamma" section).

Gandhabba State - Evidence from Tipitaka - 9/16/17 (in the "Mental Body - Gandhabba" subsection of the "Living Dhamma" section).

Sila, Samādhi, Pañ̃̃ā to Paññā, Sila, Samādhi - 9/2/17 (in the "Transition to Noble Eightfold Path" subsection).

Anicca - Worthlessness of Worldly Things - 8/20/17 (in the "Anicca - True Meaning" subsection).
Dasa Samyojana - Bonds in Rebirth Process - 8/6/17 (in the "Bhāvanā (Meditation)" section).

The Infinity Problem in Buddhism - 7/15/17 (in the "Dhamma and Philosophy" section).
List of "San" Words and Other Pāli Roots $-6 / 29 / 17$ (in the "Tables and Summaries" section).
Pure Dhamma Discussion Forum Guidelines - 6/22/17
Sañkhāra and Kammā, Viññāna and Kamma Bīja - 6/16/17 (in the "San" section).
User's Guide to Pure Dhamma Website - 6/8/17 (in "Buddha Dhamma" section).
Is Ānāpānasati Breath Meditation? - 6/2/17 (in "Bhāvanā (Meditation)" section).
Viññāna - What It Really Means - 5/26/17 (in "Living Dhamma" section).

Working of Kammā - Critical Role of Conditions - 5/21/17 (in "Living Dhamma" section).
What are rūpa? - Dhamma are rūpa too! - 5/13/17 (in "Living Dhamma" section).
Micchā Ditthi, Gandhabbayā, and Sotāpanna Stage - 5/6/17 (in "Living Dhamma" section).
Buddhaghosa's Visuddhimagga - A Focused Analysis - 4/29/17 - 4/29/17 (in the "Historical Background" section).

Misinterpretation of Anicca and Anatta by Early European Scholars - 4/29/17 (This replaces a recent post, "Answers to Criticism of Pure Dhamma Interpretations".

I have also combined two previous posts, "Theravada - Problems with Current Interpretations of Key Concepts" and "Historical Timelines of Buddha Dhamma and Sri Lanka - End of Sinhala Commentaries" to make a new post, "Incorrect Theravāda Interpretations - Historical Timeline" - 4/29/17.

Are There Procedures for Attaining Magga Phala, Jhāna and Abhiñ̃ñ̄? - 4/23/17 (in the "Power of the Human Mind" section)

Answers to Criticism of Pure Dhamma Interpretations - 4/16/17 (in the "Historical Background" section).
Pabhassara Citta, Radiant Mind, and Bhavanga - 4/13/17 (in the "Abhidhamma" section).
Buddhaghosa and Visuddhimagga - Historical Background - 4/8/17 (in the "Historical Background" section) Dasa Akusala and Anatta - The Critical Link - 4/2/17 (in the "Anicca, Dukkha, Anatta" section)

Difference Between Jhāna and Stages of Nibbāna - 3/24/17 (in the "Power of the Human Mind" section) Anatta - the Opposite of Which Atta? - 3/17/17 (in the "Anicca, Dukkha, Anatta" section)

Sakkāya Ditthi is Personality (Me) View? - 3/10/17 (in the "Sotāpanna Stage of Nibbāna" section)
Parinibbāna of Waharaka Thero - 3/9/17
Pāli Dictionaries - Are They Reliable? - 3/4/17 (in the "Sutta Interpretations" section)- Revised 3/7/17.
Attā Hi Attano Nātho - 3/4/17 (in the "Dhammapada" section).
Sañkhāra - What It Really Means - 2/25/17 (in the new "Four Aggregates" subsection in the "Living Dhamma" section).

Vedanā - What It Really Means - 2/18/17 (in the new "What is Vedanā (Feelings)?" subsection in the "Living Dhamma" section).

Cattāro Āhāra for Mental Body or Gandhabbayā - 2/11/17 (in the new "Mental Body - Gandhabbaya" subsection in the "Living Dhamma" section).
Mental Body (Gandhabbayā) - Personal Accounts - 2/5/17 (in the "What is Saññā (Perception)?" subsection in the "Living Dhamma" section).
Vipallāsa (Ditthi, Saññā, Citta) Affect Sañkhāra - 1/28/17 (in the "What is Saññā (Perception)?" subsection in the "Living Dhamma" section).

Also, a really good Sinhala translation of many sections of the website by Professor Sarath Bandara is now available: "Pure Dhamma - Sinhala Translation."

Future Suffering - Why It Arises - 01/22/17 (in the "What is Sañ̃̃̄a (Perception)?" subsection in the "Living Dhamma" section)

Sexual Orientation - Effects of Kamma and Gati (Sañkhāra) - 1/14/17 (in the "Living Dhamma -
Fundamentals" subsection in the "Living Dhamma" section)
Nikāya in the Sutta Pitaka - 1/7/17 (in the "Sutta Interpretations" section)
Pure Dhamma - Reflections on 2016-01/01/17

April - July 2017
January - March 2017

### 21.4.9 Essays - 2016

December 2016
November 2016
October 2016
September 2016
August 2016
July 2016
June 2016
May 2016
April 2016
March 2016
February 2016
January 2016

### 21.4.9. January 2016

Tiparivattaya and Twelve Types of Ñāna (Knowledge) - 1/29/16 (Dhamma Cakka Pavattana sutta in the Sutta Interpretations section)
Majiima Patipada - Way to Relinquish Attachments to this World - 1/22/16 (Dhamma Cakka Pavattana sutta in the Sutta Interpretations section). Revised 1/23/16.
Dhammacakkappavattana Sutta Interpretation - Uddesa, Niddesa, Patiniddesa - 1/16/16 (in the Sutta Interpretations section).
Popup Pāli Glossary with Pronunciation - 1/7/16. There will be no new essay this weekend.
Pancaupadanakkhandha - It is All Mental - 1/1/16 (in the "The Five Aggregates (Pañcakkhandha)" section.

### 21.4.9. February 2016 <br> 2

Nibbatti Lakkhana in Udayavaya Ñāna - 2/26/16 (under the Sotāpanna Stage of Nibbāna)
Hidden World of the Gandhabbayā: Netherworld (Paralowa) - 2/18/16 (in Manomaya Kāya section) Uadayavaya Ñāna - Introduction - 2/12/16 (under the Sotāpanna Stage of Nibbāna)

Relinquishing Defilements via Three Rounds and Four Stages - 2/4/16 (Dhamma Cakka Pavattana sutta in the Sutta Interpretations section)

### 21.4.9. March 2016

3
Getting to Samādhi via Formal Meditation Sessions - $3 / 25 / 16$ (in Meditation section)
Āhāra (Food) in Udayavaya Ñāna - 3/19/16 (under the Sotāpanna Stage of Nibbāna; new subsection on Udayavaya Nāna)
How Perceived Pleasures (Assāda) lead to Dukkha - 3/11/16 (Under Āsvada (Mind-Made Pleasures), $\bar{A} d e e n a v a(B a d ~ O u t c o m e s), ~ N i s s a r a n a ~(R e l i n q u i s h)) ~(~) ~$
Craving for Pornography - How to Reduce the Tendency - 3/4/16 (Under Discussion of Comments)

### 21.4.9. April 2016

4/29/2016 New Section: Myths or Realities?
Two posts: Animisa Locana Bodhi Poojawa - A Prelude to Acts of Gratitude
and Paramita and Niyata Vivarana - Myths or Realities?
Brain - Interface between Mind and Body - 4/22/16 (in the Abhidhamma section. Don't be discouraged even if you don't have any exposure to Abhidhamma; I am trying to make Abhidhamma easy to grasp. No need to memorize anything)
What are Dhamma? - A Deeper Analysis - 4/15/16 (in the Abhidhamma section)
Two Versions of 37 Factors of Enlightenment - 4/8/16 (in "Anicca, Dukkha, Anatta" subection under "Key Dhamma Concepts")
Why are Tilakkhana not Included in 37 Factors of Enlightenment? - 4/1/16 (in "Anicca, Dukkha, Anatta" subection under "Key Dhamma Concepts")

Getting to Samādhi via Formal Meditation Sessions - 3/25/16 (in Meditation section)
Āhāra (Food) in Udayavaya Ñāna - 3/19/16 (under the Sotāpanna Stage of Nibbāna; new subsection on Udayavaya Nāna)

How Perceived Pleasures (Assāda) lead to Dukkha - 3/11/16 (Under Āsvada (Mind-Made Pleasures), $\bar{A} d e e n a v a(B a d ~ O u t c o m e s), ~ N i s s a r a n a ~(R e l i n q u i s h)) ~(~) ~$
Craving for Pornography - How to Reduce the Tendency $-3 / 4 / 16$ (Under Discussion of Comments)

### 21.4.9. May 2016

Supreme Qualities of Buddha, Dhamma, Sañgha $-5 / 28 / 16$ (This is a re-write of a previous short post).
Tisarana Vandana and Its Effects on One's Gati- 5/28/16
5/20/2016 New Subsection: The Grand Unified Theory of Dhamma, which includes two old posts and a new post: 31 Realms Associated with the Earth. New post in Tables and Summaries section: 31 Realms of Existence

Our Two Worlds: Material and Immaterial - 5/14/16 (in Buddha Dhamma section)
Indriya and Ayatana - Big Difference - 5/7/16 (in the Key Dhamma Concepts section)

### 21.4.9. June 2016

Possible Effects in Meditation - Kundalini Awakening - 6/25/16 (In the section on Bhāvanā (Meditation))
Can Buddhist Meditation be Dangerous? - 6/17/16 (In the section on Myths or Realities)
Gandhabbayā Sensing the World - With and Without a Physical Body $-6 / 11 / 16$ (In the subsection on the Grand Unified Theory of Dhamma)

Gandhabbayā - Only in Human and Animal Realms - 6/4/16 (In the subsection on the Grand Unified Theory of Dhamma)

### 21.4.9. July 2016

Antarabhava and Gandhabbayā-7/29/16 (In the section Myths or Realities?)
Udayavaya Ñāna - Importance of the Cittaja Kaya - 7/22/16 (In the subsection on the Udayavaya Ñāna in the Sotāpanna stage of Nobbana)

New section: Abhidhamma via Science (Changed to Inconsistencies with Science on 06Mar2018) and a new post: Vision (Cakkhu Viññāna) is Not Just Seeing - 7/15/16
Nibbāna in the Big Picture - 7/8/16 (In the subsection on the Grand Unified Theory of Dhamma) Hetu-Phala, Paccuppanna, and Paticca Samuppāda - 7/2/16 (In the section Sorting out Some Key Pāli Terms (Tanhā, Lobha, Dosa, Moha, etc)

### 21.4.9. August 2016

Started a new section: Living Dhamma. The subsection "New Approach to Meditation" was deleted and those posts are now in this section. New post in this section: What Are Kilesa (Mental Impurities)? Connection to Cetasika - 8/26/16

Starting on the Path Even without Belief in Rebirth (Nirāmisa Sukha to Nibbāna Suva - The Key Step) 8/19/16

New subsection in the "Bhāvanā (Maditation)" section : Living Dhamma and a new post in it: Peace of Mind to Nibbāna - The Key Step - 8/12/16

Also, Pāli Glossary replaced by two posts with over 400 Pāli words:
Pāli Glossary - (A-K) and Pāli Glossary - (L-Z) - 8/12/16
and, updated version of Popup Pāli Glossary with Pronunciation - 8/12/16
Living Dhamma - Introduction - 8/5/16 (In the section Bhāvanā (Meditation))

### 21.4.9. September 2016

Noble Eightfold Path - Role of Sobhana Cetasika - 9/30/16 (in the "Living Dhamma" section)
How Are Gati and Kilesa Incorporated into Thoughts? - 9/22/16 (in the "Living Dhamma" section)
Satipatthāna Sutta - Relevance to Suffering in This Life -9/10/16 (in the "Living Dhamma" section)
Two new posts:
Nibbāna "Exists", but Not in This World - 9/2/16 (in the 'Nibbāna" subsection)
Suffering in This Life - Role of Mental Impurities - 9/2/16 (in the "Living Dhamma" section)

### 21.4.9. October 2016

10
Suffering in This Life and Paticca Samuppāda - 10/28/16 (in the "Living Dhamma" section)
Started a new subsection: Patthāna Dhammā in the Pațicca Sumuppada section. New post in this section: Patthāna Dhamma - Connection to Cause and Effect (Hetu Phala) - 10/22/16
September 30, 2016: I just installed Google Translator at top right of the website. I have setup only a few languages for now. I would appreciate feedback on the quality of the translations. Also, if you need a language that is not there, please let me know and I can add. You can use the "Comments" box below to provide input.
Micchā Ditthi - Connection to Hethu Phala (Cause and Effect) - 10/18/16 (in the "Living Dhamma" section) Getting to Samādhi - 10/7/16 (in the "Living Dhamma" section)

### 21.4.9. November 2016

11
Sutta Learning Sequence for the Present Day - 11/30/16 (in Sutta Interpretations section).
Asevana and Annamanna Paccaya - 11/20/16 (in Patthāna Dhammā subsection in the Pațicca Sumuppada section).

Correct Meaning of Vacī Sañkhāra - 11/10/16 (in the "Sorting out Some Key Pāli Terms" sub section of the "Key Dhamma Concepts" section)

### 21.4.9. December 2016

Saññā - What It Really Means - 12/31/16 (in the "What is Sañ̃̃ā (Perception)?" subsection in the "Living Dhamma" section)
Our Mental Body - Gandhabbayā - 12/26/16 (in the "What is Sañ̃̃a (Perception)?" subsection in the "Living Dhamma" section)

Suffering in This Life and Paticca Samuppāda II - 12/7/16 (in the "Living Dhamma" section)

### 21.4.1 December 2015

Pañcakkhandha or Five Aggregates - A Misinterpreted Concept - 12/25/15 (in the "The Five Aggregates (Pañcakkhandha)" section.

Does the Hell (Niraya) Exist? - 12/18/15 (in the "Role of the Brain in Human Consciousness" section).
Feelings: Sukha, Dukha, Somanassa, and Domanassa - 12/11/15 (in the Paṭicca Samuppāda section).
13. Kammattana (Recitations) for the Sotāpanna Stage $-12 / 5 / 15$ in the Bhāvanā (Meditation) section

### 21.4. November 2015

The Origin of Matter - Suddhatthaka - 11/27/15 (in the Abhidhamma section)
Kāma Assāda Start with Phassa Paccayā Vedanā or Samphassa Ja Vedanā - 11/19/15 (in Paṭicca Samuppāda Section)
12. Key Factors to be Considered when "Meditating" for the Sotāpanna Stage - 11/13/15 (in the Meditation section).

How Are Paticca Samuppāda Cycles Initiated? - 11/6/15 (in the Paṭicca Samuppāda section).

### 21.4.1 October 2015

Do Things Just Happen? - The Hidden Causes - 10/30/15 (in the Moral Living and Fundamentals section).
"Self" and "no-self": A Simple Analysis - Do We Always Act with Avijiā?? - 10/23/15 (in the Comments/Reviews section).

Is Buddha Dhamma (Buddhism) a Religion? - 10/21/15 (in the Dhamma and Philosophy section).
Āsvada (Mind-Made Pleasures), Ādeenava (Bad Outcomes), Nissarana (Relinquish) - 10/16/15 (New subsection with the following two posts under it)

Āsvada, Ādeenava, Nissarana - Introduction - 10/16/15
What is "Kāma"? It is not Sex-10/16/15
How to Cultivate the Anicca Saññā - 10/8/15 (I revised the original post with this title and made two posts; most of the new material is in this first post and is better to be read first)

How to Cultivate the Anicca Saññā - II - 10/8/15

I have also added audio files to "Pāli Glossary" - 10/6/15
Is Eating Meat an Akusala Kamma (Immoral Deed)? - 10/2/15

### 21.4.1 September 2015 <br> 0.4

Would Nibbāna be Possible if Impermanence is the Cause of Suffering? - 9/25/15
Anicca vata Sankhara... - 9/17/15
Details of Kamma - Intention, Who Is Affected, Kamma Patha - 9/11/15 (in a new section on "Discussion of Comments" under "Comments/Reviews").

Nirāmisa Sukha - In a Chart - 9/4/15
Learning Buddha Dhamma Leads to Nirāmisa Sukha - 9/4/15

### 21.4.1 August 2015 <br> 0.5

What is the only Akusala Removed by a Sotāpanna? - 8/28/15
Cetasika - Connection to Gati - 8/20/15
Body Types in 31 Realms - Importance of Manomaya Kāya - 8/13/15
Citta Vithi - Processing of Sense Inputs $-8 / 6 / 15$

### 21.4.1 July 2015 <br> 0.6

10. Attaining the Sotāpanna Stage via Removing Ditthasava - 7/30/15 (This is a major revision of a previous post with a different title).

Four Conditions for Attaining Sotāpanna Magga/Phala - 7/27/15
Four Noble Truths: Recipe for Problem Solving - 7/16/15
Gati to Bhava to Jāti- Ours to Control - 7/9/15
Gati and Bhava-Many Varieties - 7/3/15

### 21.4.1 June 2015

0.7

Namagotta, Bhava, Kamma Bija, and Mano Thalaya (Mind Plane) - 6/26/15
Arogya Parama Labha - 6/19/15
Key to Sotāpanna Stage - Ditthi and Vicikicchā - 6/13/15
Why Do People Enjoy Immoral Deeds? - Ditthi Is Key - 6/6/15
What is Unique in Buddha Dhamma? - $6 / 1 / 15$

### 21.4.1 May 2015 <br> 0.8

How to Cultivate the Anicca Saññ̄a - 5/24/15
Anicca, Dukkha, Anatta - According to Some Key Suttā - 5/15/15

How Does One Know whether the Sotāpanna Stage is Reached? - 5/9/15
Buddha Dhamma: Non-Perceivability and Self-Consistency - 5/3/15

### 21.4.1 April 2015

Bhava paccayā Jati. ...Jara, Marana, ... -4/29/15 (under 'Paticca Samuppāda in Plain English').
Phassa paccayā Vedana....to Bhava - 4/24/15 (under "Paticca Samuppāda in Plain English").
Difference between Phassa and Samphassa - 4/18/15 (under "Paticca Samuppāda in Plain English").
Namarupa paccayā Salāyatana - 4/11/15 (under "Paticca Samuppāda in Plain English").
Mahā Cattārīsaka Sutta (Discourse on the Great Forty) - 4/6/15
Does any Object (Rūpa) Last only 17 Thought Moments? - 4/1/15

### 21.4.1 March 2015

0.10

Viññāna paccayā Namarupa - 3/28/15 (under "Paticca Samuppāda in Plain English").
Sañkhāra paccayā Viññāna - 2 - 3/24/15 (under "Paticca Samuppāda in Plain English").
Sañkhāra paccayā Viññāna - $1-3 / 20 / 15$ (under "Paticca Samuppāda in Plain English").
Avijjā paccayā Sanikhāra - 3/16/15 (under "Paticca Samuppāda in Plain English").
Introduction - 2 - The Three Categories of Suffering 3/12/15 (under "Paticca Samuppāda in Plain English").
Introduction - What is Suffering? 3/8/15 - new sub section on "Paticca Samuppāda in Plain English" where I will use minimum Pāli words.
3. Viññāna, Thoughts, and the Subconscious $3 / 4 / 15$

### 21.4.1 February 2015

0.11

What is "Kaya" in Kāyānupassanā?- 2/26/15.
Difference between a Wish and a Determination (Paramita) 2/18/15
Are you not getting expected results from meditation? 2/15/15
Lobha, Dosa, Moha versus Raga, Patigha, Avijiā 2/13/15
Prerequisites for the Satipatthāna Bhāvanā 2/12/15
Kāyānupassanā - The Section on Habits (Sampajanapabba) 2/9/15
First Noble Truth - A Simple Explanation of One Aspect 2/6/15
"Spark" by John Ratey 2/5/15

Satipatthāna Sutta - Structure $2 / 4 / 15$ - I have revised the other two older posts on the Satipattha sutta in order to insert this post in the beginning.

Kāyānupassanā - The Foundation (Iriyapathapabba) 2/1/15

### 21.4.1 January 2015 <br> 0.12

Wrong Views (Micchā Ditthi) - A Simpler Analysis 1/28/15

Sutta Interpretation - Uddesa, Niddesa, Patiniddesa - Starting a new section on Suttā - 1/20/15
Origin of Morality (and Immorality) in Buddhism 1/17/15
Recent Evidence for Unbroken Memory Records (HSAM) 1/15/15
11. How to Select and "Grow" Meditation Procedures for Magga Phala - Meditation Section (1/12/15) Possible Outcomes of Meditation - Samādhi, Jhāna, Magga Phala (1/8/15)

If Everything is Anicca Should We Just give up Everything? (1/7/15)
"The Language of God", by Francis Collins - Book Review (1/3/15)

### 21.4.11 Essays - 2014

December 2014
November 2014
October 2014
September 2014

## August 2014

July 2014
June 2014

### 21.4.1 December 2014

1.1

Sañkhāra - Life is a Bundle of Sañkhāra $(12 / 28 / 14)$
Anicca - Repeated Arising/Destruction (12/24/14)

1. Thoughts (Citta), Consciousness (Viñ̃̃āna), and Mind (Hadaya Vatthu) - Introduction (12/20/14)
2. Viññāna (Consciousness) can be of Many Different Types and Forms (12/20/14)

Three Kinds of Ditthi, Eightfold Paths, and Samādhi (12/18/14)
Buddhist Explanations of Conception, Abortion, and Contraception (12/14/14)

## Citta and Cetasika - How Viññāna (Consciousness) Arises (12/12/14) - Abhidhamma

Manomaya Kāya - Introduction (12/12/14). I am starting a new subsection in the "Key Dhamma Concepts" section on Manomaya Kāya, and have added two previous posts from other sections to here as well. This section is a prerequisite for the Abhidhamma material, but this material may help clarify other issues as well.
"Waking Up" by Sam Harris (12/9/14) - I am starting a new section on "Book Reviews". I have moved a post that I did last month on "Why Does the World Exist?" by Jim Holt from a different section to this section.

The Cooling Down Process (Nibbāna) - How the Root Causes are Removed (12/5/14)

### 21.4.1 November 2014

1.2

What Does "Paccaya" Mean in Paticca Samuppāda? - Effect not Guaranteed (11/21/14)
Memory, Brain, Mind, Nama Loka, Kamma Bhava, Kamma Vipāka (11/19/14)
Saddharma Pundarika Sutra (Lotus Sutra) - A Focused Analysis (11/16/14)
Sadhu - Symbolizes Purified Hadaya Vatthu (Mind) (11/12/14)

Cuti-Patisandhi - An Abhidhamma Description (11/9/14) - Technical but informative!
Sotāpanna Magga and Phala - How to Distinguish (11/7/14)
Vinaya - The Nature Likes to be in Equilibrium (11/6/14)

### 21.4.1 October 2014

1.3

Najajja Vasalo Hoti. ..... (10/28/14)

### 21.5 Buddha Dhamma - In a Chart

I have made a single page chart that shows the uniqueness of the Buddha's message, and also outlines the Path that he suggested clearly.

The pdf file can be saved or printed for reference:
WebLink: PDF File: Buddha Dhamma - In a Chart

Discussion of the chart is at:
What is Unique in Buddha Dhamma?

### 21.6 Pure Dhamma Essays in Book Format

For those who may like to read the posts in epub book format, please download it at the below website: WebLink: Pure Dhamma Essays in Book Format

### 21.7 Nirāmisa Sukha - In a Chart

There are several posts at the site on "nirāmisa sukha." It is NOT a feeling (vedanā) in the sense of a sense pleasure; it does not belong in the vedana cetasika. It is a "sense of relief" when one starts realizing the "burdens" associated with sense pleasures.

- The closest analogy (if one can be given) is the feeling one gets when one is relieved of an headache that one had since birth.

I have made a single page chart that shows how the nirāmisa sukha starts as one starts when one first hears the true message of the Buddha and starts comprehending it, and becomes a Sotāpanna Anugami. Then it makes permanent stepwise jumps at the four stages of Nibbāna culminating in the Arahanthood.

The pdf file can be saved or printed for reference:

## WebLink: PDF File: Nirāmisa Sukha - In a Chart

Discussion of the chart is at:
Learning Buddha Dhamma Leads to Nirāmisa Sukha

### 21.8 Popup Pali Glossary with Pronunciation

February 20, 2020: Updated \#5 URL Link for Windows and Mobile iPhone/iPad. Added at \#5 and \#7Plain Dictionary for Mobile Android. (by Seng Kiat Ng)
August 12, 2016: Mr. Seng Kiat Ng added the new words in the two new posts "Pāli Glossary - (A-K)" and "Pāli Glossary - (L-Z)" to the pop-up dictionary, so that there are now a total of 414 Pāli words. Please download the two new files in \#3 below and delete the old files, if you have already installed the GoldenDict dictionary.

- Installation instructions are given below for those who have not installed the pop-up GoldenDict dictionary, but would like to do so.

## January 7, 2016

This post was written by Mr. Seng Kiat Ng. Much merits to him and his family for this meritorious work. This is a very useful feature that can be used with any other site as well (by downloading other dictionaries; see below).

- Please remember that once you download the files as he instructed, you will be able to highlight a Pāli word (178 words as of today) in any of the posts at the site and a popup screen will display the English meaning. You also be able to hear the Pāli pronunciation if clicked on the audio button.
- The old Pāli Glossary (with the same 178 words) is still there in case anyone wants to peruse there; the audio files have been removed since they take too long to download.

1. We will be using the GoldenDict online dictionary platform. First, one needs to install it on one's computer and then download the two Puredhamma Pāli dictionary files to a folder on one's computer.

- Other online or downloadable (free) dictionaries can also be used as described below.

2. Goto http://goldendict.org/download.php and choose the version suitable for you. I chose the first option to download the Windows version.

- Download the .exe file and double click to run it and install it.
- Mine was installed in the C:Program Files (X86)\GoldenDict directory. There should a "GoldenDict.exe" file there. This is the "clickable icon" that will open the application. It does not automatically create this "clickable icon" on the desktop, so right click on that and make a copy on the desktop for convenience.
- Now the GoldenDict application can be opened by double clicking that link on the desktop.

3. Next download the two files (one text, one audio) for the Pāli dictionary from Puredhamma.net to a folder in your computer (could be the same "GoldenDict" folder above).

- Pure-Dhamma-Pāli-English Glossary [399 words] 25Feb2020.mdx (Text) Updated 25Feb2020
- Pure-Dhamma-Pāli-English Glossary [399 words] 25Feb2020.mdd (Audio) Updated 25Feb2020

You may want to close any other screens (other than the one with the "Download" button) that pop up with advertisements. Wait until the "Download" button becomes "clickable".
4. Now open the GoldenDict as instructed in \#2 above.

- Go to "Edit" and choose "Dictionaries" and then choose the folder that you put the above two Pāli Glossary files.
- Now, right next to the "search button" on GoldenDict, there is the "scan popup" option selection button indicated by a "pen like" symbol. Click on it to enable scan popups.
- Now, open any page on Puredhamma.net and select a Pāli word. If you are running Windows Explorer, just placing the cursor on the word will make the dictionary popup (if that word is one of the 414 words that are so far in the Pāli dictionary). Try "anicca" in a post to test because that word is there.
- If you have Google Chrome, you need to select the word (highlight) and hit CTRL+C+C (hold CTRL button and hit C twice) for it to popup.
- There is a "speaker" symbol there in the popup and you can click on it to play back the audio file (pronunciation).
- In order for the popup dictionary to work, GoldenDict must be opened at the same time.

5. Here is a complete list of options to download the GoldenDict platform:

- Windows GoldenDict-1.5.0-RC-517
- Mac OS X GoldenDict Early Access Builds for Mac OS X
- Linux GoldenDict Eng-Rus-En v1.1

Other Dictionary:

- Mobile Android Plain Dictionary BlueDict
- Mobile iPhone/iPad MDict (Windows, Android, IOS, Tools, Dictionary files)

6. You can use the GoldenDict platform to access other online or downloadable dictionaries (to be used either with this site or any other site). Some can be chosen at the "Edit" menu. Go to "Edit" and choose "Dictionaries" and on the second raw of that screen there are some online dictionaries that you can choose from.

- More information at the GoldenDict.org site.
- If you have two or more dictionaries loaded, then the popup will display translations provided by all of them (if that word is in them).

7. Other than GoldenDict, the following two platforms also could be used.

- Plain Dictionary (Android - Free, unlimited Dictionary with no advertisement)
- BlueDict (Android - Free; limited to 10 Dictionaries and with advertisement)
- MDict (Windows/IPhone/Ipad/Windows Mobile/Android - Free with limitations)

### 21.9 Reflections on 2019

## January 1, 2020

1. Puredhamma.net completed a full six years online. There are over 600 posts at the site. It may look challenging to navigate through.

- It may be difficult to get an idea about the layout of the website, especially for those who are using a mobile phone or a tablet. I recommend reviewing the "Pure Dhamma - Sitemap."
- I just went through the whole site and collected all the posts under specific sections and subsections.

2. I very much want to highlight the fact that Buddha Dhamma is not about hiding in a remote place and shying away from society or subjecting oneself to harsh living.

- It is not those enticing or seducing things that make us do immoral things and make our minds stressed in turn. rather it is our own defiled gati (habits/character) making us do immoral things.
- One with a purified mind can live in the most seductive place and yet not be perturbed.
- But to get there, one needs some self-control to stay away from such extremes initially. Learning pure Dhamma is the only way to break through that first barrier. Once the Sotāpanna stage is attained, one will never go back.

3. In his very first discourse to the five ascetics, the Buddha explained that there is nothing in this world that is worth to be taken as "mine." The First Noble Truth is not about the suffering that we experience in this life. In fact, some people may not even experience that much suffering in this life until the end.

- Rather, what the Buddha said is that we create CAUSES to bring about FUTURE SUFFERING if we ATTACH to worldly pleasures. We are not any different than a fish biting into a tasty bait, say, a worm. That fish does not see the hook hidden in the "delicious worm." It will be subjected to much suffering once it bites the worm, and the hook attaches to its mouth.
- The difficulty in our case is that the deeds we do to get those sensory pleasures may not show their CONSEQUENCES in this life. That is why it is useless to follow Buddha Dhamma if one does not believe in rebirth or kamma/vipāka.
- As long as we CRAVE for sensual pleasures (that is different from just experiencing them,) we WILL be born with bodies that are subjected to diseases, decay, and eventual death. See, "Is It Necessary for a Buddhist to Eliminate Sensual Desires?"

4. I had an experience that really "opened my eyes" early in 2019. A brain tumor about $2-3 \mathrm{~cm}$ in diameter was found in the frontal lobe of my brain. Within 5 weeks they were able to operate and remove the tumor. Luckily, it was non-cancerous.

- That experience was a reminder of how fickle this life is. I was lucky to be able to survive with just losing my sense of smell. If it was not found, the tumor could have grown more and damaged my vision too.
- We all should work towards Nibbāna as if we have only a short time to live. In fact, that was the last advice of the Buddha before his Parinibbāna: 'vayadhammā sañkhārā, appamādena sampādethā'" $t i$.

5. I discussed this key point in a recent post, "Icchā (Cravings) Lead to Upādāna and to Eventual Suffering." I highly recommend reading the new series of posts on "Origin of Life" and, in particular, the subsection there "Paticca Samuppāda - Not 'Self' or 'No-Self"

- However, those of you who are not familiar with the fundamentals of Buddha dhamma (Buddhism), I recommend first reviewing the "Pure Dhamma - Sitemap" and reading on the earlier sections there, or any sections of interest.
- First, one needs to get an idea of what Buddha Dhamma is.

6. I am appreciative of many kind comments on the usefulness of the site, and about personal achievements. That gives me confidence that there are people who can see the value of Pure Dhamma and can make genuine progress.

- Special thanks to Seng Kiat Ng from Singapore for putting together all the posts in an eBook format and for updating it every week as I write new posts and update old posts. He has done that for a few years now. He is also helping manage the discussion forum. The link to the eBook at, "Pure Dhamma Essays in Book Format."
- Tobias Große in Heilbad Heiligenstadt, Germany, has now translated many pages of pure dhamma to German. Here is the link: https://puredhamma/de
- Puredhamma.net is now available in Korean, thanks to Mr. Ja-nyun Kim and his son who is the manager (DHK) of the Puredhamma Study Group Cafe (https://cafe.naver.com/puredhamma). The link to the website is https $/ / /$ puredhamma.kr
- There are few others who are working on translations to their own languages.
- There are also several other disciples of the Waharaka Thero who are working diligently to deliver the true teachings of the Buddha in the Sinhala (and English) languages; see, "Parinibbāna of Waharaka Thero." We have also discussed others at the discussion forum.
- Christian Schoenrock has organized a group in Eastern Europe. He also has a forum discussing Pure Dhamma in English that is open to everyone: https://discordapp.com/invite/g6UWq4b
- Many others have contributed by pointing out errors in some posts leading to improvements. My goal is to have $100 \%$ inter-consistency as well as consistency with the Tipitaka. My thanks all of them.

7. I am happy about the status of the discussion forum at puredhamma.net. It completed the second full year on December 17th: "Forum."

- Even though only a limited number of people are posting there, the quality of discussions is good. I encourage questions and take each question seriously. Most people have not been exposed to key concepts, and are not aware of them due to no fault on their own.
- There have been few issues with the submission of comments within the last month or so. I am using a software package dedicated to Word Press websites, and they are working on the issue. If anyone has a problem in submitting a question/comment, please send me an email: lal@puredhamma.net.

Happy New Year!
May the Blessings of the Triple Gem (Buddha, Dhamma, Sañgha) be with you always!

### 21.10 Reflections on 2018

## January 1, 2019

1. Puredhamma.net completed full five years online. There are well over 500 posts at the site. It is getting a bit complex to browse through.

- I am thinking about splitting it to three sites based on the complexity of the material. May be something like: Beginner, Intermediate, and Advanced.
- Even though there are many posts, I have not been able to adequately cover certain sections, especially Abhidhamma.

2. On the other hand, last year was an eye-opener for me, in that there is a need to explain basic concepts in Buddha Dhamma. I participated in a well-known Buddhist discussion forum, and only during the past three months or so that I realized that most people there do not have a basic understanding of the key concepts of Buddha Dhamma.

- Deep sutt $\bar{a}$ are discussed there without having an understanding of key concepts like the five aggregates: rūpa, vedanā, saññā, sañkhāra, viñ̃̄̄ạna.
- Since only a limited number of people make comments there, I am not certain how bad this problem really is.

3. I am seriously thinking about having a "sub-site" where introductory concepts in Buddha Dhamma are explained.

- That includes dasa akusala, Four Noble Truths, Noble Eightfold Path, and an introduction to Patticca Samuppāda.
- By the way, if you are new to puredhamma.net, please read the "Moral Living and Fundamentals" and the first subsections of the "Living Dhamma" section.
- It is absolutely necessary to learn the basics before getting into advanced concepts.

4. I am happy about the status of the discussion forum at puredhamma.net. It completed the first full year on December 17th: "Forum."

- Even though only a limited number of people are posting there, the quality of discussions is good. I encourage questions, and take each question seriously. Most people have not been exposed to key concepts, and are not aware of them due to no fault on their own.
- I am glad to see that at least a limited number of people are making significant progress due to those discussions. It is hard to explain everything in a post. Therefore, the forum is a good way to bring up points that I missed, or not paid enough attention to.
- My sincere thanks to all who are contributing to the discussions by proving their own input.

5. I am appreciative of many kind comments on the usefulness of the site, and about personal achievements; that gives me confidence that there are people who can see the value of Pure Dhamma and can make genuine progress.

- Special thanks to Seng Kiat Ng from Singapore for putting together all the posts in an eBook format and for updating it every week as I write new posts and update old posts. He is also helping manage the discussion forum.
- Tobias Große in Heilbad Heiligenstadt, Germany, has now translated many pages of puredhamma to German. Here is the link: https://puredhamma/de
- I understand that there is a Korean translation too. The person who is doing the work has written to me, but seems to want to stay anonymous.
- Christian Schoenrock has organized a group in Eastern Europe. He also has a forum discussing Pure Dhamma in English that is open to everyone: https:/discordapp.com/invite/g6UWq4b
- Many others have contributed by pointing out errors in some posts leading to improvements. My goal is to have $100 \%$ inter-consistency as well as consistency with the Tipitaka. My thanks all of them.

## Happy New Year!

May the Blessings of the Triple Gem (Buddha, Dhamma, Sañgha) be with you always!

### 21.11 Reflections on 2017

## January 1, 2018

1. Pure Dhamma discussion forum was launched on December 17. I had wanted to do that for a while, and I am glad to see that there are several good discussions started already. I hope more readers will take part, not only to ask questions but also to answer questions by others.

- Over the past few years, I have learned a lot by trying to answer questions put forth by others. Such questions force me to look at a given issue from a different point-of-view.
- Now more people can benefit in two ways: One can get answers from multiple people (different people look at the same issue from different angles), and everyone can benefit from the discussions.

2. I want to start working a new project that I have been wanting to do for a while. It is to illustrate the real connection between quantum mechanics and Buddha Dhamma. Some people have tried to do that highlighting "quantum weirdness", but in fact there is no weirdness in quantum mechanics.

- So, I hope the discussion forum will grow and I can only drop by once in a while.
- Forum guidelines and how to register: "Pure Dhamma Discussion Forum Guidelines."
- One does not need to register to read questions and comments by others.

3. Puredhamma.net is now available in German language, thanks to Mr. Tobias Große in Heilbad Heiligenstadt, Germany. Here is the link:

## https://puredhamma/de

- Professor J. M. R. Sarath Bandara has added more sections to the Sinhala translation of the Puredhamma website recently: Pure Dhamma - Sinhala Translation

4. I have personally made significant progress. Even though I am not certain that I have been released from the kāma loka, it seems I am almost there.

- However, I do not worry about specific attainments. I believe that if I pursue the Path, the fruits will appear naturally, just like a tree will grow and bear fruit if it is taken care of by providing water, sunlight, and nutrients.

5. I need to make a comment about the $j h \bar{a} n \bar{a}$, since there are some misconceptions. If one cultivates $j h \bar{a} n a$, the fourth Ariya jhāna can be attained only by an Anāgāmī. It is fairly easy to verify if one has attained the Anāgāmī stage (no cravings left for any sensual pleasures including sex, food, music, etc).

- When one attains the $A n \bar{a} g \bar{a} m \bar{\imath}$ stage, Samm $\bar{a} S a m a \bar{a} h i i$ is complete; hence if one has cultivated $j h \bar{a} n a$, one would attain the fourth Ariya jhāna.
- One finally attains the Arahant stage by completing Sammã Nāña and SammāVimutti: "atthāngehi samannāgato Sekhā, dasāngehi samannāgato Arahant", i.e., there are ten steps to the Arahant stage.
- These are discussed in detail at: "Samādhi, Jhāna (Dhyāna), Magga Phala."

6. A related issue is that one does not lose "kāma guna" associated with the human bhava (i.e., any sense pleasure like the ability to taste the sweetness of sugar) even when attaining the Arahant stage. One just loses any craving for them. One has seen the fruitlessness and dangers in craving for them.

- Therefore, one with any type of magga phala will still taste delicious food as such, or good music as pleasant, or feel the comfort in an air-conditioned room. These are "kāma guna" associated with the human bhava, and are removed only when an Arahant attains Parinibbāna, i.e., at the physical death of the body.
- This is explained in "Kāma Guna, Kāma, Kāma Rāga, Kāmaccandha".

7. Buddha's true message is contrary to the message embodied in all other religions and philosophies/world views. The goal is not to merely live a moral life, but also to see the dangers in "maintaining status quo" by just living a good, moral life: It is imperative to get out of the rebirth process in order to prevent unimaginable types of suffering in future lives.

- It is true that a "normal human mind" sees this as a pessimistic message. Stopping the rebirth process seems very drastic and disconcerting.
- Therefore, it is not even advisable to focus on that in the beginning. It is better to try to understand basic concepts first, as discussed in the first subsections in the "Living Dhamma" section (and the "Bhāvanā (Meditation)" section), and feel the increasing levels of nirāmisa sukha as one makes progress.
- When one advances to higher subsections of the "Living Dhamma" section, one will be reading advanced concepts. In the end, one would realize that the key message of the Buddha is actually the best message that one could receive and is more valuable than anything in this world.
- The unconventional message of the Buddha is "a world view that has never been known to the world" or "pubbe ananussutesu dhammesu." That is what I try to explain at this website in a systematic way.

8. If even a single person can attain the Sotāpanna stage, that would be worthwhile my time writing for even ten years. That means stopping an uncountable number of births in the ap $\bar{a} y \bar{a}$ for that person.

- But I know that number is higher even for a given year, based on emails that I receive. That will keep me going for as long as I can write. And there is so much to write! Even if I write for ten more years, there will still be more to write.
- Of course, I or anyone else cannot verify whether another has attained the Sotāpanna stage or any other magga phala. But even if one has become a Sotāpanna Anugāmi, he/she is an Ariya and is bound to attain the Sotāpanna stage in the immediate future. Sotāpanna Anugāmis are included in "Attha purisa puggala"" or the "Eight types of Noble Persons".

9. I am appreciative of many kind comments on the usefulness of the site, and about personal achievements; that gives me confidence that there are people who can see the value of pure Dhamma and can make genuine progress.

- My thanks also to those who made comments/suggestions/questions that have led to improvements of many web pages. Special thanks to Mr. Seng Kiat Ng from Singapore for putting together all the posts in an eBook format and for updating it every weekend as I write new posts and update old posts.
- Many others also pointed out many errors in posts which have led to improvements. My goal is to have $100 \%$ inter-consistency as well as consistency with the Tipitaka.
- I also want to illustrate that there is no need to consult late commentaries like Visuddhimagga; that can only lead to confusion. I have shown many inconsistencies in them; see, "Historical Background." There are three original commentaries included with the Tipitaka and those are sufficient.

9. Finally, I always highlight the fact that Buddha Dhamma is not about hiding in a remote place and shying away from the society or subjecting oneself to harsh living.

- One with a purified mind can live in the most seductive place and yet not be perturbed. But of course to get to that point, one needs to gradually reduce attachment to excess sense pleasures, and to stay away from bad friends and bad environments (in order to see for oneself how much "peace of mind" can be realized).
- It is not those enticing or seducing things that make us do immoral things and make our minds stressed in turn; rather it is our own defiled minds making us do immoral things (defilements can vary from hate and excess greed to just being ignorant of the true nature of the world).
- All we need to do is to get rid of our bad gati (or gathi; I note that I have used both spellings over the years) and cultivate good gati. This is the key to Nibbāna. During that process, one will start feeling the
"cooling down", and then start comprehending anicca, dukkha, anatta, which leads to the Sotāpanna stage. Therefore, it is a step-by-step process.

## Happy New Year!

May the Blessings of the Triple Gem (Buddha, Dhamma, Sangha) be with you always!

### 21.12 Reflections on 2016

## January 1, 2017; revised (\#7) January 6, 2016

1. Buddha's true message is contrary to the message embodied in all other religions and philosophies/world views. The goal is not to just live a moral life, but also to see the dangers in "maintaining status quo" by just living a good, moral life. It is imperative to get out of the rebirth process in order to prevent unimaginable types of suffering in future lives.

- This unconventional message of the Buddha is "a world view that has never been known to the world" or "pubbe ananussutesu dhammesu."
- However, it is not possible for a "normal human mind" - no matter how brilliant - to comprehend the fact that this apparently pessimistic message of the Buddha is actually the best message that one could receive and is more valuable than anything in this world.

2. I know this by own experience and that is why I am willing to state this straightforwardly, even though it may scare off some, who have been erroneously led to believe that Buddha Dhamma (Buddhism) is not that different from other religions or world views that confine a life's goal to just to live a moral life.

- It is definitely true that one MUST live a moral life. If one lives an immoral life, one's mind will be too contaminated to grasp that critical message of the Buddha.

3. Expressed in a different way: One needs to live a moral life and follow the mundane Eightfold Path first to get rid of the worst defilements (cobwebs that cover the mind) so that one could grasp this unique message.

- So, after three years of writing, and contemplating how to guide someone through the easiest path to grasp that key message of the Buddha that goes against our traditional beliefs, I have started a new section - "Living Dhamma" - that can hopefully make this process easier.
- One starts at a place even without having to accept any key foundational concepts like kamma and kamma vipāka or the validity of the rebirth process.
- One does not need to believe in anything except one's own experience. Through the improvements in one's sense of well-being, one's mind will become clear and will be able to grasp the key aspects of Buddha Dhamma.

4. My goal is to make this section section the centerpiece of the website. Anyone - regardless of one's familiarity with Buddha Dhamma (Buddhism) - should start at the very beginning, because it is imperative to grasp the very basics. I have had enough correspondences with many readers over these three years to see that many have not fully grasped the basics; that could leave out key pieces in the big picture.

- It could be a big mistake to assume that one knows the basics and thus skip them.
- It is also a mistake to try to contemplate on concepts like anicca, dukkha, anatta or sunyata without grasping the essential fact that one needs to start experiencing the "peace of mind" (nirāmisa sukha) by staying away from those thoughts, speech, and actions that can defile and make a mind stressful and not susceptible to grasping "a world view that has never been known to the world".
- The goal should be to "capture the essence" and not to try to memorize everything. Bits and pieces of the jigsaw puzzle will start falling into place, leading to joyful "Aha! moments".

5. The website is completing three full years in existence, and I am glad that there an increased interest among countries all over the world despite the fact that pure Dhamma is unconventional.

- When one starts seeing and experiencing the "true Dhamma", it will become a joyful experience and one will be compelled to dig deeper and find more.

6. This is why I am appreciative of many kind comments on the usefulness of the site; that gives me confidence that there are people who can see the value of pure Dhamma.

- My thanks also to those who made comments/suggestions/questions that have led to improvements of many web pages. Special thanks to Mr. Seng Kiat Ng from Singapore for putting together all the posts in
an eBook format and for updating it every weekend as I write new posts and update some old posts. He and many others also pointed out many errors in posts which led to improvements.
- There are readers from many countries and for the year 2016, the top 20 countries are: United States, Singapore, New Zealand, Great Britain, Sri Lanka, Japan, China, Australia, India, Sweden, Hong Kong, Canada, Germany, Bulgaria, Thailand, France, Malaysia, Russian Federation, Indonesia, South Africa.
- A few more statistics from Google Analytics on user experience: Sessions $=50,688$; page views $=$ 720,269 ; Pages $/$ Session $=14.21$; Bounce Rate $=1.83 \% ; \%$ New Users $=54.41 \%$. And in December, $8.3 \%$ spent over an hour at a time at the site according to the web host.
- Pure Dhamma seems to have no national boundaries, as it should be. It describes the true nature of our world.

7. Another related comment from some is their anxiety of why it is taking too long for them to attain the Sotāpanna stage, and how can one know for sure whether one is even making progress.

- This is a very important question. The Buddha was asked the same question. His answer was: "Do not worry about those things day in and day out. Just concentrate on learning Dhamma and keep living by that Dhamma".
- His gave a simile: "How does a good farmer go about making sure that he gets a good harvest? He prepares the field, uses good seeds, and once they germinate he makes sure to keep the weeds out and provide necessary nutrients. He does not waste time worrying about the harvest".
- The best way to gauge one's progress is to look back and see whether one has made improvements in controlling one's anger and greed by being mindful of one's thoughts and actions.

8. I would like to share a personal experience that illustrates the "anicca nature" of this world. I eat healthy and exercise regularly (yoga and cardio), and have been able to avoid even a minor ailment since 2009. But two weeks ago, a herniated disk (which was first diagnosed in 2008) started giving me physical pain on my left arm/shoulder without any obvious physical cause.

- By the way, I can also confirm that it is impossible to get into $j h \bar{a} n \bar{a}$ when one is under such physical pain. Therefore, there is no relief from this obvious kamma vipāka.
This is a good example of the anicca nature: unexpected problems can arise even if you take necessary precautions. I must hasten to point out two facts:
- I am not saying that this happened without a cause. It is obviously a strong kamma vipāka that was hard to avoid despite taking precautions (eating well/exercise) or in the Abhidhamma language, not making bad conditions (samanantara paccayā) for such kamma vipāka to bear fruit.
- If I had not been engaging in a good exercise program or had not paid attention to what I eat, I am sure I would not have been able to go 7 years without a significant health problem.

But with my productivity plunging (it is almost impossible to concentrate with such acute pain), it has brought me back to reality.
9. Finally, I very much want to highlight the fact that Buddha Dhamma is not about hiding in a remote place and shying away from the society or subjecting oneself to harsh living.

- Even if one is not be able to attain the Sotāpanna stage in this life, the effort will not go to waste: it will make it easier in the future. As the Buddha advised, just follow the Path if it seems to make sense; results will follow.
- But to get there, one needs some self-control to stay away from such extremes initially. Learning pure Dhamma is the only way to break through that first barrier. Once the Sotāpanna stage is attained, one will never, ever go back. (if one becomes a Sotāpanna magga anugami, one will never go back in this human bhava, which could be many more human births).
- One with a purified mind can live in the most seductive place and yet not be perturbed.
- It is not those enticing or seducing things that make us do immoral things and make our minds stressed in turn; rather it is our own defiled minds (defilements can vary from hate and excess greed to just being ignorant of the true nature of the world) making us do immoral things.

Happy New Year!
May the Blessings of the Triple Gem (Buddha, Dhamma, Sangha) be with you always!

### 21.13 Reflections on 2015

## January 1, 2016

I started the website sometime in early January of 2014. I am pleasantly surprised to see a marked increase in audience in 2015 compared to 2014. Actually, the increase in time spent at the site (indicated by the bandwidth and pages) has increased much more than the number of visits. That is what I really like: those who "really get it" spend more time learning pure Dhamma.

1. First of all, my heartfelt thanks for the many kind comments on the usefulness of the site, and also making comments/suggestions/questions that have led to improvements of many web pages. Special thanks to Mr. Seng Kiat Ng from Singapore for putting together all the posts in an eBook format and for updating it every weekend as I write new posts and update some old posts; he has also pointed out many errors in posts which led to improvements.

- Many others have pointed out such errors and suggested improvements to the site, and I am grateful to all.
- There are readers from over 50 countries and for the month of December, 2015, the top 20 countries are: United States, Singapore, New Zealand, Great Britain, Sri Lanka, India, Australia, Malaysia, Bulgaria, Ecuador, Netherlands, China, Canada, France, Indonesia, Thailand, Austria, Brazil, Hong Kong, and Russian Federation. Pure Dhamma seems to have no national boundaries, as it should be. It describes the true nature of our world.
- In early December, 2015, I upgraded the hosting platform to have a virtual private server and it also seems to have helped speed up the page loading.
- If you encounter problems accessing the site, avoid the www in the address line: It should just be: https:/puredhamma.net. Normally, typing just "puredhamma.net" should direct to https://puredhamma.net. Or, one could Google search "puredhamma" and the link will come out on the top.
- I also upgraded to a more secure "https" from "http" just to assure that the content will not be tampered with. I encourage sharing or using anything that is on the site. Anyone is "free to copy" any of the content. Reference to the site is a courtesy, but not required.

2. The most common feedback I get is on the usefulness of the site. I appreciate those comments.

- When I started the site, some of my friends warned me that "pure Dhamma" is too difficult to understand, and I may turn off people. But my goal is to present the true message of the Buddha as much as possible. Not everyone may be able to understand it initially, but for those who can, it will be a life-changing experience as it has been for me.

3. Another related comment from some is their anxiety of why it is taking too long for them to attain the Sotāpanna stage, and how can one know for sure whether one is even making progress.

- This is a very important question. The Buddha was asked the same question. His answer was: "Do not worry about those things day in and day out. Just concentrate on learning Dhamma and on contemplating the anicca nature of this world. The rest will follow".
- His gave a simile: How does a good a farmer go about making sure that he gets a good harvest? He prepares the field, uses good seeds, and once they germinate he makes sure to keep the weeds out and provide necessary nutrients. He does not waste time worrying about the harvest",

4. In the same way, one just needs to learn pure Dhamma and live by it. One needs to understand what Nibbāna or Nivana is, in a step-by-step process. Initially, one does not need to worry about stopping the rebirth process (this is true even up to the Sotāpanna stage). One should first focus on "quenching the fires that burn inside": One should experience the "peace of mind" that is palpable when one gradually loses extreme greed, hate, and ignorance (not knowing the true nature of this world).

- "Ragakkhayo Nibbanan, dosakkhayo Nibbanan, Mohakkhayo Nibbanan" ("Cooling down is attained with getting rid of greed, hate, and ignorance") is valid from this initial "cooling down" all the way to the attainment of the Arahant stage. Just concentrate on getting rid of the strongest immoral acts via the body, speech, and the mind first.
- Thus the best way to gauge the progress is to see how much greed, hate, and ignorance has been lost over a given time.
- Here, "getting rid of ignorance" is an important aspect, which can come ONLY via learning Dhamma, i.e., only via learning the true nature of this world.

5. When one follows this basic process, one WILL start feeling the resulting cooling down. One will realize that one becomes more thoughtful and tolerant of others, even when they do inappropriate things.

- And with time, one will see that others also seem to act less harshly. It is hard to believe but one's mindset CAN affect how others treat oneself. It is a feedback loop that may not be noticeable initially, but will become apparent with time.

6. Then one day, one will realize that one does not have the gathi even remotely resembling of those in the four ap $\bar{a} y \bar{a}$ : no extreme hate suitable for a hell being, no extreme greed suitable for a preta (hungry ghost), no "animal gathi," and one does not have the mindset to rely on others (asura). Then one realizes that one is

## a Sotāpanna.

- When one understands that the consequences of extreme immoral acts can be much more harsh in the long-term compared to any short-lived satisfaction, then one's mind will automatically reject such thoughts. Comprehending the anicca nature will do the same.

7. I very much want to highlight the fact that Buddha Dhamma is not about hiding in a remote place and shying away from the society or subjecting oneself to harsh living.

- It is not those enticing or seducing things that make us do immoral things and make our minds stressed in turn; rather it is our own defiled minds (defilements can vary from vile to just being ignorant of the true nature of the world) making us do immoral things.
- One with a purified mind can live in the most seductive place and yet not be perturbed.
- But to get there, one needs some self-control to stay away from such extremes initially. Learning pure Dhamma is the only way to break through that first barrier. Once the Sotāpanna stage is attained, one will never, ever go back. (if one becomes a Sotāpanna magga anugami, one will never go back in this life).
- Even if one is not be able to attain the Sotāpanna stage in this life, the effort will not go to waste: it will make it easier in the future. As the Buddha advised, just follow the Path if it seems to make sense; results will follow.

Happy New Year! May the Blessings of the Triple Gem (Buddha, Dhamma, Sañgha) be with you always!

### 21.14 Reflections on 2014

## January 1, 2015

I started the website sometime in early January of 2014. Since there is no discussion forum at the site, I thought of making a summary on the 52 comments (excluding follow-up correspondence) that I received over the year (I did respond to all individual comments).

1. First of all, my heartfelt thanks for the many kind comments on the usefulness of the site.
2. Some people (mainly those I know personally) "complained" that once they start reading, they "got absorbed" in the material and they could not get to their "daily tasks". This could be a concern for some others as well. The easiest solution is to set an alarm.

- I assure everyone that once one gets a "foothold" one will become more responsible for their families, not the other way around. As one begins to understand the true message of the Buddha, one will start allocating one's time wisely, taking time away from "entertainment" rather than from those tasks that are one's responsibilities.
- As some of you may have already noticed, one becomes more thoughtful and considerate, when one starts truly understanding the message of the Buddha. One realizes that we all are in the same boat, trudging along in this tedious rebirth process, and one feels true compassion for others. One will not shy away from one's responsibilities to anyone let alone to one's family.
- If you do get absorbed in the material, it is not to my credit. From experience, I know that pure Dhamma is much more satisfying and fulfilling than any sense pleasure (even before the $j h a \bar{a} \bar{a}$ ). Learning Dhamma is learning about nature in a way that had not been possible before the Buddha! And there is no other task that is more important than one's own "long-term" future.

3. There were several people who made suggestions for new posts. Such suggestions are always welcome. If I have not responded to a couple of requests that is because of a reason. I do not want to "jump ahead" until the background material is presented. Please do not shy away from making suggestions.
4. Another important comment was that, "in the Satipatthanna sutta, didn't the Buddha recommend the "breathing meditation" contrary to what I described as ānāpāna?". If one is reading the sutta as commonly translated these days, that is indeed what the translations say. But we need to examine the Päli text of the sutta to get the correct interpretation. I plan to write a series of posts on the Satipatṭhāna sutta carefully going through the Pāli text.

- And we need to sort out the types of meditation recommended by the Buddha from those that have been practiced by Hindu yogis and are described in the Visuddhimagga. I think this is a "mental block" for even Theravāda Buddhists. Unless one sits down and stay like a statue, it does not count as "meditation" for many people.
- Those days, Buddha's primary recommendation was to listen to Dhamma discourses. Many people attained magga phala just by listening to such discourses. The Satipatt!hāna sutta was delivered in the later years for bhikkhus who needed systematic guidance.
- If one pays attention, one can get to samādhi while listening (and also while reading) Dhamma concepts. I highly recommend reading posts at this site at a quiet time, and see whether it makes you more calm. It will help in getting to $j h \bar{a} n \bar{a}$ in the longer term.
- Whether listening or reading, one should fully concentrate on the subject, and may even want to stop reading and think about the material when a new concept is discussed. Then the mind focuses on that point and automatically gets to samādhi. This is the key to removing defilements from the mind (which are the biggest chunk that in turn trigger other defilements). When one focuses on a "worldly thing" such as breath or a kasina object, that just gets the mind to samādhi, without doing any cleansing.

5. One does not even need to do any formal meditation initially. If one can spend some "quality time" (quite times where one can think as one reads) a few times a week, that would be more than enough. As with anything with the mind, the mind will ask for more as needed (this is the chanda and citta part in the Satara Iddhipāda of chanda, citta, viriya, vimaimsā). And when the mind asks for it, that is the best time to start getting absorbed in the material, making the effort (viriya) and critically examining the key concepts (vīmaimsā).

- One can get all the way to the Sotāpanna stage by just comprehending the main message that the Buddha was trying to convey: In the long run, it is unprofitable to strive for material things in this world. That there is a happiness of better quality when one loses craving for sense pleasures.
- But that cannot be achieved by "forcefully giving up sense pleasures", doing "breath meditation", or just by following the five precepts. Rather, by understanding the deep message of the Buddha about the "real nature of this world", one's mind gradually realizes the futility of seeking sense pleasures as one gradually comprehends anicca, dukkha, anatta. Dhamma will be the guide.

6. I very much want to highlight the fact that Buddha Dhamma is not about hiding in a remote place and shying away from the society or subjecting oneself to harsh living.

- It is not those enticing or seducing things that make us do immoral things and make our minds stressed in turn; rather it is our own defiled minds (defilements can vary from vile to just being ignorant of the true nature of the world) making us do immoral things.
- One with a purified mind can live in the most seductive place and yet not be perturbed.
- But to get there, one needs some self-control to stay away from such extremes initially. Learning pure Dhamma is the only way to break through that first barrier. Once the Sotāpanna stage is attained, one will never go back.

Happy New Year! May the Blessings of the Triple Gem be with you always!

### 21.15 List of Pāli words with diacritical mark

## Pāli characters with diacritical mark

| $\overline{\text { A }}$ | $\overline{\mathrm{I}}$ | $\bar{U}$ | $\stackrel{\text { N }}{ }$ | $\dot{M}$ | N | T | D | N | L | M |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\overline{\mathrm{a}}$ | $\overline{1}$ | $\overline{\mathrm{u}}$ | $\dot{\mathrm{n}}$ | $\dot{\mathrm{m}}$ | ñ | t | d | ṇ | $!$ | $\dot{\mathrm{m}}$ |

The Pāli word "xxxx" is in between two ""'s - i.e. "|xxxx|" to prevent replacement when "Find and Replace" is carried out.

| Pāli word | Pāli word with Diacritical Mark |  |

### 21.16 Mars Curiosity Photos Suggest Life May Have Existed on Red Planet

"A careful study of images taken by the NASA rover Curiosity has revealed intriguing similarities between ancient sedimentary rocks on Mars and structures shaped by microbes on Earth. The findings suggest, but do not prove, that life may have existed earlier on the Red Planet":

## WebLink: NBCNEWS: Mars Curiosity Photos Suggest Life May Have Existed on Red Planet

Here is the pdf of the paper just published that proposed the hypothesis:
WebLink: LIBERTPUB: Life on Mars Hypothesis-Noffke-Astrobilogy-2015

### 21.17 Recent Publications on Benefits of Meditation

There have been an accelerated activity in studying the benefits of meditation on the brain and on physical health in general. Here are some very recent publications:

- Scientific American November 2014 (volume 311, Number 5) cover story is "Mind of the Meditator", by M. Ricard et al. : WebLink: PDF File: Ricard-Mind of the Meditator- Scientific American November 2014
- A paper that just came out online in early November (in the journal Cancer) reports that the WebLink: WIKI: Telomeres - the protein caps at the end of our chromosomes that determine how quickly a cell ages - stayed the same length in cancer survivors who meditated or took part in support groups over a three-month period: WebLink: Carlson-Mindfulness based Cancer recovery-2014

I have discussed the effects of changing habits on the brain (which is more related to insight meditation): see, "Truine Brain: How the Mind Rewires the Brain via Meditation/Habits." Insight meditation can be expected to have much more significant changes in the brain as well as in physical health. But such studies have not been conducted yet. Selected references on research studies (2011-2012) and books related to meditation can be found in that post; there have been many more publications since then.

I was surprised to come across the following article in the prestigious journal "Science" which, using real time input from 5000 people all over the world, confirmed what the Buddha said 2500 years ago: that a wandering mind is an unhappy mind; see, WebLink: PDF File: A wandering mind is an unhappy mind-Science-Killingsworth-2010.

Much merits to Neranga Abeyasinghe and his family for sending me the second publication.

### 21.18 Laniakea: Our home supercluster

Superclusters - regions of space that are densely packed with galaxies - are the biggest structures in the Universe. But scientists have struggled to define exactly where one supercluster ends and another begins. Now, a team based in Hawaii has come up with a new technique that maps the Universe according to the flow of galaxies across space. Redrawing the boundaries of the cosmic map, they redefine our home supercluster and name it Laniakea, which means 'immeasurable heaven' in Hawaiiian (from Nature Video)

## WebLink: YOUTUBE: Laniakea: Our home supercluster

- It amazing to see how unfathomably vast our "world" is, even though this is only a small part of even our universe. However, imagine this together with uncountable worlds teeming with life, that we are not aware of! This is why the Buddha said not to spend time exploring the details of this "world". There is no end to it, either spacewise or timewise.
- But we need to keep in mind that only human minds can even comprehend such things. If we are to be born an animal or worse this kind of thinking is not possible, and we will get trapped in such worlds for unimaginably long times. Thus what we need to do is to take advantage of the brief time we have in this life to comprehend the true nature of 'this world", i.e., anicca, dukkha, anatta, and to become free of it.

### 21.19 Think Outside the Box!

1. Here is an interesting presentation on the question of what motivates people. Embedded in this presentation is the fact that without self-motivation coming from self-satisfaction, it is hard to examine things from different perspectives. It works the other way too: new insights in turn provide motivation:

## WebLink: YOUTUBE: Dan Pink: The puzzle of motivation

- One of my goals has been to help others to achieve the same exhilarating experience that I have had learning and practising pure Dhamma. It cannot be matched by any other experience.

2. Many people do things just because others do, and follow the "standard practices". In following Buddha Dhamma too, many just do what their parents or other "established authorities" do. It may be a good idea to pause and re-examine some deeply-embedded ideas. Each person may have his/her own set of "beliefs".

- Some think it is enough to say some precepts and may be chant or listen to chantings to follow the Path.
- Others think it is silly to do those exact same things. And what needs to be done is to learn Abhidhamma at the deepest level.
- I think there is a value in each, if done properly. And what needs to be given priority in one's practice should be in line with one's own preferences, but the horizons need to be expanded to look into other aspects once-in-a-while and see whether there is something to be gained from those too. Our perspectives change as we make progress.

3. Yet, no matter what one does, real progress cannot be even STARTED without understanding the main message of the Buddha: the true nature of this world, i.e., anicca, dukkha, anatta.

- It makes a huge difference between the interpretation of anicca as "impermanence" or "not being able to maintain to one's satisfaction". Same with anatta as "no-self" or "one ends up truly helpless trying to seek happiness in this rebirth process".
- See, "Anicca, Dukkha, Anatta - Wrong Interpretations" and the follow-up posts.
21.20 There are as many creatures on your body as there are people on Earth!

January 20, 2016: A new study on household bugs added (below the video)

1. Before the simple microscope was invented in the late 1500 's, people could see only those animals visible to the naked eye. Life seemed to explode when Van Leeuwenhoek reported the discovery of microorganisms in 1676; he first reported numerous "microscopic creatures" in a glass of water.

With the new scientific instruments we can "see" even more minute lifeforms:

## WebLink: YOUTUBE: There are as many creatures on your body as there are people on Earth

2. A new study reveals that there are numerous species of bugs - not counting the actual number - that live in a house (which has only a few humans):

## WebLink: EUREKALERT.ORG: First study of arthropods in US homes finds huge biodiversity

The pdf file of the publication: WebLink: PDF File: Bertone-Arthropods of the great indoors-peerj-2016
3. The number of people on this Earth is insignificantly small compared to the number of other beings (seen and unseen), or even just the animals. As the above video shows, there are a huge number of living beings even on a human body; imagine how many would be on the body of an unclean animal. This is why the Buddha said it is extremely difficult to get a human birth; see, "Rebirth - Connection to Suffering in the First Noble Truth."
4. It must be noted that Buddha's disciples (and probably other Hindu yogis) were able to "see" such microscopic creatures with their abhiñ̃n̄a powers. There is a story in the Tipiṭaka about a bhikkhu with abhiññ̄a powers (but not yet attained Arahanthood) once focused his powers to a glass of water that he was about to drink and saw a multitude of tiny creatures. He kept trying to filter them out and was getting distressed. The Buddha saw this and told the bhikkhu that it is not possible to live in this world without hurting other beings, but that does not count as an immoral act since the intention is not to hurt.

- For example, if we have a wound on the head, we have to apply medication and get it healed; otherwise one may even die from that. Yet, numerous tiny creatures on the wound die when we apply the medication. There is nothing we can do to avoid it unless we are willing to risk our own life.
- But the point is that this single human life is much more "worthy" than all those creatures multiplied many times over, see, "How to Evaluate Weights of Different Kamma."
- This is an important point because many people get stressed over even cleaning their house for the fear of killing insects. But if we do not keep the house clean, those insects will multiply and make the problem even bigger. One always need to look at things with a deeper understanding. The best thing to do is to keep the house clean so that insects are not attracted in the first place.
- It is important to clarify these concepts, because it is difficult to attain any kind of calmness (samādhi) in the mind if one's mind is agitated by such things as "Am I sitting on some unseen tiny insects and killing them?". As long as our intent is not directed to willfully taking another life with hatred, there will not be any negative consequences.

### 21.21 News Article on Robin Williams and Buddhist Meditation

I have not read the books written by the author of this following news article, so I cannot comment on his books. But I thought this sad news about Robin Williams illustrates the concept of anicca (that one cannot maintain anything to one's satisfaction in this world and that there is hidden suffering). He had more than enough money and fame, but apparently he was depressed in the latter years.

- Having a peaceful mind cannot be matched by any amount of money or fame; see, "First Noble Truth A Simple Explanation of One Aspect."
- According to the Buddha, the suffering is proportional to the craving. Getting old is more stressful for those who have enjoyed beauty, fame, power, etc. But the inevitability of old age and dying is common to us all.

## WebLink: YOUTUBE: Aging Stars of the Golden Age

- Buddhist meditation is primarily on understanding the true nature of the world and that hidden suffering may come out unexpectedly; that understanding itself makes one have a peaceful mind; see, " 1 . Introduction to Buddhist Meditation."
- When depression or old age hits, the mind gets weak. Thus one should preferably start when the mind is sound and healthy.
- Suicide can only make things worse in the "long term" in the rebirth process. It is never too late to start at any stage. Human life is rare and should not be wasted at any stage.

Article: Meditation Isn't Enough: A Buddhist Perspective on Suicide

### 21.22 World Historical Timeline

It will be convenient to have a timeline of the major world events that I can refer to in my posts. Please let me know any errors that you may see. My goal is to provide a consistent and accurate timeline.

Note: I used c. to denote circa or about
I have added descriptive links to some events, and will try to add more links in the future.

| Date | Event |
| :---: | :---: |
| Before 10k BCE | WebLink: WIKI: Last Ice Age |
| 3.1k BCE | First king of Egypt, King Menes |
| 2.5 k BCE | WebLink: WIKI: Mohenjo Daro civilization in India |
| 2.1k-1.6k BCE | WebLink: WIKI: The Xia Dynasty of China |
| Before 1.7k BCE | Abraham came to Jerusalem from Ur (Old Testament) |
| 1.4 k BCE | City of Troy, kingdom of Crete, and other Greek cities |
| $1.4 \mathrm{k}-0.9 \mathrm{k}$ BCE | Olmec civilization in Mexico |
| 776 BCE | First Olympiad |
| 558-530 BCE | Cyrus ruled North India |
| Until 536 BCE | Daries I, II, III ruled North India; until Chandagupta, Persian and Greek kings ruled North India |
| 563-483 BCE | Buddha Gotama |
| 470-399 BCE | Philosopher Socrates |
| 538 BCE | Old Testament was written |
| 424-348 BCE | Plato: First Western philosopher whose writings survived intact |
| 384-322 BCE | Aristotle: student of Plato and teacher of Alexander the Great |
| c. 333 BCE | Emperor Alexander's Empire peaks |
| 323-325 BCE | Alexander the Great in India |
| 268-231 BCE | Emperor Asoka ruled North India |
| 307-276 BCE | King Devanampiyatissa in Sri Lanka |
| 247 BCE | Ven. Mahinda in Anuradhapura, Sri Lanka |
| 41 BCE | Beginning of the Roman Empire |

| Date | Event |
| :---: | :---: |
| 29 BCE | Tipitaka written down in Sri Lanka |
| 6-4 BC to 30-33 AD | Jesus of Nazareth or Jesus Christ |
| 31 BCE | Augustus becomes the first Roman Emperor and ruled until 14 CE |
| c. 150-250 CE | WebLink: WIKI: Life of Nagarjuna; considered to be the founder of Mahāyāna Buddhism |
| After 200 CE | Roman empire starts to decline |
| 4th century CE | Buddhism introduced to Korea |
| 380 CE | Christianity became the official religion in Roman empire |
| 5th century CE | Burma adopts Theravāda Buddhism |
| 412-434 CE | Buddhaghosa arrives in Sri Lanka and writes Visuddhimagga |
| 552 CE | Buddhism enters Japan from Korea |
| 589 CE | First Chinese commentaries written |
| 586 CE | Beginning of the Dark Ages in Europe with the decay of the Roman empire |
| 6th century CE | First diffusion of Buddhism in Tibet |
| 570-632 CE | Prophet Muhammad |
| $\begin{aligned} & 622 \mathrm{CE}-(1258-1492) \\ & \mathrm{CE} \end{aligned}$ | WebLink: WIKI: Islamic Golden Age |
| 618-907 CE | Chinese T'ang dynasty; golden age of Buddhism in China |
| 1215 CE | King John signs the Magna Carta granting rights to English citizens |
| 1280 | WebLink: WIKI: Eyeglasses invented in Italy |
| c. 1420 - c. 1600 | Renaissance in Europe starting in Florence, Italy |
| 1450 | Gutenberg in Germany invents the printing press |
| 1492 | Modern Age begins with the arrival of Columbus in America |
| 1564-1642 | Galileo Galilei |
| 1596-1650 | Rene Descartes |
| 1610 | Galelio announces observation of mountains on the Moon and the existence of four planets. |

| Date | Event |
| :---: | :---: |
| 1642 | Adding machine invented by Blaise Pascal |
| 1643-1727 | Isaac Newton |
| c. $1650-\mathrm{c} .1800$ | WebLink: WIKI: European "Enlightenment" |
| 1662 | Fermat's Principle of Least Time |
| 1678 | Huygens' wave theory |
| 1687 | Newton published Principia Mathematica |
| 1688 | English revolution |
| 1698 | Steam engine invented by Thomas Savery |
| 1749-1827 | P.S. de Laplace |
| 1774 | Priestly isolates oxygen |
| 1776 | America declares independence from England |
| 1789 | French revolution period |
| 1791 | Steamboat invented by John Fitch |
| 1798 | Vaccination invented by Edward Jenner |
| 1804 | Locomotive invented by Richard Trevithick |
| 1809-1882 | Charles Darwin |
| 1816 | Huygens-Fresnel principle explaining light interference |
| 1821 | Faraday demonstrates the principle of the electric motor |
| 1822 | Charles Babbage designs his first mechanical computer |
| 1826 | Photography invented by Joseph Nicephore Niepce |
| 1834 | Refrigerator invented by Jacob Perkins |
| 1835 | Morse code invented by Samuel Morse |
| 1837 | American Samuel Morse invented telegraph |
| 1842 | Anaesthesia invented by Crawford Long |
| 1843 | Typewriter invented by Charles Thurber |

| Date | Event |
| :---: | :---: |
| 1846 | Rotary printing press invented by Richard M. Hoe |
| 1859 | Charles Darwin publishes The Origin of Species |
| 1868 | Poisson explained Young's double slit experiment with Huygens-Fresnel principle |
| 1869 | Mendeleev produces the Periodic Table |
| 1873 | Maxwell states the laws of electro-magnetic radiation |
| 1877 | Phonograph invented by Thomas Alva Edison;Microphone invented by Emile Berliner |
| 1878 | Edison invents the incandescent lamp |
| 1883 | First skyscraper built in Chicago (ten stories) |
| 1888 | Hertz produces radio waves |
| 1893 | Wireless communication invented by Nikola Tesla |
| 1895 | Diesel engine invented by Rudolf Diesel |
| 1898 | Remote control invented by Nikola Tesla |
| 1900 | Planck develops quantum theory |
| 1901 | Vacuum cleaner invented by Hubert Booth |
| 1903 | Powered airplane invented by Wilbur Wright and Orville Wright |
| 1905 | Einstein proved that photon is a particle |
| 1905 | Einstein's Theory of Relativity |
| 1907 | Color photography invented by Auguste and Louis Lumiere |
| 1908 | Henry Ford mass-produces the Model T |
| 1919 | London to Paris air service begins |
| 1923 | Sound film invented by Lee DeForest |
| 1923 | Edwin Hubble discovers the first galaxy other than Milky Way |
| 1928 | Antibiotics, penicillin invented by Alexander Fleming |
| 1937 | Jet engine invented by Frank Whittle and Hans von Ohain |

### 21.23 Second Largest Religion by State in the US

The second largest religion by state in the United States (2012):

Second Largest Religious Tradition in Each State, 2010 (Christianity remains the largest religious tradition in every state)

WebLink: BOINGBOING: Christianity is the top Religion

However, Buddha Dhamma is not a religion, in the sense of providing a set of guidelines to live by. It is about the natural laws of nature. Any person of any religious faith (or no faith in any religion, i.e., atheist) can follow Dhamma and benefit. All religions are about leading a good moral life, but Buddha Dhamma describes a much more comprehensive "world view" where this life of 100 years is just a blip.

If one becomes convinced of the truth of the Buddha's world view, i.e., that this life is not the only we had or we will have, and that there are consequences to one's actions, and the only way to get relief from inevitable suffering at least at the old age and death is to purify one's mind, then the person is a Buddhist. It is all in one's mind. No one else is tracking one's progress, and no one else can purify one's own mind.

### 21.24 Introduction to "Rebirth by Francis Story" - Ian Stevenson

The following are the scanned pages from the book, "Rebirth-as Doctrine and Experience" by Francis Story. The first scan is an inside cover page, and the rest are the Introduction pages by Ian Stevenson. Dr. Stevenson mentions that he is a Buddhist on page 3. The whole introduction is insightful.

## WebLink: PDF File: Introduction-Stevenson

### 21.25 <br> Thirty One Planes of Existence

Here is a video from Carl Sagan to get an idea how vast our "detectable universe" is:

## WebLink: YOUTUBE: Carl Sagan "100 Billion Galaxies each W/100 Billion Stars"

The "world view" of the Buddha is not merely about the living beings on this planet. Our Solar system is one of an infinite number of "world systems" (planetary systems). In EACH planetary system with life (scientists have not found even one yet; but they are out there!), there are 31 "planes of existence". As we find out below, we can "see" only two of these realms: our human realm and the animal realm. Thus our "world" is much more complex than even the present-day science believes. As some of you may already know, science cannot account for $95 \%$ of the mass of the universe, which they label "dark energy" and "dark matter". This is why I say that the Buddha transcended "this world". He was able to "see" the whole of existence: see "Godel's Incompleteness Theorem" under "Dhamma and Science".

Now, it is not easy to describe the 31 planes of existence in a short essay. Therefore, I will use a visual to simplify things a bit.

Imagine a sphere with 31 shells, with a small sphere in the middle. Thus the total volume of the big sphere is completely filled by the center sphere and surrounding shells. The 31 sections represent the 31 planes of existence. I emphasize that this is just a visual. The reality is different. For example, animal and human realms co-exist in reality. Also, both time and space are infinite in reality.

1. The innermost sphere represent the Niraya (hell) where there is non-stop suffering; next is the animal realm. Going outward there are two more realms where suffering is higher than at the human realm (the fifth shell). The sixth through eleventh shells represent the realms of the devas (wrongly translated as gods by many), beings who enjoy higher level of mundane happiness and no suffering. These innermost 11 shells represent the kamaloka, where all five physical sense faculties are present.
2. The next 16 shells represent realms where only two physical sense faculties (eye and ear) are active. These beings have very fine (less dense) bodies. These are called rūpa lokas.
3. The last 4 shells represent the arūpa lokas, where beings have ultra fine bodies and only the mind faculty; no physical senses.
4. In rūpa and arūpa lokas, the beings are in jhānic states. These states can be attained by humans and thus a humans can "temporarily live" in those lokas by attaining jhānā. The 16 realms in the rūpa loka correspond to the four lower jhānā, and the 4 realms in the arūpa loka correspond to the higher four jhānā.
5. Any living being (including each of us) has been in all realms in this beginning-less samsāra. We have been in the niraya (hell) and we have been at the highest (except on arūpa loka which can be accessed only by Anāgāmis or Non-Returners). One time the Buddha pointed to a bunch of ants on the ground and told bhikkhus that each of those ants had lived in a Brahma loka. The samsāra is that long; there is no discernible beginning.
6. Above the human realm, there is no suffering (except at death, which is inevitable). However, unless one has achieved at least the Stream Entry (Sotāpanna) stage, even a being at the highest level can fall to any lower level, and thus will end up in the niraya (hell) at some point; once there one will spend a long agonizing time there and eventually come out. Each of us have done this many times over. I will explain the cause of births in different realms in terms of "kamma seeds" in upcoming posts.
7. So, each living being just moves from one realm to another, but spends most time in the four lower worlds, mainly because once fallen there it is hard to come out. This "sansaric wandering" is the critical point to think about and comprehend.
8. As one moves away from the center the level of suffering decreases, and level of mundane pleasure increases up to the 11th realm. After that in the rūpa and arūpa lokas it is mainly the jhānic pleasures, not the sense pleasures.
9. The human realm is the only one from which one can attain Nibbāna. Nibbāna, in this model, corresponds to getting out of all 31 shells, out of the big sphere; no more rebirth in any of the 31 realms. Nibbāna is where the permanent sukha or nirāmisa sukha, is. When one attains Nibbāna or Arahanthood, he/she looks just like any other human, but has no attachments to any worldly things. He still has some kamma vipāka to pay off from the kamma seed that he was born with. When that kammic power is used up, he dies and is not reborn because there are no kamma seeds left to start a new birth. He/she is in Parinibbāna with nirāmisa sukha.
10. Can we taste Nibbānic "pleasure"?. Yes. We can taste it in increments, even below the Stream Entry stage. This is nirāmisa sukha, the "pleasure of giving up worldly things". This nirāmisa sukha has "quantum jumps" at the four stages of Nibbāna: Stream Entry, Once-Returner, Non-Returner, Arahant. Thus when one is on the Path, one can experience nirāmisa sukha at varying degrees, all the way to Nibbānic bliss, during this very lifetime.
11. All these 31 realms are located in our solar system (Chakrawata), and are associated with the Earth. There are a great number of such Chakrawata (planetary systems) in existence at all times with living beings. These are in clusters of small (galaxies?), medium (universes?), and large (multiverse?) "world systems". But none is permanent. They come into being and eventually perish. Within the past 100 years or so, scientists have confirmed the existence of billions of planetary systems within galaxies in our universe, and are now exploring the possibility of the existence of multiple universes (multiverse).

The other big factor to take into account is that we have been born in almost all of these realms in our sansāric journey that has no traceable beginning. All of us have been bouncing around "inside the sphere" (mainly in the inner ones) from a beginning that is not even discernible to a Buddha.

Next, "Sansāric Time Scale", ........

### 21.26 Curiosity Rover finds Crater probably was once a Giant Martian Lake

According to Buddha Dhamma we are alone in the universe. These preliminary results from the NASA Curiosity Rover may not hold up in the end as evidence that life existed on Mars. But there will many more to come, especially if technology is developed to explore distant stars.

WebLink: YOUTUBE: Curiosity rover finds crater it is exploring was once a giant Martian LAKE
Here is a report that came out today, Dec 9, 2014, which has another video by NASA:
WebLink: DAILYMAIL: Curiosity rover finds crater it is exploring was once a giant Martian LAKE

### 21.27 Did Not Get a Response to Your Comment?

July 18, 2016

I reply to each and every question that comes through "Comments" under each post.

Several of my replies bounced back within the past few weeks, including one today because the email address of the sender was not typed correctly. Please make sure that you type your email address correctly.

### 21.28 Ancient teeth found in China challenge modern human migration theory

## October 16, 2015

When we discuss the Aggañña Sutta, that describes how the Earth and life originated it will become very clear that the basis of current theories on "human evolution" is completely wrong. However, they are consistent with Buddha Dhamma in the sense that species will exist only when conditions for their existence prevail.

- The current scientific theory is that human originated in Africa and then migrated to other parts of the world, starting about 50,000 years ago. Recent evidence just published in the prestigious journal Nature provides evidence of the existence of humans like us in China some 80,000 to 100,000 years ago. Below is the news article from CNN. I will add the paper from Nature when it becomes available:

## WebLink: CNN: Ancient teeth found in China challenge modern human migration theory

- In this context, I must also point out that there are other archeological evidence for the existence of humans in Sri Lanka and India dating back to 30,000 years and earlier:

## WebLink: WIKI: Balangoda Man

## December 18, 2015

The following post says, "..We're quickly learning that Europe and Africa may not provide the best model for us to use to interpret the fossil record of East Asia. For example, Denisova Cave is as far east as we've found the Neanderthals, and they don't seem to have occupied Siberia permanently. This is unlike Europe, where they lived until about 40,000 years ago. And so far, no Neanderthals have been found in China or anywhere further South of Denisova Cave.

The fact is that we've really only scratched the surface in East Asia.."

## XXII Sitemap

I have arranged the sections roughly in increasing complexity. However, you may want to scan through each section to get an idea of what is in each section. People have backgrounds at very different levels. Furthermore, even those who have been exposed to Buddhism for many years may not have a good understanding of the fundamentals.

- "Ten Immoral Actions (Dasa Akusala)"
- "Puñña Kamma - Dāna, Sila, Bhāvanā"
- "Details of Kamma - Intention, Who Is Affected, Kamma Patha"
- "The Five Precepts - What the Buddha Meant by Them"
- "How to Evaluate Weights of Different Kamma"
- "What is Kamma? - Is Everything Determined by Kamma?"
- "The Four Bases of Mental Power (Cattāro Iddhipāda)"
- "Why is it Necessary to Learn Key Pāli Words?"

## Buddha Dhamma and Morality

- Origin of Morality (and Immorality) in Buddhism
- Buddhist Explanations of Conception, Abortion, and Contraception
- Is Eating Meat an Akusala Kamma (Immoral Deed)?
- Do Things Just Happen? - The Hidden Causes

## Dhammapada

- Manopubbangamā dhammā..
- Sabba Pāpassa Akaranan....
- Appamado Amata Padam.
- Najajja Vasalo Hoti.
- Arogya Parama Labha..
- Anicca vata Sañkhāra..
- Atta Hi Attano Natho

## Working Towards Good Rebirths

- "Sansāric Habits and Āsavā"
- "Vagaries of Life and the Way to Seek Good Rebirths"
- "How to Avoid Birth in the Apāyā""
- Rebirth - Connection to Suffering in the First Noble Truth
- Kamma, Debt, and Meditation
- How do we Decide which View is Wrong View (Ditthi)?
- Three Kinds of Ditthi, Eightfold Paths, and Samādhi
- Implications of the Rebirth Process in Daily Life and in Society
- What Does Buddha Dhamma Say about Creator, Satan, Angels, and Demons?
- Patisandhi Citta - How the Next Life is Determined According to Gati

## Living Dhamma (This section starts at a basic level and proceeds to deep levels)

## Essential Buddhism

- Four Noble Truths - Suffering and Its Elimination
- Introduction to Citta, Vedanā, Saññā, Sañkhāra, and Viññāna
- Viññāna - Consciousness Together With Future Expectations
- Connection Between Sañkhāra and Viñ̃n̄āna
- Viññāna and Sañkhāra - Connection to Paticca Samuppāda
- Breath Meditation Is Addictive and Harmful in the Long Run
- Ānāpānasati Eliminates Mental Stress Permanently
- Ānāpāna and Satipatthāna - Fundamentals
- Sati in Ānāpānasati/Satipatthāna - Two Meanings of Sati

## Living Dhamma - Overview

- Living Dhamma - Introduction
- Peace of Mind to Nibbāna - The Key Step
- Starting on the Path Even without Belief in Rebirth (with first Desanā "The Hidden Suffering that We All Can Understand"; desanā title different from post title)

## Dhamma with Less Pāli

- Buddha Dhamma for an Inquiring Mind - Part I
- "Root of All Suffering - Ten Immoral Actions" (with the desanā "Ten Immoral Actions (Dasa Akusala)".
- Is Suffering the Same as the First Noble Truth on Suffering?
- Complexity of the Mind - Viññāña and Sañkhāra
- Dhamma, Sañkhāra, Sañkhata, Rūpa, Viññān̄a, Gati, Āsava, Anusaya
- Bhava and Bhavañga - Simply Explained!
- Citta, Mano, Viññāna - Stages of a Thought

## Living Dhamma - Fundamentals

- What Are Kilesa (Mental Impurities)? - Connection to Cetasika
- Suffering in This Life - Role of Mental Impurities (with Desanā 2)
- Satipatthāna Sutta - Relevance to Suffering in This Life (with Desanā 3)
- How Are Gati and Kilesa Incorporated into Thoughts? (with Desanā 4)
- Noble Eightfold Path - Role of Sobhana Cetasika (with Desana 5; in two parts)
- Getting to Samādhi (with Desana 6)
- Sexual Orientation - Effects of Kamma and Gati (Sañkhāra)

## Mundane Sammā Samādhi

- Micchā Ditthi - Connection to Hetu Phala (Cause and Effect) (with Desanā 7)
- Suffering in This Life and Paticca Samuppāda (with Desanā 8)
- Suffering in This Life and Paticca Samuppāda II (with Desanā 9)

## Transition to Noble Eightfold Path

- Is It Necessary for a Buddhist to Eliminate Sensual Desires?
- Silla, Samādhi, Paññā to Paññā, Sila, Samādhi
- Ye Dhammā Hetuppabhavā.. and yam kiñci samudaya dhammaṁ.

## Samādhi, Jhāna (Dhyāna), Magga Phala

- Samādhi, Jhāna, Magga Phala - Introduction
- Vitakka, Vicāra, Savitakka, Savicāra, and Avitakka, Avicāra
- Jhānic Experience in Detail - Sāmaññaphala Sutta (DN 2)
- Ascendance to Nibbāna via Jhāna (Dhyāna)
- Paññāvimutti- Arahanthood without Jhāna
- Mundane versus Supramundane Jhāna
- Nirodha Samāpatti, Phala Samāpatti, Jhāna, and Jhāna Samāpatti

## Mental Body - Gandhabba

- Our Mental Body - Gandhabba
- Gandhabba State - Evidence from Tipitaka
- Antarabhava and Gandhabba
- Ānantariya Kamma - Connection to Gandhabba
- Mental Body (Gandhabba) - Personal Accounts
- Abnormal Births Due to Gandhabba Transformations
- Cattāro Āhāra for Mental Body or Gandhabba
- Micchā Ditthi, Gandhabba, and Sotāpanna Stage
- Working of Kammā - Critical Role of Conditions

## Nāma \& Rūpa to Nāmarūpa

In this important subsection, we will discuss the link between mind (nāma) and matter (rūpa). These are deeper analyses. For simpler analyses, see, "The Five Aggregates (Pañcakkhandha)."

- Rūpa Aggregate
- What are rūpa? - Dhamma are rūpa too!
- Bhūta and Yathābhūta - What Do They Really Mean
- Vedanā (Feelings) Aggregate
- Vedanā - What It Really Means
- Vedanā and Samphassa-Jā-Vedanā - More Than Just Feelings
- Does Bodily Pain Arise Only Due to Kamma Vipāka?
- Saññã (Perception) Aggregate
- Saññā - What It Really Means
- Future Suffering - Why It Arises
- Ditthi, Saññā, and Sañkhāra - How They Relate
- Sañkhāra Aggregate
- Sañkhāra - What It Really Means
- Viññāna Aggregate
- Viññāna - What It Really Means
- Kamma Viññāna - Link Between Mind and Matter
- Anidassana Viññāna - What It Really Means
- Sakkāya Diṭthi
- Do I Have "A Mind" That Is Fixed and "Mine"?
- Nāmarūpa Formation
- Kamma Viññāna and Nāmarūpa Paricceda Nāna

## Buddha Dhamma

User's Guide to Pure Dhamma Website
Buddha Dhamma - A Scientific Approach

## Key Dhamma Concepts

## - Basic Framework of Buddha Dhamma

- Buddha Dhamma - Noble Truths, Paticca Samuppāda, Tilakkhana
- Noble Truths, Paticca Samuppāda, Tilakkhana - Key Relationships
- Anicca Nature, the First Noble Truth, and Paticca Samuppāda

Tilakkhana - Introduction

- Anicca and Anatta - Two Characteristics of the World
- Anuloma Khanti and Sammattaniyāma - Pre-requisites for a Sotāpanna
- Anicca Nature - Not Possible to Overcome Suffering in This World
- Dukkha in Tilakkhana Is a Characteristic - Not Dukkha Vedanā
- Attachment to Things with Dukkha Lakkhana Leads to Dukkha
- How Does Anicca Nature Lead to Dukkha?
- Anatta is a Characteristic of the World, not About a "Self"
- Anatta in Anattalakkhana Sutta - Part 1
- Anatta in Anattalakkhana Sutta - Part 2

## Critically-Relevant Posts in Other Sections:

- Sañkhāra - What It Really Means
- Correct Meaning of Vacī Sañkhāra

## - Concept of "San"

- What is "San"? Meaning of Sansara (or Samsara)
- Sañkhāra, Kamma, Kamma Bīja, Kamma Vipāka
- Sañkhāra - Life is a Bundle of Sañkhāra
- Difference Between Dhamma and Sañkhāra
- Kamma are Done with Sañkhāra - Types of Sañkhāra

## - Nibbāna

## Gandhabba (Manomava Kāva)

- Gandhabba (Manomaya Kāya)- Introduction
- Does any Object (Rūpa) Last only 17 Thought Moments?
- Hidden World of the Gandhabba: Netherworld (Paraloka)
- Ghost in the Machine - Synonym for the Manomaya Kāya?
- Manomaya Kāya (Gandhabba) and the Physical Body
- Brain - Interface between Mind and Body
- Manomaya Kāya and Out-of-Body Experience (OBE)
- Cuti-Patisandhi - An Abhidhamma Description
- These posts complement some of the posts in the "Udayavaya Ñāna" section, which is important for the Sotāpanna stage of Nibbāna. All these are pieces of a complex puzzle, but they are all inter-consistent. So, don't worry if you do not understand it all; with time it will all make sense and will lead to unbreakable faith in Buddha Dhamma even through future lives. Faith comes via true understanding.

- How Habits are Formed and Broken - A Scientific View

## Inconsistencies with Science

1. We all are impressed by the scientific advances made during the past 100 years or so making our lives easier and more productive. I am actually a cheerleader for scientific and technological advances.

- Physics had been my passion since high school days, and that changed when I started learning Buddha Dhamma several years ago. I still love and work on topics of interest in physics (and science in general). Fortunately, I am finding that those two interests are not mutually exclusive, and there is significant overlap. In fact, this section is the result of my two overlapping interests.

2. The following posts discuss cases where current theories of science are not consistent with Buddha Dhamma. I believe that science will recognize the primary nature of the mind in the future, and will discard the current notion that the mind (consciousness) arises out of inert matter.
Neuroscience says there is no Free Will? - That is a Misinterpretation!
The Double Slit Experiment - Correlation between Mind and Matter?
Vision (Cakkhu Viññāna) is Not Just Seeing
3. Despite the advances in science and technology, there is much about the human mind that science does not understand, and has not even begun to understand. Western science is based on the five physical senses, leaving out the most important one, the mind.

- At the present time, in 2016, scientists have the wrong view that consciousness originates in the brain.
- All scientific theories relating to the mind are based on this wrong hypothesis. However, Buddha Dhamma says not only that mind is a sense of its own, but it is the most powerful of all six senses.
Here is a post from the Abhidhamma section that has a deeper analysis of the brain-mind connection:

## Brain - Interface between Mind and Body

## Quantum Mechanics and Dhamma

This section will discuss two issues:

1. A new interpretation of quantum mechanics (QM) based on non-locality is presented based on Feynman's ideas. Concepts like wave-particle duality, observer effect, are not needed. Furthermore, complex interpretations like the "Many-Worlds interpretation" are avoided. All existing experimental data will be shown to be consistent with this interpretation.
2. A deeper understanding of how kamma automatically lead to corresponding kamma vipāka in Buddhism (Buddha Dhamma), becomes clear with this interpretation.

"Adhiccamidam, bhante, yam so kāno kacchapo vassasatassa vassasatassa accayena sakim sakim ummujjanto amusmim ekacchiggale yuge givamं paveseyyā"ti.
    "Evam adhiccamidaṁ, bhikkhave, yamं manussattam labhati. Evamं adhiccamidam, bhikkhave, yam tathāgato loke uppajjati arahamं sammāsambuddho. Evam adhiccamidam̉, bhikkhave, yam tathāgatappavedito dhammavinayo loke dibbati. Tassidam, bhikkhave, manussattam laddhamं, tathāgato loke uppanno araham sammāsambuddho, tathāgatappavedito ca dhammavinayo loke dibbati.

[^5]:    3. As I briefly stated in a previous post, dhammā are the underlying energies (or "kamma seeds" or "kamma bīja") created by the mind. See, "Moha/Avijjā and Vipāka Viññāna/Kamma Viññān̄a."

    - A seed has the POTENTIAL to give rise to a tree under proper conditions like good soil, water, and sunlight. In the same way, dhammā (a kamma bīja) has the POTENTIAL to give rise to things (both living and inert) in this word.
    - Pațicca Samuppāda describes the complex process of a dhammā (a kamma büja) giving rise to future lives. It also explains the arising of the external world that sustains life. We will address just the first part for now.

[^6]:    "kammā vipāka vaḍ̣hanti, vipāko kamma sambhavo
